

HIV-Positive Adults in Care in New York State, Medical Monitoring Project, 2009-2014

The Medical Monitoring Project (MMP)

- MMP is a surveillance system funded by the Centers for Disease Control and Prevention and implemented by local health departments. It collects behavioral and medical data about HIV-positive adults receiving medical care in the United States.
- From 2009 to 2014, MMP interviewed 2,629 HIV-positive adults receiving care in New York State. Their responses reflect their experiences during the 12 months before their interview, unless otherwise noted. All data presented are weighted.
- The information in this factsheet can guide policy decisions, resource allocation, and evaluation of treatment and prevention initiatives.

Characteristics of HIV-Positive Adults in Care in New York State, 2009-2014

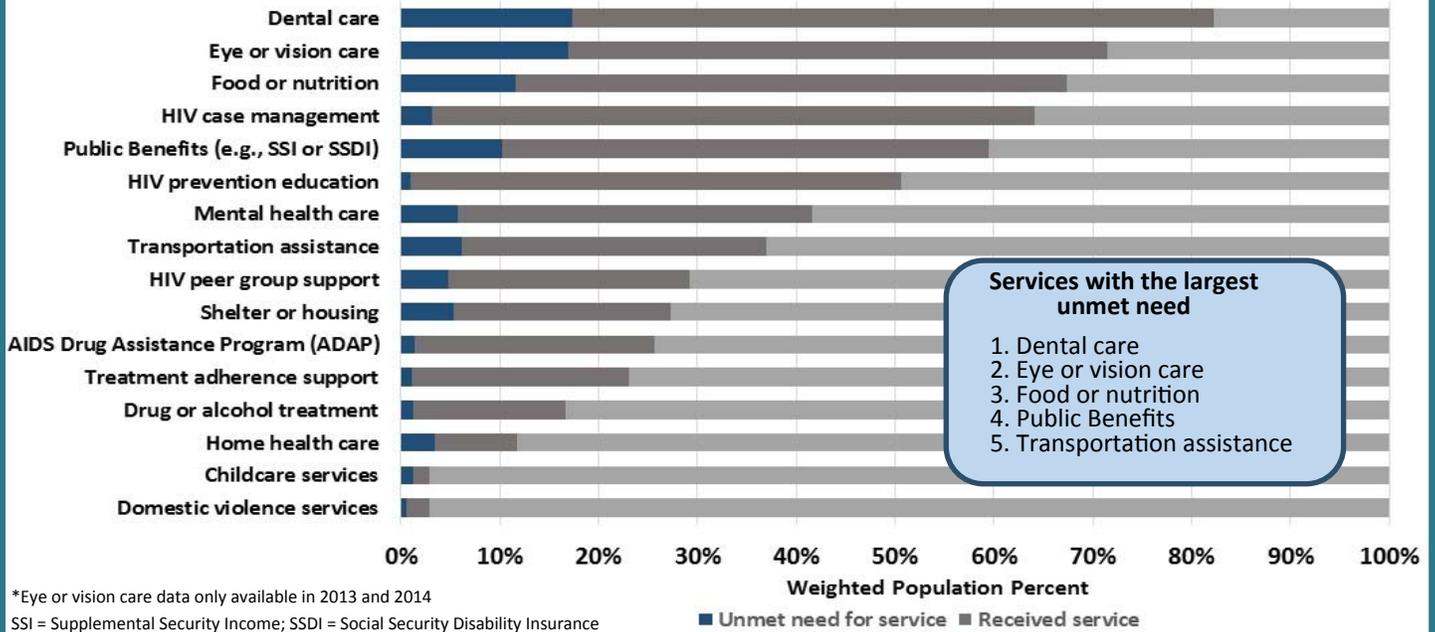

- 65% were male and 33% were female
- 34% were men who have sex with men
- 43% were black/African-American, 35% were Hispanic or Latino, and 18% were white
