Subject: Community Need Index

Preface

Welcome to the latest edition of the Community Need Index Report. This collection of eight regional reports covers all 62 New York State counties, and provides a unique reference tool for public health officials and HIV/AIDS-related service providers. The Community Need Index (CNI) combines information from multiple sources to produce a composite measure of HIV/AIDS presence and risk behavior at the ZIP code level. Its purpose is to help users identify and direct health care and prevention services to communities most in need of such services. This edition has gone through important revisions to achieve the primary goal of the project - Empowering our community partners to use the best information available in their efforts to stem the AIDS epidemic. I hope that the CNI 2006 will help the service community in New York State and serve as a model and source of information for others to develop similar tools for their own jurisdictions.

*Guthrie S. Birkhead, M.D., M.P.H.
Director, AIDS Institute*

Acknowledgements

We would like to thank the Bureau of Sexually Transmitted Diseases Control, the Bureau of HIV/AIDS Epidemiology, the AIDS Case Registry, and the Statewide Planning and Research Cooperative System (all part of the New York State Department of Health) and the New York City Department of Health and Mental Hygiene Sexually Transmitted Diseases Control Program for providing the health data used in this report. The demographic data were extracted from Summary Files 1 and 3 of U.S. Census 2000 released by the U.S. Census Bureau through their web site and DVD-ROMs. We also wish to thank the members of the HIV/AIDS Resource Planning (HARP) Workgroup, Robert Savicki, Robert Walsh, James Blodgett, Ed Waltz, James Tesoriero, and John Leung (Coordinator), for their contributions to the planning and development of the project. We are grateful to the following individuals who represented the respective division/office/bureau within the AIDS Institute during the planning phase of the project - Barry Sherman, Alvaro Carrascal, Hope Plavin, Elizabeth Fairweather, Mark Sharp, John Fuller, Beth Justiniano, Frank Laufer, and Amy Kelly. Their knowledge of the subject matter and diverse professional background have helped improve the contents and format of this report. We want to acknowledge all the Institute staff who participated in our HARP focus groups for their insights, comments, and suggestions on the initial design of the new report series. Special thanks to the Institute's Executive Office for their continuous support, guidance, and advice to bring this project to its fruition.

Section 1: Introduction

About the Community Need Index Report Series

The Community Need Index (CNI) Report Series (2006 Edition) is published by the New York State Department of Health AIDS Institute as a resource for HIV/AIDS-related need assessments, program planning, and evaluation. The report series covers all 62 New York counties with eight regional reports classified in three CNI statistical areas (see Table 1.1). Each regional report provides summary tables and thematic maps that display levels of HIV/AIDS related service needs in local communities as indicated by the CNI and the nine indicators used in the CNI calculation. In addition, socio-demographic characteristics of local communities are presented in a separate section of the report to facilitate program planning and evaluation activities. All data are reported at the ZIP code level by county. The definitions and the sources of the nine indicators are presented in Table 1.2.

Table 1.1. CNI statistical areas, report regions, and constituent counties.

<i>CNI Statistical Area*</i>	<i>Report Region</i>	<i>Counties</i>
New York City (NYC)	New York City	Bronx, Kings, New York, Queens, Richmond
New York City Vicinity (NYV)	Hudson Valley	Dutchess, Orange, Putnam, Rockland, Sullivan, Ulster, Westchester
	Nassau/Suffolk	Nassau, Suffolk
Rest of State (ROS)	Central New York	Cayuga, Cortland, Herkimer, Jefferson, Lewis, Madison, Oneida, Onondaga, Oswego, Saint Lawrence, Tompkins
	Finger Lakes	Chemung, Livingston, Monroe, Ontario, Schuyler, Seneca, Steuben, Wayne, Yates
	New York Penn	Broome, Chenango, Tioga
	Northeastern New York	Albany, Clinton, Columbia, Delaware, Essex, Franklin, Fulton, Greene, Hamilton, Montgomery, Otsego, Rensselaer, Saratoga, Schenectady, Schoharie, Warren, Washington
	Western New York	Allegany, Cattaraugus, Chautauqua, Erie, Genesee, Niagara, Orleans, Wyoming

* A CNI statistical area is made up of one or more regions within which CNI scores of the ZIP codes are computed.

Table 1.2. Description of the nine health statistical indicators used in the CNI composite measure.

<i>Indicator</i>	<i>Description</i>	<i>Source</i>
Teenage Pregnancy	Average annual rate of 2000, 2001, and 2002 pregnancies among females aged 10-17, per 1,000 females aged 10-17	Bureau of Biometrics, NYSDOH
Cocaine Hospital Discharges	Average annual rate of 2001, 2002, and 2003 cocaine-related discharges among persons aged 13-64, per 100,000 persons aged 13-64	Statewide Planning and Research Cooperative System (SPARCS), NYSDOH
Opioid Hospital Discharges	Average annual rate of 2001, 2002, and 2003 opioid-related discharges among persons aged 13-64, per 100,000 persons aged 13-64	Statewide Planning and Research Cooperative System (SPARCS), NYSDOH
Sexually Transmitted Diseases	Average annual rate of 2001, 2002, and 2003 syphilis, gonorrhea, and chlamydia cases among persons aged 13-64, per 100,000 persons aged 13-64	Bureau of STD Control, NYSDOH and Bureau of STD Control, NYCDOHMH
Maternal Seroprevalence	Ratio of 2001, 2002, and 2003 newborns that tested positive for HIV, per 100 tested newborns	Bureau of HIV/AIDS Epidemiology, NYSDOH
Male HIV Hospital Discharges	Average annual rate of 2001, 2002, and 2003 HIV-related discharges among males aged 13-64, per 100,000 males aged 13-64	Statewide Planning and Research Cooperative System (SPARCS), NYSDOH
Female HIV Hospital Discharges	Average annual rate of 2001, 2002, and 2003 HIV-related discharges among females aged 13-64, per 100,000 females aged 13-64	Statewide Planning and Research Cooperative System (SPARCS), NYSDOH
AIDS Cases	Average annual rate of 2001, 2002, and 2003 AIDS cases diagnosed among persons aged 13-64, per 100,000 persons aged 13-64	Bureau of HIV/AIDS Epidemiology, NYSDOH
HIV Cases	Average annual rate of HIV cases among persons aged 13-64 diagnosed during 2001, 2002, and 2003, per 100,000 persons aged 13-64	Bureau of HIV/AIDS Epidemiology, NYSDOH

What is the Community Need Index?

HIV, the virus that causes AIDS, affects every community in New York but impacts some localities more than others. Accordingly, the need for HIV/AIDS-related health care and prevention services may vary across neighborhoods. The CNI was created to identify spatial variation in the presence of HIV/AIDS and related risk behaviors and to facilitate comparative assessment among local communities at the ZIP code level.

