# Letter of Introduction

ANDREW M. CUOMO  
Governor

Department  
of Health

HOWARD A. ZUCKER, M.D., J.D.  
Commissioner

LISA J. PINO, M.A., J.D.  
Executive Deputy Commissioner

August 22, 2019

Dear Colleague:

Each year in the United States, there are more than 3,500 sleep-related infant deaths. Many of these deaths are preventable. To reduce the occurrence of sleep-related deaths in infants, the New York State Department of Health (NYSDOH) is pleased to present the **NYSDOH Infant Safe Sleep Toolkit** to assist with: improving infant safe sleep practices among birthing hospitals and community-based organizations; educating health care teams, families and caregivers; and reducing the occurrence of sleep-related infant deaths in New York State (NYS).

The NYSDOH Infant Safe Sleep Toolkit allows users to learn from participants in the NYSDOH hospital and community-based safe sleep projects by sharing relevant educational presentations from national and NYS safe sleep experts, organizational safe sleep policies, caregiver and professional education materials, data and quality improvement tools, success stories and lessons learned from project participants, web links, social media tools, and references. This toolkit is being distributed electronically to all NYS birthing hospitals and home visiting programs. It is also available on the New York State Perinatal Quality Collaborative (NYSPQC) website ([www.nyspqc.org](http://www.nyspqc.org)) and the NYSDOH Safe Sleep for Baby website ([www.health.ny.gov/safesleep](http://www.health.ny.gov/safesleep)). We hope that by sharing these tools and resources, we can accelerate efforts to promote and model consistent infant safe sleep practices for families and caregivers across NYS to reduce sleep-related deaths.

Addressing factors that lead to infant mortality is central to the NYSDOH's maternal and child health initiatives. NYS is working on the forefront of national efforts to reduce sudden unexpected infant death (SUID) and racial disparities as part of the Health Resources and Services Administration Maternal and Child Health Bureau-supported Safe Sleep Collaborative Improvement and Innovation Network to Reduce Infant Mortality (IM CoIIN) led by the National Institute for Children's Health Quality (NICHQ). Previously, the NYSDOH Division of Family Health, with support from the Centers for Disease Control and Prevention and NICHQ, facilitated an infant safe sleep project working with birthing hospitals across NYS (the NYSPQC Hospital-based Safe Sleep Project [www.albany.edu/sph/cphce/neo\\_public/safe\\_sleep.shtml](http://www.albany.edu/sph/cphce/neo_public/safe_sleep.shtml)) and a safe sleep pilot project for community-based organizations. The NYSDOH also supports NYS hospitals implementing safety bundles to improve safe sleep and breastfeeding through the National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPSS-IIN).

If you have questions about this toolkit or would like to contact facilities referenced herein, contact the Division of Family Health, at (518) 473-9883 or by email at [NYSPQC@health.ny.gov](mailto:NYSPQC@health.ny.gov). Thank you for your commitment to New York's families.

Sincerely,

Marilyn A. Kacica, M.D., M.P.H.  
Medical Director  
Division of Family Health  
New York State Department of Health

Empire State Plaza, Corning Tower, Albany, NY 12237 | [health.ny.gov](http://health.ny.gov)

# Toolkit Overview

The New York State Department of Health (NYSDOH) is pleased to present the NYSDOH Infant Safe Sleep Toolkit. The materials in the toolkit focus on improving infant safe sleep practices to reduce infant mortality and are intended for public health and health care professionals working across the perinatal continuum of care. The toolkit allows users to learn from NYS' infant safe sleep initiatives to date, as well as from participants in the NYSDOH hospital and community-based safe sleep projects.

## Perinatal Continuum of Care High Level Flow Map

The diagram above shows the major components of the continuum of care from the time a woman receives prenatal care through the time she and her infant are discharged into the care of pediatrics and the community (Adapted from the National Action Partnership to Promote Safe Sleep Improvement and Innovation Network). Along the continuum of care there are countless opportunities to engage parents and caregivers in critical conversations about infant safe sleep and for professionals to model safe sleep practices. The NYSDOH Safe Sleep Toolkit provides material for prenatal care providers, hospital staff, pediatric providers and community-based organization staff.

## Examples of toolkit materials across the continuum of care:

**PRENATAL** – caregiver education materials, infant safe sleep resources ([see section 4](#)).

**HOSPITAL ADMISSION** – hospital staff education materials ([see section 5](#)).

**LABOR & DELIVERY** – hospital safe sleep presentations and policies ([see section 5](#)).

**MOTHER BABY UNIT** – rooming-in and safe sleep patient room signs and crib cards ([see section 5](#)).

**HOSPITAL DISCHARGE** – caregiver education materials and infant safety commitment forms ([see section 5](#)).

**PEDIATRICS** – caregiver education materials and tips for modeling infant safe sleep images in media ([see section 6](#)).

**COMMUNITY-BASED SUPPORT** – Cribs for Kids® Program Registration Form and sample infant safe sleep policies for organizations ([see section 6](#)).

# Toolkit Overview

The toolkit contains the following sections:

1. Introduction
2. Educational Presentations
3. Quality Improvement Tools
4. NYSDOH Infant Safe Sleep Materials
5. Hospital-based Safe Sleep Resources: New York State Perinatal Quality Collaborative (NYSPQC) Safe Sleep Project relevant presentations and resources created by participating hospitals including policies, protocols, infant safe sleep materials, and provider and patient education tools.
6. Community-based Safe Sleep Resources: NYS Safe Sleep Collaborative Improvement & Innovation Network to Reduce Infant Mortality (IM CoIIN) Safe Sleep Projects relevant presentations and resources created by participating community-based organizations including policies, protocols, infant safe sleep materials, and provider and patient education tools.
7. Data Tools
8. References
9. Web Links and Media
10. Success Stories & Lessons Learned

This toolkit is being distributed electronically to all NYS birthing hospitals and home visiting programs, and is also available on the NYSPQC website, [www.nyspqc.org](http://www.nyspqc.org), and the NYSDOH Safe Sleep for Baby website, [health.ny.gov/safesleep](http://health.ny.gov/safesleep).

## FROM HOSPITALS & COMMUNITY-BASED ORGANIZATIONS

Blue starred boxes throughout this toolkit feature reflections from NYS birthing hospitals' and community-based organizations' (CBO) journeys to improve infant safe sleep. The information is provided by hospitals and CBOs that have participated in the following NYSDOH infant safe sleep improvement projects:

- NYSPQC Safe Sleep Project;
- NYS Safe Sleep IM CoIIN; and
- National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPPSS-IIN).

A complete inventory of hospital and CBO successes and lessons learned are included in **section 10**. Also look for these blue starred boxes interspersed throughout the toolkit to showcase relevant examples of successes and lessons learned.

# Definitions

The terms in this section will be used throughout the toolkit. These are the definitions provided by the [National Institute of Child Health and Human Development](#).

**Infant mortality:** Infant mortality is the death of an infant before his or her first birthday. The infant mortality rate is the number of infant deaths for every 1,000 live births.

**Sudden Unexpected Infant Death (SUID):** The death of an infant younger than one-year of age that occurs suddenly and unexpectedly. After a full investigation, these deaths may be diagnosed as any of the following causes listed below.

- **Suffocation:** When no air reaches a baby's lungs, usually caused by a block in the airway.
- **Entrapment:** When a baby gets trapped between two objects, such as a mattress and wall, and can't breathe.
- **Infection:** When a baby has a cold or other infection caused by a virus or bacteria that makes breathing difficult.
- **Ingestion:** When a baby takes something into the mouth that blocks the airway or causes choking.
- **Metabolic diseases:** Conditions related to how the body functions that can lead to problems with breathing.
- **Cardiac arrhythmias:** When a baby's heart beats too fast or too slow and affects breathing.
- **Trauma (accidental or non-accidental):** When a baby experiences an injury.
- **Sudden Infant Death Syndrome (SIDS):** One type of SUID, SIDS is the sudden death of an infant younger than one-year of age that cannot be explained even after a full investigation that includes a complete autopsy, examination of the death scene, and review of the clinical history.

In some cases, the evidence is not clear or not enough information is available, so the death is considered to be of undetermined cause.

**Co-sleeping:** A sleep arrangement in which an infant sleeps in close proximity to another person (on the same surface or different surfaces) so as to be able to see, hear, and/or touch each other. Co-sleeping arrangements can include room sharing or bed sharing. The terms "bed sharing" and "co-sleeping" are often used interchangeably, but they have different meanings.

**Room Sharing:** A sleep arrangement in which an infant sleeps in the **same room** as parents or other adults, but on a separate sleep surface, such as a crib, bassinet, or play yard. The American Academy of Pediatrics (AAP) recommends that the infant's sleep surface be close to the parents' bed to aid in feeding, comforting, and monitoring of the infant. Room sharing is known to reduce the risk of SIDS and other sleep-related causes of infant death.

**Bed Sharing:** A sleep arrangement in which an infant sleeps on the **same surface**, such as a bed, couch, or chair, with another person. Sleeping with a baby in an adult bed increases the risk of suffocation and other sleep-related causes of infant death.

*The above content is provided by the National Institute of Child Health and Human Development. Safe Sleep Basics. Common SIDS and SUID Terms and Definitions.*

Available from: <https://safetosleep.nichd.nih.gov/safesleepbasics/SIDS/Common>.

# Background

## Rationale

Deaths from Sudden Infant Death Syndrome (SIDS) have declined dramatically since 1992, when the American Academy of Pediatrics (AAP) recommended that all babies be placed on their backs to sleep. Sleep-related deaths from other causes, however, including suffocation, entrapment and asphyxia, have increased. In 2016, the AAP expanded its guidelines on safe sleep for babies (see Summary of 2016 AAP Recommendations below) with additional information for parents on creating a safe environment for their babies to sleep.<sup>1</sup> Unsafe sleep, however, remains the leading preventable cause of death for healthy infants.<sup>2</sup> There are many efforts across NYS to reduce infant sleep-related deaths by supporting caregivers and providers, and improving safe sleep practices across the perinatal continuum of care.

### Summary of 2016 AAP Recommendations for a Safe Infant Sleeping Environment to Reduce the Risk of SIDS and Other Sleep-Related Infant Deaths

1. Back to sleep for every sleep.
2. Use a firm sleep surface.
3. Breastfeeding is recommended.
4. Room share, don't bed share. Infants sleep in the parents' room on a separate surface designed for infants, ideally for the first year of life, but at least for the first six months.
5. Keep soft objects and loose bedding away from the infant's sleep area.
6. Consider offering a pacifier at nap time and bedtime once breastfeeding is established.
7. Avoid smoke exposure during pregnancy and after birth.
8. Avoid alcohol and illicit drug use during pregnancy and after birth.
9. Avoid overheating and head covering in infants.
10. Pregnant women should obtain regular prenatal care.
11. Infants should be immunized in accordance with recommendations of the American Academy of Pediatrics (AAP) and Centers for Disease Control and Prevention (CDC).
12. Avoid the use of commercial devices that are inconsistent with safe sleep recommendations.
13. Do not use home cardiorespiratory monitors as a strategy to reduce the risk of SIDS.
14. Supervised, awake tummy time is recommended.
15. There is no evidence to recommend swaddling as a strategy to reduce the risk of SIDS.
16. Health care professionals, staff in newborn nurseries and NICUs, and child care providers should endorse and model the SIDS risk-reduction recommendations from birth.
17. Media and manufacturers should follow safe sleep guidelines in their messaging and advertising.
18. Continue the Safe to Sleep® campaign, focusing on ways to reduce the risk of all sleep-related infant deaths, including SIDS, suffocation, and other unintentional deaths. Pediatricians and other primary care providers should actively participate in this campaign: <https://safetosleep.nichd.nih.gov/>.
19. Continue research and surveillance on the risk factors, causes and pathophysiologic mechanisms of SIDS and other sleep-related infant deaths, with the goal of eliminating these deaths altogether.

## Background

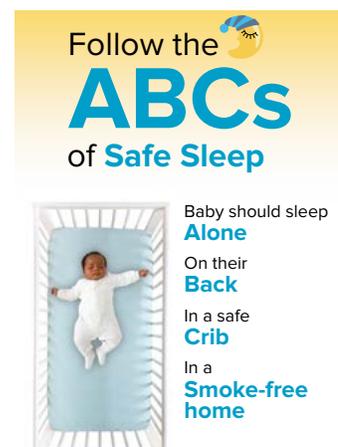

### How many infant sleep-related deaths occur in NYS?

In 2016 in NYS, over 1,000 infants under one-year of age died (infant mortality rate) of 4.5 per 1,000 live births).<sup>3</sup> Many of these deaths are attributed to congenital abnormalities and birth defects, multiple births, prematurity and low birth weight, infections and diseases. Sleep-related infant deaths are referred to as sudden unexpected infant deaths (SUID) and are attributed to either unsafe sleep practices, Sudden Infant Death Syndrome (SIDS), or unknown (for more information, refer to [Definitions](#)). About 90 babies die each year in NYS from sleep-related causes; this is the equivalent of more than four kindergarten classrooms of children.

### What is the NYSDOH doing to reduce infant mortality and promote safe sleep in NYS?

Addressing factors that lead to infant mortality is central to NYS maternal and child health initiatives. The NYS Title V Maternal and Child Health Services Block Grant (NYS Title V MCH Program) is leading statewide efforts with key stakeholders, agencies, partners and providers to reduce infant deaths and decrease economic and racial/ethnic disparities in infant mortality rates across NYS. Through a variety of focused and collective evidence-based interventions, the NYS Title V MCH Program is improving the ability of new parents to raise healthy infants by improving safe sleep practices. The NYSDOH leads efforts to improve safe sleep practices through the following strategies:

- > **Promotion of the ABCs of safe sleep campaign.** In partnership with the NYS Office of Children and Family Services (OCFS), NYSDOH developed caregiver education materials highlighting the ABCs of Safe Sleep – Baby should sleep **Alone**, on their **Back**, in a safe **Crib** right from the start. In 2019, the NYSDOH updated the messaging to include: Baby should sleep in a smoke-free home. NYSDOH shared the campaign materials across the state in public locations and distributed materials to all NYS birthing hospitals. These safe sleep materials include a brochure available in thirteen languages, mirror clings, magnets, posters in English and Spanish, crib cards, and a one-minute video in English and Spanish available on the NYSDOH YouTube channel. The campaign materials are free and available to download or order from [www.health.ny.gov/safesleep](http://www.health.ny.gov/safesleep).

*For more information about NYSDOH safe sleep materials, see section 3.*

- > **Participation in the national Collaborative Improvement and Innovation Network (CoIIN) to reduce infant mortality.** Since 2015, the NYSDOH has led NYS participation in two phases of the Health Resources and Services Administration (HRSA) supported Infant Mortality CoIIN, led by the National Institute for Children's Health Quality (NICHQ), and selected safe sleep as the priority strategy for NYS IM CoIIN. All IM CoIIN participants share the common agenda of ensuring every child reaches his/her first birthday and beyond. As part of the NYS IM CoIIN, the NYSDOH has engaged hospitals and community-based organizations across the state in safe sleep projects.

<sup>3</sup> New York State Community Health Indicator Reports. Mortality rate per 1,000 live births – Infants (<1year), 2014-2016. Available from: [https://webbi1.health.ny.gov/SASStoredProcess/guest?\\_program=/EBI/PHIG/apps/chir\\_dashboard/chir\\_dashboard&p=it&ind\\_id=lb27](https://webbi1.health.ny.gov/SASStoredProcess/guest?_program=/EBI/PHIG/apps/chir_dashboard/chir_dashboard&p=it&ind_id=lb27).

## Background

**More about NICHQ and NYS Safe Sleep IM CoIN Safe Sleep Projects.** The Safe Sleep IM CoIN is led by NICHQ. In their role, NICHQ leads NYS and other state teams in their efforts to improve birth outcomes by employing their combined expertise in infant mortality reduction and technical support in testing evidence-based strategies using quality improvement methodology. In 2017, NYS was awarded funding from NICHQ for the Safe Sleep CoIN to reduce infant mortality. This initiative builds on the work of the first phase of the NICHQ-led Infant Mortality CoIN.

*For more information about community-based safe sleep, see section 6.*

### > **Providing infant safe sleep resources to hospitals and community-based organizations**

throughout the state to help families establish a safe sleep environment. Hospitals and organizations participating in the NYSDOH safe sleep projects received resources including wearable blankets, Sleeping Safely Starter Kits (each kit contains a portable play yard, fitted crib sheet, wearable blanket and infant safe sleep literature), and *Sleep Baby Safe and Snug* board books from the Charlie's Kids Foundation. To learn more about Charlie's Kids Foundation and the book, visit <https://www.charlieskids.org>.

### > **Co-hosting educational presentations** for public health and health care professionals to raise awareness of the public health impact of sleep-related infant deaths in NYS and promote infant safe sleep practices.

*To view these educational presentations, see section 2 of the toolkit.*

### > **Leading the NYSDOH infant safe sleep initiatives including:**

- **New York State Perinatal Quality Collaborative (NYSPQC) Safe Sleep Project**, an initiative which engaged 82 NYS birthing facilities to promote safe infant sleep practices during the birth hospitalization. Participating hospital teams focused on modeling safe sleep, establishing hospital safe sleep policies and improving the delivery of safe sleep education to providers and caregivers.

*For more information, see section 5.*

- **NYS Safe Sleep IM CoIN Safe Sleep Projects**, initiatives which have engaged nine community-based organizations from across the state to deliver safe sleep education in homes and public spaces around the state.

*For more information, see section 6.*

- **NYS hospitals participating in the National Action Partnership to Promote Safe Sleep and Breastfeeding Improvement and Innovation Network (NAPPSS-IIN)** an initiative to make infant safe sleep and breastfeeding the national norm by aligning stakeholders to test safety bundles in multiple care settings to improve the likelihood that infant caregivers and families receive consistent, evidence-based instruction about safe sleep and breastfeeding.

*For more information, see section 5.*

# NYSDOH Infant Safe Sleep Projects

NYS is working at the forefront of national efforts to reduce SUID rates and racial disparities in infant sleep-related deaths as part of the NYS Title V MCH Program. The NYSDOH Division of Family Health (DFH) leads NYS participation in the IM CoIIN alongside other state teams. As part of the IM CoIIN initiative in 2015, and with support from NICHQ, the NYSDOH DFH launched a safe sleep project working with hospitals across NYS (the NYSPQC Hospital-based Safe Sleep Project) and a safe sleep pilot project for community-based organizations (the Community-based Safe Sleep Project). The outcomes of the hospital-based and community-based safe sleep projects that ended in 2017 have been far-reaching, and the NYSDOH continues to lead the NYS Safe Sleep IM CoIIN initiative with a focus on community-based organizations.

## PAST PROJECTS

### NYSPQC Safe Sleep Project (2015-2017)

Since September 2010, the NYSDOH has collaborated with its Regional Perinatal Centers (RPCs), RPC affiliate birthing hospitals and NICHQ to improve and ensure the quality of obstetrical and neonatal care related to preterm births through the NYSPQC. The NYSPQC aims to provide the best, safest and most equitable care for women and infants in NYS by collaborating with birthing hospitals, perinatal care providers and other key stakeholders to prevent and minimize harm through the translation of evidence-based guidelines to clinical practice.

The NYSPQC Safe Sleep Project kicked off in September 2015. The goal of the project was to reduce infant sleep related deaths in NYS by improving safe infant sleep practices through:

- > Implementation of policies to support/facilitate safe sleep practices;
- > Education of health care professionals so they have the knowledge to actively endorse and model safe sleep practices;
- > Education of infant caregivers so they have the knowledge, skills and self-efficacy to practice safe sleep for every sleep; and
- > Collaboration across hospital teams to share and learn.

The NYSPQC recruited birthing hospitals at all levels to participate, from those that provide basic care and do not have neonatal intensive care units, to RPCs that provide care to the most critically ill women and newborns. Between September 2015, and July 2017, a total of 82 hospitals participated in the initiative, including:

- > 17 RPCs;
- > 29 Level III birthing hospitals;
- > 15 Level II birthing hospitals; and
- > 21 Level I birthing hospitals.

# NYSDOH Infant Safe Sleep Projects

The NYSPQC Safe Sleep Project adapted the Institute for Healthcare Improvement model for Idealized Perinatal Care and Breakthrough Series Methodology as a framework to guide improvement. The project included: three in-person Learning Sessions; 12 Coaching Call webinars; clinical, quality improvement and technical support from faculty and clinical advisors; and monthly data collection with near real-time analysis and feedback to inform improvement efforts. Participating hospitals tested and implemented changes to achieve the following aims:

- > Document safe sleep education for > 97% of caregivers prior to discharge from the birth hospitalization;
- > Improve the percentage of infants placed to sleep in a safe sleep environment during the birth hospitalization; and
- > Improve the percentage of caregivers reporting that they understand safe sleep educational messages prior to discharge from the birth hospitalization.

## Project Measures

The NYSPQC Safe Sleep Project evaluated key performance measures, including: percent of medical records with documentation of safe sleep education; percent of infants, sleeping or awake-and-unattended in crib, in a safe sleep environment (positioned supine, in safe clothing, with head of crib flat and crib free of objects); percent of caregivers who reported they received information on how to put their baby to sleep safely; and percent of caregivers who indicated they understand safe sleep practices (infant should be alone, on his/her back, in crib, without items in a safe crib). Refer to the [Data Tools](#) section of the toolkit for more information about project measures.

As a means of assessing ongoing improvement and sustainment of in hospital infant safe sleep practices, the NYSPQC continued to collect data for one project measure beyond the project period: the percent of infants, sleeping or awake-and-unattended in crib, in a safe sleep environment. There were 67 NYS birthing hospitals that continued to submit data while the project was in sustain mode.

## Project Results

Hospital submitted data showed continuous improvement throughout the project period. From September 2015, to July 2017, project participants reported:

- > An 8% increase in participating hospitals' medical records indicating safe sleep education occurred during the birth hospitalization (90% to 98%);
- > A 38% increase in the percent of infants, sleeping or awake-and-unattended in a crib, in a safe sleep environment during the birth hospitalization (66% to 91%);
- > A 24% increase in the percent of primary caregivers indicating they understand safe sleep practices (72% to 88%); and
- > Nearly all caregivers indicated they plan to practice safe sleep at home.

# NYSDOH Infant Safe Sleep Projects

## NYS Safe Sleep IM CoIIN Project Phase 1 (2015-2017)

For the first phase of the NYSDOH's community-based safe sleep project, under the NYS Safe Sleep IM CoIIN initiative, the Title V MCH Program engaged a total of seven community-based organizations (CBOs) from across NYS. The CBOs served high-need areas, providing home visiting services to new parents. These CBOs are contracted to fulfill several educational requirements during in-home visits, including the consistent messaging of the AAP's ABCs of Safe Sleep. For the NYS Safe Sleep IM CoIIN, the CBOs conducted surveys with postpartum mothers to assess the effectiveness of safe sleep education on caregivers' safe sleep practices in the home setting.

The NYS Safe Sleep IM CoIIN also utilized the Model for Improvement to guide its work. The CBOs participating in the initiative tested and implemented changes to achieve their aims. The project included monthly to bimonthly Coaching Call webinars, quality improvement and technical support from faculty and clinical advisors, and monthly CBO data collection with NYS Safe Sleep IM CoIIN analysis and feedback to inform improvement efforts.

The initial community-based safe sleep project took place from September 2015 through July 2017. The project aims were to:

- > Decrease sleep-related SUID mortality rate by 10% from 40 per 100,000 live births in 2012, to 36 per 100,000 births in 2016;
- > Reduce relative disparities in sleep-related SUID deaths between non-Hispanic Blacks and non-Hispanic White infants by decreasing the rate ratio by 10% from 2.1 in 2012, to 1.9 in 2016; and
- > Increase the proportion of infants placed on their backs for sleep by 10% from 70% in 2011, to 77% in 2016.

### Project Measures

The NYS Safe Sleep IM CoIIN evaluated key safe sleep measures developed by the national IM CoIIN. Measurements were used to determine if the education was effective at altering parent/caregiver behavior, moving the teams towards their desired aims. The three key safe sleep measures for IM CoIIN included: percentage of infants sleeping on back; percentage of infants sleeping alone – always; percentage of infants sleeping in a crib.

### Project Results

At the end of the first phase of the community-based safe sleep project period in 2017, project participants reported sustained shift throughout the project for the following measures:

- > Infant sleeping alone in his/her own crib;
- > Mothers remember being told to place infants on their backs for sleep; and
- > Mothers remember being told to room share.

# NYSDOH Infant Safe Sleep Projects

## CURRENT INITIATIVES

### NYS Safe Sleep IM CoIIN Phase 2 (2018-2020)

The NYSDOH continues to participate in the second round of the national Safe Sleep IM CoIIN, with a focus on community-based organizations, particularly Health Start and Maternal and Infant Community Health Collaboratives (MICHCs), and reducing disparities in infant mortality through the promotion of infant safe sleep. NYS is working on this national project in partnership with several other states, under the leadership of NICHQ. The second phase of the NYS Safe Sleep IM CoIIN built off the first phase of the community-based safe sleep project and, like previous safe sleep projects, uses the Model for Improvement. The project included monthly to bimonthly Coaching Call webinars, quality improvement and technical support from faculty and clinical advisors, and monthly CBO data collection with NYS Safe Sleep IM CoIIN analysis and feedback to inform improvement efforts.

Since October 2018, a total of six community-based organizations are participating in the project from across the state: Bronx, Staten Island, Queens, Manhattan, Syracuse, and Binghamton. Each participating pilot organization has received safe sleep resources including Sleeping Safely Starter Kits (which each included a portable play yard, fitted crib sheet, wearable blanket and infant safe sleep literature). The NYSDOH also sent pilot organizations and all NYS home visiting programs sleep sacks and Sleep Baby Safe and Snug board books.

The central goals of the NYS Safe Sleep IM CoIIN include: implementing policies to support/facilitate safe sleep practices; educating health care professionals so they understand, actively endorse and model safe sleep practices; providing infant caregivers with education and opportunities so they have the knowledge, skills and self-efficacy to practice safe sleep for every sleep; and collaborating across teams to share and learn.

By 2020, the NYS Safe Sleep CoIIN aims to:

- > Decrease SUID rates by  $\geq 10\%$  in NYS by increasing adoption of the ABCs of safe sleep (alone, on back, in crib); and
- > Reduce racial disparities in infant safe sleep practices by  $\geq 5\%$ .

### Project Measures

The project evaluates key performance measures, including: percent of infants laid down to sleep alone; percent of infants laid down to sleep on their back; and percent of infants laid down to sleep in a crib.

# NYSDOH Infant Safe Sleep Projects

## National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPPSS-IIN) (2017-2022)

NAPPSS-IIN is an initiative to make infant safe sleep and breastfeeding the national norm by aligning stakeholders to test safety bundles in multiple care settings to improve the likelihood that infant caregivers and families receive consistent, evidence-based instruction about safe sleep and breastfeeding. This project is led by NICHQ and funded by the Health Resources and Services Administration Maternal and Child Health Bureau. In 2017, the project started with five pilot hospitals in five states, including NYS. In 2019, the initiative expanded to include additional hospitals, and will expand to include social service agencies and childcare touch points across the country by 2022. An initial coalition of 70 stakeholder organizations will be expanded to support the initiative.

The NYSDOH used NYSPQC Safe Sleep Project data and NYS administrative data related to safe sleep and infant mortality to identify and recruit hospitals to participate in the initiative. NYS's representative hospital for Cohort A is New York Presbyterian – Lawrence, and the NYSDOH has recruited two additional hospitals to participate in Cohort B: Crouse Hospital and Montefiore Medical Center, Wakefield Division. The NYSDOH facilitates quarterly meetings with statewide and national safe sleep and breastfeeding stakeholders to disseminate, spread and scale best practices to improve safe sleep practices and breastfeeding rates, and reduce disparities in both areas.

Learn more about the national NAPPSS-IIN project: <http://www.nappss.org/>.

# May 2019 was Designated as Infant Safe Sleep Month in NYS

## Press Release: New York State Proclaims May Infant Safe Sleep Month To Raise Awareness of Safe Sleep Practices for Babies

*State Agencies Will Distribute 10,000 Safe Sleep Kits to Families of the Newest New Yorkers*

The New York State Office of Children and Family Services (OCFS) and New York State Department of Health (DOH) today announced that May is Infant Safe Sleep Month to promote safe sleep practices and help New Yorkers prevent infant deaths from unsafe sleep environments. As announced in the Governor's State of the State, OCFS and DOH will provide 10,000 safe sleep kits to hospitals, local social services districts, and community-based organizations statewide to promote safe sleep education.

Each year in the United States, nearly 3,500 infants die in unsafe sleep environments. The Governor has directed DOH and OCFS to launch the statewide public awareness campaign to spread the word about preventing such tragedies. The safe sleep kits contain information on the ABC's of safe sleep: babies are safest Alone on their Backs in a Crib, with a book for parents and a window cling to remind caregivers of safe sleep practices. It also contains an infant sleep sack, a safe alternative to a blanket.

"Every parent should know the ABC's of safe sleep: infants sleep safest when they are Alone on their Backs in a Crib without blankets, pillows, bumpers, or stuffed animals," said acting OCFS Commissioner Sheila J. Poole. "Sleep-related deaths are preventable, and this campaign will give parents and other caregivers the tools and information they need to keep their babies safe."

The state is running infant safe sleep public service announcements in English and Spanish at New York State Thruway rest stops; Department of Motor Vehicles offices; Women, Infant, and Children centers; and other public settings.

New York State has seen a 26% decrease in infant mortality over the past 15 years. Educational campaigns, such as this initiative, help the state build upon the success of promoting safe sleep. OCFS and DOH are working in partnership with sister state agencies including the Office of Temporary Disability Assistance and the State Education Department to inform and educate the public.

"Education is our best tool in fighting the tragic consequences of Sudden Unexplained Infant Death Syndrome," said New York State Commissioner of Health Dr. Howard Zucker. "Ensuring that families and caregivers know the basics of safe sleep practices is a key part of supporting infant health."

In addition to the safe sleep campaign, OCFS will be distributing cribs and pack and play portable cribs to family child care programs and day care centers throughout the state in the continued effort to reduce infant mortality rates due to unsafe sleep practices. For more information on safe sleep please visit: [https://ocfs.ny.gov/main/prevention/infant\\_sleeping.asp](https://ocfs.ny.gov/main/prevention/infant_sleeping.asp).

## Educational Presentations

The educational presentations in this section highlight events hosted between 2015 and 2017, by the NYSDOH and organizational partners to promote safer sleep for infants in an effort to reduce infant mortality. The presentations featured national and NYS safe sleep experts.

These presentations can be used to educate hospital and community-based organization staff, public health professionals and others working to promote safe sleep practices.

Additional presentations can be found in:

## Can We Prevent Infant Sleep-Related Deaths? What You Need to Know

November 19, 2015

### Learning Objectives

After participation in this broadcast, the learner will be able to:

- Explain the public health impact of sleep-related infant deaths in New York State and the nation
- Name the three A-B-C's of infant safe sleep
- Identify at least two elements of a safe sleep environment

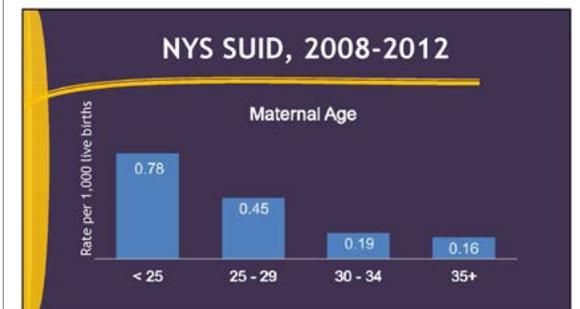

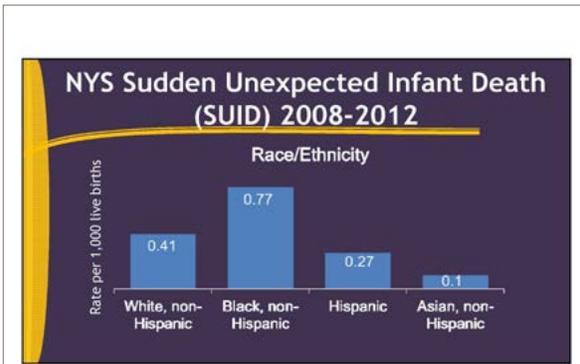

### Featured Speaker

Michael H. Goodstein, MD, FAAP  
Attending Neonatologist, York Hospital  
Clinical Associate Professor of Pediatrics, Penn State University  
Medical Director of Research, Cribs for Kids ®

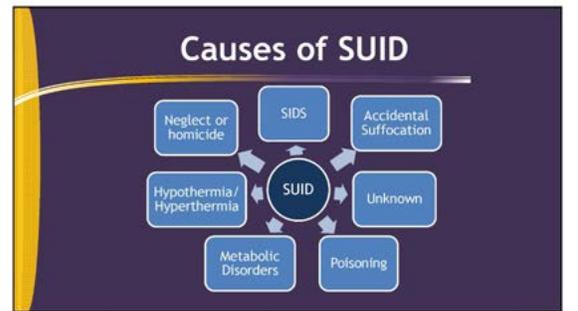

Goodstein M.

Can We Prevent Infant Sleep-Related Deaths? What You Need to Know

### Infant Mortality

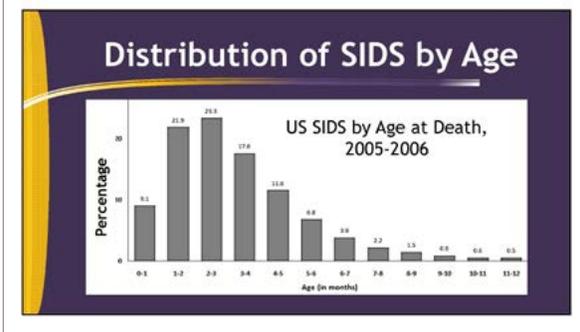

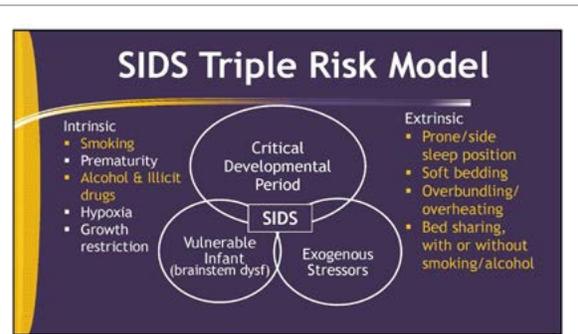

Fact: Over **3500** babies in the U.S. die suddenly and unexpectedly each year!

### Determining SIDS

- Performance of a complete autopsy
- Examination of the death scene
- Review of the case history

Child Death Review Case Reporting System

### SIDS: A Brainstem Abnormality

- Blood Pressure
- Temperature Control
- Respiratory Control
- Upper Airway Reflexes
- Arousal

Goodstein M.

Can We Prevent Infant Sleep-Related Deaths? What You Need to Know

### SIDS Pathogenesis

Serotonin receptor binding density lower in SIDS cases compared to controls

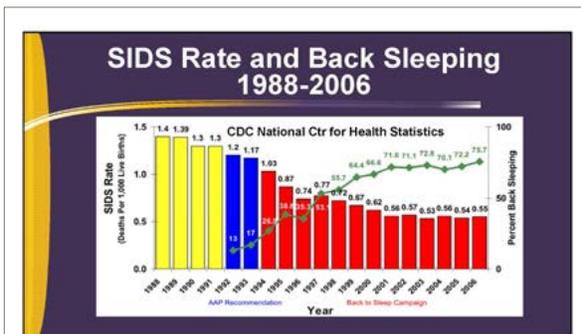

### SIDS Pathogenesis

Step 1	Life threatening event	Asphyxia and brain hypo-perfusion
Step 2	Progressive Asphyxia	Failure of arousal
Step 3		Hypoxic coma
Step 4		Bradycardia and gasping
Step 5		Failure of autoresuscitation, resulting in death

### SIDS Pathogenesis

### Supine Sleep and Aspiration

Orientation of the Trachea to the Esophagus

### Setting Policy on SUID

- American Academy of Pediatrics (AAP) Policy Recommendations
  - Level A
  - Level B
  - Level C
- Policy recommendations and technical report issued by AAP SIDS Task Force in 2011

### Increasing the Risk

Chicago Infant Mortality Study

- Sleeping on soft bedding: 5x
- Sleeping on the stomach: 2.4x
- Shared a bed with other children: 5.4x
- Sleeping on the stomach on soft bedding: 21x

### AAP Level A Recommendations

- Back to sleep for every sleep
- Use a firm sleep surface
- Room-sharing without bed-sharing
- Keep soft objects and loose bedding out of the crib
- Pregnant women should receive regular prenatal care
- Avoid smoke exposure during and after pregnancy

Goodstein M.

Can We Prevent Infant Sleep-Related Deaths? What You Need to Know

**AAP Level A Recommendations**

- Avoid alcohol and illicit drug use during pregnancy and after birth
- Breastfeeding is recommended
- Consider offering a pacifier at nap time and bedtime
- Avoid overheating
- Do not use home cardiorespiratory monitors as a strategy for reducing the risk of SIDS

**AAP Level C Recommendations**

- Health care professionals should endorse recommendations from birth
- Media and manufacturers should follow safe-sleep guidelines in their messaging and advertising
- Continue research and surveillance with the ultimate goal of eliminating these deaths entirely

**AAP Level B Recommendations**

- Infants should be immunized in accordance with recommendations
- Avoid commercial devices marketed to reduce the risk of SIDS
- Supervised, awake tummy time is recommended to facilitate development and to minimize development of flattening of skull

**The ABC's of Safe Sleep**

**A Alone**  
*Not with other people, pillows, blankets, or stuffed animals.*

**B on my Back**  
*Not on the stomach or side.*

**C in my Crib**  
*Not on an adult bed, sofa, cushion, or other soft surface.*

**Overcoming Barriers To Change**

What Parents Are Saying...

- Prone positioning: fear of choking
- Baby sleeps "better" on stomach
- Soft things are safer for the baby
- SIDS is "God's will"
- Why bother? Recommendations keep changing anyway
- Vigilance: sleep with baby for protection

**Medical Exceptions in Hospital**

- Conditions where baby may benefit from prone or side lying position
- Thermoregulation – may need extra bundling and/or hats when sleeping
- Any deviation from the AAP recommendations should prompt an explanation to the parents

TEACHABLE MOMENTS!

**Urge Parents To Take Action**

- Social learning theory and motivational interviewing encourages health care providers to:
  - Use a positive tone
  - Provide adequate information
  - Allow the parent to ask most of the questions
  - Promotes atmosphere of acceptance and compassion

**Overcoming Barriers**

- Education in the media and advertising
- Think outside the box...
- Counteract idea that SIDS is not preventable/"It's in God's hands"
- Accidental sleep death, "I don't want the baby to suffocate"

Goodstein M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know*

### Bed Sharing With Overlay

© Michigan Public Health Institute  
SIMULATED RECONSTRUCTION

### Bed Sharing With Overlay

© Michigan Public Health Institute  
SIMULATED RECONSTRUCTION

### Things You Can Do ...

- Tools to cope with fussy babies
- Sleep-deprived parents may make poor judgments
- Make use of 5 S's: swaddling, side carrying, shushing, swinging, and sucking

### Changes To Consider

- Discuss sleep safety instead of just SIDS
- Discuss aspiration and choking concerns with parents
- Discourage use of bumper pads and other soft bedding
- Encourage room sharing without bed sharing

### Hospital-Based Programs

- Capture 100% of the birthing population for education
- Point of intersection for all the members of the health care team with family members
- Nurses are critical role models
- It is efficient and cost-effective

### Hospital Program Organization

### A Model Program

- Replicate Abusive Head Trauma Program
- 50% reduction in shaken baby injuries
- Program Components:
  - DVD presentation on infant sleep safety
  - Face to face review with nursing staff
  - Sign voluntary acknowledgement statement

### From Campaigns To Conversations

- Caregivers know the "message," but are not changing behaviors
- Caregivers report a need to understand the reasons for safe sleep recommendations
- Behavior change requires two-way communication

Goodstein M.

Can We Prevent Infant Sleep-Related Deaths? What You Need to Know

### Coordinated Education Works!

Tennessee	17% reduction in deaths in 1 year
South Dakota	Infant mortality rate decreased from 8.6 to 6.5 (2013)
South Carolina	41% drop in accidental sleep-related deaths
Baltimore, MD	Lowest infant mortality rate ever recorded, recorded, decreased 28%. Racial disparity decreased almost 40%

### Crib Distribution

- Patients identified by local providers
- Confirmation of pregnancy
- Personal responsibility
- Education: PNP and sleep safety
- Provide brochures, Graco Pack 'N Play (w/SKU number), crib sheet and Halo sleep sack

### Cribs For Kids

- Originated in Pittsburgh in 1998
- Goal: Eliminate preventable unsafe sleep deaths
  - Disseminate information on SIDS and safe sleep
  - Distribute safe infant cribs to families in need

### National Certification Program

Rationale for a National Certification Program

- Consistent messaging and modeling
- Road map for success
- Culture of sleep safety
- Monitor progress
- Reward for achieving goals

### How It Works

Certification has three levels:

### SCHOOL OF PUBLIC HEALTH

UNIVERSITY AT ALBANY, State University of New York

- Evaluations & Continuing Education:** Nursing Contact Hours, CME and CHES credits are available. Please visit [www.phlive.org](http://www.phlive.org) to fill out your evaluation and complete the post-test.
- Conflict of Interest Disclosure Statement:** The planners and presenters do not have any financial arrangements or affiliations with any commercial entities whose products, research or services may be discussed in this activity. No commercial funding has been accepted for this activity.

Thank you!

### Eliminating Sleep-Related Deaths

90 children = four kindergarten classrooms

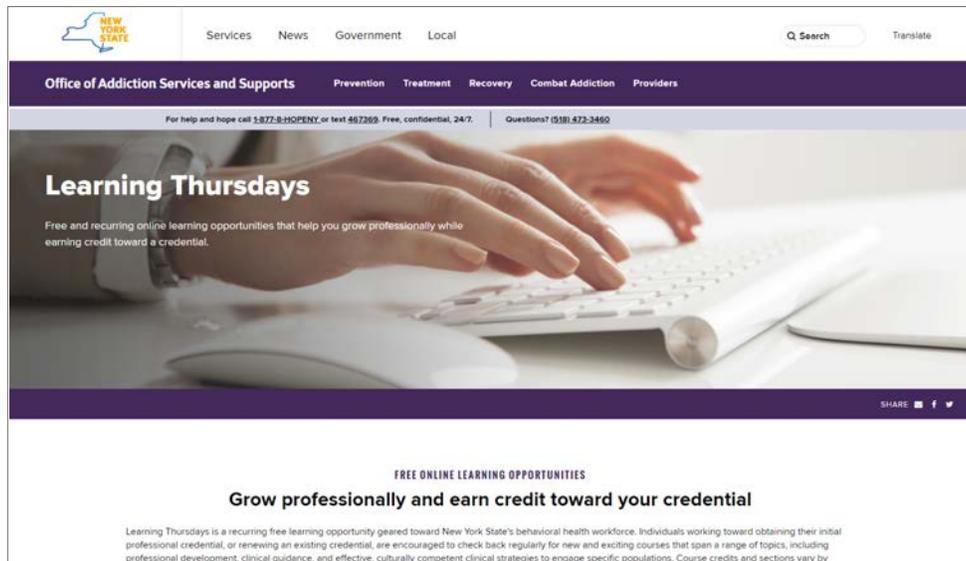

# Infant Sleep-Related Deaths: What You Need to Know

## Goodstein M, Kacica M.

### *Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

NYS Office of Alcoholism and Substance Abuse Services (OASAS) Learning Thursday Webcast, May 2017.

**Intended audience:** Public health and health care professionals.

<https://oasas.ny.gov/training/learning-thursdays>

Education about infant safe sleep practices is important for families, and for those who work with families. The latter group may include caregivers, health care practitioners, public health professionals, substance use disorder treatment providers, and staff from organizations that house and provide services to families, such as those in residential treatment or homeless shelters. The Centers for Disease Control and Prevention estimates that approximately 3,700 U.S. babies (under one-year of age) die suddenly and unexpectedly each year. The impact on families is devastating. This webinar will review the current American Academy of Pediatrics recommendations on infant safe sleep, while improving self-efficacy for those who work with families to discuss safe sleep practices with the families they are caring for and/or providing services. The program will also enhance the knowledge and understanding of viewers so they can model infant safe sleep practices in hospitals, substance use disorder outpatient or residential treatment facilities, homeless shelters, or the home environment. Finally, information will be provided on infant safe sleep resources developed by the New York State Department of Health and New York State Office of Children and Family Services, that are free, and available for use to organizations across New York.

The NYSDOH collaborated with the NYS OASAS to develop provider training for staff of residential treatment facilities for substance abuse, as well as homeless shelters to educate providers working with families regarding the importance of safe infant sleep. Providers may include caregivers, health care practitioners, public health professionals, substance use treatment providers, and residential treatment or homeless shelter staff. The webinar has been recorded and is now available for viewing, and reviews the 2016 American Academy of Pediatrics recommendations on infant safe sleep. The OASAS Learning Thursday webinar can be accessed here: [Can We Prevent Infant Sleep-Related Deaths? What You Need To Know Now!](#)

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 1

### Welcome to Learning Thursdays!

Learning Thursdays are offered to addiction professionals as a free learning opportunity with the goal of improving the knowledge and skills of the New York State substance use disorder workforce as we strive to improve the lives of individuals in prevention, treatment and recovery services.

May 18, 2017

April 17, 2017 2

NEW YORK STATE  
Office of Alcoholism and Substance Abuse Services

## CAN WE PREVENT INFANT SLEEP-RELATED DEATHS? WHAT YOU NEED TO KNOW NOW!

Michael Goodstein, MD, FAAP

April 17, 2017 3

### Disclosures

I, Michael Goodstein, have documented that I have no financial relationships to disclose or Conflicts of Interest (COIs) to resolve.

I have documented that my presentation will not involve discussion of unapproved or off-label, experimental use of a product, drug or device.

April 17, 2017 4

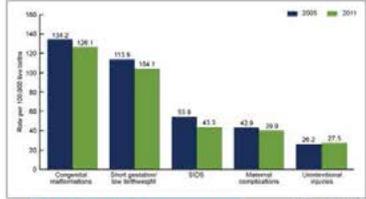

### Objectives for This Presentation

- Improve the knowledge of residential treatment and homeless shelter staff in regards to infant safe sleep practices.
- Improve staff self-efficacy in discussing safe sleep practices with caregivers.
- Enhance staff modelling of infant safe sleep practices.
- Ensure staff have knowledge of NYSDOH developed infant safe sleep resources.

April 17, 2017 5

### Infant mortality rates for the five leading causes of infant death in United States, 2005 and 2011

Cause	2005	2011
Congenital malformations	138.2	128.1
Sudden unexpected infant death (SUID)	115.8	104.1
SIDS	61.8	41.1
Maternal complications	43.8	39.9
Unintentional injuries	38.3	27.5

24,000 deaths per year

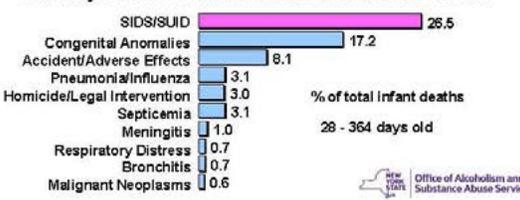

April 17, 2017 6

### Infant Mortality Statistics

#### SIDS/SUID - United States 1999

The major cause of infant death after the first month

Cause	% of total infant deaths
SIDS/SUID	28.5
Congenital Anomalies	17.2
Accident/Adverse Effects	8.1
Pneumonia/Influenza	3.1
Homicide/Legal Intervention	3.0
Septicemia	3.1
Meningitis	1.0
Respiratory Distress	0.7
Bronchitis	0.7
Malignant Neoplasms	0.6

28 - 364 days old

Goodstein M, Kacica M.

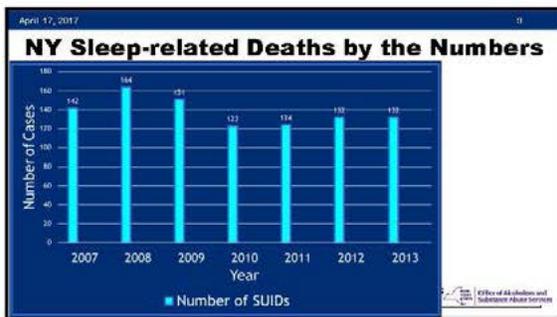

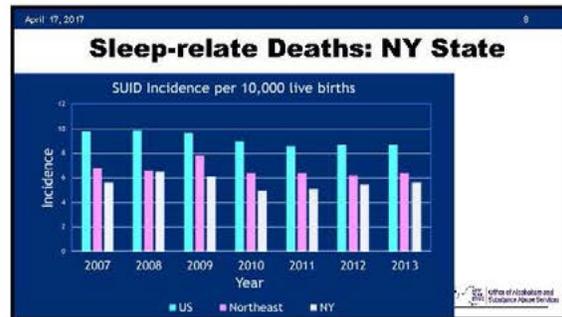

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 7

**FACT:**  
**3,500 babies in the US die suddenly and unexpectedly each year!**

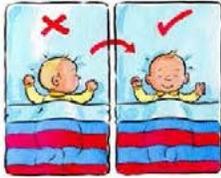

Office of Alcoholism and Substance Abuse Services

April 17, 2017 10

**Infant Sleep Safety**

Requires a consistent and repetitive message in the community to prevent accidental deaths!

Office of Alcoholism and Substance Abuse Services

April 17, 2017 11

**Definitions**

- **Co-sleeping:** A vague and confusing term to describe shared sleeping arrangements between infant and parents.
- **Bedsharing:** Any individual sharing a sleeping surface with an infant.
- **Roomsharing:** parent and infant sleep proximate in the same room, on separate sleep surfaces.

Office of Alcoholism and Substance Abuse Services

April 17, 2017 12

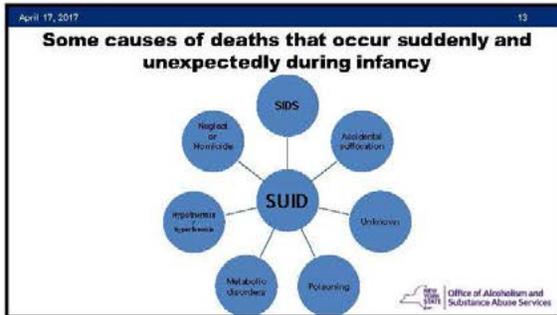

**What is SUID or SUDI?**

- Sudden Unexpected Infant Death
  - Occurs in a previously healthy infant
  - Can be explained or unexplained
    - Explained: trauma, drowning, suffocation
    - Unexplained: SIDS, undetermined
  - Most unobserved, during sleep/environment
- Sleep-related deaths
- SIDS represents a subcategory of SUID

Office of Alcoholism and Substance Abuse Services

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

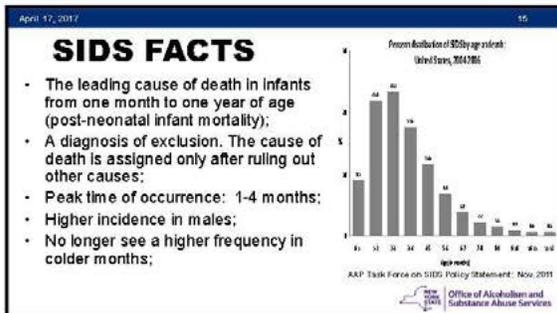

April 17, 2017 14

### What is SIDS?

ICD-10 Definition: The sudden death of an infant under one year of age which remains unexplained after the performance of a complete post-mortem investigation including:

- Performance of a complete autopsy
- Examination of the death scene
- Review of the case history

Office of Alcoholism and Substance Abuse Services

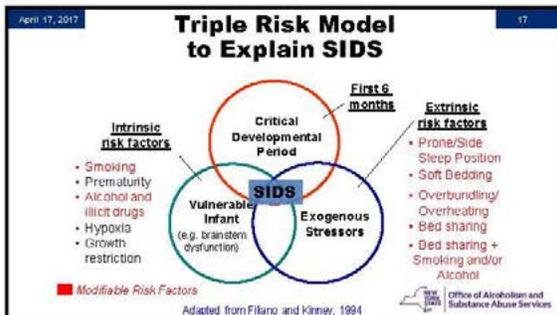

April 17, 2017 16

### SIDS FACTS

continued

- Higher incidence in preterm and low birth weight infants;
- Associated with:
  - Young maternal age;
  - Maternal smoking with pregnancy;
  - Late or no prenatal care;
- 2-3 times more common in African-American, American Indian, Alaska Native children.

Office of Alcoholism and Substance Abuse Services

April 17, 2017 18

### Strength of Recommendation

Scale based on the *Strength of Recommendation Taxonomy (SORT)*

- A: There is good quality patient-oriented evidence
- B: There is inconsistent or limited quality patient-oriented evidence
- C: The recommendation is based on consensus, disease-oriented evidence, usual practice, expert opinion, or case series for studies of diagnosis, treatment, prevention or screening.

Office of Alcoholism and Substance Abuse Services

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 19

### In General...

- Recommendations are to reduce the risk of SIDS and sleep-related suffocation, asphyxia, and entrapment;
- Recommendations should be used consistently until 1 year of age:
  - Most epidemiological studies upon which these recommendations are based include infants up to 1 year of age.

Office of Alcoholism and Substance Abuse Services

April 17, 2017 20

### Why do the recommendations change?

Recommendations are not static:

- 1992: AAP recommended side or back to reduce the risk of SIDS;
- 2000: Back preferred, but side better than prone;
- 2005: Back only.

Office of Alcoholism and Substance Abuse Services

April 17, 2017 21

### Risk of Side Positioning

- Multiple studies have demonstrated that side position places infant at higher risk for SIDS, than the back position;
- Recent studies show similar risk for side (aOR 2.0) and prone (aOR 2.6) positioning (Li, 2003; Hauck, 2002);
- Side position is unstable-unaccustomed prone;
- This risk did not emerge until fewer babies were sleeping prone.

Office of Alcoholism and Substance Abuse Services

April 17, 2017 22

### Change is Messy!

- Recommendations also become more nuanced:
  - AKA complicated
- Back to Sleep (simple message) has evolved to...
- Safe to Sleep:
  - Sleep position
  - Sleep location
  - Bedding
  - No smoking
  - Etc.

Office of Alcoholism and Substance Abuse Services

April 17, 2017 23

### 2016 SIDS Task Force Policy Statement

#### Level A Recommendations:

- ✓ Back to sleep for every sleep;
- ✓ Use a firm sleep surface;
- ✓ Room-sharing; infant on separate sleep surface;
- ✓ Keep soft objects and loose bedding out of the crib;
- ✓ Avoid smoke exposure during pregnancy and after birth;
- ✓ Avoid alcohol and illicit drug use during pregnancy and after birth;

Office of Alcoholism and Substance Abuse Services

April 17, 2017 24

### 2016 SIDS Task Force Policy Statement

#### Level A Recommendations:

- ✓ Avoid overheating;
- ✓ Do not use home cardiorespiratory monitors as a strategy for reducing the risk of SIDS;
- ✓ Health care professionals, staff in newborn nurseries and NICUs, and child care providers should endorse the SIDS risk-reduction recommendations from birth;
- ✓ Media and manufacturers should follow safe-sleep guidelines in their messaging and advertising.

Office of Alcoholism and Substance Abuse Services

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 25

### 2016 SIDS Task Force Policy Statement

**Level B Recommendations:**

- ✓ Avoid commercial devices that are inconsistent with safe sleep recommendations;
- ✓ Supervised, awake tummy time is recommended to facilitate development and to minimize development of positional plagiocephaly (flattening of skull).

April 17, 2017 26

### 2016 SIDS Task Force Policy Statement

**Level C Recommendations:**

- ✓ Continue research and surveillance on the risk factors, causes, and pathophysiological mechanisms of SIDS and other sleep-related infant deaths, with the ultimate goal of eliminating these deaths.
- ✓ There is no evidence to recommend swaddling as a strategy to reduce the risk of SIDS.

April 17, 2017 22

### We Need to Move Beyond *Back to Sleep*

She's on her back to sleep!

April 17, 2017 23

### Allegheny County, PA

#### Study of 88 SIDS Deaths, 1994-2000

11% (10 babies) Found in cribs or bassinets

89% (78 babies) Found in **unsafe** sleeping environments

Source: Allegheny County Coroner's Office, Stephen Koehler, Ph. D., Forensic Epidemiologist

April 17, 2017 28

### Bed Sharing with Siblings, Soft Bedding Increase SIDS Risk

- **Sleeping on soft bedding:** increased SIDS risk 5 X
- **Sleeping on the stomach:** increased SIDS risk 2.4 X
- **SIDS victims were 5.4 times more likely to have shared a bed with other children.**
- **Sleeping on the stomach on soft bedding:** increased risk of SIDS 21 times

Source: Chicago Infant Mortality Study, Pediatrics, May, 2003

April 17, 2017 20

### Correct Safe Sleep Environment

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 31

### Risk factors for SIDS

Babies who sleep on their stomachs are:

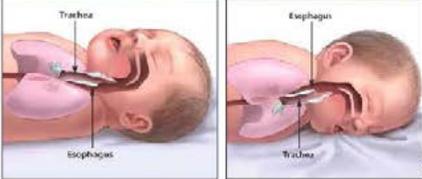

- Have longer periods of deep sleep
- have higher arousal threshold
- experience less movement
- less reactive to noise
- experience sudden decreases in blood pressure and heart rate control

April 17, 2017 32

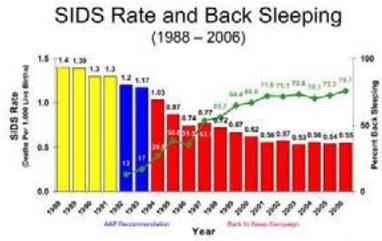

### The Truth About Supine Sleep and Aspiration: Ending the Fallacy

#### Orientation of the Trachea to the Esophagus

April 17, 2017 33

### SIDS Rate and Back Sleeping (1988 – 2006)

SIDS Rate Source: CDC, National Center for Health Statistics.  
Sleep Position Data: NICHD, National Infant Sleep Position Study

April 17, 2017 34

### Sleep Position and Reflux

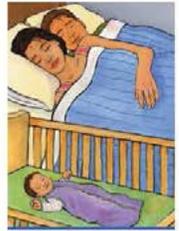

- Infants with GE reflux should be kept supine:
  - Unless the risk of death from complications of GE reflux is greater than the risk of SIDS.
- Supine position does not increase the risk of choking and aspiration in infants with GE reflux:
  - Protective airway mechanisms.
- Do NOT elevate the head of the infant's crib:
  - Ineffective in reducing GE reflux.
  - Infant may slide to the foot of the crib - may compromise respiration.

April 17, 2017 35

### Infant Sleep Location

- Infants should sleep in parents' room, close to parents' bed, but on a separate surface designed for infants;
- Ideally for first year of life, but at least for the first 6 months.

April 17, 2017 36

### Where Should Infants Sleep?

Shears, Rutherford, and Kemp Pediatrics, Oct. 2003

**Infants < 8 months, risk of death in cribs:**  
6.3 deaths per 1,000,000 infants.

**Infants < 8 months, risk of death in adult beds:**  
255 deaths per 1,000,000 infants.

**Risk for SIDS:**  
**Greatest** if sharing a sleep surface.  
**Intermediate** if sleeping in another room.  
**Least** if infant sleeps in same room without bed-sharing.

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 37

### More Recent Data

- New Zealand SUDI study
  - 64% protection with roomsharing: **aOR 0.36** (95% CI 0.19-0.71)
- Estimate of 50% reduction is very conservative
- None of the case-control studies stratify by age (months)

April 17, 2017 38

### Why is Room Sharing Protective?

- SIDS- failure to arouse
- More small awakenings during the night
  - Stirrings, movement; not fully awake
- Postulation: protective effect from small awakenings
- Room sharing facilitates breastfeeding

April 17, 2017 39

### Feeding the Baby at Night

Acknowledgment that parents may fall asleep while feeding baby:

- Safer to feed on bed than on sofa, couch, or armchair if you might fall asleep;
- No pillows, sheets, blankets, or other items that could obstruct infant breathing or cause overheating should be in bed;
- Return infant back to separate sleep surface as soon as parent awakens.

April 17, 2017 40

### Say NO to Couches, Sofas and Cushioned Armchairs!

- Never place baby for sleep on these surfaces
- Never sleep with a baby on these surfaces
- One of the **MOST** dangerous places for infant (OR 5.1-86.9)

April 17, 2017 41

### High-Risk Bed Sharing Situations

- Age of < 4 months
- Preterm or LBW
- Smoked during pregnancy
- Bed sharer is current smoker (even if not smoking in bed)
- Bed sharer has used/is using meds or substances that could impair alertness or arousal
- Bed sharer is not parent (including other children)
- Soft surface (waterbed, couch, armchair)
- Soft bedding (pillows, quilts, comforters)

April 17, 2017 42

### Bed Sharing

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

The image displays six simulated reconstruction photographs arranged in a 3x2 grid. Each photograph is labeled with a title and includes a 'SIMULATED RECONSTRUCTION' watermark and the Michigan Department of Health and Human Services logo.

- Top Left (Slide 43):** Titled "Bed Sharing", showing a woman lying on a bed with an infant on her chest.
- Top Right (Slide 44):** Titled "Bed Sharing with Overlay", showing a woman and an infant on a bed with a man leaning over them.
- Middle Left (Slide 45):** Titled "Bed Sharing with Overlay", showing a woman and an infant on a bed with a man leaning over them.
- Middle Right (Slide 46):** Titled "Bed Sharing with Overlay", showing a woman and an infant on a bed with a man leaning over them.
- Bottom Left (Slide 47):** Titled "Couch Sleeping", showing a woman sitting on a couch with an infant on her lap.
- Bottom Right (Slide 48):** Titled "Couch Sleeping", showing a woman sitting on a couch with an infant on her lap.

Goodstein M, Kacica M.

### Unsafe Bedding: NISP Trends 1993 - 2010

Year	White	Black	Hispanic	All
1993	88%	88%	88%	88%
1994	86%	86%	86%	86%
1995	84%	84%	84%	84%
1996	82%	82%	82%	82%
1997	80%	80%	80%	80%
1998	78%	78%	78%	78%
1999	76%	76%	76%	76%
2000	74%	74%	74%	74%
2001	72%	72%	72%	72%
2002	70%	70%	70%	70%
2003	68%	68%	68%	68%
2004	66%	66%	66%	66%
2005	64%	64%	64%	64%
2006	62%	62%	62%	62%
2007	60%	60%	60%	60%
2008	58%	58%	58%	58%
2009	56%	56%	56%	56%
2010	55%	55%	55%	55%

- Decrease from 88% to 55%
- Rate of decline decreases 2001-10
- 83.5% for teen mothers
- Predictors of adjusted OR > 1.5
- Young mothers
- Non-white race, ethnicity
- Less than college education

Trends in Infant Bedding Use: National Infant Sleep Position Study 1993-2010. Sherry Mendoza, Page 2016

Office of Alcoholism and Substance Abuse Services

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 55

### Why Use Soft Bedding?

- **Comfort/Warmth**
  - Extrapolation of own feelings
  - Misinterpret firm with taut
    - Soft + taut ≠ firm
- **Safety**
  - Blankets, pillows, rolls to prevent falls

April 17, 2017 56

### Soft Bedding for Older Infants

- Many parents recognize soft bedding is a risk
- Increased complacency as baby gets older
- **Soft bedding is THE most important risk factor for infants 4-12 months old** (Cohn 2015)
- Infants roll into bedding and cannot extract themselves

April 17, 2017 57

### Controversy: Should Bumper Pads be Used in Cribs?

**Chicago Tribune** Council bans sale of crib bumper pads in Chicago  
*Breaking News, Since 1847*

- Original intent of bumper pads: Prevent injury/death due to head entrapment
- Newer crib standards (slat spacing less than 2-3/8 inches) obviate the need for bumper pads!

April 17, 2017 58

### Bumper Pad Fatalities

Thach study using CPSC data found 3 mechanisms for deaths related to BPs:

- Suffocation against soft "pillow-like" bumpers
- Entrapment between mattress or crib and firm bumper pads
- Strangulation from bumper pad ties

SIMULATED RECONSTRUCTION

April 17, 2017 59

### No Bumpers in the Crib!

- Thach: bumper pads only prevent minor injuries
- CPSC electronic survey system: potential benefit of preventing minor injuries far outweighed by risk of serious injury

April 17, 2017 60

### No Bumpers in the Crib!

- No evidence that bumper pads or similar products that attach to crib slats or sides prevent injury in young infants.
- Potential for suffocation, entrapment, and strangulation.
- Bumper pads and similar products are not recommended.

SIMULATED RECONSTRUCTION

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 81

### To Swaddle or Not to Swaddle? That is the Question!

**Pros:**

- Calms the infant, promotes sleep, decreases number of awakenings.
- Encourages use of the supine position.

**Cons:**

- Increased respiratory rate and reduced functional residual lung capacity.
- Exacerbates hip dysplasia if the hips are kept in extension and adduction.
- "Loose" swaddling becomes loose bedding.
- Overheating, especially if the head is covered or the infant has infection.
- Effects on arousability to an external stimulus remain unclear (conflicting data). There may be minimal effects of routine swaddling on arousal.

April 17, 2017 82

### Swaddling

- There is insufficient evidence to recommend routine swaddling as a strategy to reduce the incidence of SIDS.
- Swaddling must be correctly applied to avoid the possible hazards.
- Swaddling does not reduce the necessity to follow recommended safe sleep practices.

April 17, 2017 83

### Swaddling - Is it Safe?

McDonnell 2014, J Peds

- Wearable blankets, swaddles: 10 deaths
  - 80% positional asphyxia, prone sleeping
  - 70% additional risk factors
- Regular blankets, 12 deaths
  - 58% positional asphyxia, prone sleeping
  - 92% additional risk factors

Infant Deaths and Injuries Associated with Wearable Blankets, Swaddle Wraps, and Swaddling (J Pediatr 2014;164:1152-6).

Office of Alcoholism and Substance Abuse Services

April 17, 2017 84

### Swaddling- More Questions...

- Pease 2016, Pediatrics
- Pooled OR = 1.38
  - Prone = 12.99
  - Side = 3.16
  - Supine = 1.93
- Increased risk with age
- Limitations:
  - Heterogeneity, definitions, other risk factors

Swaddling and the Risk of Sudden Infant Death Syndrome: A Meta-analysis. Pease. Pediatrics. PEDIATRICS Volume 137, number 6, June 2016: e20162

Office of Alcoholism and Substance Abuse Services

April 17, 2017 85

### www.healthychildren.org

Swaddling (wrapping a light blanket snugly around a baby) may help calm a crying baby. If you swaddle your baby, be sure to place him on his back to sleep. Stop swaddling your baby when he starts to roll.

April 17, 2017 86

### Pacifiers

- AAP recommendation: Consider offering a pacifier at nap time and bedtime.
- Studies consistently demonstrate a protective effect of pacifiers on SIDS.
- Mechanism unknown:
  - Dislodge within 15 to 60 minutes.
  - Decreased arousal threshold.

Office of Alcoholism and Substance Abuse Services

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 67

### Pacifiers and Breastfeeding

Well-designed trials:

- 2 found no association among term infants.
- 1 found no association among preterm infants.
- 1 found slightly decreased breastfeeding duration at one month if pacifier introduced in first week of life, but **NO** difference if pacifier introduced **after one month!**

April 17, 2017 68

### Bedside and In-Bed Sleepers

<p><b>Bedside Sleeper</b></p> <ul style="list-style-type: none"> <li>• Attached to side of parental bed</li> <li>- CPSC safety standards available</li> </ul> 	<p><b>In-Bed Sleeper</b></p> <ul style="list-style-type: none"> <li>• Meant to be placed on parental bed</li> <li>- No CPSC safety standards available</li> </ul> 
--	---

April 17, 2017 70

### Bedside and In-Bed Sleepers

- No published studies examining association between sleepers and SIDS or unintentional injury or death.
- No recommendation for or against these products.

April 17, 2017 71

### Sleep Enablers: The Wahakura

- Woven flax bassinet for infants up to 5-6 months of age
- New Zealand
- Maori

April 17, 2017 74

### Avoid Commercial Devices Inconsistent with Safe Sleep Recommendations

- Be wary of devices that claim to reduce risk
- No harm in using "special" mattresses as long as they meet safety standards
- Still have to continue to follow safe sleep recommendations

Easily Sleep At Night. Get Alerts About Your Baby's Breathing Motions!

**MONBABY BREATHING AND ROLLOVER MONITOR!**

START HERE

April 17, 2017 72

### Home Apnea Monitors Do NOT Reduce SIDS Risk

- *Monitors may be of value in selected infants (e.g., infants with apnea of prematurity).*
- No evidence that routine in-hospital cardiorespiratory monitoring prior to discharge from the hospital can identify newborn infants at risk of SIDS.

Outlet Monitor: What It Can Do To Help Prevent SIDS?

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 73

### Things to Look for in the Home

- Improper crib use
- Bumpers
- Soft Objects

Office of Alcoholism and Substance Abuse Services

April 17, 2017 74

### Things to Look for in the Home

- Unsafe cribs

Office of Alcoholism and Substance Abuse Services

April 17, 2017 75

### Things to Look for in the Home

- Signs of smoking

Office of Alcoholism and Substance Abuse Services

April 17, 2017 76

### Things to Look for in the Home

- Smoke detectors
- Carbon monoxide detectors
- Crib near loose blind cords
- Mobiles removed if child older than 6 months of age

Office of Alcoholism and Substance Abuse Services

April 17, 2017 77

### Non-Compliance

- How do educators deal with non-compliant parents practicing unsafe sleep?
  - bed sharing,
  - use of bumper pads,
  - use of other soft sleeping surfaces, etc.
- Do you stick to AAP guidelines?
- What are the legal ramifications of providing risk reduction messaging?
- Can we "meet parents where they are?"

Office of Alcoholism and Substance Abuse Services

April 17, 2017 78

### Transtheoretical or Stages of Change Model

New knowledge/innovations pass through predictable stages:

- Knowledge
- Persuasion
- Decision
- Implementation
- Confirmation

<http://libatonecounseling.net/stages-change/>

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 79

### Culture Change: Know your audience!

- **Cultural competence/Cultural barriers:**
  - What are the norms/expectations?
  - Why deviate from recommendations?
  - What are the barriers?
- **Caregivers know the "message", but are not changing behaviors;**
- **Caregivers report a need to understand the reasons for safe sleep recommendations;**
- **Gaining trust:**
  - Behavior change requires two-way communication!

April 17, 2017 80

### Addressing Sleep Deprivation

- Give parents tools to cope with fussy babies...
- Sleep-deprived parents may make poor judgments...
- Make use of tools such as swaddling, side carrying, shushing, swinging, and sucking...

April 17, 2017 81

### Overcoming Barriers to Change: What parents are saying...

- Prone positioning: fear of choking!
- Baby sleeps "better" on stomach!
- Soft things are safer for the baby!
- SIDS is "God's will."
- Why bother? Recommendations keep changing anyway!
- Vigilance: *sleep with baby*, for protection!

April 17, 2017 82

### Make Use of Your Assets

- A picture is worth a thousand words!
  - Educate through images
- All politics are local!
  - Know your numbers
  - Evidence-based Medicine
- It can't happen to me!
  - Share real local stories

April 17, 2017 83

### The Truth About Supine Sleep and Aspiration: Ending the Fallacy

Orientation of the Trachea to the Esophagus

April 17, 2017 84

### Q. How many babies die of gunshot wounds each year?

Age	Number of Deaths
Under 1 yr	~10
1 to 4 yrs	~20
5 to 14 yrs	~50
15 to 24 yrs	~4200
25 to 34 yrs	~3800

**ALMOST NONE!!**

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 88

### Encouraging parents to take action!

According to the *Social Learning Theory* parents are more likely to recall and comply with instructions when the health care provider:

- Uses a positive tone.
- Provides adequate information.
- Allows the parent to ask most of the questions.

Office of Alcoholism and Substance Abuse Services

April 17, 2017 89

### Motivational Interviewing

“a collaborative, goal-oriented style of communication with particular attention to the language of change”

- Strengthen personal motivation and commitment to a specific goal
- Elicit and explore the person’s own reasons for change (barriers)
- Atmosphere of acceptance and compassion

Office of Alcoholism and Substance Abuse Services

April 17, 2017 90

### Motivational Interviewing (MI)

- What is good about your behavior? What is not so good?
- Scale of importance:
  - High: why is it important
  - Low: what would need to happen to make the score higher
- Patient generates own solutions:
  - More likely to feel realistic
  - Planting seeds of change

Office of Alcoholism and Substance Abuse Services

Goodstein M, Kacica M.

### New Products: Safe or Unsafe???

Office of Alcoholism and Substance Abuse Services Department of Health

April 17, 2017 115

### JPMA

*Junior Product Manufacturing Association*

- Non-profit association: 250 manufacturers
- 95 percent of US prenatal to preschool products
- Certification Program is voluntary
- Built on ASTM standards
- When used properly, traditional bumper pads can help prevent limb entrapments and head injuries
- Displays marketed for use by children less than one year of age should not include items that present a suffocation or choking hazard to the infant, such as pillows...

www.jpma.org  
Sample Tested for Conformance to ASTM Safety Standards

Office of Alcoholism and Substance Abuse Services Department of Health

April 17, 2017 116

### ASTM

*American Society for Testing and Materials;*

- Develops voluntary consensus technical standards for materials, products;
- Cribs: establishes performance requirements and test procedures to determine structural integrity;
- Does not guarantee product performance.

Office of Alcoholism and Substance Abuse Services Department of Health

April 17, 2017 117

### CPSC

*Consumer Product Safety Commission*

- 500 employees oversee safety issues for thousands of product categories
- Studies ASTM standard's effectiveness and issues final consumer guidelines
- Voluntary over mandatory regulations
- Due process for all groups
- Issue Final Rules

Office of Alcoholism and Substance Abuse Services Department of Health

April 17, 2017 118

### CPSC

*Consumer Product Safety Commission*

- Monitor Injuries: Recalls
- Reactive vs. Proactive
- Voluntary reporting (post-market testing)
- Drop rail cribs
- Side car standards
- New products:
  - Lack of data from SIDS studies

Office of Alcoholism and Substance Abuse Services Department of Health

Goodstein M, Kacica M.

*Can We Prevent Infant Sleep-Related Deaths? What You Need to Know Now!*

April 17, 2017 10

### AAP

**American Academy of Pediatrics**

- Task Force on SIDS
- Limited to available studies
- Studies will be severely limited for sorting out new product risk
  - Side car sleepers?
  - Finnish Baby Box?
- New products should be consistent with current guidelines
  - Extrapolation, judgment, common sense

Office of Alcoholism and Substance Abuse Services | Department of Health

April 17, 2017 10

### A Brainstem Abnormality

Serotonergic neurons in the medulla project to nuclei in the brainstem and spinal cord which help regulate vital autonomic functions:

- Blood pressure
- Temperature control
- Respiratory control
- Upper Airway Reflexes
- Arousal

April 17, 2017 12

### The Recommendations Change as the Evidence Evolves

- Statistics and risk factors may change
  - New risks emerge (e.g.: side positioning)
  - Different levels of risk?
- Policies and procedures may change
  - Better death scene investigations
  - Diagnostic shift
- Unintended consequences
  - Plagiocephaly, development
  - New tummy time recommendations

Office of Alcoholism and Substance Abuse Services | Department of Health

# Infant Sleep-Related Deaths: What You Need to Know

## Canter J. Evidence Based Approach to Sleep Related Fatality Prevention

NYSPQC Safe Sleep Project Learning Session. September 2015. **Intended audience:** Public health and health care professionals.

### Evidence Based Approach to Sleep Related Fatality Prevention

Jennifer Canter MD, MPH, FAAP  
 Professor of Pediatrics, New York Medical College  
 Director, Child Abuse Pediatrics & Forensic Medicine  
 Maria Fareri Children's Hospital at Westchester Medical Center and  
 Westchester Institute for Human Development

Jennifer Canter MD MPH FAAP  
 Child Abuse Pediatrics - Maria Fareri  
 Children's Hospital

Westchester Institute  
 for Human Development  
 Creating Better Futures

### Outline

- Definitions
- Research Challenges
- Current Safe Sleep Recommendations American Academy of Pediatrics
- Hot Topics Safe Sleep Research
- Hospital Based Safe Sleep Education
- Recommendations

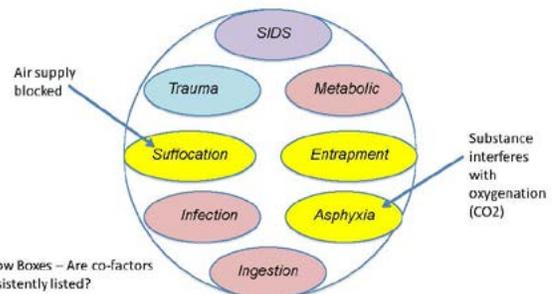

Jennifer Canter MD MPH FAAP - Child Abuse  
 Pediatrician - Maria Fareri Children's Hospital

### Definitions

- Sudden unexpected infant death (SUID) – or sudden unexpected death in infancy (SUDI) - describes **any sudden and unexpected death**, whether explained or unexplained (including SIDS), that occurs during infancy.
- Sudden infant death syndrome (SIDS) - the cause assigned to infant deaths that, after a thorough case investigation that includes a scene investigation, autopsy, and review of the clinical history **cannot be explained**.

Jennifer Canter MD MPH FAAP - Child Abuse  
 Pediatrician - Maria Fareri Children's Hospital

### Umbrella: SUID – Sudden Unexplained Infant Death

**SIDS** – Are investigations consistent?

**Yellow Boxes** – Are co-factors consistently listed?

Jennifer Canter MD MPH FAAP - Child Abuse  
 Pediatrician - Maria Fareri Children's Hospital

### Sleep Surface Sharing (Figure 9.2)

A three-month-old infant found dead in parent's bed, prone, complete investigation, autopsy, toxicology, etc., with no external causes identified except sharing the bed with the parents. If a condition such as sharing of a sleep surface (which could be a stressor or possible external cause of death) needs to be reported on the death certificate, the following format is preferred and recommended because it allows sufficient room for details and explanations.

<b>PART I - IMMEDIATE CAUSE</b>	
<b>A. Sudden Unexplained Infant Death</b>	
Due to or as a consequence of	
B.	
Due to or as a consequence of	
C.	
<b>PART II - OTHER SIGNIFICANT CONDITIONS</b>	
Condition(s) contributing to death but not resulting in the underlying cause of death in Part I	
Manner of Death	How Injury Occurred
Undetermined	Undetermined if external causes were involved. Sharing sleep surface with 2 adults. 

Fig. 9.2: Note the additional explanation of a possible stressor.

From: CDC - Certification of Unexplained Infant Deaths Cause of Death and the Death Certificate

Jennifer Canter MD MPH FAAP - Child Abuse  
 Pediatrician - Maria Fareri Children's Hospital

### Sleep Research Challenges

**Outcomes Research -**

- Do we know the denominator (unsafe sleep)
- Death classification variance\*
  - Terminology
  - Negative autopsy
  - Investigative variance

**Prevention research -**

- Overlapping efforts
- Numbers too low for statistical significance

\*Shapiro-Mendoza CK, Kim SY, Chu SY, Kahn e1358 FROM THE AMERICAN ACADEMY OF PEDIATRICS E, Anderson RN. Using death certificates to characterize sudden infant death syndrome (SIDS): opportunities and limitations. J Pediatr. 2010;156(1):38-43

Jennifer Canter MD MPH FAAP - Child Abuse  
 Pediatrician - Maria Fareri Children's Hospital

## Canter J. Evidence Based Approach to Sleep Related Facility Prevention

### Recommendation # 1 – Wholly supine until one year, side sleeping not safe

- Why:
  - Re-breathing expired gases
  - Overheating by decreasing the heat loss
  - Physical instability
- Supine sleep position does not increase the risk of choking and aspiration in infants, even those with reflux (protective airway mechanisms)
- Premies unique issues
- Misconceptions about side sleep after birth
- Why age up to 1 year
- Why is side sleep highest risk

Jennifer Canter MD MPH FAAP – Child Abuse Pediatrician - Maria Faresi Children's Hospital

### Challenges to Wholly Supine Recommendation

1. Concern for aspiration with reflux
  - The AAP/ North American Society for Pediatric Gastroenterology and Nutrition: "infants with gastroesophageal reflux should be placed to sleep in the supine position"
2. Fear of choking/aspiration
3. Modeling
  - Hospital nurses laying baby on side/prone after birth – no evidence to support this is effective\*
4. Perception that infant does not sleep well
  - Sleep for sustained periods might not be physiologically advantageous
  - Less arousal when sleeping in the prone position
  - Ability to arouse from sleep is an important protective physiologic response to stressors during sleep

Moon RY, Oden RP, Joyner BL, Ajaio TI. Qualitative analysis of beliefs and perceptions about sudden infant death syndrome (SIDS) among African-American mothers: Implications for safe sleep recommendations. J Pediatr. 2010;157(1):92-97.e2

### Choking: Anatomy

Prone Sleeping

Supine Sleeping

Continuing Education Program of SIDS Risk Reduction. NICHD.

