Background

The Consumer Assessment of Healthcare Providers and Systems (CAHPS®) survey is a comprehensive tool designed to assess consumers' experience with health care and health plans. CAHPS® is the survey instrument that asks health plan members about experiences with access to care, health care providers and health plans. The New York State Department of Health (NYSDOH) sponsors a CAHPS® survey every other year for the Medicaid managed care plans and uses the results to determine variation in member satisfaction among the plans. DataStat, Inc. conducted the survey on behalf of the NYSDOH in 2013. The instrument used for the administration of the survey was the CAHPS® 5.0 Adult Medicaid core survey, developed and tested nationally for assessing the performance of health plans.

The majority of question items addressed domains of member experience, such as getting care quickly, communication with doctors, and overall satisfaction with health care and with the health plan. The survey was expanded to include 17 supplemental questions addressing areas of particular interest to the NYSDOH. Rounding out the instrument was a set of questions collecting demographic data. In total, the survey instrument consisted of 67 questions. A copy of the modified CAHPS® questionnaire can be found in Appendix A.

Executive Summary

In New York, the CAHPS® survey is administered to Medicaid managed care plan members every other year. For the 2013 administration, the NYSDOH focused on adult members of Medicaid managed care plans. The survey included 16 Medicaid managed care plans in New York with a sample of 1,500 adults per plan. Surveys were sent to 24,000 members following a combined mail and phone methodology (four mailings, followed by phone follow up of non-responders) during the period September 9, 2013 through December 2, 2013 using a standardized survey procedure and questionnaire. For your plan, a total of 499 responses were received resulting in a 35.3% response rate. The disposition of surveys is contained at the end of this section.

Conclusions based on the information presented in this report should be tempered by a few caveats. First, for some survey items, relatively small numbers of responses may be available, due to skip patterns in the instrument. To provide the highest level of detailed reporting, results with less than 30 observations are included in the report. Conclusions based on analysis of fewer than 30 observations should be viewed with caution. Second, in some of the data presentations included in this report, correlation coefficients are computed to explore the relationship between different measures. High correlations, however, do not necessarily indicate causation. Finally, in many of the graphs and tables presented in this report, differences between the Statewide average and individual managed care plans are readily apparent. However, where these differences are not statistically significant they should be evaluated accordingly.

Summary of Overall Rating Questions

Response options for overall rating questions ranged from 0 (worst) to 10 (best). In the table below, the achievement score represents the proportion of members who responded with a rating of 8, 9, or 10. Plan-level results are compared to the Statewide for statistical significance and are presented with Statewide, New York City (NYC), Rest of State as well as individual plan results. Regional results are presented for additional information, but are not compared to the Statewide achievement scores.

Overall Rating Questions (8, 9 or 10)

	Q18. Rating of all health care	Q37. Rating of personal doctor	Q41. Rating of specialist seen most often	Q45. Rating of health plan
Statewide 2013	71.33%	77.82%	75.68%	75.77%
NYC 2013	69.27%	78.06%	73.68%	75.35%
Rest of State 2013	72.66%	77.74%	76.89%	76.06%
Fidelis 2013	70.98%	76.66%	71.89%	75.09%

↑↓ **Statistically significantly better/worse than Statewide 2013.**

Summary of Composites

A composite score is calculated for each of five domains of member experience: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, Customer Service and Shared Decision Making. Composite scores are intended to give a summary assessment of performance across the domain. Plan-level results are compared to the Statewide for statistical significance and are presented with Statewide, New York City (NYC), Rest of State as well as individual plan results. Regional results are presented for additional information, but are not compared to the Statewide achievement scores.

The CAHPS® 5.0 Adult Medicaid core survey contains a revision to the Shared Decision Making composite (formerly named Collaborative Decision Making); the revised composite added one question and significantly altered the existing questions and response choices. Due to the significant revisions to the questions in the Shared Decision Making composite, the composite and the questions comprising it are not considered eligible for trend comparisons with the previous version, Collaborative Decision Making.

Composites

	Getting Needed Care (Usually or Always)	Getting Care Quickly (Usually or Always)	How Well Doctors Communicate (Usually or Always)	Customer Service (Usually or Always)	Shared Decision Making (Yes or A lot)
Statewide 2013	78.25%	77.98%	89.47%	82.38%	48.47%
NYC 2013	74.13%	72.48%	88.66%	81.04%	47.26%
Rest of State 2013	80.96%	81.62%	90.03%	83.56%	49.15%
Fidelis 2013	78.03%	76.94%	88.17%	81.00%	48.71%

↑↓ **Statistically significantly better/worse than Statewide 2013.**

Trend Analysis - 2013 vs. 2011

The table below provides a snapshot of the items with the greatest point change, positive or negative, since 2011. All performance-related items in the questionnaire that were trendable were listed in descending order of point change, and testing was conducted to determine which trends were statistically signficant. Shown below are the ten items at the top of the list and the ten items at the bottom, with their 2011 and 2013 scores and results of the significance testing.

In the table presented below, differences over time may be readily apparent. However, where these differences are not statistically significant they should be evaluated accordingly.

Question	Fidelis 2013 Score	Fidelis 2011 Score	Point Change	Composite/ Question Group
Q10a. Doctor or other health provider talked about a healthy diet and eating habits	62.4%	47.4%	+ 15.0 ▲	Supplemental Questions
Q10b. Doctor or other health provider talked about exercise or physical activity	65.5%	51.5%	+ 14.0 ▲	Supplemental Questions
Q10c. Doctor or other health provider talked about things in your life that worry you or cause you stress	48.6%	35.9%	+ 12.6 ▲	Supplemental Questions
Q41. Rating of specialist seen most often	71.9%	60.7%	+ 11.2 ▲	Ratings
Q51. Have had a flu shot since September 1, 2012 [Displayed for Respondents Age 50+]	46.0%	35.4%	+ 10.6	Supplemental Questions
Q36. Personal doctor usually or always seemed informed about care received from other doctors or providers	74.2%	63.8%	+ 10.4 ▲	Single Items
Q10e. Doctor or other health provider talked about smoking or using tobacco products	40.7%	31.9%	+ 8.8 ▲	Supplemental Questions
Q34. Personal doctor usually or always explained what to do if this illness or health condition got worse or came back	85.1%	79.2%	+ 5.9	Supplemental Questions
Q10d. Doctor or other health provider talked about whether there was a period of time when you felt sad, empty or depressed	38.1%	32.2%	+ 5.9	Supplemental Questions
Q10f. Doctor or other health provider talked about alcohol or other drug use	28.4%	23.2%	+ 5.2	Supplemental Questions
Q16. Someone from doctor's office usually or always followed up to give blood test, x-ray or other test results	76.4%	77.2%	- 0.8	Supplemental Questions
Q31. Personal doctor usually or always spent enough time with you	84.3%	85.3%	- 1.0	Communication
Q17. Results of blood test, x-ray or other test usually or always easy to understand	77.0%	78.0%	- 1.0	Supplemental Questions
Q55. Doctor or health provider discussed or provided methods and strategies to assist with quitting smoking or using tobacco	45.8%	47.2%	- 1.3	Medical Assistance with Smoking Cessation
Q29. Personal doctor usually or always listened carefully to you	89.8%	91.3%	- 1.5	Communication
Q30. Personal doctor usually or always showed respect for what you had to say	89.9%	92.0%	- 2.1	Communication
Q33. Personal doctor usually or always gave easy to understand instructions about what to do to take care of illness or health condition	89.8%	92.6%	- 2.9	Supplemental Questions
Q22. Rating of treatment or counseling for a personal or family problem (8, 9 or 10)	60.3%	63.8%	- 3.5	Supplemental Questions
Q43. Health plan's customer service usually or always gave needed information or help	72.6%	79.1%	- 6.5	Customer Service
Q21. Usually or always easy to get treatment or counseling you needed for a personal or family problem through your health plan	67.4%	74.5%	- 7.0	Supplemental Questions