Interpreting the Community Need Index

In this report series, every ZIP code that has an identifiable geographic boundary is treated as a representation of a local community. Nine health statistics associated with each ZIP code are used as indicators of service need. The indicators are analyzed and combined into a single CNI score for each ZIP code. The ZIP codes are then rank-ordered from high to low based on their CNI scores. The top 20% of the ZIP codes (80th percentile and above) are classified as high need communities (H); the next 20% of the ZIP codes are classified moderate need communities (M); and the remaining 60% are considered as low need communities (L). It should be noted that different locations within a ZIP code may not exhibit the same level of need as measured by its CNI score. Also, a ZIP code covers a large area that may include residential as well as non-residential areas such as parks and other public works.

Comparing the Community Need Index Across Geographic Areas

To facilitate meaningful comparisons of HIV/AIDS-related service needs in local communities within different geographic regions (i.e. urban vs. rural; metropolitan areas vs. small towns, etc.), the CNI scores are computed separately for ZIP codes in each of the three statistical areas – New York City (NYC), New York City Vicinity (NYV), and Rest of State (ROS). It is important to note that CNI scores can be used to compare relative need of two or more ZIP codes within the same CNI statistical area. However, the CNI scores for ZIP codes from two different statistical areas (e.g. one ZIP code from NYC and the other from NYV) should not be compared directly, since the respective CNI scores are computed based on different sets of statistical parameters unique to each CNI statistical areas.

Useful Features

The CNI has two important features as a comparative assessment tool. First, the computation of the index is based on a statistical model that combines nine health statistical rates into a single scoring system. It is a composite measure that takes into consideration the multiple sources of HIV/AIDS-related risk. Second, it is a geographic information system (GIS)-based measure that allows spatial analysis of risk. Users of the CNI can identify high need communities using thematic maps and examine their spatial distribution. Together with information about other community characteristics, the CNI can help service providers plan and address the specific needs of the people residing in their service areas.

New Features and Enhancements

The CNI 2006 has undergone substantial revisions, while still retaining the essential features and qualities of the previous edition. Changes to the report series design, its contents, and the methodological differences between this edition and previous editions are described in this section as follows.

Updates to the Index

The CNI 2006 has been updated with the latest data available together with a revised composite model. One of the major updates is the change in the number and specifications of the health statistical indicators used to calculate the CNI scores. While previous editions of the CNI have used ten indicators, the CNI 2006 uses nine, as described in Table 1.2. Key improvements of the revised index include (1) the incorporation of newly diagnosed HIV case data; (2) the widening of many indicators' age bracket from age 15-54 to age 13-64; (3) the inclusion of chlamydia in the total counts of newly diagnosed STD cases; (4) limiting the scope of the indicators to exclude the incarcerated population when possible; (5) the consolidation of all AIDS cases into a single category; and (6) the removal of low birth weight as an indicator of HIV/AIDS risk.

Improved Reporting

Many improvements to the presentation of the information in the report have been implemented. Highlights of the key improvements are described as follows:

1. Color-coded maps with ZIP code and county boundaries

A color-coding scheme based on the CNI letter scores to denote high, moderate, and low need ZIP codes has been applied to the summary tables and maps. These enhancements provide a more efficient way for users to look for key information. In addition, both ZIP code and county boundaries have been applied to the new CNI maps. This feature allows the reader to gain a visual understanding of the fact that some ZIP codes may cross county lines. This is important to consider when interpreting the CNI. For example, the county rate of any given CNI indicator may not be equal to the rate based on aggregated ZIP code total because ZIP codes do not exactly follow county boundaries.

2. Streamlined and consolidated CNI tables

In the CNI 2006, the summary table now contains the percentile rank associated with each ZIP code, which replaces the CNI raw score that has been used in the previous edition of the CNI. This change will make it easier for users to interpret the CNI, in the context of how ZIP codes rank compared to one another within a particular CNI statistical area. In addition, differences between ZIP codes that receive the same CNI letter score can be better understood.

3. Expanded supplementary tables to include relevant demographic data

The CNI 2006 has an expanded demographic data section. Nine different tables, which cover various demographic indicators, are available for each county at the ZIP code level.

4. Electronic versions available for download

A PDF of the CNI 2006 is available for download on the New York State Department of Health website: <http://www.nyhealth.gov/diseases/aids/index.htm>.