Jennifer Canter MD MPH FAAP – Child Abuse Pediatrician - Maria Faresi Children's Hospital

### Recommendation # 2 – Firm Surface

- Firm Mattress, No Gaps, Designed For Specific Product
- Fitted Bedding/Taut Firmly Attached Fabrics
- No:
  - Adult Beds
  - Dangling Cords or Wires In Proximity
  - Car safety seats, strollers, swings, infant carriers, and infant slings
- Adherence to Manufacturer's Weight Guidelines
- Sleepers that Attach to Side of Adult Bed no data to support safety improved, risk for infant transition to bed

Jennifer Canter MD MPH FAAP – Child Abuse Pediatrician - Maria Faresi Children's Hospital

### Challenges to Firm Surface Recommendation

- Falling asleep in swing, car seat, etc
- Financial reasons
- Space considerations
- Parental perception that the crib is too large for the infant
- Parental misconception that "crib death" (ie, SIDS) *only occurs in cribs*
- Ease for feeding and nursing
- Modeling – family/friends, TV, advertising

Jennifer Canter MD MPH FAAP – Child Abuse Pediatrician - Maria Faresi Children's Hospital

### Recommendation # 3 – Room-Sharing Without Bed-Sharing

- Risks: overheating, re-breathing, airway obstruction, entrapment, falls, head covering, asphyxia, strangulation
- Separate but CLOSE: decrease as much as 50%
- Risk higher the longer the duration
- Products: sleepers attached to bed/"safe share" – not safe
- Keep twins separate
- Maternal body weight:
  - Higher weight, more co-sleeping (*Carroll-Pankhurst C, Mortimer 2001*)
  - Higher weight, *no* increased risk for SIDS (*Mitchell E, Thompson 2006*)

Jennifer Canter MD MPH FAAP – Child Abuse Pediatrician - Maria Faresi Children's Hospital

## Canter J. Evidence Based Approach to Sleep Related Facility Prevention

### Why Do Parents Bed Share?

- Parent-infant bed-sharing is common:
  - A national survey reported 45% of parents indicated sharing a bed with their infant (8 months of age or younger) at some point in the preceding 2 weeks.
  - In some racial/ethnic groups, the rate of routine bed-sharing might be higher.
- *Sheer Exhaustion*
- Nursing/feeding
  - Some behavioral studies have offer a strong case for bed-sharing's effect in facilitating breastfeeding
- Cultural and personal reasons why parents choose to bed-share include:
  - Convenience for breast or formula feeding
  - Bonding, vigilance watching child
  - Some parents will use this as a safety strategy if the infant sleeps prone or if there are environmental dangers

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Faresi Children's Hospital

### Recommendation # 4 – No Soft Objects or Loose Bedding

- Risks: Suffocation, Entrapment, Strangulation, Rebreathing:
  - Increased risk up to **5-fold** independent of sleep position
  - Increased risk **21-fold** when the infant is placed prone with soft bedding
- No Soft Objects: Pillows, soft toys, quilts, comforters, bumpers, loose bedding
- Infant Sleep Clothing: appropriate size, no head covering; entrapment/overheating
- Wedges and positioning devices are not recommended, do not help with reflux, do not prevent SIDS or suffocation
- Positioning devices used in the hospital as part of physical therapy should be removed from the sleep area well before hospital discharge

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Faresi Children's Hospital

### Recommendations # 5-8 – General Public Health

5. Pregnant women should receive regular *prenatal care*
6. Avoid *smoke exposure* during pregnancy and after birth.
7. Avoid *alcohol and illicit drug use* during pregnancy and after birth.
8. *Breastfeeding* is recommended.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Faresi Children's Hospital

### Recommendation #9 – Pacifier at Naptime and Bedtime

*"The protective effect is still unclear, but lowered arousal thresholds, favorable modification of autonomic control during sleep, and maintaining airway patency during sleep have been proposed as possible mechanisms"*

- Protective effect of pacifiers hen used at the time of last sleep (even if the pacifier falls out of infants mouth)
  - Two meta-analyses revealed pacifier use decreased the risk of SIDS by 50% to 60%
  - Two later studies not included in that meta-analyses reported equivalent or even larger protective associations
  - Two studies show that pacifier use may be most protective when used for all sleep periods.
- Reinsert when falls asleep (no force), no neck hanging device
- Finger sucking: *not* shown to have similar protective effect
- Discuss - Breastfeeding and pacifier use, dental concerns

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Faresi Children's Hospital

### Recommendation # 10 – Avoid Overheating

*"Avoid overheating—Although studies have revealed an increased risk of SIDS with overheating, the definition of overheating in these studies varied."*

- Infant should wear one layer more than an adult would wear in the infant's environment.
- Head covering during sleep is of particular concern with respect to overheating.
- Room ventilation is important; temperature in the room, air flow in the room.
- Use of fans is not proven to reduce the risk of SIDS.
- Sweating and/or infant's chest feeling hot to touch are signs of overheating.
- Prone - higher risk of overheating but it is unclear if overheating alone is an independent factor or merely a reflection of the increased risk of SIDS and suffocation associated with other risk factors e.g. use of blankets, toys, etc. in sleeping area.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Faresi Children's Hospital

### Swaddling – Where are We Headed?

- NOT a risk reduction strategy for SUID/SIDS
- Some data shows that there can be a higher risk of SIDS dependent upon infant positioning with swaddle
- Impaired arousal – harder to wake\*
  - Swaddling decreases startling, increases sleep duration, and decreases spontaneous awakenings.
  - Thus, although swaddling clearly promotes sleep and decreases the number of awakenings, the effects on arousability to an external stimulus remain unclear.

\*Franco et al. Arousal from sleep mechanisms in infants. Sleep Medicine. 2010;11 :603-614.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Faresi Children's Hospital

## Canter J. Evidence Based Approach to Sleep Related Facility Prevention

### Recommendations # 11-13 – Immunizations and Commercial Devices

11. Immunization and regular well-child checks - There is no evidence that there is a causal relationship between *immunizations* and SIDS. Indeed, recent evidence suggests that immunization might have a protective effect against SIDS.
12. Avoid commercial devices marketed to reduce the risk of SIDS— These devices include wedges, positioners, special mattresses, and special sleep surfaces.
13. Do not use home cardiorespiratory monitors as a strategy to reduce the risk of SIDS. Although cardiorespiratory monitors can be used at home to detect apnea, bradycardia, and, when pulse oximetry is used, decreases in oxyhemoglobin saturation, there is no evidence that use of such devices decreases the incidence of SIDS. They might be of value for selected infants but should not be used routinely.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Farel Children's Hospital

### Recommendation # 14 – Tummy Time

*“Supervised, awake tummy time is recommended to facilitate development and to minimize development of positional plagiocephaly.”*

- Supervised, awake tummy time is recommended on a daily basis.
- Must also consider education on risk reduction for positional plagiocephaly and advice on tummy time methods.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Farel Children's Hospital

### Recommendations # 14-16 – Targets for Risk-Reduction

14. Health care professionals, staff in newborn nurseries and neonatal intensive care nurseries, and child care providers should endorse the SIDS risk-reduction recommendations from birth.
15. Media and manufacturers should follow safe-sleep guidelines in their messaging and advertising. Media exposures (including movie, television, magazines, newspapers and Web sites), manufacturer advertisements, and store displays affect individual behavior by influencing beliefs and attitudes. Media and advertising messages contrary to safe-sleep recommendations might create misinformation about safe sleep practices.
16. Expand the national campaign to reduce the risks of SIDS to include a major focus on the safe sleep environment and ways to reduce the risks of all sleep-related infant deaths, including SIDS, suffocation, and other accidental deaths.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Farel Children's Hospital

### More about Media & Manufacturing

- A recent study found that, in magazines targeted toward childbearing women, more than one-third of pictures of sleeping infants and two thirds of pictures of infant sleep environments portrayed unsafe sleep positions and sleep environments.
- Media exposures (including movie, television, magazines, newspapers, and Web sites), manufacturer advertisements, and store displays affect individual behavior by influencing beliefs and attitudes.
- Frequent exposure to health-related media messages can affect individual health decisions and media messages have been quite influential in decisions regarding sleep position.
- Media and advertising messages contrary to safe sleep recommendations may create misinformation about safe sleep practices.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Farel Children's Hospital

### Recommendation # 18 – Continue Research & Surveillance

*“Continue research and surveillance on the risk factors, causes, and pathophysiological mechanisms of SIDS and other sleep-related infant deaths, with the ultimate goal of eliminating these deaths entirely.”*

- Continued research and improved surveillance on the etiology and pathophysiological basis.
- Education campaigns including innovative methods need to be evaluated and funded.
- Standardized protocols for death-scene investigations should continue to be implemented.
- Child death reviews, with involvement of pediatricians and other primary care providers, should be supported and funded.
- Improved and widespread surveillance of SIDS and SUID cases should be implemented and funded.

Jennifer Canter MD MPH FAAP - Child Abuse  
Pediatrician - Maria Farel Children's Hospital

#### Barriers to Following the Supine Sleep Recommendation Among Mothers at Four Centers for the Women, Infants, and Children Program

- Quantified barriers for using the supine sleep position, primarily in low income households and with black mothers
- Face to face interviews with 671 mothers
- Concluded that:
  - 59% of mothers reported supine, 25% side, 15% prone, and 1% other as the usual position
  - Prevalent barriers include:
    - Lack of or wrong advice (especially from female friends or relatives)
    - Knowledge and concerns about safety and comfort
    - Lack of trust in providers

**TABLE 1. Key Questions From Interview**

**1. How often do you use the supine position?**

1. Using the supine position when the infant is awake and when the infant is asleep (in the car, stroller, etc.)
2. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
3. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
4. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
5. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
6. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
7. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
8. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
9. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
10. Using the supine position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)

**2. How often do you use the side position?**

1. Using the side position when the infant is awake and when the infant is asleep (in the car, stroller, etc.)
2. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
3. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
4. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
5. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
6. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
7. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
8. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
9. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
10. Using the side position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)

**3. How often do you use the prone position?**

1. Using the prone position when the infant is awake and when the infant is asleep (in the car, stroller, etc.)
2. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
3. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
4. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
5. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
6. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
7. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
8. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
9. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
10. Using the prone position when the infant is asleep (in the crib, in the bed, in a car seat, etc.)

**4. How often do you use other positions?**

1. Using other positions when the infant is awake and when the infant is asleep (in the car, stroller, etc.)
2. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
3. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
4. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
5. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
6. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
7. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
8. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
9. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)
10. Using other positions when the infant is asleep (in the crib, in the bed, in a car seat, etc.)

# Canter J. Evidence Based Approach to Sleep Related Facility Prevention

## Influence of Prior Advice and Beliefs of Mothers on Infant Sleep Position

- Investigated the relationship between the advice given about infant sleep position and what positions were practiced
  - Factors could affect that relationship
- Face to face interviews with 2299 mothers, primarily African American
- Concluded that:
  - Advice for exclusively supine infant sleep position from family...doctors...nurses...or the media...was associated with usually placing an infant supine to sleep.
  - Beliefs about comfort and safety of supine position also affected sleep position
  - Additional sources of advice for supine sleep position increased the chances of using that sleep position

**Table 1. Key Interview Questions**

Question by Category
<b>Visual infant sleep position</b>
"Now I'm going to show you some pictures and give you this doll so that you can show me how you place your baby to sleep. Using the doll, please show me the position you usually place your baby to sleep, over the last 2 weeks."
<b>Advice</b>
"Did you get advice from family (friends, the media [television, radio, magazines, newspapers], doctor, nurse] about what position your baby should be placed to sleep?"
"Overall, what position did they recommend?"
<b>Beliefs</b>
"In what position do you think babies are most comfortable?"
"In what position do you think babies are most likely to choke?"

Kohorn et al. (2010) Jennifer Canter MD MPH FAAP - Child Abuse Pediatrician - Maria Faren Children's Hospital

## Maternal Assessment of Physician Qualification to Give Advice on AAP-Recommended Infant Sleep Practices Related to SIDS

- Two-fold objective:
  - Quantified degree to which mothers believe their physicians are qualified to give recommendations about safe sleep
  - Investigated the relationship between perceived competence and reports of recommended practices
- Face to face interviews with 2355 mothers
- Concluded that:
  - High physician ratings correlated with maternal reports of using recommended behaviors

**Table 2. Percentage of Mothers Rating Physicians as Highly Qualified to Give Advice in Selected Topic Areas**

Topic Area	No. (%)
What to do when baby has a fever	2070 (84)
Whether and when to give vaccinations	2025 (84)
What and how to feed baby	1900 (79)
What position baby should sleep in	1618 (78)
Whether baby should share a bed with parent or other adult	1618 (78)
Whether baby should use a pacifier	1420 (58)

**Table 3. Association of High Maternal Rating of Physician Qualification With Maternal Report of Usage of Recommended Sleep Behavior**

Usage of Recommended Sleep Behavior	Unadjusted OR* (95% CI)	AOR† (95% CI)
Supine-only sleep position	2.3 (1.9-2.8)	2.1 (1.6-2.8)
Usually no bed sharing with adult	1.7 (1.4-2.1)	1.5 (1.2-1.9)
Usually use pacifier during sleep	1.2 (1.0-1.4)	1.2 (1.0-1.5)

\*AOR = adjusted odds ratio.  
 †CI = confidence interval.  
 ‡Adjusted for study year, study site, maternal race/ethnicity, age, education, infant age, nature of physician advice, trusted source of advice.

Smith et al. (2010) Jennifer Canter MD MPH FAAP - Child Abuse Pediatrician - Maria Faren Children's Hospital

## Trends in Infant Bedding Use: National Infant Sleep Position Study, 1993-2010

- Investigated trends in bedding practices
  - Quantify the use of potentially hazardous bedding such as pillows, quilts, comforters, or loose bedding
- National Infant Sleep Position study, 1993-2010
- Concluded that:
  - Bedding use declined but remained a widespread practice (85.9% in 1993-1995 to 54.7% in 2008-2010)
  - Bedding use was also often reported in conjunction with other unsafe sleep practices
  - "For 2007 to 2010, the strongest predictors of bedding use were young maternal age, non-white race and ethnicity, and not being college educated."
- More intervention is necessary

**TABLE 2. Prevalence and 95% Confidence Intervals for Use of Bedding, 1993-2010**

Item	% Bedding Use (95% CI)	95% CI	AOR (95% CI)
Overall	85.9	85.0-86.8	1.0
1993-1995	85.9	85.0-86.8	1.0
2008-2010	54.7	53.8-55.6	0.5
Maternal age at delivery			
<20	87.2	86.3-88.1	1.1
20-24	86.7	85.8-87.6	1.0
25-29	85.9	85.0-86.8	1.0
30-34	85.0	84.1-85.9	0.9
35-39	84.1	83.2-85.0	0.8
40-44	83.2	82.3-84.1	0.7
≥45	82.3	81.4-83.2	0.6

Some college	85.9	85.0-86.8	1.0
College graduate	85.0	84.1-85.9	0.9
Postgraduate	84.1	83.2-85.0	0.8
Maternal race/ethnicity			
White	85.9	85.0-86.8	1.0
Black	85.0	84.1-85.9	0.9
Hispanic	84.1	83.2-85.0	0.8
Other	83.2	82.3-84.1	0.7
Maternal marital status			
Married	85.9	85.0-86.8	1.0
Single	85.0	84.1-85.9	0.9
Divorced	84.1	83.2-85.0	0.8
Widowed	83.2	82.3-84.1	0.7
Partnered	82.3	81.4-83.2	0.6
Other	81.4	80.5-82.3	0.5

Shapiro-Mendoza et al. (2015) Jennifer Canter MD MPH FAAP - Child Abuse Pediatrician - Maria Faren Children's Hospital

## Trends and Factors Associated With Infant Bed Sharing, 1993-2010: The National Infant Sleep Position Study

- Investigated trends of infant bed sharing
  - What factors might affect the practice
- 18,986 people given phone survey from 1993-2010
- Concluded that:
  - An average of 11.2% of participants said sharing a bed with their infant was a usual practice
  - Bed sharing increased over the study period (6.5% to 13.5%)
  - Factors associated with infant bed sharing:
    - Maternal educational level, maternal race or ethnicity, household income, region of the country, age of infant, and if the infant was full term
- Overall, these factors may help implement new intervention practices to help change behavior.

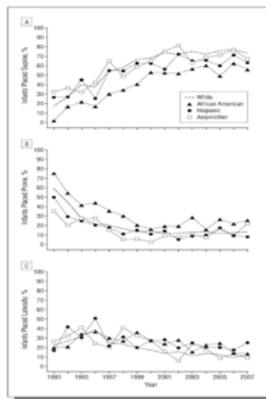

**Table 1. Prevalence of Infant Bed Sharing by Demographic Variables**

Variable	No. (%)	95% CI	AOR (95% CI)
Overall	11.2	10.5-11.9	1.0
1993-2000	6.5	6.0-7.0	1.0
2001-2010	13.5	12.8-14.2	2.1
Maternal age at delivery			
<20	12.1	11.4-12.8	1.1
20-24	11.6	10.9-12.3	1.0

Full term	11.2	10.5-11.9	1.0
Preterm	10.7	10.0-11.4	0.9

Colson et al. (2013) Jennifer Canter MD MPH FAAP - Child Abuse Pediatrician - Maria Faren Children's Hospital

## Trends and Factors Associated With Infant Sleeping Position

- Investigated trends and factors associated with choice of infant sleeping position
- National Infant Sleep Position study, 1993-2010
- Concluded that:
  - "For the 15-year period, supine sleep increased and prone sleep decreased for all infants, with no significant difference in trend by race."
  - "Choice of sleep position could be explained almost entirely by caregiver concern about comfort, choking, and advice."
  - We need to reach the populations at risk with messages that address concerns about infant comfort and choking

Colson et al. (2009) Jennifer Canter MD MPH FAAP - Child Abuse Pediatrician - Maria Faren Children's Hospital

## Integration and Collaboration

### New York State Perinatal Quality Collaborative (NYSQPC):

- To provide the best and safest care for women and infants by preventing and minimizing harm through the translation of evidence-based practice guidelines to clinical practice.

### NYSQPC Safe Sleep Project will focus on improving safe sleep practices to reduce infant mortality

- Collaborating across hospital teams to share and learn;
- Implementing policies to support/facilitate safe sleep practices;
- Educating health care professionals so they understand, actively endorse and model safe sleep practices; and
- Providing infant caregivers education and opportunities so they have the knowledge, skills and self-efficacy to practice safe sleep for every sleep.

# State, Hospital & Community Collaboration

## Kacica M, Lawless K, Grippi C, Crockett E. *Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration*

New York State Perinatal Association Conference, Albany, NY, June 2017. **Intended audience:** Perinatal health care professionals.

**Safer Sleep for Babies  
(Part 1): State, Hospital & Community Collaboration**

June 6, 2017

June 6, 2017 2

### Presenters

- **Marilyn Kacica, MD, MPH**  
– Medical Director, Division of Family Health, New York State Department of Health (NYSDOH)
- **Kristen Lawless, MS**  
– Program Director, New York State Perinatal Quality Collaborative (NYSPQC), NYSDOH
- **Christine Grippi RN, MS, CNS**  
– Clinical Nurse Specialist, NICU / Newborn Nursery, Maimonides Medical Center
- **Elizabeth Crockett, PhD, RD, CDN, CLC**  
– Executive Director, REACH CNY, Inc.

June 6, 2017 4

### Presentation Objectives

- Describe the prevalence of infant mortality in NYS, with a specific focus on cases related to an unsafe sleep environment.
- Review the American Academy of Pediatrics recommendations for creating a safe sleeping environment for infants.
- Present the statewide work focused on safe sleep being led by the New York State Department of Health, its goals, methods, and results.

June 6, 2017 5

### Presentation Objectives

- Share information on the experiences of key partners participating in the New York State Infant Mortality Collaborative Improvement and Innovation Network (NYS IM-CoIIN), including NYS birthing hospitals and community-based organizations.
- Identify and review best practices and resources developed as a result of these efforts.
- Provide answers to audience questions, and facilitate discussion as appropriate.

# Kacica M, Lawless K, Grippi C, Crockett E. Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration

June 6, 2017 7

## Infant Mortality in NYS

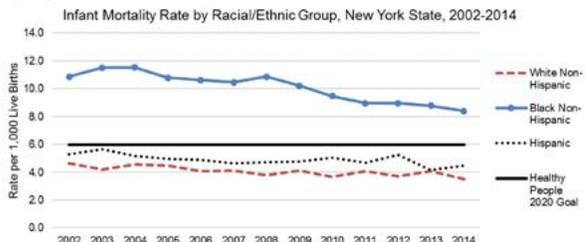

- Infant mortality, or the death of infants under one year of age, is a fundamental indicator for the overall health and wellbeing of a community.
- NYS has made progress by reducing its infant mortality rate from:
  - 6.0 deaths per 1,000 live births in 2002, to
  - 4.5 deaths per 1,000 live births in 2014.

June 6, 2017 8

## Infant Mortality in NYS

- There are major racial and ethnic disparities in infant mortality rates.
- In 2014, the mortality rate among infants born to Black, non-Hispanic mothers (8.4 per 1,000 live births) was more than twice as high as the rate for infants born to White, non-Hispanic mothers (3.5 per 1,000 live births).

June 6, 2017 9

## Infant Mortality in NYS

- Sudden unexpected infant death (SUID) is the death of an infant less than one year of age that occurs suddenly and unexpectedly where the cause of death is not immediately apparent prior to the investigation.
- SUID includes deaths resulting from:
  - Sudden Infant Death Syndrome (SIDS);
  - **Sleep-related causes of infant death including accidents related to where or how the infant slept, such as suffocation, entrapment, or strangulation;** or
  - Unknown causes of death.

June 6, 2017 10

## Infant Mortality in NYS

- The ~100 infants who died suddenly and unexpectedly in New York State during 2014, are enough to fill five kindergarten classrooms.

June 6, 2017 11

## American Academy of Pediatrics (AAP) Recommendations

June 6, 2017 12

## AAP Recommendations

AAP-TASK FORCE ON SUDDEN INFANT DEATH SYNDROME. SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162338

## Kacica M, Lawless K, Grippi C, Crockett E. *Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration*

June 6, 2017 13

### AAP Updates to Safe Sleep Guidelines

- There are 19 recommendations
- There are no contradictions to previously issued AAP recommendations
- 15 of the recommendations are “clinical”
- 4 of the recommendations are health policy related

June 6, 2017 14

### AAP Recommendations

1. **Back to sleep for every sleep.**
2. **Use a firm sleep surface.**
3. **Breastfeeding is recommended.**
4. **It is recommended that infants sleep in the parents’ room, close to the parents’ bed, but on a separate surface designed for infants, ideally for the first year of life, but at least for the first six months.**

AAP TASK FORCE ON SUDDEN INFANT DEATH SYNDROME. SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162938

June 6, 2017 15

### AAP Recommendations

5. **Keep soft objects and loose bedding away from the infant’s sleep area to reduce the risk of SIDS, suffocation, entrapment and strangulation.**
6. Consider offering a pacifier at nap time and bedtime.
7. Avoid smoke exposure during pregnancy and after birth.
8. Avoid alcohol and illicit drug use during pregnancy and after birth.

AAP TASK FORCE ON SUDDEN INFANT DEATH SYNDROME. SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162938

June 6, 2017 16

### AAP Recommendations

9. Avoid overheating and head covering in infants.
10. Pregnant women should obtain regular prenatal care.
11. Infants should be immunized in accordance with recommendations of the AAP and Centers for Disease Control and Prevention.

AAP TASK FORCE ON SUDDEN INFANT DEATH SYNDROME. SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162938

June 6, 2017 17

### AAP Recommendations

12. Avoid the use of commercial devices that are inconsistent with safe sleep recommendations.
13. Do not use home cardiorespiratory monitors as a strategy to reduce the risk of SIDS.
14. Supervised, awake tummy time is recommended to facilitate development and to minimize development of positional plagiocephaly.
15. There is no evidence to recommend swaddling as a strategy to reduce the risk of SIDS.

AAP TASK FORCE ON SUDDEN INFANT DEATH SYNDROME. SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162938

June 6, 2017 18

### AAP Recommendations

16. **Health care professionals, staff in newborn nurseries and NICUs, and child care providers should endorse and model the SIDS risk-reduction recommendations from birth.**
17. Media and manufacturers should follow safe sleep guidelines in their messaging and advertising.

AAP TASK FORCE ON SUDDEN INFANT DEATH SYNDROME. SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162938

# Kacica M, Lawless K, Grippi C, Crockett E. Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration

June 6, 2017 19

## AAP Recommendations

**18. Continue the “Safe to Sleep” campaign, focusing on ways to reduce the risk of all sleep-related infant deaths, including SIDS, suffocation, and other unintentional deaths. Pediatricians and other primary care providers should actively participate in this campaign.**

AAP TASK FORCE ON SUDDEN INFANT DEATH SYNDROME, SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162938

June 6, 2017 20

## AAP Recommendations

**19. Continue research and surveillance on the risk factors, causes, and pathophysiologic mechanisms of SIDS and other sleep-related infant deaths, with the ultimate goal of eliminating these deaths altogether.**

AAP TASK FORCE ON SUDDEN INFANT DEATH SYNDROME, SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. Pediatrics. 2016;138(5):e20162938

June 6, 2017 21

## New York State Focus on Infant Safe Sleep

June 6, 2017 22

## NYS Infant Mortality CoIIN

- Since 2015, the NYSDOH has participated in a national Infant Mortality Collaborative Improvement and Innovative Network (IM-CoIIN).
- The NYS IM-CoIIN addresses infant mortality reduction through the improvement of safe sleep practices and the promotion of optimal health for women before, after and in between pregnancies.

June 6, 2017 23

## NYS Infant Mortality CoIIN

- The NYSDOH is working to prevent infant deaths caused by an unsafe sleep environment using several strategies, including:
  - A New York State Perinatal Quality Collaborative (NYSPOC) initiative focused on safe sleep modeling and education programs in NYS birthing hospitals;
  - Community-based organizations facilitating home-based visits to support and educate mothers and caregivers during the prenatal and postpartum periods; and
  - A robust public awareness campaign regarding the American Academy of Pediatrics' recommended ABCs of Safe Sleep.

June 6, 2017 24

## Collaborating for Success

# Kacica M, Lawless K, Grippi C, Crockett E. Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration

June 6, 2017 25

## New York State Perinatal Quality Collaborative (NYSPQC) Safe Sleep Project

June 6, 2017 26

## NYSPQC Safe Sleep Project

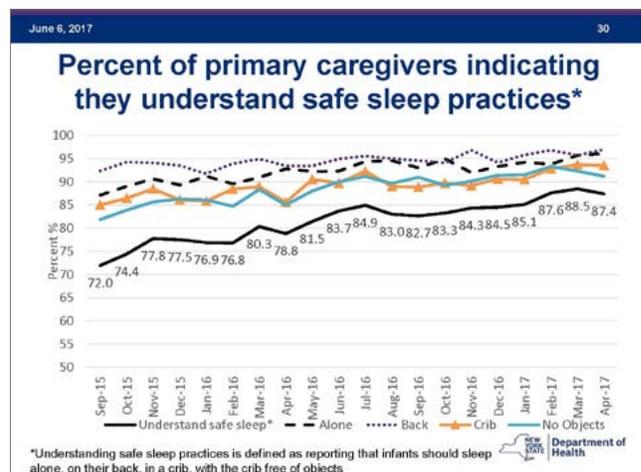

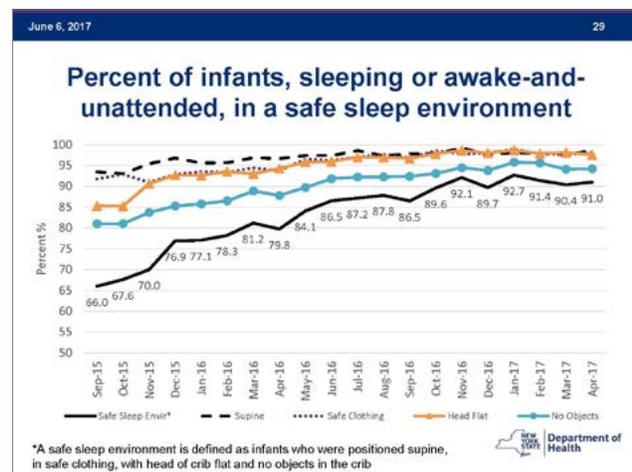

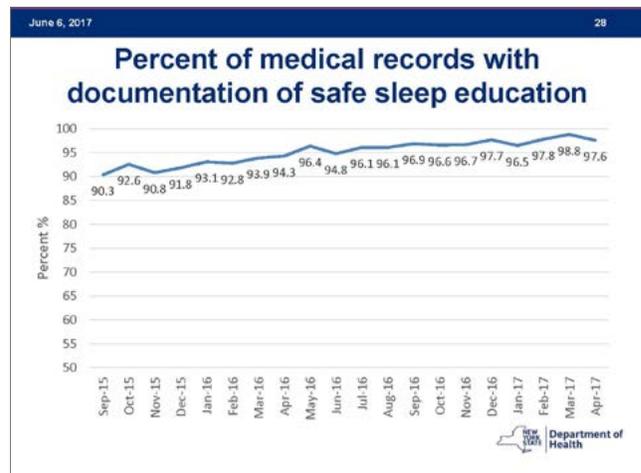

- Project began in September 2015
- 78 out of 124 (63%) NYS birthing hospitals participating in the initiative:
  - 16 Regional Perinatal Centers (RPCs)
  - 28 Level III birthing hospitals
  - 15 Level II birthing hospitals
  - 19 Level I birthing hospitals

June 6, 2017 27

## NYSPQC Safe Sleep Project

- Improvements in safe sleep practices are being achieved by:
  - Ensuring all infant caregivers (i.e., new moms or guardians) have documentation of safe sleep education documented in the medical record;
  - Establishing consistent modeling of a safe sleep environment for all infants without a medical contraindication during the birth hospitalization; and
  - Discussing caregiver (i.e., new moms or guardians) understanding of infant safe sleep education prior to discharge from the birth hospitalization.

# Kacica M, Lawless K, Grippi C, Crockett E. Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration

June 6, 2017 31

## NYSPQC Hospital Data Summary

- Improvement has been seen in all project measures
- Between September 2015 and April 2017:
  - The percent of medical records with documentation of education increased 8%;
  - The percent of infants in a safe sleep environment has increased by 38%; and
  - The percent of caregivers who understand safe sleep practices increased by 21%.

June 6, 2017 32

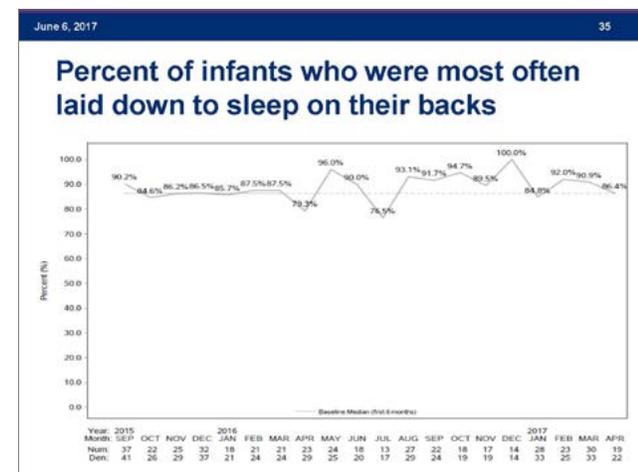

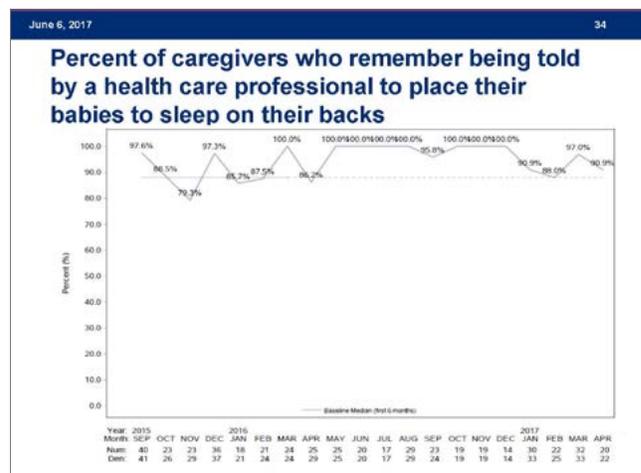

## New York State Community-based Organization (CBO) Safe Sleep Project

June 6, 2017 33

## CBO Safe Sleep Project

- Seven community-based organizations (CBOs) are engaged in a safe sleep project.
- Home visitors from the CBOs provide education to their clients, including safe sleep education.
- Home visitors survey the primary caregiver after safe sleep education has been delivered to assess safe sleep practices and the effectiveness of education.

June 6, 2017 36

## CBO Safe Sleep Project: Data Summary

- As of April 2017, data reported by participating CBOs indicates:
  - 91% of caregivers remembered being told by a health care professional to place their baby to sleep on his/her back; and
  - 86% of infants were most often placed to sleep on their back.

## Kacica M, Lawless K, Grippi C, Crockett E. *Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration*

June 6, 2017 37

### Key Partner Activities

June 6, 2017 38

### Maimonides Medical Center

June 6, 2017 39

### Maimonides Medical Center

- A designated Regional Perinatal Center (RPC), a Level 1 Adult/Pediatric Trauma Center and a Stroke Center
- Number of deliveries 2016: ~8,600
- Number of NICU Admissions 2016: ~1,015
- Located in the Borough Park section of Brooklyn
  - Diverse community and employees: almost 50% of community residents were born outside of the U.S.

June 6, 2017 40

### The Safe Sleep Challenge

- **Parents**
  - Familiar with “Back to Sleep” but uncomfortable with other aspects:
    - Avoiding “co-bedding”
    - No objects in crib
    - Safe bedding (no pillows allowed)
    - Worried about “flat head”

June 6, 2017 41

### The Safe Sleep Challenge

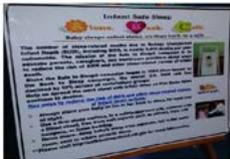

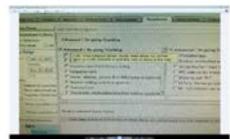

- **Health care providers**
  - Resistant to keeping crib flat:
    - Issues around staffing
    - Environment of the nursery units (ability to easily see babies in certain areas of nursery)
    - Beliefs about “reflux”
  - Resistant to keeping items out of cribs:
    - Feeding bottles
    - Handmade blankets

June 6, 2017 42

### Safe Sleep Education for Staff

- First need education/guidance re: incorporating safe sleep practices for staff:
  - All RNs in nursery & NICU (small groups)
  - Residents (Grand Rounds)
- Heightened awareness in units:
  - Signs (in all perinatal units)
  - Added to electronic medical record
  - “Safe Sleep Champions”

# Kacica M, Lawless K, Grippi C, Crockett E. Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration

June 6, 2017 43

## Safe Sleep Education for Parents in Mother-Baby Unit

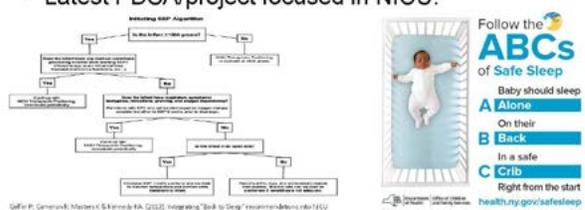

- Emphasized the need to use safe sleep practices when infant is “asleep and unattended”
- “Tummy time” and interacting with infant are very important!
- Education on admission to Mother-Baby Unit due to rooming-in

June 6, 2017 44

## Safe Sleep Education for Parents in the NICU

- More challenging: therapeutic/developmental positioning
- How do we make the transition?
- Latest PDSA/project focused in NICU:

Follow the ABCs of Safe Sleep  
**A** Alone  
**B** Back  
**C** Crib  
 Baby should sleep On their Back In a safe Crib Right from the start  
[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

June 6, 2017 45

## Outcomes

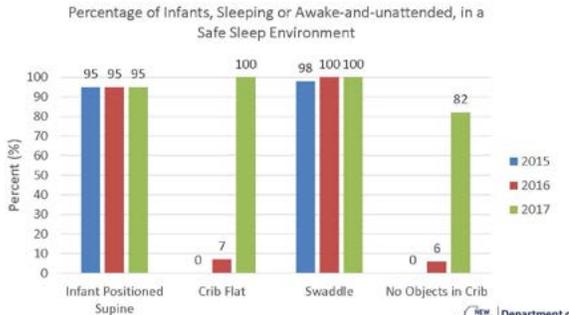

- Increased understanding by staff members regarding safe sleep practices
- Increased modeling of safe sleep practices in hospital (flat crib, no objects, safe sleep clothing/blankets)
- Increased safe sleep practices by caregivers/parents (flat crib, no objects, safe sleep clothing/blankets)

June 6, 2017 46

## Crib Checks

Percentage of Infants, Sleeping or Awake-and-unattended, in a Safe Sleep Environment

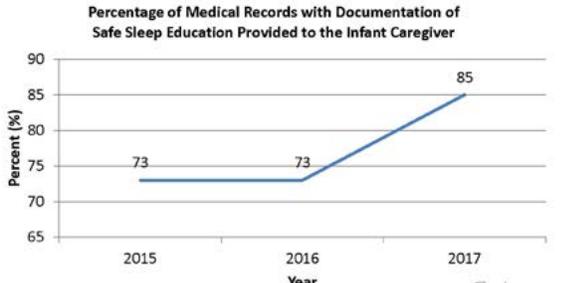

Category	2015 (%)	2016 (%)	2017 (%)
Infant Positioned Supine	95	95	95
Crib Flat	0	7	100
Swaddle	98	100	100
No Objects in Crib	0	6	82

June 6, 2017 47

## Documentation of Safe Sleep Education

Percentage of Medical Records with Documentation of Safe Sleep Education Provided to the Infant Caregiver

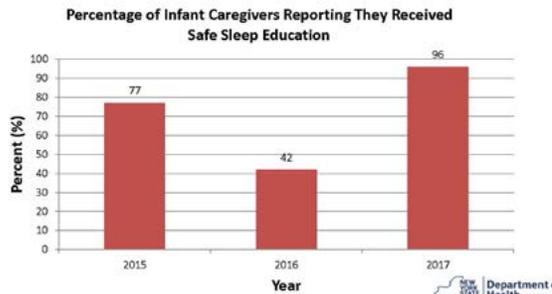

Year	Percent (%)
2015	73
2016	73
2017	85

June 6, 2017 48

## Caregiver Survey: Received Safe Sleep Education

Percentage of Infant Caregivers Reporting They Received Safe Sleep Education

Year	Percent (%)
2015	77
2016	42
2017	96

## Kacica M, Lawless K, Grippi C, Crockett E. *Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration*

June 6, 2017 49

### Summary

- Health care providers need education regarding current safe sleep recommendations
- Education should not be limited to RNs, but should include all providers that interact with patients in the perinatal setting
- Cultural considerations must be taken into account, but with focused education of caregivers, safe sleep practices can be increased/improved

June 6, 2017 50

## REACH CNY, Inc.

June 6, 2017 51

### REACH CNY, Inc.

- Community-based Perinatal Network, primarily serving Onondaga and Oswego Counties
- Currently a Maternal Infant Community Health Collaborative (MICHC) provider in both counties
- Oswego County Opportunities provides Community Health Worker services (Oswego County)
- Participating in the Safe Sleep CoIN fit well with our ongoing safe sleep education efforts
  - Working with families and caregivers
  - Working with the community

June 6, 2017 52

### Safe Sleep Education

- Nothing can take the place of doing a physical demonstration in the home, with a Pack n' Play, or the family's own crib, bassinet, or other sleep space, using a doll or their infant... to model and talk about safe sleep
- The vast majority of the families we serve follow many safe sleep measures most of the time
  - Our CHWs focus on positive reinforcement and empathetic risk-reduction education

June 6, 2017 53

### Safe Sleep Education

- Communication about safe sleep can begin with reflective questions such as:
  - What are your plans for your baby's sleeping habits?
- Be mindful of the power of intergenerational perspectives and cultural beliefs, and address them with sensitivity and honesty.

June 6, 2017 54

### Safe Sleep Education

- A common example: neighbors and relatives telling new parents 'My children slept on their tummies and they were fine.'
  - Share that MUCH has been LEARNED since the 1990s.
  - Share that parents have the power to use what has been learned to keep their babies safer.

## Kacica M, Lawless K, Grippi C, Crockett E. *Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration*

June 6, 2017 55

### Safe Sleep Education

- Recognize that parents/caregivers are bombarded with marketing of products and images of behaviors that do not meet AAP safe sleep recommendations.

June 6, 2017 56

### Collaboration: Essential & Ongoing

- Locally we have long collaborated with many of the entities involved in the NYSPQC
- Strong collaborations with local Health Departments, NYS Sudden Infant and Child Death Resource Center (CNY Office), home visiting and CHW service providers, hospitals, others
- Special projects funded by foundations:
  - CJ Foundation for SIDS
  - CNY Community Foundation—annual SIDS mini-grant opportunity

June 6, 2017 57

### Collaboration: Essential & Ongoing

- Local data is communicated to the public...as a response
- Safe sleep campaigns are renewed and highlighted
- Newer methods such as social media are now used

June 6, 2017 58

### Help for Families with Limited Resources

- Starting in 2005, REACH CNY became an affiliate of the national Cribs for Kids Program
- Currently average 120 cribs per year
- Distributed through direct-service home visitors, social workers, or hospital birthing units
- Onondaga County Health Department has an arrangement with DSS: Upon HD referral, DSS provides funds (for crib purchase) to families on full Public Assistance—
- Many families need help, our program is a “last resort”

June 6, 2017 59

### Help for Families with Limited Resources

- REACH CNY staff provide safe sleep education for home visitors, who can then refer families who need a crib
- The limiting factor: Raising the funds to buy cribs
- Ordering portable cribs directly from Cribs for Kids works well for us
- A community partner stores cribs for us

June 6, 2017 60

### Best Practices / Resources

When REACH CNY provides “Safe Sleep & Cribs for Kids” training, we provide the organization a thumb drive with these files:

- PowerPoint presentations (from Cribs for Kids, with some local additions)
- The file for a “flip book” of key safe sleep talking points that many home visitors find useful
- A file containing web links to key info online, which allows them to reference info and to print out educational materials
- REACH CNY’s Cribs for Kids Program information: Guidelines, procedures, referral form, etc.

# Kacica M, Lawless K, Grippi C, Crockett E. Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration

June 6, 2017 61

## Successes & Resources

June 6, 2017 62

## Successes

- Collaborations among participating hospitals and stakeholder organizations
- Hospital policies and procedures put into place, or updated as appropriate
- Safe sleep education and documentation built into birthing hospitals' electronic medical records (EMR) systems

June 6, 2017 63

## Collaborating for Success

- Participate in NYS Child Fatality Review Team through SIDS grant contractor
- Collaboration between NYSPQC hospital-based safe sleep project and OCFS safe sleep project
- Sharing and cobranding media with partner organizations

June 6, 2017 64

## Engaging Prenatal Providers

- Commissioner letter sent to obstetricians and nurse midwives statewide
- Educate and reinforce safe sleep messages prior to delivery

June 6, 2017 65

## Engaging Providers After Birth

- Commissioner letter sent to:
  - Pediatricians
  - Family practitioners
  - Nurse practitioners
- Reinforce safe sleep message that has been provided previously in different settings

June 6, 2017 66

## NYS Public Health Law

- New York State Public Health Law was amended in July 2016 to include language that requires birthing hospitals and birthing centers to distribute infant safe sleep information to all maternity patients, including information on crib safety.

## Kacica M, Lawless K, Grippi C, Crockett E. *Safer Sleep for Babies (Part 1): State, Hospital and Community Collaboration*

June 6, 2017 67

### Media Campaign

- Goal is to increase awareness among parents and other caregivers about infant safe sleep, through the development of:
  - ✓ Posters
  - ✓ Brochures
  - ✓ Magnets
  - ✓ Clings
  - ✓ Crib cards
  - ✓ Videos

June 6, 2017 68

### Safe Sleep Video

### TESTIMONIAL

“Our relationship with the Regional Perinatal Center (RPC) has only gotten stronger over the years, in large part because of the good communication and good rapport between us,” says Dr. Robert Bonvino, MD, who works with the Nicholas H. Noyes Memorial Hospital, RPC-affiliate birthing hospital. “The reason behind our success is simple: better communication equals better patient care, which equals better patient outcomes. That’s something we all want to achieve.”

## *Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities*

NYSPQC Safe Sleep Project Learning Session. June 2017. **Intended audience:** Health care professionals.

New York State  
Department of Health

New York State  
nyspQc  
Perinatal Quality Collaborative

**New York State Perinatal Quality Collaborative (NYSPQC)**  
Safe Sleep Project – Learning Summit  
June 20, 2017

May 20, 2019 2

**Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities**  
Pat Heinrich, RN, MSN  
Executive Project Director  
NICHQ

**NICHQ**

**Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities**

Pat Heinrich, RN, MSN, CLE

National Institute for Children's Health Quality

**Acknowledgments**

- Slides adapted from those presentation at Diversity Rx Annual Meeting Pre-Conference Workshop March 11, 2013. "Proven Strategies for Bringing Equity into Quality Improvement" by Angela Marks, MEd, Patricia Heinrich, RN, MSN, Sunita Mutha, MD
- HRSA Maternal & Child Health Bureau (MCHB)
- NICHQ Infant Mortality Team

Of all the forms of inequality, injustice in health care is the most shocking and inhumane.

Martin Luther King Jr.

**Objectives**

- Define what a health equity lens is and how it can be used to reduce disparities in SUID
- Describe specific ways to modify rapid cycle improvement when focusing on equity
- Convince you that EXPLICITLY using a health equity lens is critical to quality improvement efforts

## Heinrich P.

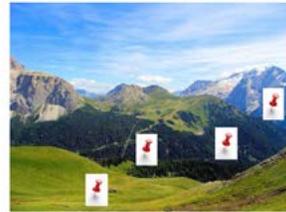

### *Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities*

#### Assumptions

- Focusing on inequities in health care delivery; will not directly address other important factors that contribute to inequities in health
- Varying levels of QI experience and expertise present today

NICHQ<sup>7</sup>

#### Recognition

Eliminating disparities is a long and winding road to walk; we're laying out directions and eliminating some of the blisters

NICHQ<sup>8</sup>

#### Take home points

- QI is different when the lens is equity
- Baseline data is essential; have to know the direction and scale of the disparity at the start
- There is a proven approach for improving equity that consists of:
  - > Proven processes
  - > Proven changes and interventions
- It is essential that you share what you learn

NICHQ<sup>9</sup>

#### Disparity vs Equality vs Equity

- **Equality:** Assumes that everyone is equal and receives equal treatment
- **Disparity:** Acknowledges differences, but places no judgments on those differences (value-free)
- **Equity:** Acknowledges differences, and additionally acknowledges systemic injustices that influence outcomes that need to be addressed in order to prevent differences based on differential experiences

NICHQ

#### What is a Health Equity Lens?

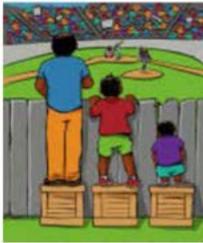

- A new way of viewing common scenarios
- A critical lens for how we do the work we do
- A challenge to do better, work smarter, be fairer in how we work towards improving healthcare for all
- A promise to remember that when we say that the system is **perfectly designed** to get the results it gets, that this means we are working in a system **designed** to create and promote health inequities

NICHQ

Heinrich P.

*Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities*

What do we call this?

"Interaction Institute for Social Change | Artist: Angus Maguire." NICHQ

Equality

Everyone gets the same amount regardless of actual need.

"Interaction Institute for Social Change | Artist: Angus Maguire." NICHQ

What do we call this?

"Interaction Institute for Social Change | Artist: Angus Maguire." NICHQ

Equity

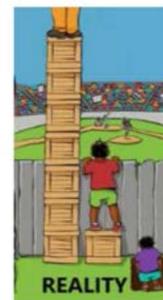

Everyone gets the amount they need to be able to enjoy the game.

"Interaction Institute for Social Change | Artist: Angus Maguire." NICHQ

But is that all there is to the story?

What if the story is more complex?

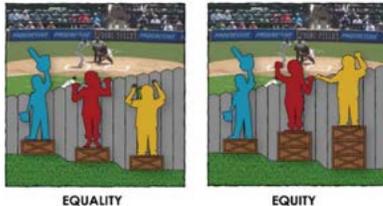

NICHQ

## Heinrich P.

### Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

What assumptions are we making in the story we're telling?

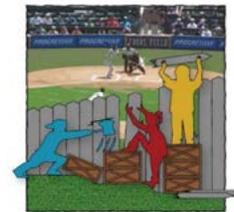

EQUALITY EQUITY

Artist: Paul Kuttner

Are we perpetuating the inequities we hope to address?

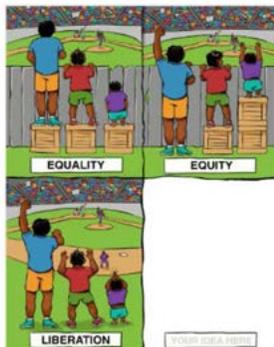

JUSTICE

Artist: Paul Kuttner

### The 4<sup>th</sup> Box Challenge

"Interaction Institute for Social Change | Artist: Anous Maouire."

Sometimes we need to explore new ways to understand familiar stories

Artist: [Salomé Chimuku](#)

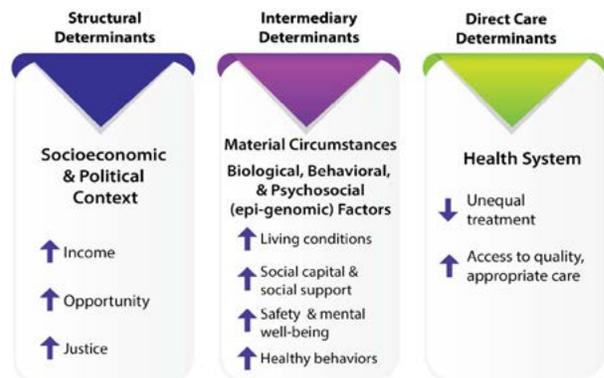

### Be clear about disparities, SDOH, and equity

- Not all health differences are health disparities.
- Health disparities are systematic, plausibly avoidable health differences according to income, race/ethnicity, religion, or socioeconomic position.
- Disparities in health and its determinants are the metric for assessing health equity.
- Health equity is the principle underlying a commitment to reducing disparities in health and its determinants.
- Health equity is social justice in health.

Source: Braveman et al. Health Disparities and Health Equity: The Issue Is Justice. *Am J Public Health*. 2011;101:5149-55.

### Three Types of Determinants of Health

## Heinrich P.

### *Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities*

#### Lever to change social determinants

**Structural**

- Change law, labor, land (and income)
- Change the ways laws are implemented

**Intermediate**

- Change living conditions
- Maximize social capital
- Create systems approaches to help people change health behaviors

**Direct Health Care**

- QI and policies to change unequal treatment
- QI and policies to increase appropriateness & quality of care

**NICHQ**

Source: Design by Kay Johnson for SDOH Learning Network, IM CollN, June 2017.

#### Our Focus Today

**Structural**

- Change law, labor, land (and income)
- Change the ways laws are implemented

**Intermediate**

- Change living conditions
- Maximize social capital
- Create systems approaches to help people change health behaviors

**Direct Health Care**

- QI and policies to change unequal treatment
- QI and policies to increase appropriateness & quality of care

**NICHQ**

Source: Design by Kay Johnson for SDOH Learning Network, IM CollN, June 2017.

## Using a Health Equity Lens with The Model for Improvement

#### What are we trying to accomplish?

- As we set our goals, we can use a health equity lens to ask ourselves?
  - What are we trying to accomplish?
    - In what populations? Experiencing what barriers?
  - How will we know a change is an improvement?
    - For whom? Under what circumstances? Who might we miss?
  - What change can we make that will result in improvement?
    - Are there unintended consequences? Do all receive benefits of changes equitably? Do our changes worsen inequities?

A Health Equity Lens requires us to ask more and different questions. It pushes us in our critical thinking at every juncture of a QI project.

**NICHQ**

#### Take home points

- QI is different when the lens is equity
- Baseline data is essential; have to know the direction and scale of the disparity at the start
- There is a proven approach for improving equity that consists of:
  - Proven processes
  - Proven changes and interventions
- It is essential that you share what you learn

**NICHQ**

#### Health Equity Lens: FAQ

- Where can we apply it?
  - EVERYWHERE!
- When should we apply it?
  - ALWAYS!
- This is a critical tool that should be applied liberally early and often. Think of it as methodological sunscreen.

# Heinrich P.

## Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

### Model for Improvement

Model for Improvement

- AIM:** What are we trying to accomplish?
- MEASURES:** How will we know that a change is an improvement?
- CHANGES:** What changes can we make that will result in improvement?

Act Plan  
Study Do

From: Associates in Process Improvement. NICHQ<sup>3</sup>

### What do we know?

- Health care disparities exist; may be worse in low resource settings
- Equity is an essential, often forgotten, component of quality
- Achieving equity can affect:
  - Quality
  - Safety
  - Cost
  - Risk management

NICHQ<sup>3</sup>

### Achieving Equity

- Many causes, many solutions
- Must move beyond diagnosing the problem
- Need more examples of what works

NICHQ<sup>3</sup>

### Can QI Reduce Disparities?

NEUTRAL	NARROWING	WIDENING
<b>One-size-fits-all</b> • ESRD patients <small>Seghal, JAMA 2003</small>	<b>Culturally tailored</b> • Depression <small>Arora, Medical Care 2005</small>	<b>One-size does not fit all</b> • CABG <small>Werner, Circulation 2005</small>

Source: Alyna Chien, MD, MS. NICHQ<sup>3</sup>

### Framework for ACTION

Diverse Populations + Tailored Care → Appropriate Services → Improved Equity in Care

Funding & Technical Assistance

Adapted from C. Brach et al. NICHQ<sup>3</sup>

### Building Blocks for Equity Focused QI

1. Establish Infrastructure
2. Re-think Aims
3. Use Data Differently
4. Tailor Tests of Change
5. Sustain & Spread

NICHQ<sup>3</sup>

## Heinrich P.

### *Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities*

Using a Health Equity Lens on: Establish Infrastructure

### Building Blocks for Equity Focused QI

1. Establish Infrastructure  
2. Re-think Aims  
3. Use Data Differently  
4. Tailor Tests of Change  
5. Sustain & Spread

NICHQ<sup>3</sup>

### Establish Infrastructure

- Human Capital
- Leadership
- REAL Data\*

NICHQ<sup>3</sup>

### Building Your Team

- Who is included as part of your QI team?
  - How are you incorporating the communities in which inequities exist?
- Important considerations when focusing on equity:
  - Strong QI fundamentals allows for a broader focus
  - Understanding of cultural, contextual, community factors (staff and/or patient involvement)
  - Consider the need for greater analytic skills for use with potentially more complex data
  - Inclusion of diverse staff to get multiple perspectives
  - Clinical champions and Leadership are key
  - Patient representation is essential

NICHQ<sup>4</sup>

“Coming together is a beginning, staying together is progress, and working together is success”

- Henry Ford

NICHQ

### Essential Skills for a Quality Improvement Leader (by Julie Kliger)

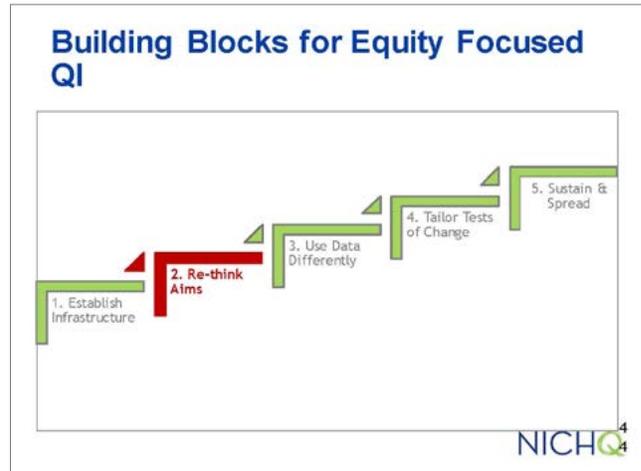

1. Setting a vision and goals.
2. Communicating strategically for commitment.
3. Creating an environment that encourages constructive accountability and constructive conflict.
4. Removing barriers to success.
5. Coaching (versus telling).
6. Celebrating success and failures.
7. Earn the trust.
8. Working from self awareness
9. Working with and through others.

Source: <http://www.beckershospitalreview.com/quality/9-essential-skills-of-a-healthcare-quality-improvement-leader.html>

NICHQ<sup>4</sup>

# Heinrich P.

## Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

### AIM: Why the Change is Desired

- Aim addresses the **gap** between where your team knows they are now, and where the team wants to be – it speaks to a known performance deficiency in an important process.
- Should be crafted to reflect Equity
  - Identify group(s) receiving disparate care
  - Identify group by which to compare
  - Frames numerical goal around reducing the gap
- Gap** = opportunity for improvement

NICHQ<sup>4</sup>

### Re-Thinking Aims

- What's different?
  - SMAART
  - Compelling and clinically relevant AND
- REFLECTS EQUITY
  - Identifies group receiving disparate care
  - Identifies group by which to compare
  - Frames numerical goal around reducing the gap

NICHQ<sup>6</sup>

### Re-Thinking Aims: Infant Mortality

By July 2018, reduce the SUID mortality rate by 10% relative to baseline

By July 2018, reduce relative disparity between white and non-Hispanic Blacks for SUID by  $\geq 10\%$

NICHQ<sup>7</sup>

### Re-Thinking Aims: Safe Sleep

By July 2018, increase the number of mothers who follow ABCs (alone, on back, in crib) of Safe Sleep

By July 2018, reduce relative disparity between white and non-Hispanic Black who follow ABCs (alone, on back, in crib) of Safe Sleep

For this to be a SMART AIM - What is missing?

NICHQ<sup>8</sup>

## Heinrich P.

### Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

#### Re-Thinking Aims: Common Questions

- What do we do if we don't have a comparison group at our organization?
  - Use national benchmark
- What is an appropriate goal?
  - Consider a percent improvement from baseline data
- How do I know if there are enough individuals in a given "group" to effectively compare?
  - Look at demographics to get a sense of baseline population, consider adding additional sites, or use rolling averages

#### Reviewing Your Aim Statement

- Does your aim explicitly address health equity?
- Are there known disparities related to race/ethnicity, income, geography, or sexual orientation? Does your aim identify groups receiving disparate care?
- Does your aim identify group by which to compare?
- Does your aim frame numerical goal around reducing the gap?
- Does your aim make assumptions about the population that might be incorrect?
- Are you sure the identified goals are consistent with the beliefs, values and preferences of the target population?

Don Berwick, "nothing about us without us"

#### Using a Health Equity Lens on: Learning from Data

#### Building Blocks for Equity Focused QI

#### REAL Data\*

- "You can't fix what you can't measure"
  - Measuring disparities: stratify quality measures by race, ethnicity, language...
- Infrastructure:
  - Fields in an EHR
  - Mechanisms to combine data from unlinked systems
  - Training staff to collect and use

"In God we trust; all others bring data" - W. Edwards Deming

AHRQ: Race, Ethnicity, and Language Data: Standardization for Health Care Quality Improvement <http://www.ahrq.gov/sites/default/files/publications/files/loracereport.pdf>

#### Establishing Measures

- Establishing Measures
  - Are you capturing important sociodemographic information as part of data collection?
  - Are you stratifying appropriately by important demographic, geographic or other factors (not just race and ethnicity)?
  - Can you track progress towards health equity with the measures you have chosen?

## Heinrich P.

# Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

### Use Data Differently

#### Defining Project Measures

- Relates to aim (i.e. the results you seek)
- Data are available
- Manageable # and ability to collect frequently
- Mix of process, outcome, and balancing
- Pay attention to measures specific to populations who experience inequities
- Process measures: May include support services such as interpreter services provided, staff training, consideration of implicit bias
- Outcome Measures: Not necessarily limited to health outcomes, may focus on utilization, referral, uptake, and access to care

\*\* NQF Disparities Measures, or other sources may be a place to start consideration of additional or new measures

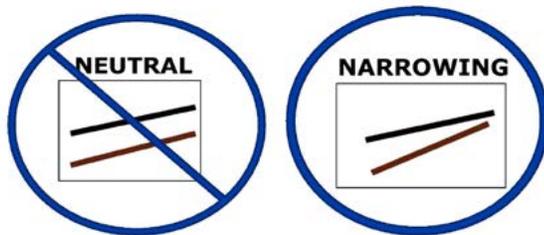

### Using Data Differently

#### Collecting & Monitoring Data - What's different?

- Involvement of key players
- Methodological considerations
- Project measures – ongoing stratification
- PDSA measures – patient characteristics accounted for.

### Data Goal

### Measuring Socio-demographics

**PARTICIPANT MANUAL** We ask because we care: Collecting patient demographic data

#### Section 4 Demographic Data Collection Questions ...

- Demographic Data Questions
- 1 Spoken Language
  - 2 Born In Canada
  - 3 Race/Ethnicity
  - 4 People with Disabilities
  - 5 Gender
  - 6 Sexual Orientation
  - 7 Family Income
  - 8 Number of People Income Supports
- Three Optional Questions
- Reading Language
  - Religion or Spiritual Affiliation
  - Housing

### Analyzing by Socio-demographics

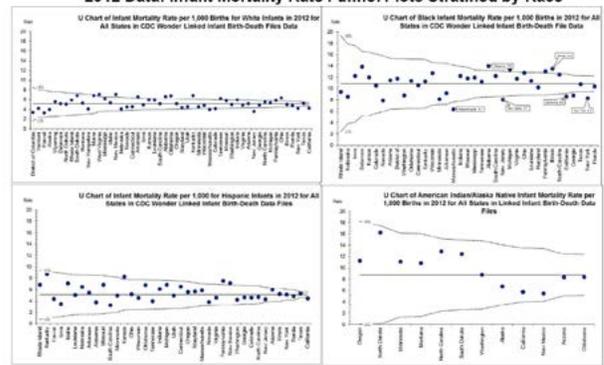

#### Stratifying Health Care Quality Measures Using Socio-demographic Factors

Minnesota Department of Health  
Report to the Minnesota Legislature 2015

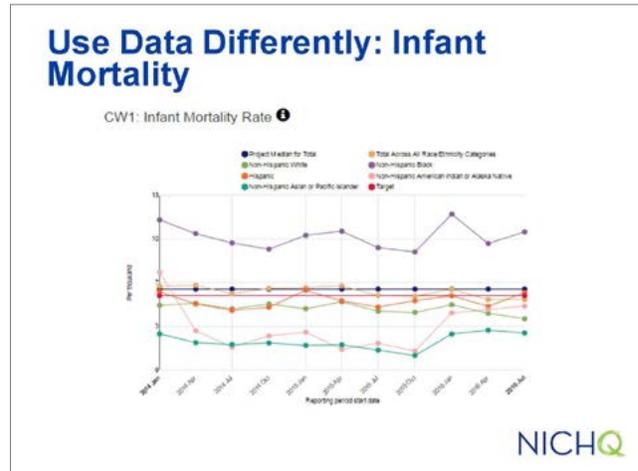

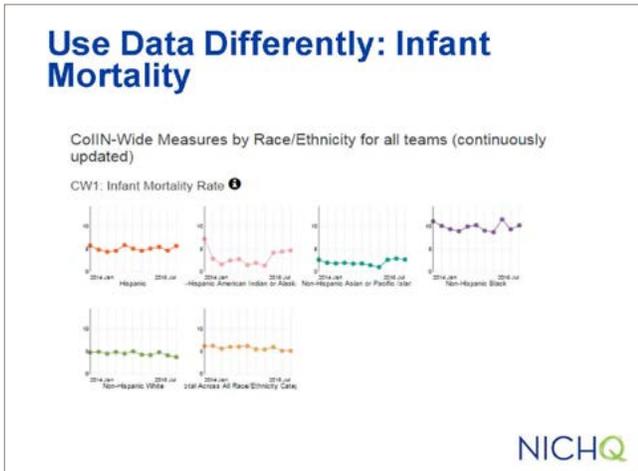

### Use Data Differently: Infant Mortality

#### 2012 Data: Infant Mortality Rate Funnel Plots Stratified by Race

# Heinrich P.

## Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

### Use Data Differently: SS Education

**PDSAs:**

- 1) Prenatally Nurse Joe will talk to of all of Dr. Sarah's patients about safe sleep and inquire if they have/need a crib
- 2) All L&D nurses will review safe sleep education immediately after birth
- 3) Dr. Sarah will reinforce this education before discharge home

**Measures:**

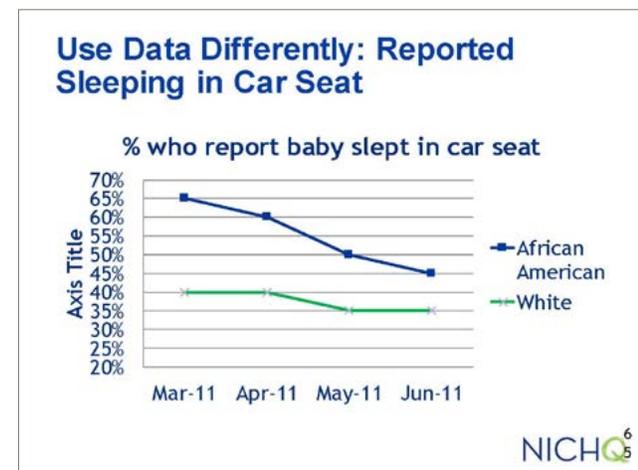

- 1) How many pregnant moms did Joe counsel about the importance of the SS?
- 2) How many patients did L&D educate?
- 3) How many moms did Dr. Sarah remind how important it is to practice safe sleep at home?

NICHQ <sup>6</sup><sub>3</sub>

### Use Data Differently: Safe Sleep

Measure Type	Measure Name	Description	Calculation		Collection Method & Frequency	How will you stratify this measure?	Goal/Target
			Numerator	Denominator			
Process	Sleeping in Crib	Infants whose moms report following baby slept in a crib all of the time in the last 2 weeks	# women who answer yes to Q: "Did your baby sleep in a crib all of the time?"	All women surveyed by CBO	Survey (Monthly)	X Race/ethnicity <input type="checkbox"/> Preferred language <input type="checkbox"/> Literacy <input type="checkbox"/> Income <input type="checkbox"/> Gender <input type="checkbox"/> Education level Other: _____	95%

NICHQ <sup>6</sup><sub>4</sub>

### Using Data Differently

- How is data being analyzed?
- Are there ways to stratify by important subgroups?
- Are health equity gaps changing along with overall outcomes?

NICHQ

## Heinrich P.

### Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

#### Using Data Differently: Common Questions

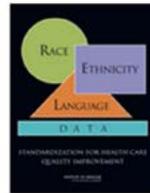

- What is considered a “big enough” sample?
- What can we do if we don't have REAL data?
- How do we get buy-in for burden of more data collection?

NICHQ<sup>6</sup><sub>7</sub>

#### REAL Data

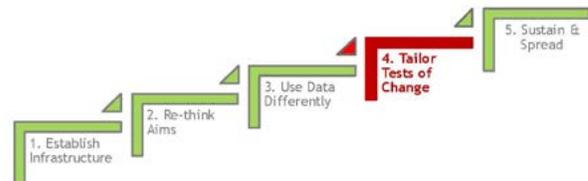

- Resources for REAL Data Collection
  - Health Research and Educational Trust (HRET) Disparities Toolkit
  - Race, Ethnicity, and Language Data: Standardization for Health Care Quality Improvement (IOM)

NICHQ<sup>6</sup><sub>8</sub>

#### Using a Health Equity Lens on: Selecting Changes

#### Building Blocks for Equity Focused QI

NICHQ<sup>7</sup><sub>0</sub>

#### Selecting Changes

- Do the changes in the change package address cultural congruence language barriers, or systemic oppression?
- Do the changes advantage certain groups?
- Is there an explicit focus on potential vulnerable populations
- EXAMPLE: IM CoIIN Safe Sleep
  - ABCS of Safe Sleep - AAP recommends:
    - Alone
    - On their Back
    - In a Crib
  - What if the family believes in “a family bed”? Or can't afford a separate sleep space?
  - What if mom is breastfeeding and exhausted?

NICHQ

#### Cycle of Change

- Testing Changes
  - Are changes being tested in populations where disparities exist?
- Implementing Changes
  - Are changes being implemented in a way that further disadvantages vulnerable groups?
  - EXAMPLE: Educational tools that are not developed at appropriate grade level, or not translated
- Spreading Changes
  - Is there an explicit focus to ensure changes spread to hard to reach populations?
  - Do the changes work in multiple populations?
  - Are there balancing measures continuing to be tracked to ensure spread of changes doesn't increase disparities?

NICHQ

# Heinrich P.

## Improving Safe Sleep Is Not Enough: We Must Also Reduce Disparities

### Tailor Tests of Change

Developing changes - what's different?

The Sequence for Improvement

- Evidence
- Theories, questions, hunches
- Linked to aim

# Introduction & Driver Diagrams

## Introduction

Data and quality improvement tools are important components of the NYSPQC model. The NYSPQC Safe Sleep Project used the [Institute for Healthcare Improvement's Breakthrough Series](#) (BTS), a learning model that has been modified to meet the requirements and unique needs of this topic and context. Additionally, the project uses the Model for Improvement, a change model developed by the Associates in Process Improvement. Both the BTS and [Model for Improvement](#) have demonstrated effectiveness in this and previous NYSDOH projects. By using these models, the NYSPQC assists participating teams with embedding strategies to measure and address disparities in care and outcomes throughout the process. A BTS Collaborative is a vehicle for identifying, testing, and spreading changes that are effective for improving care and outcomes for defined populations. The quality improvement tools in this section are key tools used by participating hospitals and organizations to achieve desired goals. Additional data collection and quality improvement tools can be found on the NYSPQC website: [www.nyspqc.org](http://www.nyspqc.org).

## Driver Diagrams

*"A Driver Diagram serves as tool for building and testing theories for improvement."*

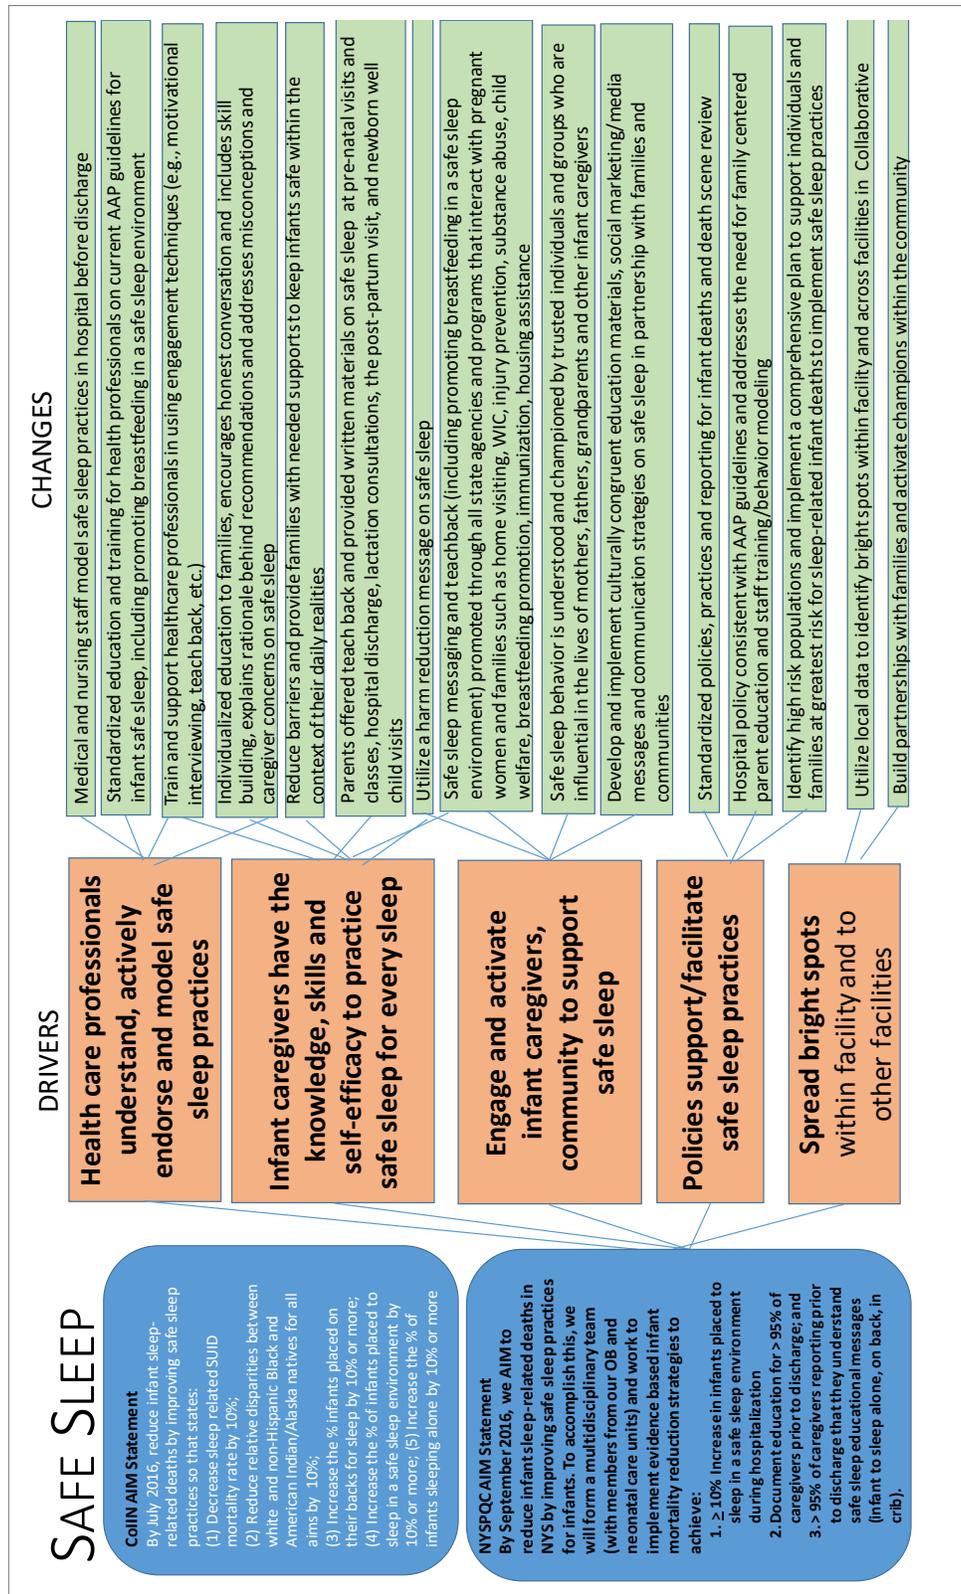

The Driver Diagram is a graphic prediction of the changes that need to be accomplished to achieve the AIM within your system. These changes are grouped together in categories labeled "Drivers" because they 'drive' the achievement of your main goal.

# Introduction & Driver Diagrams

## Steps to Develop Your Driver Diagram

- STEP 1** – Work as a team to assure all members understand/agree on goals and how they contribute to achieving them.
- STEP 2** – Clarify Your AIM.
- STEP 3** – Brainstorm “What changes can we make that will result in an improvement?”
- STEP 4** – Cluster the ideas together to see if any groups of ideas represent a common driver.
- STEP 5** – Expand the groups of ideas to see if new drivers come to mind.
- STEP 6** – Logically link together the groups of ideas into a Driver Diagram format.

# NYSPQC Safe Sleep Project Driver Diagram

# Quality Improvement (QI) Tools

## Heinrich P. *Introduction to Improvement 101*

NYSPQC Safe Sleep Project QI Training Webinar. September 2015.

**Intended audience:** Public health and health care professionals.

May 22, 2019 5

### Session Objectives

At the end of this session participants will be able to:

- Describe the Model for Improvement and its utility in structuring an improvement initiative.
- Identify components of an effective aim statement.
- Incorporate measures for improvement into an initiative.
- Explain the role of testing changes in accomplishing the AIM

May 22, 2019 6

## The Learning Model: IHI Breakthrough Series Model (BTS)

May 22, 2019 7

### Overview of Breakthrough Series Learning Collaborative

- An improvement method that relies on spread and adaptation of existing knowledge to multiple settings to accomplish a common aim.

May 22, 2019 8

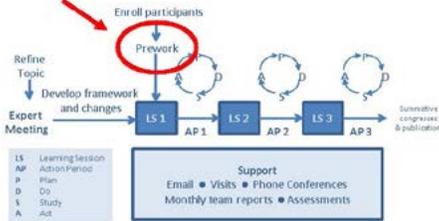

### Overview of Breakthrough Series Learning Collaborative – BTS Essentials

- Technical Content (Ideas)
  - Collaborative Charter which includes aim and goals
  - Change Package
  - Measurement System
- Model for Improvement
  - Structured method for organizations to make positive changes
- Attention to Structure
  - Learning Sessions and Action Periods
  - Focus on shared learning, awareness of psychology of change

May 22, 2019 9

### IHI Breakthrough Series™ Core Model

May 22, 2019 10

### Learning Session and Action Period Objectives

Learning Session	Action Period
<b>Learning Session 1</b> Get Ideas Get Methods Get Started Test all changes on small scale	<b>Action Period 1</b> Test all changes on small scale
<b>Learning Session 2</b> Get More Ideas Get Better at Methods Get a "Strike" Test & implement all changes	<b>Action Period 2</b> Test & implement all changes
<b>Learning Session 3</b> Celebrate Successes Get ready to Sustain and Spread Holding the gains and spread	<b>Action Period 3</b> Holding the gains and spread

**Goals**

- Support teams in their improvement work
- Build collaboration and shared learning
- Assess collaboration and progress

**Tools**

- First Tests (PDSAs)
- Conference calls (Coaching)
- Listserv
- Monthly Data Collection

# Heinrich P. Introduction to Improvement 101

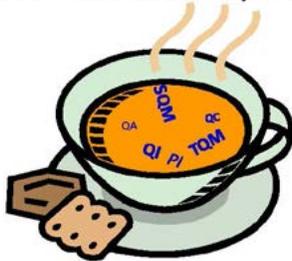

May 22, 2019 11

## A Model for Improvement

May 22, 2019 12

Have you been involved in any kind of quality....

Different titles over the years  
Might remind you of Alphabet Soup

May 22, 2019 13

### What Is Quality?

“I don’t know,  
but I know when I see it!”  
*Anonymous*

May 22, 2019 14

### The Science of Improvement

Dr. W. Edwards Deming, a statistician, described **four components for effective improvement**:

- Appreciation of a system
- Understanding variation
- Theory of knowledge
- Psychology

Deming called the interplay of these four areas **“Profound Knowledge”**

Source : *Improvement Guide*, Introduction, p xxiv-xxvi

May 22, 2019 15

### Knowledge for Improvement

Subject Matter Knowledge

**Subject Matter Knowledge:**  
Knowledge basic to the things we do in life. Professional knowledge & training. On-the-job experience.

**Profound Knowledge:**  
The interaction of the theories of systems, variation, knowledge, and psychology.

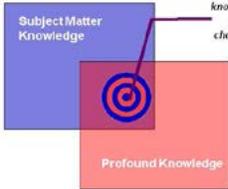

Profound Knowledge

May 22, 2019 16

Subject Matter Knowledge

*Improvement: Learning to combine subject matter knowledge and profound knowledge in creative ways to develop effective changes for improvement.*

Profound Knowledge

# Heinrich P. Introduction to Improvement 101

May 22, 2019 17

## Important Principles for Quality Improvement

- Customer Focus
- Systems and Process view
- Measurement of system and processes
- Motivation and Rewards of people
- Learning and Knowledge
- Pragmatic Use of Scientific Method

May 22, 2019 18

## Scale of Formality of Approach for Improvement Efforts

May 22, 2019 19

## All improvement requires change

Think back to an easy change you made that was an improvement

- What made it easy?
- Who supported you in the change?
- Why do you think it was easy?

May 22, 2019 20

## Think back to a change that was hard to make, so hard, you might have given up

- What made it hard?
- What barriers did you face?
- What do you think it was so difficult to make this change or this improvement?

May 22, 2019 21

## Not all changes are improvements

- *“All improvement requires changes, but all change does not result in improvement.”*  
– Source Unknown
- What change have you experienced that has NOT resulted in improvement?

May 22, 2019 24

## The Model for Improvement (MFI)

is a method to help increase the odds that the changes we make are an improvement.

© Associates for Process Improvement

# Heinrich P. Introduction to Improvement 101

May 22, 2019 26

### Model for Improvement - 3 Fundamental Questions

AIM: What are we trying to accomplish?  
 ↓  
 MEASURES: How will we know if a change is an improvement?  
 ↓  
 CHANGE: What changes can we make that will result in improvement?