Methodology

The survey drew as potential respondents adults, ages 18 to 65, who were current members of NYS Medicaid managed care plans as of July 2013 and who had been enrolled for five out of the last six months. Respondents were surveyed in English or Spanish. The survey was administered over a thirteen-week period using a mixed-mode (mail and telephone) five-wave protocol. The five-wave protocol consisted of a pre-survey letter, first questionnaire packet, and reminder postcard to all selected members, followed by a second questionnaire packet to non-respondents and finally a phone follow-up to those who had not responded to the mailings.

Survey Milestones

1. Pre-survey letters mailed: September 9, 2013
2. 1st questionnaire packets mailed: September 16, 2013
3. Reminder postcards mailed: September 25, 2013
4. 2nd questionnaire packets mailed: October 21, 2013
5. Phone field opened: November 11, 2013
6. Mail and phone field closed: December 2, 2013

Sampling Frame

A random sample of 1500 adults ages 18-64 was drawn for each of the managed care plans. To be eligible, individuals had to be current members who were continuously enrolled in the Medicaid managed care plan for at least five out of the last six months as of July 2013.

Questionnaire

The instrument selected for the survey, the CAHPS® 5.0 Adult Medicaid core survey, was developed and tested nationally for use in assessing the performance of health plans. The majority of questions addressed domains of member experience such as getting care quickly, doctor communication, overall satisfaction with health care and with the health plan. The survey was expanded to include 17 supplemental questions addressing areas of particular interest to the NYSDOH. Rounding out the survey was a set of questions collecting demographic data. In total, the survey instrument consisted of 67 questions. A copy of the modified CAHPS® questionnaire can be found in Appendix A.

Selection of Cases for Analysis

Surveys were considered complete if respondents did not say 'No' to Question 1 (Our records show that you are now in [HEALTH PLAN NAME]. Is that right?) and if they provided a valid response to at least one question. Complete interviews were obtained from 7,252 NYSDOH Medicaid managed care members, and the overall project response rate was 31.8%.

Definition of Achievement Scores

Member responses to survey questions are summarized as achievement scores. Responses that indicate a positive experience are labeled as achievements, and an achievement score is computed equal to the proportion of responses qualifying as achievements. Since achievement scores for survey questions represent the proportion of enrollees who indicate a positive experience, the lower the achievement score, the greater the need for improvement. See the *Responses by Question* section for assignment of achievement responses for each question.

In general, somewhat positive responses are included with positive responses as achievements. Responses of "Yes" and "A lot" are considered achievements for the Shared Decision Making composite. For all other composites, responses of "Usually" or "Always" are considered achievements, as are responses of "8", "9", or "10" to ratings questions.

Composites

Five composite scores summarize responses in key areas: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, Customer Service, and Shared Decision Making. The achievement score for the composite is the average of the achievement scores for the individual items comprising a composite. Following is a list of the questions that comprise each composite:

Getting Needed Care

Q19. Usually or always got care, tests or treatment you thought you needed
Q39. Usually or always get an appointment to see a specialist as soon as you needed

Getting Care Quickly

Q4. Usually or always got care right away as soon as you needed
Q7. Usually or always got an appt. for check-up or routine care as soon as you needed

How Well Doctors Communicate

Q28. Personal doctor usually or always explained things in way that was easy to understand
Q29. Personal doctor usually or always listened carefully to you
Q30. Personal doctor usually or always showed respect for what you had to say
Q31. Personal doctor usually or always spent enough time with you

Customer Service

Q43. Health plan's customer service usually or always gave needed information or help
Q44. Usually or always treated with courtesy and respect by health plan's customer service staff

Shared Decision Making

Q12. Doctor/provider talked a lot about the reasons you might want to take a medicine
Q13. Doctor/provider talked a lot about the reasons you might not want to take a medicine
Q14. Doctor/provider asked what you thought was best for you

The CAHPS® 5.0 Adult Medicaid core survey contains a revision to the Shared Decision Making composite (formerly named Collaborative Decision Making); the revised composite added one question and significantly altered the existing questions and response choices. Due to the significant revisions to the questions in the Shared Decision Making composite, the composite and the questions comprising it are not considered eligible for trend comparisons with the previous version, Collaborative Decision Making.

Correlation to Satisfaction

To understand the relationship between performance and satisfaction in particular areas of member experience, correlations are computed between responses to the question items comprising the five composites and each of the ratings questions. The specific correlation computed is Pearson's Correlation Coefficient, which takes on values between -1 to 1. Correlation scores are presented in the *Correlation Analysis* section.

Comparisons: Current Year and Trending

Two types of comparisons are presented. Current year comparisons are found in the *Executive Summary* and *Graphs* sections. In the *Executive Summary* section, plan results for the Rating Items and Composites are compared to the Statewide achievement score, with statistical testing. Regional results are presented for comparison. In the *Graphs* section plan results for each performance measure are compared to the Statewide achievement score, with statistical testing. Regional results are presented for additional information, but are not compared to the Statewide achievement scores.

Comparisons across time are the focus of the *Trend Analysis* section: all performance-related items in the questionnaire that were trendable were listed in descending order of point change. The *Trend Analysis* section displays for your plan the ten items at the top of the list and the ten items at the bottom, with their 2011 and 2013 scores and results of significance testing. In addition, in the *Responses by Question* section, for each performance item, the achievement score point change is displayed along with results of significance testing.