5. Exclusion of AIDS Institute-funded provider information

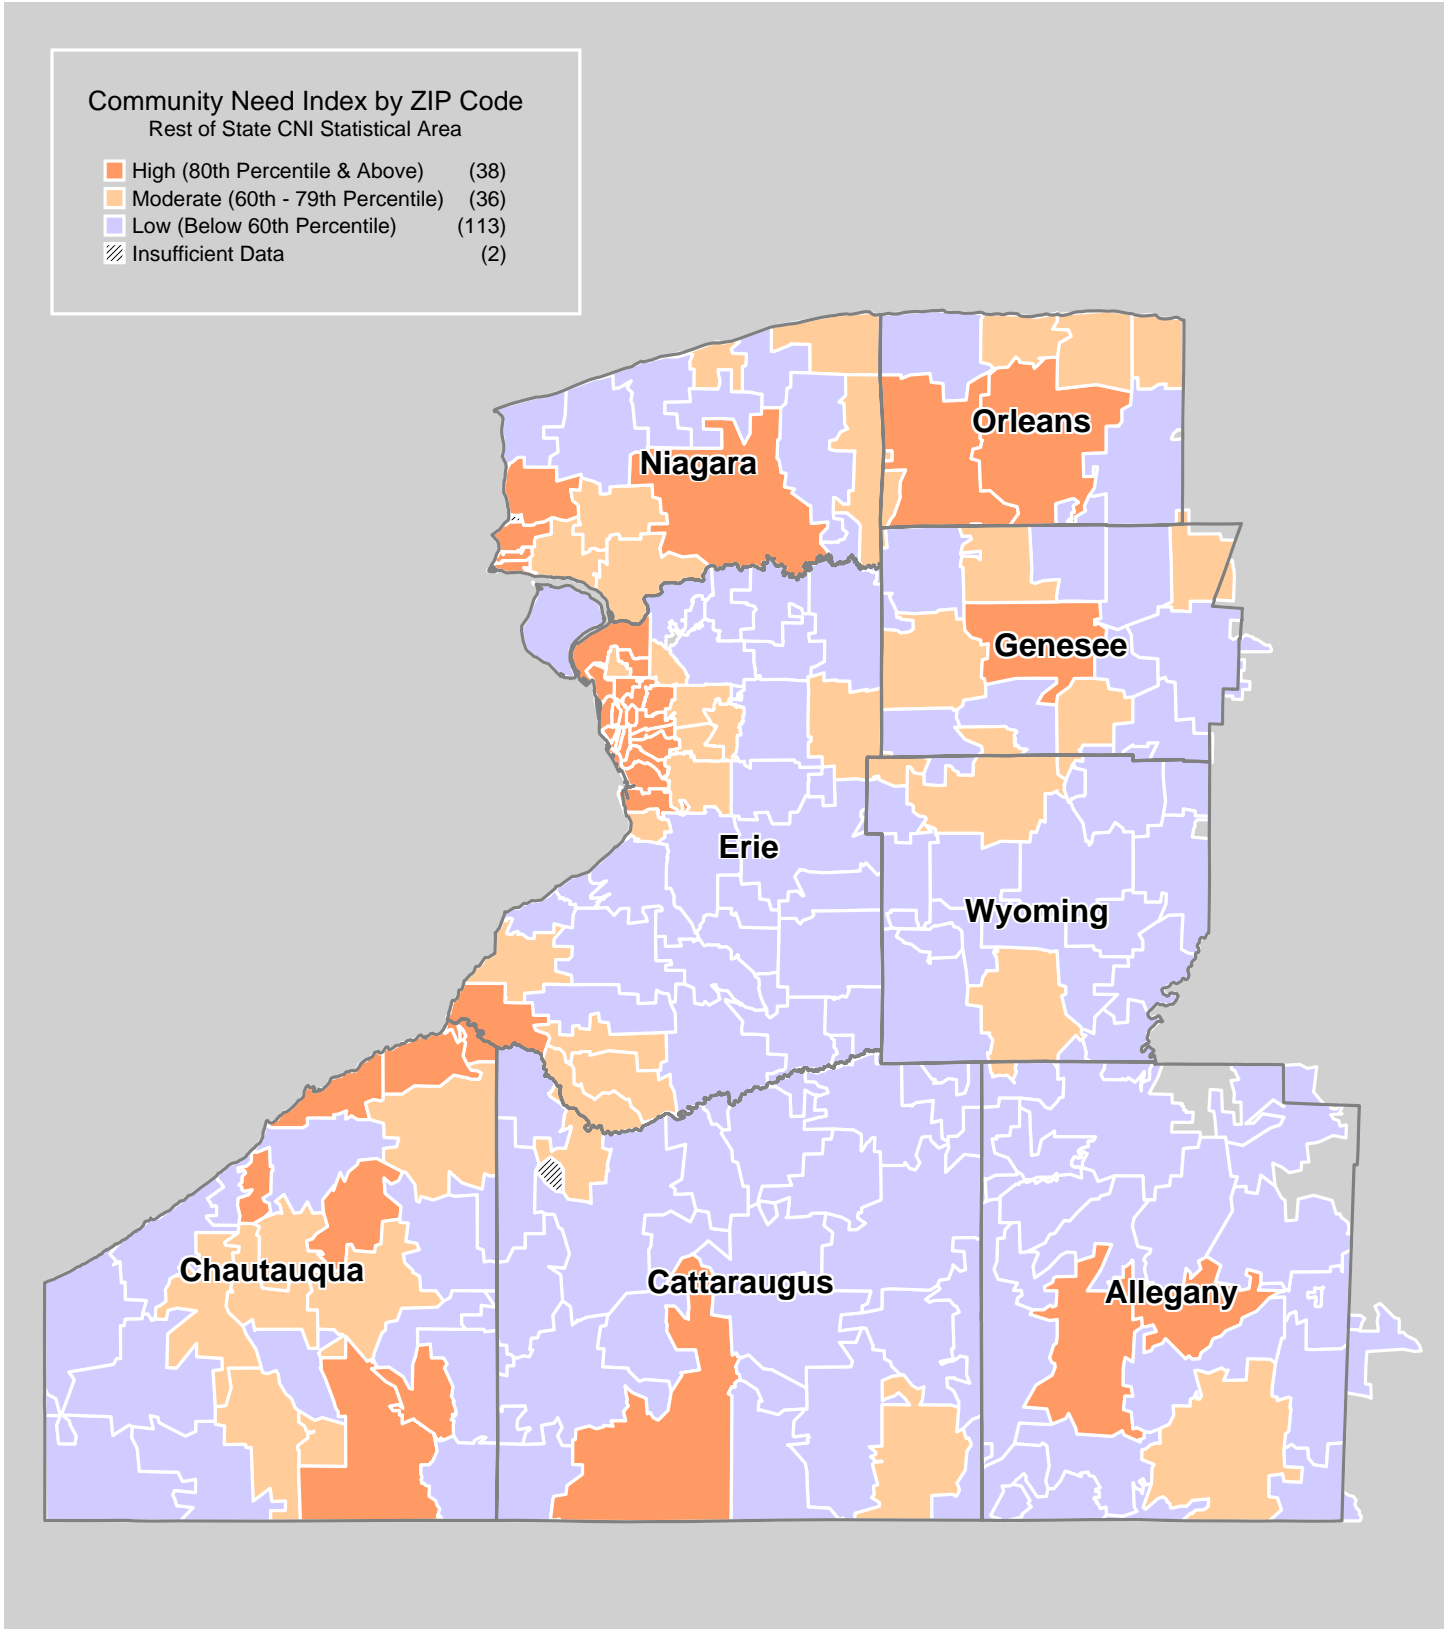

The CNI 2006 does not include AIDS Institute-funded provider information as found in previous editions. The decision to exclude this information from the CNI 2006 was based on the fact that these data were subject to frequent changes and thus provided an incomplete picture of HIV/AIDS service delivery and availability. A comprehensive reporting of HIV/AIDS service provisions is beyond the scope of this project. For more information please refer to the New York State Department of Health website: <http://www.nyhealth.gov/diseases/aids/index.htm>.

Limitations of the CNI

Users of the CNI should exercise caution when using and interpreting the information in the report series. Some of the known limitations are discussed here. First, the CNI is a composite measure designed to describe the spatial variation of HIV/AIDS presence and aggregated risk factors across geographic units, and therefore should not be used to infer risk behavior of individuals living in a particular ZIP code. Second, it is important to recognize that every community has potential needs for HIV/AIDS-related services. However, a high need area does not necessarily imply the lack of such services. The designation of a high, moderate, or low need label to a ZIP code is based on the relative ranking of a ZIP code and therefore should be considered in the context of the CNI statistical area where the ZIP code is located. Thus, a ZIP code area in New York City designated as "low" need may in fact have a higher absolute level of need than a "moderate" need ZIP code in other CNI statistical areas. Third, the CNI and its nine indicators may not show the most current information due to lag time in data reporting. Fourth, the CNI indicates, at the aggregate level, where people with different levels of service need resided during a given period of time in the past. High need areas do not necessarily represent the locations where certain high risk behavior has taken place, nor predict future occurrence of high risk behavior. In fact, people who are at high risk of HIV infection may have been exposed to risky behavior outside their resident ZIP codes. Finally, CNI scores are based on rates, not absolute numbers. A higher CNI score from a sparsely populated area may represent fewer persons who need services than a lower CNI score from a high population area. Other technical issues pertaining to data suppression, ZIP code definitions, and index construction are discussed in Appendix A.