Act A P Plan  
 Study S D Do

© Associates for Process Improvement

New York State Department of Health

May 22, 2019 26

## MFI Part I AIM Statement

New York State Department of Health

May 22, 2019 27

### Model for Improvement

AIM: What are we trying to accomplish? ← **Aim**  
 ↓  
 MEASURES: How will we know if a change is an improvement? • **Measures**  
 ↓  
 CHANGE: What changes can we make that will result in improvement? • **Ideas - PDSA cycles**

Act A P Plan  
 Study S D Do

© Associates for Process Improvement

New York State Department of Health

May 22, 2019 29

### Why an Aim Statement?

- Answers and clarifies "What are we trying to accomplish?"
- Creates a shared language and shared methods
- Facilitates organizational conversations and understanding
- Supports accountability for team leaders

New York State Department of Health

May 22, 2019 29

### What Are We Trying to Accomplish?

**Aim:** A written statement of the accomplishments expected from each improvement effort; similar to SMART objectives

Key components:

- Directs team - Should answer, "what are we trying to accomplish?"
- Sends message on magnitude of change
- Unambiguous, concise intent
- Identify specific target system or patient population to be improved

and

- Some guidance for carrying out the work
- Numeric measurable goals

*A well crafted AIM is the single highest predictor of team success*

New York State Department of Health

May 22, 2019 30

### SMART Aims (Objectives)

- **S**pecific: Understandable, unambiguous
- **M**asurable: Numeric goals
- **A**ctionable: Who, what, where, when
- **A**chievable (but a stretch)
- **R**elevant to stakeholders and organization
  - Strategic, Compelling, Important
- **T**imely: with a specific timeframe

New York State Department of Health

# Heinrich P. Introduction to Improvement 101

May 22, 2019 31

## Developing the Aim Statement

- Align with strategic goals of the organization
- Use numerical goals consistent with your project plan
- Write a clear and concise statement indicating "who, what, when, and where "
  - Who** will undertake the work, and who will be affected by it
  - What** does the team intend to do
  - by **When** will the aim be accomplished
  - Where** - define pilotsite and spread site(s)

May 22, 2019 32

## Sample Aim Statement

Happy Valley Pediatrics intends to identify, treat, and prevent children who are at risk for obesity or are obese so that:

- 95% of 2-12 year olds have BMI in chart & are classified;
- 95% who are overweight are medically assessed
- 95% have follow up contact within 4 weeks of overweight finding
- 95% have care plan with goals

**IS THIS AIM START (Specific, Measurable, Actionable, Achievable, Relevant Timely)? If not what's missing?**

May 22, 2019 33

## NYSPOC Safe Sleep Project Aim Statement

By September 2016, we AIM to reduce infant sleep-related deaths in NYS by improving safe sleep practices for infants. To accomplish this, we will form a multidisciplinary team (with members from our OB and neonatal care units) and work to implement evidence based infant mortality reduction strategies to achieve:

- ≥ 10% Increase in infants placed to sleep in a safe sleep environment during hospitalization
- Document education for > 95% of caregivers prior to discharge; and
- > 95% of caregivers reporting prior to discharge that they understand safe sleep educational messages (infant to sleep alone, on back, in crib).

**IS THIS AIM START (Specific, Measurable, Actionable, Achievable, Relevant Timely)? If not what's missing?**

May 22, 2019 34

## Pre and Interconception Project Aim

**Aim of Community Pilots**  
Pilots will develop a specific aim statement for their project.

An Aim statement summarizes what your pilot hopes to achieve during the project.

The Aim statement should be time specific, population specific and measurable. For example,

*By September 2016, the number of local primary care providers that reported integrating the "one key question" into primary care visits will increase from x to y.*

May 22, 2019 35

## Individual Team AIM Statements

- Draft your team AIM statement to assure it meets the SMAART criteria
  - Specific:** Understandable, unambiguous
  - Measurable:** Numeric goals
  - Actionable:** Who, what, where, when
  - Achievable** (but a stretch)
  - Relevant** to stakeholders and organization
  - Timely:** with a specific timeframe
- SS Teams add your AIM statement to your Storyboard for LS 1 Sept 9<sup>th</sup>  
(After LS1 you will have an opportunity to revise and finalize your AIM statement)

May 22, 2019 36

# Heinrich P. Introduction to Improvement 101

May 22, 2019 37

## MFI Part II Measurement

New York State Department of Health

May 22, 2019 38

AIM: What are we trying to accomplish?

• Aim

↓

MEASURES: How will we know if a change is an improvement?

← Measures

↓

CHANGE: What changes can we make that will result in improvement?

• Ideas – PDSA cycles

© Associates for Process Improvement

New York State Department of Health

May 22, 2019 39

### How do we know that a change is an improvement?

Improvement efforts should focus on developing and making changes, not measurement.

**But** measurement plays an important role:

- Key measures are required to assess progress on the team’s aim
- Specific measures are required for learning during PDSA cycles
- Balancing measures are needed to assess whether the system as a whole is being improved
- Data from the system (including from patients and staff) can be used to focus improvement and refine changes

New York State Department of Health

May 22, 2019 40

### Four Types of Measures: Improving Diabetes Screening Example

- **Outcome**
  - Measures direct effect on the patient, the voice of the customer
  - Example: HgbA1C
- **Process**
  - Measures the change in how care is provided to the patient, the workings of the system
  - % of patients with HgbA1C measured at initial visit
- **Structural**
  - Measures about the environment in which care is provided
  - Use of an electronic medical record
- **Balancing**
  - Measures unintended effect of the desired change
  - % patients screened for hypertension

New York State Department of Health

May 22, 2019 41

### Data for Improvement Use of Run Charts

- For purpose of improvement, “Tracking a few key measures over time is the single most powerful tool an improvement team can use.”

Percent of Patients with Written Care Plan in Chart Aggregate

Source: IHI

New York State Department of Health

May 22, 2019 42

### Why do we track measures using Run Charts?

### 3 Faces of Measurement

Aspect	Improvement	Accountability	Clinical Research
Aim	Improvement of care	Compliance, ethics, reassurance, repair for change	New knowledge
<b>Methods:</b>			
Test observability	Test observable	No test, evaluate current performance	Test blinded
Bias	Accept consistent bias	Measure and adjust to reduce bias	Design to eliminate bias
Sample size	"Just enough" data, small sequential samples	Obtain 100% of available, relevant, data	"Just in case" data
Flexibility of hypothesis	Hypothesis flexible, changes as learning takes place	No hypothesis	Fixed hypothesis
Testing strategy	Sequential tests	No tests	One large test
Confidentiality of data	Data used only by those involved in the improvement	Data available for public consumption	Research subjects' identities protected

"The Three Faces of Performance Measurement: Improvement, Accountability and Research." Saberg, Leif L., Messer, Gordon and McDonald, Susan. Journal on Quality Improvement, March 1997, Vol.23, No. 3

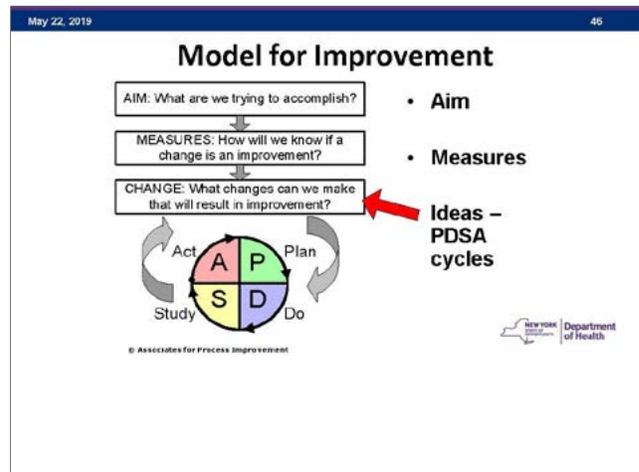

May 22, 2019 44

### Safe Sleep Project Measures

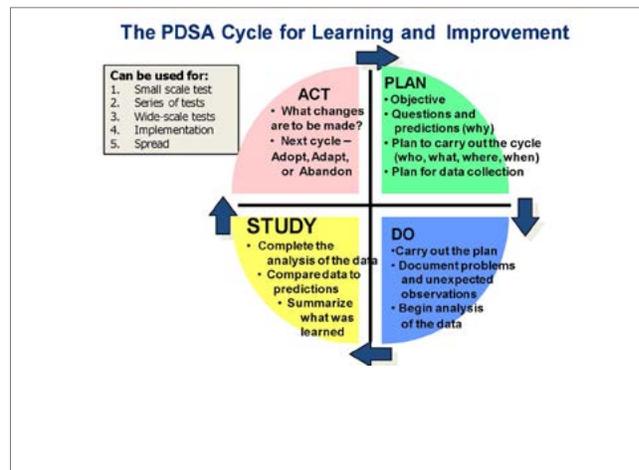

Measure	Numerator	Denominator	Data Collection	Data Collection Tool
Documentation of Safe Sleep Education	Number of medical records reviewed for either mothers or infants discharged home following birth hospitalization with documentation of safe sleep education	Number of medical records reviewed for either mothers or infants discharged home following birth hospitalization	Each month the medical records of mothers or infants that were discharged the previous month are checked for documentation of safe sleep education	Documentation of Safe Sleep Education Form and Log
Hospital Safe Sleep Practices	Number of infants without medical contraindication sleeping or snoring and unattended with safe sleep practices	Number of infants sampled	Each month sample at least 20 infants from the NICU, nursery and/or rooming-in using the crib check tool.	Crib Check Tool
Safe Sleep Knowledge	Number of caregivers that checked understanding of	Number Caregivers Surveyed	Each month a sample of 20 caregivers will be surveyed to check for understanding of safe	Caregiver Survey

May 22, 2019 45

## Part III Better Ideas Changes That Result in Improvement

- May 22, 2019 47
- ### To Be Considered a PDSA Cycle
- The test or observation was **Planned**
    - Always includes a prediction about how the change will result in an improvement
    - Includes a plan for running the test and collecting data to study
  - The plan was attempted (**Do** the plan)
  - Time was set aside to analyze the data and **Study** the results.
    - Did my prediction hold?
    - What assumptions need revision?
  - Action** was rationally based on what was learned
    - Adapt
    - Adopt
    - Abandon
- 

# Heinrich P. Introduction to Improvement 101

May 22, 2019 49

### What is a test?

- Putting a change into effect on a temporary basis & learning about its impact

May 22, 2019 50

### What it is NOT!

- Data collection
- Implementing a solution
- A project plan OR an action plan
- Rolling out an educational program
- Getting a form, policy, procedure approved by the official committees

May 22, 2019 51

### Tests v. Tasks

<p><b>A Test:</b></p> <ul style="list-style-type: none"> <li>Allows you to predict an improvement</li> <li>Provides quick feedback</li> <li>Allows you to try something</li> <li>Allows you to make changes</li> <li>Helps identify what changes should be made</li> </ul>	<p><b>A Task:</b></p> <ul style="list-style-type: none"> <li>Is the Vital Behavior that has to happen for the action to take place</li> <li>Should be identifiable</li> <li>Should be defined</li> <li>Might be supported by evidence</li> </ul>
--	--

May 22, 2019 52

### Tests v. Tasks

*Desired Change – eating a healthier diet.*

May 22, 2019 53

### Tests v. Tasks

*Desired Change – eating a healthier diet.*

May 22, 2019 54

### Why test?

- Forces us to think small
- Increases your belief that the change will result in improvement
- Predict how much improvement can be expected from the change – and confirm or abandon your prediction
- Opportunity for learning without impacting performance
- Learn how to adapt the change to conditions in the local environment

# Heinrich P. Introduction to Improvement 101

May 22, 2019 56

## Why test?

- Evaluate costs and side-effects of the change
- Minimize resistance upon implementation
- Localize a good idea to my practice setting
- Allows you to see how to adapt and make changes before implementing
- Provides a history for how you came to your end result

May 22, 2019 56

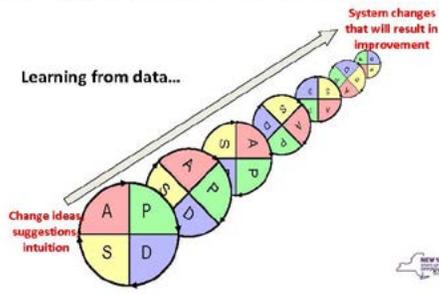

## Successful Cycles to Test Changes

- Plan multiple cycles for a test of a change
- Think a couple of cycles ahead
- Initially, scale down size of test (# of patients, clinicians, locations)
- Test with volunteers
- Do NOT try to get buy-in or consensus for test cycles
- Be innovative to make test feasible
- Collect useful data during each test
- In latter cycles, test over range of conditions

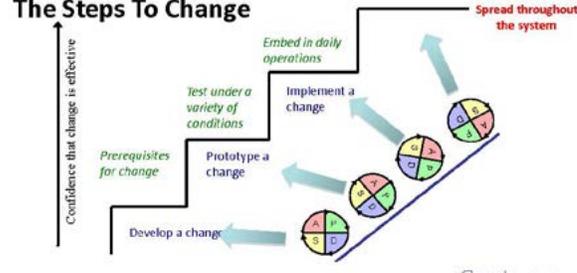

May 22, 2019 57

## Building Confidence for Change

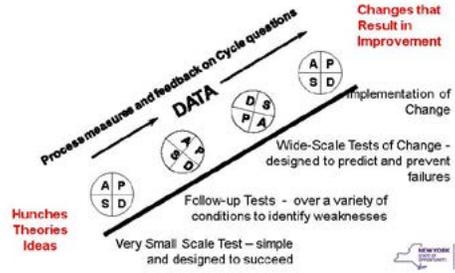

May 22, 2019 59

## The Steps To Change

May 22, 2019 59

## Repeated Use of the PDSA Cycle

May 22, 2019 60

Current Situation		Resistant	Indifferent	Ready
Low Confidence that current change idea will lead to improvement	Cost of failure large	Very Small Scale Test	Very Small Scale Test	Very Small Scale Test
	Cost of failure small	Very Small Scale Test	Very Small Scale Test	Small Scale Test
High Confidence that current change idea will lead to improvement	Cost of failure large	Very Small Scale Test	Small Scale Test	Large Scale Test
	Cost of failure small	Small Scale Test	Large Scale Test	Implement

# Heinrich P. Introduction to Improvement 101

May 22, 2019 61

## Homework After LS 1 - PDSA Exercise

1. Brainstorm potential changes that will result in improvement
2. Choose one to try first
3. Make the prediction
4. Using the PDSA Worksheet plan the change (using the left side of worksheet)
5. Test the PDSA and complete the right side of the worksheet

**PDSA WORKSHEET**

<b>Client Name:</b>	<b>Date of Use:</b>	<b>User Completion Date:</b>
<b>Current practice/plan/idea:</b>		
<b>What is the objective of the test?</b>		
<b>What is the goal you want the change to accomplish?</b>		

**PLAN**

Study: Describe the test

How will you know that the change is an improvement?

What does the change impact?

What do you predict will happen?

**PLAN**

1	Person responsible (initials)	When	Where

Page for collection of data

**DO** Test the changes

Was the cycle carried out as planned?  Yes  No

Record data and observations

What did you observe that was not part of the plan?

**STUDY**

Do the results match your prediction?  Yes  No

Compare the result of your test to your previous performance

What did you learn?

**ACT:** Check to Adapt, Adjust, or Abandon

**Adapt:** Improve the change and continue testing plan. Adapt changes to the test itself.

**Adjust:** Select changes to implement on a larger scale and develop an implementation plan and plan for sustainability.

**Abandon:** Discontinue the change due entirely to a different one.

May 22, 2019 63

**Remember: Steal shamelessly and share seamlessly, and...**

- Some is not a number
- Soon is not a time
- Hope is not a plan

May 22, 2019 64

## Summary Improvement Principles

- *Miss Frizzle (Magic School Bus):*
- “Take chances, make mistakes, get messy.”

# Quality Improvement (QI) Tools

## AIM Statement Worksheet

### Review of AIM Statement Worksheet

Hospital Team: \_\_\_\_\_

AIM Statement being reviewed:

**Review the AIM statement for the components of a SMART AIM = Specific, Measureable, Achievable, Realistic and Timely:**

1. **SPECIFIC** – Is the statement precise about what the team hopes to achieve?
2. **MEASURABLE** – Are the objectives measureable? Will you know if the changes resulted in improvement?
3. **ACHIEVABLE** – Is this doable in the time you have? Are you attempting too much? Could you do more?
4. **REALISTIC** – Do you have the resources needed (people, time, support)?
5. **TIMELY** – Do you identify the timeline for the project – when will you accomplish each part?

# Quality Improvement (QI) Tools

NICHQ  
National Institute for Children's Health Quality

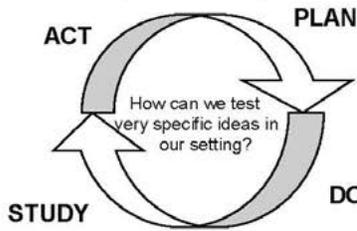

**1. Gather ideas about what changes will lead to improvement**

You need to understand some basic information about what are the existing challenges to caregivers using safe sleep practices every time infant is asleep. For example, are the challenges you are facing related to issues in how you provide education; role clarification, delegation, staff education, lack of leadership support, or tools and prompts? Consider who could offer insight into the particular area and ideas for improving it.

This is a “thinking” step that will help to explore the reasons why areas of practice have become less than optimal. Understanding barriers that prevent change will help you plan initiatives that anticipate and overcome barriers.

PDSA cycles are small tests designed to help you make progress toward a goal. Small tests do not necessarily mean small changes; rather, small tests represent small steps needed to achieve significant improvement.

**PDSA Cycle**

ACT PLAN  
STUDY DO

How can we test very specific ideas in our setting?

**2. Plan the PDSA Cycle**

It is important to develop a detailed plan for your PDSA so that you know exactly what needs to occur in your DO phase (who will do it, which patients it will involve, and how you will track your progress). When planning, ask yourself the following questions:

- What are we testing?
- Who are we testing the change on?
- When are we testing?
- Where are we testing?
- Who will implement the cycle?
- What is our measurement plan?

1

# Quality Improvement (QI) Tools

## PDSA Tutorial

### **Don't forget to make a prediction.**

Anticipating the impact of your cycle will help you to focus on

- Planning
- Areas for improvement
- Clarifying measures
- Being creative

When predicting, ask yourself, "What do you expect to happen?" Making a prediction will assist in anticipating what might come next and whether or not the cycle was a success or failure. If it did not go as planned it should not be seen as "a failure" but rather a learning opportunity – failed tests help plan subsequent tests, but for this to work your team must take the time to understand why (Study).

### **Don't forget to include measurement plan.**

Integrate the study part of the PDSA into the daily routine as much as possible. What you measure to show if your PDSA resulted in an improvement may or may not be the same as the measures you use for the Collaborative reports. Usually the study part of the PDSA cycle can be an observation, or asking one of the team members their impression of how the test of change went. Build on existing systems when re-designing. What examples of success within your office can you learn from?

*Example:*

*Goal: Increase caregiver education and buy-in for safe sleep practices in hospital and at home.*

*What is being tested: Mother Baby Unit is running a PDSA on use of a Safe Sleep Educational tool*

*Prediction: New tool will help build caregiver buy-in for safe sleep practices in hospital and at home*

*When/Where/Who: Nurse offers card to Mom on transfer from L&D to Mother Baby Unit.*

*Measurement: Nurse will report how mother's responded to the new tool.*

### **3. Conduct the Cycle (DO)**

Carry out the cycle, collect data and begin analysis. Don't forget to seek opinions about changes tested in this cycle.

*Example:*

*Nurses gave the card to 5 new patients last Wed and reported patient response.*

### **4. Analyze the Results (STUDY)**

Studying the results allows you to answer the questions:

- Was this change an improvement?
- If yes, do we need more information before implementing the change with others in the practice (e.g., Test again on different days with different staff)?
- If not, what have we learned from this test? What could we do differently next time to make it an improvement over the current system? What additional information do we need to achieve an improvement?
- Share your results: Plot data of key measures each week and display for others in the office to see. Seek input from everyone in your office.

2

# Quality Improvement (QI) Tools

## PDSA Tutorial

*Example: All 5 patients were interested and responded well to the messages on the tool. However, the nurse noted that 1 infant was transferred in bed with mother and 1 infant was transferred in a crib propped in side-lying position.*

### 5. Decide What to Do Next (ACT)

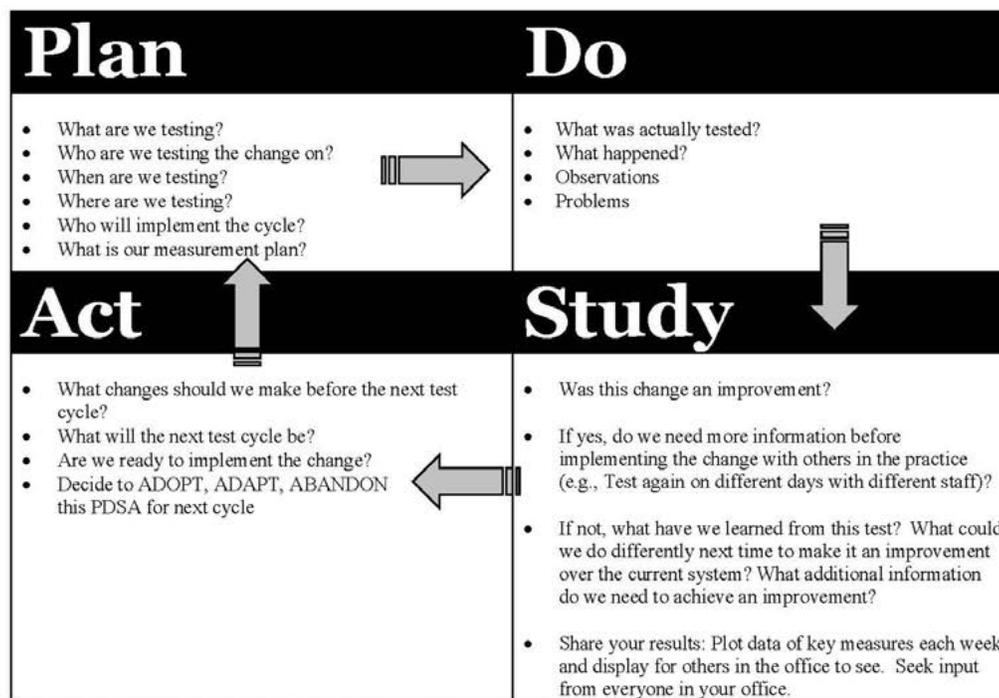

Identify what changes are to be made in the current cycle, from this, identify your next cycle. “The science in PDSA is in the act of reflection, learning from what one did. Those who want improvement to occur need to reserve specific times to ask, “What did we learn, and how can we build on it?”

Decide if you want to Adopt, Adapt or Abandon your PDSA based on the results you’ve studied.

*Example: The results of the nurse observation were discussed with the team who realized the education on transfer to MBU was “too late” and unsafe sleep practices had already occurred.*

*Potential Next Cycles: Plan ADAPT the PDSA by testing the use of the tool in L&D PRIOR to the delivery of the infant if possible (if not possible prior to delivery while mom is in early labor it will be done after delivery before the infant is asleep the first time). Education for L&D nurses is also needed and planned.*

## PDSA Worksheet

### PDSA WORKSHEET

Full facility name:	Date of test:	Test Completion Date:
Overall organization/project AIM:		
What is the objective of the test?		

#### PLAN:

Briefly describe the test:

How will you know that the change is an improvement?

What driver does the change impact?

What do you predict will happen when you run this test (what do you think will improve)?

#### PLAN

List the tasks necessary to complete this test (what)	Person responsible (who)	When	Where
1.			
2.			
3.			
4.			
5.			
6.			

Plan for collection of data:

#### DO: Test the changes.

Was the cycle carried out as planned?  Yes  No

Record data and observations.

What did you observe that was not part of our plan?

#### STUDY:

Did the results match your predictions?  Yes  No

Compare the result of your test to your previous performance:

What did you learn?

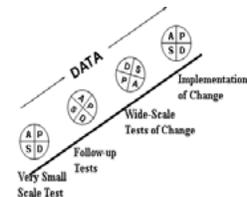

#### ACT: Decide to Abandon, Adapt, Adopt

**Abandon:** Discard this change idea and try a different one.

**Adapt:** Improve the change and continue testing plan. Describe what you will change in your next PDSA:

**Adopt:** Select changes to implement on a larger scale and develop an implementation plan and plan for sustainability

If you plan to adopt, describe plans for your next 2 - 3 PDSA cycles of follow-up tests and implementation?

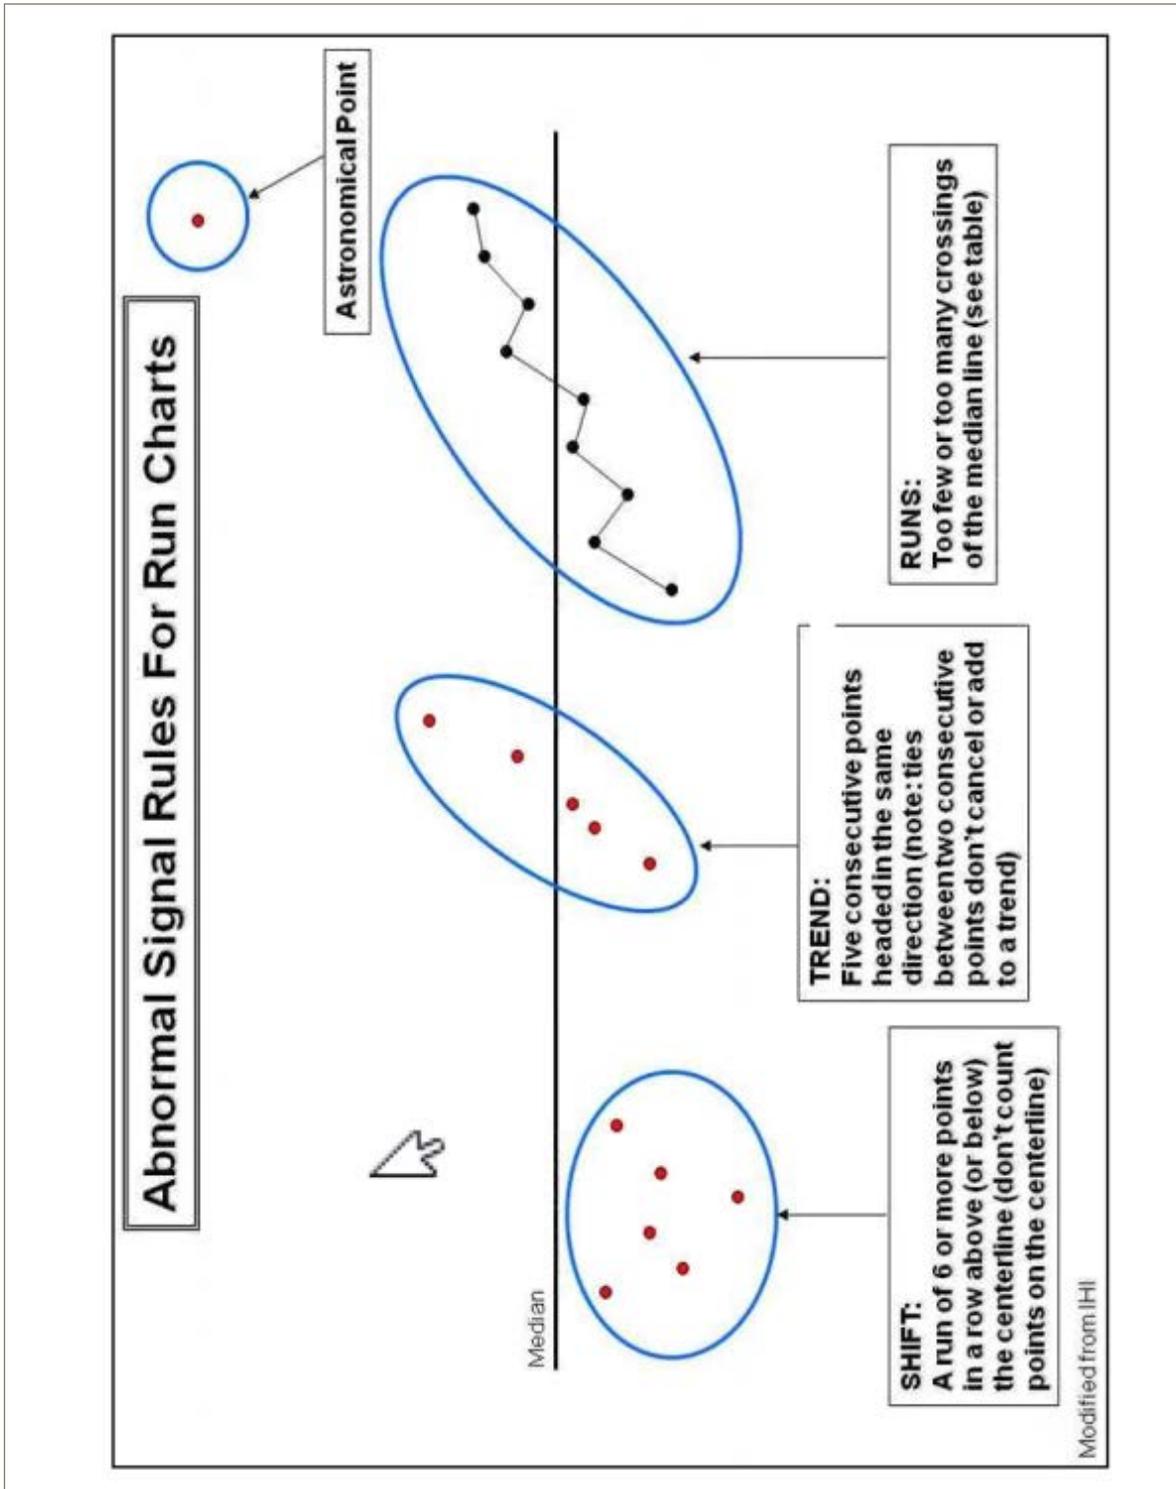

## NYC HEALTH + HOSPITALS WOODHULL MEDICAL CENTER

The PDSAs identified that staff had their own myths and cultural belief regarding baby's sleep practices. Because of PDSAs, we identified the need to standardize staff education.

# Collaboration

The NYSDOH partnered with various state agencies and organizations to co-brand and disseminate infant safe sleep educational materials. Specifically, this included the NYS Office of Children and Family Services, NYS Department of Motor Vehicles and Women, Infants, and Children (WIC). These safe sleep materials included a brochure available in the seven most commonly spoken languages in NYS, mirror clings, magnets, posters in English and Spanish, and crib cards. Posters were shared across the state in public locations such as malls, bus shelters and stores. Messaging was done in multiple languages to address the diverse population in NYS.

The NYSDOH developed a safe sleep patient education video, which was posted on YouTube in English and Spanish, and shared with all NYS birthing hospitals, community-based organizations, and other stakeholders. To ensure the safe sleep video was accessible and usable for all birthing hospitals and stakeholders, it was closed captioned into additional languages, and made available to birthing hospitals on both flash drives and DVDs. The video was also shared with the NYS Department of Motor Vehicles and the Thruway Authority, to be shown on continuous video loops in waiting areas and at rest stops. These efforts increased exposure of the content. The video, which is also available on flash drives and DVDs, is available on YouTube.

The campaign materials are free and available to download from [www.health.ny.gov/safesleep](http://www.health.ny.gov/safesleep).

## NYC HEALTH + HOSPITALS/ELMHURST

Back to Sleep/Healthy Sleep Habits is part of our plan of care and goals on admission, during the patient stay, and at time of discharge. NYSDOH Safe Sleep posters are disseminated all over the hospital including the in-patient postpartum area, NICU, lobby, pediatric and obstetrics clinics, Labor & Delivery, WIC, Breastfeeding Clinic, breastfeeding rooms, and childbirth classroom. The NYSDOH Safe Sleep video is continuously being broadcasted on television at waiting areas and added to NYC Health and Hospitals Newborn Channel Video-on-demand. The NYSDOH Safe Sleep hand-out stations are available at every Nursing Station and NICU hallway.

## SARATOGA HOSPITAL

We incorporated the NYSDOH safe sleep resources into patient education materials. We distributed information to obstetric and midwife offices, and placed safe sleep crib cards on each crib throughout the mother-baby unit.

## NYSDOH/MCH Information for Action

An **Information for Action** document was developed to provide basic information and action steps on infant mortality related to an unsafe sleep environment. The bulletin includes data for NYS including racial and ethnic differences related to IM due to unsafe sleep and key measures from PRAMS - Pregnancy Risk Assessment Monitoring System and OPHP - NYSDOH Office of Public Health Practice (e.g., placing a baby on its back to sleep, co-sleeping). It also includes action steps including “do’s and don’ts” for safe sleep, what parents, healthcare providers, community-based organization and local health departments can do, and resources for additional action. Information for Action bulletins are developed by Title V staff in collaboration with the DOH OPHP that provide basic data and information on public health priorities as well as strategies to address the issue.

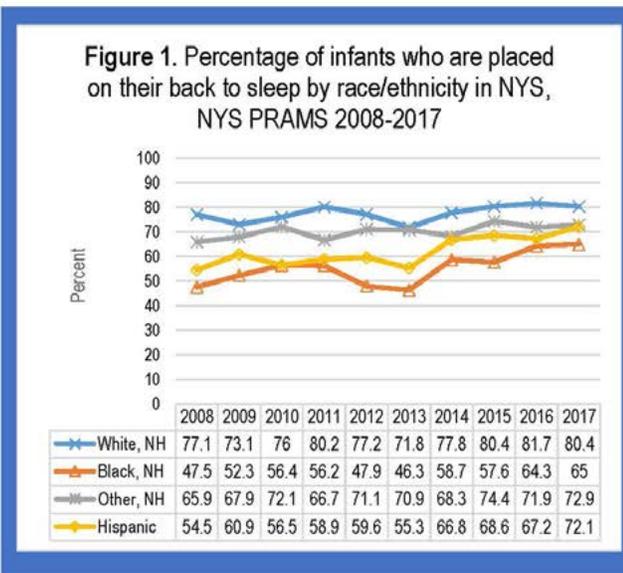

# NYSDOH/MCH Information for Action

## Promoting Safe Sleep Practices in New York State

Approximately 90 infants die suddenly or unexpectedly each year in New York State (NYS). These infant deaths are referred to as sudden unexpected infant deaths (SUID) and are often attributed to unsafe sleep practices. When no cause can be identified, the death is labeled as Sudden Infant Death Syndrome (SIDS). The American Academy of Pediatrics recommends the ABCs of Safe Sleep, with infants sleeping **alone**, on their **backs**, in a safe **crib**, and in a **smoke-free home** for every nap or sleep time. Despite widespread efforts to promote these safe sleep practices, 1 in 5 NYS mothers say they share a bed with their infant. This puts babies at higher risk of SUID, which is more likely to occur when an infant is placed on his/her stomach to sleep, shares a bed with a parent or sibling, or sleeps on an unsafe surface or with bumpers, blankets or toys in the crib. SUID is the third leading cause of infant mortality in NYS, after complications from preterm birth and birth defects. It is important for providers to spend time discussing safe sleep practices with parents/caregivers and to ask for a commitment to follow these safe sleep practices.

**The risk of SUID can be greatly reduced by following simple safe sleep guidelines**

### What does the data show?

- The Healthy People 2020 goal (MCH-20) is for 75.8 percent of infants to be placed to sleep on their backs.
- The percentage of mothers placing their babies to sleep on their back has increased from 74.2 percent in 2016 to 75.3 percent in 2017 (PRAMS).
- In 2017, 65 percent of non-Hispanic, Black mothers reported placing their babies on their backs to sleep compared to 80.4 percent of Non-Hispanic, White mothers (Figure 1).
- In 2017, 6.9 percent of non-Hispanic, White mothers smoked during pregnancy compared to 2.5% of Hispanic mothers (Figure 2).

[www.health.ny.gov/safesleep](http://www.health.ny.gov/safesleep)

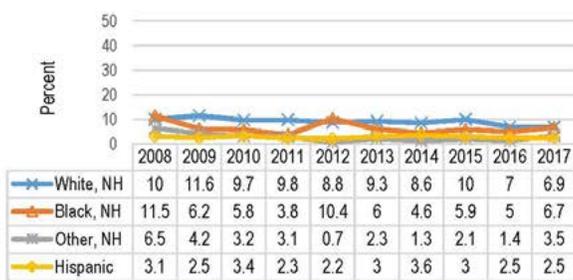

# NYSDOH/MCH Information for Action

Department of Health | Maternal and Child Health Information for Action

## Risk Factors for Sudden Unexplained Infant Death in NYS

**Figure 2.** Percentage of women who report smoking during the last three months of pregnancy by race/ethnicity in NYS, NYS PRAMS 2008-2017

In 2017, 6.9% of White, non-Hispanic women and 6.7% of Black, non-Hispanic women reported smoking during the last three months of pregnancy, compared to 10% and 11.5% respectively in 2008.

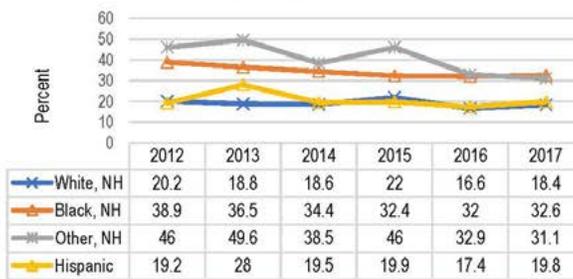

### Maternal Smoking

If a pregnant woman smokes, her baby shares every cigarette she smokes. One cigarette a day while you are pregnant doubles your baby's risk of dying from sudden unexpected infant death (SUID)<sup>1</sup>. Quitting smoking is one of the best things you can do for your baby.

<sup>1</sup> [Maternal Smoking Before and During Pregnancy and the Risk of SUID](#)

[NYSDOH Smoking Cessation and Pregnancy Campaign](#)

**Figure 3.** Percentage of mothers who report co-sleeping with their infant by race/ethnicity in NYS, NYS PRAMS 2012-2017

In 2017, 32.6 percent of Black, non-Hispanic mothers reported co-sleeping with their infant compared to 18.4 percent of White, non-Hispanic mothers. From 2012 – 2017 the rate of co-sleeping declined overall.

### Co-sleeping

Co-sleeping or bed-sharing is a practice in which babies and young children share a sleep surface (i.e. bed) with one or both parents. In its 2016 recommendations, the American Academy of Pediatrics says this practice "should be avoided at all times." Co-sleeping puts babies at risk for sleep-related deaths, including sudden infant death syndrome, accidental suffocation and accidental strangulation.<sup>2</sup>

## **KEEP YOUR BABY SAFE**

### **FOLLOW THE ABCS OF SAFE SLEEP:**

- **A – Alone.** Baby should sleep Alone.
- **B – Back.** Put baby on their Back.
- **C – Crib.** Put baby in a safe Crib
- **S – Smoke-free Home.**

### **Do's and Don'ts for Safe Sleep**

<b>DO</b> put your baby to sleep on his/her back	<b>DON'T</b> put your baby to sleep on his/her side or stomach
<b>DO</b> put your baby in a crib to sleep for naptime and bedtime	<b>DON'T</b> use a couch, recliner, adult bed, car seat, swing, bouncy seat, stroller, infant carrier, or infant sling for routine sleep
<b>DO</b> use a firm crib mattress covered by a fitted sheet designed for specific product	<b>DON'T</b> use blankets, pillows, toys, or bumper pads in the crib
<b>DO</b> put your baby's crib in the same room as your bed (room-sharing)	<b>DON'T</b> sleep in the same bed as your baby (co-sleeping)
<b>DO</b> breastfeed your baby, and put your baby in the crib after feeding	<b>DON'T</b> sleep with your baby in bed after breastfeeding
<b>DO</b> use a pacifier for sleep	<b>DON'T</b> hang the pacifier around your baby's neck
<b>DO</b> keep your baby's immunizations up to date	<b>DON'T</b> smoke in your home or around your baby

# NYSDOH/MCH Information for Action

## Taking Action to Promote Safe Sleep in New York State

### What is the NYS Department of Health (NYSDOH) doing?

- Improving safe sleep practices through promotion of the ABCs of Safe Sleep campaign.
- The NYSDOH is collaborating with other states, the National Institute for Children's Health Quality (NICHQ), and community-based organizations, particularly Healthy Start and Maternal and Infant Community Health Collaboratives (MICHCs), in the national Infant Mortality Collaborative Improvement and Innovation Network (IM CoIIN) to improve safe sleep practices.
- Through the National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPSS-IIN), led by NICHQ, the NYSDOH is supporting three NYS hospitals working to make infant safe sleep and breastfeeding the national norm. The hospitals are implementing safety bundles to improve the likelihood that infant caregivers and families receive consistent, evidence-based instruction about safe sleep and breastfeeding.

### What can parents and caregivers do?

- Remember the ABCs of Safe Sleep: [Alone](#), [Back](#), [Crib](#), and in a [Smoke-free Home](#).
- Always put your baby on his or her back to sleep, for naps and at night.
- Do not let your baby sleep in the same bed with you or another adult or child.
- Share a room, but not a bed, with your baby. Keep your baby's crib in the same room as your bed.
- Teach other family members or caregivers to always practice safe sleep.
- Use a firm mattress or other sleep surface.
- Keep soft objects, toys, crib bumpers and loose bedding out of your baby's sleep area.
- Do not smoke during pregnancy or after. If you do smoke, talk to your healthcare provider about getting help with quitting.

### Local health departments and community organizations

- Promote messages such as the ABCs of Safe Sleep to improve knowledge, attitudes and behaviors about safe sleep practices.
- Ensure providers and family members are knowledgeable about safe sleep recommendations.
- Collect input from the community to better understand why some women do not put their babies on their back to sleep or why some caregivers choose to bedshare.
- Develop or use existing campaigns to support and promote safe sleep practices based on community input.

### Health care providers

- Talk with women during pregnancy and after birth about their sleep practices with their baby.
- Listen to women and caregivers and ask questions.
- Model safe sleep practices at all times while the infant is in your care in the hospital.
- Provide parents with educational safe sleep information.
- Encourage women to breastfeed their babies and practice safe sleep and breastfeeding together.
- Provide parents and caregivers with the tools and resources to quit smoking.
- Use materials from the NYSDOH Safe to Sleep Campaign in waiting rooms and exam rooms to reinforce the safe sleep message. [Materials Order Form](#)

**Safe Sleep For Baby**

More than 60 infants die each year in New York State due to unsafe sleep practices and Sudden Infant Death Syndrome (SIDS).

Unsafe sleep practices include infants sleeping on their tummies or sides or in places other than cribs/bassinet/play yards, such as adult beds, baby stings, car seats, couches or armchairs. Also unsafe is sleeping with pets, other children or adults, or with blankets or other bedding, crib bumpers, or stuffed toys.

Sudden Infant Death Syndrome (SIDS) is the sudden death of an infant under one year of age which remains unexplained after a thorough case investigation. Unsafe sleep and SIDS are the leading cause of death in infants between one month and one year of age, with most deaths occurring when a baby is between two and four months of age.

Infant death due to unsafe sleep practices is preventable. Dress your baby in a one-piece sleeper or wearable blanket. Do not use loose blankets and make sure your baby is not too warm.

**Make Sure Everyone Caring for Your Baby Follows these Tips:**

Alone	Back	Crib	Smoke Free Home
<ul style="list-style-type: none"> <li>Put baby on trayer back to sleep – even if baby was born early (premature).</li> <li>Your baby should not sleep with adults or other children.</li> <li>Share your room, not your bed. ## Other Tips

**TIPS**

- Use a one-piece sleeper or wearable blanket. Don't use loose blankets.
- Be sure baby is not too warm.
- Breastfeed your baby.
- Try using a pacifier for sleep but don't force baby to take it.
- Get your baby immunized.
- If your baby is in a front or back baby carrier, be sure that baby's face is always visible.
- Never use a car seat, baby swing, carriage or other carrier without properly fastening all the straps. Babies have been caught in partially fastened straps and died.
- Make sure no one smokes in your home or around your baby.
- Don't use alcohol or drugs.
- Don't rely on home baby monitors.

Follow the   
**ABCs**  
of Safe Sleep

**A Alone.**  
Baby should sleep Alone.

**B Back.**  
Put baby on their Back.

**C Crib.**  
Put baby in a safe Crib.

Make sure **everyone** caring for your baby follows these tips!

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

Department of Health

Office of Children and Family Services

Department of State

Division of Consumer Protection

0672 5/19

★ Alone.
★ Back.
★ Crib.

*About 90 babies die each year in New York State from sleep-related causes. Right from the start, help your baby sleep safely every time sleep begins.*

**ALONE**

- Put baby on their back to sleep – even if baby was born early (premature).
- Your baby should not sleep with adults or other children.
- Share your room, not your bed. Room-sharing lets you keep a close watch over your baby while preventing accidents that might happen when baby is sleeping in an adult bed.
- Nothing should be in the crib except baby; no pillows, bumper pads, blankets or toys.

**BACK**

- Put baby to sleep on their back, not on their tummy or side.
- Put your baby on their tummy every day when baby is awake. Watch and encourage your baby. "Tummy time" helps baby develop strong shoulder and neck muscles.

**CRIB**

- If baby falls asleep on a bed, couch, armchair, or in a sling, swing or other carrier, put baby in a crib to finish sleeping.
- Use a safety-approved\* crib/bassinet/play yard with a firm mattress and a fitted sheet.
- **DO NOT USE A DROP-SIDE CRIB.** Federal safety standards do not allow drop-side rail cribs to be made or sold.
- Before you buy or use any crib/ bassinet/play yard check the CPSC recall list at: [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) to make sure it has not been recalled.

\*For crib safety, go to the Consumer Product Safety Commission: [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)

## Këshilla tjera

### KËSHILLA

- Përdorni kominoshe gjumi ose batanije në formë xhepi. Mos përdorni batanije të lëshme.
- Sigurohuni që foshnja të mos ketë shumë vapë.
- Ushqejeni foshnjën me gjí.
- Përdorni një biberon për gjumë, por mos e detyroni foshnjën ta përdorë atë.
- Vaksinojeni foshnjën tuaj.
- Nëse e vendosni foshnjën në një mbajtëse kangur për bebe të përparme ose të pasme, sigurohuni që fytyra e foshnjës të jetë gjithmonë e dukshme.
- Mos e përdorni asnjëherë sexhollinon, karrigen djep të lëkundshme për foshnja, karrocën apo çfarëdo lloj mbajtëse tjetër pa i lidhur ashtu siç duhet të gjithë rripat. Ka pasur raste në të cilat foshnjat janë kapur në rripa pjesërisht të lidhur dhe kanë vdekur.
- Sigurohuni që askush të mos pijë cigare në shtëpi ose pranë foshnjës.
- Mos përdorni alkool ose droga.
- Mos u besoni shumë pajisjeve vëzhguese për foshnja.

**Sigurohuni që kushdo që kujdeset për foshnjën tuaj t'i ndjekë këto këshilla!**

Ndiqni 

### ABC-të (VKD-të) për një gjumë të qetë

**A Alone (Vetëm).**  
Foshnjat duhet të flenë Vetëm.

**B Back (kurriz).**  
Vendoseni foshnjën me Kurriz.

**C Crib (Djep).**  
Vendoseni foshnjën në një Djep të sigurt.

0707 (Albanian) 5/19

★ Alone (Vetëm). ★ Back (kurriz). ★ Crib (Djep).

Çdo vit, në shtetin e Nju Jorkut vdesin rreth 90 foshnja vetëm për shkaqe që lidhen me gjumin. Që në fillim, ndihmojeni foshnjën tuaj të ketë një gjumë të qetë sa herë që fillon procesin e fjetjes.

### ALONE (VETËM)

- Vendoseni foshnjën të flejë me kurriz mbi shtrat – edhe nëse foshnja ka lindur para kohe (me lindje e parakohshme).
- Foshnja juaj nuk duhet të flejë me të rritur apo fëmijë të tjerë.
- Ndani dhomën, por jo shtratin. Ndarja e dhomës ju mundëson ta vëzhgoni foshnjën tuaj duke parandaluar aksidentet që mund të ndodhin teksa foshnja juaj fle në një krevat për të rritur.
- Në djep nuk duhet të ketë asgjë përveç foshnjës suaj. Nuk duhet të ketë asnjë jastëk, ndarëse, batanije apo lodra.

### BACK (KURRIZ)

- Vendoseni foshnjën me kurriz, jo me bark ose anash.
- Kthejeni foshnjën tuaj nga barku çdo ditë kur të zgjohet dhe të jetë nën vëzhgim. "Koha e kthimit nga barku" e ndihmon foshnjën tuaj të forcojë muskujt e shpatullave dhe të qafës.

### CRIB (DJEP)

- Nëse foshnjën e zë gjumi në krevat, kolltuk, karrige, mbajtëse të lëkundshme apo çfarëdo lloj ndenjëse tjetër, vendoseni foshnjën në djep për ta përfunduar procesin e gjumit.
- Përdorni një djep/djep shportë/djep të mbyllur me siguri të certifikuar\*, ku dyshoku të jetë i qëndrueshëm dhe çarçafi i puthitur.
- MOS PËRDORNI DJEP ME PJESE ANËSORE QË ULET. Standardet federale të sigurisë ndalojnë prodhimin ose shitjen e djepëve me parrakë me pjesë anësore që ulet.
- Përpara se të blini ose të përdorni ndonjë krevat/djep/rrethore, kontrolloni listën e artikujve të tërhequr të Komisionit për Sigurinë e Produkteve për Konsumatorin (Consumer Product Safety Commission, CPSC) në adresën: [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) për t'u siguruar që artikulli nuk është tërhequr nga tregu.

\*Për sigurinë e djepit, vizitoni Komisionin e Sigurisë së Produktit të Konsumatorit: [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)

# Safe Sleep for Baby Brochure - Arabic #0708

**اتبعي**  
**ABC**  
**(أبجديات)**  
**النوم الآمن**

**A** **Alone (بمفرده).**  
ينبغي أن ينام الطفل بمفرده.

**B** **Back (على الظهر).**  
ضعي طفلك على ظهره.

**C** **Crib (مهد الطفل).**  
ضعي الطفل في مهد الطفل الآمن.

## نصائح أخرى

**تأكد من أن جميع الأشخاص الذين يقدمون الرعاية لطفلك الرضيع يتبعون هذه النصائح!**

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

**النصائح**

- استخدمي بيجامة نوم من قطعة واحدة أو بملابيه قفلة للارتداء. لا تستخدمي بملابيه مهبلية السج.
- تأكدي من عدم التفتحة المفرطة للطفلك.
- أرضعي طفلك رضاعة طبيعية.
- حاولي استخدام لهيئة الطفل للنوم ولكن لا ترعسي الطفل على ثنولها.
- إعطائي طفلك التطعيمات المقررة.
- إذا كان طفلك في حامل الطفل الآمسي أو الخلفي، فتأكدي من أن وجه طفلك يمكن رؤيته دائمًا.
- عدم استخدام مقعد السيارة أو أرجوحة الطفل أو عربة الطفل أو حامل آخر للطفل على الإطلاق ما لم يتم تثبيت جميع أحزمة الأمان تثبيتًا مناسبًا. فالأطفال يخشون في أحزمة الأمان المثبتة جزئيًا وهو ما يعرضهم للوفات.
- تأكدي من عدم قيام أي شخص بالتدخين في منزلك أو بالقرب من طفلك.
- لا تستخدمي الكحوليات أو المخدرات.
- لا تعتمد على أجهزة مراقبة الطفل.

5/19 0708 (Arabic)

★ **Alone (بمفرده).**
★ **Back (على الظهر).**
★ **Crib (مهد الطفل).**

**CRIB (مهد الطفل)**

- إذا غلب الطفل النوم وتام على سرير البالغين أو أريكة أو كرسي ذي ذراعين أو في حقيبة الكتف أو أرجوحة أو غيرها، فضعي الطفل في سرير الطفل لإكمال نومه.
- استخدمي مهد الطفل/السرير المتحرك/ساحة لعب الطفل المبطنة بمرئية ثابتة وملائمة مناسبة والمعتمدة من لجنة الأمان المختصة.
- لا تستخدمي سرير أطفال مفتوحًا من أحد الجانبين. تمنع معايير السلامة الفيدرالية تصنيع أو بيع أسرة الأطفال المفتوحة من أحد الجانبين.
- قبل أن تشتري أو تستخدم أي سرير للأطفال/لحديثي الولادة/ساحة اللعب، تحقق من قائمة الإنهاء لدى لجنة سلامة المنتجات الاستهلاكية (CPSC) على: [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) للتأكد من عدم إلغائها.
- \* للتعرف على إجراءات الأمان الخاصة بسرير الطفل، توجه إلى [Consumer Product](http://www.consumerproduct.gov) لجنة أمان وسلامة منتجات المستهلكين.

[www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)

**BACK (على الظهر)**

- ضعِي الطفل لينام على ظهره، وليس على بطنه أو جانبه.
- ضعِي طفلك في وضع الاستلقاء على بطنه يوميًا عندما يكون مستيقظًا ويتم مراقبته. يساعد وقت الاستلقاء على البطن "الطفل في تقوية عضلات الكتف والرقبة."

**ALONE (منفردًا).**

- ضعِي طفلك على ظهره لينام - حتى لو كنت ولادة الطفل نمت مبكرًا (بخدج).
- لا ينبغي أن ينام طفلك مع البالغين أو الأطفال الآخرين.
- شاركية في حجرة نومك، وليس في سريرك. فمشاركة حجرة النوم تسمح لك بمراقبة طفلك عن قرب بينما عدم مشاركة السرير يمنع وقوع الحوادث التي قد تحدث عندما ينام طفلك في سرير البالغين.
- لا يُسمح بوضعه أي شيء آخر في مهد الطفل ما عدا الطفل؛ فلا يُسمح بالوسائد أو حواجز استئصال الصدقات أو البطاطين أو الألعاب.

## অন্যান্য পরামর্শ

### পরামর্শ

- একটি ওয়ান-পিস স্লিপার বা পরিধানেযোগ্য কন্ডল ব্যবহার করুন। টিপোটোনা কন্ডল ব্যবহার করবেন না।
- নিশ্চিত করুন বাচ্চার গা যেন খুব গরম না থাকে।
- আপনার বাচ্চকে বুকের দুধ খাওয়ান।
- মুম পাত্তাতে একটি প্যাসিকাফার (চুঁকিকাঠি) ব্যবহার করার চেহারা করুন কিন্তু এটা নিতে বাচ্চকে জোর করবেন না।
- আপনার বাচ্চকে টিকা দিন।
- বাচ্চার মুখ যেন সবসময় দেখা যায় এমনভাবে আপনার বাচ্চকে সামনের বা পিছনের বেবি ক্যারিয়ারে রাখুন।
- সমস্ত ভিত্তা সঠিকভাবে না বেঁধে কখনো গাড়ির সিট, বাচ্চার দেলনা, ক্যারেজ বা অন্যান্য ক্যারিয়ার ব্যবহার করবেন না। অনেক বাচ্চা আংশিকভাবে বাঁধা ভিত্তায় আটকা পড়ে মারা গেছে।
- কেউ যেন আপনার বাড়িতে বা আপনার বাচ্চার আশেপাশে ধূমপান না করে তা নিশ্চিত করুন।
- মদ্যপান বা মাদক সেবন করবেন না।
- হেম বেবি মনিটরের উপর নির্ভর করবেন না।

### নিশ্চিত করুন আপনার বাচ্চার পরিচর্যাকারী সবাই যেন এই পরামর্শ অনুসরণ করে!

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

## নিরাপদ ঘুমের প্রাথমিক বিষয়গুলি (ABC) অনুসরণ করুন

**A** একা (অ্যালোন)।  
বাচ্চা যেন একা ঘুমায়।

**B** ব্যাক।  
বাচ্চাকে চিং করে শোয়াবেন

**C** ক্রিব (শিশুশয্যা)।  
বাচ্চাকে নিরাপদ শিশুশয্যায় শোয়াবেন

0709 (Bengali) 5/19

★ Alone (একা)।
★ Back (ব্যাক)।
★ Crib (শিশুশয্যা)।

*New York State প্রতি বছর প্রায় 90 জন বাচ্চা ঘুম সংক্রান্ত কারণ থেকে মারা যায়। একদম শুরু থেকেই, প্রত্যেক বার আপনার বাচ্চার ঘুম শুরু হওয়ার সময় তাকে নিরাপদে ঘুমাতে সাহায্য করুন।*

### ALONE (একা)

- ঘুমানোর সময় বাচ্চাকে চিং করে শোয়াবেন - এমনকি অকালজাত (প্রিম্যাচিওর) বাচ্চার ক্ষেত্রেও।
- আপনার বাচ্চকে কোনো বহুস্ত বা অন্য বাচ্চাদের সাথে ঘুমাতে দেয়া উচিত নয়।
- আপনার কামরা ভাগাভাগি করুন, বিছানা নয়। কামরা ভাগাভাগি করলে আপনি বাচ্চার উপর নজর রাখতে পারেন ও বাচ্চা একজন প্রারম্ভিকের বিছানায় ঘুমালে যে সব দুর্ঘটনা ঘটেছে পারে সেগুলি রোধ করতে পারেন।
- শিশুশয়ার মাঝে বাচ্চা ছাড়া অন্য কিছুই রাখা হওয়া উচিত নয়; যেমন বালিশ, বাম্পার প্যাড, কন্ডল বা খেলনা।

### BACK (ব্যাক)

- বাচ্চাকে চিং করে শোয়াবেন, উঁচু করে বা পাশ ফিরে নয়।
- অবশ্য, বাচ্চাকে প্রতিদিন উঁচু করে শোয়াবেন, যখন সে জেগে থাকে ও আপনার নজরে থাকে। "টানি টাইম" বাচ্চার কঁধ ও পেরের পেশী পোক্ত করতে সাহায্য করে।

### CRIB (শিশুশয্যা)

- যদি বাচ্চা কোনো বিছানা, পুলক, আরামকেন্দ্রায় বা কোনও স্লিং, দেলনা বা অন্য ক্যারিয়ারে ঘুমিয়ে পড়ে, তাহলে অবিলম্বে তাকে শিশুশয্যায় স্থানান্তরিত দেবেন।
- একটি নিরাপত্তা-অনুমোদিত শিশুশয্যা/ব্যাসিনেটে-রেইয়ার্ড ব্যবহার করুন, যাতে একটি শক্ত গদি এবং শিট লাগানো থাকে।
- একটি ড্রপ-সাইড শিশুশয্যা ব্যবহার করবেন না। বৃজরাষ্ট্রীয় নিরাপত্তার মানদণ্ড ড্রপ-সাইড রেল শিশুশয্যা বানানোর বা বিক্রয়ের অন্তিমতি দেয় না।
- কোনও শিশুশয্যা/ঢাকনা থাকা বেতের দেলনা/রেইয়ার্ড কেনা বা ব্যবহারের আগে সেটি রিকল করা হয়েছে কিনা নিশ্চিত হতে CPSC রিকল তালিকা দেখুন নিম্ন: [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/)

*\*শিশুশয্যা নিরাপত্তার জন্য, উপত্যাকা পণ্য নিরাপত্তা কমিশন দেখুন [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)*

## 其他小贴士

**小贴士**

- 给宝宝穿连体睡衣或防踢睡袋。不要盖宽松的毯子。
- 确保宝宝不会觉得太暖和。
- 用母乳喂养宝宝。
- 尝试用安抚奶嘴帮助宝宝入睡，但不要强迫宝宝吮吸安抚奶嘴。
- 给宝宝接种疫苗。
- 使用前抱式或后背式婴儿背带时，确保宝宝的脸始终露出。
- 在安全带没有全部系好的情况下，切勿使用汽车座椅、婴儿摇篮、婴儿车或其他载具。宝宝可能会被部分系起的安全带缠住而导致死亡。
- 确保家中或宝宝周围无人吸烟。
- 不要使用酒精或药物。
- 不要依赖婴儿监护器。

**确保看护  
您宝宝的每个人都  
遵循这些小贴士！**

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

**遵守  
ABC  
安全睡眠**

**A Alone (独自)。**  
宝宝应独自睡眠

**B Back (仰卧)。**  
让宝宝仰卧。

**C Crib (婴儿床)。**  
将宝宝放入安全的婴儿床。

Department of Health

Office of Children and Family Services

Department of Social Services

Division of Consumer Protection

0678 (Chinese) 5/19

★ 独自。
★ 仰卧。
★ 婴儿床。

在纽约州，每年约有 90 名婴儿死于和睡觉相关的事。从出生开始，帮助您的宝宝夜夜享受安全睡眠。

### 独自

- 即使宝宝是早产儿，也要仰卧睡觉。
- 宝宝不应和成人或其他儿童一起睡觉。
- 分享您的卧室，而不是床。分享卧室可以让您在密切关注宝宝的同时，避免宝宝睡在成人床上时会发生的危险。
- 婴儿床上只放婴儿，不要堆放枕头、床围垫、毯子或玩具。

### 仰卧

- 让宝宝仰卧，不要趴着或侧躺。
- 每天当宝宝醒着时，要多趴着。看护并鼓励宝宝。“肚皮时间”帮助宝宝锻炼强壮的颈部肌肉。

### 婴儿床

- 如果宝宝在大床、沙发、扶手椅、婴儿背带、摇篮或其他载具中睡着了，将其抱入婴儿床继续睡。
- 使用具备坚固床垫和专用床单（四边有松紧带、可包住床垫）的、经安全认证的婴儿床、摇篮、游戏床。
- 请勿使用下拉式婴儿床。根据联邦安全标准，不允许制造或出售下拉式围栏婴儿床。
- 在购买或使用任何婴儿床、摇篮、游戏床前，务必访问 [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) 查看 CPSC 产品召回清单，以确保上述物品不在召回产品之列。

\*关于婴儿床的安全认证，请转至美国消费品安全委员会网站：

## Autres conseils

### CONSEILS

- Utilisez une grenouillère ou une turbulette. Ne mettez pas de couvertures larges.
- Assurez-vous que votre bébé n'a pas trop chaud.
- Allaitiez votre bébé.
- Essayez d'utiliser une tétine pour dormir, mais ne forcez pas votre bébé à la prendre.
- Faites vacciner votre bébé.
- Si votre bébé est dans un porte-bébé ventral ou dorsal, assurez-vous que son visage est toujours visible.
- N'utilisez jamais de siège auto, de balançoire pour bébé, de landau ou d'autre type de support sans attacher correctement toutes les sangles. Certains bébés se sont pris dans des sangles partiellement attachées, ce qui a provoqué leur décès.
- Assurez-vous que personne ne fume dans votre maison ou à proximité de votre bébé.
- Ne consommez ni alcool ni drogues.
- Ne vous fiez pas aux systèmes d'écoute-bébé à domicile.

Assurez-vous que **toutes les personnes** qui veillent sur votre bébé suivent ces conseils !

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

Department of Health
Office of Children and Family Services
Department of State
Division of Consumer Protection

0710 (Français) 5/19

Suivez les **règles de base** pour un **sommeil en toute sécurité**.

**A** **Alone (Seul).**  
Le bébé doit dormir seul.

**B** **Back (Dos).**  
Placez le bébé sur le dos.

**C** **Crib (Berceau).**  
Placez le bébé dans un berceau sûr.

★ Alone (Seul).
★ Back (Dos).
★ Crib (Berceau).

*Environ 90 bébés meurent chaque année dans l'État de New York de causes liées au sommeil. Prenez tout de suite de bonnes habitudes pour aider votre bébé à dormir en toute sécurité en toute occasion.*

### ALONE (SEUL)

- Placez le bébé sur le dos pour dormir, même si le bébé est né prématuré.
- Votre bébé ne doit pas dormir avec des adultes ou avec d'autres enfants.
- Partagez votre chambre, pas votre lit. Le fait de partager votre chambre vous permet de surveiller attentivement votre bébé tout en évitant les accidents qui pourraient survenir lorsque le bébé dort dans le lit d'un adulte.
- Le berceau ne doit contenir que le bébé ; n'y mettez ni oreiller, ni bordure de protection, ni couverture, ni jouets.

### BACK (DOS)

- Placez le bébé sur le dos pour dormir, ni sur son ventre ni sur le côté.
- Placez votre bébé sur le ventre chaque jour lorsqu'il est éveillé et surveillé. Le « temps sur le ventre » aide le bébé à développer ses épaules pour les renforcer ainsi que les muscles de son cou.

### CRIB (BERCEAU)

- Si le bébé s'endort sur un lit, un canapé, un fauteuil ou dans une écharpe de portage, sur une balançoire ou dans tout autre type de support, placez le bébé dans son berceau pour dormir.
- Utilisez un berceau/coffin/parc approuvé du point de vue de la sécurité\* avec un matelas ferme et un drap bien ajusté.
- **N'UTILISEZ PAS DE BERCEAU À BARRIÈRE COULISSANTE.** Les normes de sécurité fédérales n'autorisent ni la fabrication ni la vente de berceaux à barrière coulissante.
- Avant d'acheter ou d'utiliser un berceau/coffin/parc, consultez la liste des rappels de la CPSC à l'adresse [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) afin de vous assurer que ce produit n'a pas fait l'objet d'un rappel.

\*Pour connaître les règles de sécurité en matière de berceau, consultez le site de la Consumer Product Safety Commission (Commission de sécurité des produits de consommation) : [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs/](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs/)

## Lòt Ti Konsèy

### KÈK TI KONSÈY

- Itilize yon kouchèt konplè oswa kouvèti li ka mete sou li tankou rad. Pa itilize kouvèti ki lach.
- Asire tibebe a pa twò cho.
- Bay tibebe ou tete.
- Eseye itilize yon tetin pou tibebe ou dòmi, men pa fose li pran tetin nan.
- Vaksin tibebe ou.
- Si tibebe ou devan oswa dèye yon pòt-bebe, asire figi tibebe a toujou vizib.
- Pa janm itilize yon chèz vwati, balanswa bebe, materyèl pou pote bebe oswa lòt pòt-bebe san ou pa byen tache tout bretèl yo. Tibebe bloke nan bretèl ki tache anpati epi yo mouri.
- Asire moun pa fimen lakay ou oswa toutotou tibebe ou.
- Pa bwè alkòl oswa pa pran dwòg.
- Pa konte sou entèfon tibebe a lakay ou.

Asire **tout moun** k ap pran swen tibebe ou swiv ti konsèy sa yo!

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

**A Alone (Poukont Li).**  
Tibebe a ta dwe dòmi Poukont Li.

**B Back (Sou do).**  
Mete tibebe a sou Do li.

**C Crib (Kabann Timoun).**  
Mete tibebe a nan yon Kabann Timoun ki pwoteje.

Department of Health

Office of Children and Family Services

Department of Social Services

Division of Consumer Protection

0674 (Haitian Creole) 5/9

★ Poukont Li.

★ Sou Do.

★ Kabann Timoun.

*Apre 90 tibebe mouri chak ane nan Eta New York akòz pwoblèm ki gen pou wè ak dòmi. Apre tibebe ou fè, ede li dòmi an sekirite chak fwa li kòmanse dòmi.*

### POUKONT LI

- Mete tibebe a sou do li pou li dòmi – menmsi tibebe a te fèt bonè (anvan lè).
- Tibebe ou pa ta dwe dòmi avèk adilt oswa lòt timoun.
- Dòmi nan menm chanm, pa sou kabann ou. Si ou dòmi nan menm chanm avèk tibebe ou sa ap pèmèt sivey tibebe ou depre pandan w ap evite aksidan ki ta ka rive lè tibebe a ap dòmi sou yon kabann adilt.
- Ou pa ta dwe mete anyen nan kabann timoun nan, sof tibebe a; pa mete zòrye, bòdi pou pwoteje tibebe a, kouvrelè oswa jwèt.

### SOU DO

- Mete tibebe a dòmi sou do, men pa ni sou vant ni sou kote.
- Mete tibebe ou sou vant li chak jou lè tibebe a je klè. Gade tibebe w la epi ankouraje li. "Tan sou vant" ede tibebe a devlope miskilèt solid nan zèpòl ak nan kou.

### KABANN TIMOUN

- Si tibebe a pran somèy sou yon kabann, kanape, fotèy, oswa sou yon echap pou pote bebe, balanswa oswa lòt pòt-bebe, mete li sou yon kabann bebe pou li fin dòmi.
- Itilize yon kabann timoun/bèso/pak tibebe apwouve\* ki gen yon matla solid ak yon dra fouwo.
- PA ITILIZE BÈSO KI KA LOUVRI SOU KOTE. Estanda sekirite federal yo pa pèmèt yo fabrike oswa vann bèso ki ka louvri sou kote yo.
- Avan ou achte oswa itilize nenpòt kabann timoun/bèso/pak tibebe, gade sou lis rapèl CPSC a nan: [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) pou w ka sèten yo pa te raple li.

\*Pou sekirite kabann bebe a, ale nan Komisyon Sekirite Pwodui Konsomasyon: [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)

# Safe Sleep for Baby Brochure - Italian #0675

## Altri consigli

**CONSIGLI**

- Usa un pigiama intero o una coperta indossabile. Non usare coperte troppo ampie.
- Accertati che il bambino non sia troppo caldo.
- Allatta il bambino.
- Prova a usare un ciuccio per la nanna, ma non forzare il bambino.
- Fai vaccinare il tuo bambino.
- Se il bambino è in un passeggino frontale o posteriore, accertati che il suo volto sia sempre visibile.
- Non usare mai seggiolini per auto, altalene per neonati, passeggini o altri supporti senza allacciare correttamente le cinture. Vi sono stati casi di morte dovuti al fatto che i bambini sono rimasti impigliati in cinture parzialmente allacciate.
- Accertati che nessuno fumi nell'abitazione o vicino al bambino.
- Non usare alcol o droghe.
- Non fare affidamento sul baby monitor.

Accertati che **chiunque** si prenda cura del tuo bambino segua questi consigli!

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

0675 (Italian) 5/9

Segui gli 

## ABC

del **sonno sicuro**

**A** **Alone (solo).**  
Il bambino deve dormire solo.

**B** **Back (schiena).**  
Adagia il bambino sulla schiena.

**C** **Crib (lettino).**  
Adagia il bambino in un lettino.

★ Solo.
★ Schiena.
★ Lettino.

*Nello Stato di New York, circa 90 bambini muoiono ogni anno per cause correlate al sonno. Aiuta il tuo bambino a dormire in sicurezza fin dal momento in cui si addormenta.*

**SOLO**

- Quando arriva il momento della nanna, adagia il bambino sulla schiena – anche se è nato prematuro.
- Il neonato non deve dormire con adulti o altri bambini.
- Condividi la tua camera, non il tuo letto. Condividere la camera ti consente di sorvegliare attentamente il bambino e di evitare gli incidenti che potrebbero verificarsi se dormisse in un letto per adulti.
- Nel lettino deve esserci solo il bambino: togli i cuscini, paracolpi, coperte o giochi.

**SCHIENA**

- Adagia il bambino sulla schiena quando arriva il momento della nanna, non a pancia in giù o sul fianco.
- Ogni giorno, quando il bambino è sveglio, stendilo per un po' a pancia in giù. Senza perderlo di vista, incoraggiarlo a muoversi. Passare del tempo a pancia in giù aiuta il bambino a sviluppare i muscoli di collo e spalle.

**LETTINO**

- Se il bambino si addormenta su un letto, un divano, una poltrona, una fascia porta-bebè, una sdraietta o qualsiasi tipo di marsupio, spostalo su un lettino non appena possibile.
- Usa lettini, culle e box conformi alle norme di sicurezza\*, muniti di un materasso rigido e di lenzuola con gli angoli.
- **NON USARE LETTINI CON SPONDE MOBILI.** Gli standard di sicurezza federali vietano la produzione e la vendita di lettini a sbarre con sponde mobili.
- Prima di acquistare o usare un lettino, una culla o un box, assicurati che non siano stati ritirati dal mercato. Puoi consultare la lista dei prodotti richiamati, stilata dalla CPSC, su [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/).

\*Per informazioni sulla sicurezza dei lettini, consulta il sito della Consumer Product Safety Commission (Commissione per la sicurezza dei prodotti di consumo): [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)

## 그밖의 요령

**요령**

- 원피스형 잠옷 또는 입는 담요를 이용하세요. 늘어짐 담요는 사용하지 마세요.
- 아기가 너무 덥지 않게 주의하세요.
- 아기에게 모유를 수유하세요.
- 고우 젖꼭지를 물려 재워보세요. 하지만 강제로 물리지는 마세요.
- 아기에게 예방접종을 하세요.
- 앞이나 뒤로 아기띠를 해 아기를 안은 경우, 아기 얼굴이 보이는지 항상 확인하세요.
- 카시트, 아기 그네, 유모차 등 기타 캐리어를 사용할 때는 항상 모든 끈(혹은 락)을 적절히 매어 주세요. 아기들이 다 채우지 않은 스트랩에 걸려 사망하는 경우도 있습니다.
- 집안이나 아기 근처에서 담배를 피우는 사람이 없도록 하세요.
- 알코올이나 약물을 하지 마세요.
- 가정용 아기 모니터에 의존하지 마세요.

아기를 돌보는 모든 사람이 이러한 요령을 따를 수 있게 하세요!

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

안전한 수면의 

## ABC를 지키세요

**A Alone(혼자).**  
아기는 혼자 자야 합니다.

**B Back(등을 뒤로).**  
아기를 뒤로 눕히세요.

**C Crib(아기 침대에).**  
아기를 안전한 아기 침대에 눕히세요.

Department of Health

Office of Children and Family Services

Department of State

Division of Consumer Protection

0676 (Korean) 5/10

★ 혼자.
★ 등을 뒤로.
★ 아기 침대에.

**혼자**

- 아기가 일찍 태어난 경우에도 (조산) -등을 뒤로하여 아기를 눕히세요.
- 성인이나 다른 아동과 함께 재우지 마십시오.
- 방을 함께 써도 침대는 함께 쓰지 마십시오. 방을 함께 쓰면 아기를 가까이에서 지켜보면서 아기가 심인용 침대에서 잘 때 발생할 수 있는 사고를 예방할 수 있습니다.
- 아기 침대에는 아기 외에 베개, 병퍼 패드, 담요나 장난감 등 다른 아무것도 없어야 합니다.

**등을 뒤로**

- 아기를 재울 때는 엎드리거나 옆으로가 아니라 등을 뒤로 하여 눕히십시오.
- 아기가 깨어 있을 때는 매일 아기의 배를 대고 엎드려 눕게 하십시오. 아기의 얼굴을 보고 움직이도록 독려하십시오. "터미 타임(Tummy time)"은 아기의 어깨와 목 근육을 강하게 발달시키는 데 도움이 됩니다.

**아기 침대에**

- 아기가 침대, 소파, 안락의자 또는 술링, 그네 혹은 기타 운반대 위에서 잠이 들었다면, 아기를 아기침대에 눕혀 재우십시오.
- 안전성 인증을 받은\* 아기 침대/요람/플레이야드에 단단한 매트리스와 안을 넣은 시트를 사용하십시오.
- 상하 여닫이식 아기침대는 사용하지 마십시오. 연방 안전 기준에 따르면 상하 여닫이식 아기침대는 제작하거나 판매할 수 없습니다.
- 아기침대/요람/플레이야드는 구입하거나 사용하기 전에 [www.cpsc.gov/Recalls](http://www.cpsc.gov/Recalls)에서 CPSC 리콜 목록을 확인하여 리콜 기록이 있는지 확인하십시오.

\*아기침대 안전에 대한 사항은 소비자재 안전 위원회(Consumer Product Safety Commission) 사이트를 방문하십시오.

# Safe Sleep for Baby Brochure - Russian #0677

## Другие советы

### СОВЕТЫ

- Используйте детский ночной комбинезон или комбинезон-конверт. Не используйте одеяла.
- Убедитесь, что ребенку не слишком жарко.
- Кормите малыша грудью.
- Предложите ребенку пустышку для засыпания, но не заставляйте его брать пустышку вопреки его желанию.
- Сделайте малышу все необходимые прививки.
- Если ребенок сидит в сумке-кенгуру впереди или позади вас, убедитесь, что его лицо всегда находится в зоне видимости.
- При использовании автокресла, детских качелей, коляски или другого приспособления для транспортировки детей, всегда закрепляйте должным образом все ремни. Малыш может запутаться в частично закрепленных ремнях и погибнуть.
- Убедитесь, что никто не курит в доме или воле ребенка.
- Не употребляйте алкоголь или наркотики.
- Не полагайтесь на радионяню.

**Убедитесь, что каждый, кто ухаживает за вашим малышом следует этим советам!**

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

Следуйте правилам 

## ABC

безопасного сна

**A Alone (один)**  
Малыш должен спать один.

**B Back (на спине)**  
Положите малыша на спину.

**C Crib (в кроватке)**  
Положите ребенка в безопасную детскую кроватку.

Department of Health

Office of Children and Family Services

Department of Safety

Division of Consumer Protection

0677 (Russian) 5/19

★ Один.
★ На спине.
★ В кроватке.

*Каждый год в штате Нью-Йорк погибает около 90 младенцев по причинам, связанных со сном. Обеспечьте малышу безопасные условия для спокойного сна с первого дня его жизни.*

### ОДИН

- Укладывайте малыша спать на спину, – даже если он был рожден раньше срока (недоношенным).
- Малыш не должен спать со взрослыми или другими детьми.
- Пусть он находится в вашей комнате, но не в вашей кровати: это позволяет вам внимательно следить за малышом и предотвращает несчастные случаи, которые могут произойти, когда ребенок спит в постели взрослого.
- В детской кроватке не должно быть ничего, кроме ребенка: никаких подушек, одеял или игрушек.

### НА СПИНЕ

- Укладывайте малыша спать на спину, а не на бок или живот.
- Каждый день укладывайте малыша на живот, когда он не спит. Наблюдайте за ребенком и подбадривайте его. Лежа на животе, младенец укрепляет свои шейные и плечевые мышцы.

### В КРОВАТКЕ

- Если малыш заснул на кровати, диване, в кресле или в слинге, на качелях или в другом приспособлении для детей, переложите его в детскую кроватку.
- Используйте безопасную\* детскую кроватку/колыбель/манеж с твердым матрасом и простыней на резинке.
- НЕ ИСПОЛЬЗУЙТЕ КРОВАТКУ С ОТКИДНОЙ БОКОВИНОЙ. Федеральные стандарты безопасности запрещают производство и продажу детских кроваток с откидной боковиной на направляющих.
- Прежде чем покупать или использовать какую-либо детскую кроватку/колыбель/манеж, ознакомьтесь с памяткой Комиссии безопасности потребительских товаров (Consumer Product Safety Commission, CPSC) по адресу: [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/), чтобы убедиться, что этот товар не был изъят из продажи.

*\*Информация о безопасности детских кроваток находится на сайте Комиссии безопасности потребительских товаров (Consumer Product Safety Commission): [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)*

# Safe Sleep for Baby Brochure - Spanish #0673

## Otras sugerencias

### SUGERENCIAS

- Utilice un pijama de una sola pieza o un saco de dormir. No utilice cobertores holgados.
- Asegúrese de que el bebé no esté muy caliente.
- Amamante a su bebé.
- Intente utilizar un chupón pero no fuerce al bebé a aceptarlo.
- Vacune a su bebé.
- Si su bebé está en un portabebé delantero o trasero, asegúrese de que su rostro siempre esté visible.
- Nunca use un asiento para bebé, columpio para bebé, carruaje u otro portabebé sin ajustar correctamente todas las correas. Ha ocurrido que los bebés quedan atrapados entre las correas parcialmente ajustadas y han muerto.
- Asegúrese de que nadie fume en su casa o cerca de su bebé.
- No consuma alcohol ni drogas.
- No confíe plenamente en los monitores para bebé.

¡Asegúrese de que todas las personas que cuidan a su bebé sigan estas sugerencias!

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

0673 (Spanish) 5/9

## Siga las ABC del sueño seguro

**A** **Alone (solo).**  
El bebé debe dormir solo.

**B** **Back (sobre su espalda).**  
Recueste al bebé sobre su espalda.

**C** **Crib (cuna).**  
Coloque al bebé en una cuna segura.

★ Solo.
★ Sobre su espalda.
★ Cuna.

*Aproximadamente 90 bebés mueren cada año en el estado de Nueva York por causas relacionadas con el sueño. Desde el principio, ayude a su bebé a dormir de manera segura cuando llegue la hora de descansar.*

### SOLO

- Recueste al bebé sobre su espalda para dormir, incluso si el bebé nació antes de tiempo (prematuro).
- Su bebé no debe dormir con los adultos ni con otros niños.
- Comparta su habitación, no su cama. Compartir la habitación le permite vigilar de cerca a su bebé a la vez que evita que puedan ocurrir accidentes si el bebé duerme en una cama para adultos.
- No coloque nada en la cuna excepto a su bebé; ni almohadas, ni cojines protectores, ni cobertores o juguetes.

### SOBRE SU ESPALDA

- Recueste al bebé sobre su espalda para dormir, no boca abajo ni de costado.
- Recueste boca abajo al bebé todos los días cuando esté despierto. Supervise y motive a su bebé. "Ponerlo boca abajo" ayuda al bebé a fortalecer los músculos del hombro y del cuello.

### CUNA

- Si el bebé se queda dormido en una cama, sofá, sillón o en un columpio u otro portabebé, traslade al bebé a una cuna para que siga durmiendo.
- Utilice una cuna/moisés/corralito de seguridad aprobado\* con colchón firme y una sábana a medida.
- NO UTILICE UNA CUNA EN LA QUE PUEDAN QUITARSE LOS BARANDALES.** Las normas federales de seguridad no permiten la fabricación ni la venta de cunas en las que pueden quitarse los barandales.
- Antes de comprar o utilizar una cuna/moisés/corralito, consulte la lista de artículos retirados del mercado de la Comisión de Seguridad de Productos del Consumidor (Consumer Product Safety Commission, CPSC) en [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) para asegurarse de que no se haya retirado del mercado.