Statistical Testing

Statistically significant differences between scores were determined using t-tests. A significance level of .05 or less was considered statistically significant and "↑" or "↓" is placed at the top of the appropriate bar or next to the appropriate achievement score.

Case-Mix Analysis

The results presented in this report are case-mix adjusted to control for differences in the member population across managed care plans. The results for 2013 are case-mix adjusted for age (Q62), health status (Q49) and education (Q64). Case-mix adjustment is applied to mitigate the effect of differences in individual plan's member population. The variables chosen for case-mix adjustment are beyond the control of the managed care plan and have been shown to affect managed care plan and health care ratings. For example, individuals with higher levels of education generally rate lower for satisfaction. Details about the distribution of populations in categories for the three adjusters can be seen in the *Respondent Sample Profile* contained in the *Executive Summary* section.

Using this Report

Understanding Achievement Scores

This report is designed to assist the NYSDOH and participating health plans in identifying key opportunities to improve members' experiences. Member responses to survey questions are summarized as achievement scores. Responses that indicate a positive experience are labeled as achievements, and an achievement score is computed as the proportion of responses qualifying as positive. Responses of "Yes" and "A lot" and are considered achievements for the Shared Decision Making composite. For all other composites, responses of "Usually" or "Always" are considered achievements. For example, a response of "Usually" or "Always" to the question "How often did you get care as soon as you thought you needed?" is considered a positive response, and the achievement score for this question is equal to the proportion of respondents who answered the question with "Usually" or "Always". Because achievement scores for survey questions are computed as the proportion of members who indicate a positive experience, the lower the achievement score, the greater the need to improve.

Achievement scores are computed and reported for all pertinent survey questions. In addition, composite scores are built from groups of survey questions that make up broad domains of members' experience: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, Customer Service, and Shared Decision Making.

Understanding the Sections of the Report

The CAHPS® survey results are presented here in a format that is optimized for use in practical decision-making. Specifically, these reports can:

1. Assist the NYSDOH and health plans in identifying strengths and weaknesses in quality of health care, access and services, and

2. Provide the NYSDOH and health plans with a way to assess where resources can best be allocated to improve experiences.

The remainder of the report is broken into three major sections that are briefly described here to help you make the best use of the report and the information it contains.

Rating Questions, Composites, Medical Assistance with Smoking Cessation, Aspirin Use and Discussion, Single Items and Supplemental Questions

This section contains a graphic presentation of Statewide, NYC, Rest of State and plan-specific results for each question using the achievement scores. Statistical significance, the achievement score, and the number of respondents for each plan are displayed. This depicts plan-specific performance compared to various benchmarks or peers. The composites are directly followed by the individual questions in the composite for more detailed information.

The Aspirin Use and Discussion measure assesses different facets of aspirin use in the primary prevention of cardiovascular disease. The measure is based on two questions, one assessing current aspirin use, and the other asking whether a health provider discussed the risks and benefits of taking aspirin to prevent heart attack or stroke.

The Aspirin Use component includes members in certain risk factor categories who could safely take aspirin (based on the response to Q57), had no cardiovascular disease exclusion (based on the response to Q60), and who answered Q56. The rate represents the proportion of these members who indicated they take aspirin daily or every other day.

The Discussing Aspirin Risks and Benefits component includes members in certain age/gender categories who had no cardiovascular disease exclusion (based on the response to Q60), and who answered Q58. The rate represents the proportion of these members who indicated that a health provider had discussed the risks and benefits of aspirin with them.

 © DataStat, Inc.

Correlation Analysis

The Correlation Analysis section is helpful in understanding how satisfaction in various questions relates to the four general rating questions (personal doctor, specialist seen most often, all health care, and health plan) for respondents. The tables show which questions are most strongly linked to the rating and the current achievement score. The information helps define what areas are related to satisfaction and how the program or plan performed in that area. The section enables a quick view of how composite questions correlate across ratings.

The correlation analyses are presented two ways. First there are correlations of 13 composite questions to the four rating questions ranked by the highest correlation between the question and rating. This allows a visual picture of clustering of composites across ratings. The second analysis presents the proportion of responses in each response option for each composite question for each individual rating. This lets you see where there may be an opportunity for improvement. For example, if a question correlates highly and has higher proportions of "usually" and "sometimes", improving the processes may move respondents up to "always" to improve not only that composite, but the other rating questions.

Responses by Question

This section provides a breakdown for each question with the number of members responding to the question and the distribution for each available response option. For each question that has responses determined to be positive or negative, there is a colored circle indicating achievement or room for improvement. The circles are based on the response category and are not indicative of areas the plan needs to improve necessarily. For example, "Always" and "Usually" are achievement and "Sometimes" and "Never" are room for improvement. Similarly on a rating question, 8, 9, or 10 are achievement and 0 through 7 are room for improvement. Questions without a colored circle indicate the question is not associated with this type of response determination. For example, asking whether a member needed a service in the past six months does not have an associated achievement related to it. This section provides additional information about volume of members to help you prioritize areas to be addressed.