Section 3: Statewide Risk Indicator Table

Description

The Statewide Risk Indicator Table provides the nine CNI indicator rates for all 62 counties in New York State. This table serves as a reference for readers interested in comparisons by county within each region. Comparisons can also be made across the eight report regions, as this is the only table in the report that lists county data for every region. Statewide rates are also provided for each indicator, allowing for comparisons to be made between county and state rates.

Notes: ^a Rates are calculated using 2001, 2002, and 2003 data, except Teen Pregnancy which uses 2000, 2001, and 2002 data.

Refer to Table 1.2 for variable definitions and for additional information on rate calculations.

* Data have been suppressed. Refer to Appendix A for suppression criteria.

Section 4: Demographic Data Tables

Description

An expanded set of demographic data tables have been compiled to supplement the Community Need Index (CNI). The data presented in these tables have been extracted from the U.S. Census 2000 Summary File 1 and Summary File 3. The demographic data tables in this section are organized by county. A list of the demographic variables included and their related tables can be found in the list of tables below.

The information in these tables provide the socio-demographic context for the interpretation of the CNI. For example, service providers may use the CNI, in conjunction with the demographic data, in designing and targeting HIV prevention activities for the communities they serve. A community that experiences high residential mobility might best be reached by mass media, while a community low in residential turnover might be more responsive to outreach through community organizations. Areas with relatively large numbers of families with children and young people might best be reached through schools and youth centers. Areas with sizable racial/ethnic minority populations might best be reached by strategies that take into account their history, customs, and languages.

It should be noted that the demographic data are cross-sectional in nature and provide composite "snapshots" of the communities at a single point in time. The variables are most useful when they are interpreted jointly rather than individually. Furthermore, the information presented in this table should be used in combination with knowledge of the history and the dynamics of the local communities to most effectively design and deliver HIV prevention services.

For more information on the demographic data presented in this document, including full descriptions of the variables, please refer to the Census 2000 Summary File 1 and 3 Technical Documentation, which can be found on the U.S. Census Bureau website as follows: <http://www.census.gov/main/www/cen2000.html>

Appendix A: Technical Notes

Introduction

The Community Need Index (CNI) is a composite measure designed to assess the need for HIV/AIDS-related services by ZIP code. There are two main issues pertaining to the measurement of service need by geography. First, the need for services is an abstract construct and thus cannot be observed directly. Furthermore, there is no known measure readily available to evaluate and compare the need for services in small geographic areas. Second, the need for services may emerge for different reasons and a single indicator may not fully capture multiple sources of service need. For instance, communities combating injection substance use may require treatment and prevention services that are markedly different from communities with elevated levels of unprotected sexual activity among teenagers. Using a multiple-indicator approach to these problems, the CNI project combined the values of nine ZIP-code level variables into a single index for every ZIP code located in each of the three CNI statistical areas in New York State. The CNI allows service providers to easily identify ZIP codes with the highest need for HIV/AIDS-related services. Providers may allocate their resources and effort more effectively according to the relative needs of the communities within their service areas.

The purpose of this appendix is two-fold. First, it explains the major steps taken in calculating the CNI. Second, it discusses issues that are critical to the interpretation of the data tables contained in this report. Selected examples of how to use the CNI in various applications are provided in Appendix B. Readers who want to analyze the data sets used in the CNI report series may refer to Appendix C for data documentation.

Need Indicators

The CNI is constructed using nine ZIP-code level need indicators. Each indicator is a health statistic expressed as a rate or a ratio that is based on three years of data, and it is presumed to be associated with one or more underlying risk factors for the transmission of HIV in a local community (Table A1).

Index Construction

The CNI is computed separately for each of the three CNI statistical areas in New York State. An independent statistical model is estimated for each CNI statistical area. ZIP codes with less than 500 residents are excluded from the estimation process. All indicators are standardized (i.e. they have a mean of zero and a standard deviation of one) and a statistical weight is computed for each standardized indicator. Table A2 shows the weights for three CNI statistical areas,

Table A1. Need indicators and the associated risk factors.

Indicator	Presence of HIV/AIDS	Risk Factor	
		Drug Use Behavior	Sexual Behavior
AIDS Cases	X		
HIV Cases	X		
Maternal Seroprevalence	X		
Female HIV Discharge	X		
Male HIV Discharge	X		
Cocaine Discharge		X	
Opioid Discharge		X	
Teenage Pregnancy			X
Sexually Transmitted Diseases			X

Table A2. Statistical weights* for the nine indicators by CNI area.

Indicator	CNI Statistical Area		
	NYC	NYV	ROS
AIDS Cases	0.141	0.140	0.132
HIV Cases	0.138	0.138	0.130
Maternal Seroprevalence	0.123	0.129	0.122
Female HIV Discharge	0.140	0.129	0.128
Male HIV Discharge	0.133	0.113	0.113
Cocaine Discharge	0.132	0.121	0.126
Opioid Discharge	0.130	0.140	0.102
Teenage Pregnancy	0.099	0.117	0.128
Sexually Transmitted Diseases	0.128	0.117	0.122

New York City (NYC), New York City Vicinity (NYV), and Rest of State (ROS), respectively. These weights are used to determine the CNI raw scores for every ZIP code, including those with less than 500 residents. They represent the relative effects of the indicators on the CNI within a statistical area. The calculation of these weights is discussed in Step 9 of The CNI Algorithm section below.

