Molina Healthcare Background

Background

The Consumer Assessment of Healthcare Providers and Systems (CAHPS®) 5.0H Children with Chronic Conditions (CCC) questionnaire is a comprehensive tool designed to assess consumers' experience with health care and health plans. CAHPS® CCC is the questionnaire that asks parents/caretakers of child health plan members about experiences with access to care, health care providers, and health plans. The CCC component of the questionnaire is a supplement to the CAHPS® Child Medicaid questionnaire which allows health plans to identify children with chronic conditions and evaluate their experience of care. The New York State Department of Health (NYSDOH) sponsored the CAHPS® CCC survey in response to CMS CHIPRA requirements. Results will be used to determine variation in parent/caretaker satisfaction among the plans. DataStat, Inc. conducted the survey on behalf of the NYSDOH from November 2020 through February 2021. The instrument used for the administration of the survey was the CAHPS® CCC questionnaire, developed and tested nationally for assessing the performance of health plans.

The survey was administered over a fifteen-week period using a mixed-mode (mail and telephone) four-wave protocol. The four-wave protocol consisted of a first questionnaire packet and reminder postcard to the parent/caretaker of all randomly selected child members, followed by a second questionnaire packet to non-respondents, and finally a phone follow-up to those who had not responded to the mailings.

The majority of questions addressed parent's/caretaker's experience with their child's health care, such as getting care quickly, communication with doctors, overall satisfaction with health care, and screening questions to identify children with chronic conditions. The questionnaire was further expanded to included 5 items from the CAHPS® Health Information Technology Item Set and an additional 6 supplemental questions of particular interest to the NYSDOH. Rounding out the instrument was a set of questions collecting demographic data. In total, the questionnaire consisted of 92 questions. A copy of the modified CAHPS® CCC questionnaire can be found in Appendix A.

Executive Summary

The CAHPS® CCC questionnaire was administered to the parents/caretakers of Medicaid and Child Health Plus (CHP) managed care plan child members. The survey included 13 managed care plans in New York with a sample of 1,500 children per plan. Questionnaires were sent to 19,500 parents/caretakers of child members following a combined mail and phone methodology during the period November 17, 2020, through February 23, 2021, using a standardized survey procedure and questionnaire. A total of 246 eligible and complete responses were received resulting in a 18.0% response rate. The disposition of surveys is contained at the end of this section.

Conclusions based on the information presented in this report should be tempered by a few caveats. First, for some questionnaire items, relatively small numbers of responses may be available due to skip patterns in the questionnaire. In order to present the most reliable information, results based on fewer than 30 observations are not presented in this report. Second, in some of the data presentations included in this report, correlation coefficients are computed to explore the relationship between different measures. High correlations, however, do not necessarily indicate causation. Third, in many of the charts and tables presented in this report, differences between the MMC/CHP Statewide average and other groups may be readily apparent. However, where these differences are not statistically significant they should be evaluated accordingly.

Throughout this report, health plan scores are reported alongside five reporting entities made up of respondents across all health plans. MMC/CHP Statewide scores include all respondents to the survey. Medicaid and CHP scores represent a split of all respondents by Payer status. CC-Negative and CC-Positive scores represent a split of all respondents by the child member's chronic condition status.

