## OFFERING PAID TIME OFF FOR CANCER SCREENINGS

## Save Money and Save Lives: Implement a Screening Program Today

## Cancer prevention and screening keeps your staff healthy and makes business sense

- Cancer is the second leading cause of death in New York State.¹
- Cancer screening can help detect cancer early, when treatment can be most successful, or, in some cases, prevent cancer from ever developing in the first place.<sup>2</sup>
- Research has shown that offering designated time off for cancer screenings increases employee screening rates.<sup>3,4</sup>
- A business can realize a return on investment for this policy. A cancer diagnosis is estimated to cost a business more than \$1,600 annually per employee in lost productivity.<sup>5</sup>
- Employers may realize a healthier workforce and reduce spending on worker compensation and disability costs, replacement costs for ill or injured employees who are absent, and recruitment and training costs for new employees.<sup>6</sup>
- The sooner policies are implemented, the sooner businesses will realize the savings and a healthier workforce.
