OUTPATIENT ANTIMICROBIAL STEWARDSHIP: INTERVENTIONS THAT WORK

Jeff Gerber, MD, PhD
Children’s Hospital of Philadelphia
University of Pennsylvania School of Medicine
LEARNING OBJECTIVES

• recognize the need for outpatient antimicrobial stewardship
• understand examples of outpatient antimicrobial stewardship interventions
• recognize some novel stewardship strategies
PRESENTATION OUTLINE

• explain the need for outpatient antimicrobial stewardship
• describe a relevant stewardship CE study generating targets for improvement
• describe an outpatient antimicrobial stewardship intervention focused on this target
• some novel stewardship strategies
WHY OUTPATIENT STEWARDSHIP?

“...because that’s where the money is.”

- Willie Sutton, criminal (1901-1980)

>90% of antibiotic exposure in outpatients
US Outpatient Antibiotic Prescribing Variation According to Geography, Patient Population, and Provider Specialty in 2011

Lauri A. Hicks,¹ Monina G. Bartoces,¹ Rebecca M. Roberts,¹ Katie J. Suda,² Robert J. Hunkler,¹ Thomas H. Taylor Jr,¹ and Stephanie J. Schrag¹

¹Centers for Disease Control and Prevention, Atlanta, Georgia; ²Department of Veterans Affairs, University of Illinois at Chicago; and ³IMS Health, Plymouth Meeting, Pennsylvania

- IMS Health Xponent database
- 262.5 million antibiotic prescriptions dispensed in 2011
- 842 prescriptions per 1000 persons
- 29% for kids

Clinical Infectious Diseases 2015;60(9):1308–16
ANTIBIOTIC USE: OUTPATIENT CHILDREN

Gerber et al., JPIDS, 2014
BUT ANTIBIOTICS ARE WONDERFUL…

“I am a fan of antibiotics just because of the fact that it does heal them pretty quickly.” [H]

“I think [antibiotics] are wonderful. They clear up everything quickly. As long as you take them how the doctor prescribes, the infection is gone.” [K]

“All I can say is, antibiotics work. That is the only thing I can say. When we use it right it works. It helps them get better quickly.” [SP]
BUT, THERE ARE DOWNSIDES…

- use drives resistance
- bacteria have shown the ability to become resistant to every antibiotic that has been developed
NATIONAL SUMMARY DATA

Estimated minimum number of illnesses and deaths caused by antibiotic resistance *:

At least 2,049,442 illnesses,
23,000 deaths

*bacteria and fungus included in this report

Estimated minimum number of illnesses and death due to *Clostridium difficile* (C. difficile), a unique bacterial infection that, although not significantly resistant to the drugs used to treat it, is directly related to antibiotic use and resistance:

At least 250,000 illnesses,
14,000 deaths

WHERE DO INFECTIONS HAPPEN?

Antibiotic-resistant infections can happen anywhere. Data show that most happen in the general community; however, most deaths related to antibiotic resistance happen in healthcare settings, such as hospitals and nursing homes.
INDIVIDUAL HARM

- 5%–25% diarrhea
- 1 in 1000 visit emergency department for adverse effect of antibiotic
  - comparable to insulin, warfarin, and digoxin
- 1 in 4000 chance that an antibiotic will prevent serious complication from ARTI

Shehab N. CID 2008:47; Linder JA. CID 2008:47
Your body is mostly microbes

- 10 x more cells
- 100 x more genes
- 1000 different species

http://www.knightslab.org
benefits derived from microbiota may have profound consequences for health
- food digestion and nutrition
- regulation of metabolism
- processing and detoxification of environmental chemicals
- development and regulation of the immune system
- prevention of invasion and growth of pathogens
INCREDIBLY BASIC PRIMER ON THE MICROBIOME

• Its pretty complicated, but …

• DIVERSITY IS GOOD.

WHY COMPARE BROAD VS. NARROW?

Conflicting guidelines

- AOM
  - AAP recommends amoxicillin; RCTs used amoxicillin-clavulanate for AOM
- Sinusitis:
  - AAP recommends amoxicillin; IDSA recommends amoxicillin-clavulanate
- GAS pharyngitis:
  - cephalosporins?

Pneumococcal vaccination?

(50% of antibiotic use for children is broad-spectrum)
METHODS

- **prospective cohort study** (2015 – 2016)
- 31 pediatric primary care practices
- 6m-12y Dx with ARTI and prescribed oral antibiotic
- excluded multiple ARTIs, another bacterial infection, antibiotics within past 30 days
DATA COLLECTION

- Parents/guardians contacted by phone 5 days after diagnosis to confirm eligibility and initiation of antibiotic
- 2 structured telephone interviews completed 5 and 14 days after diagnosis
EXPOSURES

• exposed = narrow-spectrum antibiotics
  • penicillin, amoxicillin

• unexposed = broad-spectrum antibiotics
  • amoxicillin-clavulanate
  • cephalosporins
  • macrolides
OUTCOMES

• qualitative interviews with 109 parents and 24 children from 4 practices presenting for care with ARTI symptoms

• identified missed school and work, child suffering, child sleep quality, side effects, and speed of symptom resolution as important outcomes

</tbody>
</table>
LIMITATIONS

- relied on clinician diagnosis; many were likely viral
- 30% enrollment rate
- PedsQL™ might not be sensitive enough to detect minor differences in symptoms
- unobserved confounding?
- generalizability
CONCLUSIONS

