Eligibility for Temporary Assistance (TA) and Food Stamps (FS)

(Among Offenders Released from Prison in 2003)

The following is a summary of findings from a preliminary analysis of eligibility for temporary cash assistance (TA) and food stamps (FS) established for offenders reentering the community from state prison. The purpose of the analysis was to determine whether substantial numbers of reentering offenders are ultimately found to be TA- or FS-eligible, and if so, to determine how soon their eligibility is established.

Highlights

- Of 26,457 offenders released from prison in 2003, 11,846 were TA-eligible (Table 2) and 13,759 were FS-eligible (Table 3) during one or more months between release and February, 2005. The patterns of TA eligibility and the patterns of FS eligibility were very similar, so only the TA findings are summarized here.
- Among the 11,846 with post-release TA-eligibility, 10,965 were TA-eligible following release and *prior to first return* to prison or prior to February 2005, whichever was earlier. Table 1 and Figure 1 show the following:
 - o Forty percent of these had their first post-release period of TA-eligibility in the calendar month of release, and an additional 23% had their first period of TA-eligibility in the calendar month *following* the calendar month of release.
 - Seventeen percent had their first post-release period of TA-eligibility in the sixth calendar month following the calendar month of release, or later.
- The percentage with first TA eligibility in the sixth calendar month following the month of release (or later) *did not* vary much among the 16 counties with 100 or more offenders reentering in 2003, but were noticeably lower than average in 2 of them—Orange and Suffolk (Table 6).
- The percentage with first TA eligibility in the month of release *did* vary noticeably among counties with sufficient numbers to yield reliable estimates, ranging from 24% in Oneida County to 52% in Schenectady County (Table 6).

Methods and Caveats

Data sources. The analysis was made possible by combining data maintained by the Department of Correctional Services (DOCS) with data maintained by the Office of Temporary and Disability Assistance (OTDA). DOCS supplied personal identifiers, release dates, and dates of subsequent re-incarceration for offenders released from DOCS custody in 2003. OTDA used the identifiers supplied by DOCS to match OTDA records with DOCS records and then added information to the file indicating individuals' established periods of eligibility for public assistance and food stamps. The resulting composite file was forwarded to Division of Criminal Justice (DCJS) researchers for analysis.

Months vs. days. The data provided only indicate whether or not a person was eligible sometime in a given calendar month. Thus, the findings are not precise with respect to the number of days between release and first eligibility. The lag between release and first eligibility was calculated as calendar month of eligibility minus calendar month of release. A "0" (zero) means that release and first eligibility occurred in the same calendar month, a "1" means first eligibility

occurred in the calendar month following the calendar month of release, and so on. The number of days from release to first eligibility could range as follows:

- o "0" month lag could be 0-30 days
- o "1" month lag could be 1-61 days
- o "2" month lag could be 28-91 days
- o "3" month lag could be 60-122 days
- o "4" month lag could be 89-152 days
- o "5" month lag could be 120-183 days
- o "6 or more" month lag could be 150-789 days

(These odd-looking ranges take into account the fact that a month could have 28, 29, 30, or 31 days, in a known sequence)

Tracking periods. The number of pre-release months examined and the number of post-release months examined were not standardized for these analyses. The number of pre-release months examined ranged from 74 to 86 (some portion of which the offender was incarcerated). The number of post-release months examined ranged from 15 to 27, so only the results for numbers found eligible in months 0 through 15 are straightforward.

Additional Details

- The numbers of reentering offenders granted TA and FS eligibility represent a small but non-trivial proportion of the overall TA and FS workload.
 - In 2003, over 300,000 new TA applications were approved statewide, and more than 300,000 additional FS-only applications were approved (that is, in addition to FS granted via TA applications) (Based on aggregate counts supplied separately by OTDA).
 - o Of 26,457 offenders released from prison in 2003, 11,772 were previously TAeligible, and 11,846 were TA-eligible following release (Table 2).
 - o In the same group, 13,154 were previously FS-eligible, and 13,759 were FS-eligible following release (Table 3).
- Among those with no months of TA eligibility following the 2003 release, about 29% had been TA eligible sometime in the 6 or 7 years prior to release (Table 2).
- Both pre-release and post-release, substantial numbers of individuals were eligible for short periods (Table 4). The most frequent total months eligible in the post-release follow-up period was 2 months. Nearly half of those with any eligibility in the follow-up period were eligible for 6 months or less, and some individuals had intermittent eligibility (from inspection of the raw data, not displayed here).
- Statewide, of the 26,457 releases in 2003, 10,965 had one or more months of TA eligibility from the month of release through February 2005, or prior to return to prison, whichever was earlier (Table 1). The distribution of calendar month lag between release and first TA eligibility was as follows:

0	"0" could be 0-30 days	39.8%
0	"1" could be 1-61 days	23.0%
0	"2" could be 28-91 days	9.0%
0	"3" could be 60-122 days	5.1%
0	"4" could be 89-152 days	3.5%
0	"5" could be 120-183 days	2.6%
0	"6" could be 150-789 days	17.2%

• The percentage with a lag of 150 days or more did not vary much across counties (except for counties with small N, for which the % would be expected to fluctuate). In all but 3 of the 16 counties with 100 or more reentering offenders in 2003, between 15% and 21% of the offenders reentering from prison had their first post-release eligibility in the sixth subsequent calendar month or later. This percentage was only slightly higher (22.6%) for Oneida County, but was noticeably lower for Orange and Suffolk counties (11.6% and 12.4%, respectively). However, the percentage with first TA eligibility established in the calendar month of release did vary noticeably, even among counties with urban centers and sufficient numbers of releases to produce reliable estimates, ranging from 24.1% in Oneida County to 52.1% in Schenectady County. See Table 6 for additional details.

All in all, these results suggest that the numbers of individuals with a long lag between release and first eligibility are large enough to warrant further efforts to determine whether the lags reflect a problem (e.g., delays in compiling documents, delays in filing applications, delays in scheduling a face-to-face meeting, or delays in processing submitted applications) or simply reflect parolees' circumstances accurately (e.g., employed upon release but unemployed later, no medical or treatment need identified at first but a need identified later, etc.). One step in that direction might be to add to the data file an indicator identifying the month of first post-release application, if that information is retrievable.
