Approx. 53,000 individuals held at 54 NYS Department of Corrections and Community Supervision (DOCCS) correctional facilities

NYS DOCCS correctional facilities have some of the highest estimated HIV seropositivity rates in the country, 2.4% - 3.7%\(^1\)

Majority of HIV positive inmates unknown to HS are personally aware of their HIV status, choose not to disclose, and therefore, are NOT receiving medical care for HIV

\(^1\) Bureau of HIV/AIDS Epidemiology 2012 Survey of Incoming Inmates in NYS DOCCS (the Prison Study); February 2015
Positive Pathways

- A collaborative initiative between the NYS Department of Health, the NYS Department of Corrections and Community Supervision and community based organizations

Goals
- Reduce stigma associated with being HIV positive in DOCCS correctional facilities
- Identify new & existing cases of HIV in DOCCS correctional facilities
- Promote (re-) engagement in HIV care & treatment during incarceration
- Ensure linkage to & continuity of HIV care & treatment upon & after release
Confidentiality & inadvertent disclosure concerns

Stigma associated with being HIV positive

Denial

Not ready to disclose, waiting until release to get care for HIV

Poor perception of the quality of care available in DOCCS
Expanded Positive Pathways (ExPP)

NYS Department of Health (DOH) and NYS Department of Corrections and Community Supervision (DOCCS) collaborating to more efficiently identify, link and retain inmates with HIV in care
### Network of 12 Community Based Organizations (CBOs)

A network of 12 Community Based Organizations (CBOs) embedded within DOCCS Correctional Facilities and communities across New York State who

Hepatitis C Continuity Program

• The purpose of this program is to provide a treatment completion opportunity to inmates released from DOCCS on Hepatitis C medications.
• The Regional Infection Control Nurse meets with the soon to be released inmate to help plan medical follow up.
• Medicaid application is initiated.
• Upon release from DOCCS, the inmate is released with several weeks of medication.