\*Para obtener información sobre la seguridad de las cunas, diríjase a la Comisión de Seguridad de Productos del Consumidor: [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)

# Safe Sleep for Baby Brochure - Urdu #0711

**محفوظ نیند کی**  
**ABCs**  
پر عمل کریں

**A Alone (اکیلے)**  
بچوں کو چاہیے کہ Alone (اکیلے) سونیں

**B Back (پیٹھ)**  
بچے کو اسکی Back (پیٹھ) کے بل رکھیں۔

**C Crib (پالنا)**  
بچے کو ایک محفوظ Crib (پالنے) میں رکھیں۔

## دیگر تجاویز

**یقینی بنائیں کہ آپ کے بچے کی دیکھ بھال کرنے والا ہر کوئی ان تجاویز پر عمل کرتا ہے!**

[health.ny.gov/safesleep](http://health.ny.gov/safesleep)

**تجاویز:**

- ایک جز والا سلیپر بہ پہننے کے قابل مکمل استعمال کریں۔ ڈھیلے ڈھالے مکمل استعمال نہ کریں۔
- یقین کریں کہ آپ کا بچہ کافی گرم نہیں ہے۔
- اپنے بچے کو چھاتی سے دودھ پلائیں۔
- نیند کے لیے چوسنی استعمال کرنے کی کوشش کریں لیکن بچے کو اسے اپنے پر مجبور نہ کریں۔
- اپنے بچے کی ٹیکہ کاری کروائیں۔
- لگر آپ کا بچہ سانسے یا پیچھے والے ہے اس کی کپڑوں میں ہوا تو یقین کریں کہ بچے کا چہرہ ہمیشہ نظر آ رہا ہو۔
- تمام پٹوں کو اچھی طرح مضبوطی سے بندھنے بغیر کار سیت، بے بی جہولہ، کربینج یا دیگر کیرینر کبھی استعمال نہ کریں۔ بچے جزوی طور پر بندھے ہوئے پٹوں میں پھنسے ہوئے اور مردہ حالت میں پائے گئے ہیں۔
- یقینی بنائیں کہ آپ کے گھر میں یا آپ کے بچے کے اس پاس کوئی بھی سگریٹ نہیں پیتا ہے۔
- لاکھل یا منشیات استعمال نہ کریں۔
- گھر کے لیے ہی مائیکرو ویو بھروسہ نہ کریں۔

NEW YORK STATE Department of Health Office of Children and Family Services Department of State Division of Consumer Protection

★ **Alone (اکیلے)**

★ **Back (پیٹھ)**

★ **Crib (پالنا)**

**New York State** میں ہر سال لگ بھگ 90 بچے سونے سے متعلق وجوہات سے فوت ہو جاتے ہیں۔ شروع سے ہی، ہر بار سونا شروع کرتے ہی بحفاظت سونے میں اپنے بچے کی مدد کریں۔

**CRIB (پالنا)**

- اگر بچہ بستر، تختہ، بازو والی کرسی یا جہولہ پٹی، جہولے یا دیگر کیرینر پر سو جاتا ہے تو نیند پوری ہونے کے لیے بچے کو پالنے میں رکھیں۔
- مضبوط گڈے اور لگی ہوئی شیٹ والا حفاظت کے لحاظ سے منظور شدہ پالنا/جہولہ/پالنے پارڈ استعمال کریں۔
- ڈراپ سائیڈ والا پالنا استعمال نہ کریں۔ وفاقی حفاظتی معیارات ڈراپ سائیڈ سہارے والے پالنے بنانے یا فروخت کرنے کی اجازت نہیں دیتے ہیں۔
- کوئی پالنا/جہولہ/پالنے پارڈ خریدنے سے پہلے CPSC کی منسوخی کی فہرست: [www.cpsc.gov/Recalls/](http://www.cpsc.gov/Recalls/) پر چیک کر کے یقینی بنائیں کہ اسے منسوخ نہیں کیا گیا ہے۔
- پالنے کی حفاظت کے لیے، کنزیومر پروٹیکشن سٹیٹی کمیشن پر جانیں: [www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs](http://www.cpsc.gov/en/Safety-Education/Safety-Education-Centers/Cribs)

**BACK (پیٹھ)**

- بچے کو ان کی پیٹھ کے بل سلائیں، ان کے پیٹ یا پیلو کے بل نہیں۔
- اپنے بچے کو ان کے پیٹ کے بل روزانہ اس وقت رکھیں جب وہ بیدار ہوں اور ان پر نگاہ ہو۔
- پیٹ کے بل لٹنے کا وقت کدھے اور گردن کے مضبوط عضلات تیار کرنے میں مدد کرتا ہے۔

**ALONE (اکیلے)**

- بچے کو سونے کے لیے ان کی پیٹھ کے بل رکھیں - چاہے بچے کی پینٹاش پہلے (قبل از وقت) ہونی نہیں۔
- آپ کے بچے کو باغوں یا دوسرے بچوں کے ساتھ نہیں سونا چاہیے۔
- اپنے کمرے کا اشتراک کریں، اپنے بستر کا نہیں کمرے کا اشتراک کرنا آپ کو اپنے بچے پر فریبی نگاہ رکھنے دیتا ہے جبکہ ایسے حادثات کو روکتا ہے جو کسی بالغ فرد کے بستر پر سونے کی حالت میں پیش آ سکتا ہے۔
- پالنے میں بچے کے علاوہ کچھ نہیں ہونا چاہیے: ٹیکے، مہر پیٹرز، مکمل یا کھلوانے نہ ہوں۔

# Anatomical Diagram

The NYSDOH adapted an **anatomical diagram** from the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), to be used by organizations as a patient education tool regarding infant safe sleep. The anatomical diagram specifically portrays the importance of putting babies on their backs to sleep. Throughout our projects, we heard that new parents often ask providers, “Won’t my baby choke if he is placed on his back for sleep?” This tool was developed in response, and to continue our efforts to educate all new parents on the importance of safe sleep for every sleep. The diagram, which is intended to be printed as a two-sided document, features an anatomical diagram on the front side for parents and caregivers to view, and a paragraph form description on the back for providers to reference when educating parents and caregivers.

## **NEWARK WAYNE COMMUNITY HOSPITAL**

We have adopted the NYSDOH Safe Sleep Anatomical Diagram as part of the discharge information for families.

# Anatomical Diagram - English #0686

## Place Babies on their Backs to Sleep.

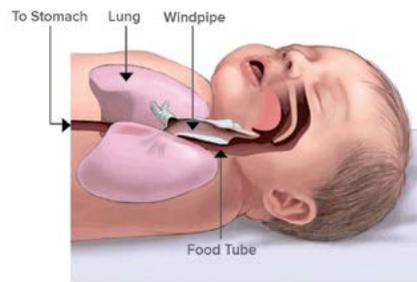

**Tummy Sleeping**

Babies choke when food gets in the windpipe.

**Back Sleeping**

Babies are safer when the windpipe is on top.

 Department of Health | Office of Children and Family Services

## Won't my Baby Choke Sleeping on their Back?

**Tummy Sleeping**

**On the tummy**, the windpipe is below the food tube. Anything that is spit up will flow down by gravity to the lowest point. It is now easier for spit up to be breathed into the lungs.

**Back Sleeping**

**On the back**, the windpipe is above the food tube. Anything that is spit up will be pushed back down by gravity to the lowest point. The windpipe is protected.

# Anatomical Diagram - Chinese #0688

让婴儿在睡眠期间保持仰卧姿势。

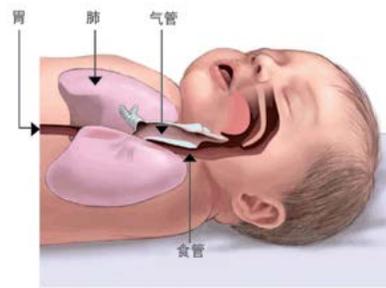

俯卧睡眠

食物进入气管会导致婴儿呛咳。

仰卧睡眠

气管在上时，婴儿会更安全。

婴儿不会在仰卧睡眠时呛咳吗？

俯卧睡眠

俯卧时，气管低于食管，婴儿呛吐的任何东西将因重力流向最低点。此时，呛吐的东西更容易被吸入肺部。

仰卧睡眠

仰卧时，气管高于食管，婴儿呛吐的任何东西将被重力推回至最低点，因而气管可以得到保护。

**Placez les bébés sur le dos pour dormir.**

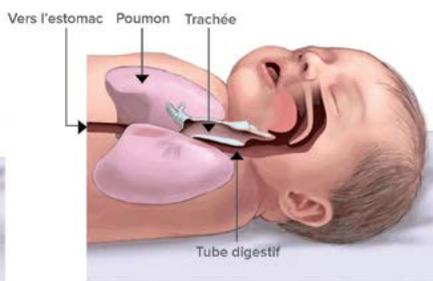

Position sur le ventre

Les bébés s'étouffent lorsque les aliments retombent dans la trachée.

Position sur le dos

Les bébés sont plus en sécurité lorsque la trachée est orientée vers le haut.

**Est-ce que mon bébé peut éviter de s'étouffer en dormant sur le dos ?**

Position sur le ventre

Dans la position sur le ventre, la trachée est en dessous du tube digestif. Tout ce qui est régurgité s'écoulera vers le bas sous l'effet de la gravité jusqu'au point le plus bas. Il est ainsi plus risqué que les aliments régurgités finissent dans les poumons.

Position sur le dos

Dans la position sur le dos, la trachée est au-dessus du tube digestif. Tout ce qui est régurgité sera poussé vers le bas sous l'effet de la gravité jusqu'au point le plus bas. La trachée est donc protégée.

## Far addormentare il bambino in posizione supina.

**Sonno in posizione prona**

Se nel tubo di alimentazione viene introdotto del cibo, il bambino rischia di soffocare.

**Sonno in posizione supina**

Per motivi di sicurezza, è preferibile posizionare in alto il tubo di alimentazione.

## Il mio bambino non rischia di soffocare dormendo in posizione supina?

**Sonno in posizione prona**

**In posizione prona**, la trachea si trova più in basso rispetto al tubo di alimentazione. Eventuali rigurgiti riflirebbero verso il basso a causa della forza di gravità fino a raggiungere il punto più basso possibile. In questa situazione, aumenta il rischio che il rigurgito possa finire nei polmoni.

**Sonno in posizione supina**

**In posizione supina**, la trachea si trova più in alto rispetto al tubo di alimentazione. Eventuali rigurgiti verrebbero spinti verso il basso dalla forza di gravità fino a raggiungere il punto più basso possibile. In questo caso, la trachea è adeguatamente protetta.

# NYSDOH Commissioner Letter to Providers – July 2016

Department  
of Health

ANDREW M. CUOMO  
Governor

HOWARD A. ZUCKER, M.D., J.D.  
Commissioner

SALLY DRESLIN, M.S., R.N.  
Executive Deputy Commissioner

July 5, 2016

Dear Provider:

Each year about 90 New York State (NYS) infants die from sleep-related causes, many of which are preventable. To eliminate sleep-related deaths in infants, the New York State (NYS) Department of Health (Department), in partnership with the NYS Office of Children and Family Services, has joined a national collaboration of state health departments, state agencies, and our professional and community partners.

The Department is working to update and deliver safe sleep messages to parents and caregivers across the state. In 2011, the Department adapted the American Academy of Pediatrics guidelines for educational materials related to Sudden Infant Death Syndrome and safe sleep in a consumer brochure entitled "Follow the ABCs of Safe Sleep." The message is: Babies should sleep **A**lone, on their **B**acks, and in a safe **C**rib, right from the start. The "ABC" message is simple and effective to help introduce safe sleep basics to parents and caregivers.

A recent study showed the more often mothers heard advice about safe sleep practices, the more likely they were to follow the advice<sup>1</sup>. Your role in providing safe sleep education early and often to parents and caregivers of infants is critical to reducing these preventable deaths. My vision is that every child in NYS will have the opportunity to reach his or her first birthday and grow up healthy. Please help to make this vision a reality by sharing safe sleep materials and education at every opportunity.

These materials, available in English and six other languages, are free of charge for your use. Use this [link](#) to order copies of these publications. Please visit [www.health.ny.gov/safesleep](http://www.health.ny.gov/safesleep) for additional safe sleep information, including a brochure and poster that you can share with families in your practice.

If you have questions, please contact Eric Cleghorn at the Bureau of Child Health at 518-474-1961 or by electronic mail at [NYSIMCollN@health.ny.gov](mailto:NYSIMCollN@health.ny.gov).

Thank you for your commitment to New York's families.

Sincerely,

Howard A. Zucker, M.D., J.D.  
Commissioner of Health

# NYSDOH/OCFS Commissioner Letter to Providers – May 2019

May 24, 2019

Dear Provider:

Each year in the United States, there are more than 3,500 sleep-related infant deaths. Many of these sleep-related deaths are preventable. Governor Cuomo has designated May as Infant Safe Sleep Month in New York State (NYS). To reduce the occurrence of sleep-related deaths in infants, the NYS Department of Health (Department) and NYS Office of Children and Family Services (OCFS) encourage you to continue to emphasize infant safe sleep practices in caregiver education you provide, including discussion of those risk factors associated with sudden unexpected infant death (SUID). A recent study estimated that 22% of SUID cases in the United States can be directly attributed to maternal smoking during pregnancy<sup>1</sup>. Smoking cessation is essential to reducing infant sleep-related deaths.

To assist your efforts with family and caregiver education, the Department and OCFS have developed several educational materials related to Sudden Infant Death Syndrome and infant safe sleep for use in your practice. These materials are informed by the American Academy of Pediatrics (AAP) 2016 recommendations<sup>2</sup> that urge caregivers to “Follow the ABCs of Safe Sleep.” The message is: Babies should sleep **A**lone, on their **B**acks, and in a safe **C**rib right from the start! The “ABC” message is simple and effective to help introduce safe sleep to parents and caregivers.

In addition, we encourage your organizations to model infant safe sleep in print and digital media, including websites and advertisements to reinforce the “ABC” message. The AAP 2016 recommendations cite concerns that images portraying infants in unsafe sleep conditions may create misinformation among caregivers thus putting infants at risk. The images families see on their health care providers’ websites, communication materials, or social media should reflect behaviors that will keep babies safe.

Research has shown that the more frequently caregivers heard about safe sleep practices, the more likely they were to follow the advice<sup>3</sup>. Your role in providing safe sleep education early and often to infant caregivers and supporting women with smoking cessation is critical to reducing infant mortality. Our vision is that every child in New York State will have the opportunity to reach his or her first birthday and grow up healthy. Please help make this vision a reality by modeling infant safe sleep and sharing safe sleep materials and education at every opportunity.

The materials developed by the Department, available in English and six other languages, are free of charge for your use. Please visit [www.health.ny.gov/safesleep](http://www.health.ny.gov/safesleep) for additional safe sleep information and a printable brochure to share with the families you serve. Select materials (i.e.: magnets, mirror clings, posters, crib cards, and videos) can be ordered by completing the form available here: [https://www.health.ny.gov/forms/order\\_forms/safe\\_sleep\\_for\\_baby.pdf](https://www.health.ny.gov/forms/order_forms/safe_sleep_for_baby.pdf)

# NYSDOH Commissioner Letter to Obstetric/Childbirth Providers – October 2016

Department  
of Health

ANDREW M. CUOMO  
Governor

HOWARD A. ZUCKER, M.D., J.D.  
Commissioner

SALLY DRESLIN, M.S., R.N.  
Executive Deputy Commissioner

October 7, 2016

Dear Provider:

Each year, about 90 New York State (NYS) infants die from sleep-related causes, many of which are preventable. To eliminate sleep-related deaths in infants, the New York State Department of Health (Department), in partnership with the New York State Office of Children and Family Services, has joined a national collaboration of state health departments, state agencies, and professional and community partners.

The Department is working to update and deliver safe sleep messages to parents and caregivers across the state. The Department adapted the 2011 American Academy of Pediatrics guidelines for educational materials related to Sudden Infant Death Syndrome and safe sleep in a consumer brochure entitled “Follow the ABCs of Safe Sleep.” The message is: Babies should sleep **A**lone, on their **B**acks, and in a safe **C**rib right from the start! The “ABC” message is simple and effective to help introduce safe sleep to parents and caregivers.

A recent study showed that the more often caregivers heard about safe sleep practices, the more likely they were to follow the advice<sup>1</sup>. Your role in childbirth education, including preparing women to be mothers, is invaluable. Incorporate safe sleep messages early and often, because encouraging parents to practice safe sleep from the start is essential to reducing these preventable deaths.

My vision is that **every** child in New York State will have the opportunity to reach his or her first birthday and grow up healthy. Please help make this vision a reality by sharing safe sleep materials and education at every opportunity.

These materials, available in English and six other languages, are free of charge for your use. Use this [link](#) to order copies of these publications. ## Infant Safe Sleep in the Birthing Hospital

This section is organized to follow the NYSPQC Safe Sleep Project's driver diagram, a visual display of the overall aim of the project, the primary drivers that contribute to achieving the project aim, and the specific change ideas to test for each driver. For each project driver, there are educational presentations, hospital tools, and insights from birthing hospital teams.

**OVERVIEW OF A PROGRAM TO EDUCATE PEDIATRIC RESIDENTS ABOUT SAFE SLEEP**

Christine Grippi, RN, MSN  
Clinical Nurse Specialist, NICU/NBN  
Maimonides Medical Center

**OUR DATA COLLECTION TEAM**

- Natasha Nurse Clarke RN
- Vivian Lopez RN, NNP
- Christine Grippi, RN, CNS
- Hira Ahmed MD
- Zubin Amarsi MD
- Anna Sullivan RN, NICU

**INTRODUCTION**

- Maimonides Medical Center has been participating in the NYSPQC Safe Sleep Initiative since its inception
- The focus was primarily on education of nurses and parents
- Safe Sleep education was introduced to nurses and parents in both of the well newborn nurseries and the NICU that included both verbal and written instructions (brochure and magnet)

**SUMMARY OF OUR PDSA CYCLES**

- Nursing documentation was not consistently entered regarding safe sleep education so did focused education, announcements at unit briefs and surveillance regarding this parameter with improvement
- Crib Checks were also not consistent with safe sleep practices, particularly regarding flat cribs and no objects in cribs. Again, focused education, announcements at unit briefs and surveillance resulted in improvement, although we still struggle with objects (mostly feeding bottles) in the bottom of the crib.

**SUMMARY OF PDSA CYCLES (CONT.)**

- Caregiver surveys were notable for a percentage of caregivers reporting that they had **NOT** received safe sleep education.
- Focused education, announcements at briefs and surveillance were again employed with the nurses in well baby nurseries and NICU
- **Rates continued to be low:**
- January-August 2016: 59% of caregivers reported getting safe sleep education
- **41% DID NOT get safe sleep education according to this self report**

Driver:

Health care professionals understand, actively endorse and model safe sleep practices

**Grippi C. Overview of a Program to Educate Pediatric Residents About Safe Sleep** NYSPQC Safe Sleep Project Coaching Call Webinar. March 2017. Intended audience: Hospitals

**PLAN TO IMPROVE CAREGIVER REPORT OF SAFE SLEEP EDUCATION**

- Hira Ahmed and Zubin Amarsi, pediatric residents at MMC, have been educated regarding the safe sleep project and have been assisting with data collection.
- They suggested that the pediatric residents should be educated about safe sleep to reinforce education in the hospital and also to be prepared for their roles as pediatricians after graduation

**THE FOLLOWING SLIDES WERE DEVELOPED BY HIRA AND ZUBIN AND PRESENTED AT PEDIATRIC GRAND ROUNDS IN SEPTEMBER 2016 TO ALL OF THE PEDIATRIC RESIDENTS AT MAIMONIDES MEDICAL CENTER**

**NY STATE PERINATAL QUALITY COLLABORATIVE SAFE SLEEP PROJECT**

Hira Ahmed  
Zubin Amarsi

**INTRODUCTION**

- Focuses on improving safe sleep practices to reduce infant mortality in NY
- Working with 82 hospitals across state to improve safe sleep practices by implementing hospital policies to support and facilitate safe sleep, educating health care workers and providing infant caregivers education on safe sleep

**SIDS**

- Sudden death which occurs before 1 year of age, usually in a previously healthy infant
- Cause of death unexplained after thorough investigation; including complete autopsy, death scene investigation, and review of child's health history
- A diagnosis of exclusion
- SIDS is not predictable
- Leading cause of death from 1month-12months

**SUID**

- Sudden unexpected infant death
- Explained vs unexplained
- Sleep related infant deaths-
  - Risk factors-suffocation, asphyxia and entrapment
  - Seasonal trend: there are more SIDS deaths in winter months
  - More male babies die of SIDS
  - Unaccustomed tummy sleeping increases risk as much as 18 times

Driver:

Health care professionals understand, actively endorse and model safe sleep practices

**Grippi C. Overview of a Program to Educate Pediatric Residents About Safe Sleep** NYSPQC Safe Sleep Project Coaching Call Webinar. March 2017. Intended audience: Hospitals

### RISK FACTORS

- Maternal factors:
  - Young maternal age
  - Maternal smoking during pregnancy
  - Late or no prenatal care
- Infant factors:
  - Preterm birth and/or low birth weight
  - Prone/side sleeping position
  - Sleeping on a soft surface and/or with bedding accessories such as loose blankets and pillows
  - Bed-sharing (eg, sleeping in parents' bed)
  - Overheating

### AAP POLICY STATEMENT

- Back to sleep for every sleep
- Use a firm sleep surface
- Room-sharing without bed-sharing is recommended
- Keep soft objects and loose bedding out of the crib

### AAP POLICY STATEMENT

- Avoid smoke exposure during pregnancy and after birth
- Avoid alcohol and illicit drug use during pregnancy and after birth
- Breastfeeding is recommended
- Consider offering a pacifier at nap time and bedtime
- Avoid overheating
- Do not use home cardiorespiratory monitors as a strategy for reducing the risk of SIDS

### AAP POLICY STATEMENT

- Expand the national campaign to reduce the risks of SIDS to include a major focus on the safe sleep environment and ways to reduce the risks of all sleep related infant deaths, including SIDS, suffocation, and other accidental deaths; primary care providers should actively participate in this campaign!!

### WHERE ARE WE WITH SIDS

- Incidence of SIDS has declined by more than 50 percent since the mid-1980s
- Greatest reduction occurred after 1992, when AAP issued a recommendation to reduce the risk of SIDS by placing infants in a supine position for sleep
- Between 1992 and 2001, SIDS rate fell from 1.2 to 0.56 per 1000 live births
- Proportion of infants sleeping in the supine position increased from 13 to 72 percent

### COMMON COMPLAINTS OF BACK TO SLEEP

- On back, baby startles easily and wakes up
  - can be protective for the baby
- Flat head
  - Temporary and positional
- Bald spot
  - Supervised tummy time
  - Hair will grow back
- Delay in development
  - Within normal range
  - Supervised Tummy Time!!!

Driver:

Health care professionals understand, actively endorse and model safe sleep practices

**Grippi C. Overview of a Program to Educate Pediatric Residents About Safe Sleep** NYSPQC Safe Sleep Project Coaching Call Webinar. March 2017. Intended audience: Hospitals

**REFLUX**

- Still need to be supine
- Elevating head of bed not recommended due to respiratory compromise and sliding down
- RARELY: infants whose risk of death from reflux is greater than from SIDS may need to be elevated/prone

**SAFE SLEEP**

**SAFE SLEEP ENVIRONMENT FOR INFANTS**

**NOT SAFE SLEEP ENVIRONMENTS FOR BABY**

**UNSAFE CRIB**

**SLEEP CLOTHING**

### The ABC's of Safe Sleep

**A** **Alone**  
Not with other people, pillows, blankets, or stuffed animals.

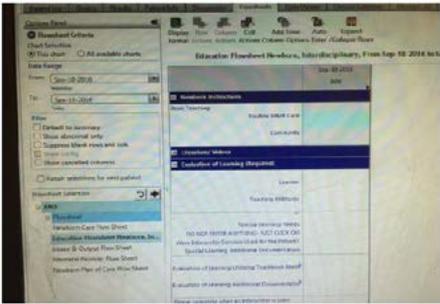

**B** **on my Back**  
Not on the stomach or side.

**C** **in my Crib**  
Not on an adult bed, sofa, cushion, or other soft surface.

### SAFE SLEEP INITIATIVE

- Our study involves Mother Baby unit and NICU- focus on parents and provider education on Safe Sleep concepts, documentation of safe sleep education in EMR and observation of safe sleep practices in MBU and NICU
- We are using 3 parameters to collect data from:
  - 1. Documentation of education
  - 2. Caregiver surveys
  - 3. Crib checks

### OUTCOME

- After the Pediatric Grand Rounds Presentation, we noticed that the caregiver surveys showed improvement in % of caregivers reporting receiving safe sleep education
- From 10/1/16 through 3/15/17, **96% of caregivers reported that they had received safe sleep education on caregiver surveys.**

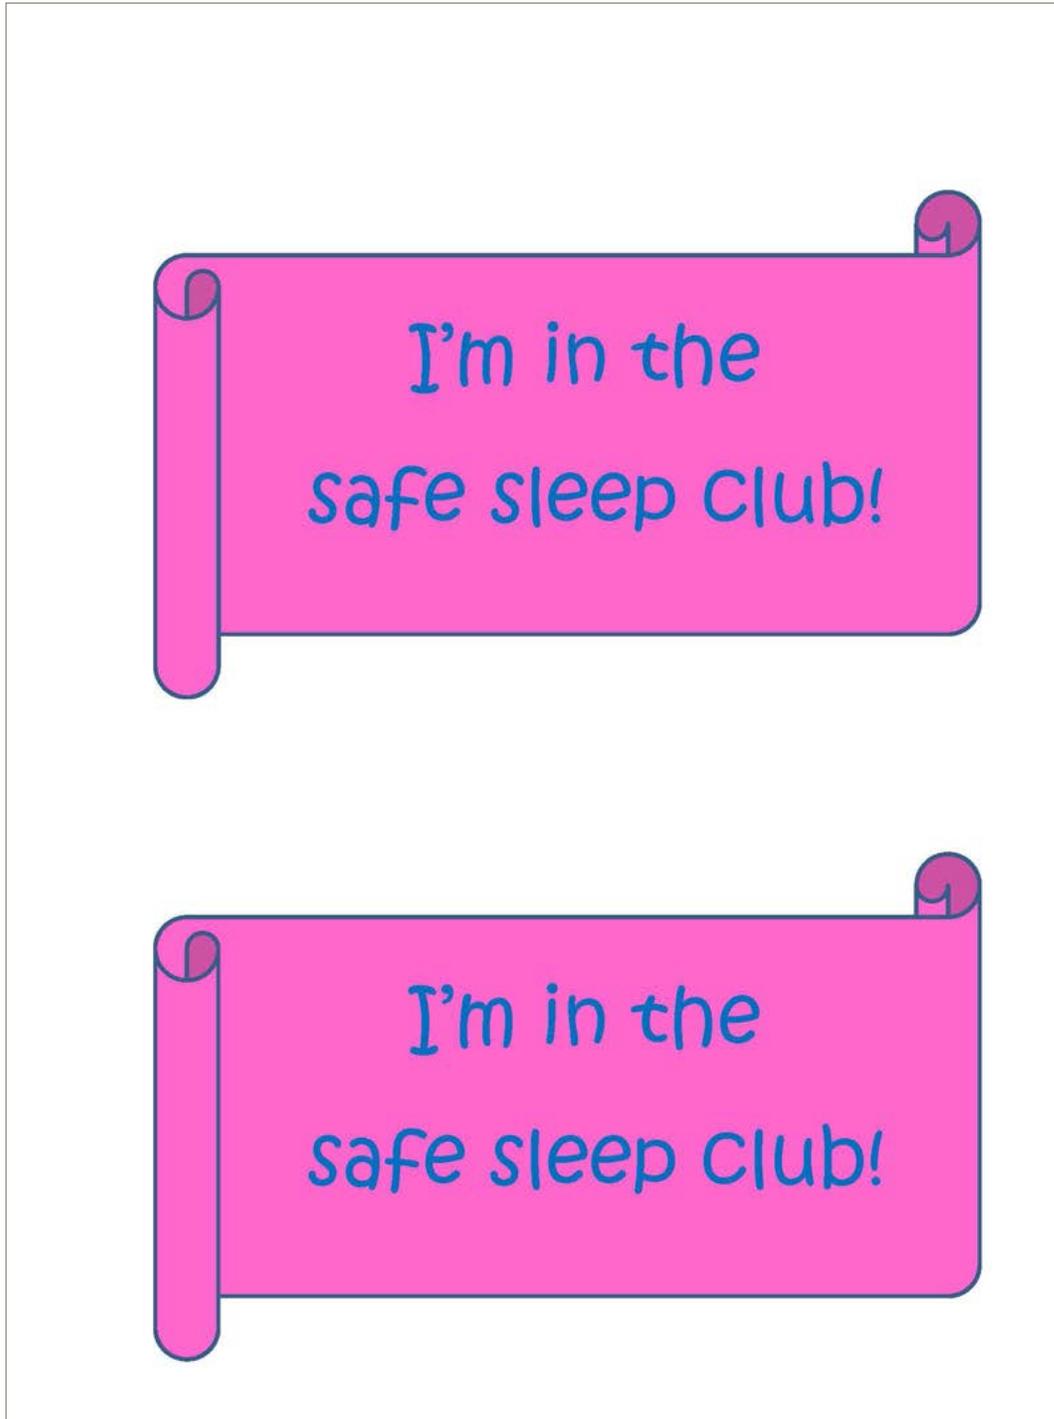

### IN CONCLUSION

- We saw improvement in our education of parents regarding safe sleep when Pediatric Residents were educated about safe sleep practices and our participation in the project.
- Recommend that all health care providers working in perinatal/neonatal settings receive safe sleep education so that they can provide and reinforce this topic with parents

## Albany Medical Center - Safe Sleep Crib Card

Driver:

Health care professionals understand, actively endorse and model safe sleep practices  
**Albany Medical Center - Safe Sleep Crib Card**

**Safe Sleep Readiness:**

- 32 weeks or greater corrected gestational age.
- In room air or on nasal cannula/high flow nasal cannula.
- No congenital anomalies of the face, skull or airway (collaborate with provider).
- Collaborate with provider if infant is on IV fluids.

**Guidelines:**

- Baby always sleeps supine.
- No blanket rolls, loose bedding or stuffed toys.
- Head of bed flat (elevate HOB during and for 1 hour after, tube feeding).
- “Tummy time” should be directly supervised and done only while infant is awake.
  - “Reflux precautions” are not indicated.

**Safe Sleep Readiness:**

- 32 weeks or greater corrected gestational age.

**Albany Medical Center - Safe Sleep Club**

**Criteria to begin Safe Sleep:**

- Infant is greater than 32 weeks corrected gestational age.
- Infant is stable on room air or a low flow nasal cannula
- Infant has no congenital anomaly or neurological impairment requiring special positioning (e.g. micrognathia, myelomeningocele)
- Infant is on full feeds (oral or gastronomy)

**Transition to Safe Sleep Environment:**

- Transition occurs based on developmental maturation
- Once infant reaches 50% oral intake, head of bed needs to be flat after each oral feed
- Once infant maintains temperature for 24 hours after being weaned from heat, the infant should be swaddled with one blanket **OR**
- Swaddled with commercial sleep sack (i.e. Zaks)
- Hats should not be used during sleep once thermoregulation is achieved
- No additional blankets or positioning rolls should be used

**Follow the  
ABCs  
of Safe Sleep**

## From the Hospitals

### THE UNIVERSITY OF VERMONT HEALTH NETWORK CHAMPLAIN VALLEY PHYSICIANS HOSPITAL

#### Lessons Learned:

- Education done on even a limited basis can have a huge impact. After educating just two nurses to provide education to infant caregivers about infant safe sleep practices, we saw immediate improvement in all the ABCs of infant safe sleep.
- Consistent information from everyone increases compliance. Reeducation of the pediatricians showed that it is important to give information in more than one form and from more than one source. The mesh bag that we attached to the cribs also included an informational card developed by the hospital which reinforced existing education. The bag gives infant caregivers a way to keep the crib free of objects while still being able to display gifts for the infant that have been brought to the hospital.

*To read more about Champlain Valley Physicians Hospital's story, see **Section 10**.*

## From the Hospitals

### SARATOGA HOSPITAL

Tips for Healthcare Provider Safe Sleep Education:

- Utilize a modality that is easily accessible to all staff and can track completion of education (i.e. Healthstream).
- Assess nurses' knowledge post-education to identify knowledge deficits.
- Provide real-time feedback to staff. Correct unsafe sleep practices in real-time with nursing staff.

*To read more about Saratoga Hospital, see **Section 10**.*

### STONY BROOK MEDICINE

We hosted an in-service training for all staff on proper swaddling. For the training, we utilized the International Hip Dysplasia Institute's instructional video available for free online here: <https://www.youtube.com/watch?v=LLqfROdUP7k>.

*To read more about Stony Brook Children's Hospital, see **Section 10**.*

2

**Disclosures**

- I have nothing to disclose

3

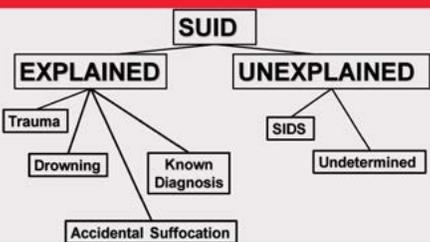

**Definitions**

- SIDS = Sudden Infant Death Syndrome
- SUID = Sudden and Unexpected Infant Death
  - Aka Sudden and unexpected death in infancy (SUDI)

4

**Simple Classification System**

```

    graph TD
      SUID --> EXPLAINED
      SUID --> UNEXPLAINED
      EXPLAINED --> Trauma
      EXPLAINED --> Drowning
      EXPLAINED --> KnownDiagnosis[Known Diagnosis]
      EXPLAINED --> AccidentalSuffocation[Accidental Suffocation]
      UNEXPLAINED --> SIDS
      UNEXPLAINED --> Undetermined
    
```

5

**SIDS**

- Any **SUID** (i.e. sudden and unexpected death) that remains **unexplained** after:
  - A complete review of the history
  - An autopsy
  - A death scene investigation
- Typically** a seemingly healthy infant is found dead after a sleep period, dying either during sleep itself or during a transition from sleep to waking.
- A diagnosis of exclusion
- SIDS is not predictable

6

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Carlin R. Safe Infant Sleep Practices: Convincing Mothers to Make Cribs Less Cushy**

NYSPOC Safe Sleep Project Learning Session, September 2016. Intended audience: Public health and health care professionals.

### Suffocation

- **Asphyxia** is any situation in which there is a decrease in oxygen (O<sub>2</sub>) and an increase in carbon dioxide (CO<sub>2</sub>) in the body.
  - If you stop breathing
  - If your mouth, nose, or airway becomes obstructed.
  - If you "re breathe" (imagine an infant face down in soft bedding).
- **Suffocation** is a form of asphyxia
- **Entrapment** is when an infant is "trapped" in a situation that produces asphyxia
- **Strangulation** is when bed clothes or other material is wrapped around the neck, blocking the airway causing asphyxia.

Children's National Medical Center
7

### SIDS and Asphyxia

- Asphyxia has always been part of SIDS
- Many risk factors are associated with potentially asphyxiating environments
  - Prone sleeping
  - Soft bedding, pillows, bumper pads, etc.
  - Bedsharing
- Some asphyxial situations would cause death in any baby
  - In some, not all babies die
- Why do these babies die?

Children's National Medical Center
8

### Triple Risk Model

Children's National Medical Center
9

### Rebreathing Theory

- Infants in certain sleep environments are more likely to trap exhaled CO<sub>2</sub> around the face
  - Lie prone and near-face-down/face-down
  - Soft bedding
  - Tobacco smoke exposure
- Infants rebreathe exhaled CO<sub>2</sub>
- Infants die if they cannot arouse/ respond appropriately

Children's National Medical Center
10

### An Example of SIDS Pathogenesis

Children's National Medical Center
11

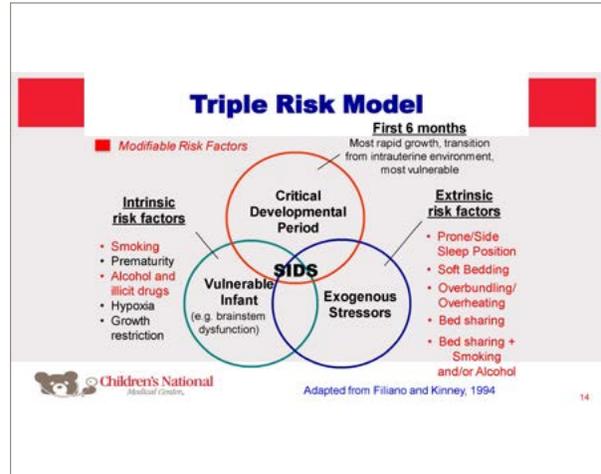

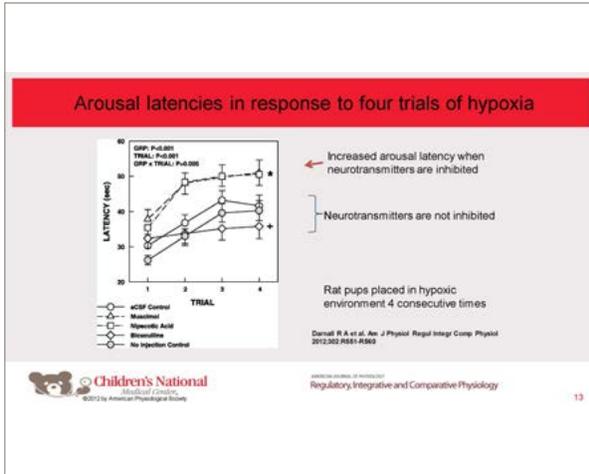

### Brain Dysfunction

- Kinney et al have found abnormalities in autonomic control in the brainstem
  - Decreased neurotransmitter (serotonin, acetylcholine, glutamate, GABA) binding
  - Network dysfunction
  - Infants may not be able to sense and respond to hypercarbia or hypoxia
- Weese-Mayer and others have found polymorphisms in serotonin transporter protein gene
- Up to 70% of SIDS have neurotransmitter abnormalities
- These abnormalities are not present in infants dying of other causes, including chronic hypoxia

Children's National Medical Center
12

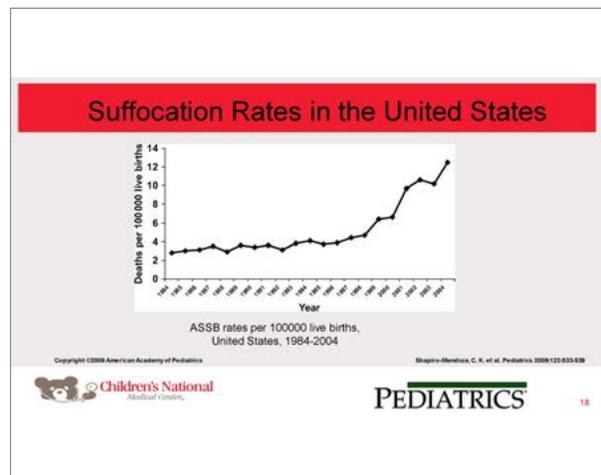

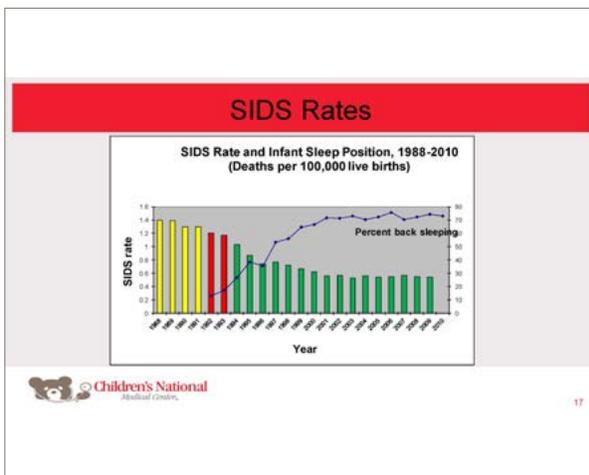

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Carlin R. Safe Infant Sleep Practices: Convincing Mothers to Make Cribs Less Cushy**

- ### 2011 AAP Recommendations
- Back to sleep for every sleep
    - Preterm infants by 32 weeks post-menstrual age
    - Infants in newborn nursery
  - Use a firm sleep surface
    - No pillows, quilts, adult beds
    - No sitting devices
  - Roomsharing without bedsharing is recommended
  - Keep soft objects and loose bedding out of the crib
    - Pillows, quilts, sheepskins, blankets, bumper pads
  - Pregnant women should receive regular prenatal care
- Children's National Medical Center

- ### 2011 AAP Recommendations
- Avoid smoke exposure during pregnancy and after birth
  - Avoid alcohol and illicit drug use during pregnancy and after birth
  - Breastfeeding is recommended
  - Consider offering a pacifier at naptime and bedtime
  - Avoid overheating
  - Immunize infants
  - Avoid commercial devices marketed to reduce the risk of SIDS
  - Supervised, awake tummy time is recommended
- Children's National Medical Center

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Carlin R. *Safe Infant Sleep Practices: Convincing Mothers to Make Cribs Less Cushy***  
 NYSPQC Safe Sleep Project Learning Session, September 2016. Intended audience: Public health and health care professionals.

### Rates of SIDS and SUID

Source: CDC Wonder, 2011

19

### Why are rates of these deaths increasing?

- Diagnostic shift
  - Improved death scene investigation
- Increases in prone sleeping
- Increases in soft bedding
- Increases in high-risk bed sharing (multiple people in bed, bedding risks, etc.)
- 80->90% of sleep-related deaths occur in unsafe sleep environments

20

### What's up with the bedding?

- A 2014 analysis of infant sleep-related deaths reported to state child death review teams identified soft bedding as an important risk factor for SIDS and accidental sleep-related deaths as infants will roll into the bedding
  - Risk of bedding as a contributing factor was higher between 4 and 12 months of age

21

### What's up with the bedding?

- In 2015, Shapiro-Mendoza et al published a national survey that found that more than half of parents usually placed their infants to sleep with blankets, quilts, pillows, and other similar objects,
- Groups most likely to use soft bedding:
  - Teenagers
  - Non-whites
  - Those without a college degree

22

### Racial and Ethnic Disparities in SUID

- Rates of Sudden Infant Death Syndrome (SIDS) and other sleep-related deaths (including suffocation) are very high among African American infants.
- These racial disparities have increased over the past decade.
- African American infants are twice as likely to die as other infants.

23

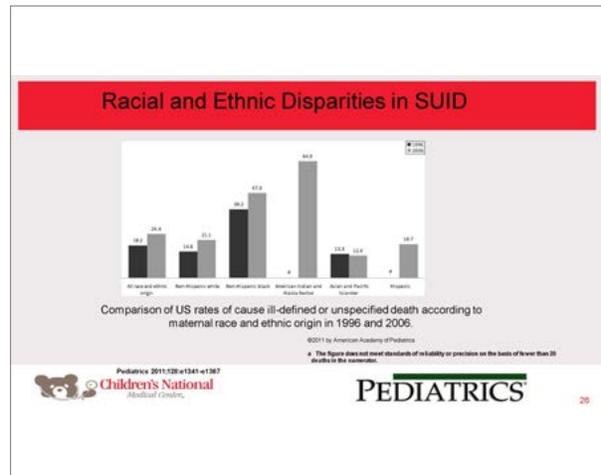

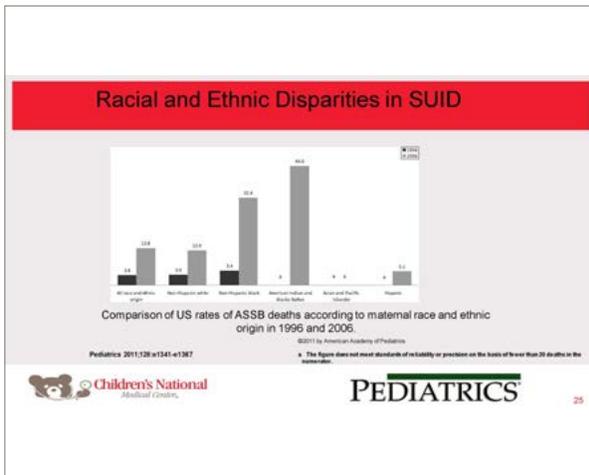

### Racial and Ethnic Disparities in SUID

Race/Ethnic Origin	1996	2006
All race and ethnic origin	79.3	94.1
Non-Hispanic white	69.4	85.8
Non-Hispanic black	135.2	158.8
American Indian and Alaska Native	205.1	238.4
Asian and Pacific Islander	48.9	52.8
Hispanic	49.3	57.0

24

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Carlin R. *Safe Infant Sleep Practices: Convincing Mothers to Make Cribs Less Cushy***  
 NYSPQC Safe Sleep Project Learning Session, September 2016. Intended audience: Public health and health care professionals.

### Why Disparities Exist

- Our qualitative data suggest that:
  - African American parents have a high degree of self-efficacy with regard to preventing infant suffocation.
  - African American parents have a lower degree of self-efficacy with regard to SIDS risk reduction.
- Many of the risk factors for SIDS and other preventable sleep related deaths are the same.

Children's National Medical Centers 27

### Nothing I do can make a difference

"SIDS occurs, and that's something that must have been meant to happen. I wouldn't blame myself. I just feel like I'm doing the best thing for my son and that whatever I feel comfortable with doing for him. Because you can't listen to everybody, you can't listen to statistics, and you have to do what's comfortable. As long as you know your baby, and know what your baby likes, and how he reacts to things, then I feel that's the best way. For me, the stomach; that's the best way."

Children's National Medical Centers 28

### SIDS vs. Suffocation

"For suffocation, yes, [I would believe sleeping on the back is best]. SIDS, they still don't know what causes it. That's why I said, not SIDS, but the fact of suffocation. They can suffocate if they sleep on their stomach."

Children's National Medical Centers 29

### Objective

To compare African-American parental behaviors with regard to infant sleep when given the standard "SIDS risk reduction" message or an enhanced "SIDS and suffocation risk reduction" message.

Children's National Medical Centers 30

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Carlin R. Safe Infant Sleep Practices: Convincing Mothers to Make Cribs Less Cushy**  
 NYSPOC Safe Sleep Project Learning Session, September 2016. Intended audience: Public health and health care professionals.

### Specific Aims

- To evaluate the impact of additional messages on infant sleep practices.
- Standard message of "SIDS risk reduction" vs.
- Standard message + an additional message of "prevention of suffocation and strangulation."

 31

### Hypothesis

- Parents who receive the standard message + "prevention of suffocation and strangulation" message will report:
  - Less high-risk bedsharing
  - Less use of soft bedding and soft sleep surfaces
  - Less prone infant sleep positioning

 32

### Study Flow Diagram

Enrollment	1194 mothers	
Randomization	Standard message (control) group (n=592)	Enhanced message (intervention) group (n=602)
2-3 weeks (958 [80.2%] completed)	502 mothers	496 mothers
2-3 months (716 [60.0%] completed)	369 mothers	347 mothers
5-6 months (637 [53.4%] completed)	302 mothers	305 mothers

 33

### Inclusion criteria

- Healthy, term (>36 week) infants
- No medical condition precluding supine sleeping
- Hospitalization < 1 week in birth hospital
- No known medical conditions that would require subspecialty care

 34

**Spread the Word!**  
 Make sure everyone you know for your baby knows the Safe Sleep. The 10 "10" guidelines, bedsharing, cot-sharing, cotlets, and other alternatives to reduce the risk of SIDS. Babies who usually sleep on their backs but who are the parents of their children, even for a while, are at every 1000 for SIDS in every 1000 live births.

**Babies Sleep Safest on Their Backs.**  
 One of the most ways to lower your baby's risk of SIDS is to put her on her back to sleep. For that and at night, until you are sure you can be sure that babies should sleep on their backs, but always keep them on their backs. If you are a parent of their children, even for a while, are at every 1000 for SIDS in every 1000 live births.

**Reduce the Risk of Sudden Infant Death Syndrome (SIDS)**  
 Enjoy Your Baby!

**Safe Sleep for Your Baby**  
 Reduce the Risk of Sudden Infant Death Syndrome (SIDS)

**What is SIDS?**  
 SIDS stands for Sudden Infant Death Syndrome. It is the sudden, unexpected death of an infant younger than 1 year of age.

**What Should I Know About SIDS?**  
 Always place your baby on his or her back to sleep. The baby should sleep on a firm, flat surface.

**What Can I Do to Lower My Baby's Risk of SIDS?**  
 1. Always place your baby on his or her back to sleep. The baby should sleep on a firm, flat surface.

**1. Keep soft objects, toys, and loose bedding out of your baby's sleep area.** Don't use pillows, blankets, quilts, duvet covers, or quilts in your baby's sleep area. Don't use anything in your baby's sleep area that could cover his or her face.

**2. Do not allow anything around your baby.** Don't let anyone else put anything around your baby.

**3. Keep your baby's sleep area clear of soft bedding.** Your baby should not sleep in a bed or on a couch or armchair with pillows, blankets, quilts, duvet covers, or quilts. If you are using a cot, crib, or playpen, make sure the mattress fits snugly in the frame. If you are using a cot, crib, or playpen, make sure the mattress fits snugly in the frame.

**4. Do not let your baby overheat.** Dress your baby in light, comfortable clothing. Don't overdress your baby. Don't use a blanket or coverlet that is too heavy for the room.

**5. Do not use home monitors to reduce the risk of SIDS.** If you have questions about using monitors for your children, ask your health care provider.

**6. Analyze the evidence that flat sleeps will decrease the risk of SIDS.** "Tummy" sleep when your baby is awake and someone is watching, except the American that your baby lies in the crib than one week to the next, and always keep them on their backs, with blankets.

**7. Do not let your baby overheat.** Dress your baby in light, comfortable clothing. Don't overdress your baby. Don't use a blanket or coverlet that is too heavy for the room.

**8. Avoid products that claim to reduce the risk of SIDS.** There are no products that claim to reduce the risk of SIDS. If you have questions about using monitors for your children, ask your health care provider.

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Carlin R. Safe Infant Sleep Practices: Convincing Mothers to Make Cribs Less Cushy**  
 NYSPOC Safe Sleep Project Learning Session, September 2016. Intended audience: Public health and health care professionals.

**Try A Pacifier**  
 Offer a pacifier at naptime and nighttime.  
 Research studies show that pacifiers may prevent SIDS. If you are breastfeeding, wait until your child is at least 1 month old before offering a pacifier. This will help prevent nipple confusion. Don't worry about putting the pacifier back in your baby's mouth if it falls out after he or she falls asleep.

**Children's National Medical Center**  
 Prevent Suffocation, Strangulation, and Sudden Infant Death Syndrome (SIDS)

Children's National Medical Center  
 Gitting Center for Community Pediatric Health  
 111 Michigan Ave., NW  
 Washington, DC 20010  
 Phone: 202-476-2113 (toll-free) Fax: 202-461-3388

**What can you do to prevent suffocation?**  
 Never place your baby on the stomach for sleep. Newborn and young infants can't easily raise their heads, so they need special protection from suffocation.  
 Never put your infant in a crib with soft bedding like blankets, pillows, stuffed animals, or plush toys. Make sure that your baby's face and head are clear of all soft bedding. Avoid pillow-like bumpers, and consider removing crib bumpers altogether. Never place an infant on a mattress covered with plastic.  
 Infants should not sleep in the same bed with other children. It is okay for mom to bring the baby into bed for outside time and breastfeeding, but never let the baby sleep with other children because it's dangerous.  
 Make sure your baby's crib sheet fits snugly on the mattress to keep it from coming off and getting wrapped around your baby's head. Keep all loose bedding away from your baby's crib. This includes sheets that do not fit properly, blankets, comforters, pillows, toys, and crib bumpers.

**What can you do to prevent strangulation?**  
 Don't put necklaces or headbands on your infant. Remove ties when your baby is placed in his or her crib for sleep. Don't hang diaper bags or purses on cribs, because a baby can become entangled in the straps or straps. Don't use a string or anything else to attach a pacifier around your baby's neck or clothing.  
 Don't dress your baby in clothing that has drawstrings. Drawstrings can get caught on crib equipment and furniture. Cut drawstrings out of the hood, pants, and waistbands of your infant's clothing. Cut strings off mittens.  
 Don't leave your infant alone in a stroller. Babies can slide down and trap their head.  
 Don't use cribs that have cutouts in the headboard or footboard.  
 Make sure your baby's mattress is the right size and fits snugly in the crib. This will prevent the baby from getting caught between the mattress and the crib.

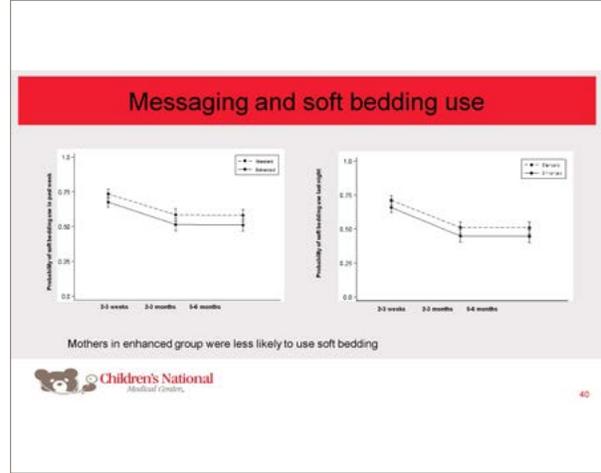

**What can you do to prevent SIDS?**  
 Sudden Infant Death Syndrome (SIDS) is the term used when a baby dies suddenly from no known reason. Some people call SIDS "crib death" because many babies who die of SIDS are found in their cribs, but cribs don't cause SIDS.  
 Always place your baby on his or her back to sleep, for naps and all night. Babies who sleep on their stomachs are much more likely to die of SIDS than babies who sleep on their backs. The back sleep position is the safest.  
 Place your baby on a firm sleep surface, such as a safety approved crib mattress, covered by a fitted sheet. Never put your baby to sleep on pillows, quilts, sheepskins, or other soft surfaces.  
 Keep soft objects, toys, and loose bedding out of your baby's sleep area. Don't use pillows, blankets, quilts, sheepskins, or pillow-like crib bumpers in your baby's sleep area, and keep all items away from your baby's face.  
 Do not allow smoking around your baby. Don't smoke before or after the birth of your baby, and don't let others smoke around your baby.

 † Standard group is reference group for all adjusted odds ratios

### Other results

- No impact of messaging on
  - Sleep position
  - Sleep location
  - Bedsharing
  - Breastfeeding

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Carlin R. Safe Infant Sleep Practices: Convincing Mothers to Make Cribs Less Cushy**

NYSPOC Safe Sleep Project Learning Session, September 2016. Intended audience: Public health and health care professionals.

### Discussion

- Mothers who received an enhanced message about SIDS risk reduction and suffocation prevention were significantly less likely to use soft bedding in their infant's sleep environment
  - 26% decrease in soft bedding use last night
  - 30% decrease in soft bedding use in the past week

43

### Self Efficacy

- Self efficacy was higher in African American mothers with regards to suffocation than SIDS
- African American Mothers more likely to believe unsafe sleep practices increased their infant's risk of suffocation than SIDS.
- High Self Efficacy does not necessarily correlate to decreased use of soft bedding:
  - Mothers with a high vigilance who felt they could prevent SIDS and those who reported watching infant to prevent SIDS were more likely to use soft bedding
  - Mothers who believed that there is no way to prevent SIDS or suffocation were also more likely to use soft bedding.

44

### Bedsharing

- Mothers who bedshare to prevent SIDS are more likely to use soft bedding
  - Parents worried infant will fall off the bed of another bedsharer will roll into the infant
  - Use soft bedding to build a barrier to protect the infant
- Risk of SIDS while bedsharing is increased when soft bedding is present
- Soft bedding may need to be addressed with parents even in the setting of bed sharing

45

### Limitations

- Demographic variance from national surveys of African-American Women
  - from a single geographic area
  - less likely to attend college
  - more likely to be unmarried
  - more likely to have Medicaid health insurance
    - Those with lower socioeconomic status have been found to be less likely to adhere to sleep recommendations
- Attrition rate over 6 months was high (47%) and mothers who completed all interviews were demographically different than baseline
- Inherent limitations in parental reporting
- Potential for social desirability bias as mothers receiving the enhanced message may have had a different reporting tendency than those receiving standard message
- Self efficacy questions may impact maternal willingness to be forthcoming about actual practices

46

### Conclusions

- Enhanced messaging against both SIDS and suffocation decreased the use of soft bedding in African American mothers when compared to standard messaging and should be used as a tool to help decrease the rate of SIDS in this population
- Enhanced messaging did not affect maternal self efficacy, bedsharing, sleep location, breast feeding or positioning of infants

47

**Children's National Medical Center - Infant Safe Sleep Brochure**

**It is recommend that nursing mothers breastfeed their baby. Research shows that breastfeeding reduces the risk of Sudden Infant Death Syndrome (SIDS).**  
 If you can, give your baby only breast milk for at least the first six months. Breastfeeding gives you lots of time to cuddle and bond with your baby and helps protect against many illnesses.

**The safest place for your baby to sleep for the first six months is in a crib placed near your bed.**  
 Your baby should not sleep in a bed, on a couch, or on an armchair with adults or other children, however, he or she can sleep in the same room as you. Your baby's crib should meet current standards. For guidelines, please visit the Consumer Product Safety Commission's website at [www.cpsc.gov](http://www.cpsc.gov) or the Juvenile Products Manufacturers Association's website at [www.jpma.org](http://www.jpma.org).

**Miltsch N. *Creating a Successful Grandparent Class*** NYSPQC Safe Sleep Project Learning Session. September 2016. Intended audience: Public health and health care professionals.

*The NYSPQC Safe Sleep Project participants found that grandparents are very influential on safe sleep practices once the baby returns home from the hospital. Through the project's listserv, and during an in-person Learning Session, hospitals shared educational materials used in their grandparent education programs to ensure that grandparents understood and were practicing safe sleep with infants.*

**ROCHESTER GENERAL HOSPITAL**

- 526 Bed community hospital
- One of the highest concentrations of poverty and children living in poverty
- Level II nursery
- Approximately 2,500 births per year

**Marketing Strategies**

- Birth center brochures sent to all pregnant women in preadmission packets
- Call center representatives making recommendations, staff knowledgeable about class content
- Bundle discounts for multiple classes
- Class schedules reviewed during all prenatal classes
- Recommendation for class from attending physicians
- Cost: \$25 per family
- No fee for clinic patients
- Discounted parking
- Not restricted to RRH patients
- Raffle gift certificate for grandparent class

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep

**Miltsch N. *Creating a Successful Grandparent Class*** NYSPOC Safe Sleep Project Learning Session.

September 2016. Intended audience: Public health and health care professionals.

- Budget cuts
- Low attendance
- Wrong class placement
  - Cost
- Perception that previous knowledge was wrong
  - Learning environment
- Lack of educational component
  - Skepticism
  - Fear
- Grandparents feeling insulted
- Misunderstanding that being a grandparent makes you an expert
- Desire to not interfere

Today's Grandparents...

...not the same image of the old granny and gramps!

Today's Grandparents Are:

- Healthier
- Younger
- Still employed
- More engaged
- Primary Care Providers

**And they have:**

- Active social lives
- Diverse lifestyles
- Long distance relationships

Don't ask "Why do I have to go to class?"  
Ask "Why not?"

Been there, done that!

...But wait!

It's not the same??

COMPARISON OF INFANT CARE

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep

**Miltsch N. *Creating a Successful Grandparent Class*** NYSPOC Safe Sleep Project Learning Session.

September 2016. Intended audience: Public health and health care professionals.

### What's Out??

- Full-term hospital nursery
- Bathing baby immediately after delivery
- Daily bathing
- Feeding schedules
- Water supplements
- Cord care
- Swaddling
- Smoking
- Side or tummy sleeping
- Assuming toddlers will know not to touch

### Sooo....What's In??

- Skin to skin
- Breastfeeding
- Transition time after delivery before bathing
- 24-hour rooming in
- On-demand feeding
- Tdap vaccines
- Safe sleep practices (back to sleep direct reason for decrease in SIDS)
- No smoking
- Tummy time
- Car seats
- Prevention
- Sleep sacs

### Teaching Style

- Open table forum (lecture style not conducive to participation)
- Promote and support honest dialog and feedback from participants
- Focus on evidence-based information & desire to be updated
- Provide rationale for practice changes
- Reinforce the value of a strong grandparent relationship

### Teaching Style Continued

- Reinforce that what grandparents did in the past was not wrong
- Time allotted for questions and reassurance
- Teach by example at the hospital-education trumps patient satisfaction
- Video, demonstration, handouts
- Opportunity for "seasoned" grandparents to share previous experience

### EFFECTIVE COMMUNICATION BETWEEN PARENTS AND "GRANDER-PARENTS"

- Open, frank conversation in a receptive environment
  - Birth plans
  - Hospital routines
- Agree to listen & respect opinions
- Sharing education with anyone who will be caring for infant
- Being sensitive to grandparents feeling like they did wrong
- Avoid conflict by formulating a clear plan
- Do not pressure
- Establishment of own traditions
- Reality check: How much did new parents know 1 year ago?

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Miltsch N. *Creating a Successful Grandparent Class*** NYSPOC Safe Sleep Project Learning Session.  
 September 2016. Intended audience: Public health and health care professionals.

**Fact:**  
 Grandparents want to do the best for their grandchildren!

**HAPPINESS IS**

...holding your grandchild in your arms and feeling love at first sight.

Long Distance Grandparenting

- Class provides opportunity for grandparents to feel connected during pregnancy
- Technology (FaceTime, cell phones)
- Keeping family traditions alive
- Repetition
- Your grandchildren will know you!
- Sending gifts does not necessarily equal involvement
- Taking a class eliminates pressure for parents to give a crash-course on safety during the grandparent's visit

**EXPECTATIONS WHEN BEING A CARE PROVIDER**

**Congratulations! Your children have entrusted their child to you!**  
 Now what?!

- Establish ground rules
- How will disagreements be handled?
- Will this be a paid position?  
 Grandparent vs. care provider
- Setting aside "grandparent time"
- Review safety education as baby progresses developmentally
- Safety is not a luxury, but a necessity

*Nancy*

We could not have enjoyed the grandparenting class more... you offered so much valuable information we are truly grateful to have before Baby Wandering arrives.

Thank you ever so much!

**Children** are the rainbow of life

**Grandchildren** are the pot of gold

**Albany Medical Center – Grandparent Class Objectives**

*The Birth Place at Albany Med*  
**GRANDPARENT UPDATE**  
**Objectives**

**Objectives of the Program:**

As a result of this class participants will:

1. Have the opportunity to discuss current maternal and infant care practices during their hospital stay (from admission, through labor, childbirth, and during the post-partum period).
2. Have the opportunity to review and update their information regarding infant feedings, infant care, immunizations and infant safety.
3. Have the opportunity to discuss infant care and working parents.

**Target Group:**

Parents of expectant parents who desire to update their information regarding current hospital obstetrical and newborn care.

**Materials Required:**

- Healthy Newborn Appearance Procedures and Reflexes (photo flip chart by Childbirth Graphics)  
Growth and Development Chart – AMC
- Harvey Karp video – Show the 5 S's

**Information packet for participants includes:**

- Class outline (AMC) (2016)
- Family Bibliography (AMC) (2016)
- Universal Hearing Screening Letter (AMC) (2015)
- Immunizations Birth to 6 Years Old (CDC) (2019)
- Hepatitis B Vaccine (CDC) (2018)
- Tdap Vaccine (CDC) (2015)
- Breastfeeding Mothers' Bill of Rights (NYS) (2010)
- Breastfeeding Information (AMC) 2016
- What Grandparents Can Do To Support a Breastfeeding Mother (ILCA) (2004)
- Car Seat Recommendations (NHTSA) (2014)
- Capital Region Child Safety Fitting Stations (2015)
- What Does a Safe Sleep Environment Look Like? (U.S. Department of Health and Human Services) (2018)
- Community Resource List (AMC) (2016)
- Tips for Grandparents of A Newborn (Healthychildren.org) (2015)
- Program Evaluation (AMC) (2016)
- Childbirth Options Brochure (AMC)
- Circumcision (AAP) (2013)
- Keeping Sleeping Babies Safer ((NYS Office of Children & Family Services) (2008)
- Shaken Baby Syndrome (DOH) (2015)
- Skin to Skin (AMC) (2018)
- Safe Babies NY (NYS Office of Children & Family) (2016)

**Instructor:**

An experienced RN or Childbirth Educator with experience in newborn care employed by the Department of Women and Children Nursing. Experience working with families on the Mother/Baby Unit is preferred.

**Class Structure:**

A two hour class will be offered 4 times per year. Each class consists of up to eight families. All families will pre-register for the program

**Class Format:**

The class consists of a combination of lecture and discussion. Group participation is a vital component of the program.

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Catskill Regional Medical Center – Safe Sleep Brochure**

**To calm a crying baby:**

- Check to see if your baby is hungry, is too hot or too cold or needs a diaper change.
- Check to see if your baby is sick or has a fever.
- Feed your baby slowly and burp often.
- Rock your baby.
- Give your baby a pacifier or let your baby breastfeed.
- Play soft music, sing or hum to your baby.
- Take your baby for a ride in a car or stroller.

**If nothing seems to work:**

- Put the baby in his or her crib with the sides up, close the door and walk away.
- Do something to relax: take a bath or shower, watch TV, listen to music.
- Sit down, close your eyes and take deep breaths.
- Call a friend or family member to talk.
- Have someone come over to give you a break.

### What is Shaken Baby Syndrome (SBS)?

**When anyone shakes a baby or young child, the brain and body are seriously injured.**

### Why does SBS happen?

Most people who shake a baby in their care are not trying to hurt the child. They may become frustrated by nonstop crying, difficulty feeding a baby or problems toilet training. Outside stresses like money, work or personal relationships can add to this frustration. Adults may get so upset that they lose control and shake the baby.

It is important to understand that crying is normal! Crying is how babies communicate. They may be too hot or cold, want attention, be tired or hungry or need a diaper change. If your baby is crying, check all of these things first.

### Caring for a baby is stressful!

It is normal to feel frustrated and overwhelmed sometimes. If you get upset, there are things you can do for yourself and the baby that can help you cope.

Anyone may shake a child, even a mother, father or babysitter. Make sure to share this important information on Shaken Baby Syndrome with anybody who cares for your child.

### What happens when a child is shaken?

When a baby or young child is violently shaken, the head rolls back and forth, causing his or her brain to hit the skull. This causes swelling and bleeding of the brain – even the eyes can bleed. It only takes a few seconds of shaking to cause permanent damage to a child.

### Shaking can result in:

- Permanent brain damage
- Blindness
- Seizures
- Cerebral palsy
- Paralysis
- Developmental disability
- Death (1 in 4 die)

### How can I prevent these injuries?

- Never, ever shake a child.
- Make sure that everyone who cares for your child knows not to shake him or her.
- Learn what to do when your baby cries

### Signs and symptoms of Shaken Baby Syndrome

- Extreme irritability
- Baby is very stiff or like a rag doll
- Lethargy
- Seizures
- Not eating or poor appetite
- Dilated pupils
- Feeding problems
- Difficulty breathing
- Vomiting
- Blood spots in eyes

**If you think your child has been shaken, call 911 or bring your baby to the nearest emergency room immediately. Getting medical attention right away could save your child's life.**

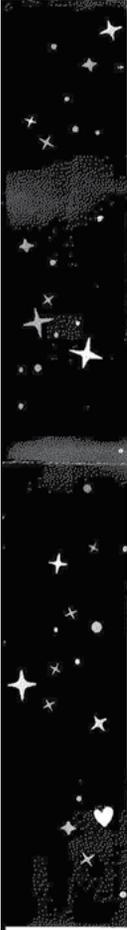

### What can I do to make my baby stop crying?

All babies cry a lot during the first few months of life. Crying does not mean that your baby is being bad or that your baby is angry with you. Sometimes, babies just need to cry.

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Catskill Regional Medical Center – Safe Sleep Brochure**

### OTHER TIPS

- Use a one-piece sleeper. Don't use blankets.
- Be sure baby is not too warm.
- Breastfeed your baby.
- Try using a pacifier for sleep but don't force baby to take it.
- Get your baby immunized.
- If your baby is in a front or back baby carrier, be sure that baby's face is always visible.
- Never use a car seat, baby swing, carriage or other carrier without properly fastening all the straps. Babies have been caught in partially fastened straps and died.
- Make sure no one smokes in your home or around your baby.
- Don't use alcohol or drugs.
- Don't rely on home baby monitors.

## Follow the ABCs of Safe Sleep

**A** Baby Should Sleep **ALONE**.  
**B** Put Baby on Their **BACK**.  
**C** Put Baby in a Safe **CRIB**.

PRINT

Take the second and check... Does your baby look like this??  
**SAFE SLEEP PRACTICE**, nothing should be in the bassinet with your baby

Safe Sleep environment NO, NO's

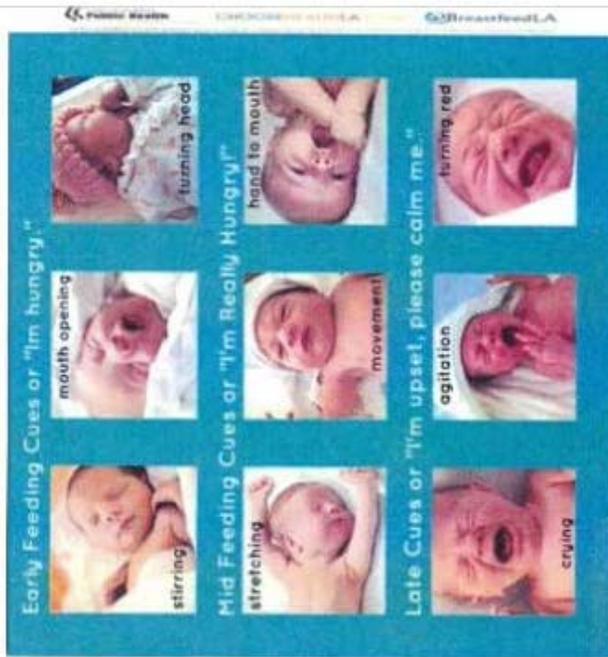

**Rooming-In Benefits for Mother**

- Better quality sleep, parents better rested and more relaxed.
- Increased confidence in handling and caring for baby.
- Ability to learn what your baby's cues are (sleepy, stressed, in need of quiet time or hungry).
- Earlier identification of early feeding cues (rooting, opening mouth, and sucking on tongue, fingers or hand) which improves breastfeeding experience.
- Less "baby blues" and postpartum depression.

**Rooming-In Benefits for baby**

- Better quality sleep. Your baby will develop a more regular sleep-wake cycle earlier, and may help ease the transition to day/night routines.
- More stable body temperatures and blood sugar.
- Generally more content, less crying.
- Breastfeed sooner, longer and more easily.

The best advice we can give new parents is to learn how to rest when your baby sleeps day and night in the first few days. Early in the newborn period, babies eat frequently, and find comfort and security in being close to you.

Patient Identification

#### Snuggery Family Newborn Safety Partnership Agreement

Congratulations from The Snuggery on the birth of your newborn!

Your baby’s safety is a priority at all times in The Snuggery. Your baby’s safety depends on hospital staff and parents working together to keep your newborn safe.

**The Snuggery staff and parents promise to:**

- ❖ Instruct all persons handling your baby to perform hand washing or sanitizing before handling your baby.
- ❖ Make sure the security tag is applied to your baby’s ankle at all times.
- ❖ Match baby identification bands whenever the baby is separated from you.
- ❖ Never leave the baby unattended.
- ❖ Place the baby safely in the bassinet when sleeping or moving outside your room.
- ❖ Never handle the baby outside of the bassinet or in a chair without assistance when you are drowsy.
- ❖ Never leave the baby in bed with you when you are drowsy or sleeping.
- ❖ Follow A- B-Cs of safe sleep practices for the baby at all times.

**As a parent I recognize that leaving the Snuggery unit at any time during my hospital admission is not safe for me and therefore not in the best interest of my baby.**

**A** ALONE  
**B** on my **BACK**  
**C** in a **CRIB**

## PARENT GUIDE TO PRACTICING SAFE SLEEP AT HOME

✓ **SAFE SLEEP**

✗ **NOT SAFE SLEEP**

Sudden Infant Death Syndrome (SIDS) and sleep related death are two common health worries for babies between 1 month and 1 year of age. Making sure your baby has a safe sleep space is one important way to protect your baby. Below are the “**ABCs**” of safe sleep.

**A – ALONE**

- Share your ROOM with your baby... not your BED
- Sharing a bed with your baby increases the chance of a baby dying by 40 times
- Adult beds and bedding are soft and are a suffocation (smothering) danger
- Keep the room a comfortable temperature (ideally between 70-77°F or 21-25°C)

**B – On my BACK**

- Lying on the back is the safest position to protect baby from aspiration (choking) episodes.
- The windpipe (airway) is in front of the esophagus (feeding tube). Gravity keeps milk away from baby’s airway when a baby is on the back.
- Being on the side or on the belly makes it EASIER for milk to get into the windpipe.

**C – In a CRIB**

- Your baby’s crib should have a firm mattress covered by a tight-fitting sheet. No stuffed animals, loose or fluffy blankets, crib bumpers, toys, or other similar items should be in the crib.
- Extra items in the crib increases the chance baby can be smothered.
- Don’t use infant positioners
- You can swaddle a fussy baby.
- You can use a pacifier in a baby more than 1 month old to help baby fall asleep, but don’t clip the pacifier to baby’s clothes. Baby can be strangled by the cord or ribbon.

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Montefiore Medical Center - Parent's Guide to Practicing Safe Sleep at Home (English)**

## HOW TO SWADDLE

Swaddling is a soothing technique used during the newborn stage to help babies calm and sleep. Swaddling should be stopped after 2 months of age, before baby starts to roll. Parents should know that swaddling may decrease a baby's arousal, making the baby sleep more soundly and making it harder for the baby to wake up.

### HIP SWADDLING USING DIAMOND SHAPE TECHNIQUE

- Fold one corner of a square blanket down and place the baby with its head in the center above the folded corner.
- Fold the right corner of the blanket over the baby between the left arm and under the left side.
- Then fold the left corner of the blanket over the baby and under the right side.
- Fold or twist the bottom of the blanket loosely and tuck it under one side of the baby.
- Legs should be able to bend up and out.

**STEP 1**  
Dress baby in regular sleepwear and close the zipper.

**STEP 2**  
Fold left swaddle wing over baby's right arm and torso, tucking under baby's left arm.

**STEP 3**  
Swaddle wrap should be snug, below chin, and aligned with baby's shoulders.

**SOLO**  
en mi **ESPALDA**  
en una **CUNA**

## Guía para Padres Practicar Formas seguras de dormir para el bebé en su casa.

Síndrome de Muerte Súbita Infantil (SIDS) y la muerte relacionada con el sueño son dos preocupaciones comunes de salud para los bebés de 1 mes a 1 año de edad. Asegurarse de que su bebé tiene un espacio seguro para dormir es una manera importante de proteger a su bebé. A continuación se presentan el "ABC" de sueño seguro.

**A – ALONE (SOLO)**

- Comparte su habitación con su bebé ... no su cama. Compartir la cama con su bebé aumenta la probabilidad de que un bebé muera por 40 veces.
- Las camas de adultos y ropa de cama son suaves y pueden causar una (sofocación) peligro de asfixia
- Mantenga la habitación una temperatura agradable (lo ideal es entre 70-77°F o 21-25°C)

**Segura Forma De  
Dormir**

**B – On my BACK (En mi ESPALDA)**

- Acostado sobre la espalda es la posición más segura para proteger al bebé de la aspiración (episodios de asfixia).
- La tráquea (vía aérea) se encuentra en frente del (tubo de alimentación) esófago. La gravedad mantiene la leche fuera de las vías respiratorias del bebé cuando un bebé está en la parte posterior.
- Estar en el lado o en el vientre hace que sea más fácil para la leche entrar en la tráquea.

**No Forma Segura  
Para Dormir**

**C – In a CRIB (En una CUNA)**

- La cuna del bebé debe tener un colchón firme cubierto por una sábana ajustada. Sin animales de peluche, mantas sueltas o esponjosas, protectores de cuna, juguetes u otros artículos similares deben estar en la cuna.
- Los elementos adicionales en la cuna del bebé aumenta la probabilidad que él bebe pueda sofocarse.
- No utilice los posicionadores infantiles.
- Se puede envolver a un bebé inquieto.
- Se puede utilizar un chupete en un bebé más de 1 mes de edad para ayudar al bebé a dormirse, pero no sujetar el chupete a la ropa del bebé. El bebé puede ser estrangulado por el cordón o cinta.

## Mt. Sinai Hospital – Safe Sleep Top Ten List

Parenting Center

### Safe Sleep Top Ten List

#### Safety

The National Institute of Child Health and Human Development makes the following recommendations to reduce the risk of Sudden Infant Death Syndrome (SIDS):

#### Safe sleep top 10 list:

1. Always place your baby on their back to sleep at all times – for naps during the day and sleeping at night (even if you are watching him/her!)
2. Place your baby on a firm sleep surface, such as on a safety-approved crib mattress, covered by a fitted sheet. Never place the baby to sleep on pillows, quilts, sheepskins, or other soft surfaces.
3. Keep soft objects, toys, and loose bedding out of your baby's sleep area. Don't use pillows, blankets, quilts, and stuffed animals in baby's sleep area, and keep any other items away from the face.
4. Do not smoke around your baby or let others smoke around him/her either.
5. Keep your baby's bed close to, but separate from, where you and others sleep. The baby shouldn't sleep in a bed with adults or other children, but can sleep in the same room as you. If you bring the baby into bed with you to breastfeed, put him/her back in a separate sleep area, such as a bassinet, crib, cradle, or bedside co-sleeper (infant bed that attaches to an adult bed) when finished.
6. Think about using a clean, dry pacifier when placing your baby down to sleep (because it has been shown to decrease the risk of SIDS), but don't force the baby to take it.
7. Do not let your baby get too hot during sleep. Dress the baby in light pajamas, and keep the room at a temperature that is comfortable for an adult.
8. Avoid products like infant positioners and pillows that say they reduce the risk of SIDS. Most have not been tested for usefulness or safety.
9. Do not use home monitors to reduce the risk of SIDS. If you have questions about using monitors for other medical reasons talk to your pediatrician.
10. Reduce the chance that flat areas will develop on your baby's head: give "tummy time" when the baby is awake and someone is watching closely; change how you place the baby in the crib from one week to the next to avoid the baby always looking in the same direction; and avoid too much time in car seats, carriers, and bouncers.

<b>Current Status:</b> Active		<b>PolicyStat ID:</b> 5870379	
		<b>Origination:</b> 5/1/2013 <b>Last Approved:</b> 3/22/2019 <b>Last Revised:</b> 3/22/2019 <b>Next Review:</b> 3/21/2022 <b>Owner:</b> Ann Ottman <b>Policy Area:</b> SMH Guidelines <b>References:</b> <b>Applicability:</b> University of Rochester - Strong Memorial Hospital	
			
<b>Infant Safe Sleep Environment</b>			
<b>General Information:</b>			
<p>Sudden Infant Death Syndrome (SIDS) is the sudden death of an infant less than 12 months of age that cannot be explained after a thorough investigation is conducted, including an autopsy, investigation of the place of death and review of the clinical history. Sudden Unexpected Infant Death (SUID) is a term used to describe any sudden and unexpected death, regardless of whether or not it is caused by SIDS. SUIDs can be attributed to several preventable causes including suffocation, asphyxia, and entrapment.</p> <p>In 1994, the American Academy of Pediatrics initiated the "Back to Sleep" campaign to promote supine sleep for the prevention of SIDS. In 1996, the campaign was updated to encourage supine sleep in premature as well as term infants. In 2011 the AAP expanded recommendations beyond "Back to Sleep" to include additional recommendations for a Safe Infant Sleeping Environment. In 2016 the AAP updated their recommendations for a safe infant sleeping environment.</p>			
<b>Purpose:</b>			
<p>It is essential for staff that cares for infants to promote safe sleep practices through implementation, role modeling and patient education. These guidelines outline the 2016 AAP safe infant sleep environment recommendations that should be implemented by all staff that provide care to infants.</p>			
<b>AAP 2016 Safe Infant Sleeping Environment:</b>			
<p><b>Unless medically contraindicated the following A-Level recommendations should be in place for all infants to promote a safe sleep environment.</b></p>			
<ol style="list-style-type: none"> <li>1. Place the infant in a supine position for sleep for all naps and at night. Once an infant can roll from prone to supine and supine to prone, the infant can be allowed to remain in their assumed position.</li> <li>2. Use a firm sleep surface, such as a mattress in a safety-approved crib, covered by a secured or fitted sheet. Area should be free of hazards such as dangling cords (including balloons), electric wires, and window-covering because they might present a strangulation risk. (Infants should NOT sleep in swings that are in an upright position, infant seats or car seats as they might assume positions that can create risk of suffocation or airway obstruction).</li> <li>3. Breastfeeding is recommended.</li> <li>4. Room-sharing without bed-sharing. A separate but proximate sleeping environment is recommended. An infant should not share a bed, sleeper chair or chair with another adult or child while asleep. If an infant is</li> </ol>

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Strong Memorial Hospital - Safe Sleep Initiative Parent Signature Form**

found bed sharing with a sleeping adult, the infant will be returned to their crib, re-education will be provided to the caregiver and documented. Reeducation along with documentation will occur with repeated instances of bed sharing.