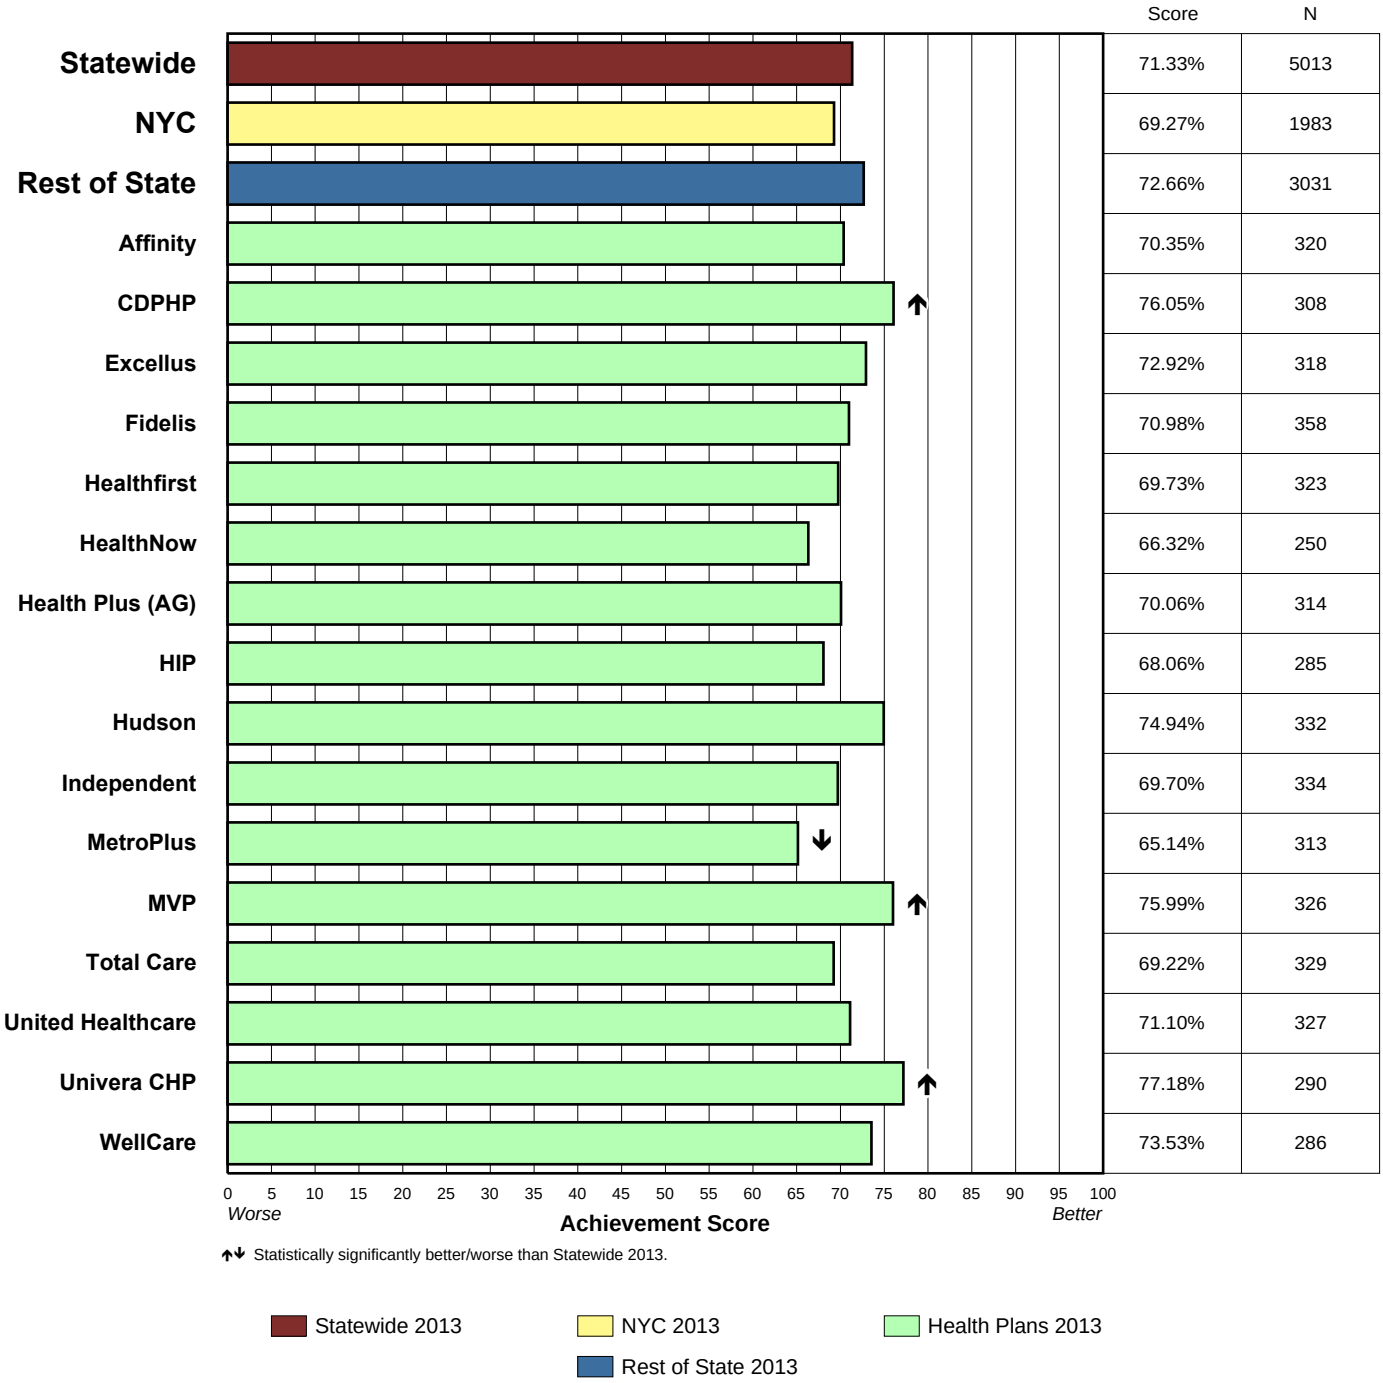
When applicable, each question is represented with the composite name, the achievement score, the correlation value and trend information. The achievement scores are case-mix adjusted while data for each response option are not case-mix adjusted.

Overall Ratings

The CAHPS® 5.0 survey uses a 0-10 rating for assessing overall experience with personal doctors, specialists, health care and health plans. In the following four graphs, proportions of respondents assigning ratings of 8, 9, or 10 are reported as achievement scores.