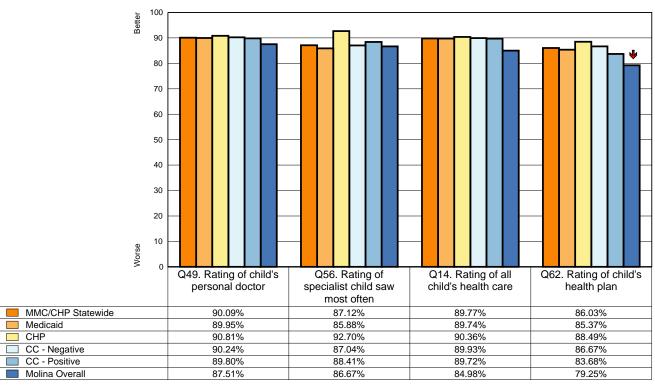

The first part of the *Executive Summary* provides summaries of the overall rating questions and composites. Composites are comprised of questions that relate to the same broad domain of performance. This report contains three types of composites: Standard Child Medicaid CAHPS® composites, CAHPS® CCC composites, and a composite from the CAHPS® Supplemental Items' Health Information Technology Item Set. The Standard Child Medicaid CAHPS® composites summarize responses in four key areas of care: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, and Customer Service. The CAHPS® CCC composites summarize responses in three areas related to specific aspects of care for chronic conditions: Access to Specialized Services, Family-Centered Care: Personal Doctor Who Knows Child, and Coordination of Care for Children with Chronic Conditions. The CAHPS® Supplemental Items' composite summarize responses in an area related to Health Information Technology: Helpfulness of Provider's Website in Giving You Information About Your Child's Care and Tests. The achievement score for each of the nine composites is the average of the achievement scores for the individual items comprising a composite. For a detailed list of the questions that belong to each composite, please refer to the *Methodology* section.

Summary of Overall Rating Questions

Response options for overall rating questions ranged from 0 (worst) to 10 (best). In the table below, the achievement score represents the proportion of parents/caretakers of members who responded with a rating of "8", "9", or "10". Results are presented for Statewide, Payer status (Medicaid and CHP), Chronic Condition status (CC-Negative and CC-Positive), and the plan. Plan results are compared to the Statewide achievement scores and a significance level of .05 or less was considered statistically significant and "n" or "v" is placed at the top of the appropriate bar. Payer status and Chronic Condition status are presented for additional information, but are not compared to the Statewide achievement scores.

CC-Negative and CC-Positive scores represent a split of all respondents by the child member's chronic condition status. Chronic condition status is determined by the parent's/caretaker's answers to screening questions. The child member is considered positive for a chronic condition if the responses to one or more of five sets of screening questions indicates a chronic condition.

Overall Rating Questions (8, 9 or 10)

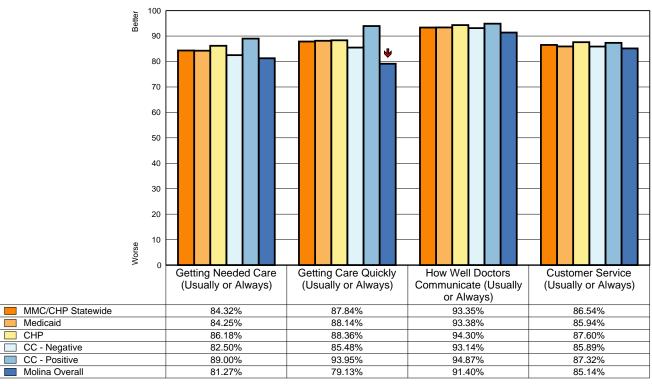

Statistically significantly better/worse than MMC/CHP Statewide.

Summary of Standard Composites

A composite score is calculated for each of four domains of member experience: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, and Customer Service. Composite achievement scores indicate the proportion of parents/caregivers who reported a positive experience within a given domain. Responses of "Usually" or "Always" indicate achievement for all composite measures.

Results are presented for MMC/CHP Statewide, Payer status (Medicaid and CHP), Chronic Condition status (CC-Negative and CC-Positive), and the health plan. Plan results are compared to the MMC/CHP Statewide achievement scores and a significance level of .05 or less was considered statistically significant and "\nabla" or "\left" is placed at the top of the appropriate bar. Payer status and Chronic Condition status are presented for additional information, but are not compared to the MMC/CHP Statewide achievement scores.

Standard Composites

[↑] Statistically significantly better/worse than MMC/CHP Statewide.

Summary of CCC Composites

The table below presents the results for the CCC composites. The Access to Specialized Services composite reflects response options of "Usually" or "Always" in the achievement score. The Family-Centered Care and Coordination of Care composites use 'Yes' as the achievement score. The composite score is calculated using the same calculation that is used for the standard CAHPS composites. Results are presented for Statewide, Payer status (Medicaid and CHP), Chronic Condition status (CC-Negative and CC-Positive), and the plan. Plan results are compared to the MMC/CHP Statewide achievement scores and a significance level of .05 or less was considered statistically significant and "♠" or "▶" is placed at the top of the appropriate bar. Payer status and Chronic Condition status are presented for additional information, but are not compared to the MMC/CHP Statewide achievement scores.

CC-Negative and CC-Positive scores represent a split of all respondents by the child member's chronic condition status. Chronic condition status is determined by the parent's/caretaker's answers to screening questions. The member is considered positive for a chronic condition if the responses to one or more of five screening sets indicates a chronic condition.