• according to patient-centered outcomes generated in partnership with patients and their caregivers, broad-spectrum agents offered no benefit over narrow-spectrum agents for the treatment of ARTIs

• broad-spectrum agents were associated with more adverse drug effects

• these data confirm and extend recommendations to use narrow-spectrum antibiotics for most children, a choice that will maximize patient outcomes while reducing unnecessary antimicrobial resistance pressure, adverse drug effects, and healthcare costs
HOW DO WE IMPLEMENT THIS?
Effect of an Outpatient Antimicrobial Stewardship Intervention on Broad-Spectrum Antibiotic Prescribing by Primary Care Pediatricians
A Randomized Trial

- cluster-RCT of 18 practices, 170 clinicians
- common EHR
- focused on antibiotic choice for encounters for bacterial infections with established guidelines
  - streptococcal pharyngitis
  - acute sinusitis
  - pneumonia

Gerber et al. JAMA.2013;309(22):2345
INTERVENTION: TIMELINE

Feedback reports

On-site education

20 months baseline data

12 months audit/feedback
Broad Spectrum Antibiotics for Acute Sinusitis

(amoxicillin-clavulanate, 2nd/3rd cephalosporins, or azithromycin)

- **YOU**
  - Baseline (1/1/10-5/31/10): 25.9%
  - Q1 (6/1/10-9/30/10): 34.1%
  - Q2 (10/1/10-1/31/11): 49.5%

- **Your Practice**
  - Baseline (1/1/10-5/31/10): 16.9%
  - Q1 (6/1/10-9/30/10): 23.9%
  - Q2 (10/1/10-1/31/11): 47.9%

- **Network**
  - Baseline (1/1/10-5/31/10): 27.7%
  - Q1 (6/1/10-9/30/10): 35.5%
  - Q2 (10/1/10-1/31/11): 42.5%

WHAT DO CLINICIANS THINK?
QUALITATIVE ANALYSES

• most did not believe that their prescribing behavior contributed to antibiotic overuse
• reported frequently confronting parental pressure
• sometimes acquiescing to avoid losing patients to other practices that would “give them what they want”
“We have lots of parents who come in and they know what they want. They don’t care what we have to say. They want the antibiotic that they want because they know what is wrong with their child.”
CLINICIAN PERCEPTIONS

- interviewed 10 physicians, 306 parents

- physician perception of parental expectations for antimicrobials was the only predictor of prescribing antimicrobials for viral infections
  - when they thought parents wanted antimicrobial:
    - 62% vs. 7% prescribed antibiotic

Mangione-Smith et al. *Pediatrics* 1999;103(4)
WHAT DO PARENTS THINK?
WHAT DO PARENTS WANT?

• direct parental request for antibiotics in 1% of cases
• parental expectations for antibiotics were not associated with physician-perceived expectations
• parents who expected antibiotics but did not receive them were more satisfied if the physician provided a contingency plan
• failure to meet parental expectations regarding communication events during the visit was the only significant predictor of parental satisfaction (NOT failure to provide expected antimicrobials)

WHAT DO PARENTS THINK?

• interviewed >100 parents of kids presenting with ARTIs from waiting rooms

• parents did not plan to demand an antibiotic for their child
  • deferred to medical expertise about the need for antibiotic therapy
  • parents are aware of the downsides of antibiotics and may be willing to partner to improve appropriate use

Szymczak, ID Week, San Diego, 2015
COMMUNICATION

• parent and clinician surveys after 1,285 pediatric ARTI visits to 28 pediatric providers from 10 Seattle practices

• positive treatment recommendations (suggesting actions to reduce child’s symptoms) were associated with decreased risk of antibiotic prescribing

Mangione-Smith et al. Ann Fam Med 2015;13:221-227
NON-CLINICAL DRIVERS OF ANTIBIOTIC PRESCRIBING?

- perceived parental pressure
- presence of trainees
- time of day
- patient race
- practice location

Linder, *JAMA Internal Medicine* 2014;174(12)
Gerber et al., *Pediatrics* 2013;131:677–684
Handy LK, *Pediatrics* 2017
Behavior Change Ahead?
Suggested alternatives

- “antibiotics are generally not indicated for this”

Accountable justification

- free text, or “no justification given”

Peer comparison

- top decile “top performer” or “not top performer”
Figure 2. Adjusted Rates of Antibiotic Prescribing at Primary Care Office Visits for Antibiotic-Inappropriate Acute Respiratory Tract Infections Over Time

A. Accountable justification
B. Peer comparison
C. Suggested alternatives

Prescribing rates for each intervention are marginal predictions from hierarchical regression models of intervention effects, adjusted for concurrent exposure to other interventions and clinician and practice random effects. Error bars indicate 95% CIs. Model coefficients are available in eTable 3 in Supplement 2.

Table 2. Unadjusted Visit Counts and Antibiotic Prescribing Rates for Antibiotic-Inappropriate Acute Respiratory Tract Infections During the Baseline and Intervention Periods, by Study Group
antibiotic prescribing in the ambulatory setting is common and can be harmful to the patient and society

audit with feedback can be an effective strategy to improve prescribing

other socio-behavioral approaches, such as improving communication and holding clinicians accountable can also be effective

more to come…
THANK YOU
