For AIDS and HIV data statistics please see <https://www.health.ny.gov/diseases/aids/general/statistics/annual/>

* From 2013-2021, an increasing number of NYS counties participated in a sampling estimation system for Lyme disease surveillance whereby a sample of positive laboratory results were investigated and the results extrapolated to estimate case counts. Additional information by case year and county can be found at:

<https://www.health.ny.gov/statistics/diseases/communicable/>.

Beginning in 2022 with a new national surveillance case definition change, all positive laboratory reports received by all NYS counties were used to determine case counts and no extrapolation was done.

** Resistant, Sensitive, Intermediate, & Unknown