Summary of Supplemental Item Composite

The table below presents the results for the Helpfulness of Provider's Website in Giving You Information About Your Child's Care and Tests composite. This composite is from the CAHPS® Health Information Technology Item Set. The Helpfulness of Provider's Website in Giving You Information About Your Child's Care and Tests composite reflects response options of "Usually" or "Always" in the achievement score.

Results are presented for MMC/CHP Statewide, Payer status (Medicaid and CHP), Chronic Condition status (CC-Negative and CC-Positive), and the health plan. Plan results are compared to the MMC/CHP Statewide achievement scores and a significance level of .05 or less was considered statistically significant and "\nabla" or "\left" is placed at the top of the appropriate bar. Payer status and Chronic Condition status are presented for additional information, but are not compared to the MMC/CHP Statewide achievement scores.

| Q9. Had your questions answered by your child's doctors or othe health providers | r 79.9% | 84.6% | - 4.7 | CCC Single Items |
| Q6. Child got appointment for routine care as soon as needed | 80.8% | 86.2% | - 5.4 | Getting Care Quickly |
| Q51. Child's personal doctor understands how child's conditions affect your child's day-to-day life | 88.3% | 94.0% | - 5.7 | Family-Centered Care: Personal Doctor Who Knows Child |
| Q34. Someone from your child's health plan, doctor's office or clinic helped you get emotional, developmental or behavioral treatment or counseling for your child | 39.2% | 51.6% | - 12.4 | CCC Single Items |
| Q8. Doctor/provider talked about specific things you could do to prevent illness in your child | 56.7% | 69.6% | - 12.9 ▼ | Single Items |

^{▲ ▼} Statistically significantly higher/lower than 2018 score.

Better

Molina Healthcare Methodology

Methodology

Children, ages 0 to 17, who were current members of New York State Medicaid or CHP managed care plans as of July 2020 and who had been enrolled for five out of the last six months were eligible to be randomly selected for this survey. Respondents were surveyed in English or Spanish. The survey was administered over a fifteen-week period using a mixed-mode (mail and telephone) four-wave protocol. The four-wave protocol consisted of a first questionnaire packet and reminder postcard to a parent/caretaker of all randomly sampled members, followed by a second questionnaire packet to non-respondents and finally a phone follow-up to those who had not responded to the mailings.

Survey Milestones

- 1. 1st questionnaire packets mailed: November 17, 2020
- 2. Reminder postcards mailed: November 24, 2020
- 3. 2nd questionnaire packets mailed: December 15, 2020
- 4. Phone field opened: January 12, 2021
- 5. Mail and phone field closed: February 23, 2021

Sampling Frame

A stratified random sample of 1,500 children ages 0 to 17 was drawn for each health plan. No populations were oversampled for this survey. To be eligible, children had to be current members who were continuously enrolled in the New York State Medicaid or CHP managed care plans for at least five out of the last six months as of July 2020.

Questionnaire

The instrument selected for the survey, the CAHPS® CCC questionnaire, was developed and tested nationally for use in assessing the performance of health plans. The majority of questions addressed domains of child members' experience such as getting care quickly, doctor communication, overall satisfaction with health care, and health plan. The CCC component of the questionnaire is a supplement to the CAHPS® Child Medicaid core questionnaire which allows health plans to identify children with chronic conditions and evaluate their experience of care. The CCC supplemental items focus on components of care essential for the successful treatment, management, and support of children with chronic conditions. The questionnaire was further expanded to included 5 items from the CAHPS® Health Information Technology Item Set and an additional 6 supplemental questions of particular interest to the NYSDOH. Rounding out the questionnaire was a set of questions collecting demographic data. In total, the questionnaire consisted of 92 questions. A copy of the modified CAHPS® CCC questionnaire can be found in Appendix A.

Selection of Cases for Analysis

Questionnaires were considered complete if respondents did not say "No" to Question 1 (Our records show that your child is now in [HEALTH PLAN NAME]. Is that right?) and if they provided a valid response to at least three of the five following questions: Q3, Q38, Q53, Q57, Q62. Complete interviews were obtained from 246 parents/caretakers of Molina Healthcare members, and the response rate was 18.0%.