The CNI Algorithm

1. “Point ZIPs”, ZIP codes that represent office buildings, post offices with mail delivery, or mail boxes but without residence population, are re-classified as parts of the surrounding ZIP codes. Data from these ZIP codes are also reassigned to the nearby ZIP codes that have population.
2. Indicator rates are created by dividing a numerator (number of cases) by a population denominator, as indicated in Table 1.2. Rates that include three years of data over a population are multiplied by a conventional number of persons to give a rate per 1,000 or 100,000, and are divided by three to give an average that approximates a one year rate. In the case of Newborn Seroprevalence the denominator also contains three years of data, so it is not necessary to divide by three. For any given indicator, a denominator with a value of zero in a ZIP code will be assigned with a rate of zero.
3. New York State is divided into three CNI statistical areas - New York City, New York City Vicinity, and Rest of State. The CNI for each CNI statistical area is computed separately.
4. ZIP codes with either less than 500 residents or less than 5 cases are excluded from weight estimation described in Step 5 through 8 below.
5. SAS PROC CORR is used to generate a correlation matrix for the ten indicators.
6. SAS PROC VARCLUS is run on the correlation matrix. PROC VARCLUS divides the nine indicators into varying numbers of clusters by maximizing the sum across clusters of the variance of the ten indicators that is explained by the cluster components. In addition, the procedure produces a set of scoring coefficients b_{ij} for the standardized indicators x_{ij} associated with a cluster $CLUS_j$, where i denotes any one of the n_j indicators ($i=1, \dots, i, \dots, n_j$), and j denotes any one of the J clusters ($j=1, \dots, j, \dots, J$). The scoring coefficients will be used to create cluster scores, c_j , in the next step.
7. SAS PROC SCORE is used to create a set of cluster scores, c_1, c_2, \dots, c_j , for each ZIP code. A cluster score c_j is a linear combination of the products of the scoring coefficients b_{ij} and the standardized indicators x_{ij} (i.e. the sum of $b_{ij}x_{ij}$) associated with a cluster $CLUS_j$:

$$c_j = \sum_{i=1}^{n_j} b_{ij}x_{ij} = b_{1j}x_{1j} + b_{2j}x_{2j} + \dots + b_{ij,j}x_{ij,j}$$

8. The variance of the indicators x_{ij} explained by the cluster $CLUS_j$ is labeled as k_j . The total variance of all nine indicators explained by all clusters is equal to $(k_1+k_2+\dots+k_j)$. The relative proportion of variance explained by any single cluster $CLUS_j$ is equal to $k_j/(k_1+k_2+\dots+k_j)$, or simplified as K_j .

9. CNI scores are computed for all ZIP code areas (including ZIP codes with less than 500 residents) as

$$10. \quad \sum_{j=1}^J \sum_{i=1}^{n_j} K_j b_{ij} x_{ij} = \sum_{j=1}^J K_j \sum_{i=1}^{n_j} b_{ij} x_{ij} = \sum_{j=1}^J K_j c_j = K_1 c_1 + K_2 c_2 + \dots + K_J c_J$$

Notice that the products $K_j b_{ij}$ are equivalent to the weights listed in Table A2. They represent the relative effects of the indicators on the CNI within a statistical area.

11. The CNI scores are transformed by adding the absolute value of the lowest score to the original scores, multiplied by 100, and rounding the transformed scores to the nearest digit. This is done to avoid negative scores and scores with many decimal digits which would be more difficult to read and compare.

12. If the ZIP code has less than 50 people or less than six cases in the denominators of all rates, the CNI score is considered unreliable, and is assigned a value of zero which represents a low CNI score.

13. In each of the three statistical areas, ZIP codes are rank-ordered from the highest to the lowest CNI score. The top 20% of the ZIP codes (80th percentile and above) are classified as having high need for HIV/AIDS-related services; the next 20% of the ZIP codes are classified as having moderate need; and the remaining 60% are considered as low need areas. The CNI letter scores, H, M, and L, are used throughout the report to denote ZIP codes with high, moderate, and low need for services, respectively.

14. If necessary, ZIP codes are added or subtracted from a letter group so that no two ZIP code areas with the same score (before rounding) are assigned to different letter groups. The choice of adding or subtracting is made so that the change is applied to the smallest number of ZIP codes.

15. It should be noted that the CNI scores can be used to compare relative service need of two or more ZIP codes from the same CNI statistical area. However, ZIP codes from two different statistical areas (i.e. one ZIP code from NYC and the other from NYV) should not be compared directly since the two sets of CNI scores are computed based on different statistical parameters.

Data Suppression

The CNI is an index. It is a composite of nine rates that indicate presence of HIV, or of risk behavior that could lead to HIV. Each of the nine rates is based on data that are subject to confidentiality protocols. These protocols are instituted to avoid publication of rates with very small numerators or denominators which, in a small community, might lead to identification of individuals. The CNI component rates are published in Table 1.2. Rates in ZIP code areas with small numerators or denominators are suppressed according to protocols required by data owners. Those protocols are listed in Table A3. In cases where a single suppressed rate might be computed from a knowledge of census denominators and a county rate, an additional rate is suppressed.

The CNI itself is not suppressed, but is converted to “L” and to a number score of zero in ZIP code areas where the sum of the numerators of component rates is less than six, or where the population of the area is less than fifty. In most but not all of these cases, the CNI was “L” before this conversion. This conversion has the same effect and some of the same motivation as suppression. The conversion is also done because it is thought that CNI scores based on fewer cases are not reliable.

Table A3. Suppression protocols for CNI variables.

Rate	Numerator (3 year totals)	Denominator	Suppress when:	
			Numerator	Denominator
AIDS Cases	AIDS Cases aged 13-64 np*	Population 13-64 np	n < 3	
HIV Cases	HIV Cases aged 13-64 np	Population 13-64 np	n < 3	
Maternal Seroprevalence	Newborns positive	Newborns tested		d < 50
Female HIV Discharge	Female HIV hospital discharge 13-64 np	Females 13-64 np	n < 6	d < 50
Male HIV Discharge	Male HIV hospital discharge 13-64 np	Males 13-64 np	n < 6	d < 50
Cocaine Discharge	Cocaine hospital discharge 13-64 np	Population 13-64 np	n < 6	d < 50
Opioid Discharge	Opioid hospital discharge 13-64 np	Population 13-64 np	n < 6	d < 50
Teenage Pregnancy	Pregnancies to females aged 10-17	Females aged 10-17	n < 6	d < 50
Sexually Transmitted Diseases**	STD cases aged 13-63	Population 13-64	n < 6	

* Non-prison population

** STD includes syphilis, gonorrhea, and chlamydia

Cautions When Using the CNI and the Indicator Rates

Some of the known limitations of the CNI are discussed in Section 1. Other technical issues that may affect the interpretation of the CNI and the indicator rates are ZIP code definitions.

ZIP codes are the lowest level of geography that are available on all data sets. However, ZIP codes were originally developed for mail delivery and not designed for data tabulation purpose. Problems arise when ZIP code definitions and boundaries are changed by the U.S. Postal Service. When this happened, attempts were made to reassign the numerators and the denominators to the appropriate areas. However, new ZIP codes may not always match the map boundary files in the CNI database. The vintage of the ZIP code boundary file (2002-03) used in mapping and tabulation was chosen to closely match the years of the data presented in this report. This will result in blank areas on the maps. Another problem is that while attempts have been made to determine addresses and ZIP codes of residence for all cases, there are occasions in which the data may be assigned to temporary residences or to post office boxes. It should be noted that the addresses of a hospital patient shows the ZIP code of the patient's residence, not the ZIP code of the hospital. Therefore, a ZIP code with a high CNI score or high indicator rates cannot be attributed to the mere presence of one or more hospitals in the community. If this happens frequently in a low-population area, the cases in the numerator can be larger than they should be given the denominator. For this reason, areas with low populations but many temporary residents or many mailboxes in associated ZIP codes may have rates that are higher than appropriate. A final problem is that a ZIP code may be missing from a county map or table. This may occur for several reasons: (1) The ZIP code is a "point" ZIP, that is, an office building or a post office with mail delivery or mail boxes but without population; (2) the ZIP code is associated with a small town that has a non-delivery post office and mail delivery from another ZIP code; it is assigned to the ZIP code of delivery; (3) the ZIP code has been changed by the Postal Service; (4) the ZIP code crosses one or more county boundaries. The ZIP code is assigned to a primary county, and does not appear on the maps and tables of the other counties with which it is associated.

