Data Analysis and Research Translation (DART) Presentation of HIV/AIDS Current Topic (PHACT) Report 3, December 2022

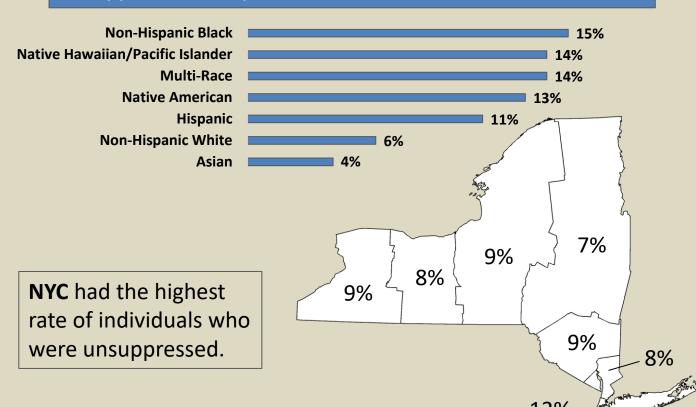

## HIV Viral Suppression among People in Care

**87,607** people living with diagnosed HIV and in care in NYS in 2021 9,965 (11%) were not virally suppressed

Younger individuals were more likely to be unsuppressed

Non-Hispanic Black individuals were 4x more likely to be unsuppressed compared to Asian individuals

New York State Department of Health/AIDS Institute Division of Epidemiology, Evaluation, and Partner Services performed during 2021 and reported to NYSDOH. Data Analysis and Research Translation

BHAE@health.ny.gov

Care is defined as a CD4, viral load, or genotype test Unsuppressed is defined as no viral load test in 2021 or the value at the last viral load test in 2021 was >200 copies/ml.