Definition of Achievement Scores

Parent/caretaker responses to questions are summarized as achievement scores. Responses that indicate a positive experience are labeled as achievements, and an achievement score is computed equal to the proportion of responses qualifying as achievements. Since achievement scores for questions represent the proportion of parent/caretaker respondents who indicate a positive experience, the lower the achievement score, the greater the need for improvement. See the *Responses by Question* section for assignment of achievement responses for each question.

In general, somewhat positive responses are included with positive responses as achievements. For example, a response of "Usually" or "Always" to the question "How often did you get an appointment for health care at a

Molina Healthcare Methodology

doctor's office or clinic as soon as your child needed?" is considered an achievement, as are responses of "8", "9", or "10" to rating questions.

Composites

Four standard composite scores summarize responses in key areas: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, and Customer Service. The achievement score for the composite is the average of the achievement scores for the individual items comprising a composite. Following is a list of the questions that comprise each composite:

Getting Needed Care

Q54. Child got an appointment with a specialist as soon as needed Q15. Easy to get the care, tests or treatment your child needed

Getting Care Quickly

Q4. Child got 'urgent' care as soon as needed

Q6. Child got appointment for routine care as soon as needed

How Well Doctors Communicate

Q40. Child's personal doctor explained things in a way that was easy to understand

Q41. Child's personal doctor listened carefully to you

Q42. Child's personal doctor showed respect for what you had to say

Q45. Child's personal doctor spent enough time with child

Customer Service

Q58. Customer service from child's health plan gave needed information or help

Q59. Customer service staff from child's health plan treated you with courtesy/respect

There are three CCC composite scores summarizing responses in areas related to caring for children with chronic conditions: Access to Specialized Services, Family-Centered Care: Personal Doctor Who Knows Child, and Coordination of Care for Children with Chronic Conditions. The achievement score for the composite is the average of the achievement scores for the individual items comprising a composite. Following is a list of the questions that comprise each CCC composite:

Access to Specialized Services

Q27. Easy to get special medical equipment or devices for your child

Q30. Easy to get special therapy (physical, occupational or speech) for your child

Q33. Easy to get (emotional, developmental or behavioral) treatment or counseling for your child

Family-Centered Care: Personal Doctor Who Knows Child

Q46. Child's personal doctor talked with you about how your child is feeling, growing or behaving

Q51. Child's personal doctor understands how child's conditions affect your child's day-to-day life

Q52. Child's personal doctor understands how child's conditions affect your family's day-to-day life

Coordination of Care for Children with Chronic Conditions

Q18. Child's doctors or other health providers gave help needed in contacting your child's school or daycare

Q37. Child's health plan, doctor's office or clinic helped coordinate child's care among different providers or services

There is also a supplemental composite score summarizing the responses in an area related to Health Information Technology: Helpfulness of Provider's Website in Giving You Information About Your Child's Care and Tests. The achievement score for the composite is the average of the achievement scores for the individual items comprising a composite. Following is a list of the questions that comprise the supplemental composite:

Helpfulness of Provider's Website in Giving You Information About Your Child's Care and Tests

Q22. Blood tests, x-rays, or other test results were easy to find on website

Q23. Blood tests, x-rays, or other test results were put on website as soon as needed

Q24. Blood tests, x-rays, or other test results were presented in a way that was easy to understand

Q25. Visit notes were easy to understand

Molina Healthcare Methodology

Correlation to Satisfaction

To understand the relationship between performance and satisfaction in particular areas of parent/caretaker experience, correlations are computed between responses to the performance-related items and each of the ratings questions. The specific correlation computed is Pearson's Correlation Coefficient, which takes on values between -1 to 1. Correlation scores are presented in the *Correlation Analysis* section.

Comparisons: Current Year and Trending

Two types of comparisons are presented. Current year comparisons are found in the *Executive Summary* and *Graphs* sections. In the *Executive Summary* section, Payer status (Medicaid and CHP) and Chronic Condition status (CC-Negative and CC-Positive) for the Rating Items and Composite Items are presented for additional information, but are not compared to the MMC/CHP Statewide achievement scores. In the *Graphs* section, plan-level results for each performance measure are compared to the MMC/CHP Statewide achievement score with statistical testing. Again, Payer status and Chronic Condition status are presented for additional information, but are not compared to the MMC/CHP Statewide achievement scores.