5. Keep soft objects and loose bedding out of the crib, including bumper pads, pillows, blankets, quilts and stuffed toys.
6. Consider offering a pacifier at naptime and bedtime once breastfeeding is firmly established and after discussion with parent/caregiver. Pacifiers should be one piece construction with an easily grasped handle and a flange large enough to prevent mouth entry. Pacifiers that have the stuffed animals or attached strings can be dangerous.
7. Avoid smoke exposure (including changing clothes prior to handling infant after being exposed to smoke) and use of alcohol or illicit drug use around infant.
8. Avoid overheating. Infant should be dressed appropriately for the environment, with no more than one layer more than an adult would wear to be comfortable in that environment. Infant sleep clothing that is designed to keep the infant warm without the possible hazard of head covering or entrapment can be used.
9. Infants should be immunized in accordance with AAP and CDC recommendations.
10. Home cardiopulmonary monitors should not be used as a strategy reduce the risk of SIDS.
11. Health care providers, staff in newborn nurseries and NICU's and child care providers should endorse and model the SIDS, risk-reduction recommendations from birth. Parents/caregivers of infants will be provided safe sleep education.
12. Media should follow safe sleep guidelines in messaging.
13. If medical contraindications are present that prevents implementing AAP recommendations on pediatric general care units, a provider order should be requested.
14. Swaddling. AAP 2016 cautions that there is a high risk of death if a swaddled infant is placed in or rolls to the prone position. If swaddling used the AAP recommends the following:
  - Infant should be placed supine.
  - Swaddling should be snug around the chest but allow room at hips and knees to avoid exacerbation of hip dysplasia.
  - Once the infant attempts to roll, swaddling should be discontinued.

### Healthy Newborn Guidelines:

1. Mothers' are educated about safe sleep practices during their postpartum stay. Written safe sleep information is provided and mother is encouraged to view Safe Sleep video.
2. Mother signs Safe Sleep Initiative ( form SH 2110) prior to discharge, indicating commitment to safe sleep practices and acknowledging if she viewed safe sleep video during her postpartum stay.

### NICU Specific Guidelines:

1. Begin transitioning the infant to a supine sleep position by at least 32 weeks gestational age unless the infant's clinical status prevents them from lying supine (eg. medical condition/incision which prevents them from supine positioning, advanced respiratory support, etc).
2. The transition should include:

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep

## Strong Memorial Hospital - Safe Sleep Initiative Parent Signature Form

- Parent education
  - Supine sleep position for all sleep (daytime and nighttime)
  - Head of the bed flat
  - Wearable blanket (eg. Halo Sleepsack) may be needed to help maintain infant in a normal temperature range.
  - Often, preterm infants require additional layer to support thermoregulation as infants are weaning to an open crib. If additional blankets/layers are required, a blanket should be placed INSIDE the sleep sack on the torso/legs only with the infant's arms out and through the sleep sack. For example: At most, infants should only be dressed in the following:
    - An onesie
    - An outfit/ pajama
    - One blanket with infant's arms bundled out
    - One sleep sack with arms through armpit holes
  - If patient continues to have temperatures below normal range, the infant should be placed in an isolette per the "Transfer of Preterm Infants from Incubator to Open Crib" policy.
  - **Rationale:** NICU infants have the potential to be ready for discharge as early as 34 weeks corrected gestational age. By initiating the supine sleeping position at 32 weeks this allows for a period of adaptation, evaluation as well as the opportunity to educate parents and caregivers. The AAP recommends placing infants supine as soon as medically stable.<sup>1</sup>
3. If a medical contraindication exists for not placing an infant in the supine position for sleep, a provider order is needed.
  4. If after 32 weeks corrected gestational age the infant needs to maintain an elevated head of bed, a provider order is required. Ongoing evaluation by the team during rounds should continue until such time as the infant meets criteria.
  5. Infants who are diagnosed with gastro esophageal reflux disease (GERD) should be evaluated on a case by case basis for keeping the head of the bed elevated and should only have an order to do so if it is felt the risk of complications from GERD is greater than the risk from SIDS.<sup>1</sup>
  6. Parents and caregivers should be educated about safe sleep practices during their NICU stay. Discussion should start prior to 32 week gestation. Provide parents with Safe Sleep information and offer them opportunity to view safe sleep video. Educational materials are available in English or Spanish. Parents should be encouraged to share safe sleep practices with family members or caregivers of their infant.
  7. For infants who are weaning from the incubator please follow the guidelines for bundling or Halo Sleeper use. Halo Sleepers are available in either premature or newborn size. If the infant must be bundled with a blanket, bundling should be done with one blanket and the top blanket between the nipples and shoulders tucked under the mattress with their feet at the bottom of the bed.

**Rationale:** Loose bedding should not be used in the infant's sleeping environment.

Infants in incubators should be weaned from all developmental positioning products **PRIOR** to being placed in an open crib unless there is a medical indication. If there is a medical indication for the use of a position aide, a provider order is required.

Driver:

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**Strong Memorial Hospital - Safe Sleep Initiative Parent Signature Form**

**Documentation:**

- Need for order (provider or nursing driven) for positioning outside of these guidelines
- Rationale for alternate positioning must be documented
  - Notes from OT or providers
- Education for parents must be documented (written material, video prescribed/viewed)
- Parental non-compliance must be documented via EMR.

**Statement**

Guidelines are intended to be flexible. They serve as reference points or recommendations, not rigid criteria. Guidelines should be followed in most cases, but there is an understanding that, depending on the patient, the setting, the circumstances, or other factors, guidelines can and should be tailored to fit individual needs.

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep  
**United Memorial Medical Center - Infant Safety Guidelines**

**ROCHESTER REGIONAL HEALTH** | **Infant Safety Guidelines**

The nursing staff at United Memorial Medical Center want to encourage you to be with your baby as much as possible throughout your stay. We practice 24 hour rooming in to help you and your baby get used to each other's sleep cycles and feeding cues, however the baby may go to the nursery at any time if you feel the need.

Some guidelines we would like you to follow during your stay include:

1. Recognize the pink hospital badge worn by the nurses that identifies them as maternity staff and know who your nurse is on each shift.
2. Realize that once you are admitted to the hospital you will not be allowed to leave the floor for any reason until discharge.
3. Your baby will be wearing numbered ID bands on his/her ankles before leaving the delivery room. The band numbers will correspond with bands that you and the father (or your support person) will also have on. Any time the baby is taken to the nursery or leaves your room for any reason, upon returning the numbered ID bands should be checked to ensure that the numbers match. If any of the bands are missing, fall off or appear too snug please let your nurse know.
4. The baby cannot be left alone in the room or left with other un-banded visitors, one of the parents (or the support person) with the ID band needs to be with baby at all times for safety reasons.
5. Restrict visitors to your closest family and friends over the age of 14 (siblings of the baby that do not display signs or symptoms of illness regardless of age are allowed).
6. Practice good hand hygiene by washing your hands or using hand sanitizer foam before handling the baby, encourage the father and other visitors to do the same.
7. The baby must be placed on his/her back in the open crib, alone, without any soft items (stuffed toys, pillows, loose bedding etc.) whenever you are napping, sleeping or using the bathroom.
8. The baby should never be put to sleep or left alone on an adult bed, sofa/couch, chair, recliner, pillows or any other soft surfaces. Infants sleep **Alone on his/her Back in a Crib**.
9. Sleeping with the baby or "co-sleeping" is not permitted in the hospital, as it can be dangerous.
10. When the baby is in the room with you, keep the open crib beside your bed and away from the door.
11. Ensure safe transport of your infant at all times via the open crib whenever he/she leaves your room, the baby should never be carried in your arms in the hallway.
12. UMMC promotes and encourages breastfeeding as the optimal way to feed a baby. As such every mother will be provided an educational pamphlet that will outline the benefits of breastfeeding for both mother and baby as well as the risks of formula feeding and supplementation.

By signing below I confirm that a nurse has reviewed the above information with me, I have been provided the described educational material, been given the chance to ask questions and agree to abide by these guidelines.

**Westchester Medical Center - Safe Sleep Bedside Ticket (English and Spanish)**

## SAFE BABIES

Remember the **ABC'S** of Safe Sleep: **A**lone, on the **B**ack, in the **C**rib.

**Alone:** Nothing in the crib but the baby!

**Back:** Tell all caregivers that your baby sleeps on the back only.

**Crib:** Never sleep with your baby! *Share the room to stay close.*

**Do not** over bundle your baby when sleeping. *Keep the room at a temperature that is comfortable for a lightly dressed adult.*

Provide tummy time while awake and supervised.

Think about using a pacifier at sleep times.

Keep your home **smoke free.**

**Maria Fareri Children's Hospital**  
Westchester Medical Center Health Network

100 Woods Road, Valhalla, NY 10595 • (914) 493-7000  
 WestchesterMedicalCenter.org/MFCH

## BEBÉS SEGUROS

Recuerde el **ABC** del sueño seguro: **A**l dormir solo, **B**oca arriba, en la **C**una.

**Al dormir solo:** ¡No debe haber nada en la cuna salvo el bebé!

**Boca arriba:** Dígale a todos sus cuidadores que su bebé solo debe dormir de espaldas.

**Cuna:** ¡Nunca duerma con su bebé! *Compartan habitación para mantenerse cerca.*

**No** arrope demasiado a su bebé cuando esté durmiendo. *Mantenga la habitación a una temperatura que sea cómoda para un adulto que no esté abrigado.*

Deje que su hijo esté boca abajo mientras está despierto y vigilado.

Piense en utilizar un chupete durante las horas de dormir.

Mantenga su hogar **libre de humo.**

## From the Hospitals

### GOOD SAMARITAN HOSPITAL OF SUFFERN

#### Lessons Learned:

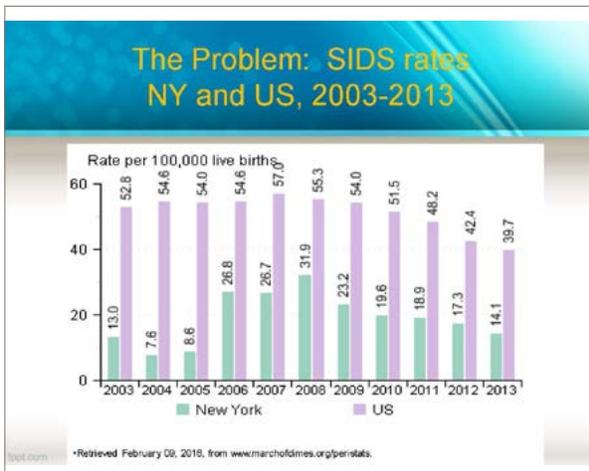

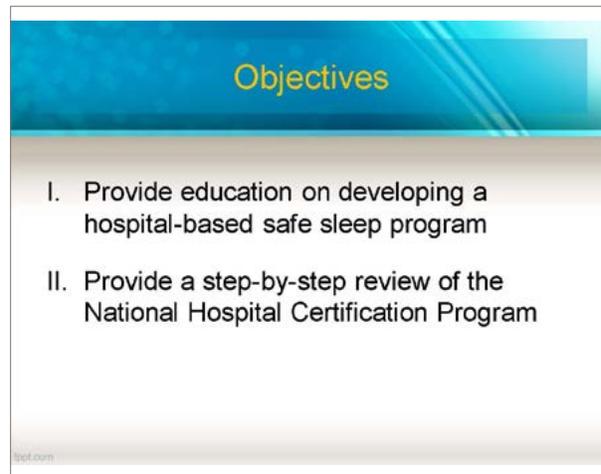

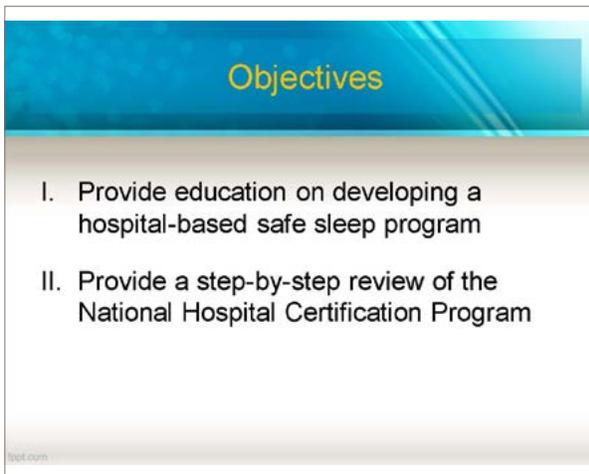

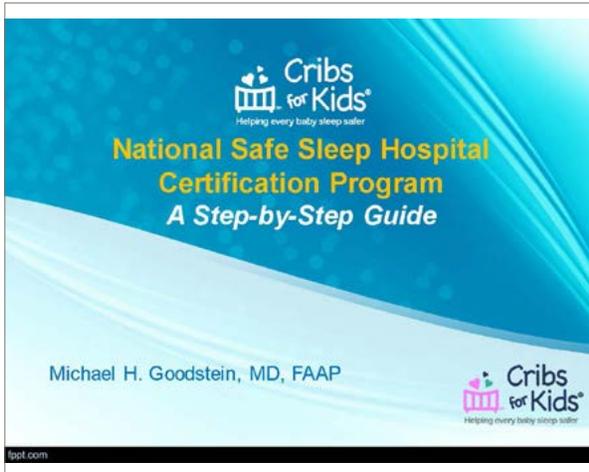

Know your patient population and how they learn best. We learned from community-based partners that the Hasidic culture utilizes extended family to care for newborn infants so the mothers may rest. So we extended our safe sleep education to grandmothers as well as the mothers. We also learned that many of our patients do not watch DVDs or television. In the hospital our patients preferred to be taught 1:1 by their nurse rather than watch the safe sleep DVD.

*To read more about Good Samaritan Hospital of Suffern, see **Section 10**.*

### The Problem

- 3,500 SUID per year
- Lack of consistent messaging
  - Verbal
  - Visual
- Where do you even begin?
  - Inertia
  - Helplessness
  - Disbelief

### Not Following the Evidence

- IOM study: How long for HCP's to incorporate new EBM into practice?
- 2006: 52% routinely provide discharge instructions that promote supine sleep at home
- 2015: 53% strongly agreed recommendations make a difference in preventing SIDS
- 20% strongly agreed that parents would model nurses' behaviors at home.

Aris: Adv Neonatal Care. 2006 Oct;8(5):261-64.  
Barnsman: Adv Neonatal Care. 2015 Vol. 15(3): 209-19.

### Transtheoretical or Stages of Change Model

- New knowledge/innovations pass through predictable stages:
  - Knowledge
  - Persuasion
  - Decision
  - Implementation
  - Confirmation

http://data.wagner.edu/online/health/change/

### Diffusion of Innovation Theory

- Key players:
  - Opinion leaders
  - Change agents
  - Change aids

### Diffusion of Innovation Theory

- People respond differently to change:
  - Innovators
  - Early adopters
  - Early majority
  - Late majority
  - Laggards

### Patient Safety Issue

- Premise: Do no harm
- Harm in the hospital:
  - Hospital Associated Infections
    - CLABSI, UTI's
  - "Never events" (wrong site surgery, retained foreign bodies)
  - Falls and fall-related injuries
  - Readmissions

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Presentation for Administration

- Support from physicians already knowledgeable about SIDS/SUID (**Opinion Leaders**)
- Scope of problem
  - national and local statistics
- Logistics of program- focusing on a successful program model that has produced excellent public health care results
- Cost-effectiveness

### Staff Acceptance “Buy-In”

- Pediatric and NBN nurses with knowledge about SIDS make quick allies (**change agents**)
- Resistance to “another program” is easily overcome by:
  - Concept of a program to reduce local infant mortality
  - Use of Statistics
  - Use of Evidence-Based Medicine

### Nursing Buy-In: Initial Discussions

- Nurse Managers (**Change Agents**)
- Discussions at staff organizational levels (**Change Aids**):
  - Multidisciplinary committees
  - Nursing councils
  - Nurse leaders: support dissemination of program concept to general staff
- Follow-up discussions
- Timing is important!

### Challenge Your Staff! Why are our babies dying???

### Staff Education

- Intensive education to develop expertise to talk to families
- Nurses are reluctant sleep safety advocates because:
  - Lack of formal training
  - Lack of time to review research
  - Disbelief that changing their behavior will make a difference
  - Discomfort with back to sleep (fear of aspiration)

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Healthcare Provider Education

- Develop an infant sleep safety policy for the hospital:
  - Set the standard of care at the institution
  - Sample policies in the Hospital Initiative Toolkit
  - Finalized through newborn and pediatric hospital committees

### Hospital Nursing Education

- In-service lectures vs. computer-based training
- Lecture compliance may be difficult if not mandatory
- Computer-based easier to do, but teaching may be less effective
- Provided CME credits

### Avoiding Potential Pitfalls

- Fear of Aspiration
- Claims made against the program:
  - Anti-bonding
  - Anti-breastfeeding

### Maintenance of Education

- Safe sleep toolkit at nurses' stations
  - Hospital safe sleep policy
  - Review of appropriate practices
  - Discussion points to review with families
- Informational flip charts
- Computer-based review course with test as part of yearly competencies

### Healthcare Provider Education: In the Community

- Went into local physician offices to lecture during staff meetings
  - Pediatric and obstetrical
    - OB offices focused on prenatal educators
  - Provided posters and teaching materials
  - Discussed bad information in free magazines
- Family Practice Grand Rounds
- Emergency Department Education
- VNA
- Red Cross Educators
- Prenatal Class Educators

### A Model Program

- Replicate Shaken Baby Program (now called abusive head trauma)
- 50% reduction in shaken baby injuries reported by Dr. Dias (Peds April 2005)
- Program Components:
  - DVD presentation on infant sleep safety
  - Face to face review with nursing staff
  - Sign voluntary acknowledgement statement

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Hospital Initiative Components

[www.cribsforkids.org/HospitalInitiativeToolkit/](http://www.cribsforkids.org/HospitalInitiativeToolkit/)

- INTRODUCTORY LETTER
- HOSPITAL INITIATIVE TOOL KIT INSTRUCTIONS
- ORGANIZATIONAL CHART
- HOSPITAL POLICY
- ACKNOWLEDGMENT FORM (Engl. & Span.)
- SAFE SLEEP EDUCATIONAL IFLIP CHART
- NONCOMPLIANCE WAIVER (Engl. & Span.)
- NURSING EDUCATION MODULE
- SAFE SLEEP POSTERS
- DOOR HANGERS (Engl. & Span.)
- GRADUATION CERTIFICATE
- SAMPLE LETTER TO HOSPITALS
- SAMPLE LETTER TO PROVIDERS
- INFANT SAFE SLEEP BROCHURES (Engl. & Span.)
- PRESS KIT

### Infant Safe Sleep Program: Supplemental Components

- Place posters prominently in every labor, maternity, and pediatric room, offered to all OB, Peds, and FP offices
- Have wearable blankets available for purchase at discount at gift shop and lactation center
- Display nursery at entrance to maternity
- Hospital phone service (on-hold message)

### Voluntary Acknowledgement Statement

**By signing this statement I agree that I have received this information and understand that:**

“My baby should sleep on the back; sleeping on the side or tummy is dangerous.”

“Sleeping with my baby increases the risk of my baby dying from suffocation or SIDS.”

### Voluntary Acknowledgement Statement

- An acknowledgement form only
- Focuses family on the importance of the information
- Not for legal purposes
- Protects the hospital from potential legal action in event of a later SUID event at home

### Safe Sleep Posters

11" x 17" ~ Engl. & Span.

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Qualitative Study Results (n = 17)

- Overall 94% of sites were pleased with their progress on safe sleep:
  - 11/17 very well
  - 5/17 relatively successful, helped significantly, making progress, fairly well
  - 1 hospital failed to maintain the program

### Achieving Cultural Change

- “Nurses hold each other accountable”
- “Rarely find things in the crib”
- “Nurses come to report incidents of unsafe sleep”
- “We have convinced both nursing staff and the patients that this is an important topic.”
- “The sustainability of this initiative is remarkable.”

### Five Themes to Successful Culture Change: Infant Sleep Safety

- LEADERSHIP
- EDUCATION
- PERSISTENCE
- PERSONALIZE
- INSTITUTIONALIZE

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Reasons for Success

- Leadership: people to promote and sustain the program; multidisciplinary
  - “the nurses know that physicians will back them in discussions around safe sleep”
- Education
  - “a lot of the educational support we received from the program promoted buy-in”
  - “what has made this program work is education, continued education of staff... and education of patients and community”

### Reasons for Success

- Persistence
  - “It took patience and consistency to make the change happen”
    - Takes more than one time education
    - Maintenance of competency
    - Changing personnel
- Personalize
  - “making SIDS a personal issue for us and convincing us of the need to get serious about patient education has been the key”

### Reasons for Success

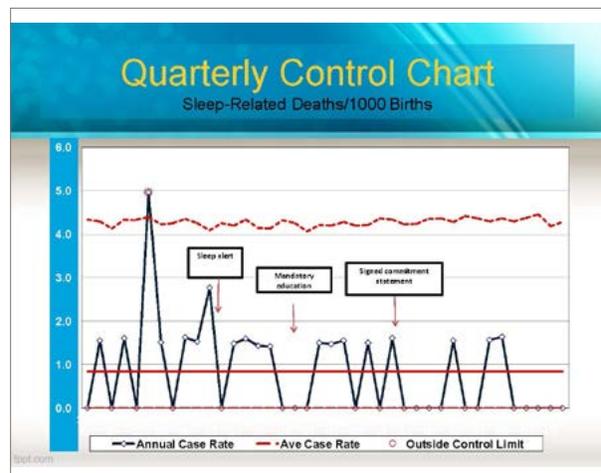

- Institutionalize
  - Ownership/internalization
  - Standard of care
  - Expectations
  - Repercussions
- Moral Imperative
  - “the numbers speak for themselves”
  - “sharing with staff the number of babies that die per year... was alarming to people and they pay attention”

### Roadblocks

- Nurses
  - Fear of choking
    - Overcome with education and time
- Parents
  - Bed sharing and attachment parenting
  - Need for patient satisfaction
- Cultural barriers
- Time and commitment

### Results of HCP Education

- Understanding of the AAP guidelines increased from 75% to 99% ( $p < 0.01$ )
- Agreement with all of the AAP guidelines increased from 88% to 94% ( $p = 0.049$ )
- Staff education on ISS increased from 47% to 99% ( $p < 0.01$ )
- Staff adequately trained about ISS increased from 43% to 99% ( $p < 0.01$ )

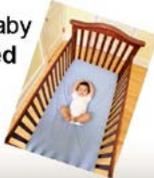

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### ISS Study: Phase 1 Results

- After education with the ISS program:
  - Intention to always sleep the baby supine **increased** from 82% to 97% ( $p < 0.01$ )
  - Intention to always place the baby in the crib or bassinet **increased** from 81% to 92% ( $p < 0.01$ )

### Conclusions from Other Health Systems

- Hospital based safe sleep is a practical, cost-effective and reproducible model
- The program has positive impact on providers and families
- Successful implementation requires:
  - Leadership (identify champions)
  - Education and reinforcement
  - Sweat equity (time and effort)
- Experience of each hospital may vary, but common process can be used
- Long term cultural change is achievable

### Coordinated Education Efforts Work!

- TN- 17% reduction in infant sleep-related deaths in 1 year
- SD- Over 4,300 Pack 'n Plays distributed. Infant mortality rate decreases from 8.6 (2012) to 6.5 (2013).
- S. Carolina Department of Health and Environmental Control (DHEC) 2013 data: 41% drop in accidental sleep-related deaths

### Coordinated Education Efforts Work!

- Baltimore B'more for Healthy Babies:
  - 2012 lowest infant mortality rate ever recorded
  - decreased 28% to 9.7 per 1000.
  - Racial disparity decreased almost 40%.
  - **Biggest contributor was decrease in number of sleep-related deaths.**

### The National Safe Sleep Hospital Certification Program: WHY?

- Systematic way to promote consistent messaging and modeling
- Provide a road map for success
- Develop and maintain a culture of sleep safety
- Monitor progress
- Reward for achieving goals

### The National Safe Sleep Hospital Certification Program

- Recognize hospitals with commitment to community leadership
  - Best practices
  - Education
- Flexibility to individualize to specific local needs
- 3 Levels = Step-wise goals
  - Achievable
  - Expand at your own pace

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### The National Safe Sleep Hospital Certification Program

- All materials available on-line
  - No major costs to the hospital
- Easy on-line access for documentation
- **NO FEE FOR PARTICIPATION**

### How It Works

The National Certification process has three levels:

<http://www.cribsforkids.org/safe-sleep-hospital-certification-application/nyspqc>

### Leadership Requirement

- Two people identified as responsible for the program (**Opinion Leaders**)
- At least one person listed must be:
  - Physician
  - Nurse manager
  - Nurse educator

### Safe Sleep Hospital Bronze Certification Level

**Requirements:**

- **Develop a safe sleep policy statement** incorporating the AAP's Infant Safe Sleep guidelines.
- **Train staff** on safe sleep guidelines, your hospital's safe sleep policy, and the importance of modeling safe sleep for parents.
- **Educate parents** on the importance of safe sleep practices, and implement these practices in the hospital setting.

### Safe Sleep Hospital Bronze Certification Level

- **Policy**
  - Should cover all hospital areas with infant care
  - Samples available at:
    - Cribs for Kids®
    - Central Ohio Hospital Council
    - Other
  - What about harm reduction messaging?

### Safe Sleep Hospital Bronze Certification Level

- **Staff Education**
  - NICHD Curriculum for Nurses on SIDS Risk Reduction (CEU)
  - Cribs for Kids learning module
  - Maintenance of skills
- **Parent Education**
  - DVD
  - Modeling
  - Not just handing out a brochure

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Safe Sleep Leader Silver Certification Level

**Requirements:**

- Develop a safe sleep policy statement
- Train staff
- Educate parents
- **Replace regular receiving blankets** in nursery and/or NICU with wearable blankets to model no loose bedding in the crib.
- **Audit** - Record your progress and report your successes to Cribs for Kids®

### Safe Sleep Leader Silver Certification Level

- Use of wearable blankets
  - Will not completely replace receiving blankets
  - Blankets needed in the delivery room
  - Transition after first bath
  - Any brand is allowable
  - **NEW: alternative gift program**
- Appropriate swaddling is acceptable

### Safe Sleep Leader Silver Certification Level

- Audits
  - Numerous tools available
  - Cribs for Kids (thanks to UAMS)
  - Can be used as part of a PDSA cycle

### Sample Audit Tool\*

### Measuring Improvement

- Pre- and Post- Tests
- Competencies
- Follow-up Surveys
- Unannounced Audits

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Measuring Improvement: Sample Survey

1. It is safest for a baby to sleep:
  - On his stomach
  - On his back
  - On his side
  - On his side or back
  - Does not matter
2. It is safest for a baby to sleep:
  - In a crib or bassinet in the parents' room
  - In a side car or "co-sleeper"
  - In bed with the parents
  - Does not matter
  - In a crib or bassinet in a separate room
3. Which of the following are safe to have in the baby's sleep area: (you may fill in more than one answer)
  - pillows
  - positioners
  - stuffed animals and/or plush toys
  - bumpers
  - comforters
  - none of the above
4. Which of the following statements is correct: (choose 1)
  - It is best to bundle the baby with lots of blankets to keep him warm.
  - Sleeping with the baby is the best way to keep him warm.
  - Keeping the room temperature comfortable for a lightly dressed adult is safest for the baby.
  - It is safest to bundle the baby up to the chin with a thick blanket to stay warm.
5. The only way for breastfeeding to be successful is by having the mother and baby sleep together.
  - True
  - False
6. Pacifiers are useful for reducing the risk of SIDS.
  - True
  - False

### Safe Sleep Champion Gold Certification Level

- **Requirements:**
  - Develop a safe sleep policy statement
  - Train staff
  - Educate parents
  - Replace regular receiving blankets
  - Audit: Record your progress and report your successes to Cribs for Kids®

### Safe Sleep Champion Gold Certification Level

- **Affiliate with or become a local Cribs for Kids® partner** and provide safe sleep education and safe sleep environments to parents in your community

[www.cribsforkids.org/become-a-partner/](http://www.cribsforkids.org/become-a-partner/)

### Safe Sleep Champion Gold Certification Level

- **Provide community and media outreach:**
  - Write an editorial
  - Provide education at health fairs
  - Work with a Girl Scout Troop
  - Host a community day at your hospital
  - Have a PSA air on local media outlets
  - Ask local businesses to put up safe sleep posters (esp. those catering to young children)
  - Work with religious groups (i.e., safe sleep Sunday)

Driver:

Hospital policies support/facilitate safe sleep practices

**Goodstein M. National Cribs for Kids® Safe Sleep Hospital Certification Program Webinar.** NYSPQC Safe Sleep Project Webinar. February 2016. Intended audience: Hospitals.

### Review Process

**Once your application has been submitted:**

1. An automated email will be sent to confirm submission of the application.
2. Once the application has entered the review process, you will be notified by email.
3. While in review, if the committee has any questions regarding the information provided or needs more information, a request will be sent.
4. Once the review is complete, the status of the application will be sent via email.
5. A certificate and official letter of acceptance will be sent via USPS.

### We Can Help

- Cribs for Kids® provides a robust suite of comprehensive support materials and tools to aid you in implementing this certification program in your hospital, including:
  - sample policy statements;
  - training materials;
  - posters, door hangers, certificates, brochures;
  - a public relations kit, and more.
- Visit [www.cribsforkids.org/hospital-certification-toolkit/](http://www.cribsforkids.org/hospital-certification-toolkit/)

March 10, 2016 13

### Do Our Recommendations About Co-Sleeping Negatively Impact Breastfeeding?

- According to a new study funded by the NIH - Following advice to sleep in the same room with their infants—but not in the same bed—does **not** appear to discourage new mothers from breastfeeding, as some experts had feared

March 10, 2016 14

### The Study

- The *Study of Attitudes and Factors Effecting Infant Care Practices* was published online in *Academic Pediatrics* and conducted by researchers at Boston University, the University of Virginia and Yale University
- Reporting a nationally representative survey of more than 3,000 mothers and found that the majority (65.5 percent) reported room sharing without bed sharing, while 20.7 percent reported bed sharing. Thirty percent of women reported exclusively breastfeeding. Among these women, 58.2 percent room-shared and did not bed-share.
- The authors asked the women to complete questionnaires when the infant was between 2 and 6 months of age on advice they received from their infant's doctor, birth hospital nurses, their family members, and the news media. In addition to finding out whether or not these sources had provided advice on infant care, the questionnaires sought to determine whether the advice was consistent with the recommendations of practitioner groups

March 10, 2016 15

### Lessons Learned

- The authors also found that **mothers were more likely to follow the recommendations for room sharing and exclusive breastfeeding if they had received advice to do so.** The women were asked if they received advice from any of these sources: family, baby's doctors, nurses at the hospital where the baby was born, and the media. **The greater the number of sources a mother had heard from, the more likely she was to follow the recommendations.**
- This survey shows that physicians have an opportunity to provide new mothers with much-needed advice on how to improve infant health and even save infant lives

March 10, 2016 16

### Lessons Learned

- African American women, Hispanic women and first time mothers were more likely to receive advice from their physicians than were white women and mothers of two or more children
- "As a physician, these findings made me stop and really think about how we communicate important information to new parents," said the study's first author, Staci R. Eisenberg, M.D., a pediatrician at Boston Medical Center. **"We may need to be clearer and more specific in telling new mothers about safe sleep recommendations. From a public health perspective, there is a real opportunity to engage families and the media to promote infant health."**

March 10, 2016 17

### Cultural Competence vs Cultural Humility

- Cultural competence** is "best defined not as a discrete end point but as a commitment and active engagement in a lifelong process that individuals enter into on an ongoing basis with patients, communities, colleagues, and with themselves
- Cultural humility** is the "ability to maintain an interpersonal stance that is other-oriented (or open to the other) in relation to aspects of cultural identity that are most important to the [person]."

November 10, 2016

4

## Sudden Unexpected Postnatal Collapse

- Rare, but potentially fatal event in otherwise healthy-appearing term newborns
- BAPM (2011):  $\geq 35$  w GA
  - Well at birth w/ normal 5-minute Apgar and deemed well enough for routine care
  - Collapses unexpectedly in a state of cardiorespiratory extremis such that resuscitation with intermittent positive-pressure ventilation is required
  - Collapses within the first 7 days of life
  - Either dies, goes on to require intensive care or develops encephalopathy

Driver:

Hospital policies support/facilitate safe sleep practices

**Campbell D. *Early Newborn Transition: SSC, Breastfeeding, Safe Sleep & Sudden Unexpected Postnatal Collapse***. November 2016. Intended audience: Hospitals.

November 10, 2016

5

## Sudden Unexpected Postnatal Collapse

- 2.6 to 133 cases per 100,000 newborns (Herlenius, Kuhn, 2013)
  - Potentially preventable SUPC etiologies
    - Infection, cardiac, PPHN/respiratory, metabolic, anemia
- Pejovic & Herlenius (2013):
  - 1/3 SUPC events occurring in the first 2 hours of life
  - 1/3 occurring between 2 and 24 hours of life
  - 1/3 occurring between 1 and 7 days of life
  - 57% occur during SSC
- Becher (2012):
  - 73% events in the 1<sup>st</sup> 2 hours

6

## SUPC Documented Risk Factors

Maternal	Environmental	Infant
Obesity	Bedsharing	Late preterm
Primiparity, lack education re: proper positioning, what's "normal" for NB	Head totally covered	Infant sleeping after feeding (decreased arousal response to airway obstruction)
Analgesia, sedation (narcotics, mag sulfate)	Side-lying BF position or unsupervised BF	Occluded position mouth and nose, neck bent
Postnatal fatigue (mother falls asleep)	Prone position during SSC or BF (up against breast)	Immature/decreased sympathetic responses to potentially asphyxiating position
	Maternal/parental distractions (phone, visitors, TV)	
	Mother unobserved

Lori Feldman-Winter, MD, MPH, FAAP, Jay P. Goldsmith, MD, FAAP, COMMITTEE ON FETUS  
AND NEWBORN, TASK FORCE ON SUDDEN INFANT DEATH SYNDROME

## Safe Positioning Checklist

1. Mother or provider of SSC is in reclining position, not flat
2. Infant's back is covered and hair is dry
3. Infant is well-flexed on provider's chest
4. Infant's shoulders are flat against provider's chest
5. Infant is chest-to-chest with provider, not over a breast
6. Infant's head is turned to one side
7. Infant's face can be seen
8. Infant's nose and mouth are visible and uncovered
9. Infant's neck is straight, not bent

# Birth Kangaroo Care Competency Checklist

Step	Action	Complete
Step 1 Prior to birth	Inform parents and discuss the process of Birth Kangaroo Care	<input type="checkbox"/>
Step 2 Just prior to the birth	a. Lift the mother's gown so her abdomen is exposed, or if gown is on backwards, open the gown b. Place a warm blanket over her abdomen	<input type="checkbox"/>
Step 3 Immediately after birth	a. Place the nude infant supine on the blanket on the mother's abdomen so that the infant's head is at or above the mother's umbilicus or the infant can be placed transfer across the mother's lower abdomen b. Place mom semi-upright (about 30-40 degrees inclined)	<input type="checkbox"/>
Step 4 Within the first minute of life the following events should occur	a. Bulb suction the mouth and nose only as necessary for mucus b. Thoroughly dry the baby's head and body with the warm blanket that is on the mother's abdomen c. Remove the wet blanket and dry the mother's abdomen. (if her abdomen is wet it will interfere with temperature regulation) d. Place a head cap and blanket on the infant e. You may give blow-by FIO2 to the infant with mother's face mask, just as you would on the radiant warmer, if needed during this time f. Assign the 1-minute APGAR score	<input type="checkbox"/>
Step 5 During the next 2-5 minutes the following events should occur	a. Once cord is cut, lift infant up and remove wet blanket that infant was lying on and dry mother's abdomen with it b. Turn infant prone and place on mother's abdomen or between breasts c. Assess the infant while he/she is on the mother's abdomen d. Assign the 5 minute APGAR score e. Place a diaper on the infant and cover the infant's back with a receiving blanket folded into fourths f. Be sure that the infant's shoulders are flat and not constricted throughout skin-to-skin contact with the parent	<input type="checkbox"/>
Step 6 Leave infant alone	a. DO NOTHING! Allow time for the infant to spontaneously crawl towards the breasts (takes 20-50 minutes) b. Explain to the mother that the infant should remain on her abdomen for the first 60-90 minutes of life c. Observe infant's progress toward breast (the 9 instinctual stages) and comment to mother on how clever is her baby	<input type="checkbox"/>
Step 7 Observe the following behaviors ALLOW SELF-LATCH (RN is to state these observations)	a. Infant's hand caresses breast, mouthing action begins b. Comment to mother that these actions are signs of breastfeeding readiness, infant's natural instincts, and infant's intuition. They are pre-feeding behaviors c. The infant will crawl to approach the breast. Again inform mom that this is exactly what should occur d. Infant will spontaneously lunge at breast and attempt to latch onto nipple. It may take 2 or 3 attempts before a successful latch is obtained. DO NOT HELPH! A spontaneous latch provides a secure, leak-free, and pain-free latch! e. Listen for air leaks and watch cheek rise and fall with swallows and confirm swallowing movements in neck	<input type="checkbox"/>
Step 8 Check for safe position of infant's head	a. Nose (and mouth if not sucking) uncovered by breast tissue b. Face of infant is visible c. Neck is straight, not bent forward nor backward	<input type="checkbox"/>

Step	Action	Complete
Step 9 Tell mother to closely watch infant so infant does not accidentally suffocate against mother's skin by checking these	a. Color of baby's face is pink, not pale, gray, blue b. Nose and mouth are uncovered so baby can breathe c. Head is turned to one side or another, not facing toward maternal tissue d. Infant's arms and legs are bent and with tone, NOT LUMP e. Looking for rise and fall of upper back or shoulder with each breath (checking for breathing) If mother is sleepy, tell her to have someone watch them both, especially baby, while she sleeps in skin-to-skin contact or PUT THE INFANT ON BACK in OWN COT	<input type="checkbox"/>
Step 10	Change infant to other nipple after 20 minutes of sucking	<input type="checkbox"/>
Step 11	Provide continuous, uninterrupted skin-to-skin contact until the first feeding is complete or through 60-90 minutes post birth, whichever is longer, even if the infant does not go to breast and even if the infant is not going to be breast-fed	<input type="checkbox"/>
Step 12	Turn the infant supine at end of feeding and/or skin-to-skin contact period	<input type="checkbox"/>
Step 13 Proceed with the following while infant is on mother	a. Eye prophylaxis b. Vitamin K injection (ideally given while in KC) c. Length measurement d. Identification banding	<input type="checkbox"/>
Step 14 Proceed with the following where possible	a. Weight b. Other measurements (i.e. oxygen saturation to rule out congenital heart defect) c. Other routine care in the setting of choice (i.e. the L&B suite or mother's postpartum room or rooming-in)	<input type="checkbox"/>
Step 15	Return infant to mom for continuous skin-to-skin while transferring to postpartum care	<input type="checkbox"/>

### Assessing the Infant's Tolerance to Birth KC

1. The infant is pink (perhaps has mild acrocyanosis), NOT PALE, GRAY, BLUE
2. The respiratory effort is easy, no audible grunting or visible intercostal retractions.
3. The infant is alert, demonstrating feeding cues or the nine stages of instinctual behavior, or sleeping IN SAFE POSITION on the mother's abdomen/chest.
4. Well-flexed posture with good tone, NOT LIMP NOR FLACCID.

### Documenting the Birth KC Session

1. Length of Birth KC session including starting and ending time
2. Did the baby feed during KC? If yes, write type and length/amount of feed.
3. Infant's tolerance of KC.
4. Chart infant temperature at end of KC.
5. Chart maternal tolerance and comments during KC.
6. Chart "Step 4 of Baby Friendly completed"

### Tube Top for Post-partum Kangaroo Care

1. Before the KC session begins, instruct the mother to wear the tube top with nothing underneath. Over the tube top she may wear a blouse or robe that opens in the front.
2. Lower the tube top and properly place the baby in Kangaroo Position (\*), between the breasts, and well flexed in "sniffing position."
3. Lift the tube top up covering the baby up to the ear providing full support to the body, neck, and head.
4. Make sure the size of the tube top is appropriate: tight enough to provide the baby with full body support and containment, and loose enough to facilitate breathing.
5. Mother may get up and walk around while providing KC as the tube top will hold the baby in place.

(\* Kangaroo Position: "strictly vertical with legs and arms flexed and head in a lateral position on the mother's breast, to allow maximum exposure of the body area between the baby and mother or abdomen in holding together."

**NEWBORN SAFETY INFORMATION FOR PARENTS**

PARENT REPORT

**For your Baby's Safety:**

We want this to be a safe environment for you and your baby. Parents, staff, and visitors all play an important part in helping us reach this goal. To help ensure you and your baby have a safe and enjoyable stay with us, here is a list of some of the security measures we use on our unit:

- Specialized training for staff in maintaining a secure and safe environment
- Security doors and video cameras throughout the Family Maternity Center
- Cards with a sample of your baby's cord blood which contains your baby's DNA
  - We do not keep a copy of this card; you have the only one
  - Store this card in a cool, dark safe place and in the provided glassine envelope
  - DNA samples are more reliable than foot or finger printing for identification purposes and in case of your child's disappearance, this safety precaution will help with identification
- Bracelets with matching numbers for you, your baby, and your primary support person
  - You and your baby's band numbers will be checked whenever your baby is separated from you and again when your baby is returned
- Do not sleep with your baby in your bed or while relaxing on the couch or chair
  - When you feel sleepy or plan on sleeping, place the baby in the bassinet
  - If you should fall asleep with your baby in your bed or arms, your nurse will move the baby to the bassinet
  - Accidental infant falls happen because of unfamiliar surroundings, the effects of medication and design of the hospital bed, couch, or chair
  - Obtain information regarding co-bedding at home from your newborn's care provider.
- Babies are moved to and from the nursery or any other procedure area in their bassinet and may not be carried in the hallways
  - Only staff, you or your primary support person may have your baby outside your room
- Babies must remain in the Family Maternity Center at all times
- We will teach you steps you can take to keep your baby safe
  - Do not give your baby to anyone who is not wearing a Providence photo name badge and additional Family Maternity bright pink identification. Be sure the photo matches the person wearing the badge
  - Do not leave your baby alone in the room while you shower or go for a walk. A family member may watch the baby or you may discuss options with your nurse
  - If in doubt about anyone in your room, immediately call for your nurse
  - We encourage you to accompany your baby to and from any procedure

*I have read and understand the above information.*

Family Maternity RN \_\_\_\_\_

Date \_\_\_\_\_ Time \_\_\_\_\_

### Baby Safety Sheet Information

Infant security strategies

Identification policy

Safe sleep tips:

- Baby "back to sleep"
- No holding baby while sleepy
- Request staff to help put baby back in bassinet

Babies are not to be carried in hallways/ must be in bassinet

---

### Risk Factors Assessed by Nurses

High level of fatigue in the new mother

Recent pain medication

Night shift hours

Prior near miss with this patient

Woman > 2 days postpartum

Woman with history of narcotic substance use and/or in methadone treatment program

Driver:

Hospital policies support/facilitate safe sleep practices

**Campbell D. *Early Newborn Transition: SSC, Breastfeeding, Safe Sleep & Sudden Unexpected Postnatal Collapse.*** November 2016. Intended audience: Hospitals.

November 10, 2016

19

## Transitioning to Home and Safe Sleep Beyond Discharge

- AAP recommendations & guidance on breastfeeding and safe sleep
  - Pacifier introduction
  - Maternal smoking
  - Use of alcohol
  - Sleep positioning
  - Bed-sharing
  - Appropriate sleep surfaces, especially when practicing SSC.
- Emphasis on practices that increase the risk of sudden and unexpected infant death
  - Smoking
  - Use of alcohol
  - Placing the infant in a non-supine position for sleep
  - Non-exclusive breastfeeding
  - Placing the infant to sleep (with or without another person) on sofas or chairs

Driver:

Hospital policies support/facilitate safe sleep practices

**Campbell D. *Early Newborn Transition: SSC, Breastfeeding, Safe Sleep & Sudden Unexpected Postnatal Collapse.*** November 2016. Intended audience: Hospitals.

November 10, 2016

20

## Summary Best Practices

1. Develop standardized methods and procedures
  - Immediate and continued SSC with attention to continuous monitoring and assessment
2. Standardize the sequence of events immediately after delivery to promote safe transition:
  - Thermoregulation
  - Uninterrupted SSC
  - Direct observation of the first breastfeeding session
3. Document maternal and newborn assessments
4. Provide direct observation of the mother-infant dyad while in the delivery room setting
5. Position the newborn in a manner that provides an unobstructed airway

Driver:

Hospital policies support/facilitate safe sleep practices

**Campbell D. *Early Newborn Transition: SSC, Breastfeeding, Safe Sleep & Sudden Unexpected Postnatal Collapse.*** November 2016. Intended audience: Hospitals.

November 10, 2016

21

## Summary Best Practices

6. Conduct frequent assessments & monitoring mother-infant dyad during PP rooming-in settings
  - Particular attention to high-risk situations such as nighttime and early morning hours
7. Assess the level of maternal fatigue periodically
  - If the mother is tired or sleepy, move the infant to a separate sleep surface (e.g., side-car or bassinet) next to the mother's bed
8. Avoid bed-sharing in the immediate postpartum period
  - Assisting mothers to use a separate sleep surface for the infant
9. Promote supine sleep for all infants
  - SSC may involve the prone or side position of the newborn, especially if the dyad is recumbent
  - Imperative that the mother/caregiver who is providing SSC be awake and alert
10. Train all health care personnel in standardized methods of providing:
  - Immediate SSC after delivery
  - Mother-infant dyad transition
  - Throughout rooming-in period

Driver: Hospital policies support/facilitate safe sleep practices

## First Candle – Hospital Safe Sleep Policy Template

*One challenge encountered by the NYSPQC Hospital-based Safe Sleep Project participating hospital teams while modeling safe sleep in hospitals was that compliance in keeping soft items out of cribs plateaued at 90%, while other components of safe sleep were able to reach almost 100%. In your hospital policies, be sure your hospital policy specifies frequency of staff education and frequency of room checks.*

First Candle  
- Helping Babies Survive & Thrive -

Research | Education | Advocacy | Family Support

### HOSPITAL SAFE SLEEP POLICY TEMPLATE

**INTRODUCTION.**

First Candle/National SIDS Alliance, in conjunction with the Eunice Kennedy Shriver National Institute on Child Health and Development (NICHD) are seeking national and local organizations to partner with as we promote our hospital infant safe sleep policy template.

This template is designed as a resource for hospitals, to be used as they develop or update their infant safe sleep policy and protocol. It reflects the most current evidence-based research and 2011 AAP guidelines. Included are recommendations for NICU and well-baby nurseries, as well as teaching points for staff and patient education. References are cited at the end of this document.

We understand most hospitals have their own specific standards and format for their written policies. It is not our intent to dictate how a hospital will develop and implement such a policy; this document was written to offer a template, technical assistance and support in the process.

Our goal is for every birthing hospital to have an infant safe sleep policy. We are excited to work with hospitals across the country to bring this goal to fruition. We hope you will join our efforts.

In the belief that every baby deserves a first birthday and beyond,

Barb Himes  
Director of Education and Training

First Candle – Hospital Safe Sleep Policy Template

**HOSPITAL SAFE SLEEP POLICY (Evidence-Based)**

**GOALS.**

1. To provide a uniform model hospital policy for healthcare providers in the newborn, Level II/ III/IV nurseries and pediatric settings
2. To ensure that all recommendations are modeled and understood by caregivers/parents with consistent instructions given prior to discharge

**RATIONALE.**

A major decrease in the incidence of sudden infant death syndrome (SIDS) occurred when the American Academy of Pediatrics (AAP) released its initial recommendation in 1992 that infants be placed in a non-prone position for sleep. The incidence of SIDS has leveled off in recent years, while the incidence of other causes of sudden unexpected infant death that occur during sleep (including suffocation, asphyxia and entrapment) has increased. The AAP has expanded its recommendations to include a safe sleep environment, which reduces the risk of all sleep-related infant deaths, including SIDS. Research has shown that SIDS is not caused by vomiting, choking and immunizations.

**DEFINITIONS.**

<i>Bed Sharing</i>	The practice of a parent, sibling or other individual sleeping together with the infant on a shared sleep surface, i.e. a bed, sofa, recliner, etc. (not recommended).
<i>Co-sleeper</i>	A three-sided crib that attaches to the parent's bed. Safety standards have not yet been established for these devices.
<i>Health Care Provider</i>	Physicians, nurse practitioners, certified nurse midwives, nurses, lactation consultants
<i>Plagiocephaly</i>	The appearance of a persistent flat spot on an infant's head.
<i>Room Sharing</i>	Infant sleeping in a crib or other separate and safe surface in the same room as the parent/caregiver (recommended).
<i>SIDS</i>	Sudden Infant Death Syndrome - the sudden death of an infant under 1 year of age, which remains unexplained after a thorough case investigation, including performance of a complete autopsy, examination of the death scene, and review of the clinical histories.
<i>Tummy Time</i>	Infants are placed on tummy when they are awake and someone is supervising. Tummy time helps strengthen the infant's head, neck and shoulder muscles, and helps to prevent flat spots on the head.

**POLICY AND PROCEDURE.**

**Sleep Position.**

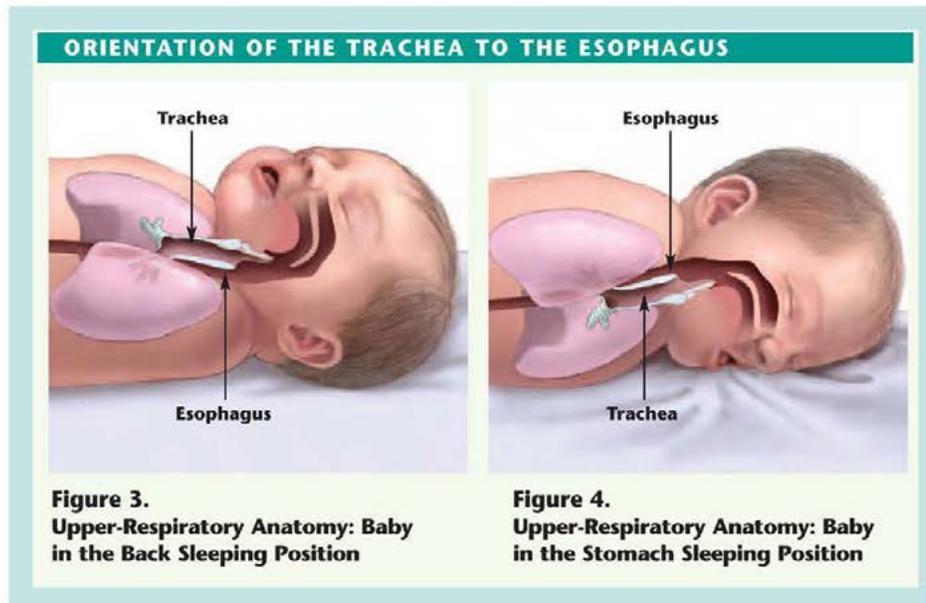

- All infants > 32weeks will be placed on their back to sleep during every nap and nighttime for the first year unless otherwise ordered by the physician. Side sleeping is no longer advised and should be used only if there is a physician order.
- The flat supine sleeping position does not increase the risk of choking and aspiration in infants, even those with gastroesophageal reflux.
- Level II/III/IV nurseries will start to transition to back sleeping as soon as the infant is medically stable, well in advance of discharge.

**Teaching Points:**

- Teach parents to place infants on their backs to sleep for every sleep. Have parents communicate this "back to sleep" message with everyone who cares for their infant.
- Use visual aids to show parents that the supine position does not increase the risk of choking and aspiration.

Driver:  
Hospital policies support/facilitate safe sleep practices  
First Candle – Hospital Safe Sleep Policy Template

*In fact, babies may actually clear secretions better when placed on their backs. The figures above show the orientation of the trachea to the esophagus in the back sleeping (Figure 3) and stomach sleeping (Figure 4) positions. When a baby is in the back sleeping position, the trachea lies on top of the esophagus. Anything regurgitated or refluxed from the esophagus must work against gravity to be aspirated into the trachea. Conversely, when a baby is in the stomach sleeping position, anything regurgitated or refluxed will pool at the opening of the trachea, making it easier for the baby to aspirate.*

- The risk of SIDS is 7 to 8 times higher among infants who normally sleep on their backs when placed on their stomachs to sleep.
- Side lying is an unstable sleeping position because the infant can more easily roll to the prone position. Side positioning is not recommended.
- Once an infant can roll from supine to prone and from prone to supine, the infant can be allowed to remain in the sleep position that he or she assumes.

**Sleep Surface.**

- Mattresses should be firm and maintain their shape. There should be no gaps between the mattress and the side of the crib, bassinet, portable crib or play yard.
- Only mattresses and tightly-fitted sheets designed for the specific type of product should be used.

**Teaching Point:**

- Pillows or cushions should not be substituted for mattresses or in addition to a mattress. Couches, adult mattresses, futons, etc. are not considered a firm sleeping surface.
- Soft materials or objects such as pillows, quilts, comforters or sheepskins, even if covered by a sheet, should not be placed under a sleeping infant.
- If an additional waterproof pad is used, it should be thin and tightly fitted.
- Sitting devices, such as car safety seats, strollers, swings, infant carriers and infant slings are not recommended for routine sleep in the hospital or at home.

Driver:  
Hospital policies support/facilitate safe sleep practices  
**First Candle – Hospital Safe Sleep Policy Template**

**Bedding.**

- Keep all soft objects and loose bedding out of the crib

*Teaching Point:*

- No bumper pads, stuffed toys or any other objects in the crib. **"NOTHING BUT BABY."**
- Appropriately sized sleep sacks/blanket sleepers are optimal; avoid blankets and other loose bedding.

**Smoking, Drugs and Alcohol.**

- Do not expose babies to secondhand smoke.
- Second to sleep position, smoke exposure is the largest contributing risk factor for SIDS.
- Avoid alcohol and illicit drug use.

*Teaching Point:*

- Clothing exposed to secondhand smoke should be changed, or a cover gown provided, prior to handling infants.
- Wash hands after smoking and before touching infant.
- Encourage families to set strict rules for smoke-free homes and cars to eliminate secondhand smoke.
- Anyone who is sleep deprived or using alcohol or medications causing diminished responsiveness in combination with bed sharing also places an infant at high risk.
- Share smoking cessation resources in your institution or community.

**Sleeping Environment.**

- Room sharing **without bed sharing** is recommended.
- Keep the infant's sleep area close to, but separate from, where parents sleep.

*Teaching Points:*

- Bed sharing with anyone, including parents, other children and particularly multiples is not safe. Pets also pose a threat to sleeping infants.
- Infants may be brought into bed for feeding or comforting but should be returned to their own bed when the parent is ready to return to sleep.
- The infant's crib, portable crib, play yard or bassinet should be placed in the parent's room, close to their bed, making it more convenient for feeding and contact.
- Infants should not be fed/held on a couch, armchair or in bed when there is a high risk that the parent might fall asleep.
- Sleeping on a couch, recliner or armchair with an infant is not safe.

**Pacifier Use.**

- Pacifier use is recommended throughout the first year of life when placing infant down to sleep unless contraindicated or refused by parents.

*Teaching Points:*

- For breastfed infants, avoid pacifier use until breastfeeding is firmly established (approx. 1 month).
- It is not necessary to reinsert a pacifier once the infant falls asleep.
- Do not force an infant to take a pacifier.
- Educate parents that pacifiers should not be coated in any sweet solution, hung around the infant's neck or attached to clothing while sleeping.

**Overheating/Over-bundling.**

- Avoid overheating or over-bundling infant.
- Infants should be dressed appropriately for the environment, with no more than one additional layer than an adult would wear to be comfortable.

Driver:  
Hospital policies support/facilitate safe sleep practices  
**First Candle – Hospital Safe Sleep Policy Template**

**Teaching Points:**

- Appropriately sized sleep sacks /blanket sleepers are optimal; avoid blankets and other loose bedding.
- Suggest layering clothing as a secondary choice.
- Acknowledge cultural beliefs and how it affects safe sleeping.
- If swaddling is needed for comfort or thermoregulation, swaddle below the axilla.
- Kangaroo Care or skin-to- skin is another method of thermoregulation but should be used only when mother is awake.
- Teach parents to evaluate infants for signs of overheating, such as sweating or the chest feeling hot to touch.
- Do not cover the infant’s face or head.

**NICU/Special Care (Level II/ III/IV).**

- Infants should be placed in the supine position for sleep as soon as medically stable and significantly before anticipated discharge (by 32 weeks postmenstrual age).

**Teaching Point:**

- Endorse safe-sleeping guidelines with parents from the time of admission.

**Positioning Aids/Commercial Devices.**

- Staff in Level II/ III/IV nurseries should model and implement all SIDS risk reduction recommendations as soon as the infant is clinically stable and significantly before anticipated discharge. Remove developmental aids as appropriate.
- Avoid commercial devices marketed to reduce the risk of SIDS—these include wedges, positioners, special mattresses, and special sleep surfaces.

**Teaching Points:**

- Inform parents to avoid commercial devices marketed to reduce the risk of SIDS, plagiocephaly and acid reflux (products include wedges, positioning aids, rolled blankets).
- There is no evidence that these devices reduce the risk of SIDS or suffocation, or that they are safe.

**Monitoring Devices.**

- Infants with cardio/respiratory instability may require a cardiopulmonary monitor.
- No monitoring device can identify, predict or prevent SIDS.

**Teaching Point:**

- Educate parents and caregivers that monitors are only machines and are not substitutes for direct observation.

**Tummy Time.**

- Supervised, awake tummy time is recommended on a daily basis, beginning as early as possible, to promote motor development, facilitate development of the upper body muscles, and minimize the risk of positional plagiocephaly.

**Teaching Points:**

- Avoid plagiocephaly by:
  - limiting time in car seats, carriers, bouncers, and other devices.
  - encouraging “cuddle time” (bonding) by holding infant.
  - changing the infant’s orientation in the bed.

**Back to Sleep.**

- Educate parents on the importance of following all of the AAP Policy Statement Recommendations for Safe Sleep well before discharge.
- Document that safe sleep education was provided.

Driver:

Hospital policies support/facilitate safe sleep practices

## First Candle – Hospital Safe Sleep Policy Template

**Teaching Point:**

- Request that parents share safe sleep message with **EVERYONE** caring for their infant (grandparents, babysitters, child care providers, etc).
- Readmission of infants under 1 year of age is an excellent opportunity to ask where the infant normally sleeps and to re-enforce AAP safe sleep recommendations.

**Breastfeeding.**

- Breastfeeding is recommended.
- Breastfeeding is associated with a reduced risk of SIDS. If possible, mothers should exclusively breastfeed or feed with expressed human milk (i.e., not offer any formula or other non-human milk-based supplements) for six months, in alignment with AAP recommendations.

**Teaching Point:**

- The protective effect of breastfeeding increases with exclusivity. However, any breast milk feeding has been shown to be more protective against SIDS than formula feeding.

**Immunization.**

- Infants should be immunized in accordance with recommendations of the AAP and the Centers for Disease Control and Prevention.

**Teaching Points:**

- There is no evidence that there is a causal relationship between immunizations and SIDS.
- Recent evidence suggests that immunization might have a protective effect against SIDS.

## WellSpan Health York Hospital - Safe Sleep Policy

*This policy from York Hospital is the model used by Cribs for Kids.*

WELLSPAN HEALTH- YORK HOSPITAL      NURSING POLICY AND PROCEDURE

---

**DATES:**      **Original Issue:**      **August, 1995**  
                   **Annual Review:**      **August, 2016**  
                   **Revised:**                      **August, 2017**

**Owner:**            **M. Goodstein**  
**Approved by:** **WCSL Council**

**TITLE:**      **INFANT SAFE SLEEP POLICY**

---

### I. Purpose

- A. Establish guidelines and parameters for infant positioning.
- B. Establish appropriate and consistent parental education on safe sleep positions and environment.
- C. Establish consistent safe sleep practices by healthcare professionals for infants prior to discharge.
- D. To comply with Pennsylvania ACT 73 which mandates that provision of education for parents relating to sudden infant death syndrome and sudden unexpected death of infants.

### II. Definitions

**Infant Mortality Rate:** Number of deaths in infants aged under 1 year of life per 1,000 live births in a given geographic location.

**Neonatal Mortality Rate:** Number of deaths in infants aged under 29 days of life per 1,000 live births in a given geographic location.

**Post-neonatal Mortality Rate:** Number of deaths in infants aged 29 to 364 days of life per 1,000 live births in a given geographic location.

**SIDS (Sudden Infant Death Syndrome):** The sudden death of an infant younger than one year of age that remains unexplained after a complete investigation.

**SUID (Sudden Unexpected Infant Death):** The death of an infant less than one year of age that occurs suddenly and unexpectedly, and whose cause of death is not immediately obvious before the investigation. Most SUIDs are reported as one of three types:

- SIDS
- Accidental suffocation or strangulation in bed
- Unknown Cause

**SUPC (Sudden Unexpected Postnatal Collapse)** Any condition resulting in temporary or permanent cessation of breathing or cardiorespiratory failure in a well-appearing, full-term newborn with Apgar scores of eight or more, occurring during the first week of life. Many, but not all, of these events are related to suffocation or entrapment.

Driver:

Hospital policies support/facilitate safe sleep practices  
WellSpan Health York Hospital - Safe Sleep Policy

**NAS (Neonatal Abstinence Syndrome):** Is a constellation of symptoms that occur in a **newborn** who has been exposed to addictive opiate drugs. This is most commonly due to prenatal or maternal use of substances that result in withdrawal symptoms in the newborn. It may also be due to discontinuation of medications such as fentanyl or morphine used for pain therapy in the newborn (postnatal NAS).

**III. Policy Statement**

The infant mortality rate is a widely-used indicator of the nation’s health. In 2010, the United States (U.S.) ranked 26th in infant mortality among industrialized nations, with an overall infant mortality rate of 6.1 deaths per 1,000 live births.<sup>1</sup> The leading causes of infant mortality in the U.S. are a) congenital malformations, b) short gestation/low birth weight, c) sudden infant death syndrome (SIDS), d) maternal complications, and e) unintentional injuries (mostly suffocations)<sup>2</sup>. Although the infant mortality rate in the U.S. decreased to 5.96 deaths per 1,000 live births in 2015, this still represents approximately 24,000 deaths per year, of which, **about 3,500 are sudden unexpected infant deaths (SUID)**.

In 1992 the American Academy of Pediatrics (AAP) recommended that infants no longer sleep in the prone position. By 1994, the National Institutes of Health, introduced the Back to Sleep campaign. Over the next 10 years, the sudden infant death syndrome (SIDS) rate in the U.S. fell 53%, correlating with an increase in exclusive supine sleep.

Despite these advances, approximately 1,500 infant deaths occur due to SIDS each year. SIDS is the third-leading cause of infant mortality overall, and it is the leading cause of post-neonatal mortality. And although the incidence of SIDS continues to decline, other deaths (including accidental suffocation and strangulation in bed and undetermined deaths) have increased, suggesting a possible “diagnostic coding shift,” resulting in little change in the incidence of SUID in recent years.

The AAP recommends “Health care professionals, staff in newborn nurseries and NICUs, and child care providers should endorse and model the SIDS risk reduction recommendations from birth. All physicians, nurses, and other health care providers should receive education on safe infant sleep. Hospitals should ensure that hospital policies are consistent with updated safe sleep recommendations and that infant sleep spaces (bassinets, cribs) meet safe sleep standards.”

However, studies show that many hospitals do not currently provide consistent and accurate information or model appropriate behavior in the hospital. In one study, parents reported receiving instruction on sleep position from either nurses and doctors less than 50% of the time and only 37% of parents reported seeing their infant placed exclusively in the supine position in the nursery. Yet parents who reported both receiving instruction and observing their infant put to sleep in the supine position were most likely to keep their babies in the supine position for sleep at home (70%), while parents who received no instruction and did not see their babies’ supine in the nursery were least likely to report using the supine position at home (22%). Parents are less likely to believe that infant safe sleep practices are important when the hospital staff is inconsistent with their message and behavior.

<sup>1</sup> (MacDorman, Matthews, Mohangoo, & Zeitlin, 2014).

<sup>2</sup> (MacDorman, Hoyert, & Matthews, 2013).

## WellSpan Health York Hospital - Safe Sleep Policy

Healthcare professionals play a vital role by showing mothers/caregivers a positive model for safe sleep practices in the hospitals or office settings, and educating parents and caregivers on the importance of infant sleep safety. The challenge for hospitals is to provide education about reducing the potential for accidental injury or death while still promoting methods for mothers/caregivers to bond with their newborns. Healthcare providers should have open, frank, nonjudgmental conversations with families about their sleep practices. Healthcare facilities can make a difference by providing education for staff and families, and promoting and monitoring safe sleep behaviors that can reduce the risk of injury or infant death.

#### IV. Equipment

Open cribs/bassinets, isolettes or infant warmers

#### V. Procedure

##### A. Infants in the Newborn Nursery:

1. Place all infants on their backs to sleep and the head of the bed flat. Infants with a medical contraindication to supine sleep position -- i.e. congenital malformations, upper airway compromise, severe symptomatic gastroesophageal reflux -- should have a physician's order along with an explanation documented.
2. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls, and stuffed animals should not be used.
3. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet and can be returned to the newborn nursery at the discretion of the nurse. The mother/parent should then be re-educated on safe sleep practices as soon as practical. If this continues to be a reoccurring problem an "Infant Safe Sleep Non-Compliance" release form should be signed by the parent that he or she has been educated and understands that sleeping with an infant is dangerous with the most serious consequence being death.
4. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "wearable blanket" may be used. If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable.

**The following measures are to be discouraged, since they are not consistent with the AAP**

##### **Guidelines:**

- i. Use of extra blankets should be discouraged. If a baby cannot maintain temperature with normal clothing and swaddling materials, it is preferable to place the infant in an incubator or under a radiant warmer. Alternatively, the baby may be covered transiently with an extra blanket tucked in under the mattress. If this is required, please remove prior to discharge and re-educate the mother/caregiver on the importance of "no loose" or "bulky blankets" in the crib or bassinet.
  - ii. If a hat is still needed for thermoregulation at discharge, educate the parents/caregivers to monitor baby's temperature, and to attempt to discontinue using the hat after 2-3 days of stable temperatures at home. If the baby maintains a normal temperature without the hat, then it can be permanently discontinued. Generally, a hat should not be needed after a few days in home environment.
5. Environmental temperature should be maintained at 72-78 degrees Fahrenheit.

Driver:

Hospital policies support/facilitate safe sleep practices

## WellSpan Health York Hospital - Safe Sleep Policy

6. The following recommendations for **skin to skin** bonding, when the mother is awake and fully alert, will decrease the risks of SUPC (see page 1 for definition.)

- Infant’s face can be seen
- Infant’s head is in “sniffing” position
- Infant’s nose and mouth is not covered
- Infant’s head is turned to one side
- Infant’s neck is straight, not bent
- Infant’s shoulders and chest face mother’s
- Infant’s legs are flexed
- Infant’s back is covered with blanket
- Mother-infant dyad is monitored continuously by the staff in the delivery environment and regularly on the postpartum unit
- When mother want to sleep, infant is placed in bassinet or with another support person who is awake and alert.

### **B. Infants in the Neonatal Intensive Care Nursery (NICU):**

**Please see home safe sleep environment algorithm**

1. Infants who are ill and do not meet the criteria for the home safe sleep environment should have the Therapeutic Positioning Card at their bedside stating: “Infant is not ready for the Home Sleep Environment (HSE)”
2. Place all infants on their backs to sleep and the head of the bed flat, using the Home Sleep Environment guidelines (HSE). NICU infants should be placed exclusively on their backs to sleep when stable and in the convalescent stage of their development (see #5 for guidelines). The placement of NICU infants on their back to sleep should be done well before discharge, to model safe sleep practices to their families.

### **The following exceptions should be noted:**

- i. Infants with upper airway compromise, life-threatening GE reflux (not mild to moderate apnea/bradycardia), respiratory distress, or a greater degree of prematurity may be placed prone or side lying until resolution of symptoms.
  - ii. Preterm infants and ill newborns may benefit developmentally and physiologically from prone or side lying positioning and may be positioned in this manner when continuously monitored and observed.
  - iii. Infants with Neonatal Abstinence Syndrome (NAS) with difficult to control symptoms may be placed in a prone position for brief periods of time (see addendum for guidelines).
3. The following recommendations for skin to skin when mother is fully awake, and alert will decrease the risks of SUPC (see page 1 for definition):

- Infant’s face can be seen
- Infant’s head is in “sniffing” position
- Infant’s nose and mouth is not covered
- Infant’s head is turned to one side
- Infant’s neck is straight, not bent
- Infant’s shoulders and chest face parent’s

Driver:

Hospital policies support/facilitate safe sleep practices

## WellSpan Health York Hospital - Safe Sleep Policy

- Infant's legs are flexed
  - Infant's back is covered with blanket
  - Parent-infant dyad is monitored continuously by the staff in the NICU
  - If the parent becomes drowsy, infant is placed back in the incubator, warmer or bassinet, or with another support person who is awake and alert.
- iv. A firm sleep surface should be used (firm mattress with a thin covering). Soft bedding and objects such as pillows, quilts, blanket rolls, bumpers and stuffed animals should not be present. Positioning devices (such as snugglies) may be used for developmentally sensitive care of any infant in the NICU (premature infant, infant with neurologic or orthopedic abnormalities) as determined by the team (including occupational and physical therapy).
  - v. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "wearable blanket" may be used. If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable.

**The following measures are to be discouraged, since they are not consistent with the AAP Guidelines:**

- i. **Use of extra blankets should be discouraged. If a baby cannot maintain temperature with normal clothing and swaddling materials, it is preferable to place the infant in an incubator or under a radiant warmer. Alternatively, the baby may be covered transiently with an extra blanket tucked in under the mattress. If this is required, please remove prior to discharge and re-educate the mother/caregiver on the importance of "no loose" or "bulky blankets" in the crib or bassinet.**
  - ii. **If a hat is still needed for thermoregulation at discharge, educate the parents/caregivers to monitor baby's temperature, and to attempt to discontinue using the hat after 2-3 days of stable temperatures at home. If the baby maintains a normal temperature without the hat, then it can be permanently discontinued. Generally, a hat should not be needed after a few days in home environment.**
4. Environmental temperature should be maintained at 72-78 degrees Fahrenheit.
  5. The following guidelines should be used to transition NICU patients to the Home Sleep Environment (HSE):
    - i. Babies with a gestational age of 33 weeks and beyond AND greater than 1500 grams without respiratory distress should be placed in HSE.
    - ii. Babies with gestational age 34 weeks and beyond with respiratory distress may be positioned prone until respiratory symptoms are resolving.
    - iii. Babies with gestational age under 34 weeks should be assessed when reaching a post-conceptional age of 33 weeks and weight greater than 1500 grams:
    - iv. If the baby has respiratory distress, staff may continue with prone positioning until respiratory symptoms are resolving. Safe sleep modeling can be performed with an infant on Low flow nasal cannula or High Flow Nasal Cannula <2. LPM.
    - v. If the baby has no respiratory symptoms, then the primary nursing team should

Driver:

Hospital policies support/facilitate safe sleep practices

## WellSpan Health York Hospital - Safe Sleep Policy

discuss the infant's neuromuscular status with Occupational Therapy. Once the baby no longer requires positioning devices, begin HSE protocol.

6. Once it is determined that an infant is ready for home sleep environment, the following actions should be completed:
  - i. Apply the HSE card/safe sleep ticket to the baby's bedside.
  - ii. Fill out the graduation certificate with the baby's name.
  - iii. At the parent's next visit, have them watch the safe sleep DVD and then provide modeling and review of the appropriate home sleep environment.
  - iv. After completion of the training, present the family with the graduation certificate.

**Also educate the mother/caregiver on the following:**

- i. No burp cloth under infant.
- ii. No sleeping in swing or car seats. It is acceptable to place a fussy baby in a swing to calm down, then transfer to the bassinet for sleeping.
- iii. Prior to discharge the MD/NNP to give the "Sleep Baby Safe and Snug" book to family and review education.

**C. Infants in the Pediatric Unit (Infants less than 1 year of age):**

1. Follow the guidelines for the Newborn Nursery
2. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet or crib. The mother/parent should then be re- educated on safe sleep practices as soon as practical. If this continues to be a reoccurring problem an "Infant Safe Sleep Non-Compliance" release form should be signed by the parent that he or she has been educated and understands that sleeping with an infant is dangerous, with the most serious consequence being death.

**VI. Documentation**

**A. Document the infant's position on the Newborn Nursery, or Pediatric Flow sheets.**

**B. Family/Parental teaching: All parents will be educated on SIDS and safe sleep environments and positioning. Additionally, other caregivers (daycare workers, grandparents, and babysitters) should be encouraged to participate in this education.**

1. All healthy infants should be placed on their backs to sleep.
2. All infants should be placed in a separate but proximate sleeping environment (in a safety approved crib, infant bassinet, or Pack 'n Play/play yard).
3. All infants should be placed on a firm sleep surface. Remove all soft-loose bedding, quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from the sleeping area.
4. Never place a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam mattress.
5. Avoid bed sharing with the infant.

**Note the risk of bed sharing:**

- Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling of the bed, and infants have suffocated in bedding.
- Infants have died from suffocation due to adults rolling over on them.
- Sleeping with an infant when fatigued, obese, a smoker, or impaired by alcohol or drugs

Driver:

Hospital policies support/facilitate safe sleep practices

## WellSpan Health York Hospital - Safe Sleep Policy

(legal or illegal) is extremely dangerous and may lead to the death of an infant.

6. If a blanket must be used, the preferred method is to swaddle/bundle the infant no higher than the axillary or shoulder level.
  - **Swaddling should be discontinued when the infant shows signs of rolling over.**
7. The use of a “wearable blanket” may be used in place of a blanket.
8. Avoid the use of commercial devices marketed to reduce the risk of SIDS.
9. Avoid overheating. Do not over swaddle/bundle, overdress the infant, or over heat the infant’s sleeping environment.
10. Consider the use of a pacifier (after breastfeeding has been well established) at sleep times during the first year of life. Do not force an infant to take a pacifier if he/she refuses.
11. Avoid maternal and environmental smoking.
12. Avoid alcohol and drug use.
13. Breastfeeding is beneficial for infants.
14. Home monitors are not a strategy to reduce the risk of SIDS, this includes both Medical grade and direct to consumer devices/monitors.
15. Encourage tummy time when the infant is awake, to decrease positional plagiocephaly.

**C. Document all parental teaching (note if the contract was signed and whether the Safe Sleep DVD was viewed) related to sleep safe practices on the parental teaching portion of the plan of care.**

**D. For additional information please refer to the Cribs for Kids® tool kit on Safe Sleep Practices.**

### NAS & Prone Positioning

#### **Infant Irritable**

##### Comfort Measures

- Rocking (including use of swings/Mamaroo)
- Holding (volunteers)
- Swaddling
- White noise
- Appropriate Skin-to-skin care
- Infant massage

**Irritability continues > 12 hours that necessitates prone positioning at times**

Consult with MD/NNP to review scores and meds

**Re-assess need for prone positioning and ALWAYS use comfort measures BEFORE placing an infant prone!**

#### **Getting ready for home--**

- Discontinue prone positioning if used.
- Discuss with primary nursing team, PT/OT, MD/NNP

#### **Begin Home Sleep Environment (if not done earlier) when-**

- Morphine dose 0.16mg every 3 hours
- Average abstinence scores of < 6 over 24 hours
- No scores > 10 in the last 24 hours

Driver:

Hospital policies support/facilitate safe sleep practices

## WellSpan Health York Hospital - Safe Sleep Policy

- No prn doses needed in the previous 24 hours

**Implement the "home sleep environment" at least 1 week before discharge if not sooner.**  
**KEY POINT -implement when infant is ready for "home sleep" and not earlier in the hospitalization**

- View video
- Post Safe sleep ticket
- Post-Graduation card - make this a "special" day for parents!
- Review information and safe sleep DVD with parents
- Swing time limited to awake/fussy times.
- Safe Sleep baby book given to parents by MD, NNP

### Family Education

- Need extra education when prone
- **DO NOT say**, "I couldn't get him to sleep so I put him on his belly". "She was very fussy last night and slept better being on her belly", "belly sleeping is okay here in the NICU because our babies are monitored – don't do this at home"
- **DO say**, "to help her calm I put her on her belly for a brief time. This special therapy is sometimes needed to help with withdrawal symptoms".
- **Be consistent** with messages.

### Considerations

- Staffing – try to avoid clustering NAS babies in 1 area
- Avoid triage assignments if possible
- Consistent care givers are important
- Maintain positivity
- Communicate with charge nurse any concerns with assignments
- Safe Sleep Notes
- May begin in isolette, bassinet, or open crib
- No washcloths under infant

**Adirondack Medical Center - Safe Sleep Practices for Infants Policy**

**ADIRONDACK HEALTH**

TITLE:	Safe Sleep Practices for Infants	POLICY #: PCS-0799-37
FOLDER NAME:	Perinatal Services	PAGE: 1 OF: 4
PREPARED BY:	Paula McGreevy, RNC	
EFFECTIVE DATE: August 7, 2015	REVIEWED/REVISED:	
APPROVED BY:	 Linda McClarigan, RN, BSN, MSHA (Chief Nursing Officer)	

**POLICY STATEMENT:**

All healthcare professionals will reinforce infant safe sleep practices as outlined by NIH/ Eunice Kennedy Shriver National Institute of Child Health and Human Development. The healthcare professional staff is responsible for teaching and role modeling infant safe sleep practices to parents/ caregivers during both formal {i.e. childbirth, breastfeeding and newborn care classes; discharge instructions} and informal teaching opportunities {i.e., general conversation and demonstrations regarding infant care and safety}.

**PROCEDURE(S) FOR IMPLEMENTATION:**

A separate bed and bed space must be set up for each infant. No equipment, blankets or objects should be near the infant's face while in the crib/bed. When bundling infants, the top of the blanket should be kept at neck level or lower. If available, a sleep sac may be used.

When a mother-baby-dad is observed sleeping in a situation that is unsafe, such as the infant in the bed with mother or on a pillow, the nurse will move the child to the crib and teach the safe technique as soon as practical.

When performing bath demonstrations, the nurse will state that when at home after bathing to place infant in crib, on back, and within same room as a parent or caregiver. Nurse will model placing infant on back with no loose items in the isolette/crib. After placing infant on his/her back to sleep in isolette/crib, nurse will encourage "tummy time" when infant is awake and mother/caregiver is able to supervise.

Nurse will ask if mother/caregiver has a safe sleep environment (safety approved crib) for infant at home. Nurse will ask if parent/caregiver knows about the Consumer Product Safety Commission (CPSC) standards for a safe crib. For those who have not received this information, the nurse will provide an information sheet with the correct information. If parent/caregiver does not have safety-approved crib at home, nurse will provide appropriate referral. Nurse will also discuss the importance of using a tight fitting crib sheet.

Nurse will demonstrate the following to the parents:

- Proper swaddling.
- Proper "tummy time".
- Proper use of blanket in a crib. (i.e., place baby with feet to foot of the crib, tuck a thin blanket around the crib mattress, cover baby only as high as his/her chest.)

Driver:

Hospital policies support/facilitate safe sleep practices

## Adirondack Medical Center - Safe Sleep Practices for Infants Policy

<b>TITLE:</b> Safe Sleep	<b>DEPARTMENT:</b> Perinatal Services	<b>POLICY #:</b> PCS-0799-37
-----------------------------	--	---------------------------------

**Note:** Nurse should encourage parent/caregiver to use an infant sleeper or sleep sack instead of blanket, to dress the infant in a manner to avoid over-bundling or over-heating, and to set room temperature at a comfortable level.

Nurse will ask if parent/caregiver about plans to bed share. Nurse should remember that some families wish to practice bed sharing based on their cultural beliefs, environmental situation or other personal reasons. However, the nurse should educate all families about the risks involved with sleeping in the same bed with their infant.

**Key points to review with parents:**

- ▶ Adult beds are not designed to meet federal safety standards for infants.
- ▶ Babies have been suffocated by becoming trapped or wedged between the bed and the wall or bed frame, have been injured by rolling off the bed, or have been suffocated by bedding. Infants have died when an adult rolled onto and suffocated them.
- ▶ Bed sharing **must** be avoided at all times when a mother or any other person is extremely fatigued, obese, a smoker, impaired by alcohol or drugs, legal or illegal. Sleeping with a baby under these conditions is extremely dangerous and may lead to the baby's death.
- ▶ Never place an infant to sleep on a couch, sofa, recliner, cushioned chair, waterbed, beanbag chair, soft mattress, pillow, synthetic or natural animal skins (such as lambskins), or other soft surface such as "memory" foam mattress toppers and pillows designed for adults. Many studies have shown parent/infant room sharing is protective against Sudden Infant Death Syndrome (SIDS).

**If a mother desires to bed share despite the above warnings, continue to discuss and stress the importance of room sharing as an alternative to bed sharing:**

- Use a crib or "sidecar" next to mother's bed. A sidecar is a crib-like infant bed that attaches securely and safely next to the parent's bed; with this nighttime nurturing device, parents have their own sleeping space, baby has his or her own sleeping space, and baby and parents are in close touching and nursing distance to one another.
- Place infant back to crib after comforting or breastfeeding and/or when the parent is ready to sleep. Keep crib in the same room as parent/caregiver. Parents have their own sleeping space, baby has his or her own sleeping space, and baby and parents are still in close touching and nursing distance to one another.

**Reinforce concepts with parents:**

Infants should be breastfed for at least the first six months; infants should always sleep in a smoke-free home or environment; prone (on stomach) positioning when awake, often called supervised "tummy time", is essential for development of shoulder girdle and arm strength, head control and stability of the trunk.

Remind parent/caregiver that these infant care practices and standards apply for all nap times and sleeping at night; Mother/caregiver should provide these directions to others who will be providing care to the infant.

