

Section 4: Demographic Data Tables

Description

An expanded set of demographic data tables have been compiled to supplement the Community Need Index (CNI). The data presented in these tables have been extracted from the U.S. Census 2000 Summary File 1 and Summary File 3. The demographic data tables in this section are organized by county. A list of the demographic variables included and their related tables can be found in the list of tables below.

The information in these tables provide the socio-demographic context for the interpretation of the CNI. For example, service providers may use the CNI, in conjunction with the demographic data, in designing and targeting HIV prevention activities for the communities they serve. A community that experiences high residential mobility might best be reached by mass media, while a community low in residential turnover might be more responsive to outreach through community organizations. Areas with relatively large number of families with children and young people might best be reached through schools and youth centers. Areas with sizable racial/ethnic minority populations might best be reached by strategies that take into account their history, customs, and languages.

It should be noted that the demographic data are cross-sectional in nature and provide composite "snapshots" of the communities at a single point in time. The variables are most useful when they are interpreted jointly rather than individually. Furthermore, the information presented in this table should be used in combination with knowledge of the history and the dynamics of the local communities to most effectively design and deliver HIV prevention services.

For more information on the demographic data presented in this document, including full descriptions of the variables, please refer to the Census 2000 Summary File 1 and 3 Technical Documentation, which can be found on the U.S. Census Bureau website as follows: <http://www.census.gov/main/www/cen2000.html>

List of Tables

- Table 4.1. Population Size, Sex, Age, and Median Age