Comparisons across time are the focus of the *Trend Analysis* section: all performance-related items in the questionnaire that were trendable were listed in descending order of point change for Molina Healthcare results. The *Trend Analysis* section displays plan-level results for the ten items at the top of the list and the ten items at the bottom with the corresponding 2018 and 2020 scores as well as significance testing results. In addition, the *Responses by Question* section presents achievement score point change and significance testing results for each performance item.

Statistical Testing

Statistically significant differences between scores were determined using t-tests. A significance level of .05 or less was considered statistically significant and "♠" or "♥" is placed at the top of the appropriate bar or next to the appropriate achievement score.

Case-Mix Analysis

The results presented in this report are case-mix adjusted to control for differences in the member population across Medicaid or CHP managed care plans. The results for 2020 are case-mix adjusted for child age (Q82), child member health status (Q66), and parent/caretaker education (Q88). Case-mix adjustment is applied to mitigate the effect of differences in individual plan's member population. The variables chosen for case-mix adjustment are beyond the control of the Medicaid or CHP managed care plan and have been shown to affect plan and health care ratings. For example, individuals with higher levels of education generally rate lower for satisfaction.

Molina Healthcare Using this report

Using this Report

Understanding Achievement Scores

Parent/caretaker responses to questions are summarized as achievement scores. Responses that indicate a positive experience are labeled as achievements, and an achievement score is computed as the proportion of responses qualifying as positive. For example, a response of "Usually" or "Always" to the question "How often did you get an appointment for health care at a doctor's office or clinic as soon as your child needed?" is considered a positive response, and the achievement score for this question is equal to the proportion of respondents who answered the question with "Usually" or "Always". Because achievement scores for questions are computed as the proportion of parents/caretakers who indicate a positive experience, the lower the achievement score, the greater the need to improve.

Achievement scores are computed and reported for all pertinent questions. In addition, composite scores are built from groups of questions that make up broad domains of members' experience: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, Customer Service, Access to Specialized Services, Family-Centered Care: Personal Doctor Who Knows Child, Coordination of Care for Children with Chronic Conditions, and Helpfulness of Provider's Website in Giving You Information About Your Child's Care and Tests.

Throughout this report, health plan scores are reported alongside five reporting entities made up of respondents across all health plans. Statewide scores include all respondents to the survey. Medicaid and CHP scores represent a split of all respondents by Payer status. CC-Negative and CC-Positive scores represent a split of all respondents by the child member's chronic condition status.

Achievement scores based on fewer than 30 observations are suppressed in this report and "NA" is substituted for the result. When relevant, a footnote is presented. Typically, too few responses to a questionnaire item is due to skip patterns in the instrument. Suppressing scores based on a small number of cases ensures that this report includes the most reliable information available.

Understanding the Sections of the Report

The CAHPS® CCC questionnaire results are presented here in a format that is optimized for use in practical decision-making. Specifically, these reports can:

- 1. Assist the NYSDOH and health plans in identifying strengths and weaknesses in quality of health care, access, and services, and
- 2. Provide the NYSDOH and health plans with a way to assess where resources can best be allocated to improve experiences.

The remainder of the report is broken into three major sections that are briefly described here to help you make the best use of the report and the information it contains.

Graphs/Results

This section contains a graphic presentation of MMC/CHP Statewide, Medicaid, CHP, Chronic Condition status, and plan-specific results for questions using the achievement scores. Statistical significance, the achievement score, and the number of respondents for each plan are displayed. This depicts plan-specific performance compared to various benchmarks or peers. The composites are directly followed by the individual questions that are combined to create the composite measures.

Correlation Analysis

The Correlation Analysis section is helpful in understanding how satisfaction in various questions relates to the four standard rating questions (personal doctor, specialist seen most often, all health care, and health

Molina Healthcare Using this report

plan) for respondents. The charts show which questions are most strongly linked to the rating and the current achievement score. The information helps define what areas are related to satisfaction and how the group or plan performed in that area.

The correlation analyses are presented two ways. First, there are correlations of the top ten highly correlated composite questions to the four rating questions ranked by the highest correlation between the question and rating. This allows a visual picture of clustering of composites across ratings. Second, the analysis presents the proportion of responses in each response option for each composite question for each individual rating. This lets you see where there may be an opportunity for improvement. For example, if a question correlates highly and has higher proportions of "Usually" and "Sometimes", improving the processes may move respondents up to "Always" to improve not only that composite, but the other rating questions.