History of the CNI

Previous editions of the Community Need Index were published in 1991, 1992, 1994, 1995, and 2000. The basic CNI model has been fairly consistent for all editions. Methodological modifications were introduced over the years to improve the utility of the CNI. The 1991 edition did not include sexually transmitted diseases as an indicator since the data were not available. Editions for 1992 through 2000 included ten variables as shown in Table A3. Based on the results of focus groups, variable correlations, data availability, and many formulations, the current version dropped one variable, combined two, and added another. Weighting by the relative proportion of variance explained by each cluster was introduced in 1992 to adjust for the relative contribution of the clusters to the overall CNI.

The number of years of data used for the numerator of each indicator varied over the years (Table A4). In 1992, 1994, and 1995, more years of data were added to improve stability of the indicator rates. In 2000 and 2006, the number of years of data used in model estimation were restricted to three for all indicators in order to show more recent patterns of service needs. The numerators and denominators for the newborn seroprevalence and the low birthweight indicators are from the same data years, whereas population-based denominators used U.S. Census figures or other population estimates as shown in Table A4. The parameter estimates of the 1992, 1994 and 1995 CNI model were based on ZIP codes with population of 4,000 or more. The 2000 and 2006 edition lowered the threshold to include ZIP codes with population of 500 or more.

Table A4. Published editions of the CNI and years of data included.

Indicator	Edition					
	1991	1992	1994	1995	2000	2006

Appendix B: Examples of How to Use the CNI

Introduction

This appendix provides examples of how the CNI report may be used to identify high need areas and support service planning. The first example focuses on the eight highest need areas in Kings County, New York. The goal is to identify service need patterns using the CNI, the nine indicators, and socio-demographic information included in the report. The second example illustrates the selection of appropriate provider locations that are well-situated to deliver specific services to a target population. Both examples are for illustrative purposes only and provide basic strategies to analyze community-level information. The findings are not intended to be viewed as the sole resource for decision-making. Rather, the CNI report series is designed as a tool to complement providers' knowledge of the target communities and assist in raising new questions regarding service needs. Readers may use these examples as templates and develop their own customized strategies based on specific program goals.

Example 1: Identifying High Need Areas

The analysis of high need areas within a county or a city typically involves the following questions. Where are the locations of the high need areas in the county? Are there any discernible spatial patterns involving these high need areas? How many people are living in these high need areas? What are the most important service needs of the residents living there? What are the socio-demographic characteristics of these high need communities?

The following example focuses on identifying high need areas in Kings County, New York. There are 37 ZIP codes with residents in Kings County, 8 of which are classified as high need areas according to the CNI 2006. Table B1 shows the 8 Kings County ZIP codes with the highest CNI scores, their corresponding percentiles in the New York City CNI statistical area, and ZIP code population in 2000. These ZIP codes are densely populated, with populations ranging from just under 50,000 to over 86,000 residents. All 8 high need ZIP codes are clustered close together near the northern portion of the county that corresponds to the whole of the Bedford-Stuyvesant-Crown Heights neighborhood, and part of the Williamsburg-Bushwick and East New York neighborhoods. This cluster of high need areas is partially circumscribed on three sides by moderate need areas in the east, the west, and the south (see Figure B1).

Table B2 reports the 9 indicator rates that make up the CNI for the 8 high need ZIP codes. The last three rows of the table, containing reference figures to facilitate comparison, correspond to the county rates for Kings County (RF1), and the 50th and the 80th percentiles (RF2 and RF3) in the New York City CNI statistical area.

Table B1. Example 1 - CNI scores and population estimates for the eight highest need areas in Kings County, New York.

ZIP Code	CNI Score	Percentile in NYC CNI Statistical Area	Total Population 2000
11233	High	91	61,955
11221	High	89	76,363
11212	High	88	85,161
11216	High	87	55,775
11206	High	86	69,032
11207	High	83	86,551
11213	High	82	65,440
11238	High	81	48,965

Table B2. Example 1 - Indicator rates by ZIP code, Kings County, New York. (For definitions of the indicators, refer to Section 1, Table 1.2.)

ZIP Code	Teen Pregnancy per 1,000 Females	Cocaine Discharges per 100,000 persons 13-64	Opioid Discharges per 100,000 persons 13-64	STD per 100,000 persons	Maternal Seroprevalence per 100 tested newborns	Male HIV Discharges per 100,000 Males 13-64	Female HIV Discharges per 100,000 Females 13-64	Newly Diagnosed AIDS Cases per 100,000 Males 13-64	Newly Diagnosed HIV Cases per 100,000 Persons 13-64
11233	39.9	1,437	1,541	2,286	1.63	877	742	192	132
11221	37.6	1,466	1,659	1,884	1.38	976	709	157	121
11212	35.0	950	1,093	2,656	1.03	1,124	654	177	111
11216	35.0	1,347	1,434	2,045	1.23	1,113	457	153	141
11206	31.8	1,746	2,776	1,805	0.66	834	728	131	99
11207	33.7	953	1,270	2,052	1.12	676	609	148	101
11213	32.4	1,119	1,291	2,103	0.89	767	680	140	84
11238	33.9	923	1,110	1,306	1.06	589	537	156	98
RF1	22.4	537	823	1,047	0.52	387	274	77	53
RF2	19.1	392	545	559	0.26	318	148	57	42
RF3	32.0	1,044	1,295	1,445	0.82	867	509	124	98

Notes: RF1: Kings County Rate.
 RF2: 50th Percentile in New York City Statistical Area
 RF3: 80th Percentile in New York City Statistical Area
 Source: Section 2 Tables. Community Need Index for New York City, 2006 Edition

Numbers that are highlighted with **bold** type indicate that the rates are at or above the 80th percentiles as shown in row RF3. This table shows that for any given ZIP codes, between 5 to 8 indicators have values that are at or above the 80th percentiles in the New York City area. Even among indicator rates that are not boldfaced, these figures are much higher than the medians (RF2) for New York City and the county rates (RF1), respectively. Taken together, these figures suggest that the need for HIV/AIDS related services in these communities is high and the underlying sources for such need are diverse.