Driver:

Hospital policies support/facilitate safe sleep practices

Adirondack Medical Center - Safe Sleep Practices for Infants Policy

<b>TITLE:</b> Safe Sleep	<b>DEPARTMENT:</b> Perinatal Services	<b>POLICY #:</b> PCS-0799-37
-----------------------------	--	---------------------------------

**Discharge Instructions (oral) to Parent/Caregiver:**

- ▶ Place healthy infant on his/her back to sleep; change the direction that the infant lies in the crib weekly.
- ▶ Set up the infant's own safe sleeping area in the same room with the parents/caregivers especially during the infant's early months. If a mother decides to bed share despite the warnings, provide additional guidance.
- ▶ Place healthy infant in a crib that meets the minimum federal safety standards as established by the Consumer Product Safety Commission. Additionally, staff will instruct parents/caregivers to use a firm, tight-fitting mattress and a tight-fitted bottom sheet specifically made for the crib.
  - Remove all soft or loose bedding including quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from the infant's sleeping area.
  - Use an infant sleeper or sleep sack instead of blankets. If a blanket must be used, instruct parent to place infant with feet to foot of the crib and tuck a thin blanket around the crib mattress, covering infant only as high as infant's chest.
  - Dress the infant in a manner to avoid over-bundling or over-heating; set room temperature, if possible, at a comfortable level.
  - Review other updated crib safety guidelines as listed by the Consumer Product Safety Commission.
- ▶ Never place an infant to sleep on a couch, sofa, recliner, cushioned chair, waterbed, beanbag chair, soft mattress, pillow, synthetic or natural animal skins (such as lambskins), or other soft surface such as "memory" foam mattress toppers and pillows designed for adults.
- ▶ Encourage mother to breastfeed her infant for at least the first six months.
- ▶ Keep infant in a smoke-free home or environment.
- ▶ Position infant prone (on stomach) when awake (i.e. supervised tummy time)
- ▶ Advise parent/caregivers that infant sleep practices and standards apply for all nap times and sleeping at night, including time the infant is cared for by other family members, baby sitters or child care providers.

**Written Discharge Instructions to Parent/Caregiver:**

- ▶ Safe Sleep for Your Baby {NIH Pub No. 12- 5759 June 2013 and Safe Sleep for Your Baby {First Candle}.

**Documentation:**

All verbal and written instructions will be documented in the Patient Record.

## Albany Medical Center - Safe Sleep for Hospitalized Infants Policy

### Safe Sleep for Hospitalized Infants (AMC Specific)

#### OVERVIEW

1. To establish consistent safe sleep practices by health care professionals for all infants admitted to Albany Medical Center.
2. To provide a guideline for modeling Safe Sleep in the hospital environment based on the American Academy of Pediatrics (AAP) recommendations.
3. To provide consistent discharge information related to Safe Sleep.

#### BACKGROUND

Sudden Unexpected Infant Death (SUID) affects nearly 4000 families in the United States each year. Although the cause of these deaths cannot be explained, most occur while the infant is sleeping in an unsafe environment.

There are three types of SUIDs:

1. Sudden Infant Death Syndrome (SIDS) - Sudden death of an infant, less than 1 year of age, that cannot be explained after a thorough investigation (i.e. autopsy, death scene investigation, case history review)
2. Unknown Cause – Sudden death of an infant, less than 1 year of age, that cannot be explained because a thorough investigation was not conducted and cause of death could not be determined.
3. Accidental suffocation /strangulation – Death of an infant due to accidental suffocation/strangulation. Mechanisms that lead to accidental suffocation include, but are not limited to: suffocation by soft bedding, overlay (person rolls on top of or against an infant), wedging or entrapment (infant becomes trapped between two objects, i.e. wall or mattress) or strangulation (infant's head and neck become caught between crib railings)

Health Care Professionals provide a vital role in modeling Safe Sleep practices for infants and providing current, consistent education for parents and families.

Definition of bed:

- In the hospital: infant's own sleep space (bassinet, crib or isolette)
- At home: infant's separate sleep space (from other family members) with a firm mattress (crib, bassinet, pack 'n play)

Definition of Co-bedding:

- Co-bedding is placing infant in environment for sleep with the parent, a twin/ triplet, a sibling or pet.
- Co-bedding is NOT recommended
- Infants require a separate sleep space from the parent or siblings sleep space.
- Initially, keeping the bassinet or crib in the same room as the parents should be considered.

#### PROCEDURE

1. Hospitalized infants meeting eligibility criteria must be placed on their backs to sleep in a safe sleep environment.

Criteria for Safe Sleep Initiation:

- Infant is greater than 32 weeks corrected gestational age
- Infant is stable on room air or a low flow nasal cannula
- Infant has no congenital anomaly or neurological impairment requiring special positioning: e.g. micrognathia, myelomeningocele,

3/16; 6/17

1

Driver:

Hospital policies support/facilitate safe sleep practices

## Albany Medical Center - Safe Sleep for Hospitalized Infants Policy

### Safe Sleep for Hospitalized Infants (AMC Specific)

- Infant is on full feeds (oral or gastrostomy)
- ❖ **Transition to safe sleep position/ environment occurs with developmental maturation:**
- Once the infant reaches 50% oral intake for the day, the head of bed needs to be flat after each oral feed.
  - The head of bed can remain elevated after the tube feeding per AMC tube feeding procedure.
- Once the infant maintains temperature 24h after birth or 24h after being weaned from supplemental heat, the infant is swaddled with one blanket.
  - Swaddling (wrapping the infant in a light blanket) encourages the supine position
  - Commercial sleep sac can be used
  - Hats should not be used once thermoregulation achieved
  - No additional blankets/ positioning rolls in the bed
- ❖ **Infants with severe GE reflux are eligible for Safe sleep positioning & environment with the following recommendations:**
- Parent/caregiver should hold the infant upright for 30 minutes after a feeding, if possible, and then place infant supine for sleep with the head of bed flat.
- GE reflux is not an indication for prone positioning.
- Guidelines for care at discharge should be made in collaboration with the medical team for infants with symptomatic GE reflux.

### MONITORING AND CARE

#### Safe Sleep Environment in the hospital consists of:

- Alone: Infant sleeping alone; No bed -sharing with parent or sibling
- Back: Infant supine; No side-lying/ prone
- Head of bed flat
- Crib: No extra bedding, blankets or crib bumpers; No soft fluffy blankets
- No stuffed toys in bed
- No developmental positioning aids (rolls, pillows, nests, wedges, Zflo)
- Use of a commercial sleep sack is preferred ( over swaddling for providing warmth or once infant able to get out of swaddle blanket ~ 2 months of age)
- Swaddle should be with one blanket
- Avoid overheating. Hats and headbands should not be used after initial transition period.
- Use pacifier once breastfeeding is established; Avoid using pacifier clips that attach to clothing

#### 3. Healthcare professionals (RN, LPN, PCA, RT, Medical Providers, consultants (OT, PT, Speech), parents, caregivers and volunteers should:

- Model Safe Sleep practices
- Educate parents/caregivers about Safe Sleep practices throughout the infant's hospitalization
- Consult Social Worker if parent states they have no separate sleep space available at home; There are programs available in some NYS counties to provide a pack 'n play.

3/16; 6/17

2

Driver:

Hospital policies support/facilitate safe sleep practices

## Albany Medical Center - Safe Sleep for Hospitalized Infants Policy

### Safe Sleep for Hospitalized Infants (AMC Specific)

#### 4. Parent/Caregiver Safe Sleep education includes:

- Alone
- Back
- Crib environment
- Pamphlet: Follow the ABC's of Safe Sleep
- Video on Education channel

#### 5. The following are additional recommendations that should be discussed during SIDS/SUID education with parents

- Share your room NOT your bed
  - Infant requires own separate safe sleep space
  - Infant should not co-bed with an adult, sibling or family pet.
  - Recommend initially keeping the bassinet or crib in the same room as the parents.
  - Accidental suffocation can occur when infant sleeps in adult bed
- Only mattresses designed for specific product should be used; mattresses should be firm with no gap between mattress and the wall of the crib, pack 'n play or bassinet;
- Sitting devices (car seats, strollers, infant carriers) are not recommended for routine sleep, particularly for infants < 4 months of age
- When infant exhibits signs of attempting to roll, swaddling should no longer be used.
- Breastfeeding is recommended and has been shown to reduce risk of SUID/SIDS. Consider pacifier use for nap time & bedtime once breastfeeding has been established
- Avoid smoking exposure around infant or their environment.
  - Exposure to second hand smoke is associated with increased risk of SIDS
  - Avoid alcohol and illicit drug use; in conjunction with bed-sharing, it places the infant at high risk of SIDS
- Avoid use of commercial devices that are inconsistent with safe sleep recommendations
- Prematurity is a risk factor for SIDS
- Immunizations reduce risk
- Frequent supervised tummy time should be provided when the infant is awake. Tummy Time helps the infant's head, neck, and shoulder muscles get stronger and helps to prevent flat spots on the head
- Once infant can independently roll over, the infant may remain in the sleep position they assume.

#### DOCUMENTATION

RN to document safe sleep practices and caregiver education in infant's medical record

3/16; 6/17

3

Driver:

Hospital policies support/facilitate safe sleep practices

**BronxCare Health System – Safe Sleep (SIDS/SUDS) Policy**

**BRONXCARE HEALTH SYSTEM  
PATIENT CARE SERVICES DEPARTMENT**

**Manual Code No:** PCS-L&D-S-001  
**Page No:** 1 of 6

<b>Title:</b> Safe Sleep (SIDS/SUDS)		
<b>Issued By:</b> Patient Care Services Department		
<b>Effective Date:</b> 2/2016	<b>Last Review Date:</b> 9/18, 7/19	<b>Last Revised Date:</b> 9/18, 7/19
<b>Distribution:</b> Patient Care Services Manual, NICU, Maternity, Labor and Delivery, Pediatric, Pediatric Ed & Ambulatory Clinics		

**PURPOSE:**

1. To establish and model consistent safe sleep practices for all Healthcare Professionals as recommended by the American Academy of Pediatrics (AAP)
2. To provide parents and all infant caregivers with consistent education recommended by the American Academy of Pediatrics on safe sleep positions and environment.

**POLICY:**

1. All healthcare professionals and personnel will adhere to safe sleep practices in all Maternal Child Health units and the Pediatric ED. Education for parents/caregivers will be initiated in the prenatal period (Prenatal ambulatory clinics), continued during the mother’s maternal hospitalization and throughout the infants first year of life and reinforced at each pediatric outpatient visit for Bronx Care Health System patients.
2. All education must be documented with validation of understanding from parent/caregiver.
3. All Nursing staff hired to work in the Maternal Child Health departments will be educated on the AAP recommendations of Safe Sleep and the Safe Sleep education that will be provided to all parents/caregivers on orientation and annually.
4. Nurse rounding on in-patient units; Maternity, NICU and Pediatrics will include ensuring nothing but baby is in bassinet/crib.

**DEFINITION:**

**Sudden Infant Death Syndrome (SIDS)** - infant death up to 1 year of age, that cannot be explained after a thorough case investigation, including autopsy

**Sudden Unexpected Infant Death (SUID)** - term used to describe any sudden and unexpected death, whether explained or unexplained (including SIDS) during infancy. Explained cases includes, suffocation, asphyxia, entrapment, infection, ingestions, metabolic diseases, cardiac channelopathies and trauma.

Driver:

Hospital policies support/facilitate safe sleep practices

## BronxCare Health System – Safe Sleep (SIDS/SUDS) Policy

### Safe Sleep (SIDS/SUDS)

---

#### **PROCEDURE:**

##### **Labor & Delivery and Maternity:**

1. All infants > 32 weeks will be placed on their “back to sleep” with head of the bed flat.  
Note: Exception: Physician order with documented explanation.
2. Nothing should be in the bassinet except baby.
3. Rooming- in is recommended without bed sharing.
4. If a baby is found in bed with a sleeping mother/parent, the baby should be placed in the bassinet, or brought to the Nursery and safe sleep reeducation should be done and documented.
5. Encourage exclusive breastfeeding.
6. Promote skin to skin bonding while mother/parent is awake, but ensure the following
  - Baby’s face can be seen
  - Head is in “sniffing” position
  - Nose and mouth is not covered head is turned to one side
  - Neck is straight, not bent
  - Shoulder’s and chest face mother’s
  - Legs are flexed
  - Baby’s back is covered with a blanket
  - While in delivery room, mother/baby is continuously monitored and regularly on post-partum
7. Pacifier use is recommended throughout infancy during sleep time.  
Note: For Breastfed Infants, avoid pacifier until breastfeeding is firmly established.
8. Infant swaddling should be no higher than shoulder level.
9. Infants should be placed as close to the foot (feet to foot) of the bassinette as possible to prevent the blanket from covering the infants face.
10. Hats should not be placed on infant’s head, unless needed for temperature instability.
11. All healthcare professionals must emulate safe sleep practices.
12. All mother’s/parents/caregivers must receive verbal and written safe sleep education and must view the safe sleep video prior to discharge.

Driver:

Hospital policies support/facilitate safe sleep practices

## BronxCare Health System – Safe Sleep (SIDS/SUDS) Policy

### Safe Sleep (SIDS/SUDS)

---

#### Safe Sleep Practices Specific to NICU

1. All NICU babies that are medically stable (in bassinet) should be placed “back to sleep” as soon as possible, as they are at increased risk of SIDS.
2. Education for “Safe Sleep” practices will be initiated and documented at the time of admission for all NICU parents/caregivers. Preterm parents must be counseled about the importance of supine sleeping in preventing SIDS.
3. Some NICU babies may require special positioning due to medical/neurological/congenital anomalies. Parents/caregivers should be told why the infant is not on their back. Infant position should be documented in the EMR.

#### Documentation

1. Document the infant’s sleep position every shift on the Newborn Nursery, NICU and Pediatric Flow sheet.
2. Any position other than “back to sleep” must be accompanied by a documented rationale.
3. Document all parental/caregiver education, including Safe Sleep video was viewed.
4. Document parental/caregiver understanding of Safe Sleep practices.

**Parent/Caregiver Education:** The following recommendations must be provided to all parents/caregivers with its rationale as to how it affects safe sleep. All Safe sleep education provided to parents/caregivers must be documented in the EMR with parent/caregivers acknowledgement of understanding or lack of understanding.

1. Back to sleep for every sleep until 1 year of birth. While infants will always be placed on their backs to sleep, when an infant can easily turn over from back to front and front to back, they can remain in whatever position they prefer to sleep
2. Inform parents that the supine position, “back to sleep” does not increase the risk of choking and aspiration.
3. Side lying is not safe, as the risk of rolling to the prone position is increased.
4. Use a firm sleep surface, no gaps between mattress and side of bassinet/crib.
5. Keep soft objects and loose bedding away from the infant’s sleep area; reduces SIDS, suffocation and entrapment, enforce nothing but baby in sleep area.
6. Room sharing without bed sharing is recommended for the first year of life, but at least for the first 6 months.
7. Pregnant women should receive regular prenatal care.

Page 3

Driver:

Hospital policies support/facilitate safe sleep practices

## BronxCare Health System – Safe Sleep (SIDS/SUIDS) Policy

### Safe Sleep (SIDS/SUIDS)

8. Sitting devices, such as car seats, strollers, swings, infant carriers and infant slings should not be used for routine sleep, particularly for infants younger than 4 months.
9. When infant slings or cloth carriers are used, ensure that the infant's head is visible, and the nose and mouth are clear of obstructions.
10. Avoid smoke exposure during pregnancy and after birth; smoking is the second most frequent cause of SIDS/SUIDS.
11. Avoid alcohol and illicit drug use during pregnancy and after birth.
12. Encourage exclusive breastfeeding for 6 months; breastfeeding has been shown to reduce the risk of SIDS.
13. Inform parents to offer a pacifier at nap time and bedtime; however do not force on infant. For breastfed infants, pacifier introduction should be delayed until breastfeeding is firmly established.
14. Avoid overheating, no more than one extra layer than an adult.
15. Instruct mother/parent to swaddle baby no higher than axillary and to stop swaddling once baby can roll over.
16. Awake Tummy time is recommended, but must be supervised at all times.
17. Only one infant will be placed to sleep in each crib/bassinet.
18. Bibs and pacifiers should not be tied around an infant's neck or clipped to clothing when sleeping.
19. Infants should be immunized in accordance with AAP and CDC recommendations.
20. Do not use home cardiorespiratory monitors as a strategy to reduce the risk of SIDS.

**Crouse Hospital – Safe Sleep for Newborns Policy**

Crouse Hospital Policy & Procedure  
Sleep Safe for Newborns  
Lead Author: Marti Stoecker

PPPG #: P0092  
Effective Date: 01/04/17  
Page 1 of 2

**General Information**

**Policy Name:** Safe Sleep for Newborns  
**PPPG Category:** Area Specific: Women's and Children's Services  
**Applies To:** Units where infants reside  
**Key Words:** Safe Sleep, Bed Sharing, Co-Bedding  
**Associated Forms & PPPGs:** Breastfeeding Policy  
**Original Effective Date:** 02/22/16  
**Current Version's Effective Date:** 1/4/2017  
**Review & Revision Dates:** 01/04/17

**Policy**

Safe sleeping practices will be implemented, role modeled and educated to while the infant is hospitalized.

**Procedure**

The American Academy of Pediatrics recommends for prevention of death from sleep related causes including Sudden Infant Death Syndrome (SIDS) that an infant sleeps in his/her own crib, as close to parent as possible, but not in the parent's bed.

All infants will be placed supine, with the head of the crib flat for all naps and night time sleep, unless there is a specific provider order to do otherwise.

Infants need to sleep on firm surface with a tightly fitted sheet.

Avoid overheating infants; recommendations include one layer more than adult is comfortable in. Sleep Sacks are recommended. We model safe sleep in the hospital, by utilizing the Sleep Sack when able. If infant is not maintaining temperature you may swaddle baby in receiving blanket and then in place sleep sack.

Multiples will not be allowed to co-bed.

If primary care giver has used medications impairing their ability to arouse, the baby can either stay in the room with another adult or may go to the nursery so the primary caregiver can rest.

Pacifiers have been proven to help with prevention of SIDS. Breastfeeding infants are only given pacifiers in the newborn period to decrease pain during procedures, for specific medical reasons or upon specific request of the mother. The NICU also uses pacifiers for non nutritive sucking see breastfeeding policy for specifics.

If breastfeeding, pacifiers should not be introduced until breastfeeding is established roughly 2-4 weeks of age.

Parents of all infants discharged from the newborn nursery or NICU are educated on safe sleep and given information on safe sleep, and will be given an opportunity to ask questions about safe sleep during their stay and at discharge. Parents will be given information on interventions that may reduce the risk of SIDS, such as immunizations and breast feeding.

PPPG #: P0092  
Effective Date: 01/04/17  
Page 2 of 2

**Tenants for Home:**

- Environment should be non smoking.
- An infant should not share a bed or sleeper chair with another adult, child or animal.
- Infants less than one year old should sleep alone, on their back, and in a crib with firm mattress and fitted sheet in the parents room.
- Remove all blankets, comforters, and toys from your baby's sleep area (this includes but is not limited to loose blankets, bumpers, pillows and positioners).
- The American Academy of Pediatrics states importance of using wearable blanket (sleep sack) instead of loose blankets.
- Offer pacifier when putting baby to sleep. If breastfeeding introduce pacifier after one month, when breastfeeding is established.
- After feedings put baby back to sleep in separate safe sleep area.
- Parents will be educated on the benefits of "tummy time" to promote motor development, facilitate upper body muscles and avoid positional plagiocephaly. The infant should be observed at all times during "tummy time".
- Area should be free of hazards such as dangling cords, wires, or window coverings to prevent strangulation risk. Infants should NOT sleep in infant swings, car seats, infant seats due to the risk of positional obstruction of their airways.

**NICU Specific Guidelines:**

- Begin transitioning infants to a supine sleep position at 32 weeks, when medically appropriate. Transition includes:
  - Head of the bed flat
  - Safe sleep clothing (onesie, and/or sleeper and swaddled with 1 receiving blankets and/or a sleep sack)
  - Weaned from all developmental care products PRIOR to being placed in an open crib, unless medically indicated.

- AAP Task Force on Sudden Infant Death Syndrome. SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment. *Pediatrics*. 2016; 138(5):e20162938.
- Moon, R., Damell, R., Goodstein, M., & Hauck, F. (2011). SIDS and other Sleep-related Infant Deaths: Expansion of the recommendations for a safe infant sleeping environment. *Pediatrics*, 128 (5), e1341-e1367.
- Varghese, S., Gasalberti, D., Ahern, K., & Chang, J. (2015). An analysis of attitude toward infant sleep safety and SIDS risk reduction behavior among caregivers of newborns and infants. *Journal of Perinatology*, 1-4.

**Definitions**

- **SIDS (Sudden Infant Death Syndrome):** the sudden death of an infant less than 1 year of age that cannot be explained after a thorough investigation is conducted, including an autopsy.
- **Tummy Time:** the practice of placing an infant prone during awake periods in order to promote upper body strength and development of core muscles.

## Glens Falls Hospital – Infant Safe Sleep Practices Policy

**Title:** Safe Sleep Practices, Infant

**Area:** Women's & Children's Services

**Page:** 1 of 2

**Effective Date:** March 27, 2017

**Scope:** Independent

**Purpose:** To insure that all parents are taught required Safe Sleep practices in an effort to reduce sleep-related infant deaths

**Definitions:** Safe Sleep is a term referring to evidence based measures related to newborn sleep positions and environments that reduce the risk of sleep related infant deaths.

**Policy:**

Providers and staff will provide education to all parents and model infant safe sleep practices as recommended by the American Academy of Pediatrics. Staff responsible for the care of infants will be educated on and accountable for practicing infant safe sleep practices.

**Procedure:**

All infants will be placed in cribs in a manner consistent with the ABC's of safe sleep. Infants in the Special Care Nursery may be placed in positions other than supine when determined to be necessary and are on continuous cardio-respiratory monitoring.

Parents will be taught the ABC's of safe sleep prior to the nurse leaving parents unattended with their newborn at the conclusion of the recovery period.

Safe sleep practices should be reinforced throughout the hospital stay through modeling and use of educational materials.

Safe sleep should be reinforced at the time of discharge using teach back method of validating understanding.

Good Samaritan Hospital Medical Center - Safe Sleep/Crib Safety Policy

**GOOD SAMARITAN HOSPITAL MEDICAL CENTER  
NURSING DEPARTMENT  
POLICY AND PROCEDURE MANUAL**

**TITLE:** Safe Sleep/ Crib Safety

**ORIGINAL DATE OF ISSUE:** 0 9/15 **PAGE** 1 of 3

**Presented at Clinical Practice Council:** 09/15

**Approved by Executive Council:** 01/16

**Physician Order:** Yes  No

**Consent:** Yes  No

**Purpose:** To expand the Recommendations from the American Academy of Pediatrics safe sleep environment and to reduce the risk of all sleep related infant deaths to include SIDS. To provide a uniform model hospital policy for healthcare providers that serves the newborn and pediatric population under 1 year old

**Policy Statements:** A major decrease in the incidence of SIDS occurred when the American Academy of Pediatrics released its initial recommendation in 1992 that infants be placed in a non-prone position for sleep. The AAP has expanded its recommendations to include a safe sleep environment, which reduces the risk of all sleep-related infant deaths, including SIDS. GSHMC supports the safe infant sleep environment by training the staff caring for infants under 1 year old and educating the parents as recommended by the New York State DOH and the AAP/

**SAFE SLEEP**

PROCEDURE	KEY POINT
<p><b>Sleep Position:</b> The nurse will access all infants &gt; 32 weeks for placing the infant on his/her back for the first year unless otherwise ordered by the physician. The nurse will educate the caretaker of this sleep position.</p>	<ul style="list-style-type: none"> <li>• Side sleeping is no longer advised and should be used only if there is a physician order.</li> <li>• The flat supine sleeping position does not increase the risk of choking and aspiration in infants, even those with GE reflux.</li> </ul>
<p><b>Sleep Surface:</b> The nurse will make sure Mattress is firm and maintained its shape and fits snugly in the crib. Nurse will educate the caregiver that any gaps around crib mattress will provide areas that a baby can become trapped in and/or suffocate</p>	<ul style="list-style-type: none"> <li>• Mattresses should be firm. Soft mattresses will change shape or conform to the weight of the baby's head and body and become an obstruction to the airway. Infant should not sleep on waterbed, sofa or pillow.</li> </ul>

Driver:

Hospital policies support/facilitate safe sleep practices

Good Samaritan Hospital Medical Center - Safe Sleep/Crib Safety Policy

<p><b>Bedding:</b> The nurse will maintain the bassinette/crib free of all soft objects and loose bedding. No stuffed animals, blankets, quilts, sheepskins, pillows, blanket rolls. The nurse will educate the care giver to keep infants crib free of clutter.</p>	<ul style="list-style-type: none"> <li>• Soft objects can easily change position in a crib and become an obstruction to the airway. Without proper neck control and maturity of the airway, an infant is not able to change position away from these obstructions while asleep.</li> </ul>
<p><b>Overheating/Over-bundling</b> Healthcare providers will avoid overheating or over-bundling infant. Infants should be dressed appropriately for the hospital environment, with no more than one additional layer than an adult would wear to be comfortable If swaddling is needed for comfort or thermoregulation, swaddle below the axilla. Kangaroo Care or skin –to-skin is another method of thermoregulation but should be used only when mother is awake. Infant’s head should be uncovered during sleep. The healthcare provider will educate caretakers on overheating/ over bundling methods.</p>	<ul style="list-style-type: none"> <li>• Infants are sensitive to extremes in body temperature and cannot easily regulate body temperatures well</li> <li>• . Infants who are overheated with heavy clothes, blankets have increased risk of SIDS</li> <li>• Teach parents to evaluate infants for signs of overheating, such as sweating or the chest feeling hot to touch.</li> <li>• Hats and bonnets can promote heat retention and CO2 accumulation around the face from increased breath rate while asleep.</li> </ul>
<p><b>Sleeping Environment:</b> Nurses will ensure room sharing without bed sharing is maintained. (Rooming In) Nurses will encourage the infant’s sleep area close to, but separate from, where patient sleeps and that the Infant is be placed in bassinette to sleep. Nurses will educate the caregivers the importance of sleep environment.</p>	<ul style="list-style-type: none"> <li>• Bed sharing with anyone, including parents, other children and particularly multiples is not safe. Pets also pose a threat to sleeping infants.</li> <li>• Adult beds are not designed to meet federal safety standards for infants</li> </ul>
<p><b>NICU:</b> Healthcare providers should model and implement all SIDS risk reduction recommendations as soon as the infant is clinically stable and significantly before anticipated discharge. Remove developmental aids as appropriate. Avoid commercial devices marketed to reduce the risk of SIDS .i.e. wedges, positioners, special mattresses.</p>	<ul style="list-style-type: none"> <li>• Inform parents that there is no evidence or that these devices reduce the risk of SIDS or suffocation, or that they are safe.</li> </ul>
<p><b>Back to Sleep</b> Healthcare providers will educate caregivers/parents on the importance of following all recommendations for Safe Sleep</p>	<ul style="list-style-type: none"> <li>• Sleeping on the back carries the lowest risk for SIDS.</li> <li>• Ensure all recommendations are understood by caregivers/parents with</li> </ul>

## HealthAlliance and Westchester Medical Center Health Network - Infant Positioning / Safe Sleeping Practice Policy

Policy: **Infant Positioning / Safe Sleeping Practice**  
 Approver: OB Nurse Director  
 Initiated: 4/2013  
 Last Approved Date: 5/2017  
 Reference: SIDS and Other Sleep-Related Infant Deaths: Evidence Based for 2016 Updated Recommendations for a Safe Infant Sleeping Environment. American Academy of Pediatrics.  
  
 NYS Department of Health Safe Sleep for Baby.  
<https://www.health.ny.gov/publications/0672/>

Responsible Department(s): OB Nursing

1.0 **DEFINITIONS:** None

2.0 **POLICY:**

- 2.1 To establish guidelines and parameters for infant positioning.
- 2.2 To establish appropriate and consistent parental education on safe sleep positions and environment.
- 2.3 To establish consistent safe sleep practices by healthcare professionals for infants prior to discharge.
- 2.4 To comply with AAP Guidelines for infant safe sleep practices and providing education for parents relating to sudden infant death syndrome and sudden unexpected death of infants.
- 2.5 Policy Statement:
  - 2.5.1 Sudden unexpected infant death (SUID), also known as sudden unexpected death in infancy (SUDI), is a term used to describe any sudden and unexpected death, whether explained or unexplained (including sudden infant death syndrome [SIDS] and ill-defined deaths), occurring during infancy. SIDS remains the leading cause of postneonatal (28 days to 1 year of age) mortality.
  - 2.5.2 Healthcare professionals have a vital role in educating parents and families regarding Safe Sleep practices. As important role models, healthcare professionals are critical in communicating SIDS risk reduction strategies to parents and families, and by practicing safe sleep practices while infants are still in the hospital.
  - 2.5.3 The American Academy of Pediatrics recommends a safe sleep environment that can reduce the risk of all sleep-related infant deaths. Recommendations for a safe sleep environment include supine positioning, use of a firm sleep surface, room-sharing without bed-sharing, and avoidance of soft bedding and overheating. Additional recommendations for SIDS risk reduction include avoidance of exposure to smoke, alcohol, and illicit drugs; breastfeeding; routine immunizations; and use of a pacifier.

Driver:

Hospital policies support/facilitate safe sleep practices

## HealthAlliance and Westchester Medical Center Health Network - Infant Positioning / Safe Sleeping Practice Policy

3.0 **RELATED POLICIES:** None

4.0 **PROCEDURE:**

4.1 Infants in the Newborn Nursery or Rooming-in:

4.1.1 Place all infants on their backs to sleep.

\*Infants with a medical contraindication to supine sleep position (i.e. congenital malformations, upper airway compromise, and severe symptomatic gastroesophageal reflux) should have a physician's order along with an explanation documented.

4.1.2 A firm sleep surface should be used (firm mattress with a thin covering).

4.1.3 Keep soft objects, such as pillows, pillow-like toys, quilts, comforters, sheepskins, and loose bedding, such as blankets and non-fitted sheets, away from the infant's sleep area to reduce the risk of SIDS, suffocation, entrapment, and strangulation.

4.1.4 If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet. The mother/parent should then be re-educated on safe sleep practices.

4.1.5 All efforts should be made to assist mom in remaining skin-to-skin for as long as she desires as mother/baby separation can impact breastfeeding success.

5.0 **DOCUMENTATION/EDUCATION:**

5.1 Document the infant's position on the Newborn EMR documentation

5.2 **Family/Parental Teaching:** All parents/caregivers will be educated on SIDS and safe sleep environment and positioning:

5.2.1 All healthy infants should be placed on their backs to sleep.

5.2.2 It is recommended that infants sleep in the parents' room, close to the parents' bed, but on a separate surface. A safety-approved infant's crib, portable crib, bassinet, or play yards should be placed in the parents' bedroom, ideally for the first year of life, but at least for the first 6 months.

5.2.3 All infants should be placed on a firm sleep surface. Mattress should be firm with a well fitted sheet. Nothing should be in the crib, portable crib, bassinet, play yards except for the baby – keep soft objects such as pillows, pillow-like toys, quilts, comforters, sheepskins, and loose bedding, such as blankets and non-fitted sheets, away from the infant's sleep area to reduce the risk of SIDS, suffocation, entrapment, and strangulation.

5.2.4 Bumper pads are not recommended; they have been implicated in deaths attributable to suffocation, entrapment and strangulation and, with new safety standards for crib slats, are not necessary for safety against head entrapment.

5.2.5 Never place or leave a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam mattress.

5.2.6 Sitting devices, such as car seats, strollers, swings, infant carriers, and infant slings, are not recommended for routine sleep in the hospital or at home, particularly for young infants.

5.2.7 Breastfeeding is associated with a reduced risk of SIDS

5.2.8 Avoid bed sharing with the infant.

Risk of bed sharing:

5.2.8.1 Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling off the bed, and infants have suffocated in bedding.

5.2.8.2 Infants have died from suffocation due to adults rolling over on them.

Driver:

Hospital policies support/facilitate safe sleep practices

## HealthAlliance and Westchester Medical Center Health Network - Infant Positioning / Safe Sleeping Practice Policy

- 5.2.8.3 Sleeping with an infant when fatigued, obese, a smoker, or impaired by alcohol or drugs (legal, or illegal) is extremely dangerous and may lead to the death of an infant.
- 5.2.9 Use one-piece sleepers, do not use blankets.
- 5.2.10 There is no evidence to recommend swaddling as a strategy to reduce the risk of SIDS. If swaddling is used, infants should always be placed on the back. When an infant exhibits signs of attempting to roll, swaddling should no longer be used.
- 5.2.11 Avoid the use of commercial devices marketed to reduce the risk of SIDS.
- 5.2.12 Do not rely on home baby monitors.
- 5.2.13 Avoid overheating and head covering.
- 5.2.14 Try using a pacifier (after breastfeeding has been well established) at nap times and at bedtime. Do not force an infant to take a pacifier if he/she refuses. If the pacifier falls out after the infant is asleep, it does not need to be put back in.

Driver:

Hospital policies support/facilitate safe sleep practices

## Kaleida Health - Safe to Sleep Practices and Sudden Infant Death Syndrome (SIDS) Prevention for the Neonate/Infant Policy

 <b>Kaleida Health</b> POLICY	Title: <b>Safe to Sleep Practices and Sudden Infant Death Syndrome (SIDS) Prevention for the Neonate/Infant</b>	# <b>NEO.10</b>
	Owner: <b>Newborn/Neonatal Standards</b>	Issued: <b>12/8/08</b>
Keywords: Back to sleep, SIDS prevention, safe sleep		

**I. Statement of Purpose**

Sudden infant death syndrome (SIDS) is a sudden and unexplained death that usually occurs while the infant is asleep during the first year of life. An infant between the ages of 1 and 4 months is at the highest risk. Although there is no conclusive research on the cause(s) of SIDS, safety measures such as placing the neonate/infant on his or her back when sleeping and other safe sleep guidelines have been shown to reduce the incidence of SIDS.

**II. Audience**

All staff providing care for neonates/newborn and infants up to a year of age

**III. Instructions**

**A. Recommendations for safe sleep**

1. Place infant in supine position for every sleep period until 1 year of age. Side sleeping is not considered safe and is not recommended. Once infant can roll from supine to prone and prone to supine, do not disturb infants' sleep. However, continue to place infant supine to initiate sleep. Do not use rolled up blankets or other positioning devices to prevent infant from rolling.

**\*\*Keypoint:** The supine position may be contraindicated in certain conditions such as spina bifida.

**\*\*Keypoint:** In the hospital, while on monitors infants may be placed prone to improve ventilation and for the purpose of repositioning an infant with little movement. When deemed appropriate by the provider, the infant will be placed supine to model best practice for the parents in preparation for discharge.

2. Infant should sleep in a crib by him or herself. The crib should be covered with a fitted sheet and be free of soft or loose materials such as pillows, sheepskin, stuffed animals, quilts, bumper pads, and other positioning devices.
3. Infants who are swaddled should have the blanket come no higher than the shoulders with the hands free near the face. The blanket should be loosely wrapped to avoid reducing functional lung capacity.

**\*\*Keypoint:** Once the infant can roll over on its own do not swaddle.

4. Avoid overheating. If the infant's chest feels warm to the touch or the infant is sweating, the infant is likely overheated and should be less layered. Avoid covering of the face or head.
5. Room sharing without bed sharing is recommended. Parents should be instructed to place the infant in his or her crib if the parent becomes drowsy. When rooming in, the neonate needs to sleep in the crib and not in the parent's bed.
6. Smoke exposure is known to be associated with SIDS. Avoid placing infant in crib with blankets or stuffed animals with a smoke odor. Parents should be educated to avoid holding an infant while wearing clothes that smell like smoke.

Hospital policies support/facilitate safe sleep practices

**Kaleida Health - Safe to Sleep Practices and Sudden Infant Death Syndrome (SIDS) Prevention for the Neonate/Infant Policy**

Title: Safe to Sleep Practices and Sudden Infant Death Syndrome (SIDS) Prevention for the Neonate/Infant	# NEO.10
--	----------

A patient gown can be provided to shield the infant from third hand smoke exposure.

- 7. Offer a pacifier to the infant for sleep times. If the pacifier falls out of mouth after the infant is asleep, do not replace.  
**\*\*Keypoint:** For the breast feeding infant, pacifiers should not be offered until breastfeeding has been established, typically 2-3 weeks of age.

- 8. Parents should be educated that immunizations and breastfeeding are associated with lower SIDS rates.

B. Document education provided to parents or caregivers regarding safe sleep practices.

**Kaleida Health – Developmental Care of the Infant Policy**

 <b>Kaleida Health</b> POLICY	Title: Developmental Care of the Infant	# PED.13
	Owner: Pediatric Standards Committee	Issued: 9/10/01
Keywords: Infant, developmental		

- I. **Statement of Purpose**  
This policy outlines the nursing management of the infant (under one year of age) while hospitalized, focusing on the developmental needs of the child in a family centered environment. Erikson’s developmental stage for infants is Trust vs. Mistrust. This stage covers the ages of birth to 18 months. During this period children develop a sense of trust when caregivers provide reliability, care, and affection.
  
- II. **Audience**  
Acute, Critical and Long Term Care
  
- III. **Instructions – (Outline necessary steps for consistent completion of process/ procedure)**
  - A. **Supportive Data**  
Infancy (birth-12 months) is a time of great physical and cognitive growth. The infant’s nervous system and other organ systems become more closely regulated and less variable in function than at birth. The primary caregiver and the infant establish a bond and a mutually satisfying relationship that enables the infant to learn to trust.
  
  - B. **Assessment/Data Collection**
    1. **Assessment**
      - a. Utilize treatment room for procedures to maintain the infant’s room as a safe place.
      - b. Prioritize care, performing the least invasive procedure first (i.e. obtain a respiratory rate prior to disturbing the child).
    2. **Data Collection**
      - a. Use appropriately sized equipment (i.e. a blood pressure cuff should be 2/3 the length of the child’s upper arm and wrap around the circumference of the arm).
      - b. Interpret lab values and vital signs based on age and size appropriate parameters.
      - c. Use a pain scale appropriate to the child’s developmental level (i.e. CRIES).
      - d. Use PAWS scales during assessment to determine immediate awareness of patient deterioration.
  
  - C. **Care and Management**
    1. Encourage the development of trust
      - a. Provide a sense of security by holding, cuddling, swaddling and/or cooing.
      - b. Allow active participation of the primary caregiver.  
**\*\*Keypoint:** Stranger anxiety begins around 6 months of age.
      - c. Provide consistency in staff to allow for continuity of care.
      - d. Meet physical needs immediately.

Driver:

Hospital policies support/facilitate safe sleep practices

## Kaleida Health – Developmental Care of the Infant Policy

Title: Developmental Care of the Infant

# PED.13

- e. Offer facial and simple verbal clues.
- f. Maintain a calm, relaxed and reassuring manner.
- g. Attempt to keep routines unchanged (i.e. naptime, diet, meal time – as appropriate).
- 2. Encourage age-appropriate developmental skills (i.e. holding a bottle, finger-foods, crawling).
  - a. Offer age-appropriate distractive toys (i.e. rattles, mobiles, soft toys)
  - b. Provide a variety of bright colored toys with musical sounds.
  - c. Use age-appropriate positioning alternatives (i.e. nip-nap, high chair, swing)
- 3. Manage pain
  - a. Avoid intrusive procedures when possible (i.e. axillary temperatures are the preferred method).
  - b. Pain in a newborn is demonstrated by a total body reaction. The newborn is easily distracted. Later in infancy, pain is a localized reaction. The infant may become uncooperative and offer physical resistance.
- D. **Safety**
  - 1. **Environment**
    - a. Constant vigilance, awareness, and supervision are essential as the child gains increased motor and manipulative skills that are coupled with an insatiable curiosity about the environment.
    - b. Do not leave the infant unsecured (i.e. use straps between the legs and around the lap).
    - c. Prevent access to unsafe areas (i.e. stairways, tubs, medications, cleaning supplies, plastic bags, water).
    - d. Never leave an infant on a raised, unguarded surface.
    - e. Assure appropriate size crib and mattress. When the infant is not under close supervision side rails should be in full up position. If the infant is in a climber crib upper side rails should be in the down position.  
**\*\*Keypoint:** Any infant that is developmentally capable of pulling themselves to an upright position or crawl is placed in a climber crib whenever not under direct supervision.
    - f. Monitor for risk of strangulation from objects in the environment (i.e. tubes, cords). Never attach a pacifier to the patient with a string.
    - g. Inspect toys for small, removable parts.
  - 2. **Nutrition**
    - a. Hold infant in an upright position during feeding. Do not prop bottle.
    - b. Exercise caution when feeding solid foods, large chunks can be aspirated.
  - 3. **Sleep**
    - a. Always place the infant (up to 1 year of age) on their back to sleep.
    - b. Crib should be free of pillows, blankets and other soft objects.
    - c. Infants should not sleep in bed with adults
  - 4. **Nursing Care**
    - a. Utilize arm boards (appropriate size) for intravenous sites to prevent accidental dislodgement.
    - b. Do not refer to medications as candy.
- E. **Infection Control**
  - 1. Wash hands, minimally, prior to entering the room, before and after patient care interventions and when exiting the room.

Page 2 of 4

Kaleida Health – Developmental Care of the Infant Policy

Title: Developmental Care of the Infant	# PED.13
---	----------

- 2. Adhere to standard precautions and any additionally required isolation.
- 3. Convey the importance of good hand washing for all caregivers, including parents or guardians.

F. Patient/Family Education

- 1. Environment
  - a. Teach parents to use the side rails and assure they are securely up before leaving the child's side.
  - b. Reinforce the importance of proper supervision.
  - c. Reinforce safety in the home/hospital environment and the importance of a childproof environment.
  - d. Instruct on car seat safety.
- 2. Sleep - Review safe sleep with parents/caregiver
  - a. Firm mattress and fitted sheet
  - b. Do not use pillows, blankets, crib bumpers, etc.
  - c. Keep soft objects, toys and loose bedding out of sleep area
  - d. Do not smoke or let anyone else smoke around the infant
  - e. Do not cover the infant's head
  - f. Always place infants up to one year of age on their back to sleep
  - g. Dress the infant in warm clothes – do not use a blanket
  - h. Infants should NOT sleep in the same bed, couch, chair, etc. as adults

G. Documentation

Include the developmental level in the individual plan of care in the electronic medical record.

Title: Developmental Care of the Infant	# PED.13
---	----------

ERIKSON DEVELOPMENTAL STAGES:

Stage	Basic Conflict	Important Events	Outcome
<b>Infancy (birth to 18 months)</b>	Trust vs. Mistrust	Feeding	Children develop a sense of trust when caregivers provide reliability, care, and affection. A lack of this will lead to mistrust.
<b>Early Childhood (2 to 3 years)</b>	Autonomy vs. Shame and Doubt	Toilet Training	Children need to develop a sense of personal control over physical skills and a sense of independence. Success leads to feelings of autonomy, failure results in feelings of shame and doubt.
<b>Preschool (3 to 5 years)</b>	Initiative vs. Guilt	Exploration	Children need to begin asserting control and power over the environment. Success in this stage leads to a sense of purpose. Children who try to exert too much power experience disapproval, resulting in a sense of guilt.
<b>School Age (6 to 11 years)</b>	Industry vs. Inferiority	School	Children need to cope with new social and academic demands. Success leads to a sense of competence, while failure results in feelings of inferiority.
<b>Adolescence (12 to 18 years)</b>	Identity vs. Role Confusion	Social Relationships	Teens need to develop a sense of self and personal identity. Success leads to an ability to stay true to yourself, while failure leads to role confusion and a weak sense of self.
<b>Young Adulthood (19 to 40 years)</b>	Intimacy vs. Isolation	Relationships	Young adults need to form intimate, loving relationships with other people. Success leads to strong relationships, while failure results in loneliness and isolation.
<b>Middle Adulthood (40 to 65 years)</b>	Generativity vs. Stagnation	Work and Parenthood	Adults need to create or nurture things that will outlast them, often by having children or creating a positive change that benefits other people. Success leads to feelings of usefulness and accomplishment, while failure results in shallow involvement in the world.
<b>Maturity (65 to death)</b>	Ego Integrity vs. Despair	Reflection on Life	Older adults need to look back on life and feel a sense of fulfillment. Success at this stage leads to feelings of wisdom, while failure results in regret, bitterness, and despair.

PATIENT CARE MANUAL  
 Newborn Services

<b>MANUAL CODE: S-13</b>	
<b>SUBJECT: Safe Sleep Guideline</b>	
<b>DATE ISSUED: 7/09</b>	<b>DATE REVISED: 10/16</b>
<b>SUPERSEDES:</b>	
<b>CROSS REFERENCES: D-03; D-08; F-02; P-12</b>	

**PURPOSE:**

1. To establish consistent safe sleep practices for health care professionals to provide to all infants prior to discharge.
2. To ensure that American Academy of Pediatrics (AAP) safe sleep recommendations are modeled for and understood by parents and caregivers with consistent instructions given prior to discharge.

**BACKGROUND:**

Nearly 4,000 US infants die suddenly and unexpectedly each year. We often refer to these deaths as sudden unexpected infant death (SUID). Although the causes of death in many of these children can't be explained, most occur while the infant is sleeping in an unsafe sleeping environment. Most SUIDs are reported as one of three types of infant deaths.

1. Sudden Infant Death Syndrome (SIDS)  
 SIDS is defined as the sudden death of an infant less than 1 year of age that cannot be explained after a thorough investigation is conducted. Although the incidence of SIDS has declined since 1992, it remains the leading cause of death in infants 1 to 12 months old.
2. Unknown Cause  
 The sudden death of an infant less than 1 year of age that cannot be explained because a thorough investigation was not conducted and cause of death could not be determined.
3. Accidental Suffocation and Strangulation in Bed  
 Mechanisms that lead to accidental suffocation include:
  - i. Suffocation by soft bedding—such as a pillow or waterbed mattress.
  - ii. Overlay—when another person rolls on top of or against the infant while sleeping.

Driver:

Hospital policies support/facilitate safe sleep practices

## Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

- iii. Wedging or entrapment—when an infant is wedged between two objects such as a mattress and wall, bed frame, or furniture.
- iv. Strangulation—such as when an infant’s head and neck become caught between crib railings.

Health care professionals provide a vital role in modeling and educating safe sleep practices for neonates.

### Special considerations for NICU:

Premature, low birth weight and ill infants have an increased risk of SIDS after discharge from the NICU. The AAP recommends infants in the NICU to be placed predominantly supine, at least from 32 weeks onward, so that they may become acclimated to supine sleeping prior to discharge.

### POLICY

1. **Hospitalized infants, who meet criteria, must be placed on their backs to sleep, in a safe sleep environment.**
2. **A Safe Sleep Environment consists of:**
  - Head of bed flat
  - Infant supine at all times
  - A firm sleep surface
  - Remove soft objects such as stuffed animals, extra bedding, and pillows.
  - Remove developmental positioning devices: Zflo pillow, blanket rolls, wedges.
  - Use of sleep sack is preferable to using a blanket
  - If the infant is swaddled, swaddle below the shoulders. Positioning of the arms when swaddled should be as following:
    - If infant is <32 weeks GA or postmenstrual age (PMA), then he/she should be swaddled with the arms in the blanket and arms should be in a neutral position favoring flexion (i.e. as if the baby is hugging himself/herself). Avoid straightening or extending the arms as that counteracts the natural and more developmental-appropriate newborn tone, which favors flexion.
    - If the infant is >32 weeks GA or PMA, then he/she should be assessed on their ability to be swaddled with the arms out. If arms-out swaddling can be tolerated, then it should be done in order to allow the infant to advance their development through varying sensory experiences with their hands. However, if the infant is not developmentally ready (i.e. – problems with overstimulation, unable to self-soothe, etc.), then continue swaddling with arms in and reassess again as the infant matures.
  - Avoid overheating. Assess infant as to the need for additional blankets or hat for warmth, a sleep sack can be used in place of blankets. In general, infants should be dressed with no greater than 1 layer more than an adult would wear to be comfortable in that environment.

Driver:

Hospital policies support/facilitate safe sleep practices

## Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

Continue to assess infant and intervene as appropriate so that infant remains comfortable and in safe sleep milieu. Tuck blanket into mattress and place blanket below shoulder level. If using sleep sack, extra blankets are not needed.

- Avoid hats and headbands for sleep, unless necessary for thermoregulation.
- Do not cover infant's head or face with blanket.
- Avoid pacifiers that attach to infant's clothing.
- Infant should be placed as close to the foot ("feet to foot") of the bassinette/crib as possible, to prevent the blanket, if used, from covering the face or head.

3. **Criteria for Safe Sleep Initiation for NICU patients:**

- Greater than 32 weeks' gestation postmenstrual age
- In an open crib/bassinette
- On room air or nasal cannulae (< 1.5 LPM flow)
- Taking a minimum of 50% of feedings by mouth for three consecutive days
- If infant has not been weaned to a crib/bassinette, then baby must meet all other criteria and be >1600 grams.

4. **Exceptions to Safe Sleep guidelines as noted above may include:**

- Infants with continued respiratory distress, airway issues requiring prone positioning or who require respiratory support (any type of positive pressure)
- Infants with congenital anomalies such as myelomeningocele, micrognathia, spina bifida, and skeletal anomalies and/or neurologic impairment requiring specialized positioning

5. **Conditional Safe Sleep guidance for infants with severe (symptomatic) gastroesophageal reflux as evidenced by the presence of all of the following:**

- Apnea, bradycardia, desaturation associated with nipple and/or enteral feeding
- Greater than 4 emesis events in a 24 hour period or more than 1 emesis event that is at least 20% of the feeding volume
- Back arching, crying, and/or poor weight gain (less than 20g/day or less than 10g/kg/day in a week) plus at least one of the symptoms mentioned above

**Recommendations for infants with symptomatic GE reflux:**

- Elevate crib 30 degrees for 20 to 30 minutes after a feeding or have parent/caregiver hold infant upright if possible, then place the baby supine with the crib head of the bed flat (safe sleep mode).
- Guidelines will be provided by the medical providers for the appropriate sleep positioning at home for infants with symptomatic GE reflux
- Infants with severe reflux who require alternative sleep positioning require home monitoring.

6. **Healthcare professionals (nurses, nurse's aides, medical professionals, respiratory therapists, physiatry staff [speech, OT, PT]), parents and volunteers should:**

Driver:

Hospital policies support/facilitate safe sleep practices

## Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

- Model safe sleep practices
- Educate the infant's parent(s)/caregivers about safe sleep practices throughout the infant's hospitalization

### 7. Parental/Caregiver Education includes:

- Always place the infant on his or her back to sleep for every sleep.
- Infants should sleep in the parents' room, close to the parents' bed, but on a separate surface designed for infants, at least for the first 6 months of life (up to a year).
- Do not place your child in a location besides a crib or bassinet for sleep (i.e. do not place your child in a car seat or stroller). There is a concern for an increased risk of sleep-related death.
- Communicate the "safe to sleep" message to everyone who cares for the infant.
- Place the infant on a firm sleep surface, such as a safety-approved mattress, covered by a fitted sheet in a crib. Provide current crib safety standards web: [www.jpma.org](http://www.jpma.org). There is no in using mattresses that prevent/minimize rebreathing as long as they meet standard safety requirements; However, there is no evidence that they reduce the risk of SIDS. Any commercial devices that are inconsistent with safe sleep recommendations should be avoided. For more information, please see: [www.cpsc.gov](http://www.cpsc.gov).
- Ensure that there are no gaps between the mattress and crib.
- Never place the infant to sleep on pillows, quilts, sheepskins, or other soft surfaces, such as a couch or water bed.
- Keep soft objects, toys, pillows, and loose bedding away from the infant's sleep area.
- Do not use crib bumpers.
- Do not use heavy or loose blankets.
- Avoid overheating the infant- dress the infant in light sleep clothing and keep the room at a temperature that is comfortable for an adult. The infant should be in no greater than 1 layer more than an adult would wear to be comfortable in that environment.
- Avoid hats and headbands for sleeping.
- If a blanket is used in the crib, the blanket is to be tucked under the mattress and placed only as high as the infant's chest.
- The baby should never sleep in the same bed or on a couch with another child or adult.
- Breastfeeding is associated with a decreased risk of SIDS. Therefore, breastfeeding or giving expressed breastmilk is recommended for 6 months.
- If your baby has significant reflux, hold your baby upright for 20-30 after feeding before placing on his/her back for sleeping. If the infant is placed in an infant seat immediately after feeding then the infant seat should be partially reclined to 45° elevation. Having the infant sitting fully upright (60-90°) increases pressure on the baby's abdomen and increases the chances of reflux and vomiting.

### 8. Additional information for family:

- Breastfeeding reduces the risk of SUID/SIDS.
- Avoid smoking around the infant; this is the second most frequent cause of SUID/SIDS

Driver:

Hospital policies support/facilitate safe sleep practices

## Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

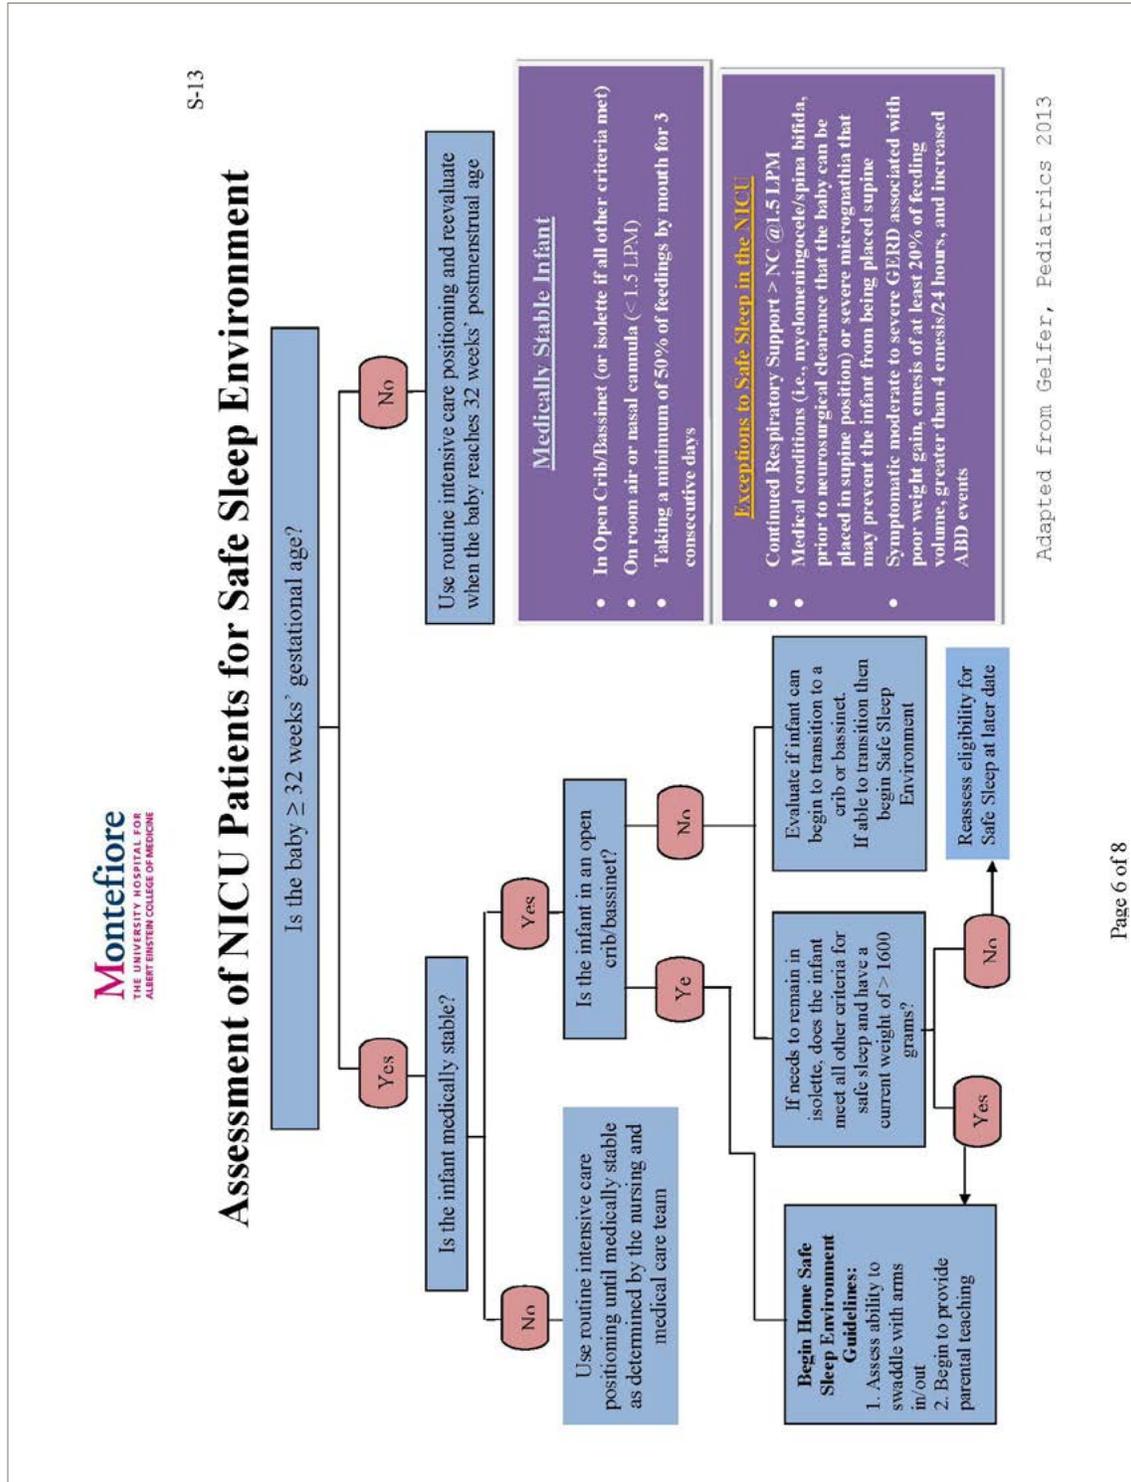

besides positioning.

- Avoid alcohol and illicit drug use around the infant. This causes a particularly high risk of SIDS when used in combination with bed-sharing.
- Provide frequent tummy time for the infant-only when the infant is awake and the caregiver is watching.
- Once an infant can roll from supine to prone and from prone to supine the infant can be allowed to remain in the sleep position that he or she assumes.
- Immunizations may have a protective effect against SUID/SIDS.
- Avoid attaching pacifiers to the infant's clothing during sleep.
- Supervised, awake tummy time is recommended to facilitate development and minimize positional plagiocephaly.

Document safe sleep practice and education in infant medical record.

**Mt. Sinai Hospital - Safe Sleep Discharge Instructions**

**Mt. Sinai Hospital  
Discharge Instructions**

Our new mothers also have additional statements included in their discharge instructions. These are reviewed prior to discharge and the patient signs an acknowledgment of having received and understood the information provided:

© 2019 Mt. Sinai Hospital. All rights reserved. This document is the property of Mt. Sinai Hospital and is not to be distributed outside of the hospital.

**Newborn Activity:**

**Sleeping:** Healthy babies are safest when sleeping on their backs at nighttime and during naps. No side sleeping and no tummy sleeping. Remove soft, fluffy bedding and stuffed toys from the baby's crib. Place newborns in their own crib but near their caregiver. Do not smoke around the baby. Offer a pacifier at nap time and bedtime.  
**Tummy Time:** Tummy time is for babies who are awake and being watched. Babies need this to develop strong muscles, for a minimum of 15 minutes a day.  
**Crying:** Babies cry when they are hungry, wet, cold, uncomfortable, or lonely. If crying lasts more than two hours, call your pediatric health care provider.  
**Tremors:** This can happen when a baby cries. This is normal.

---

**TITLE: SAFE SLEEP POLICY**

**POLICY:**

1. Hospitalized infants, less than 1 year old, greater than 32 weeks gestational age and medically stable (on full feedings, room air or nasal cannula, and in open crib or bassinette) must be placed on their backs to sleep in a safe sleep environment.
2. The RN will provide the parents with safe sleep education during the hospital stay and at discharge.
3. RNs and other healthcare providers will model safe sleep while infants are in the hospital setting.

**PURPOSE:**

To establish consistent safe sleep practices for all healthcare providers for infants in the hospital setting and implement the American Academy of Pediatrics safe sleep recommendations

**APPLICABILITY:**

**Population Served:**

- Adult
- Psychiatry
- Obstetrics**
- Pediatrics**

**Care Setting**

- Ambulatory Care (clinic based)
- Critical Care**
- Emergency Department
- Inpatient Non Critical Care**
- Procedure/Diagnostic Area
- Periop**
- Step-down**

**SUPPORTIVE EVIDENCE –BASED DATA:**

Deaths from Sudden Infant Death Syndrome have declined dramatically since the American Academy of Pediatrics (AAP) recommendation that all babies be placed on their backs to sleep in 1992. In an updated policy statement and technical report, the AAP is expanding its guidelines on safe sleep for babies, with additional information for parents on creating a safe environment for their babies to sleep. #### SAFE SLEEP POLICY, CONT’D

##### NURSING ASSESSMENT AND CARE:

1. Remove toys, clothing, diapers and other articles from patient’s crib
2. Place head of bed flat
3. Follow algorithm to determine if infant qualifies for safe sleep
4. Utilize HALO safe sleep sack (MSCH only)
5. Use one blanket to cover mattress

##### PROCEDURE:

1. Hospitalized infants who meet the criteria as defined by the AAP must be placed
  - A. Safe Sleep Criteria
    - 1) > 32 weeks’ gestational age
    - 2) Medically Stable
      - (a) On Room Air or Nasal Cannula
      - (b) Tolerating Full Enteral Feeds
      - (c) In an open crib/bassinnet
    - 3) See Attached Algorithm
  - B. Safe Sleep Environments Consist of
    - A. Head of bed flat
    - B. Infant sleeping on their back
    - C. Toys, clothes, diapers, sleeping and developmental aids removed from crib
    - D. One flat sheet on mattress
    - E. Blanket positioned so it stays below the shoulders or using the HALO sleep sack
    - F. Twins and multiples need to be placed in separate sleeping areas
    - G. Removing infant hats or headbands
3. Exceptions to Safe Sleep Guidelines
  - A. Any infant with a medical contraindication and a written order.

##### PATIENT TEACHING:

1. Using teach-back, instruct families on importance of safe sleep & what safe sleep practices encompasses.
2. Staff model safe sleep practices for parents.
3. Encouraging parents to breastfeed.
4. Immunizations according to AAP and CDC
5. <http://www.healthychildcare.org/pdf/sidsparentsafesleep.pdf>
6. <http://www.cdc.gov/sids/parents-caregivers.htm>

##### DOCUMENTATION:

1. Document sleeps safe halo sack used under the patient education flow sheet.
2. Document that education given to the parent on halo sleep sack use.

## Northwell Health – Safe Sleep Practices Clinical Practice Guideline

Northwell Health  
Neonatal Service Line

CLINICAL PRACTICE GUIDELINE

Safe Sleep Practices

### GENERAL STATEMENT of PURPOSE

General information: Sudden infant death (SIDS) is the sudden death of an infant less than one year of age that cannot be explained after a thorough investigation is conducted including an autopsy, assessment of the place and circumstances of death, and review of the clinical history. Sudden unexpected infant death (SUID) is a term used to describe any sudden and unexpected death regardless of whether or not it is caused by SIDS. SUID can be caused by potentially preventable causes including suffocation, asphyxia and entrapment. Since initiation of the “Back to Sleep” program by the AAP for full term babies in 1994, the incidence of SIDS has decreased. The recommendation has since been extended to premature infants as well. In 2011, the program was further expanded to include recommendations for a safe sleep environment.

Purpose: To ensure that staff caring for infants promote safe sleep practices through implementation, role modeling, and patient education for the hospital stay. Parent education regarding continued adherence to safe sleep guidelines is required for safe discharge. These guidelines outline the AAP 2011 safe infant sleep environment recommendations that should be implemented by all staff that provide care to infants.

### SCOPE

This policy applies to all staff of the Northwell Health System, including but not limited to medical staff, nursing staff, respiratory therapists, physical, occupational and speech therapists, child life specialists and other persons performing work for or at Northwell Health System.

### GUIDELINE STATEMENT

#### **I. Guidelines for healthy term infants in the hospital**

- A. Place infants in the supine position with the bed flat for sleep for all naps and at night.
- B. Infant bassinets should have a firm sleep surface covered by a tightly fitted secure sheet.
  1. Infants should not sleep in swings, car seats or infant seats as they might assume a position which could lead to airway obstruction.
  2. There should be no gaps between the mattress and the side of the crib.
  3. There should be no toys, blankets, bumpers or pillows in the crib.
- C. Infant should be dressed in light sleep clothing such as a one-piece sleeper (eg: stretchie or sleep sac) without a head covering or other possible hazard of entrapment.
  1. Infants who require a hat for warmth in the first 24 hours, may use a properly fitted hat which cannot become dislodged and does not cover the mouth or nose.
- D. Infants may be swaddled in the supine position based on AAP recommended swaddling techniques so the hips remain flexed.

*This document is intended as a general guideline.*

*The healthcare professional must use the appropriate judgment dependent on the particular clinical situation*

1

12/10/2015

Driver:

Hospital policies support/facilitate safe sleep practices

## Northwell Health – Safe Sleep Practices Clinical Practice Guideline

- E. Infant should not share a bed, sleeper chair, or chair with another person while asleep. Avoid co-bedding for twins and higher order multiples.
- F. If an infant sling or soft carrier is used, ensure that the head is up and above the fabric, the face is visible and the nose and mouth are free of obstruction.
- G. Skin to skin care should be encouraged to facilitate breast feeding, but only when the caregiver is awake. The mother should be properly positioned with the HOB elevated, and the infant's head should be on the mother's chest and the infant's nose and mouth should be free and unobstructed. Caregivers should be taught to stay attuned to the infant's breathing pattern and advised to place the infant back in the crib if the caregiver becomes fatigued.

### II. Guideline for NICU infants who are ill or preterm

- A. Begin transitioning the infant to supine sleep position at 32 weeks gestation or as soon as clinical status warrants, ideally at least 2 weeks prior to discharge. Infants who have medical contraindications to being placed supine for sleep require an order in the medical record. Discussion should be held during rounds until such time as the infant meets criteria for safe sleep positioning.
  - 1. Supine sleep with head of bed flat.
    - a. Infant should not sleep in car seats or swings
    - b. There should be no toys, pillows or bumpers in the crib.
  - 2. Halo sleeper or swaddle, and a well-fitting hat which does not slip off or cover the nose or mouth may be used to maintain temperature.
  - 3. If an additional blanket is needed, the infant should be placed with the feet at the end of the crib and the blanket should be placed with the edge between the nipples and shoulders and tucked in on the sides and the bottom of the crib.
  - 4. Remove developmental care supports one item at a time when transitioning to open crib unless there is a medical indication.

### III. Special circumstances

- A. Infants who are diagnosed with gastro-esophageal reflux should be evaluated on a case by case basis for the need to keep the head of the bed elevated. They should be placed with the head of the bed elevated only if the risk of GER is greater than the risk of SIDS (eg: those infants in whom airway protective mechanisms are impaired).
- B. Infants with airway malformations may require prone or side-lying positioning and home apnea and pulse oximetry monitoring should be considered for these infants.

### IV. Guidelines for discharge teaching

- A. Place infants in a crib in the supine position with the bed flat for sleep for all naps and at night.
- B. Use a firm sleep surface covered by a tightly fitted secure sheet.
  - 1. The area should be free of cords, dangling objects including balloons, window coverings and electrical cords that might create strangulation or suffocation.
  - 2. Infants should not sleep in swings, car seats or infant seats as they might assume a position which could lead to airway obstruction.
  - 3. There should be no gaps between the mattress and the side of the crib.
  - 4. Keep soft objects such as pillows, bumpers, blankets, quilts and stuffed toys out of the crib.
- C. Avoid overheating. Infant should be dressed in light sleep clothing such as a one-piece sleeper (eg: stretchie or sleep sac) without a head covering or other possible hazard of entrapment. The infant should have no more than one layer of extra clothing than that used by an adult to be comfortable in the environment.
  - 1. Hats should not be used during sleep.

*This document is intended as a general guideline.*

*The healthcare professional must use the appropriate judgment dependent on the particular clinical situation*

2

12/10/2015

Driver:

Hospital policies support/facilitate safe sleep practices

## Northwell Health – Safe Sleep Practices Clinical Practice Guideline

2. Infants up to 2 months of age may be swaddled and placed on their back.
- D. Room sharing without bed sharing. A separate infant crib with 4 side rails in the same room as the caregiver is recommended. An infant should not share a bed or sleeper chair, with another child or adult while asleep. Avoid co-bedding for twins and higher order multiples.
- E. Avoid commercial devices marketed to reduce the risk of SIDS such as wedges, positioners, special mattresses and sleep surfaces or home monitors. There is no evidence that these devices reduce the risk of SIDS or suffocation or that they are safe.
- F. Consider offering a pacifier at naptime and at bed time if bottle feeding or once breastfeeding is well-established (usually 3-4 weeks of age). The pacifier should not be hung around the infant's neck. Detach the pacifier from the infant's clothing for sleep.
- G. Avoid smoking around the infant and avoid use of alcohol and illicit drugs.
- H. Encourage tummy time to promote motor development, facilitate development of upper body strength and avoid plagiocephaly. The infant should be awake and supervised at all times during tummy time.
- I. If an infant sling or soft carrier is used, ensure that the head is up and above the fabric, the face is visible and the nose and mouth are free of obstruction
- J. Encourage good prenatal care for subsequent pregnancies

### V. Parent education and documentation:

- A. Prior to discharge from the NICU or regular nursery, parents must be provided with education about safe sleep practices as outlined above, as well as about interventions such as breastfeeding and immunizations which may reduce the risk of SIDS.
  1. Distribute safe sleep materials to parents
- B. Document parent teaching regarding safe sleep practices in the medical record.
- C. Encourage parents to view a video such as "SIDS and safe sleep" or other videos available from NYS Office of Child and Family Services (Safe sleep as simple as A,B,C)
- D. Document in the medical record when parents have watched the video.

 <b>Kings County</b> POLICY AND PROCEDURE MANUAL		HOSPITAL MANUAL (HM) Page 1 of 11
DEPT/SERVICE: PATIENT CARE SERVICES		KEY WORDS: Safe Sleep (SIDS)
CATEGORY: Provision of Care, Treatment and Services		
SUBJECT: Safe Infant Sleeping Environment		
DATE FIRST ISSUED: 6/17/2013	DATE LAST REVISED: 1/14, 1/15, 5/15, 5/18	
DATE EFFECTIVE: 6/8/15	SUPERCEDES: 5/15	

**POLICY STATEMENT:**

According to the (CDC, 2017), "In 2015, there were about 3,700 sudden unexpected infant death (SUID) in the United States. These deaths occur among infants less than 1 year old and have no immediate obvious cause". Since the 1990's data has shown, an unsafe sleeping environment is a contributing factor for SUIDS/SIDS. Accidental suffocation and strangulation in bed, SIDS, and unknown causes, were the common reported types of sudden unexpected infant death.

A major decrease in the incidence of sudden infant death syndrome (SIDS) occurred when the American Academy of Pediatrics (AAP) released its initial recommendation in 1992 that infants be placed in a non-prone position for sleep. The incidence of SIDS has leveled off in recent years, while the incidence of other causes of sudden unexpected infant death (SUID) that occur during sleep (including suffocation, asphyxia and entrapment) has increased.

As healthcare providers, practicing and educating parents and caregivers on maintaining safe sleep environments, is integral in reducing risk factors related to SIDS/SUIDS.

**PURPOSE:**

- To help maintain a safe sleep environment and reduce the risk of SIDS and other sleep-related causes of infant death.
- Establish guidelines and parameters for infant positioning.
- To provide parents and caregivers with standard evidence-based guidelines to promote safe sleep practices prior to discharge.

**SCOPE:** M.D's, CNM's, NP's, PA's, RN's, LPN's, PCA's/PCT's

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 3 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**II. Prenatal:**

1. Safe sleep education will be provided and reinforced throughout the prenatal period, for all OB patients. Education is provided in trimester classes given by the Women's Health Staff.
2. Education on infant safety, is also provided at the Childbirth Education classes.
3. The American Academy of Pediatrics recommends that infants are placed on their back to sleep, but when infants can easily turn over from their back to their stomach, they may adopt whatever position they prefer for sleep. This recommendation by the American Academy of Pediatrics will be included in all our Safe Sleep education and teaching..
4. Safe sleep education provided to the patient will be documented in the EMR

**III. Intrapartum:**

1. On admission the patient will be assessed on their awareness and understanding of safe sleep practices.
2. After delivery, the newborn will be placed skin-to-skin immediately after birth, and will remain skin-to-skin uninterrupted through the first breastfeeding, or for at least an hour if exclusively formula-feeding. The infants will be placed on their backs during transitional care in the radiant warmer, and in the bassinet. Safe sleep practices will be demonstrated and reinforced to the patient and family.

**(The following recommendations for skin to skin bonding, when the mother is awake and fully alert, will decrease the risks of SUPC (see page 1 for definition.)**

- Infant's face can be seen
- Infant's head is in "sniffing" position
- Infant's nose and mouth is not covered
- Infant's head is turned to one side
- Infant's neck is straight, not bent
- Infant's shoulders and chest face mother's
- Infant's legs are flexed
- Infant's back is covered with blanket
- Mother-infant dyad is monitored continuously by the staff in the delivery environment and regularly on the postpartum unit
- When mother want to sleep, infant is placed in bassinet or with another support person who is awake and alert.

Driver:

Hospital policies support/facilitate safe sleep practices

**NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy**

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 4 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**III. Intrapartum: (Cont.)**

3. Education provided to the patient is to be documented in the EMR.
4. On transfer to the Mother/Baby unit the nurse will report to mother/baby nurse the safe sleep education provided to the patient. Mother will hold infant in her arms securely during transfer to the mother/baby unit.

**IV. Postpartum:**

1. All infants > 32weeks will be placed on their back to sleep during every nap and nighttime for the first year unless otherwise ordered by the physician. Side sleeping is no longer advised and should be used only if there is a physician order.
2. If determined by the newborn health care provider, an infant requires alternative sleep positions or special sleeping arrangements, the provider must document in the EMR the indications and detail the alternative sleep positions or special sleeping arrangements (i.e. infants on phototherapy) . Caregivers will put the infant to sleep as specified in the written instructions.
3. On admission patient will be provided admission packet which includes information on safe sleep.
4. Patient education on safe sleep begins on delivery day and consistently reinforced until day of discharge. Safe sleep education will be included in the rooming-in admission process for the newborn.
5. Infants should receive all recommended vaccinations at birth. Evidence suggests that immunization reduces the risk of SIDS by 50 percent (CDC, 2017).
6. Patient education on safe sleep will be documented in the nurse postpartum care note daily.

**V. Breastfeeding:**

1. Breastfeeding is recommended.
2. Breastfeeding is associated with a reduced risk of SIDS. If possible, mothers should exclusively breastfeed or feed with expressed human milk (i.e., not offer any formula or other non-human milk-based supplements) for six months, in alignment with AAP recommendations.

Driver:

Hospital policies support/facilitate safe sleep practices

**NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy**

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 5 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**VI. Neonatal Intensive Care Unit (NICU)**

1. Infants should be placed in the supine position for sleep as soon as medically stable and significantly before anticipated discharge.
2. If determined by the newborn health care provider, an infant requires alternative sleep positions or special sleeping arrangements, the provider must document in the EMR the indications and detail the alternative sleep positions or special sleeping arrangements. Caregivers will put the infant to sleep as specified in the written instructions.
3. Place all infants on their backs to sleep and the head of the bed flat.
4. Infants with upper airway compromise, life-threatening GE reflux (not mild to moderate apnea/bradycardia), respiratory distress, or a greater degree of prematurity may be placed prone or side lying until resolution of symptoms.
5. Preterm infants and ill newborns may benefit developmentally and physiologically from prone or side lying positioning and may be positioned in this manner when continuously monitored and observed.
6. Infants with Neonatal Abstinence Syndrome (NAS) with difficult to control symptoms may be placed in a prone position for brief periods of time.

**NAS & Prone Positioning**

**Infant Irritable**

**Comfort Measures**

- Rocking (including use of swings/Mamaroo)
- Holding (volunteers)
- Swaddling
- White noise
- Appropriate Skin-to-skin care
- Infant massage

**Irritability continues > 12 hours that necessitates prone positioning at times**

Consult with MD/NNP to review scores and meds

**Re-assess need for prone positioning and ALWAYS use comfort measures BEFORE placing an infant prone!**

Driver:

Hospital policies support/facilitate safe sleep practices

KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL	HOSPITAL MANUAL (HM) Page 6 of 11
DEPT/SERVICE: PATIENT CARE SERVICES	KEY WORDS: Safe Sleep (SIDS)
CATEGORY: Provision of Care, Treatment and Services	
SUBJECT: Safe Infant Sleeping Environment	

**VI. Neonatal Intensive Care Unit (NICU) (Cont.)**

7. NICU infants should be placed exclusively on their backs to sleep when stable and in the convalescent stage of their development.

8. Placement of NICU infants on their backs to sleep should be done well before discharge in order to model safe-sleep practices to their families.

**i. Begin Home Sleep Environment (if not done earlier) when-**

- a. Morphine dose 0.16mg every 3 hours
- b. Average abstinence scores of < 6 over 24 hours
- c. No scores > 10 in the last 24 hours
- d. No prn doses needed in the previous 24 hours

**ii. Implement the "home sleep environment" at least 1 week before discharge if not sooner.**

- a. **KEY POINT** -implement when infant is ready for "home sleep" and not earlier in the hospitalization
- b. \*Swing time should be limited to awake/fussy times.

iii. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls, and stuffed animals should not be used. Positioning devices (snugglies) may be used for developmentally sensitive care of the extremely premature.

iv. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "sleep sack" may be used. Kangaroo Care is encouraged, mother and baby will be closely supervised during Kangaroo Care.

**The following recommendations for skin to skin bonding, when the mother is awake and fully alert, will decrease the risks of SUPC (see page 1 for definition.)**

- Infant's face can be seen
- Infant's head is in "sniffing" position
- Infant's nose and mouth is not covered
- Infant's head is turned to one side
- Infant's neck is straight, not bent
- Infant's shoulders and chest face mother's
- Infant's legs are flexed
- Infant's back is covered with blanket
- Mother-infant dyad is monitored continuously by the staff in the delivery environment and regularly on the postpartum unit
- When mother want to sleep, infant is placed in bassinet or with another support person who is awake and alert.

<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**VI. Neonatal Intensive Care Unit (NICU) (Cont.)**

**\*If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable**

- 9. Environmental temperature should be maintained at 72 to 78 degrees F.
- 10. The following guidelines should be used to transition NICU patients to the Home Sleep Environment (HSE):
  - a. Babies with a gestational age of 34 weeks and beyond AND greater than 1500 grams without respiratory distress should be placed in HSE.
  - b. Babies with gestational age 34 weeks and beyond with respiratory distress may be positioned prone until respiratory symptoms are resolving.

Babies with gestational age under 34 weeks should be assessed when reaching a post-conceptual age of 33 weeks and weight greater than 1500 grams: (Wellspring Health-York, 2011)

  - 1. If the baby has respiratory distress, staff may continue with prone positioning until respiratory symptoms are resolving.
  - 2. If the baby has no respiratory symptoms, then the primary nursing team should discuss the infant's neuromuscular status with Occupational Therapy. Once the baby no longer requires positioning devices, begin to follow HSE guidelines.

**VIII. Safe Sleep Practices**

**The following instructions will be included in the safe sleep education:**

- Mattresses should be firm and maintain their shape. There should be no gaps between the mattress and the side of the crib, bassinet, portable crib or play-yard.
- Only mattresses and tightly-fitted sheets designed for the specific type of product should be used.
- All soft objects and loose bedding should be kept out of the crib; this includes fluid protective chux's.
- Infants should be dressed appropriately for the environment, with no more than one additional layer than an adult would wear to be comfortable. Infants must be supervised to ensure they are not overheated or chilled.

Driver:

Hospital policies support/facilitate safe sleep practices

**NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy**

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 8 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**VIII. Safe Sleep Practices (Cont.)**

- Infants should be swaddled/bundled no higher than the axillary or shoulder level. A “wearable blanket” may be used. If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable.
- The patient will be instructed to physically check on the infant frequently during napping or sleeping and shall remain in close proximity to the infant in order to hear and see them if they have difficulty during napping/sleeping or when they awaken.
- Bed-Sharing is not recommended.
  - \* Parents will be instructed and educated on admission as to the risks of bed sharing. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet. The mother/parent should then be re-educated on safe sleep practices as soon as practical.
- Toys and stuffed animals will be removed from the crib when the infant is sleeping.
- Only one infant may occupy a crib at one time.
- While at home, car safety seats, strollers, swings, infant carriers, infant slings, boppy pillows, and other sitting devices should not be used for sleep/nap time.
- Neonatal rounding is to continue as per policy (See Neonatal Fall Prevention Policy). Newborn safety practices during rooming-in should be monitored regularly and documented.
- Quiet time will take place between the hours of 2-4pm. This will provide the patient with quiet time for herself and her newborn. During this time safe sleep practices should be reinforced.
- Each patient is required to view safe sleep video before discharge. Viewing of the video by the patient/family will be documented in the EMR.
- Environmental temperature should be maintained at 72 to 78 degrees F.