Responses by Question

This section provides a breakdown for each question with the number of members responding to the question and the distribution for each available response option. For each question that has responses determined to be positive or negative, there is a colored circle indicating achievement (green circle) or room for improvement (red circle). The circles are based on the response category and are not indicative of areas the plan needs to improve necessarily. For example, "Always" and "Usually" are achievement and "Sometimes" and "Never" are room for improvement. Similarly on a rating question, "8", "9", or "10" are achievement and 0 through 7 are room for improvement. Questions without a colored circle indicate the question is not associated with this type of response determination. For example, asking whether a child needed a service in the past six months does not have an associated achievement score related to it. Achievement scores based on fewer than 30 observations are suppressed and "NA" is substituted for the result. This section provides additional information about volume of child members to help you prioritize areas to be addressed.

When applicable, each question is presented with the composite name, the achievement score, the correlation with rating of health plan value, and trend information. The achievement scores are case-mix adjusted while data for each response option are not case-mix adjusted.

Molina Healthcare Graphs/Results

Graphs/Results

The Graphs/Results section contains a graphic presentation of MMC/CHP Statewide, Payer status (Medicaid and CHP), Chronic Condition status (CC-Negative and CC-Positive), and plan-specific results for each question using the achievement scores. Tests for statistical significance compare the plan-level scores to the MMC/CHP Statewide scores. Payer status and Chronic Condition status are presented for additional information, but are not compared to the MMC/CHP Statewide achievement scores. Rating results are followed by composites and the questions that make up each composite.

The CAHPS® CCC questionnaire uses a 0 to 10 rating for assessing overall experience with personal doctors, specialists, health care, and health plans. In the four ratings graphs, proportions of respondents assigning ratings of "8", "9", or "10" are reported as achievement scores.

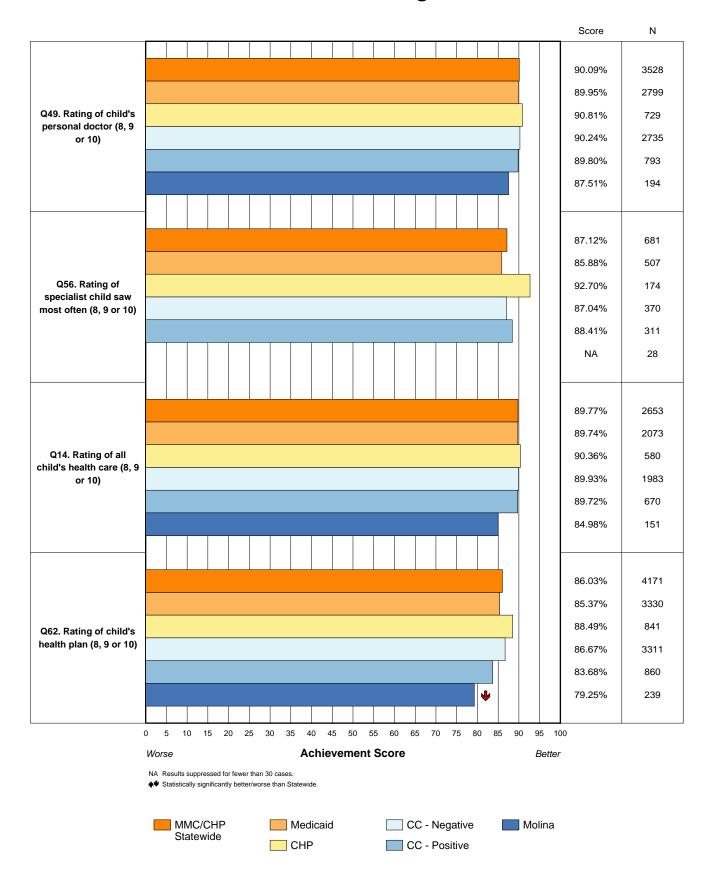

Questions that relate to the same broad domain of performance are grouped together for the purpose of reporting. For example, the domain Getting Care Quickly includes questions about how soon appointments were scheduled. In the title of each graph the response option(s) considered an achievement is displayed. Graphs presenting the results of individual questions that make up the composite score follow the presentation of the composite results.

For full detail of response options for each question and which responses qualify as achievements, please refer to the Responses by Question section.