For instance, a comparison of ZIP code 11206 and 11238 demonstrates the general differences in their need profiles. ZIP code 11206 has a much higher cocaine- and opioid-related hospital discharge rates and STD rate, underscoring the greater need for HIV prevention services. In contrast, ZIP code 11238 has a higher maternal seroprevalence rate and newly diagnosed AIDS cases rate, suggesting a greater need for AIDS-related health care services.

Table B3 displays selected social and demographic characteristics of these communities. These ZIP codes were mostly populated by people of color, with higher concentrations of non-Hispanic blacks in ZIP code 11216 (85%), 11233 (83%), 11212 (82%), 11213 (76%), and 11238 (66%). Persons of Hispanic origin have a substantial presence in ZIP code 11206 (56%), 11221 (34%), and 11207 (34%), with about 50% of the Hispanic population in these ZIP codes self-identifying as Puerto Ricans.

A comparison of the two high need ZIP codes 11206 and 11238 using the information from Table B3 suggests two different service need profiles. Over half of the residents in ZIP code 11206 (northwestern portion of the Williamsburg-Bushwick neighborhood) are Hispanics (54%) and almost 30% are Puerto Ricans. As a whole, the population in this ZIP code is relatively young, with the median age of under 29 years old. The level of educational attainment is also relatively low. One in four persons aged 25 and above did not complete school beyond 8th grade. With an unemployment rate of 9%, the ZIP code median household income is under \$18,700 and almost 41% of its population are living below poverty level. Twenty four percent of its residents are identified as foreign born and almost half of them are recent immigrants who came to the U.S. after 1990. Among the foreign-born, less than one third are naturalized citizens. About 18% of foreign-born persons do not speak English very well or not at all, and 22% of the households are linguistically isolated, underscoring the need for immigration-related and multi-language services.

The residents in ZIP code 11238 (on the west side of the Bedford-Stuyvesant-Crown Heights neighborhood) are primarily non-Hispanic Black (66%). With a median age of 33, the population in this ZIP code is older than that of 11206. ZIP code median household income is relatively high at almost \$40,000 (compared to the county median of \$32,135) and only 19% of its residents are living below poverty level, probably due to a lower unemployment rate (6.7%) and the higher educational

attainment of its residents - 36% reported to have a college or post-graduate degree, compared to the county average of 22%. Just like ZIP code 11206, 24% of its residents are foreign born. However, two thirds of the foreign-born population came before 1990 and over 48% have become naturalized citizens. Furthermore, less than 4% of the foreign-born persons do not speak English very well or not at all.