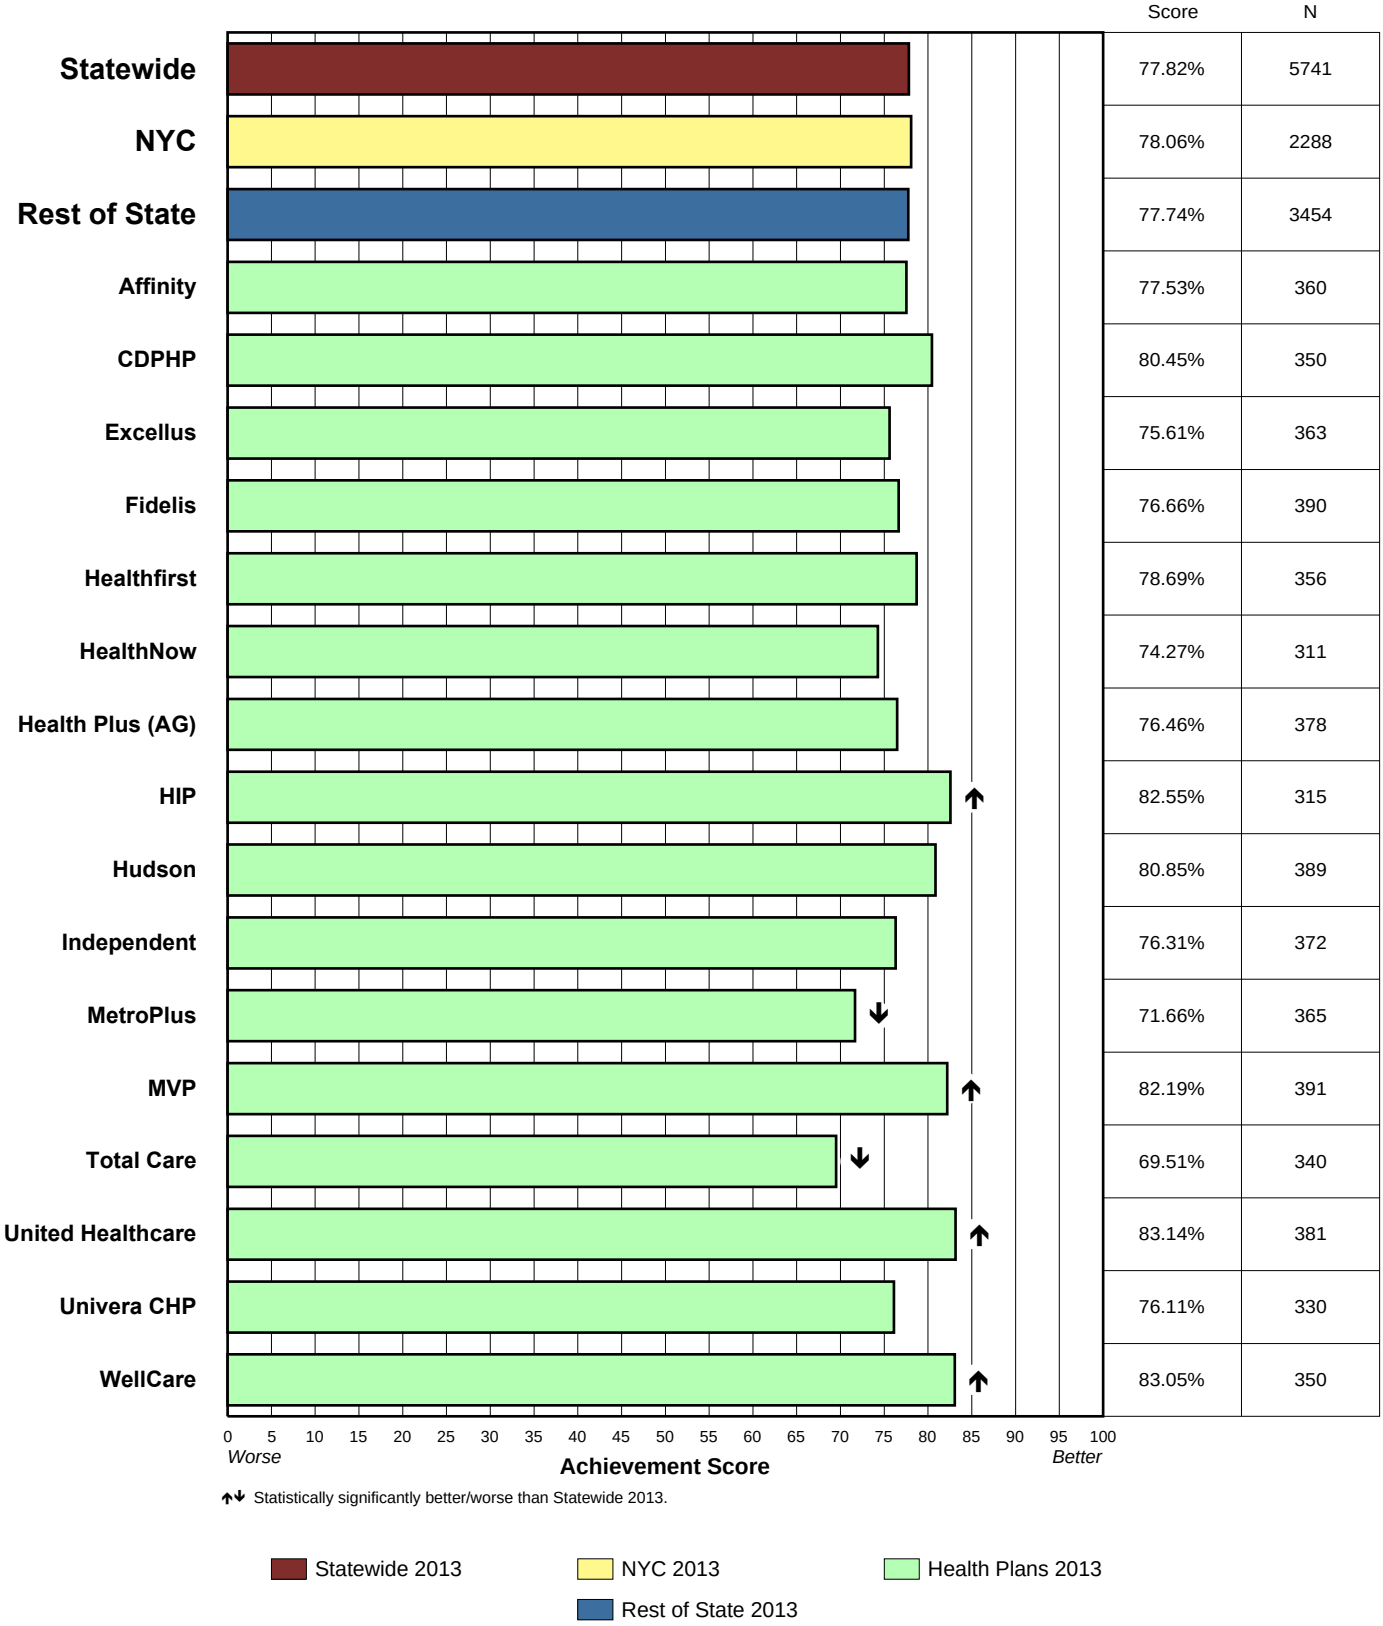
For each rating graph, plan-level results are compared to the Statewide for statistical significance and are presented with Statewide, New York City (NYC), Rest of State as well as individual plan results.