<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**IX. Pediatric OPD**

**If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is acceptable.**

- Parents are educated on safe sleep practices during the well-baby follow-up by the provider.
- Education is provided to the parents on all pediatric patients up to 6 months of age.
- Education on safe sleep is documented by the provider in the EMR.
- Literature is available for the parent/parents in the pediatric clinic and is provided by the pediatric nurse.

**X. Home Sleep Environment (HSE) Guidelines**

The following information for the mother/ family will be included in the education for safe sleep on discharge:

1. All healthy infants should be placed on their backs to sleep.
2. All infants should be placed in a separate but proximate sleeping environment (crib, infant bassinet, play-yard, portable crib, or portable play-yard).
3. All infants should be placed on a firm sleep mattress. Remove all soft-loose bedding, quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from the sleeping area.
4. Never place a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam mattress.

KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL	HOSPITAL MANUAL (HM) Page 10 of 11
DEPT/SERVICE: PATIENT CARE SERVICES	KEY WORDS: Safe Sleep (SIDS)
CATEGORY: Provision of Care, Treatment and Services	
SUBJECT: Safe Infant Sleeping Environment	

**X. Home Sleep Environment (HSE) Guidelines (cont.)**

1. Avoid bed sharing with the infant.
  - \* Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling off the bed, and infants have suffocated in bedding.
  - \* Infants have died from suffocation due to adults rolling over on them.
  - \* Sleeping with an infant when fatigued, obese, a smoker, or impaired by alcohol or drugs (legal or illegal) is extremely dangerous and may lead to the death of an infant.
2. If a blanket must be used, the preferred method is to swaddle/bundle the infant no higher than the axillary or shoulder level.
  - **Swaddling should be discontinued when the infant shows signs of rolling over.**
3. The use of a “wearable blanket” may be used in place of a blanket.
4. Avoid the use of commercial devices marketed to reduce the risk of SIDS.
5. Avoid overheating. Do not over swaddle/bundle, overdress the infant, or over heat the infant’s sleeping environment.
6. Consider the use of a pacifier (after breastfeeding has been well established) at sleep times during the first year of life. Do not force an infant to take a pacifier if he/she refuses.
7. Avoid maternal and environmental smoking.
8. Breastfeeding is beneficial for infants.
9. Home monitors are not a strategy to reduce the risk of SIDS.
10. Encourage tummy time when the infant is awake to decrease positional plagiocephaly.
11. All mothers should be shown the safe sleep DVD before discharge, and review the appropriate home sleep environment.

**Number: PEDS 1219**  
**Page 1 of 4**

**TITLE: SAFE SLEEP POLICY**

**POLICY:**

1. Hospitalized infants, less than 1 year old, greater than 32 weeks postmenstrual age and medically stable (on full feedings, room air or nasal cannula, and in open crib or bassinette) must be placed back to sleep in a safe sleep environment.
2. The RN will provide the parents with safe sleep education during the hospital stay and at discharge
3. RNs and other healthcare providers will model safe sleep while infants are in the hospital setting.

**PURPOSE:**

To establish consistent safe sleep practices for all healthcare providers for infants in the hospital setting and implement the American Academy of Pediatrics safe sleep recommendations

**APPLICABILITY:**

**Population Served:**

- Adult
- Psychiatry
- Obstetrics
- Pediatrics

**Care Setting**

- Ambulatory Care (clinic based)
- Critical Care
- Emergency Department
- Inpatient Non Critical Care
- Procedure/Diagnostic Area
- Periop
- Step-down

**SUPPORTIVE EVIDENCE –BASED DATA:**

Since the American Academy of Pediatrics (AAP) recommended all babies should be placed on their backs to sleep in 1992, deaths from Sudden Infant Death Syndrome have declined dramatically. In an updated policy statement and technical report, the AAP is expanding its guidelines on safe sleep for babies, with additional information for parents on creating a safe environment for their babies to sleep.

### SAFE SLEEP POLICY, CONT'D

#### NURSING ASSESSMENT AND CARE:

1. Remove toys, clothing, diapers and other articles from patient's crib
2. Place head of bed flat
3. Follow algorithm to determine if infant qualifies for safe sleep
4. Utilize HALO safe sleep sack
5. Use one blanket to cover mattress

#### PROCEDURE:

1. Hospitalized infants who meet the criteria as defined by the AAP must be placed
  - A. Safe Sleep Criteria
    - 1) > 32 weeks' postmenstrual age
    - 2) Medically Stable
      - (a) On Room Air or Nasal Cannula
      - (b) Tolerating Full Enteral Feeds
      - (c) In an open crib/bassinet
    - 3) See Attached Algorithm
2. Safe Sleep Environments Consist of
  - A. Head of bed flat
  - B. Infant sleeping on their back
  - C. Toys, clothes, diapers, sleeping and developmental aids removed from crib
  - D. One flat sheet on mattress
  - E. Blanket positioned so it stays below the shoulders or using the HALO sleep sack
  - F. Twins and multiples need to be placed in separate sleeping areas
  - G. Removing infant hats or headbands
3. Exceptions to Safe Sleep Guidelines
  - A. Any infant with a medical contraindication and a written order

#### PATIENT TEACHING:

1. Using teach-back, instruct families on importance of safe sleep & what safe sleep practices encompasses
2. Staff model safe sleep practices for parents
3. Encouraging parents to breastfeed
4. Immunizations according to AAP and CDC
5. <http://www.healthychildcare.org/pdf/sidsparentsafesleep.pdf>
6. <http://www.cdc.gov/sids/parents-caregivers.htm>

**Ollean General Hospital – Safe Sleep Practice/Infant Positioning Policy**

Ollean General Hospital		Policy and Procedure Manual	
<b>TITLE:</b>	Safe Sleep Practice/ Infant Positioning	<b>POLICY #:</b>	
Department or Hospital-Wide Section Name:	Nursing Division-OB/Pediatrics	Revision Date:	Revision #:
Committee approvals – see meta data information		Original Effective Date:	

1) **STATEMENT OF POLICY:**  
SIDS (Sudden Infant Death Syndrome) is considered to be the sudden death of an infant younger than one year of age that remains unexplained after a complete investigation. There has been a significant decrease in the number of infants who have died from SIDS due to healthcare providers and public health campaigns educating parents and caregivers of the risk factors related to SIDS. Healthcare professionals have a vital role in educating parents and families regarding the "Back to Sleep" campaign. The "Back to Sleep" campaign was started in 1994. In 1992 the SIDS rate was 1.2 deaths per 1000 live births. In 2001, the SIDS rate was 0.56 deaths per 1000 live births, which was a decrease of 53% over a ten-year period. The decreasing SIDS rate is occurring due to a reduction in prone positioning. In 1992, prone positioning was seen in 70%, compared to 13% in 2006. As important role models, healthcare professionals are critical in communicating SIDS risk reduction strategies to parents and families, and by practicing safe sleep practices while infants are still in the hospital. There are factors that have been identified that place an infant at an increased risk of SIDS. They include: stomach sleeping, sleep surfaces that are soft (loose, fluffy bedding), overheating during sleep, maternal smoking (during pregnancy or in the infant's environment), and bed sharing.

**PURPOSE:**

- a. Establish guidelines and parameters for infant positioning.
- b. Establish appropriate and consistent parental education on safe sleep positions and environment.
- c. Establish consistent safe sleep practices by healthcare professionals for infants prior to discharge.

2) **EQUIPMENT:** Bassinettes, Open Cribs, Isolettes, Infant Warmers

3) **DESIGNATED PERSONNEL:** OB Nurses, Pediatric Nurses, Pediatricians

4) **PROCEDURE:**

- a) **Infants in the Newborn Nursery:**
  1. Place all infants on their backs to sleep and the head of the bed flat.  
\*Infants with a medical contraindication to supine sleep position (i.e. congenital malformations, upper airway compromise, and severe symptomatic gastroesophageal reflux) should have a physician's order along with an explanation documented.
  2. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls, and stuffed animals should not be used.
  3. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet and can be returned to the newborn nursery at the discretion of the nurse. The mother/parent should then be re-educated on safe sleep practices as soon as practical.
  4. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "sleep sack" may be used. Sleep sacks may be used on infants < 38 pounds and 1 year of age.  
\*If temperature instability occurs, infants may have an additional blanket used by tucking the blanket around the mattress and covering the infant no higher than the axillary or shoulder level.
  5. The infant's feet should touch the bottom of the bed so he/she cannot wiggle down below the blanket.
  6. Environmental temperature should be maintained at 72 to 78 degrees F.
- b) **Infants in the Neonatal Intensive Care Nursery (NICU):**
  1. Place all infants on their backs to sleep and the head of the bed flat.
    - \* Infants with upper airway compromise, life-threatening GE reflux (not mild to moderate apnea/bradycardia), respiratory distress, or a greater degree of prematurity may be placed prone or side lying until resolution of symptoms.
    - \* Preterm infants and ill newborns may benefit developmentally and physiologically from prone or side lying positioning and may be positioned in this manner when continuously monitored and observed.
    - \* Infants with Neonatal Abstinence Syndrome (NAS) with difficult to control symptoms may be placed in a prone position for brief periods of time
    - \* NICU infants should be placed exclusively on their backs to sleep when stable and in the convalescent stage of their development. (see number 6 for guidelines)

Driver:

Hospital policies support/facilitate safe sleep practices

## Olean General Hospital – Safe Sleep Practice/Infant Positioning Policy

- \* Placement of NICU infants on their backs to sleep should be done well before discharge in order to model safe-sleep practices to their families.
- 2. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls; and stuffed animals should not be used.
- 3. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "sleep sack" may be used.
  - If temperature instability occurs, infants may have an additional blanket used by tucking the blanket around the mattress and covering the infant no higher than the axillary or shoulder level.
- 4. The infant's feet should touch the bottom of the bed so he/she cannot wiggle down below the blanket.
- 5. Environmental temperature should be maintained at 72 to 78 degrees F.
- 6. The following guidelines should be used to transition NICU patients to the Home Sleep Environment (HSE):
  - a. Babies with a gestational age of 34 weeks and beyond AND greater than 1500 grams without respiratory distress should be placed in HSE.
  - b. Babies with gestational age 34 weeks and beyond with respiratory distress may be positioned prone until respiratory symptoms are resolving.
  - c. Babies with gestational age under 34 weeks should be assessed when reaching a post-conception age of 33 weeks and weight greater than 1500 grams:
    - 1. If the baby has respiratory distress, staff may continue with prone positioning until respiratory symptoms are resolving.
- 7. Once it is determined that an infant is ready for home sleep environment, the following actions should be completed:
  - a. Have parents watch the safe sleep DVD and then provide modeling and review of the appropriate home sleep environment.
- c) **Infants in the Pediatric Unit: (Infants less than 1 year of age)**
  - 1. Follow the guidelines for the Newborn Nursery.
  - 2. If a blanket is needed for the infant, the infant's feet should touch the bottom of the bed so he/she cannot wiggle down below the blanket. If no blanket is needed, the infant may be positioned in the bed appropriately.
  - 3. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet or crib. The mother/parent should then be re-educated on safe sleep practices as soon as practical.
- d) **DOCUMENTATION:**
  - A. Document the infant's position on the Newborn Nursery, NICU, or Pediatric EMR.
  - B. Family/Parental teaching: All parents and caregivers will be educated on SIDS and safe sleep environments and positioning.
    - 1. All healthy infants should be placed on their backs to sleep.
    - 2. All infants should be placed in a separate but proximate sleeping environment (crib, infant bassinette, or Pac 'N' Play).
    - 3. All infants should be placed on a firm sleep surface. Remove all soft-loose bedding, quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from the sleeping area.
    - 4. Never place a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam mattress.
    - 5. Avoid bed sharing with the infant.
      - Risk of bed sharing:**
      - \* Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling off the bed, and infants have suffocated in bedding.
      - \* Infants have died from suffocation due to adults rolling over on them.
      - \* Sleeping with an infant when fatigued, obese, a smoker, or impaired by alcohol or drugs (legal or illegal) is extremely dangerous and may lead to the death of an infant.
  - 6. If a blanket must be used, the preferred method is to swaddle/bundle the infant no higher than the axillary or shoulder level or use an appropriate size blanket that can be tucked in mound the crib mattress and position the infant's feet at the bottom of the bed.
  - 7. The use of a "sleep sack" may be used in place of a blanket.
  - 8. Avoid the use of commercial devices marketed to reduce the risk of SIDS.
  - 9. Avoid overheating. Do not over swaddle/bundle, overdress the infant, or over heat the infant's sleeping environment.
  - 10. Consider the use of a pacifier (after breastfeeding has been well established) at sleep times during the

Driver:

Hospital policies support/facilitate safe sleep practices

## Olean General Hospital – Safe Sleep Practice/Infant Positioning Policy

first year of life. Do not force an infant to take a pacifier if he/she refuses.

11. Avoid maternal and environmental smoking.
12. Breastfeeding is beneficial for infants.
13. Home monitors are not a strategy to reduce the risk of SIDS.
14. Encourage tummy time when the infant is awake to decrease positional plagiocephaly.

C. Document all parental teaching (include if the contract was signed and whether the Safe Sleep DVD was viewed) related to sleep safe practices in the mothers EMR.

**NAS (Newborn Abstinence Syndrome) & Prone Positioning**

Infant Irritable  
Comfort Measures

- Rocking
- Holding (volunteers)
- Swaddling
- Etc.

IF irritability continues despite efforts to calm

- May position infant prone
- Re-assess symptoms of withdrawal when infant awakens
- Consult with Pediatrician

Irritability continues > 12 hours that necessitates prone positioning at times

- Consult with Pediatrician

Re-assess need for prone positioning and ALWAYS use comfort measures BEFORE placing an infant prone!

Getting ready for home--

- Discontinue prone positioning if used.
- Discuss with primary nursing team, Pediatrician

Begin Home Sleep Environment (if not done earlier) when-

- Average abstinence scores of < 6 over 24 hours
- No scores > 10 in the last 24 hours

When implementing the "home sleep environment" prior to discharge:

- KEY POINT -implement when infant is ready for "home sleep" and not earlier in the hospitalization.
- Review information and safe sleep DVD with parents if not already completed

Family Education

- Need extra education when prone
- DO NOT say "I couldn't get him to sleep so I put him on his belly", or "She was very fussy last night and slept better being on her belly", or "belly sleeping is okay here in the NICU because our babies are monitored- don't do this at home"
- DO say "To help her calm I put her on her belly for a brief time. This position is sometimes needed to help with withdrawal symptoms".
- Be consistent with messages

		ROCHESTER GENERAL HOSPITAL			
<b>Policy &amp; Procedure</b>					
<b>Title:</b>	Infant Safe Sleep	<b>Date of Origin:</b>	3/10/16	<b>Policy #</b>	NP S8
		<b>Last Reviewed:</b>			
		<b>Last Revised:</b>			
		<b>Effective:</b>	4/2016	<b>Page</b>	1 of 6
<b>Policy Statement:</b>	<p>There has been a major decrease in the incidence of Sudden Infant Death Syndrome (SIDS) since the American Academy of Pediatrics' (AAP's) recommendation, made in 1992, that infants be placed in a non-prone position for sleep. However, other causes of unexpected infant death that occur during sleep including suffocation, asphyxia, and entrapment, have increased. The AAP expanded their recommendations to include a safe sleep environment to reduce the risk of all sleep related infant deaths, including SIDS (AAP, 2011).</p> <p>This policy is in accordance with the Healthy People 2020 Maternal, Infant and Child Health goal MICH-1.9, which is to reduce the number of infant deaths from sudden unexpected infant death including SIDS, unknown causes, accidental suffocation and strangulation in bed.</p> <p>Parents tend to copy practices they observe in the hospital setting. Health care providers play a vital role in ensuring proper modeling of safe sleep practices while infants are hospitalized.</p> <p><b>Purpose:</b></p> <ul style="list-style-type: none"> <li>- To establish guidelines for safe infant positioning during the inpatient hospital stay.</li> <li>- To establish consistent education to parents/caregivers regarding safe sleep conditions.</li> <li>- To ensure infant safe sleep recommendations are modeled by healthcare providers and education about safe sleep practices is provided to parents/caregivers prior to discharge.</li> </ul>				
<b>Definitions:</b>	<p><b>Sudden infant death syndrome (SIDS)</b> is the sudden death of an infant less than one year of age that cannot be explained after a thorough case investigation, including a scene investigation, autopsy and review of the clinical history.</p> <p><b>Sudden unexpected infant death (SUID)</b> is a term used to describe any sudden and unexpected death, whether explained or unexplained (including SIDS). Some SUID can be attributed to suffocation, asphyxia, or entrapment.</p> <p><b>Bed sharing</b> is the practice of a parent, sibling or other individual sleeping together with the infant on a shared sleep surface, i.e. a bed, sofa, recliner (not recommended).</p> <p><b>Room sharing</b> is the practice of the infant sleeping in a crib or other safe and separate sleep surface in the same room as the parent or caregiver (recommended).</p>

**St. Mary's Healthcare – Infant Positioning/Safe Sleeping Policy**

 <p><b>ST. MARY'S Organizational Policy Manual</b></p>	<b>Policy #</b>	
	<b>Title:</b>	INFANT POSITIONING/SAFE SLEEPING POLICY
	<b>Replaces Policy:</b>	
	<b>Policy Originator:</b>	<u>Director of Maternal Health</u>
	<b>Concurrence:</b>	
	<b>Effective Date:</b>	10/12/2016
	<b>Revised Date:</b>	6/19/2017
	<b>Chapter Owner Approval:</b>	Michele Walsh, CNO
	<b>AEC/OEC approval Date:</b>	

I. **Policy Statement:** ABC'S of safe sleep prevents sudden infant death syndrome (SID's). Healthcare professionals have a vital role in educating parent and family members regarding safe sleep. About 90 infants die each year in New York State from sleep-related causes. SID'S has declined but the number of sleep-related deaths caused by suffocation, entrapment, and asphyxia has increased. Since 1992 the American Academy of pediatrics (AAP) guidelines has recommended that infants should be on their back to sleep until 1 year. As important role models, healthcare professionals are critical in communicating SIDS risk reduction strategies to parents and families, and by practicing safe sleep practices while infants are still in the hospital.

II. **Purpose:**

1. Establish guidelines and parameters for infant positioning
2. Achieve zero preventable sleep related deaths
3. Implement evidence based policy, procedure, and practice

III. **Procedure:**

A. Maternity Unit Level 1 Nursery

1. All healthy infants should be placed on their backs to sleep unless physician order states otherwise.
2. All infants should be placed in a separate but proximate sleeping environment (crib, infant bassinette or, Pac N' Play).
3. All infants should be placed on a firm sleep surface. Remove all soft-loose bedding, quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from sleeping area.
4. Parents are instructed ,never place a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam.

Driver:

Hospital policies support/facilitate safe sleep practices

## St. Mary's Healthcare – Infant Positioning/Safe Sleeping Policy

5. Parents are instructed to; avoid bed sharing with the infant. Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling off the bed, and infants have suffocated in bedding.
6. If a blanket must be used, the preferred method is to swaddle /bundle the infant no higher than the arm pits or use an appropriate size blanket that can be tucked in around the crib mattress; position the infant's feet at the bottom of the bed.
7. The use of sleep sack may be used in place of a blanket.
8. **DON'T RELY ON MONITORS**; Monitors are not a strategy to reduce the risk of SIDS.
9. Document all parental teaching and whether the ABC'S of safe sleep video was viewed related to safe sleep practices on the parental teaching portion of the plan of care.

**B. NAS-**

1. Follow the procedure for the Maternity Unit

**C. Infants in the Intensive Care Nursery (ICU): (Infants less than or equal to 1 year of age)**

1. Follow the procedure for the Maternity Unit

**D. William hall progressive unit (Infants less than or equal to 1 year of age)**

- II. Follow the procedure for the Maternity Unit

**II. Definition**

SIDS-sudden infant death syndrome

NAS-Neonatal Abstinence Syndrome

**ABC'S of Safe Sleep**

Alone

- ❖ Alone means a separate sleep space (Same room, not the same bed)
- ❖ No adults
- ❖ No siblings or twin
- ❖ No pets
- ❖ No pillows, blankets, bumpers or stuffed animals

Back

- ❖ No wedges or positioners
- ❖ Not on my tummy (tummy time when awake and supervised)
- ❖ No side sleeping
- ❖ No elevation
- ❖ No increased risk of choking got healthy infants (Breast is best!)

Crib

- ❖ Firm sleep surface (No co-sleepers in bed or attached to slide)
- ❖ No car seats, carriage, chairs, swings, tubs or, breastfeeding pillows
- ❖ Not too warm by wearing too many layers or covers
- ❖ Onesies and light blanket up to chest and tucked into mattress or, sleep sack
- ❖ **DON'T RELY ON MONITORS**

<b>Subject:</b> PEDPC2063 Infant Sleep Position: SAFE SLEEP	<b>Published Date:</b> 03/31/2017
Provision of Care Treatment and Services	<b>Next Review Date:</b> 03/31/2020
<b>Scope:</b> Hospital Wide	<b>Original Creation Date:</b> 06/01/1994

Printed copies are for reference only. Please refer to the electronic copy for the latest version.

**Responsible Department/Division/Committee:**

Nursing

**Policy:**

Stony Brook University Hospital (SBUH) adheres to the American Academy of Pediatrics (AAP) position on sleep positioning for Sudden Infant Death Syndrome (SIDS) prevention in the newborn/infant patient population (known as the Back to Sleep initiative, as outlined in AAP policy statement of November 2011)

**Definitions:**

**Authorized provider** - An individual permitted by law and Stony Brook University Hospital (SBUH) to provide care, treatment and services within the scope of licensure and/or consistent with individually granted privileges.

**Infant** - A child during the period from birth to one year of age.

**Procedures:**

- A. **Sleep position:** Infants with stable pulmonary and cardiovascular systems should be placed on their back when being put down to sleep on a flat surface. The AAP recommends the transition take place before the infant’s anticipated discharge, by 32 weeks’ postmenstrual age.

Driver:

Hospital policies support/facilitate safe sleep practices

## Stony Brook Medicine Children's Hospital – Infant Sleep Position Safe Sleep Policy

- a. Any exceptions to the flat lying back to sleep position require the order of an authorized provider:
  - i. Diagnosis or rationale for non-back sleep position
  - ii. Recommended sleep position
  - iii. Duration of recommended position (i.e. when to re-evaluate)

### B. Crib Safety

- a. No co-bedding for twins and higher order multiples.
- b. No equipment, blankets or objects should be in the crib/bed. The ONLY exception is a pacifier which may be loose or in use in the crib/bed.
- c. Any mattress cover must be snug-fitting.
- d. Safe blanket use - Appropriate use of blankets includes:
  - i. As a mattress cover (if can be snugly fit)
  - ii. For swaddling/bundling - the top of the blanket should be kept at axillary or shoulder level. (If available, a sleep sack should be used.)
  - iii. As a top cover for warmth - Place baby with feet to foot of the crib, tuck a thin blanket around the crib mattress, cover baby only as high as his/her chest.

- C. **Education:** Prior to discharge, the registered professional nurse (RN) instructs the patient family to practice safe sleep positioning as per this policy. This education is documented on the Parent Education form.

## Infant Safe Sleep Environment

### General Information:

Sudden Infant Death Syndrome (SIDS) is the sudden death of an infant less than 12 months of age that cannot be explained after a thorough investigation is conducted, including an autopsy, investigation of the place of death and review of the clinical history. Sudden Unexpected Infant Death (SUID) is a term used to describe any sudden and unexpected death, regardless of whether or not it is caused by SIDS. SUIDs can be attributed to several preventable causes including suffocation, asphyxia, and entrapment.

In 1994, the American Academy of Pediatrics initiated the "Back to Sleep" campaign to promote supine sleep for the prevention of SIDS. In 1996, the campaign was updated to encourage supine sleep in premature as well as term infants. In 2011 the AAP expanded recommendations beyond "Back to Sleep" to include additional recommendations for a Safe Infant Sleeping Environment. In 2016 the AAP updated their recommendations for a safe infant sleeping environment.

### Purpose:

It is essential for staff that cares for infants to promote safe sleep practices through implementation, role modeling and patient education. These guidelines outline the 2016 AAP safe infant sleep environment recommendations that should be implemented by all staff that provide care to infants.

### AAP 2016 Safe Infant Sleeping Environment:

**Unless medically contraindicated the following A-Level recommendations should be in place for all infants to promote a safe sleep environment.**

1. Place the infant in a supine position for sleep for all naps and at night. Once an infant can roll from prone to supine and supine to prone, the infant can be allowed to remain in their assumed position.
2. Use a firm sleep surface, such as a mattress in a safety-approved crib, covered by a secured or fitted sheet. Area should be free of hazards such as dangling cords (including balloons), electric wires, and window-covering because they might present a strangulation risk. (Infants should NOT sleep in swings that are in an upright position, infant seats or car seats as they might assume positions that can create risk of suffocation or airway obstruction).
3. Breastfeeding is recommended.
4. Room-sharing without bed-sharing. A separate but proximate sleeping environment is recommended. An infant should not share a bed, sleeper chair or chair with another adult or child while asleep. If an infant is

Driver:

Hospital policies support/facilitate safe sleep practices

## Strong Memorial Hospital - Back to Sleep Policy

found bed sharing with a sleeping adult, the infant will be returned to their crib, re-education will be provided to the caregiver and documented. Reeducation along with documentation will occur with repeated instances of bed sharing.

5. Keep soft objects and loose bedding out of the crib, including bumper pads, pillows, blankets, quilts and stuffed toys.
6. Consider offering a pacifier at naptime and bedtime once breastfeeding is firmly established and after discussion with parent/caregiver. Pacifiers should be one piece construction with an easily grasped handle and a flange large enough to prevent mouth entry. Pacifiers that have the stuffed animals or attached strings can be dangerous.
7. Avoid smoke exposure (including changing clothes prior to handling infant after being exposed to smoke) and use of alcohol or illicit drug use around infant.
8. Avoid overheating. Infant should be dressed appropriately for the environment, with no more than one layer more than an adult would wear to be comfortable in that environment. Infant sleep clothing that is designed to keep the infant warm without the possible hazard of head covering or entrapment can be used.
9. Infants should be immunized in accordance with AAP and CDC recommendations.
10. Home cardiopulmonary monitors should not be used as a strategy reduce the risk of SIDS.
11. Health care providers, staff in newborn nurseries and NICU's and child care providers should endorse and model the SIDS, risk-reduction recommendations from birth. Parents/caregivers of infants will be provided safe sleep education.
12. Media should follow safe sleep guidelines in messaging.
13. If medical contraindications are present that prevents implementing AAP recommendations on pediatric general care units, a provider order should be requested.
14. Swaddling. AAP 2016 cautions that there is a high risk of death if a swaddled infant is placed in or rolls to the prone position. If swaddling used the AAP recommends the following:
  - Infant should be placed supine.
  - Swaddling should be snug around the chest but allow room at hips and knees to avoid exacerbation of hip dysplasia.
  - Once the infant attempts to roll, swaddling should be discontinued.

### Healthy Newborn Guidelines:

1. Mothers' are educated about safe sleep practices during their postpartum stay. Written safe sleep information is provided and mother is encouraged to view Safe Sleep video.
2. Mother signs Safe Sleep Initiative ( form SH 2110) prior to discharge, indicating commitment to safe sleep practices and acknowledging if she viewed safe sleep video during her postpartum stay.

### NICU Specific Guidelines:

1. Begin transitioning the infant to a supine sleep position by at least 32 weeks gestational age unless the infant's clinical status prevents them from lying supine (eg. medical condition/incision which prevents them from supine positioning, advanced respiratory support, etc).
2. The transition should include:

Infant Safe Sleep Environment. Retrieved 06/25/2019. Official copy at <http://urnc-smh.policystat.com/policy/5870379/>.  
Copyright © 2019 University of Rochester - Strong Memorial Hospital

Page 2 of 5

Driver:  
Hospital policies support/facilitate safe sleep practices  
**Strong Memorial Hospital - Back to Sleep Policy**

- Parent education
  - Supine sleep position for all sleep (daytime and nighttime)
  - Head of the bed flat
  - Wearable blanket (eg. Halo Sleepsack) may be needed to help maintain infant in a normal temperature range.
  - Often, preterm infants require additional layer to support thermoregulation as infants are weaning to an open crib. If additional blankets/layers are required, a blanket should be placed INSIDE the sleep sack on the torso/legs only with the infant's arms out and through the sleep sack. For example: At most, infants should only be dressed in the following:
    - An onesie
    - An outfit/ pajama
    - One blanket with infant's arms bundled out
    - One sleep sack with arms through armpit holes
  - If patient continues to have temperatures below normal range, the infant should be placed in an isolette per the "Transfer of Preterm Infants from Incubator to Open Crib" policy.
  - **Rationale:** NICU infants have the potential to be ready for discharge as early as 34 weeks corrected gestational age. By initiating the supine sleeping position at 32 weeks this allows for a period of adaptation, evaluation as well as the opportunity to educate parents and caregivers. The AAP recommends placing infants supine as soon as medically stable.<sup>1</sup>
3. If a medical contraindication exists for not placing an infant in the supine position for sleep, a provider order is needed.
  4. If after 32 weeks corrected gestational age the infant needs to maintain an elevated head of bed, a provider order is required. Ongoing evaluation by the team during rounds should continue until such time as the infant meets criteria.
  5. Infants who are diagnosed with gastro esophageal reflux disease (GERD) should be evaluated on a case by case basis for keeping the head of the bed elevated and should only have an order to do so if it is felt the risk of complications from GERD is greater than the risk from SIDS.<sup>1</sup>
  6. Parents and caregivers should be educated about safe sleep practices during their NICU stay. Discussion should start prior to 32 week gestation. Provide parents with Safe Sleep information and offer them opportunity to view safe sleep video. Educational materials are available in English or Spanish. Parents should be encouraged to share safe sleep practices with family members or caregivers of their infant.
  7. For infants who are weaning from the incubator please follow the guidelines for bundling or Halo Sleeper use. Halo Sleepers are available in either premature or newborn size. If the infant must be bundled with a blanket, bundling should be done with one blanket and the top blanket between the nipples and shoulders tucked under the mattress with their feet at the bottom of the bed.

**Rationale:** Loose bedding should not be used in the infant's sleeping environment.

Infants in incubators should be weaned from all developmental positioning products **PRIOR** to being placed in an open crib unless there is a medical indication. If there is a medical indication for the use of a position aide, a provider order is required.

Driver:  
Hospital policies support/facilitate safe sleep practices  
**Strong Memorial Hospital - Back to Sleep Policy**

**Documentation:**

- Need for order (provider or nursing driven) for positioning outside of these guidelines
- Rationale for alternate positioning must be documented
  - Notes from OT or providers
- Education for parents must be documented (written material, video prescribed/viewed)
- Parental non-compliance must be documented via EMR.

**United Memorial Medical Center - Safe Sleep for Babies Policy**

<b>POLICY AND PROCEDURE</b>		1 of 2
United Memorial Medical Center		Batavia, New York
<b>Policy # :</b>	<b>Safe Sleep For Babies</b>	
<b>Dept of Origin:</b>	Maternity	
<b>Date of Origin:</b> 10/2014	<b>P &amp; P Date:</b> 1/26/17	<b>Effective Date:</b> 2/26/17

**Goal:** To educate all parents about safe sleep practices and then to promote and foster the development of those practices throughout their hospital stay.

**Department/ Personnel Impacted:** Maternity/Nursery, ICU, ER and any staff working on units serving infants under the age of 1.

**Purpose:**

- 1) To establish guidelines and parameters for infant positioning.
- 2) Establish appropriate and consistent parental education on safe sleep positions and environment
- 3) Provide consistent safe sleep practices by healthcare professionals for infants prior to discharge.

**Policy Statement:**

**Infants in the newborn nursery and rooming in with mothers:**

- All infants will be placed on their backs to sleep with the head of the bed flat.
- A firm sleep surface should be used. Use of soft bedding such as pillows, quilts, blanket rolls and stuffed animals should not be allowed.
- If an infant is found co-sleeping with a mother/parent, the infant should be placed back in their bassinet the mother/parent should then be re-educated on safe sleep practices.
- A sleep sack should be used once the infant is transferred to his/her postpartum room, teaching should be provided to parents on use of sleep sack.
- Preterm infants and ill newborns may benefit developmentally and physiologically from prone or side lying positioning and may be positioned in this manner with a physician's order and when continuously monitored and observed.

**Infants(less than 1 year of age) in the Pediatric Unit (ICU) and ER:**

- Follow the guidelines for the newborn nursery.
- If a blanket is needed, the infant's feet should touch the bottom of the bed so he/she cannot wiggle down below the blanket and blanket needs to be tucked in on all three sides.

Driver:

Hospital policies support/facilitate safe sleep practices

## United Memorial Medical Center - Safe Sleep for Babies Policy

### Procedure:

- 1) On admission (prior to delivery if possible, if not shortly after birth) all mothers will be provided with the infant safety guidelines form.
  - Nursing staff will review safety guidelines with mother, ensuring they understand that:
    - a. Sleeping with the baby or “co-sleeping” is not permitted in the hospital, as it can be dangerous and baby could be hurt or even suffocated.
    - b. Babies should never be put to sleep on an adult bed, sofa/couch, chair or recliner, pillows or any other soft surfaces.
    - c. Baby must be placed to sleep on his/her back in the open crib, alone without any soft items (stuffed toys, pillows etc.) whenever mother is napping, sleeping or using the bathroom.
  - The mother and the RN responsible for explaining the safety guidelines will both sign the form; one copy will be placed in the infants' chart, the other given to the mother for reference.
  - When infant is transported to postpartum room he/she should be placed in a hospital sleep-sack. Parents will be instructed on use of sleep sack and told to call the nurse for a replacement if it gets soiled.
  - Throughout stay nursing staff should continue to model a safe sleep environment by using the sleep sack in an uncluttered open crib.
  - Throughout hospital stay and at discharge education will be provided to all mothers encouraging them to:
    - a. Always place baby on his/her back to sleep.
    - b. Use a firm sleep surface, covered by fitted sheet and free of soft objects (i.e. crib bumpers, toys, loose bedding etc.)
    - c. Never place an infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, pillow, synthetic/natural animal skin or memory foam mattress.
    - d. Avoid the use of commercial devices marketed to reduce the risk of SIDS.
    - e. Not smoke or allow smoking around the baby.
    - f. Make sure grandparents, babysitters and any other caregivers also place the baby on his/her back to sleep in a safe environment.
    - g. Avoid bed sharing with infant.
      - RISK OF BEDSHARING- adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped/ wedged between the bed and wall/bed frame, injured by rolling off the bed and suffocated in the bedding. Infants have died from suffocation due to adults rolling over on them. Sleeping with an infant when fatigued, obese, a smoker or impaired by alcohol or drugs (legal or illegal) is extremely dangerous and may lead to the death of an infant.
    - h. Avoid overheating. Do not over bundle, over dressing or over heat the infant or his/her sleep environment.
    - i. Encourage supervised tummy time when infant is awake.
    - j. Breastfeeding is beneficial for infants.
    - k. Consider use of pacifier at sleep times (once breastfeeding has been well established).

Manual Code: CPG-1A  
Page 1 of 4

TITLE: <b>Infant Positioning for Safety</b>		
EFFECTIVE: 7/2014	REVIEWED: 4/2015	REVISED:

**AUTHOR(S)**

Director, Quality and Safety MFCH  
Vice President of Nursing, Patient Care Services MFCH  
Infant Positioning Task Force

**SCOPE AND PURPOSE**

The purpose of this guideline is to provide guidance for staff for appropriate positioning and handling of infants ages 0-1 throughout Westchester Medical Center. Promotes safe practices for sleeping, feeding, and being held by staff or parents or when moving throughout the organization.

**OVERVIEW**

Infants are at risk for injury through unsafe sleep practices, when being held in the arms of staff or parents or while being fed. Injuries may include, but are not limited to, fractures or other injury related to infants being dropped while being fed; transferring to bassinet, crib or while being transported off the nursing unit while being held; injury related to unsafe sleep practices such as co-bedding.

**TARGET CLINICAL POPULATION**

All infants, ages 0-1, throughout Maria Fareri Children’s Hospital and Westchester Medical Center

**OBJECTIVES**

To minimize the risk of infant injury to infants age 0-1 while receiving care at Westchester Medical Center and to provide education to staff and families promoting safe infant handling and positioning.

**TARGET USERS**

Nurses, Physicians, Physician Assistants, Nurse Practitioners, and Allied Health Professionals at Westchester Medical Center caring for infant patients.

Page 2 of 4

#### GUIDELINE

1. Sleep Positioning:
  - a. For all healthy newborns and small infants, the sleeping position must be on their back. Consistent with the 1998 and 2005 AAP policy statement and the Task Force for Infant Safety, for healthy newborns and infants, non-prone positioning is the safest and most appropriate position for sleep.
  - b. Infants should be placed for sleep in bassinets or cribs for sleep with no additional items in the crib. No bumpers, pillows or toys should be in the bassinet when the infant is placed for sleeping.
  - c. Infants should not be placed on chairs, couches or pull out cots for sleeping.
  - d. Bed sharing or co-bedding between infants and family is discouraged as it may increase the risk of injury.
  - e. For preterm and ill infants receiving care in the Neonatal ICU, positioning should be as appropriate for the clinical condition of the infant as continuous monitoring is in place for these patients.
  - f. For acutely ill infants, alternative positioning may be appropriate depending on their clinical condition (prone to improve oxygenation, severe reflux refractory to other interventions, etc). The care team should discuss optimal positioning of the infant during family centered rounds so families may be educated on rationale for alternative positions from the back. Continuous monitoring with pulse oximeter or monitor must be in utilized when positions other than back are utilized. The practitioner must document in the medical record the rational for alternative positioning along with any instructions and education provided to the family.
  - g. Following the acute phase of care, infants who have been alternatively positioned should be transitioned to sleeping on their back prior to discharge to promote safe sleep practices with families.
  - h. Parents and families with infants less than one year should be educated on safe sleep practices, including the "Back to Sleep" initiative upon admission and throughout the hospitalization. Instructional material regarding safe sleep practices should be distributed on admission to all families with infants less than one year. The video "ABC's of Safe Sleep" should be provided to all families of infants prior to discharge.

Code: CPG-1A

Page 3 of 4

#### 2. Holding

- a. When moving throughout the hospital, parents should be instructed to place infant in stroller, wagon or crib. Parents should not hold the infant in their arms while walking in the hospital.
- b. When cuddling an infant, parents should be encouraged to seek assistance if needed to place baby in crib. Supportive devices, such as a blanket or sheet to sling the baby in the parent's arms may be utilized.

#### 3. Infant feeding

- a. While the newborn or infant is feeding, positioning devices should be utilized to promote infant safety.
- b. Mother/family education regarding infant safety should be incorporated into all aspects of care, including infant feeding instruction. Specific education should include:
  - i. If mother is tired, she should be encouraged to request assistance from staff to place in or remove baby from bassinette for feeding
  - ii. For postpartum patients, mother and family members should not walk with baby in her/his arms. Baby should be transported only in the bassinette.
  - iii. Gel pads and pillows may be used to support the mother's arms while feeding but care should be taken that the baby is not propped higher than the bed side rail.
  - iv. A sheet or blanket maybe used to "tuck" the infant to the mother to prevent accidental injury through an infant fall
- c. When mother is holding or feeding baby, staff should complete frequent rounds to assess mother's needs, including need for sleep, assistance to bathroom or assistance to place baby into bassinette. Some maternal circumstances may increase the risk of accidental infant injury including:
  - i. Cesarean delivery
  - ii. Receiving pain medication
  - iii. Symptomatic anemia
  - iv. Early morning hours

In these circumstances, staff may need to increase the frequency of rounding to assess the mother's level of sleepiness if holding or feeding the infant.

4. Infant must not be placed to sleep in bed with the mother but should be placed nearby in the bassinette or crib.

**NOTE:** The e-version of this document is the latest and the only acceptable one. If you have a paper version of it, you are responsible to ensure it is identical to the e-version. Printed material is considered to be uncontrolled documentation.

Page 4 of 4

5. When an infant is at least six months old and can independently roll in both directions, sleep position may be the infant's preference but more frequent rounding and assessment should occur. Side rails and crib rails must be in the up position when the infant is in the crib.
6. Sleep sacks brought from home by the family may be used for safe positioning.
7. A blanket may be used to tuck infant in crib or bassinette but must be tucked in under the armpits.

WINTHROP UNIVERSITY HOSPITAL

<b>SUBJECT:</b>	SAFE INFANT SLEEP POLICY
<b>EFFECTIVE DATE:</b>	9/2015; 5/2016
<b>SUPERSEDES:</b>	5/2014
<b>UPDATE FREQUENCY</b>	ANNUALLY
<b>CROSS REFERENCE:</b>	
<b>REFERENCES:</b>	SIDS and Other Sleep-Related Infants Deaths: Expansion of Recommendation for a Safe Infant Sleeping Environment. TASK FORCE ON SUDDEN INFANT DEATH SYNDROME. <i>Pediatrics</i> ; October 17, 2011 DOI: 10.1542/peds.2011-2284
<b>RESPONSIBLE FOR DEVELOPMENT APPROVED BY:</b>	
<b>Applicable Departments</b>	Mother/Baby, Pediatrics, Labor and Delivery, NICU
<b>Applicable Disciplines</b>	MD, APRN, RN, NA
<b>Responsible for Implementation</b>	Department Managers

**POLICY:**

To reduce infant related deaths including Sudden Infant Death syndrome (SIDS) by improving safe sleep practices using evidence based infant mortality reduction strategies recommended by the 2011 AAP policy statement.

<b>PROCEDURE:</b>	<b>KEY POINTS:</b>
Infants will be placed on their back in a bassinet with a flat firm crib mattress covered by a fitted sheet.	Supervised, awake tummy time is recommended to facilitate development and to reduce the development of positional plagiocephaly.
Infants maybe brought into the bed for feeding or comforting but should be returned to their own crib when the parent is ready to return to sleep	AAP does not recommend any bed sharing due to the increased risk of SIDS or suffocation while bed sharing.

Winthrop University Hospital - Safe Infant Sleep Policy

<p>AAP endorses the use of one piece sleeper called a “halo sack” as an alternative to loose blankets.</p> <p>Keep soft objects such as pillows, stuffed toys, quilts, comforters, sheepskin bedding (blankets and sheets) out of the crib.</p> <p>Avoid the use of bumpers, wedges, positioners and special mattresses</p>	<p>Infant sleep clothing designed to keep infant warm without the possible hazard of head covering or entrapment can be used.</p>
<p>Infants should be dressed appropriately for the environment, with no more than one layer.</p>	<p>Avoid over bundling and covering of the face and head. Parents and caregivers should evaluate for any signs of overheating such as sweating or the infant’s chest feeling hot to touch.</p>
<p>Give no pacifiers or artificial nipples.</p>	<p>Pacifiers are only recommended when breastfeeding is established by 3-4 weeks of life.</p>
<p>Educate parents and other caregivers about smoking, use of alcohol and other illicit drugs before and after birth.</p>	<p>There is an increased risk of SIDS with prenatal and postnatal exposure to alcohol or illicit drug use.</p>
<p>Breastfeeding and immunizations are recommended and have been shown to be protective against SIDS.</p>	<p>Breastfeeding and immunizations are associated with reduced risk of SIDS.</p>
<p>The parents and other caregivers will be instructed to view the NYS ABC VIDEO recommended by the AAP to provide education regarding safe sleep practices to reduce SIDS.</p>	<p>NYS ABC VIDEO can be viewed on Newborn Channel.</p>

**ST. MARY’S HEALTHCARE AMSTERDAM**

The policy has helped our organization model safe sleep practices for infants throughout the hospital including our maternity and ICU. It also is a great resource for supporting teaching points for parents. Now our community knows the importance of safe sleep. We were also able to apply for cribs for kids silver status to signify safe sleep practices within our hospital.

June 26, 2019 6

**Presentation Objectives**

- Provide an overview of infant mortality in New York State, and those deaths specifically related to an unsafe sleep environment
- Describe the work taking place in New York State, led by the Department of Health, to improve infant safe sleep practices and reduce infant mortality, including the New York State Perinatal Quality Collaborative (NYSPQC) Safe Sleep Project

NICU Policies Support/Facilitate Safe Sleep Practices

Campbell D, Kacica M, Carson K, Shapiro K, Gillen G.

*Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU*

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

June 26, 2019 7

### Presentation Objectives

- Discuss safe sleep challenges specific to the NICU identified by NYSPQC Safe Sleep Project participants
- Describe safe sleep strategies implemented at NYSPQC participating NICU sites, University of Rochester Medical Center and New York University Medical Center
- Respond to audience questions and facilitate discussion regarding NICU related concerns and challenges

June 26, 2019 8

### Infant Mortality in NYS

June 26, 2019 9

### Infant Mortality in NYS

- Infant mortality, or the death of infants under one year of age, is a fundamental indicator for the overall health and wellbeing of a community.
- NYS has made progress by reducing its infant mortality rate from:
  - 6.0 deaths per 1,000 live births in 2002, to
  - 4.5 deaths per 1,000 live births in 2014.

June 26, 2019 10

### Infant Mortality in NYS

- Sudden unexpected infant death (SUID) is the death of an infant less than one year of age that occurs suddenly and unexpectedly where the cause of death is not immediately apparent prior to the investigation.
- SUID includes deaths resulting from:
  - Sudden Infant Death Syndrome (SIDS);
  - **Sleep-related causes of infant death including accidents related to where or how the infant slept, such as suffocation, entrapment, or strangulation;** or
  - Unknown causes of death.

June 26, 2019 11

### Infant Mortality in NYS

- The ~100 infants who died suddenly and unexpectedly in New York State during 2014, are enough to fill five kindergarten classrooms.

June 26, 2019 12

### New York State Focus on Infant Safe Sleep

NICU Policies Support/Facilitate Safe Sleep Practices

Campbell D, Kacica M, Carson K, Shapiro K, Gillen G.

*Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU*

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

June 26, 2019 13

### NYS Infant Mortality CoIN

- Since 2015, the NYSDOH has participated in a national Infant Mortality Collaborative Improvement and Innovative Network (IM-CoIN).
- The NYS IM-CoIN addresses infant mortality reduction through the improvement of safe sleep practices and the promotion of optimal health for women before, after and in between pregnancies.

June 26, 2019 14

### NYS Infant Mortality CoIN

- The NYSDOH is working to prevent infant deaths caused by an unsafe sleep environment using several strategies, including:
  - **A New York State Perinatal Quality Collaborative (NYSPQC) initiative focused on safe sleep modeling and education programs in NYS birthing hospitals;**
  - Community-based organizations facilitating home-based visits to support and educate mothers and caregivers during the prenatal and postpartum periods; and
  - A robust public awareness campaign regarding the American Academy of Pediatrics' recommended ABCs of Safe Sleep.

June 26, 2019 15

### Collaborating for Success

June 26, 2019 16

### New York State Perinatal Quality Collaborative (NYSPQC) Safe Sleep Project

June 26, 2019 17

### NYSPQC Safe Sleep Project

- Project began in September 2015
- 78 out of 124 (63%) NYS birthing hospitals participating in the initiative:
  - 16 Regional Perinatal Centers (RPCs)
  - 28 Level III birthing hospitals
  - 15 Level II birthing hospitals
  - 19 Level I birthing hospitals
- **59 of the participating hospitals implemented the initiative within their hospital's NICU**

June 26, 2019 18

### NYSPQC Safe Sleep Project

- Improvements in safe sleep practices are being achieved by:
  - Ensuring all infant caregivers (i.e., new moms or guardians) have documentation of safe sleep education documented in the medical record;
  - Establishing consistent modeling of a safe sleep environment for all infants without a medical contraindication during the birth hospitalization; and
  - Discussing caregiver (i.e., new moms or guardians) understanding of infant safe sleep education prior to discharge from the birth hospitalization.

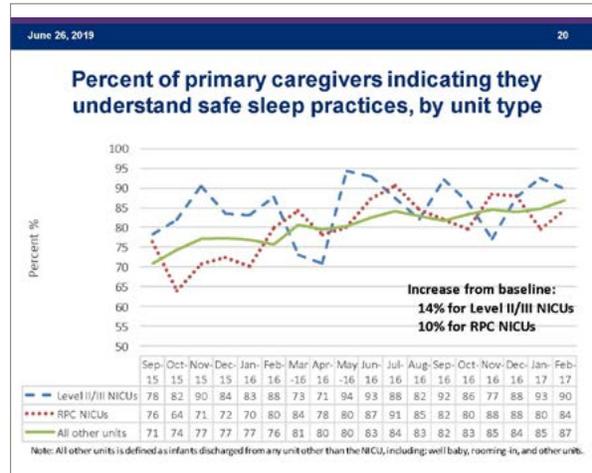

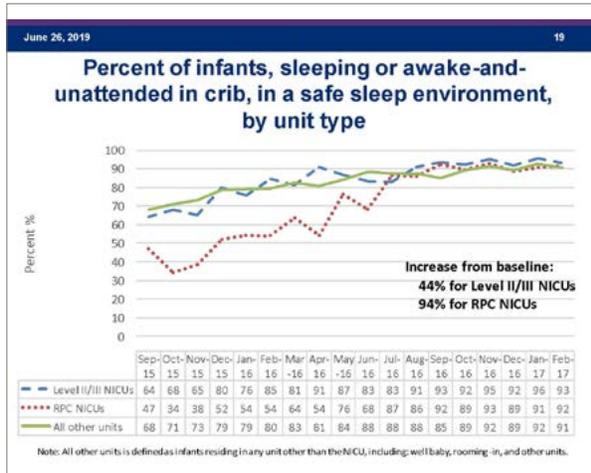

NICU Policies Support/Facilitate Safe Sleep Practices

Campbell D, Kacica M, Carson K, Shapiro K, Gillen G.

*Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU*

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

**NYSPQC Project Data Summary**

- RPC NICUs started off the project much lower on all project measures than other units, including Level II/III NICUs, and have improved significantly.
- In recent months, Level II/III and RPC NICUs were the same or better on all measures than all other unit types.

**Safe Sleep Challenges In the NICU**

**What are the risks?**

- Preterm (PT) or low birth weight (LBW) infants are at 2x the risk of SIDS compared w/ healthy term infant
  - Preterm infant is:
    - 85 x higher risk for SIDS if placed prone for sleep
    - 40x more likely to die of SIDS if sidelying
  - LBW infant is:
    - 83 x higher risk for SIDS if placed prone for sleep
    - 36 x more likely to die of SIDS if sidelying
  - SGA infant is:
    - > 24 x risk if placed prone
    - 15 x risk if placed side lying
- Prone positioning and maternal smoking/passive smoke exposure are most significant risks for SIDS

Oyen, 1997; Fleming, 2003; Blair, 2006

**Triple Risk Model**

**Intrinsic risk factors:** Smoking, Prematurity, Alcohol and illicit drugs, Hypoxia, Growth restriction

**Extrinsic risk factors:** Prone/Side Sleep Position, Soft Bedding, Overbundling/Overheating, Bed sharing, Bed sharing + Smoking and/or Alcohol

**Critical Developmental Period:** First 6 months

**SIDS:** Sudden Infant Death Syndrome

**Vulnerable Infant:** (e.g. brain stem dysfunction)

**Exogenous Stressors:** (represented by the intersection of intrinsic and extrinsic factors)

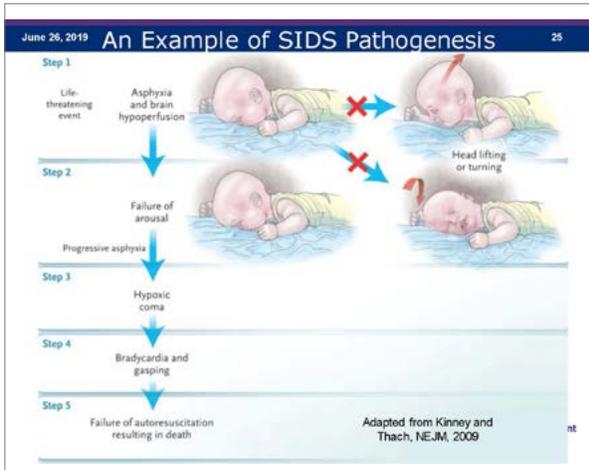

Adapted from Filiano and Kinney, 1999

NICU Policies Support/Facilitate Safe Sleep Practices

*Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU*

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

June 26, 2019 26

### High alert!

- LBW and preterm infants at highest risk for SIDS and accidental suffocation
- These infants are more likely to be placed sidelying or prone at 2-4 months, during peak incidence of SIDS
- Reasons parents place infants to sleep side or prone
  - Infant's "sleep preference"
  - Advice from health professionals
  - **Observed care in the NICU**

June 26, 2019 27

### A day in the life of a recovering NICU patient

June 26, 2019 28

### What you do makes a difference

- Parents copy at home what is demonstrated in the hospital
  - Stable preterm infants should be placed supine for sleep by 32 weeks' PMA
- Demonstrate proper practice
  - No stuffed animals
  - No blankets over crib
  - Avoid over-bundling, quilts and comforters
  - Tummy time when awake and observed
  - Car seats, swings, boppy's and infant seats are not for sleeping and should never be placed on elevated surfaces (beds, cribs, counters)

June 26, 2019 29

### Seeing is believing!

Parents need to **see** their baby sleeping safely on his or her back before discharge

Courtesy: The Children's Hospital at Dartmouth

June 26, 2019 30

### Best practice in the NICU before going home!

- Supine sleep position
- Wearable blanket or swaddle below nipple line
- Flat crib position
- Firm mattress
- No loose bedding or soft toys in crib

**Be careful not to do anything in the ICN that you don't want parents doing at home**

Courtesy: The Children's Hospital at Dartmouth

NICU Policies Support/Facilitate Safe Sleep Practices

Campbell D, Kacica M, Carson K, Shapiro K, Gillen G.

Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

June 26, 2019 31

### Challenge: Timeline for Safe Sleep

Very confusing timeline for when safe sleep should begin. Developmental care with prone positioning is important, as are rolls in a supine position. Older, full term babies in isolettes (SGA, phototherapy, etc.), should safe sleep be done on them or only when they are in a crib?

June 26, 2019 32

### Challenge

There is a short amount of time between when an infant becomes eligible for safe sleep and is discharged home. How do we educate parents and model safe sleep effectively in this short time frame?

June 26, 2019 33

### Algorithm to Initiate Safe Sleep Practice

June 26, 2019 34

### Initiating SSP Algorithm

FIGURE 1  
Algorithm to determine when an infant is ready to begin SSP. SSP, Interoxygenatory apnea.

June 26, 2019 35

### NICU Therapeutic Positioning

Examples of when NICU Therapeutic Positioning is appropriate:

- Respiratory symptoms such as tachypnea, retractions, grunting and oxygen dependency
- Nasal CPAP
- Nasal Cannula requirements other than home oxygen requirements
- Phototherapy
- Scalp IV or central lines
- Neonatal Abstinence Syndrome
- Lack of handling due to social reasons (please address with primary team)
- Any medical condition that requires prone or side lying positioning
- If tummy time cannot be implemented due to inability to be positioned prone (such as ostomy/surgical site)

Continue to evaluate infant for readiness to start Back to Sleep positioning

Gelfer, et al, Pediatrics, 2013

June 26, 2019 36

### Assessment of Safe Sleep Readiness

	5	10	15	20	Score
State: Stability of level of consciousness when expected to be arousing	Strongly/consistently throughout	Quick Face/Weak cry/irritable/hyper-alert - any diffuse or generalized arousal	Erratic but has intermittent alertness	Weakly/irritably alert with care/cry is considered easily	
Motor: Posture/tone stability	Low tone/flop at any time	Extremities floppy, frantic and/or tense	Head tucked posture briefly on arms or with light containment/needs some support due to tone, generally	Arms/legs to tucked posture on own	
Autonomic: H/Low HR/RR/sats during care, vital and color responses	Significant color A, bradycardia, emesis and/or vitals A & J > 30 beats from baseline, severe being critical	Moderate color A, bradycardia, emesis and/or vitals A & J 20-30 beats from baseline, moderate being critical	Stable to mild color A, occasional rapid A & J vitals A & J 10-20 beats from baseline, open crib	Stable color/vital/normal support and/or vitals A & J < 10 beats from baseline, open crib	
Regulation: Response to support	Self-regulatory strategies may be present, difficult to co-regulate	With caregiver support, shows some regulatory strategies (suck, grasp, huck)	Has brief success on own using self-regulatory strategies or succums with light/intermittent support	Uses own self-regulatory strategies successfully, unnecessary to no support necessary	
Respiratory support	Oxycane	Vent	CPAP/PEEP	NC/room air	

Scoring guide:  
90-100 Full SSP in place  
80-90 Secure only and positioning and PBN  
65-75 Suckle and suckling with positioning aids PBN  
25-60 Developmental positioning required

NATIONWIDE CHILDRENS

NICU Policies Support/Facilitate Safe Sleep Practices

Campbell D, Kacica M, Carson K, Shapiro K, Gillen G.

*Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU*

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

June 26, 2019 37

### Ready for Back to Sleep

- Back to Sleep is recommended by the AAP and should be implemented prior to discharge.
- Arms in or arms out are both acceptable ways to swaddle an infant based on its needs.
- Cold infants are not happy infants. Dress infants appropriately and use extra blankets if necessary.
- Keep unnecessary blankets, toys, and soft objects out of the infant's bed space.
- Tummy time should be encouraged when alert and should be supervised by a parent or caregiver.
- Opportunities for tummy time are during an assessment or when a nurse is warming a feed.
- Swaddling is safe. Keep the blankets from going above the infant's shoulder line.
- Look through the guideline located on *SharePoint* for more detailed information on Back to Sleep.
- Educate parents on a safe sleep environment and practice with the parent crib card, DVD, and discussion.
- Encourage the use of a pacifier.
- Prevent plagiocephaly by encouraging tummy time when the infant is awake.

Gelfer, et al, Pediatrics, 2013

June 26, 2019 38

### Challenge: Reflux

After feedings, babies with reflux should be held in an upright position for 20-30 minutes. Our staff to patient ratio may not allow a nurse to do this and they instead, raise the head for that allotted timeframe and then put the head down. While this is not considered 'safe sleep' this is reality in our environment.

June 26, 2019 39

### Supine sleep position is safest for reflux...

- When positioned prone, a baby could be more likely to aspirate as gravity allows emesis to flow down into the trachea.
- When supine, the emesis stays in the esophagus decreasing the risk of aspiration.

(Cote A. Back to sleep...for life, Montreal Children's Hospital, Montreal, Canada, Copyright 2002)

June 26, 2019 40

### Challenge

Not a great strategy

The nurses feel that the way the isolettes' are constructed, it is difficult to maintain safe sleep with the babies who are medically stable, >32 weeks and active despite being swaddled/or with a bendy positioner towards the bottom of the isolette. There is a gap between the mattress and they find babies roll to the side and hit their face against the door, etc. We can't put anything in this gap. The staff feels they see less of this when the baby is in the prone position. What is the function of safe sleep while the neonate is in the isolette?

June 26, 2019 41

### Challenge

Infants accustomed to therapeutic positioning become irritable and experience interruption of sleep states when transitioned to safe sleep.

June 26, 2019 42

### Barriers

<p><b>Perceived infant comfort</b></p> <ul style="list-style-type: none"> <li>• Arousal from sleep is an important protective reflex</li> </ul> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <p>There is lack of evidence on when and how to transition preterm infants to supine</p> </div>	<p><b>Perceived conflicts</b></p> <ul style="list-style-type: none"> <li>• Physiologic benefits on non-supine positioning during ACUTE phases of illness                             <ul style="list-style-type: none"> <li>- Improved oxygenation, decreased WOB</li> </ul> </li> <li>• Developmental support: promoting flexed midline positioning</li> <li>• Positional plagiocephaly                             <ul style="list-style-type: none"> <li>- Absence supervised tummy time</li> </ul> </li> </ul>

MEDICINE of the HIGHEST ORDER

### About Us

RPC located in Rochester, NY (Monroe County)

Serving a 13 county area in Western NY and the Southern Tier

Birth Center, High Risk OB, 68 bed level IV NICU

- NICU has two physical locations

In 2016:

- There were 2808 live births at SMH
- Admissions to the NICU
- 788 inborn and 255 outborn

### Safe Sleep Hospital Certification

- Mission is to educate parents and caregivers about unsafe sleeping conditions
- Provide portable cribs to families who are in need of a bed for their baby
- Certification for those who are champions of safe sleep

### Our NICU Safe Sleep Guidelines

Begin transitioning the infant to a supine sleep position at 32 weeks gestational age as clinical status warrants:

- 32 weeks PMA
- Taking 50% PO feeds (if appropriate)
- Nasal Cannula 1 LPM or less

- Need for order for positioning outside of these guidelines
- Rationale for alternate positioning must be documented
  - Notes from OT or providers
- Education for parents must be documented

NICU Policies Support/Facilitate Safe Sleep Practices

Campbell D, Kacica M, Carson K, Shapiro K, Gillen G.

*Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU*

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

### Wearable Blanket Program

Wearable blankets are a commercial product designed for infants up to 9 months of age. They provide containment and warmth, come in fleece and cotton, for infants while also promoting safety while sleeping.

49

MEDICINE OF THE HIGHEST ORDER 

### Wearable Blanket Utilization

Every infant is discharged with their own wearable blanket (has UR logo). Hospitals get wearable blankets at a reduced cost; currently using a grant.

**Birth Center**

- Own wearable blanket after first bath

**NICU**

- Unit wearable blankets until discharged
  - Separate laundry
- Own wearable blanket to take home

50

MEDICINE OF THE HIGHEST ORDER 

### Preparing for Discharge

Staff nurse created "Project Launching Pad"

- Improve parent education and comfort
- Each day of week focused on particular topic
  - Made a poster to display publically in units
  - Safe Sleep Tuesdays

MEDICINE OF THE HIGHEST ORDER 

### Preparing for Discharge Cont.

At 32 weeks PMA post a discharge checklist in the infant's room

My Patient Education has been updated, including Parents have watched: Shaken Baby, Safe Sleep, Car Seat

I have passed a \_\_\_\_\_day countdown with the HOB flat - or -

I have passed a \_\_\_\_day countdown with HOB up because that is how I will be at home

My Parents have the HOB Up Handout and know how to do this at home

MEDICINE OF THE HIGHEST ORDER 

### Decreasing Elevated HOB

An elevated HOB puts infants at risk for suffocating:

- Sliding down in the bed
  - obstructs airway
- Rolling over to prone

Positioning devices are just as dangerous

For infants with reflux consider elevating HOB for a limited time period after feeding.

www.onsafety.cpsc.gov

MEDICINE OF THE HIGHEST ORDER 

### Our Initiative

Reduce elevated HOB

1. Started monthly audits this year
2. Surveyed staff
3. Piloting new algorithm

116 patients (Jan-May)

- HOB elevated - 54%
- HOB up order - 25%

Clinically significant aspiration- 5%

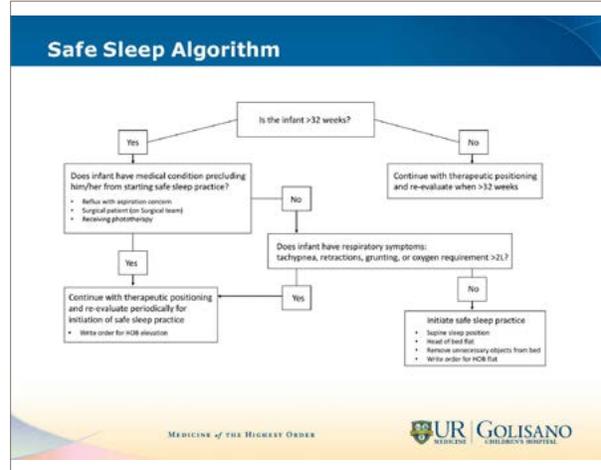

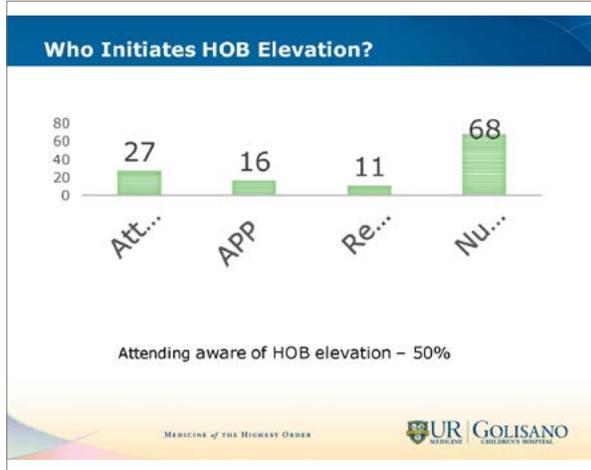

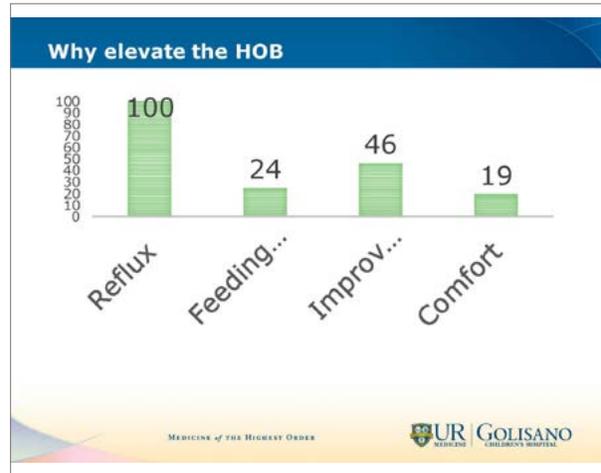

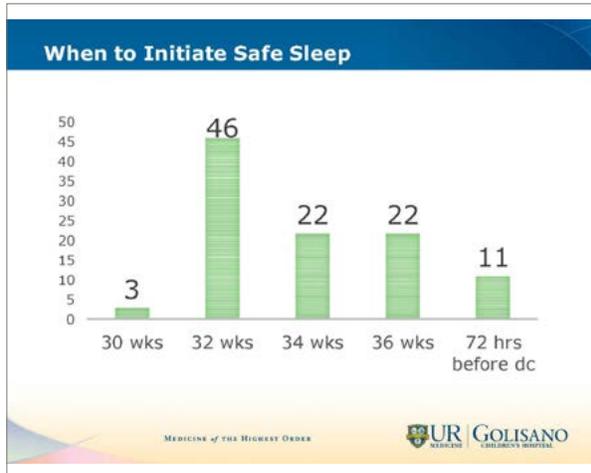

MEDICINE OF THE HIGHEST ORDER 

NICU Policies Support/Facilitate Safe Sleep Practices

## NYU Langone Medical Center

### SAFE SLEEP

### NYU LANGONE MEDICAL CENTER

We have been keeping our babies in Safe Sleep positioning since 2008 based on the original Back to Sleep initiative from the NIH.

Since then we have accomplished:

1. Increased safe sleep positioning in the NICU.
2. Educated parents more effectively about Safe Sleep
3. Consistently documented Safe Sleep in the EMR

Team Leader – Geri Cillo-Gillen, [Gcillo@nyumc.org](mailto:Gcillo@nyumc.org), 212-263-5790

### BARRIERS

- Reflux - we now elevate HOB for 30 min after feed. Teach parents to hold infant for 30 min after feed.
- Culture - We explore with families their own beliefs and help them understand the importance of Safe Sleep positioning.
- Transition of premature infants - Safe Sleep rounding incorporates developmental care and helps caregivers transition to home sleeping

### HOW DID WE DO IT!

- Educated staff through annual competency's utilizing the NIH safe sleep module and frequent simulated education around safe sleep
- Revised our Safe Sleep standard as per updated AAP guidelines.
- Engaged all disciplines in promoting safe sleep
- Established safe sleep rounding 3X/week on all shifts to support staff in providing proper positioning for discharge.
- Using sleep sacks for all eligible infants (full oral feeds, no oxygen requirements, nearing discharge.)
- Utilized NYS ABC pamphlet and video for parent education
- Provide sleep sack giveaway at discharge.

NYU Hospitals Center  
Departments of Nursing  
Departmental Structure Standard

**PROTOCOL: Safe to Sleep Campaign, Management of the Infant in the**

**PURPOSES:**

1. To provide education for staff and parents of proper infant positioning to reduce the risk of Sudden Infant Death Syndrome (SIDS)
2. To promote safe infant positioning in preparation for discharge
3. To provide postnatal guidance to parents based on the "Tummy Time for Baby"
4. To educate families by modeling Safe Sleep practices.

**LEVEL:** Inter-dependent

**SUPPORTIVE DATA:**

Sudden infant death syndrome (SIDS) remains the third leading cause of infant death in the United States and the leading cause of death beyond 1 month of age, responsible for a death rate that has remained static since 2001 (Grunstein, 2015).

SIDS remains the most frequent cause of infant death beyond the neonatal period, with peak incidence between 2 and 4 months of age (Pfeifer, 2013)

In 2011, the American Academy of Pediatrics (AAP) released new recommendations for safe sleep. In addition to SIDS, these recommendations include for the first time the larger umbrella category of sudden unexpected infant deaths, due to our strong sleep and tummy time aim to "reduce the risk of all sleep-related infant deaths." Healthy People 2020 has targeted both SIDS and sudden unexpected infant death mortality rates, aiming at a 10% decrease in both over the next several years, thus making sleep-related infant death prevention a national priority (Barnard).

**CONTENT:**

**PATIENT ASSESSMENT/INTERVENTION:**

1. Use "Safe Sleep" recommendations for every sleep.
2. Use a firm crib mattress covered by a fitted sheet.
3. Swaddle infants with arms out or use SleepSack.
4. Keep bassinets and cribs flat.
5. Always position a Safe to Sleep ready infant supine
6. Place the following infants in safe sleep positioning:

## NICU Policies Support/Facilitate Safe Sleep Practices

Campbell D, Kacica M, Carson K, Shapiro K, Gillen G.

### Safer Sleep for Babies (Part 2): Initiatives & Challenges in the NICU

New York State Perinatal Association Conference, June 2017. Intended audience: Hospitals and NICUs.

a. All feedings by mouth, no feeding tube in place  
 b. No oxygen or respiratory support  
 c. Self-regulation of temperature, no external heat

- Model safe sleep for the above infants at all times
- Keep soft objects and toys looking out of the crib
- Breastfeed if possible
- Consider offering a pacifier at bedtime and as bedtime
- Avoid overfeeding
- Immunize infant in accordance with recommendations from the American Academy of Pediatrics and the Centers for Disease Control and Prevention
- Model the SIDS risk reduction recommendations from both health care professionals staff in the NICU and newborn nurses, and child care providers.

**FAMILY EDUCATION**

- Teach family about the importance of room sharing and not bed sharing
- Avoid parental smoking and use of alcohol
- Do not use home cardiorespiratory monitors as a strategy to reduce SIDS
- Avoid commercial marketing devices, such as wedges and positioners, to reduce SIDS
- Use supervised awake tummy time to facilitate development and to minimize developmental delay
- Start safe sleep education as soon as possible
- Provide safe sleep literature prior to discharge

**SAFETY CORRECTIVE ACTIONS**

- If the baby has OE or reflux: Then hold the infant upright in prone position, for 20 min after the feed
  - Do not use blankets to elevate crib mattress
  - Return the infant to supine 20 min after the feed.

**DOCUMENTATION**

- Document safe sleep in the NICU Patient Care Summary in the EMR Under Safety

**INFECTION CONTROL**

- Handwashing before and after patient contact

 SIDS and Other Sleep-Related Infant Deaths: Expansion of Recommendations for a Safe Infant Sleeping Environment

**TABLE 1 Summary and Strength of Recommendations**  
 Level A recommendations

- Back to sleep for every sleep
- Use a firm sleep surface
- Room-sharing without bed-sharing is recommended
- Keep soft objects and loose bedding out of the crib
- Pregnant women should receive regular prenatal care
- Avoid smoke exposure during pregnancy and after birth
- Avoid alcohol and illicit drug use during pregnancy and after birth
- Breastfeeding is recommended
- Consider offering a pacifier at nap time and bedtime
- Avoid overheating
- Do not use home cardiorespiratory monitors as a strategy for reducing the risk of SIDS
- Expand the national campaign to reduce the risks of SIDS to include a major focus on the safe sleep environment and ways to reduce the risks of all sleep-related infant deaths, including SIDS, suffocation, and other accidental deaths; pediatricians, family physicians, and other primary care providers should actively participate in this campaign

June 26, 2019 5

**AAP Technical Report 2011**

**Preterm Infants Should Be Placed Supine as Soon as Possible**  
 Infants born prematurely have an increased risk of SIDS, and the association between prone sleep position and SIDS among low birth weight infants is equal to, or perhaps even stronger than, the association among those born at term. 101,102 Therefore, preterm infants should be placed supine for sleep as soon as their clinical status has stabilized. The task force supports the recommendations of the AAP Committee on Fetus and Newborn, which state that hospitalized preterm infants should be placed in the supine position for sleep by 32 weeks' postmenstrual age to allow them to become accustomed to sleeping in that position before hospital discharge. 103 69 Unfortunately, preterm and very low birth weight infants continue to be more likely to be placed prone for sleep after hospital discharge. 104,105

NICU Policies Support/Facilitate Safe Sleep Practices

LaGamma E. *Promoting Change – an Example: Improving Compliance with Safe Sleep in the NICU.* NYSQC Safe Sleep Project Coaching Call, January 2016. Intended audience: Hospitals and NICUs.

June 26, 2019 7

### Abstract

- BACKGROUND AND OBJECTIVES:** The American Academy of Pediatrics stresses that NICUs should endorse and model the sudden infant deaths syndrome risk reduction recommendations significantly before anticipated discharge of the infant. Medical personnel are critical role models for parents, and the way they position infants in the hospital strongly influences parental practices at home. The aims of this project were to increase the percentage of infants following safe sleep practices in the NICU before discharge and to determine if improving compliance with these practices would influence parent behavior at home.
- METHODS:** An algorithm detailing when to start safe sleep practices, a "Back to Sleep" crib card, educational programs for nurses and parents, a crib audit tool, and post discharge telephone reminders were developed as quality improvement intervention strategies.
- RESULTS:** NICU compliance with supine positioning increased from 39% to 83% (P = .001), provision of a firm sleeping surface increased from 5% to 96% (P = .001), and the removal of soft objects from the bed improved from 45% to 75% (P = .001). Through the use of a post-discharge telephone survey, parental compliance with safe sleep practices was noted to improve from 23% to 82% (P = .001).
- CONCLUSIONS:** Multifactorial interventions improved compliance with safe sleep practices in the NICU and at home.

June 26, 2019 8

### Initiating SSP Algorithm

FIGURE 1 Algorithm to determine when an infant is ready to begin SSP, bronchiopulmonary dysplasia.

June 26, 2019 9

### Therapeutic Positioning or Ready for Back to Sleep?

Each infant's crib had a card that would recommend care depending on readiness to begin SSPs.

#### NICU Therapeutic Positioning

Examples of when NICU Therapeutic Positioning is appropriate:

- Respiratory symptoms such as tachypnea, retractions, grunting and oxygen dependence
- Apnea/CPAP
- Atrial/ventricular arrhythmias or other heart rhythm abnormalities
- Bradycardia
- Apnea/bradycardia
- Low or absent tone
- Apnea/bradycardia/episodes
- Low or absent tone in a bed of rest (prone activity not necessary)
- Any medical condition that requires a bed of rest (prone activity)
- Patients, when appropriate, who are unable to be positioned prone (prone is necessary)

Continue to evaluate infant for readiness to start Back to Sleep positioning

#### Ready for Back to Sleep

- Baby is sleeping on her or his back for the majority of the night
- All CPAP or nasal cannula tubing is secured and baby has no leaks
- Baby's hands are not caught in the lines
- Baby's mouth is appropriately and securely latched to the breast
- Most umbilical devices, lines, and accessories are in the infant's crib
- Z-PVC tubes are in place and secured to the infant's chest
- Respiratory symptoms have been resolved and oxygen is not necessary
- Apnea/bradycardia has been resolved and oxygen is not necessary
- Baby is able to hold her or his head up
- Baby is able to hold her or his head up
- Baby is able to hold her or his head up
- Baby is able to hold her or his head up
- Baby is able to hold her or his head up

Note: Re-bullet 3 above – DO NOT add blankets to crib or over infant. Use for swaddling (below shoulderline) is safe, or consider increasing room temperature if possible

June 26, 2019 10

### Compliance with SSP Components

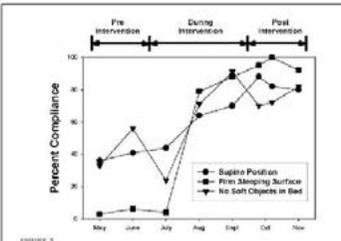

FIGURE 3 Line chart of the compliance with SSP components

June 26, 2019 11

### Findings

- Positioning devices for developmental care and respiratory advantages of prone positioning not found in preterm infants off oxygen and nearing discharge
- Early involvement of key stakeholders (Administrators, Nurses, Doctors, Nurse Educators, OP, PT) was essential to success
- Incorporation of SIDS risk reduction strategies into hospital nursing routine positively impacted parental post-discharge practices

June 26, 2019 12

Coaching Call Webinar – April 2017

June 26, 2019

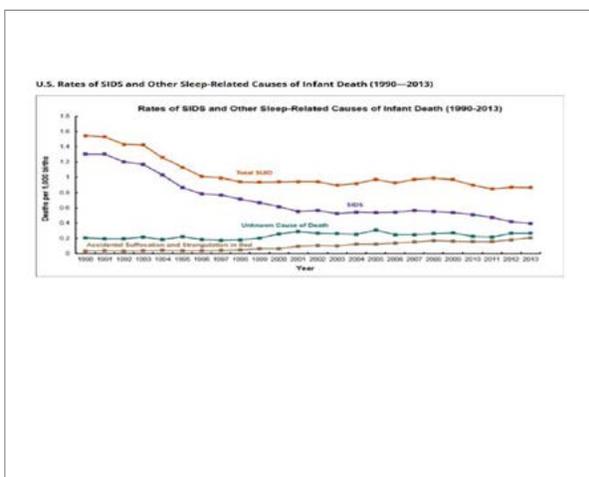

**TRANSITIONING OF INFANTS IN NICU FROM PRONE POSITION TO SUPINE POSITION**

Presented by  
Dr. B. K. Rajegowda  
Chief of Neonatology  
Harris Hospital - Lincoln Hospital  
Professor of Clinical Pediatrics  
Weill Medical College Cornell University

**BACK TO SLEEP CAMPAIGN**

- Started in 1994 to decrease the sleep related SIDS.
- Health care providers have a vital role in educating parents and families along with professional organization on the importance of placing an infant to sleep “BACK TO SLEEP”
- The SIDS rate has drastically decreased since 1994 in all races and ethnic groups, but some ethnic groups and high risk infants like premature infants are still on higher rates for SIDS
- The SIDS causes now include other unexplained causes to include and now called SUDS
- About 3500 infants died each year in the USA from sleep related causes.

**AAP TASK FORCE RECOMMENDATION**

- All health care professionals keep addressing to all infant’s care providers on all AAP task force recommendation for placing babies to sleep in a safe environment. They are,
  - BACK TO SLEEP
  - USE FIRM SLEEP SURFACE
  - AVOID BED SHARING
  - AVOID SMOKING AND DRUGS
  - AVOID OVER HEATING AND OVER DRESSING
  - AVOID USE OF COMMERCIAL DEVICES INCLUDING MONITORS
  - CONSIDER Pacifier AT NAP TIME ( for breastfeeding delay )
  - ENCOURAGE WOMEN TO BREAST FEED
  - EDUCATE PARENTS AND FAMILIES AND OTHER CARE PROVIDERS ON SAFE INFANT POSITION
  - ENCOURAGE SUPERVISED “TUMMY TIME”

NICU Policies Support/Facilitate Safe Sleep Practices

Rajegowda BK.

Transitioning of Infants in NICU from Prone Position to Supine Position.

NYSPOC Safe Sleep Project Coaching Call. April 2017. Intended audience: Hospitals and NICUs.

**NICU INFANTS**

Lastly, preterm infants and full term newborn admitted to NICU are not exempt from suggested recommendation expect when infant in ICU who have,

- Sick infant with acute and chronic lung disease
- Extremely born infant with periods of Apnea, bradycardia and periodic breathing
- Infant with documented GE reflux
- Infant with major congenital anomalies like
  - Choanal atresia
  - Pierre- Robin Syndrome
  - Neuro-Muscular diseases

May benefits physiologically and developmentally from prone or side lying position as long as infant continuously monitored and observe until resolution of symptoms

**NICU INFANTS**

- NICU infants who are stable premature and full term infants, who are graduated to convalescence stage to transition them to home sleep environment (HSE)
  - Infant with gestational age of 34 weeks and beyond and more than 1500gms to place them on HSE protocol
  - Infants with gestational age less than 34 weeks if they are not in distress slowly transition them to HSE provided infant do not require any other assistance.
  - In order to model safe sleep practice to the families Placement of NICU infants on their back to sleep should be done well before they discharge
  - Infants who are swaddle/bundled no higher than shoulder level before putting them to sleep
  - Sleep sac maybe used

- When the infant is ready of HSE, the parents
  - learn on positioning the infant on his/her back and explain them why the baby should sleep on the back.
- Repeat same slogan every time parents visit the infant
- Show parents, all the task force of recommendation of infant safe sleep,
  - Reinforce parental education
  - Show a DVD on back to sleep
  - Give appropriate education material for parents to read towards prevention of SIDS
  - Physician will also play a part from the time infant transitioned from prone to supine during their rounds and inform parents on reinforcing the importance of HSE
  - During followup well baby clinic the pediatric care providers will reinforce HSE
  - On our institution we refer the families to VNS to visit their home to assess and reinforce the family on infant safe sleep.

