Treatment Adherence - Medication Support

These programs are funded to integrate treatment adherence services into the continuum of HIV primary care. Each program implements strategies to promote adherence to HAART through a client-centered approach. Members of the health care team work in concert with consumers to develop, implement, and evaluate tools and skills-building activities to increase and sustain adherence to therapy. One of the fundamental objectives of the Treatment Adherence Initiative is to foster a comprehensive approach to assessing and assisting consumers at risk for non-adherence, and promote consumer and provider collaboration to develop consumer-specific strategies that lead to sustained treatment adherence.

(607)272-4098

HIV/STD/HCV Prevention Education/Risk Reduction Services

Health education and risk reduction education and/or counseling services are provided to individuals and/or groups and range from targeted outreach to prevention counseling to group interventions to broad community level interventions (CLI). Individual-level interventions (ILI) provide individualized health communication, health education, and risk reduction counseling to assist clients in creating plans for individual behavior change and making ongoing appraisals of their own behavior. These interventions may consist of one or multiple sessions. Group-level interventions (GLI) may include peer education and support to promote and reinforce safer behaviors. Prevention interventions delivered to groups may be single or multiple sessions, and often provide interpersonal skills training to negotiate and sustain appropriate behavior change. CLIs seek to reduce risk behaviors by changing attitudes, norms, and practices of community members, and may include a combination of intervention types (e.g., outreach, health communication, public information) or units of delivery (e.g., individual, group, community)