Q18. Rating of all health care (8, 9 or 10)



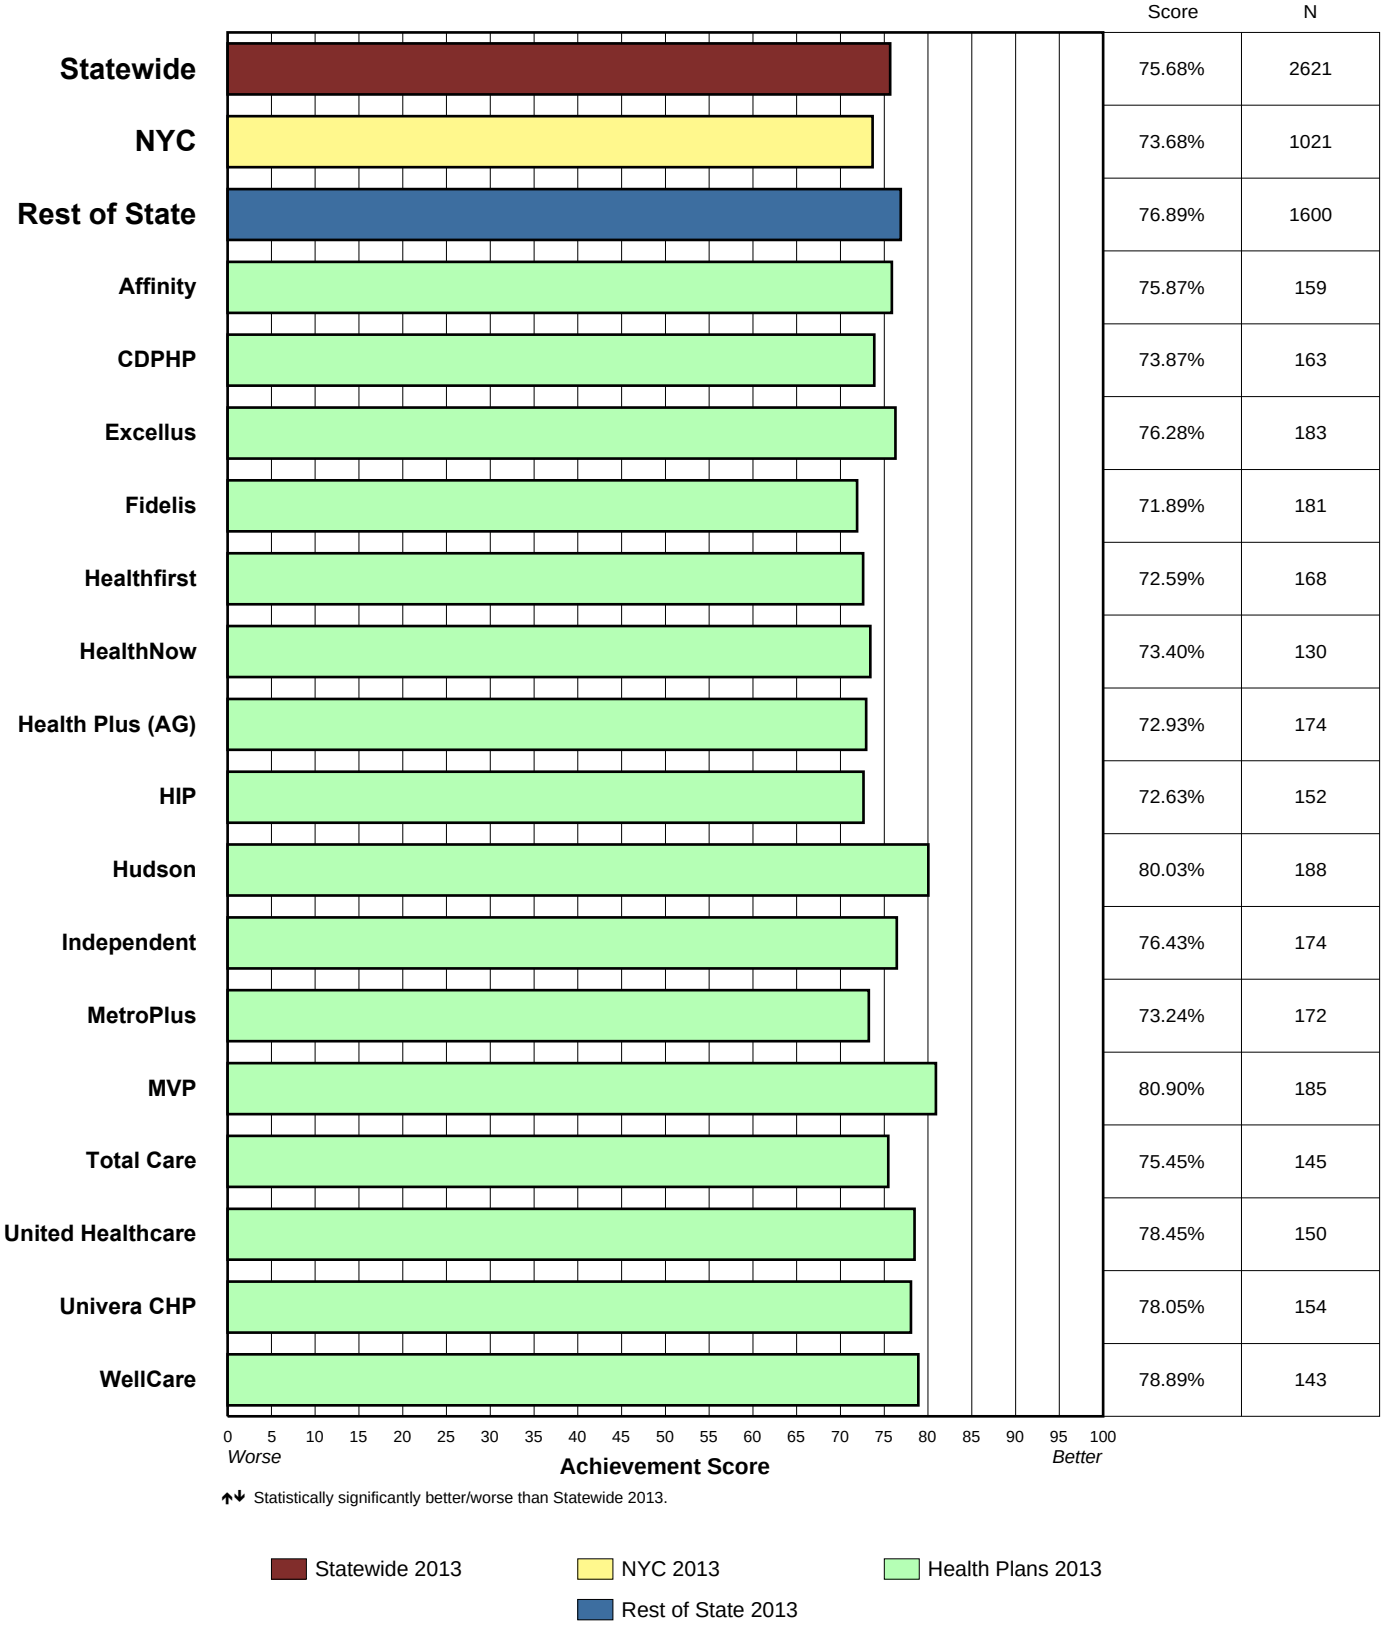
Overall Ratings

Q37. Rating of personal doctor (8, 9 or 10)