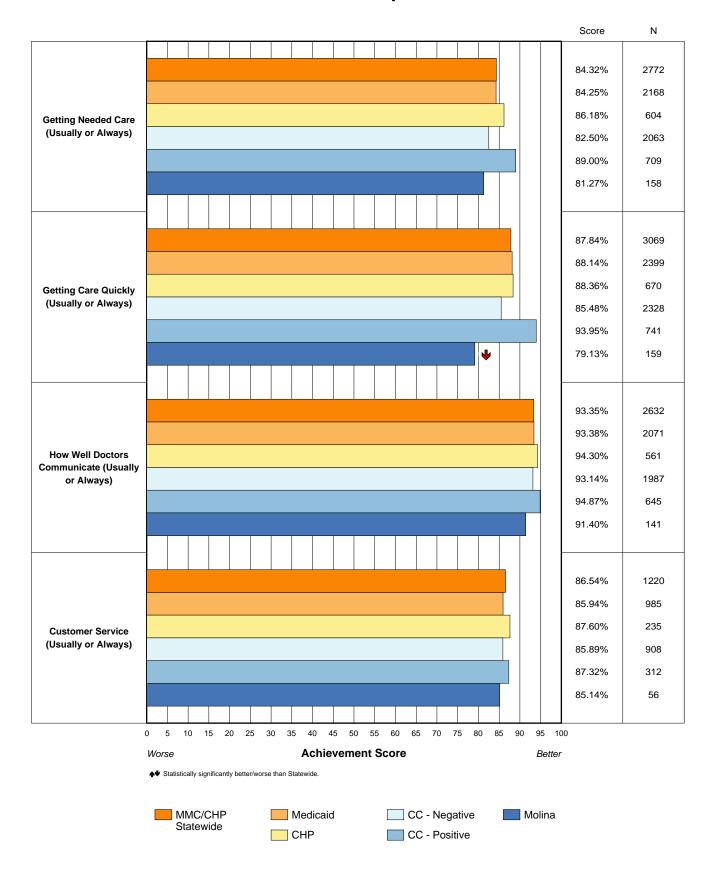

In this report, results based on fewer than 30 cases are suppressed and "NA" is substituted for the result. When relevant, a footnote is presented.

Molina Healthcare Correlation Analysis

Molina Healthcare

The Correlation Analysis section is helpful in understanding how results in various questions relate to the four standard ratings (personal doctor, specialist seen most often, all health care, and health plan) for respondents. This allows for evaluation of which questions are most strongly linked to the rating and what the current achievement score is. The section can be used for a quick view of how composite questions correlate across ratings.

The correlation analyses are presented two ways. There is a table summarizing correlations of the top ten highly correlated standard composite questions to the four rating questions ranked by the highest correlation between the question and rating. This allows a visual picture of clustering of composites across ratings. Each question in a composite is represented with the individual question number, composite name, achievement score, and the correlation value.

Example:

If Getting Needed Care and How Well Doctors Communicate have higher correlations across the ratings, you can see how these aspects are important to parents/caretakers and influence how satisfied they are with their child's providers, health care, and health plan. Likewise, composites clustered toward the bottom may indicate areas of lower importance to the parents/caretakers. The visual also allows you to see areas where you can improve. If you are performing poorly in Getting Needed Care, and it is important to the parent's/caretaker's satisfaction with care, this could be a compelling reason to focus on improving this area. It also lets you see how different questions within a composite correlate individually.

The correlation summary table is followed by four tables presenting more detailed data on composite questions for each individual rating. The questions are written out and you can see the proportion of responses for each response option. This lets you see where an opportunity for improvement may lie. For example, if a question correlates highly with ratings and has higher proportions of "Sometimes" and "Never", improving the processes may move respondents up to "Always" which will improve not only that composite, but the other rating questions.

Responses by Question

This section presents each question and the distribution for each available response option. For each question that has responses determined to be positive or negative, there is a colored circle indicating achievement (green circle) or room for improvement (red circle). The circles are based on the response category and are not indicative of areas the plan needs to improve necessarily. When applicable, each question is presented with the composite name, the achievement score, the correlation value and trend information. In this section, a t-test is used to determine significant differences across time where 2020 scores are compared to 2018 scores when applicable. A significance level of .05 or less was considered statistically significant and "♠" or "♥" is placed next to the appropriate achievement score change. The achievement scores are case-mix adjusted while data for each response option are not case-mix adjusted.

Q1. Our records show that your child is now in [Health Plan Name]. Is that right?