Example 2: HIV Counseling and Testing Services in Kings County

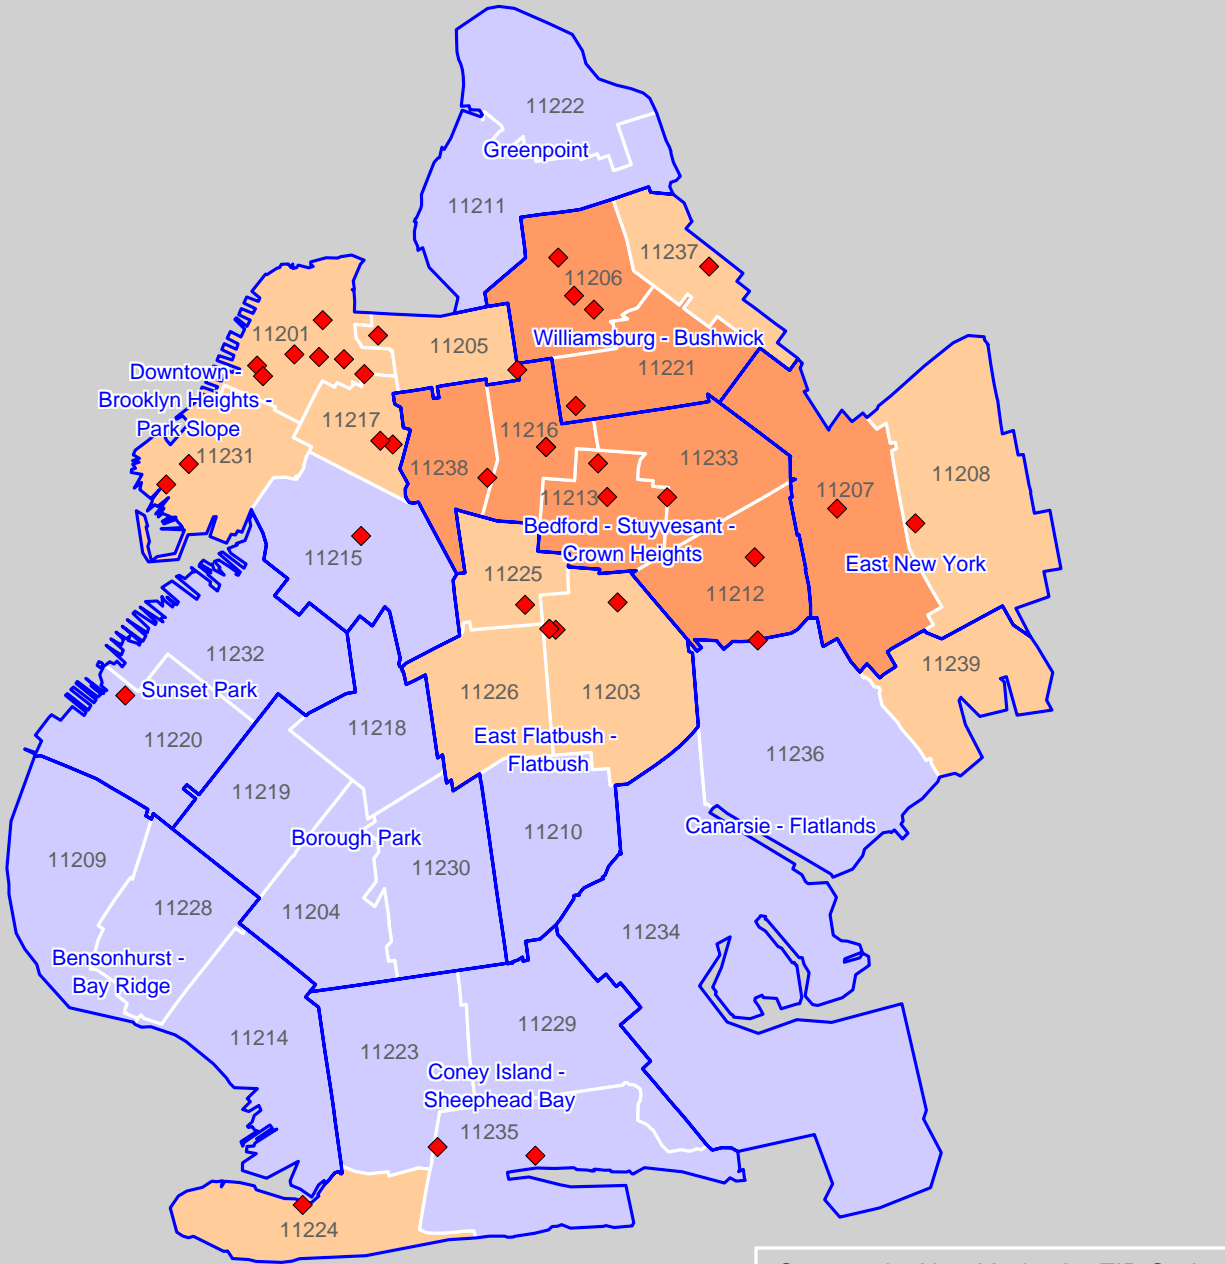

The second example examines the spatial distribution of HIV counseling and testing (C&T) services in Kings County, NY. Using data from an agency survey conducted in 2003, the locations of 38 HIV C&T service providers are geocoded and displayed on the CNI map for Kings County (Figure B1). About one third of the 38 providers are located in the eight high need ZIP codes. Except for ZIP code 11233, all high need areas have at least one HIV C&T service provider in the community. Another 55%, or 21 providers, are located in the 11 moderate need areas, with the highest concentration of providers in ZIP code 11201 (7 providers, or 18%).

In Example 1, ZIP code 11206 is identified as a high need area with a primarily Hispanic population (54%). It is also home to almost 2,900 Asians, 89% of which are of Chinese descent. An estimated 56% of the Chinese residents in 11206 do not speak English well or not at all. Of the three service providers present in the ZIP code, only one provides C&T services with Chinese translation service.

In brief, this simple exercise demonstrated how to use the CNI in conjunction with other data sources to identify possible service needs in the local community. Data from an agency survey of HIV C&T services, coupled with US Census data, helped identify two likely opportunities in expanding HIV C&T services in high need areas. First, there is no HIV C&T service provider in ZIP code 11233, one of the eight high need ZIP codes in the Bedford-Stuyvesant-Crown Heights neighborhood. Second, the Chinese residents in ZIP code 11206 who have very limited English-speaking ability may be better served if translation services are more readily available among HIV C&T service providers serving the local community.

The examples provided in this section are for illustrative purpose only. The data available in Sections 2, 3, and 4 of this report can be used to perform similar analyses for other communities of interest.

Appendix C: Data Set and Documentation

Introduction

This is the documentation for the data file, CNIdata06.XLS. It is in Microsoft Excel 2002 format. It is the data from which the Community Need Index (CNI) and the nine indicators are constructed. A second Excel file, RateCalc06.XLS, provides examples of indicator rate calculation. Table C1 describes the variables contained in the data file. The variable names are arranged in the order in which they occur in the data file.

Calculation of Indicator Rates

Table C2 shows the numerators and the denominators used in the calculation of indicator rates. The numerators are the sum of cases diagnosed or reported in three consecutive years. All indicator rates, except for newborn seroprevalence, are expressed as averages of three years of data divided by corresponding population estimates from a single year. The calculation of newborn seroprevalence rates involves data from a three-year period in both the numerators and the denominators. Indicator rates for cocaine hospital discharges, opioid hospital discharges, sexually transmitted diseases, male HIV discharges, female HIV discharges, AIDS cases, and HIV cases are calculated as:

$$[(\text{Numerator}/\text{Denominator})/3]*100,000$$

Indicator rates for teenage pregnancy are calculated as:

$$[(\text{Numerator}/\text{Denominator})/3]*1,000$$

Indicator rates for newborn seroprevalence are calculated as:

$$(\text{Numerator}/\text{Denominator})*100$$

Data Suppression

Blank Cells in the Excel data file indicate suppressed data.

County Codes

Each county is assigned a unique county code similar to the Federal Information Processing Standards (FIPS) code. The county names associated with their respective county codes are displayed in Table C3.

Table C1. Variables contained in the data file CNIData06.XLS.

Variable	Variable Description
ZIP	ZIP code area
CNI	CNI letter score (H=high; M=moderate; L=low)
CNIrank	CNI region percentile rank
CNTYcode	County code
CNTYname	County name
CNIarea	CNI statistical area (1= NYC, 2= NYV, 3= ROS)
TEENpreg	Number of pregnancies for females aged 10-17, 2000-2002, excluding spontaneous fetal deaths with gestations of less than 20 weeks.
COCdsch	Number of cocaine-related hospital discharges for non-prison persons aged 13-64, 2001-2003
Opiodsch	Number of opioid-related hospital discharges for non-prison persons aged 13-64, 2001-2003
STD	Number of syphilis, gonorrhea, and chlamydia cases for persons aged 13-64, 2001-2003
NBpos	Number of newborns tested HIV-positive, 2001-2003
MHIVdsch	Number of HIV-related hospital discharges for non-prisons males aged 13-64, 2001-2003
FHIVdsch	Number of HIV-related hospital discharges for non-prisons females aged 13-64, 2001-2003
AIDS	Number of AIDS cases diagnosed among non-prison persons aged 13-64, 2001-2003
HIV	Number of HIV cases diagnosed among non-prison persons aged 13-64, 2001-2003
NBtest	Number of newborns tested for HIV, 2001-2003
PopF1017	Female population aged 10-17, from 2000 Census
npF1364	Non prison female population aged 13-64
npM1364	Non prison male population aged 13-64
npP1364	Non prison population aged 13-64
Pop1364	Population aged 13-64

Table C2. Numerators and denominators used in the calculation of CNI indicators. (Data sources in parentheses.)

Indicator	Numerator	Denominator	Multiplier
AIDS Cases	AIDS (BHAЕ)	npP1364 (Census)	100,000
HIV Cases	HIV (BHAЕ)	npP1364 (Census)	100,000
Maternal Seroprevalence	NBpos (BHAЕ)	NBtest (BHAЕ)	100
Female HIV Discharge	FHIVdsch (SPARCS)	npF1364 (Census)	100,000
Male HIV Discharge	MHIVdsch (SPARCS)	npM1364 (Census)	100,000
Cocaine Discharge	COCdsch (SPARCS)	npP1364 (Census)	100,000
Opioid Discharge	Opiodsch (SPARCS)	npP1364 (Census)	100,000
Teenage Pregnancy	TEENpreg (BB)	PopF1017 (Census)	1,000
Sexually Transmitted Diseases	STD (SCP and BSC)	Pop1364 (Census)	100,000