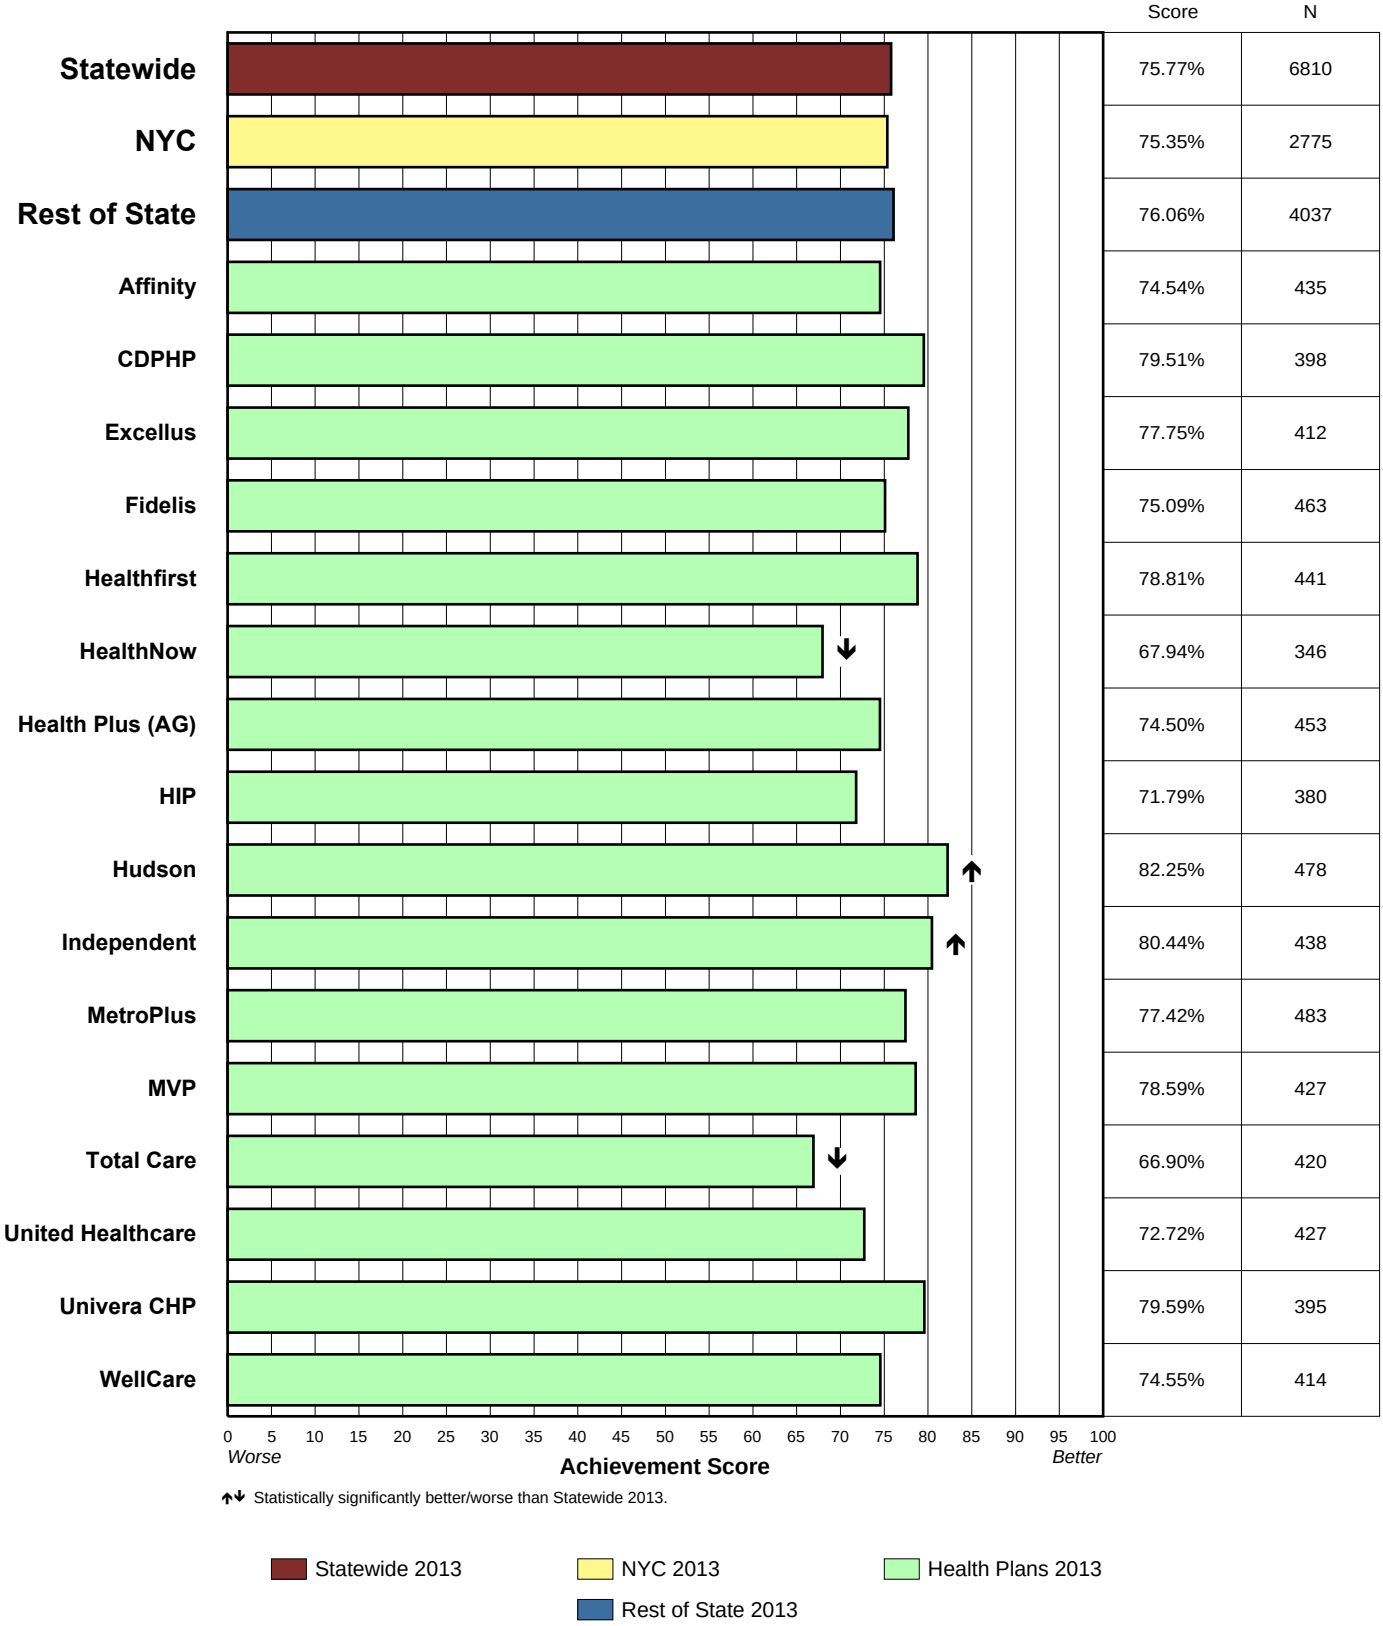
Overall Ratings

Q41. Rating of specialist seen most often (8, 9 or 10)



Overall Ratings

Q45. Rating of health plan (8, 9 or 10)



Composites

Questions that relate to the same broad domain of performance are grouped together for the purpose of reporting. For example, the domain "Getting Care Quickly" includes questions about how soon appointments were scheduled. Composite achievement scores reflect responses of "Usually" or "Always" for the first four composites. Responses of "Yes" and "A lot" are considered achievements for the Shared Decision Making composite.

For each graph, plan-level results are compared to the Statewide for statistical significance and are presented with Statewide, New York City (NYC), Rest of State as well as individual plan results.

For full detail of response options for each question and which responses qualify as achievements, please refer to the *Responses by Question* section.

Correlation Analysis

The Correlation Analysis section is helpful in understanding how results in various questions relate to the four general ratings (personal doctor, specialist seen most often, all health care, and health plan) for respondents. This allows for evaluation of which questions are most strongly linked to the rating and what the current achievement score is. You can use the section for a quick view of how composite questions correlate across ratings.

The correlation analyses are presented two ways. First there is a table summarizing correlations of the 13 composite questions to the four rating questions ranked by the highest correlation between the question and rating. This allows a visual picture of clustering of composites across ratings. Each question in a composite is represented with the individual question number, the composite name, the achievement score and the correlation value.

Example:
Looking at where the composites cluster will let you identify areas correlating with ratings. For example if Getting Needed Care and How Well Doctors Communicate have higher correlations across the ratings, you can see how these aspects are important to members and influence how satisfied they are with their providers, their health care or their health plan. Likewise, composites clustered toward the bottom may indicate areas of lower importance to the members. The visual also allows you to see areas where you are performing well or poorly. If you are performing poorly in Getting Needed Care, and it is important to the members' satisfaction with care, this could be a compelling reason to focus on improving this area. It also lets you see how different questions within a composite correlate individually.

The summary is followed by four tables presenting more detailed data on composite questions for each individual rating. The questions are written out and you can see the proportion of responses for each response option. This lets you see where an opportunity for improvement may lie.

Example:
For example, if a question correlates highly and has higher proportions of "sometimes" and "never", improving the processes may move respondents up to "always" which will improve not only that composite, but the other rating questions.

