

# 2011 West Nile Virus Surveillance Summary

## Positive Test Results\* (01/01/2011 – 12/31/2011)

- No West Nile virus reported
- Mosquito or mammal infection
- Human disease case(s) with or without mosquito infection

\*The total number of WNV-positive mosquitoes/mammals depends on the amount of surveillance and testing in each county, and is not necessarily associated with degree of WNV risk. WNV-positive birds are not shown.