Correlation Summary

All information that would let someone identify you will be kept private. The New York State Department of Health and DataStat will not share your personal information with anyone without your OK. You may choose to answer this survey or not. If you choose not to, this will not affect the benefits you get.

Your responses to this survey are completely confidential. Once you complete the survey, place it in the envelope that was provided, seal the envelope, and return the envelope to DataStat.

You may notice a barcode number on the front of this survey. This number is ONLY used to let us know if you returned your survey so we don't send you reminders.

If you want to know more about this study, please call 1-877-455-3394.

SURVEY INSTRUCTIONS

- **Please be sure to fill the response circle <u>completely</u>. Use only <u>black or blue ink</u> or <u>dark pencil</u> to complete the survey.**

Correct Mark ● **Incorrect Marks**

- **You are sometimes told to skip over some questions in the survey. When this happens you will see an arrow with a note that tells you what question to answer next, like this:**

● **Yes ➔ *Go to Question 1***
○ **No**

⬇ START HERE ⬇

1. **Our records show that you are now in [HEALTH PLAN NAME]. Is that right?**

   ○ Yes ➔ ***Go to Question 3***
   ○ No ➔ ***Go to Question 2***

2. **What is the name of your health plan? (please print)**

   _____

YOUR HEALTH CARE IN THE LAST 6 MONTHS

These questions ask about your own health care. Do not include care you got when you stayed overnight in a hospital. Do not include the times you went for dental care visits.

3. In the last 6 months, did you have an illness, injury, or condition that needed care right away in a clinic, emergency room, or doctor's office?

- ○ Yes ➔ ***Go to Question 4***
- ○ No ➔ ***Go to Question 6***

4. In the last 6 months, when you needed care right away, how often did you get care as soon as you thought you needed?

- ○ Never
- ○ Sometimes
- ○ Usually
- ○ Always

5. In the last 6 months, when you tried to get an appointment for care you needed right away, how long did you usually have to wait between trying to get an appointment and actually seeing someone?

- ○ Same day
- ○ 1 day
- ○ 2-3 days
- ○ 4-7 days
- ○ 8-14 days
- ○ 15 days or longer

6. In the last 6 months, did you make any appointments for a check-up or routine care at a doctor's office or clinic?

- ○ Yes ➔ ***Go to Question 7***
- ○ No ➔ ***Go to Question 8***

7. In the last 6 months, how often did you get an appointment for a check-up or routine care at a doctor's office or clinic as soon as you thought you needed?

- ○ Never
- ○ Sometimes
- ○ Usually
- ○ Always

8. In the last 6 months, not counting the times you went to an emergency room, how many times did you go to a doctor's office or clinic to get health care for yourself?

- ○ None ➔ ***Go to Question 20***
- ○ 1 ➔ ***Go to Question 9***
- ○ 2 ➔ ***Go to Question 9***
- ○ 3 ➔ ***Go to Question 9***
- ○ 4 ➔ ***Go to Question 9***
- ○ 5 to 9 ➔ ***Go to Question 9***
- ○ 10 or more ➔ ***Go to Question 9***

9. In the last 6 months, did you and a doctor or other health provider talk about specific things you could do to prevent illness?

- ○ Yes
- ○ No