**REPORT OF NHVP**

Data from Newborn Home Visiting program Bureau Maternal infant and reproductive health from September 2016 through February 2017

TASK FORCE ON SUDDEN INFANT DEATH SYNDROME

**NEW**

POLICY STATEMENT Organizational Principles to Guide and Define the Child Health Care System and/or Improve the Health of all Children

American Academy of Pediatrics  
DEDICATED TO THE HEALTH OF ALL CHILDREN™

## SIDS and Other Sleep-Related Infant Deaths: Updated 2016 Recommendations for a Safe Infant Sleeping Environment

TASK FORCE ON SUDDEN INFANT DEATH SYNDROME

- 63 new high quality studies
- Solicited an independent statistician to evaluate bed sharing data
- Added breastfeeding expert to taskforce

TABLE 2 Summary of Recommendations With Strength of Recommendation

**A-level recommendations**

- Back to sleep for every sleep.
- Use a firm sleep surface.
- Breastfeeding is recommended.
- Room-sharing with the infant on a separate sleep surface is recommended.
- Keep soft objects and loose bedding away from the infant's sleep area.
- Consider offering a pacifier at naptime and bedtime.
- Avoid smoke exposure during pregnancy and after birth.
- Avoid alcohol and illicit drug use during pregnancy and after birth.
- Avoid overheating.
- Pregnant women should seek and obtain regular prenatal care.
- Infants should be immunized in accordance with AAP and CDC recommendations.
- Do not use home cardiorespiratory monitors as a strategy to reduce the risk of SIDS.**
- Health care providers, staff in newborn nurseries and NICUs, and child care providers should endorse and model the SIDS risk-reduction recommendations from birth.
- Media and manufacturers should follow safe sleep guidelines in their messaging and advertising.
- Continue the "Safe to Sleep" campaign, focusing on ways to reduce the risk of all sleep-related infant deaths, including SIDS, suffocation, and other unintentional deaths. Pediatricians and other primary care providers should actively participate in this campaign.

**B-level recommendations**

- Avoid the use of commercial devices that are inconsistent with safe sleep recommendations.
- Supervised, awake tummy time is recommended to facilitate development and to minimize development of positional plagiocephaly.

**C-level recommendations**

- Continue research and surveillance on the risk factors, causes, and pathophysiologic mechanisms of SIDS and other sleep-related infant deaths, with the ultimate goal of eliminating these deaths entirely.
- There is no evidence to recommend swaddling as a strategy to reduce the risk of SIDS.

**NEW**

## Simply Put

Arousability

Asphyxiating Environments

The Risk of SUID can be greatly reduced by following simple safe sleep guidelines

Follow the **ABCs** of Safe Sleep

- A** Alone
- B** On their Back
- C** In a safe Crib

Right from the start

### Do Pediatric Residents and Attending Physicians Practice What They Preach?

Jenna Wheeler, MD<sup>1</sup>, MaryAnn O'Riordan, MS<sup>1</sup>, and Jeffrey Solomon, MD<sup>1</sup>

Wheeler et al. 1177

Table 1. Frequency With Which Physicians Reported Strict Adherence to AAP Guidelines With Their Own Children<sup>1</sup>

	General Pediatricians (n = 31)	Pediatric Resident Physicians (n = 245)
Always placing infant on back to sleep	32.3	88.1
Never co-sleeping with infant	45.2	38.1
Always using their own baby's cribs/cradles	32.3	49.8
Bedside breastfeeding	45.2	45.3
Joint sofa or mattress	80.7	72.9
Solid head immobilizer at 4-6 months of age	11.6	24.1
No swaddling	100	88.7

Abbreviations: AAP, American Academy of Pediatrics. OR values are expressed as percentages.

### Parent Myth 1: My baby will choke on her back.

- No increased risk of choking or aspiration – Protective Mechanism
- Rare exceptions- infants for whom the risk of death from complications of GE reflux is greater than the risk of SIDS

### NICU Provider Myth 1: But our babies have NG/OG tubes and they all need HOB elevation

- “There is no evidence to suggest that infants receiving NG or OG feeds are at an increased risk of aspiration if placed in the supine position.”
- Elevating HOB is ineffective in reducing GER – Sliding infant- positioners, z- flo etc

**NEW**

### Evidence-Based Treatment of Gastroesophageal Reflux in Neonates

By Susan Plank, RN, CNSRN, MA

- Cochrane review in 2009
- 5 separate studies
- None found decrease in GER symptoms for infants with HOB elevation
- Prone and left lateral positioning was superior

Infant Position	Reflux Index*
Supine	11.3
Right Lateral	12.0
Left Lateral	7.7
Prone	4.7
Horizontal	10.7
Elevated Head of Bed	10.1

\*Normal average index is 10 for infants <12 months of age.

### Reflux Precautions for Infants

Priority: Routine | Routine | STAT

Frequency: CONT | Once | Start

For: Hours | Days | Weeks

Starting: 8/17/2017 | Today | Tomorrow | AC 1553

Units Specified

Scheduled Times: Once Schedule

Reference LISTS: 1. Health Topics - Reflux Precautions

Location: Entress - Atrial/Bradycardia/Desaturations | Onset

Positioning: Head of bed flat (recommended) | Head of bed elevated with wedge | Head of bed elevated (optimal)

Degrees: 15 degrees (recommended) | +/- 30 degrees

Comments (P): Keep infant upright and calm for 20-30 minutes after each feed, preferably by holding them. Avoid placing infant in car seat or swing after feeding as it may increase pressure on their belly and cause more symptoms of reflux. Place baby on their back during sleep in crib without loose blankets, pillows, toys, WubbaLubbs or care supplies. Avoid overfeeding.

NICU Policies Support/Facilitate Safe Sleep Practices

Hanke S.

*Safe sleep is hard. Our babies are worth it. Promoting safe sleep in the NICU.*

NYSPOC Safe Sleep Project Coaching Call. December 2017. Intended audience: Hospitals and NICUs.

The Risk of SUID can be greatly reduced by following simple safe sleep guidelines

Follow the **ABCs** of Safe Sleep

Baby should sleep

- A** Alone
- B** Back
- C** Crib

Right from the start

health.ny.gov/safesleep

### Room sharing

- Decrease risk of SIDS by 50%
- Ease of use to bring infant to bed for comforting or feeding
- Promotes breastfeeding while minimizing co-sleeping risks
- Promoted bonding with less risk from bed sharing

- **2016:** “It is recommended that infants sleep in the parents’ room, close to the parents’ bed, but on a separate surface designed for infants, ideally for the first year of life, **but at least for the first 6 months.**”
- **2011:** “Roomsharing without bedsharing is recommended.”
  - “All sleep recommendations should be followed for one year of age”

To avoid SIDS, infants and parents should share a room, report says

By Marisa Smith-Bloomer, CNN

Infants should share parents' room for 1st year, report finds

Infants should share bedroom with parents to reduce risk of sudden death, group advises

### Parent Myth #2- There are safe ways to co-sleep

- No studies have shown co-sleeping is protective against SIDS or suffocation
- No way to control many risks associated with bed sharing
- Risk is increased when:
  - Infant < 4 months
  - Tobacco other substances that impair alertness or arousal
  - Bedsharer is not parent (children/pets)
  - Soft bedding (pillows, quilts, comforter)
  - **Soft surface (couch, armchair)**

### NICU Provider myth #2- Our patient’s are on monitors. It is okay to have items in the crib.

NICU Policies Support/Facilitate Safe Sleep Practices

Hanke S.

*Safe sleep is hard. Our babies are worth it. Promoting safe sleep in the NICU.*

NYSPOC Safe Sleep Project Coaching Call. December 2017. Intended audience: Hospitals and NICUs.

- “I wanted to reach out to you about an issue that came up this weekend. Our friends just had a baby. The baby had a few issues that had him in the NICU for two weeks...**their point was that while at the hospital the nurses had blankets, animals, and stuff all around him the whole time. They felt that if at the hospital he could have loose blankets, animals, and lay in different positions, why can't they? It made me think – how many more parents go home with this impression?**”

### Parents pay attention to us

Other	11 (13.1)	Other	27 (5.1)	

### What you can do in your NICU

- Furthermore, the task force believes that neonatologists, neonatal nurses, and other health care providers responsible for organizing the hospital discharge of infants from NICUs should be vigilant about endorsing the SIDS risk-reduction recommendations from birth.
- They should model the recommendations as soon as the infant is medically stable and significantly before the infant's anticipated discharge from the hospital.
- In addition, NICUs are encouraged to develop and implement policies to ensure that supine sleeping and other safe sleep practices are modeled for parents before discharge from the hospital

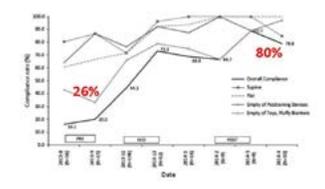

**ORIGINAL ARTICLE**  
 Implementation of safe sleep practices in the neonatal intensive care unit

### Integrating "Back to Sleep" Recommendations Into Neonatal ICU Practice

Polina Gelfer, Ricci Cameron, Kathy Masters and Kathleen A. Kennedy  
*Pediatrics* 2013;131:e1264; originally published online March 4, 2013;  
 DOI: 10.1542/peds.2012-1857

- Supine- 39% → 83%
- Firm surface- 5% → 75%
- No objects- 45% → 75%

### What you can do in your NICU

- Every parent thinks that his/her baby is the exception to the rule...
  - Don't give them a reason to be an exception
- Start a non-judgmental dialogue!
  - Ask them if they have a crib
  - Ask parents how they plan to put their babies to sleep
- Empathize with their challenges
  - Reinforce the Do's and Don'ts
- Provide solutions but don't compromise

NICU Policies Support/Facilitate Safe Sleep Practices

Hanke S.

*Safe sleep is hard. Our babies are worth it. Promoting safe sleep in the NICU.*

NYSPOC Safe Sleep Project Coaching Call. December 2017. Intended audience: Hospitals and NICUs.

### What you can do in your NICU

- Be a voice for your mothers and babies
- Your patients listen to your voice

THIS IS WHAT SAFE SLEEP LOOKS LIKE

### What you can do in your NICU

- Set expectations
  - Find a clinical champion both physician and nursing
  - Establish a clear safe sleep policy
  - Talk to families early about these expectations.
- Implement effective interventions
  - Safe Sleep Start Algorithms
  - Staff education
  - Crib Card
  - Patient educational materials (Sleep Baby, Videos)
- Focus on sustaining gains
  - Use your data for feedback to your team
  - Celebrate successes, share stories of discharge babies that died
  - Find engaged family members in your hospital and community
  - Share their story!!!

### Charlie's Kids FOUNDATION

- Founded in 2011
- 501(c)3 Organization
- All volunteer
- Our mission is to distribute information about SIDS and safe sleep practices to families

- Provides timely and repetitive safe sleep messaging in approachable, easy to read book
- Targets all levels of education, language and literacy abilities
- Promotes parent/child bonding, early literacy
- Distributed in bulk through hospitals, health departments, non-profits

### Randomized Trial of a Children's Book Versus Brochures for Safe Sleep Knowledge and Adherence in a High-Risk Population

John S. Hutton, MD; Resmi Gupta, MS, MA; Rachel Gruber, MS; Jennifer Berndsen, LSW; Thomas DeWitt, MD; Nicholas J. Ollberding, PhD; Judith B. Van Ginkel, PhD; Robert T. Ammerman, PhD

**Adherence \*2x greater for Sleep Baby Safe and Snug**

Maternal Adherence with Safe Sleep Recommendations – Book Versus Brochures  
Odds Ratio and 95% Confidence Interval

Item	Odds Ratio	95% CI
Observed	1.00	0.00 - 1.00
Always use crib	0.46	0.38 - 0.57
Crib in parent's room	0.50	0.37 - 0.70
Firm crib mattress/fitted sheet	1.01	0.76 - 1.36
Crib free of pillow/blanket items	0.88	0.55 - 1.42
Evidence of bed-sharing	2.17	1.24 - 3.81
Reported	1.20	0.84 - 1.73
Evidence of smoking	1.22	0.58 - 2.59
Bed-sharing	1.81	1.18 - 2.80
Non-aspine sleep position	0.58	0.38 - 0.87
Breastfeeding	1.00	0.55 - 1.81
Pacifier use	0.83	0.55 - 1.26
Smoking	1.01	0.61 - 1.67
Material sharing with baby	0.44	0.21 - 0.90

Academic Pediatrics 2017

### Georgia- 2016-17

- All 78 birthing hospitals participated
- Goal safe sleep education
- Distributed book and onesies
- Parent Survey (n=420)
  - 91% found information helpful
  - 82% share safe sleep recommendations with others
  - Receiving information in hospital was strongly correlated with knowledge and behaviors regarding safe sleep location

Safe to Sleep Hospital Initiative Parent Survey Results June 2017

NICU Policies Support/Facilitate Safe Sleep Practices

### It's working!

Sleep Related Deaths are down

Over 2 Million Books Distributed since 2013

- “I wanted to let you know that I shared your story and book with my sister in law who has a four week old baby and was co-sleeping. It was a very awkward conversation but your story and all the work you have done to raise awareness inspired me and helped me to get some cojones and tell her, in a very nice way, that sleeping with her tiny baby in her arms, on her chest, or in bed is not a safe idea. You have done some amazing things.”
- I know, it's terrible, but I have slept with a baby on my chest many times! I know you are not supposed to, but you are just so tired with a new baby that you just want to find some way to sleep! I am promising myself I won't do it with the new baby after reading Charlie's story.”

NICU Policies Support/Facilitate Safe Sleep Practices

*Safe sleep is hard. Our babies are worth it. Promoting safe sleep in the NICU.*

NYSPOC Safe Sleep Project Coaching Call. December 2017. Intended audience: Hospitals and NICUs.

Thank you

**Help your baby sleep safe and snug**

- ♥ **DO** put your baby on his/her back for every sleep.
- ♥ **DO** put your baby's crib in the same room as your bed (room-sharing).
- ♥ **DO** put your baby in a crib to sleep for naps and bedtime.
- ♥ **DO** find your own way to stay awake while feeding your baby.
- ♥ **DO** use a firm only mattress covered by a fitted sheet.
- ♥ **DO** breastfeed your baby.
- ♥ **DO** offer a pacifier for sleep once breastfeeding is established.
- ♥ **DO** use a wearable blanket to keep your baby warm.
- ♥ **DO** rock/sing your baby.

- ♥ **DON'T** put your baby to sleep on his/her side or stomach.
- ♥ **DON'T** sleep with your baby on a shared sleep surface.
- ♥ **DON'T** put your baby to sleep on a couch, armchair, or adult bed.
- ♥ **DON'T** fall asleep holding or feeding your baby.
- ♥ **DON'T** use a car seat, stroller, stroller, or infant carrier for routine sleep.
- ♥ **DON'T** have blankets, pillows, toys or bumper pads in the crib.
- ♥ **DON'T** smoke, drink or use drugs.
- ♥ **DON'T** reposition your baby if his/her shows signs of rolling over.
- ♥ **DON'T** let your baby overheat.

**Safe sleep is hard. Your baby is worth it.**

## NICU Policies Support/Facilitate Safe Sleep Practices This policy from York Hospital is the model used by Cribs for Kids.

*“Hospitals can achieve success in the NICU with both breastfeeding and safe sleep. The road to success is similar to that for healthy term babies. It is all about education, respect, staff awareness and modeling, with promotion of both breastfeeding and safe sleep. NICUs need to develop an algorithm and policy for transition to safe sleep well before discharge as recommended by the AAP Task Force on Sudden Infant Death Syndrome and AAP Committee on Fetus and Newborn. The WellSpan Health York Safe Sleep Policy has this algorithm and extensive instructions for this transition.”*

### **Michael Goodstein, MD, FAAP**

Division Chief WellSpan Neonatology  
Clinical Associate Professor of Pediatrics (Penn State U.)  
Director, York County Cribs for Kids Program

NICU Policies Support/Facilitate Safe Sleep Practices

## **Sample Policy & Procedures**

### *Safe Sleep Practices for the Neonatal Intensive Care Unit*

Parents tend to copy practices that they observe in hospital settings. As a nurse, you play a vital role in ensuring an infant's health and survival after they leave the hospital. This is the most important modeling job of your life.

NICU Policies Support/Facilitate Safe Sleep Practices

First Candle – Sample Policy & Procedures Safe Sleep Practices for NICU

The most important modeling job of your life.

**Sample Policy & Procedures**  
*Safe Sleep Practices for NICU*

<b>Scope of Responsibility:</b>	All health care professionals caring for infants in the Neonatal Intensive Care Unit (NICU)
<b>Goals:</b>	<ol style="list-style-type: none"> <li>1. To provide guidelines that will ensure a safe sleep environment for all newborns by implementing the American Academy of Pediatrics' (AAP) 2005 recommendations regarding safe sleep.</li> <li>2. To ensure that all recommendations are modeled for and understood by parents/caregivers with consistent instructions given prior to discharge.</li> </ol>
<b>Purpose:</b>	Sudden Infant Death Syndrome (SIDS) is a sudden and unexplained death that usually occurs while the infant is asleep. Highest risk is between the ages of 1 and 4 months. Although there is no conclusive research on the cause(s) of SIDS, safety measures such as positioning the infant on his/her back to sleep and other safe sleep guidelines have been shown to reduce the incidence of SIDS.
	<p><b><i>NICU Considerations</i></b></p> <ul style="list-style-type: none"> <li>• Premature infants have increased risk of SIDS.</li> <li>• Premature infants are more likely to be placed prone to sleep after hospital discharge.</li> <li>• As parents/caretakers may see infants placed prone to sleep in the NICU, babies and parents/caretakers may become used to the prone sleep position.</li> </ul>
<b>Conclusion:</b>	NICU staff should be more vigilant about endorsing and modeling the supine sleep position and safe sleep guidelines before an anticipated discharge.

NICU Policies Support/Facilitate Safe Sleep Practices

First Candle – Sample Policy & Procedures Safe Sleep Practices for NICU

Intervention	NICU	NICU Parent Education
<b>Sleep Position</b>	<ul style="list-style-type: none"> <li>• Infants with PFC or pneumonia who have oxygen requirements may be tried to sleep on their stomachs to see if this improves oxygenation. If it does, they may be left on their stomachs until oxygen need decreases. They should then be changed to the supine sleep position.</li> <li>• Infants who have decreased mobility due to illness, neurological defects, medication or restraints may be rotated to different positions to avoid certain problems, such as atelectasis until their condition improves. They should then be changed to the supine sleep position.</li> <li>• Premature infants with respiratory problems and oxygen requirements may be tried in the prone position to see if it benefits them. If it does they may be left there but the infant should be checked daily to see if this continues to make a difference.</li> <li>• Premature infants who have significant feeding residuals may be tried to sleep on their stomachs to see if it improves passage of food. The infant should be tried supine every few days to see if this remains a problem. If not, the infant should be placed permanently in the supine position. Infants handle reflux better on their backs.</li> <li>• Infants with airway obstruction problems such as Pierre-Robin Sequence or laryngomalacia may require the prone sleep position until developmental changes in head shape and laryngeal function occur, usually requiring several months.</li> </ul>	<ul style="list-style-type: none"> <li>• Parents/caregivers need to be told that the stomach sleeping is temporary and they should be provided with sufficient explanation. The supine position should be modeled prior to discharge.</li> <li>• Parents/caregivers need to be told that once well, infants need to always sleep on their backs and that carrying, play and supervised “tummy time” while awake are adequate stimulation for development. Parents/caregivers can rotate the infant’s position in bed, but the infant should always be on his/her back.</li> <li>• “Tummy time” is supervised playtime with the infant while he/she is awake and positioned on the tummy. This is important to infants’ development by providing the opportunity for infants to learn to lift and turn their heads, exercise their bodies and strengthen the neck, arm and shoulder muscles.</li> <li>• Changing the direction that your baby lies in the crib from week to week and supervised “tummy time” will reduce the incidence of positional plagiocephaly or flat spots on the infant’s head.</li> </ul>

NICU Policies Support/Facilitate Safe Sleep Practices  
 First Candle – Sample Policy & Procedures Safe Sleep Practices for NICU

Intervention	NICU	NICU Parent Education
<p><b>Bedding/ Soft Materials (Blankets)</b></p>	<ul style="list-style-type: none"> <li>• Infants should not sleep on sheepskins or other very soft materials unless they are experiencing skin breakdown or are less than 32 weeks gestation. If an infant is placed to sleep on a sheepskin, he/she should sleep on their back.</li> <li>• Infants should be frequently monitored visually, as well as electronically, for face down position. While on such bedding, they should be placed on their backs to sleep.</li> <li>• “Boundaries” made from blanket rolls can serve as potential sources of airway obstruction and entrapment. They should not be used except in extreme cases such as PFC and extreme prematurity and only on open tables.</li> <li>• No toys or stuffed animals are to be put in the crib, bassinet or isolette with the infant. Infants can be provided stimulation by visual patterns or pictures of the family on the isolette wall. Stuffed animals and toys should be displayed outside of the crib so that they will be available to the parents/ caregivers to use to interact with the infant if appropriate when they visit.</li> <li>• Once an infant has successfully graduated from the isolette, it is important to establish how many layers of clothing will be required to maintain thermal neutrality (warmth without overheating). If an undershirt, jumpsuit and sleeper are not adequate to keep an infant warm without additional blankets, the infant’s readiness to be weaned from the isolette should be questioned.</li> <li>• Staff should consider using a wearable blanket as an alternative to loose blankets and model its use for the parents/caregivers.</li> </ul>	<ul style="list-style-type: none"> <li>• Parents/caregivers must be told that these are temporary conditions that will be stopped once the skin matures and that under no circumstances are they to do this at home.</li> <li>• Parents/caregivers need to be shown and told that no loose or soft items are to be in the crib, bassinet or isolette with the infant.</li> <li>• Parents/caregivers should be encouraged to display toys outside of the crib.</li> <li>• Parents/caregivers should be encouraged to bring in the various types of clothing they will use.</li> <li>• Parents/caregivers should be asked to compare the normal temperature of their home with that of the NICU and figure out, along with the nursing staff, how to adjust the home environment or the infant’s clothing. Parents/ caregivers should be taught to look for signs of overheating such as fever and sweating and signs of being cold such as cold hands and skin mottling.</li> <li>• Parents/caregivers can be encouraged to consider using a wearable blanket or dressing the infant in layers as an alternative to loose blankets.</li> </ul>

NICU Policies Support/Facilitate Safe Sleep Practices

First Candle – Sample Policy & Procedures Safe Sleep Practices for NICU

Intervention	NICU	NICU Parent Education
<b>Crib/Bedsharing (Breastfeeding)</b>	<ul style="list-style-type: none"> <li>• During rooming, it must be made clear that the infant is to sleep in a crib, bassinet or isolette. Bedsharing should not take place in the NICU.</li> <li>• Parents should be carefully supervised during “kangaroo care,” or if they are breastfeeding</li> </ul>	<ul style="list-style-type: none"> <li>• Parents/caregivers must be made aware of the multiple dangers of an infant sleeping in an adult bed prior to discharge. In addition, the extreme danger of bedsharing on couches and with other children must be pointed out.</li> <li>• Parents should be informed that “kangaroo care” should be limited to the hospital setting.</li> <li>• Parents/caregivers should be informed to place their infant to sleep in a crib or bassinet that meets the U.S. Consumer Product Safety Commission’s safety standards. Nurses should emphasize that the crib should be firm.</li> <li>• Parents should be encouraged to place the infant to sleep in the same room as the parents.</li> <li>• It should be stressed that after going home, parent/caregiver interactions with the infant need to occur under safe conditions when both are awake and alert.</li> <li>• The availability of bed-extendors and small cribs near the adult bed to facilitate breastfeeding should be addressed.</li> </ul>
<b>Swaddling/ Bundling</b>	<ul style="list-style-type: none"> <li>• Blankets used for swaddling should come no higher than the infant’s shoulders.</li> </ul>	<ul style="list-style-type: none"> <li>• Parents/caregivers should be encouraged to speak with their physician about the need to swaddle. If the physician wants the infant swaddled, the nurse will need to demonstrate.</li> </ul>

NICU Policies Support/Facilitate Safe Sleep Practices

First Candle – Sample Policy & Procedures Safe Sleep Practices for NICU

Intervention	NICU	NICU Parent Education
<p><b>Smoking</b></p>	<ul style="list-style-type: none"> <li>Smoking is not allowed in the NICU and should not be introduced into the infants’ environment.</li> </ul>	<ul style="list-style-type: none"> <li>Parents/caregivers need to be made aware of the dangers of anyone smoking around the infant.</li> <li>Bedsharing may be more dangerous if the mother smokes and should be strongly warned against.</li> <li>Parents/caregivers should be encouraged to stop smoking and create a smoke-free environment for the infant.</li> </ul>
<p><b>Pacifier Use</b></p>		<ul style="list-style-type: none"> <li>Suggest to parents that they consider offering a pacifier at nap time and bedtime. Research shows that pacifier use during sleep is associated with a reduced risk of SIDS. Research also shows that the use of a pacifier does not interfere with breastfeeding nor cause dental problems.</li> <li>Explain to parents why they should wait one month before offering a pacifier to a breastfeeding baby. The risk of SIDS is very low during the first month and it is important to ensure that the baby is nursing well before introducing a pacifier.</li> <li>Tell parents not to use a pacifier as a substitute for nursing or feeding. Pacifiers should be offered after a feeding or when a baby is put down to sleep.</li> <li>Tell parents not to put a pacifier back in a baby’s mouth if it falls out after he or she falls asleep. Doctors say that babies who use a pacifier at naptime and nighttime are protected, even if the pacifier falls out of their mouth after they fall asleep.</li> <li>Tell parents not to force their baby to take a pacifier if he or she does not want it. Encourage parents to try several times during a period of a few weeks before giving up.</li> </ul>

NICU Policies Support/Facilitate Safe Sleep Practices  
WellSpan Health York - Safe Sleep Policy (Section VB. Infants  
in the Neonatal Intensive Care Nursery)

WELLSPAN HEALTH- YORK HOSPITAL      NURSING POLICY AND PROCEDURE

**DATES:**      **Original Issue:**      **August, 1995**  
                  **Annual Review:**      **August, 2016**  
                  **Revised:**      **August, 2017**

**Owner:**      **M. Goodstein**  
**Approved by:** **WCSL Council**

**TITLE:**      **INFANT SAFE SLEEP POLICY**

**I. Purpose**

- A. Establish guidelines and parameters for infant positioning.
- B. Establish appropriate and consistent parental education on safe sleep positions and environment.
- C. Establish consistent safe sleep practices by healthcare professionals for infants prior to discharge.
- D. To comply with Pennsylvania ACT 73 which mandates that provision of education for parents relating to sudden infant death syndrome and sudden unexpected death of infants.

**II. Definitions**

**Infant Mortality Rate:** Number of deaths in infants aged under 1 year of life per 1,000 live births in a given geographic location.

**Neonatal Mortality Rate:** Number of deaths in infants aged under 29 days of life per 1,000 live births in a given geographic location.

**Post-neonatal Mortality Rate:** Number of deaths in infants aged 29 to 364 days of life per 1,000 live births in a given geographic location.

**SIDS (Sudden Infant Death Syndrome):** The sudden death of an infant younger than one year of age that remains unexplained after a complete investigation.

**SUID (Sudden Unexpected Infant Death):** The death of an infant less than one year of age that occurs suddenly and unexpectedly, and whose cause of death is not immediately obvious before the investigation. Most SUIDs are reported as one of three types:

- SIDS
- Accidental suffocation or strangulation in bed
- Unknown Cause

**SUPC (Sudden Unexpected Postnatal Collapse)** Any condition resulting in temporary or permanent cessation of breathing or cardiorespiratory failure in a well-appearing, full-term newborn with Apgar scores of eight or more, occurring during the first week of life. Many, but not all, of these events are related to suffocation or entrapment.

## NICU Policies Support/Facilitate Safe Sleep Practices WellSpan Health York - Safe Sleep Policy (Section VB. Infants in the Neonatal Intensive Care Nursery)

**NAS (Neonatal Abstinence Syndrome):** Is a constellation of symptoms that occur in a **newborn** who has been exposed to addictive opiate drugs. This is most commonly due to prenatal or maternal use of substances that result in withdrawal symptoms in the newborn. It may also be due to discontinuation of medications such as fentanyl or morphine used for pain therapy in the newborn (postnatal NAS).

### III. Policy Statement

The infant mortality rate is a widely-used indicator of the nation's health. In 2010, the United States (U.S.) ranked 26th in infant mortality among industrialized nations, with an overall infant mortality rate of 6.1 deaths per 1,000 live births.<sup>1</sup> The leading causes of infant mortality in the U.S. are a) congenital malformations, b) short gestation/low birth weight, c) sudden infant death syndrome (SIDS), d) maternal complications, and e) unintentional injuries (mostly suffocations)<sup>2</sup>. Although the infant mortality rate in the U.S. decreased to 5.96 deaths per 1,000 live births in 2015, this still represents approximately 24,000 deaths per year, of which, **about 3,500 are sudden unexpected infant deaths (SUID)**.

In 1992 the American Academy of Pediatrics (AAP) recommended that infants no longer sleep in the prone position. By 1994, the National Institutes of Health, introduced the Back to Sleep campaign. Over the next 10 years, the sudden infant death syndrome (SIDS) rate in the U.S. fell 53%, correlating with an increase in exclusive supine sleep.

Despite these advances, approximately 1,500 infant deaths occur due to SIDS each year. SIDS is the third-leading cause of infant mortality overall, and it is the leading cause of post-neonatal mortality. And although the incidence of SIDS continues to decline, other deaths (including accidental suffocation and strangulation in bed and undetermined deaths) have increased, suggesting a possible "diagnostic coding shift," resulting in little change in the incidence of SUID in recent years.

The AAP recommends "Health care professionals, staff in newborn nurseries and NICUs, and child care providers should endorse and model the SIDS risk reduction recommendations from birth. All physicians, nurses, and other health care providers should receive education on safe infant sleep. Hospitals should ensure that hospital policies are consistent with updated safe sleep recommendations and that infant sleep spaces (bassinets, cribs) meet safe sleep standards."

However, studies show that many hospitals do not currently provide consistent and accurate information or model appropriate behavior in the hospital. In one study, parents reported receiving instruction on sleep position from either nurses and doctors less than 50% of the time and only 37% of parents reported seeing their infant placed exclusively in the supine position in the nursery. Yet parents who reported both receiving instruction and observing their infant put to sleep in the supine position were most likely to keep their babies in the supine position for sleep at home (70%), while parents who received no instruction and did not see their babies' supine in the nursery were least likely to report using the supine position at home (22%). Parents are less likely to believe that infant safe sleep practices are important when the hospital staff is inconsistent with their message and behavior.

<sup>1</sup> (MacDorman, Matthews, Mohangoo, & Zeitlin, 2014).

<sup>2</sup> (MacDorman, Hoyert, & Matthews, 2013).

## NICU Policies Support/Facilitate Safe Sleep Practices WellSpan Health York - Safe Sleep Policy (Section VB. Infants in the Neonatal Intensive Care Nursery)

Healthcare professionals play a vital role by showing mothers/caregivers a positive model for safe sleep practices in the hospitals or office settings, and educating parents and caregivers on the importance of infant sleep safety. The challenge for hospitals is to provide education about reducing the potential for accidental injury or death while still promoting methods for mothers/caregivers to bond with their newborns. Healthcare providers should have open, frank, nonjudgmental conversations with families about their sleep practices. Healthcare facilities can make a difference by providing education for staff and families, and promoting and monitoring safe sleep behaviors that can reduce the risk of injury or infant death.

#### IV. Equipment

Open cribs/bassinets, isolettes or infant warmers

#### V. Procedure

##### A. **Infants in the Newborn Nursery:**

1. Place all infants on their backs to sleep and the head of the bed flat. Infants with a medical contraindication to supine sleep position -- i.e. congenital malformations, upper airway compromise, severe symptomatic gastroesophageal reflux -- should have a physician's order along with an explanation documented.
2. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls, and stuffed animals should not be used.
3. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet and can be returned to the newborn nursery at the discretion of the nurse. The mother/parent should then be re-educated on safe sleep practices as soon as practical. If this continues to be a reoccurring problem an "Infant Safe Sleep Non-Compliance" release form should be signed by the parent that he or she has been educated and understands that sleeping with an infant is dangerous with the most serious consequence being death.
4. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "wearable blanket" may be used. If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable.

**The following measures are to be discouraged, since they are not consistent with the AAP**

#### **Guidelines:**

- i. Use of extra blankets should be discouraged. If a baby cannot maintain temperature with normal clothing and swaddling materials, it is preferable to place the infant in an incubator or under a radiant warmer. Alternatively, the baby may be covered transiently with an extra blanket tucked in under the mattress. If this is required, please remove prior to discharge and re-educate the mother/caregiver on the importance of "no loose" or "bulky blankets" in the crib or bassinet.
- ii. If a hat is still needed for thermoregulation at discharge, educate the parents/caregivers to monitor baby's temperature, and to attempt to discontinue using the hat after 2-3 days of stable temperatures at home. If the baby maintains a normal temperature without the hat, then it can be permanently discontinued. Generally, a hat should not be needed after a few days in home environment.
5. Environmental temperature should be maintained at 72-78 degrees Fahrenheit.

## NICU Policies Support/Facilitate Safe Sleep Practices WellSpan Health York - Safe Sleep Policy (Section VB. Infants in the Neonatal Intensive Care Nursery)

6. The following recommendations for **skin to skin** bonding, when the mother is awake and fully alert, will decrease the risks of SUPC (see page 1 for definition.)
  - Infant's face can be seen
  - Infant's head is in "sniffing" position
  - Infant's nose and mouth is not covered
  - Infant's head is turned to one side
  - Infant's neck is straight, not bent
  - Infant's shoulders and chest face mother's
  - Infant's legs are flexed
  - Infant's back is covered with blanket
  - Mother-infant dyad is monitored continuously by the staff in the delivery environment and regularly on the postpartum unit
  - When mother want to sleep, infant is placed in bassinet or with another support person who is awake and alert.

### **B. Infants in the Neonatal Intensive Care Nursery (NICU):**

**Please see home safe sleep environment algorithm**

1. Infants who are ill and do not meet the criteria for the home safe sleep environment should have the Therapeutic Positioning Card at their bedside stating: "Infant is not ready for the Home Sleep Environment (HSE)"
2. Place all infants on their backs to sleep and the head of the bed flat, using the Home Sleep Environment guidelines (HSE). NICU infants should be placed exclusively on their backs to sleep when stable and in the convalescent stage of their development (see #5 for guidelines). The placement of NICU infants on their back to sleep should be done well before discharge, to model safe sleep practices to their families.

### **The following exceptions should be noted:**

- i. Infants with upper airway compromise, life-threatening GE reflux (not mild to moderate apnea/bradycardia), respiratory distress, or a greater degree of prematurity may be placed prone or side lying until resolution of symptoms.
  - ii. Preterm infants and ill newborns may benefit developmentally and physiologically from prone or side lying positioning and may be positioned in this manner when continuously monitored and observed.
  - iii. Infants with Neonatal Abstinence Syndrome (NAS) with difficult to control symptoms may be placed in a prone position for brief periods of time (see addendum for guidelines).
3. The following recommendations for skin to skin when mother is fully awake, and alert will decrease the risks of SUPC (see page 1 for definition):
    - Infant's face can be seen
    - Infant's head is in "sniffing" position
    - Infant's nose and mouth is not covered
    - Infant's head is turned to one side
    - Infant's neck is straight, not bent
    - Infant's shoulders and chest face parent's

## NICU Policies Support/Facilitate Safe Sleep Practices WellSpan Health York - Safe Sleep Policy (Section VB. Infants in the Neonatal Intensive Care Nursery)

- Infant's legs are flexed
  - Infant's back is covered with blanket
  - Parent-infant dyad is monitored continuously by the staff in the NICU
  - If the parent becomes drowsy, infant is placed back in the incubator, warmer or bassinet, or with another support person who is awake and alert.
- iv. A firm sleep surface should be used (firm mattress with a thin covering). Soft bedding and objects such as pillows, quilts, blanket rolls, bumpers and stuffed animals should not be present. Positioning devices (such as snugglies) may be used for developmentally sensitive care of any infant in the NICU (premature infant, infant with neurologic or orthopedic abnormalities) as determined by the team (including occupational and physical therapy).
  - v. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "wearable blanket" may be used. If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable.

**The following measures are to be discouraged, since they are not consistent with the AAP Guidelines:**

- i. **Use of extra blankets should be discouraged. If a baby cannot maintain temperature with normal clothing and swaddling materials, it is preferable to place the infant in an incubator or under a radiant warmer. Alternatively, the baby may be covered transiently with an extra blanket tucked in under the mattress. If this is required, please remove prior to discharge and re-educate the mother/caregiver on the importance of "no loose" or "bulky blankets" in the crib or bassinet.**
  - ii. **If a hat is still needed for thermoregulation at discharge, educate the parents/caregivers to monitor baby's temperature, and to attempt to discontinue using the hat after 2-3 days of stable temperatures at home. If the baby maintains a normal temperature without the hat, then it can be permanently discontinued. Generally, a hat should not be needed after a few days in home environment.**
4. Environmental temperature should be maintained at 72-78 degrees Fahrenheit.
  5. The following guidelines should be used to transition NICU patients to the Home Sleep Environment (HSE):
    - i. Babies with a gestational age of 33 weeks and beyond AND greater than 1500 grams without respiratory distress should be placed in HSE.
    - ii. Babies with gestational age 34 weeks and beyond with respiratory distress may be positioned prone until respiratory symptoms are resolving.
    - iii. Babies with gestational age under 34 weeks should be assessed when reaching a post-conceptual age of 33 weeks and weight greater than 1500 grams:
    - iv. If the baby has respiratory distress, staff may continue with prone positioning until respiratory symptoms are resolving. Safe sleep modeling can be performed with an infant on Low flow nasal cannula or High Flow Nasal Cannula <2. LPM.
    - v. If the baby has no respiratory symptoms, then the primary nursing team should

## NICU Policies Support/Facilitate Safe Sleep Practices WellSpan Health York - Safe Sleep Policy (Section VB. Infants in the Neonatal Intensive Care Nursery)

discuss the infant's neuromuscular status with Occupational Therapy. Once the baby no longer requires positioning devices, begin HSE protocol.

6. Once it is determined that an infant is ready for home sleep environment, the following actions should be completed:
  - i. Apply the HSE card/safe sleep ticket to the baby's bedside.
  - ii. Fill out the graduation certificate with the baby's name.
  - iii. At the parent's next visit, have them watch the safe sleep DVD and then provide modeling and review of the appropriate home sleep environment.
  - iv. After completion of the training, present the family with the graduation certificate.

**Also educate the mother/caregiver on the following:**

- i. No burp cloth under infant.
- ii. No sleeping in swing or car seats. It is acceptable to place a fussy baby in a swing to calm down, then transfer to the bassinet for sleeping.
- iii. Prior to discharge the MD/NNP to give the "Sleep Baby Safe and Snug" book to family and review education.

**C. Infants in the Pediatric Unit (Infants less than 1 year of age):**

1. Follow the guidelines for the Newborn Nursery
2. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet or crib. The mother/parent should then be re-educated on safe sleep practices as soon as practical. If this continues to be a reoccurring problem an "Infant Safe Sleep Non-Compliance" release form should be signed by the parent that he or she has been educated and understands that sleeping with an infant is dangerous, with the most serious consequence being death.

**VI. Documentation**

**A. Document the infant's position on the Newborn Nursery, or Pediatric Flow sheets.**

**B. Family/Parental teaching: All parents will be educated on SIDS and safe sleep environments and positioning. Additionally, other caregivers (daycare workers, grandparents, and babysitters) should be encouraged to participate in this education.**

1. All healthy infants should be placed on their backs to sleep.
2. All infants should be placed in a separate but proximate sleeping environment (in a safety approved crib, infant bassinet, or Pack 'n Play/play yard).
3. All infants should be placed on a firm sleep surface. Remove all soft-loose bedding, quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from the sleeping area.
4. Never place a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam mattress.
5. Avoid bed sharing with the infant.

**Note the risk of bed sharing:**

- Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling of the bed, and infants have suffocated in bedding.
- Infants have died from suffocation due to adults rolling over on them.
- Sleeping with an infant when fatigued, obese, a smoker, or impaired by alcohol or drugs

## NICU Policies Support/Facilitate Safe Sleep Practices WellSpan Health York - Safe Sleep Policy (Section VB. Infants in the Neonatal Intensive Care Nursery)

(legal or illegal) is extremely dangerous and may lead to the death of an infant.

6. If a blanket must be used, the preferred method is to swaddle/bundle the infant no higher than the axillary or shoulder level.
    - **Swaddling should be discontinued when the infant shows signs of rolling over.**
  7. The use of a “wearable blanket” may be used in place of a blanket.
  8. Avoid the use of commercial devices marketed to reduce the risk of SIDS.
  9. Avoid overheating. Do not over swaddle/bundle, overdress the infant, or over heat the infant’s sleeping environment.
  10. Consider the use of a pacifier (after breastfeeding has been well established) at sleep times during the first year of life. Do not force an infant to take a pacifier if he/she refuses.
  11. Avoid maternal and environmental smoking.
  12. Avoid alcohol and drug use.
  13. Breastfeeding is beneficial for infants.
  14. Home monitors are not a strategy to reduce the risk of SIDS, this includes both Medical grade and direct to consumer devices/monitors.
  15. Encourage tummy time when the infant is awake, to decrease positional plagiocephaly.
- C. Document all parental teaching (note if the contract was signed and whether the Safe Sleep DVD was viewed) related to sleep safe practices on the parental teaching portion of the plan of care.**
- D. For additional information please refer to the Cribs for Kids® tool kit on Safe Sleep Practices.**

### NAS & Prone Positioning

#### **Infant Irritable**

##### Comfort Measures

- Rocking (including use of swings/Mamaroo)
- Holding (volunteers)
- Swaddling
- White noise
- Appropriate Skin-to-skin care
- Infant massage

**Irritability continues > 12 hours that necessitates prone positioning at times**

Consult with MD/NNP to review scores and meds

**Re-assess need for prone positioning and ALWAYS use comfort measures BEFORE placing an infant prone!**

#### **Getting ready for home--**

- Discontinue prone positioning if used.
- Discuss with primary nursing team, PT/OT, MD/NNP

#### **Begin Home Sleep Environment (if not done earlier) when-**

- Morphine dose 0.16mg every 3 hours
- Average abstinence scores of < 6 over 24 hours
- No scores > 10 in the last 24 hours

## NICU Policies Support/Facilitate Safe Sleep Practices WellSpan Health York - Safe Sleep Policy (Section VB. Infants in the Neonatal Intensive Care Nursery)

- No prn doses needed in the previous 24 hours

**Implement the "home sleep environment" at least 1 week before discharge if not sooner.**  
**KEY POINT -implement when infant is ready for "home sleep" and not earlier in the hospitalization**

- View video
- Post Safe sleep ticket
- Post-Graduation card - make this a "special" day for parents!
- Review information and safe sleep DVD with parents
- Swing time limited to awake/fussy times.
- Safe Sleep baby book given to parents by MD, NNP

### Family Education

- Need extra education when prone
- **DO NOT say**. "I couldn't get him to sleep so I put him on his belly". "She was very fussy last night and slept better being on her belly", "belly sleeping is okay here in the NICU because our babies are monitored – don't do this at home"
- **DO say**. "to help her calm I put her on her belly for a brief time. This special therapy is sometimes needed to help with withdrawal symptoms".
- **Be consistent** with messages.

### Considerations

- Staffing – try to avoid clustering NAS babies in 1 area
- Avoid triage assignments if possible
- Consistent care givers are important
- Maintain positivity
- Communicate with charge nurse any concerns with assignments
- Safe Sleep Notes
- May begin in isolette, bassinet, or open crib
- No washcloths under infant

NICU Policies Support/Facilitate Safe Sleep Practices  
BronxCare Health System – Safe Sleep (SIDS/SUDS) Policy

**BRONXCARE HEALTH SYSTEM**  
**PATIENT CARE SERVICES DEPARTMENT**

**Manual Code No:** PCS-L&D-S-001  
**Page No:** 1 of 6

<b>Title:</b> Safe Sleep (SIDS/SUDS)		
<b>Issued By:</b> Patient Care Services Department		
<b>Effective Date:</b> 2/2016	<b>Last Review Date:</b> 9/18, 7/19	<b>Last Revised Date:</b> 9/18, 7/19
<b>Distribution:</b> Patient Care Services Manual, NICU, Maternity, Labor and Delivery, Pediatric, Pediatric Ed & Ambulatory Clinics		

**PURPOSE:**

1. To establish and model consistent safe sleep practices for all Healthcare Professionals as recommended by the American Academy of Pediatrics (AAP)
2. To provide parents and all infant caregivers with consistent education recommended by the American Academy of Pediatrics on safe sleep positions and environment.

**POLICY:**

1. All healthcare professionals and personnel will adhere to safe sleep practices in all Maternal Child Health units and the Pediatric ED. Education for parents/caregivers will be initiated in the prenatal period (Prenatal ambulatory clinics), continued during the mother's maternal hospitalization and throughout the infants first year of life and reinforced at each pediatric outpatient visit for Bronx Care Health System patients.
2. All education must be documented with validation of understanding from parent/caregiver.
3. All Nursing staff hired to work in the Maternal Child Health departments will be educated on the AAP recommendations of Safe Sleep and the Safe Sleep education that will be provided to all parents/caregivers on orientation and annually.
4. Nurse rounding on in-patient units; Maternity, NICU and Pediatrics will include ensuring nothing but baby is in bassinet/crib.

**DEFINITION:**

**Sudden Infant Death Syndrome (SIDS)** - infant death up to 1 year of age, that cannot be explained after a thorough case investigation, including autopsy

**Sudden Unexpected Infant Death (SUID)** - term used to describe any sudden and unexpected death, whether explained or unexplained (including SIDS) during infancy. Explained cases includes, suffocation, asphyxia, entrapment, infection, ingestions, metabolic diseases, cardiac channelopathies and trauma.

## NICU Policies Support/Facilitate Safe Sleep Practices BronxCare Health System – Safe Sleep (SIDS/SUDS) Policy

### Safe Sleep (SIDS/SUDS)

#### **PROCEDURE:**

##### **Labor & Delivery and Maternity:**

1. All infants > 32 weeks will be placed on their “back to sleep” with head of the bed flat.  
Note: Exception: Physician order with documented explanation.
2. Nothing should be in the bassinet except baby.
3. Rooming- in is recommended without bed sharing.
4. If a baby is found in bed with a sleeping mother/parent, the baby should be placed in the bassinet, or brought to the Nursery and safe sleep reeducation should be done and documented.
5. Encourage exclusive breastfeeding.
6. Promote skin to skin bonding while mother/parent is awake, but ensure the following
  - Baby’s face can be seen
  - Head is in “sniffing” position
  - Nose and mouth is not covered head is turned to one side
  - Neck is straight, not bent
  - Shoulder’s and chest face mother’s
  - Legs are flexed
  - Baby’s back is covered with a blanket
  - While in delivery room, mother/baby is continuously monitored and regularly on post-partum
7. Pacifier use is recommended throughout infancy during sleep time.  
Note: For Breastfed Infants, avoid pacifier until breastfeeding is firmly established.
8. Infant swaddling should be no higher than shoulder level.
9. Infants should be placed as close to the foot (feet to foot) of the bassinette as possible to prevent the blanket from covering the infants face.
10. Hats should not be placed on infant’s head, unless needed for temperature instability.
11. All healthcare professionals must emulate safe sleep practices.
12. All mother’s/parents/caregivers must receive verbal and written safe sleep education and must view the safe sleep video prior to discharge.

## NICU Policies Support/Facilitate Safe Sleep Practices BronxCare Health System – Safe Sleep (SIDS/SUDS) Policy

### Safe Sleep (SIDS/SUDS)

---

#### Safe Sleep Practices Specific to NICU

1. All NICU babies that are medically stable (in bassinet) should be placed “back to sleep” as soon as possible, as they are at increased risk of SIDS.
2. Education for “Safe Sleep” practices will be initiated and documented at the time of admission for all NICU parents/caregivers. Preterm parents must be counseled about the importance of supine sleeping in preventing SIDS.
3. Some NICU babies may require special positioning due to medical/neurological/ congenital anomalies. Parents/caregivers should be told why the infant is not on their back. Infant position should be documented in the EMR.

#### Documentation

1. Document the infant’s sleep position every shift on the Newborn Nursery, NICU and Pediatric Flow sheet.
2. Any position other than “back to sleep” must be accompanied by a documented rationale.
3. Document all parental/caregiver education, including Safe Sleep video was viewed.
4. Document parental/caregiver understanding of Safe Sleep practices.

**Parent/Caregiver Education:** The following recommendations must be provided to all parents/caregivers with its rationale as to how it affects safe sleep. All Safe sleep education provided to parents/caregivers must be documented in the EMR with parent/caregivers acknowledgement of understanding or lack of understanding.

1. Back to sleep for every sleep until 1 year of birth. While infants will always be placed on their backs to sleep, when an infant can easily turn over from back to front and front to back, they can remain in whatever position they prefer to sleep
2. Inform parents that the supine position, “back to sleep” does not increase the risk of choking and aspiration.
3. Side lying is not safe, as the risk of rolling to the prone position is increased.
4. Use a firm sleep surface, no gaps between mattress and side of bassinet/crib.
5. Keep soft objects and loose bedding away from the infant’s sleep area; reduces SIDS, suffocation and entrapment, enforce nothing but baby in sleep area.

## NICU Policies Support/Facilitate Safe Sleep Practices BronxCare Health System – Safe Sleep (SIDS/SUIDS) Policy

### Safe Sleep (SIDS/SUIDS)

8. Sitting devices, such as car seats, strollers, swings, infant carriers and infant slings should not be used for routine sleep, particularly for infants younger than 4 months.
9. When infant slings or cloth carriers are used, ensure that the infant's head is visible, and the nose and mouth are clear of obstructions.
10. Avoid smoke exposure during pregnancy and after birth; smoking is the second most frequent cause of SIDS/SUIDS.
11. Avoid alcohol and illicit drug use during pregnancy and after birth.
12. Encourage exclusive breastfeeding for 6 months; breastfeeding has been shown to reduce the risk of SIDS.
13. Inform parents to offer a pacifier at nap time and bedtime; however do not force on infant. For breastfed infants, pacifier introduction should be delayed until breastfeeding is firmly established.
14. Avoid overheating, no more than one extra layer than an adult.
15. Instruct mother/parent to swaddle baby no higher than axillary and to stop swaddling once baby can roll over.
16. Awake Tummy time is recommended, but must be supervised at all times.
17. Only one infant will be placed to sleep in each crib/bassinet.
18. Bibs and pacifiers should not be tied around an infant's neck or clipped to clothing when sleeping.
19. Infants should be immunized in accordance with AAP and CDC recommendations.
20. Do not use home cardiorespiratory monitors as a strategy to reduce the risk of SIDS.

## NICU Policies Support/Facilitate Safe Sleep Practices Crouse Hospital – Safe Sleep for Newborns Policy

Crouse Hospital Policy & Procedure  
Sleep Safe for Newborns  
Lead Author: Marti Stoecker

PPPG #: P0092  
Effective Date: 01/04/17  
Page 1 of 2

### General Information

**Policy Name:** Safe Sleep for Newborns

**PPPG Category:** Area Specific: Women's and Children's Services

**Applies To:** Units where infants reside

**Key Words:** Safe Sleep, Bed Sharing, Co-Bedding

**Associated Forms & PPPGs:** Breastfeeding Policy

**Original Effective Date:** 02/22/16

**Current Version's Effective Date:** 1/4/2017

**Review & Revision Dates:** 01/04/17

### Policy

Safe sleeping practices will be implemented, role modeled and educated to while the infant is hospitalized.

### Procedure

The American Academy of Pediatrics recommends for prevention of death from sleep related causes including Sudden Infant Death Syndrome (SIDS) that an infant sleeps in his/her own crib, as close to parent as possible, but not in the parent's bed.

All infants will be placed supine, with the head of the crib flat for all naps and night time sleep, unless there is a specific provider order to do otherwise.

Infants need to sleep on firm surface with a tightly fitted sheet.

Avoid overheating infants; recommendations include one layer more than adult is comfortable in. Sleep Sacks are recommended. We model safe sleep in the hospital, by utilizing the Sleep Sack when able. If infant is not maintaining temperature you may swaddle baby in receiving blanket and then in place sleep sack.

Multiples will not be allowed to co-bed.

If primary care giver has used medications impairing their ability to arouse, the baby can either stay in the room with another adult or may go to the nursery so the primary caregiver can rest.

Pacifiers have been proven to help with prevention of SIDS. Breastfeeding infants are only given pacifiers in the newborn period to decrease pain during procedures, for specific medical reasons or upon specific request of the mother. The NICU also uses pacifiers for non nutritive sucking see breastfeeding policy for specifics.

If breastfeeding, pacifiers should not be introduced until breastfeeding is established roughly 2-4 weeks of age.

Parents of all infants discharged from the newborn nursery or NICU are educated on safe sleep and given information on safe sleep, and will be given an opportunity to ask questions about safe sleep during their stay and at discharge. Parents will be given information on interventions that may reduce the risk of SIDS, such as immunizations and breast feeding.

## NICU Policies Support/Facilitate Safe Sleep Practices Crouse Hospital – Safe Sleep for Newborns Policy

Crouse Hospital Policy & Procedure

Lead Author: Marti Stoecker

PPPG #: P0092  
Effective Date: 01/04/17  
Page 2 of 2

### Tenants for Home:

Environment should be non smoking.

An infant should not share a bed or sleeper chair with another adult, child or animal.

Infants less than one year old should sleep alone, on their back, and in a crib with firm mattress and fitted sheet in the parents room.

Remove all blankets, comforters, and toys from your baby's sleep area (this includes but is not limited to loose blankets, bumpers, pillows and positioners).

The American Academy of Pediatrics states importance of using wearable blanket (sleep sack) instead of loose blankets.

Offer pacifier when putting baby to sleep. If breastfeeding introduce pacifier after one month, when breastfeeding is established.

After feedings put baby back to sleep in separate safe sleep area.

Parents will be educated on the benefits of "tummy time" to promote motor development, facilitate upper body muscles and avoid positional plagiocephaly. The infant should be observed at all times during "tummy time".

Area should be free of hazards such as dangling cords, wires, or window coverings to prevent strangulation risk. Infants should NOT sleep in infant swings, car seats, infant seats due to the risk of positional obstruction of their airways.

### NICU Specific Guidelines:

Begin transitioning infants to a supine sleep position at 32 weeks, when medically appropriate. Transition includes:

- Head of the bed flat
- Safe sleep clothing (onesie, and/or sleeper and swaddled with 1 receiving blankets and/or a sleep sack)
- Weaned from all developmental care products PRIOR to being placed in an open crib, unless medically indicated.

### Primary Sources

NICU Policies Support/Facilitate Safe Sleep Practices  
 Good Samaritan Hospital Medical Center - Safe Sleep/Crib Safety Policy

**GOOD SAMARITAN HOSPITAL MEDICAL CENTER  
 NURSING DEPARTMENT  
 POLICY AND PROCEDURE MANUAL**

**TITLE:** Safe Sleep/ Crib Safety

**ORIGINAL DATE OF ISSUE:** 09/15 **PAGE** 1 of 3

**Presented at Clinical Practice Council:** 09/15

**Approved by Executive Council:** 01/16

**Physician Order:** Yes  No

**Consent:** Yes  No

**Purpose:** To expand the Recommendations from the American Academy of Pediatrics safe sleep environment and to reduce the risk of all sleep related infant deaths to include SIDS. To provide a uniform model hospital policy for healthcare providers that serves the newborn and pediatric population under 1 year old

**Policy Statements:** A major decrease in the incidence of SIDS occurred when the American Academy of Pediatrics released its initial recommendation in 1992 that infants be placed in a non-prone position for sleep. The AAP has expanded its recommendations to include a safe sleep environment, which reduces the risk of all sleep-related infant deaths, including SIDS. GSHMC supports the safe infant sleep environment by training the staff caring for infants under 1 year old and educating the parents as recommended by the New York State DOH and the AAP/

**SAFE SLEEP**

PROCEDURE	KEY POINT
<p><b>Sleep Position:</b>                      The nurse will assess all infants &gt; 32 weeks for placing the infant on his/her back for the first year unless otherwise ordered by the physician.                      The nurse will educate the caretaker of this sleep position.</p>	<ul style="list-style-type: none"> <li>Side sleeping is no longer advised and should be used only if there is a physician order.</li> <li>The flat supine sleeping position does not increase the risk of choking and aspiration in infants, even those with GE reflux.</li> </ul>
<p><b>Sleep Surface:</b>                      The nurse will make sure Mattress is firm and maintained its shape and fits snugly in the crib.                      Nurse will educate the caregiver that any gaps around crib mattress will provide areas that a baby can become trapped in and/or suffocate</p>	<ul style="list-style-type: none"> <li>Mattresses should be firm. Soft mattresses will change shape or conform to the weight of the baby's head and body and become an obstruction to the airway. Infant should not sleep on waterbed, sofa or pillow.</li> </ul>

NICU Policies Support/Facilitate Safe Sleep Practices  
 Good Samaritan Hospital Medical Center - Safe Sleep/Crib Safety Policy

<p><b>Bedding:</b>                  The nurse will maintain the bassinette/crib free of all soft objects and loose bedding. No stuffed animals, blankets, quilts, sheepskins, pillows, blanket rolls. The nurse will educate the care giver to keep infants crib free of clutter.</p>	<ul style="list-style-type: none"> <li>• Soft objects can easily change position in a crib and become an obstruction to the airway. Without proper neck control and maturity of the airway, an infant is not able to change position away from these obstructions while asleep.</li> </ul>
<p><b>Overheating/Over-bundling</b>                  Healthcare providers will avoid overheating or over-bundling infant. Infants should be dressed appropriately for the hospital environment, with no more than one additional layer than an adult would wear to be comfortable                  If swaddling is needed for comfort or thermoregulation, swaddle below the axilla.                  Kangaroo Care or skin –to-skin is another method of thermoregulation but should be used only when mother is awake.                  Infant’s head should be uncovered during sleep.                  The healthcare provider will educate caretakers on overheating/ over bundling methods.</p>	<ul style="list-style-type: none"> <li>• Infants are sensitive to extremes in body temperature and cannot easily regulate body temperatures well</li> <li>• . Infants who are overheated with heavy clothes, blankets have increased risk of SIDS</li> <li>• Teach parents to evaluate infants for signs of overheating, such as sweating or the chest feeling hot to touch.</li> <li>• Hats and bonnets can promote heat retention and CO2 accumulation around the face from increased breath rate while asleep.</li> </ul>
<p><b>Sleeping Environment:</b>                  Nurses will ensure room sharing without bed sharing is maintained. (Rooming In)                  Nurses will encourage the infant’s sleep area close to, but separate from, where patient sleeps and that the Infant is be placed in bassinette to sleep.                  Nurses will educate the caregivers the importance of sleep environment.</p>	<ul style="list-style-type: none"> <li>• Bed sharing with anyone, including parents, other children and particularly multiples is not safe. Pets also pose a threat to sleeping infants.</li> <li>• Adult beds are not designed to meet federal safety standards for infants</li> </ul>
<p><b>NICU:</b>                  Healthcare providers should model and implement all SIDS risk reduction recommendations as soon as the infant is clinically stable and significantly before anticipated discharge.                  Remove developmental aids as appropriate.                  Avoid commercial devices marketed to reduce the risk of SIDS .i.e. wedges, positioners, special mattresses.</p>	<ul style="list-style-type: none"> <li>• Inform parents that there is no evidence or that these devices reduce the risk of SIDS or suffocation, or that they are safe.</li> </ul>
<p><b>Back to Sleep</b>                  Healthcare providers will educate caregivers/parents on the importance of following all recommendations for Safe Sleep</p>	<ul style="list-style-type: none"> <li>• Sleeping on the back carries the lowest risk for SIDS.</li> <li>• Ensure all recommendations are understood by caregivers/parents with</li> </ul>

NICU Policies Support/Facilitate Safe Sleep Practices  
 Good Samaritan Hospital Medical Center - Safe Sleep/Crib Safety Policy

well before discharge will ensure that prior to discharge, all parents/caregivers are provided with educational material approved by hospital. Nurses will document in EMR all verbal and written instruction to parents/caregivers.	consistent instructions given prior to discharge.

NICU Policies Support/Facilitate Safe Sleep Practices  
Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

PATIENT CARE MANUAL  
Newborn Services

MANUAL CODE: S-13	
SUBJECT: Safe Sleep Guideline	
DATE ISSUED: 7/09	DATE REVISED: 10/16
SUPERSEDES:	
CROSS REFERENCES: D-03; D-08; F-02; P-12	

**PURPOSE:**

1. To establish consistent safe sleep practices for health care professionals to provide to all infants prior to discharge.
2. To ensure that American Academy of Pediatrics (AAP) safe sleep recommendations are modeled for and understood by parents and caregivers with consistent instructions given prior to discharge.

**BACKGROUND:**

Nearly 4,000 US infants die suddenly and unexpectedly each year. We often refer to these deaths as sudden unexpected infant death (SUID). Although the causes of death in many of these children can't be explained, most occur while the infant is sleeping in an unsafe sleeping environment. Most SUIDs are reported as one of three types of infant deaths.

1. Sudden Infant Death Syndrome (SIDS)
 

SIDS is defined as the sudden death of an infant less than 1 year of age that cannot be explained after a thorough investigation is conducted. Although the incidence of SIDS has declined since 1992, it remains the leading cause of death in infants 1 to 12 months old.
2. Unknown Cause
 

The sudden death of an infant less than 1 year of age that cannot be explained because a thorough investigation was not conducted and cause of death could not be determined.
3. Accidental Suffocation and Strangulation in Bed
 

Mechanisms that lead to accidental suffocation include:

  - i. Suffocation by soft bedding—such as a pillow or waterbed mattress.
  - ii. Overlay—when another person rolls on top of or against the infant while sleeping.

## NICU Policies Support/Facilitate Safe Sleep Practices Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

- iii. Wedging or entrapment—when an infant is wedged between two objects such as a mattress and wall, bed frame, or furniture.
- iv. Strangulation—such as when an infant’s head and neck become caught between crib railings.

Health care professionals provide a vital role in modeling and educating safe sleep practices for neonates.

### Special considerations for NICU:

Premature, low birth weight and ill infants have an increased risk of SIDS after discharge from the NICU. The AAP recommends infants in the NICU to be placed predominantly supine, at least from 32 weeks onward, so that they may become acclimated to supine sleeping prior to discharge.

### POLICY

1. Hospitalized infants, who meet criteria, must be placed on their backs to sleep, in a safe sleep environment.
2. A Safe Sleep Environment consists of:
  - Head of bed flat
  - Infant supine at all times
  - A firm sleep surface
  - Remove soft objects such as stuffed animals, extra bedding, and pillows.
  - Remove developmental positioning devices: Zflo pillow, blanket rolls, wedges.
  - Use of sleep sack is preferable to using a blanket
  - If the infant is swaddled, swaddle below the shoulders. Positioning of the arms when swaddled should be as following:
    - If infant is <32 weeks GA or postmenstrual age (PMA), then he/she should be swaddled with the arms in the blanket and arms should be in a neutral position favoring flexion (i.e. as if the baby is hugging himself/herself). Avoid straightening or extending the arms as that counteracts the natural and more developmental-appropriate newborn tone, which favors flexion.
    - If the infant is >32 weeks GA or PMA, then he/she should be assessed on their ability to be swaddled with the arms out. If arms-out swaddling can be tolerated, then it should be done in order to allow the infant to advance their development through varying sensory experiences with their hands. However, if the infant is not developmentally ready (i.e. – problems with overstimulation, unable to self-soothe, etc.), then continue swaddling with arms in and reassess again as the infant matures.
  - Avoid overheating. Assess infant as to the need for additional blankets or hat for warmth, a sleep sack can be used in place of blankets. In general, infants should be dressed with no greater than 1 layer more than an adult would wear to be comfortable in that environment.

## NICU Policies Support/Facilitate Safe Sleep Practices Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

Continue to assess infant and intervene as appropriate so that infant remains comfortable and in safe sleep milieu. Tuck blanket into mattress and place blanket below shoulder level. If using sleep sack, extra blankets are not needed.

- Avoid hats and headbands for sleep, unless necessary for thermoregulation.
- Do not cover infant's head or face with blanket.
- Avoid pacifiers that attach to infant's clothing.
- Infant should be placed as close to the foot ("feet to foot") of the bassinette/crib as possible, to prevent the blanket, if used, from covering the face or head.

3. **Criteria for Safe Sleep Initiation for NICU patients:**

- Greater than 32 weeks' gestation postmenstrual age
- In an open crib/bassinette
- On room air or nasal cannulae (< 1.5 LPM flow)
- Taking a minimum of 50% of feedings by mouth for three consecutive days
- If infant has not been weaned to a crib/bassinette, then baby must meet all other criteria and be >1600 grams.

4. **Exceptions to Safe Sleep guidelines as noted above may include:**

- Infants with continued respiratory distress, airway issues requiring prone positioning or who require respiratory support (any type of positive pressure)
- Infants with congenital anomalies such as myelomeningocele, micrognathia, spina bifida, and skeletal anomalies and/or neurologic impairment requiring specialized positioning

5. **Conditional Safe Sleep guidance for infants with severe (symptomatic) gastroesophageal reflux** as evidenced by the presence of all of the following:

- Apnea, bradycardia, desaturation associated with nipple and/or enteral feeding
- Greater than 4 emesis events in a 24 hour period or more than 1 emesis event that is at least 20% of the feeding volume
- Back arching, crying, and/or poor weight gain (less than 20g/day or less than 10g/kg/day in a week) plus at least one of the symptoms mentioned above

**Recommendations for infants with symptomatic GE reflux:**

- Elevate crib 30 degrees for 20 to 30 minutes after a feeding or have parent/caregiver hold infant upright if possible, then place the baby supine with the crib head of the bed flat (safe sleep mode).
- Guidelines will be provided by the medical providers for the appropriate sleep positioning at home for infants with symptomatic GE reflux
- Infants with severe reflux who require alternative sleep positioning require home monitoring.

6. **Healthcare professionals (nurses, nurse's aides, medical professionals, respiratory therapists, physiatry staff [speech, OT, PT]), parents and volunteers should:**

## NICU Policies Support/Facilitate Safe Sleep Practices Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

- Model safe sleep practices
- Educate the infant's parent(s)/caregivers about safe sleep practices throughout the infant's hospitalization

### 7. Parental/Caregiver Education includes:

- Always place the infant on his or her back to sleep for every sleep.
- Infants should sleep in the parents' room, close to the parents' bed, but on a separate surface designed for infants, at least for the first 6 months of life (up to a year).
- Do not place your child in a location besides a crib or bassinet for sleep (i.e. do not place your child in a car seat or stroller). There is a concern for an increased risk of sleep-related death.
- Communicate the "safe to sleep" message to everyone who cares for the infant.
- Place the infant on a firm sleep surface, such as a safety-approved mattress, covered by a fitted sheet in a crib. Provide current crib safety standards web: [www.jpma.org](http://www.jpma.org). There is no in using mattresses that prevent/minimize rebreathing as long as they meet standard safety requirements; However, there is no evidence that they reduce the risk of SIDS. Any commercial devices that are inconsistent with safe sleep recommendations should be avoided. For more information, please see: [www.cpsc.gov](http://www.cpsc.gov).
- Ensure that there are no gaps between the mattress and crib.
- Never place the infant to sleep on pillows, quilts, sheepskins, or other soft surfaces, such as a couch or water bed.
- Keep soft objects, toys, pillows, and loose bedding away from the infant's sleep area.
- Do not use crib bumpers.
- Do not use heavy or loose blankets.
- Avoid overheating the infant- dress the infant in light sleep clothing and keep the room at a temperature that is comfortable for an adult. The infant should be in no greater than 1 layer more than an adult would wear to be comfortable in that environment.
- Avoid hats and headbands for sleeping.
- If a blanket is used in the crib, the blanket is to be tucked under the mattress and placed only as high as the infant's chest.
- The baby should never sleep in the same bed or on a couch with another child or adult.
- Breastfeeding is associated with a decreased risk of SIDS. Therefore, breastfeeding or giving expressed breastmilk is recommended for 6 months.
- If your baby has significant reflux, hold your baby upright for 20-30 after feeding before placing on his/her back for sleeping. If the infant is placed in an infant seat immediately after feeding then the infant seat should be partially reclined to 45° elevation. Having the infant sitting fully upright (60-90°) increases pressure on the baby's abdomen and increases the chances of reflux and vomiting.

### 8. Additional information for family:

- Breastfeeding reduces the risk of SUID/SIDS.
- Avoid smoking around the infant; this is the second most frequent cause of SUID/SIDS

Page 4 of 8

## NICU Policies Support/Facilitate Safe Sleep Practices Montefiore Medical Center - Safe Sleep Guideline Policy

S-13

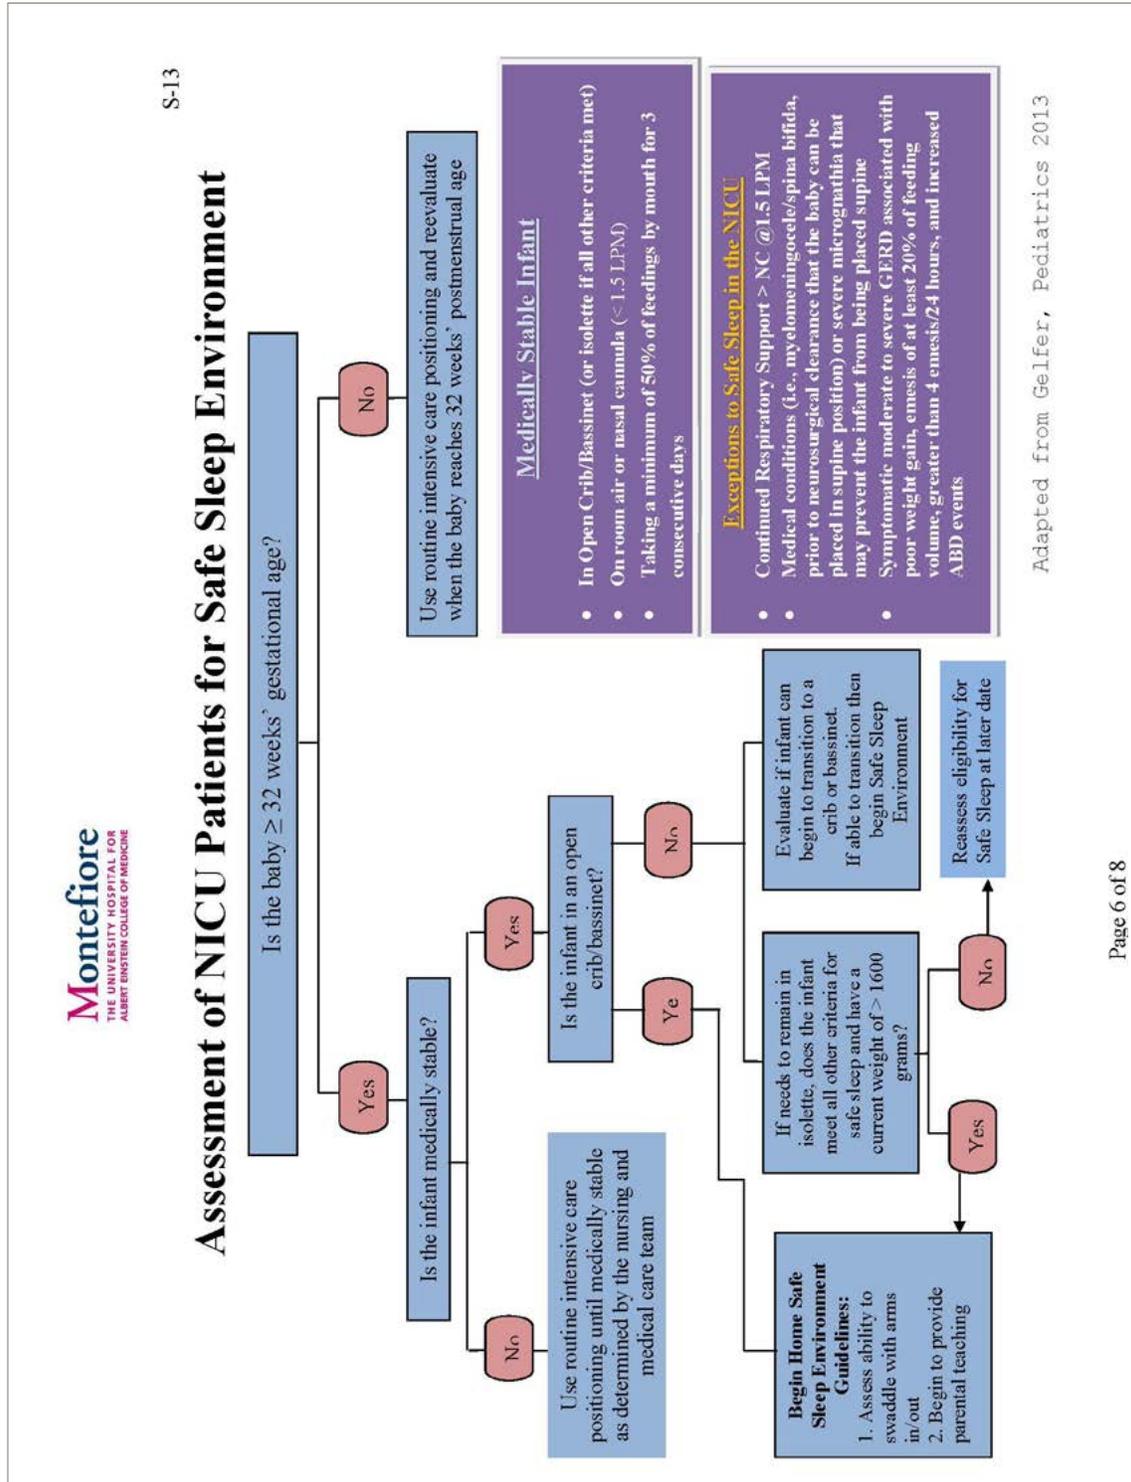

besides positioning.

- Avoid alcohol and illicit drug use around the infant. This causes a particularly high risk of SIDS when used in combination with bed-sharing.
- Provide frequent tummy time for the infant-only when the infant is awake and the caregiver is watching.
- Once an infant can roll from supine to prone and from prone to supine the infant can be allowed to remain in the sleep position that he or she assumes.
- Immunizations may have a protective effect against SUID/SIDS.
- Avoid attaching pacifiers to the infant's clothing during sleep.
- Supervised, awake tummy time is recommended to facilitate development and minimize positional plagiocephaly.

Document safe sleep practice and education in infant medical record.

Page 5 of 8

**POLICY/PROCEDURE**

TITLE: BACK TO SLEEP

Approved: Approved: Laura Kyrillidis R.N., Director of Nursing Perinatal and Pediatrics Services, Patricia Leggio R.N., Nurse Manager Neonatal ICU

Cross References: AAP retrieved on December 10<sup>th</sup>, 2011 from <http://www.healthychildcare.org/sids.html>

**1.0 POLICY:**

- 1.1 All full term babies in the NICU will be placed on their backs as per the American Academy of Pediatrics.
- 1.2 A baby who is spitting-up or vomiting can be placed on their side at the discretion of the RN. When stable, the baby should be returned to its back as per NICU policy.

ADDENDUM: Smaller infants on monitors may be placed on abdomen for periods at a time, as to change position, and aid in their development. Infants on phototherapy may also be placed on their abdomen, to expose that area to the lights. For these occasions, the infant must be on a cardiac monitor.

NICU Policies Support/Facilitate Safe Sleep Practices  
Northwell Health – Safe Sleep Practices Clinical Practice Guideline

Northwell Health  
Neonatal Service Line

CLINICAL PRACTICE GUIDELINE

Safe Sleep Practices

**GENERAL STATEMENT of PURPOSE**

General information: Sudden infant death (SIDS) is the sudden death of an infant less than one year of age that cannot be explained after a thorough investigation is conducted including an autopsy, assessment of the place and circumstances of death, and review of the clinical history. Sudden unexpected infant death (SUID) is a term used to describe any sudden and unexpected death regardless of whether or not it is caused by SIDS. SUID can be caused by potentially preventable causes including suffocation, asphyxia and entrapment. Since initiation of the “Back to Sleep” program by the AAP for full term babies in 1994, the incidence of SIDS has decreased. The recommendation has since been extended to premature infants as well. In 2011, the program was further expanded to include recommendations for a safe sleep environment.

Purpose: To ensure that staff caring for infants promote safe sleep practices through implementation, role modeling, and patient education for the hospital stay. Parent education regarding continued adherence to safe sleep guidelines is required for safe discharge. These guidelines outline the AAP 2011 safe infant sleep environment recommendations that should be implemented by all staff that provide care to infants.

**SCOPE**

This policy applies to all staff of the Northwell Health System, including but not limited to medical staff, nursing staff, respiratory therapists, physical, occupational and speech therapists, child life specialists and other persons performing work for or at Northwell Health System.

**GUIDELINE STATEMENT**

**I. Guidelines for healthy term infants in the hospital**

- A. Place infants in the supine position with the bed flat for sleep for all naps and at night.
- B. Infant bassinets should have a firm sleep surface covered by a tightly fitted secure sheet.
  - 1. Infants should not sleep in swings, car seats or infant seats as they might assume a position which could lead to airway obstruction.
  - 2. There should be no gaps between the mattress and the side of the crib.
  - 3. There should be no toys, blankets, bumpers or pillows in the crib.
- C. Infant should be dressed in light sleep clothing such as a one-piece sleeper (eg: stretchie or sleep sac) without a head covering or other possible hazard of entrapment.
  - 1. Infants who require a hat for warmth in the first 24 hours, may use a properly fitted hat which cannot become dislodged and does not cover the mouth or nose.
- D. Infants may be swaddled in the supine position based on AAP recommended swaddling techniques so the hips remain flexed.

*This document is intended as a general guideline.*

*The healthcare professional must use the appropriate judgment dependent on the particular clinical situation*

1

12/10/2015

## NICU Policies Support/Facilitate Safe Sleep Practices Northwell Health – Safe Sleep Practices Clinical Practice Guideline

- E. Infant should not share a bed, sleeper chair, or chair with another person while asleep. Avoid co-bedding for twins and higher order multiples.
- F. If an infant sling or soft carrier is used, ensure that the head is up and above the fabric, the face is visible and the nose and mouth are free of obstruction.
- G. Skin to skin care should be encouraged to facilitate breast feeding, but only when the caregiver is awake. The mother should be properly positioned with the HOB elevated, and the infant's head should be on the mother's chest and the infant's nose and mouth should be free and unobstructed. Caregivers should be taught to stay attuned to the infant's breathing pattern and advised to place the infant back in the crib if the caregiver becomes fatigued.

### II. Guideline for NICU infants who are ill or preterm

- A. Begin transitioning the infant to supine sleep position at 32 weeks gestation or as soon as clinical status warrants, ideally at least 2 weeks prior to discharge. Infants who have medical contraindications to being placed supine for sleep require an order in the medical record. Discussion should be held during rounds until such time as the infant meets criteria for safe sleep positioning.
  - 1. Supine sleep with head of bed flat.
    - a. Infant should not sleep in car seats or swings
    - b. There should be no toys, pillows or bumpers in the crib.
  - 2. Halo sleeper or swaddle, and a well-fitting hat which does not slip off or cover the nose or mouth may be used to maintain temperature.
  - 3. If an additional blanket is needed, the infant should be placed with the feet at the end of the crib and the blanket should be placed with the edge between the nipples and shoulders and tucked in on the sides and the bottom of the crib.
  - 4. Remove developmental care supports one item at a time when transitioning to open crib unless there is a medical indication.

### III. Special circumstances

- A. Infants who are diagnosed with gastro-esophageal reflux should be evaluated on a case by case basis for the need to keep the head of the bed elevated. They should be placed with the head of the bed elevated only if the risk of GER is greater than the risk of SIDS (eg: those infants in whom airway protective mechanisms are impaired).
- B. Infants with airway malformations may require prone or side-lying positioning and home apnea and pulse oximetry monitoring should be considered for these infants.

### IV. Guidelines for discharge teaching

- A. Place infants in a crib in the supine position with the bed flat for sleep for all naps and at night.
- B. Use a firm sleep surface covered by a tightly fitted secure sheet.
  - 1. The area should be free of cords, dangling objects including balloons, window coverings and electrical cords that might create strangulation or suffocation.
  - 2. Infants should not sleep in swings, car seats or infant seats as they might assume a position which could lead to airway obstruction.
  - 3. There should be no gaps between the mattress and the side of the crib.
  - 4. Keep soft objects such as pillows, bumpers, blankets, quilts and stuffed toys out of the crib.
- C. Avoid overheating. Infant should be dressed in light sleep clothing such as a one-piece sleeper (eg: stretchie or sleep sac) without a head covering or other possible hazard of entrapment. The infant should have no more than one layer of extra clothing than that used by an adult to be comfortable in the environment.
  - 1. Hats should not be used during sleep.

*This document is intended as a general guideline.*

*The healthcare professional must use the appropriate judgment dependent on the particular clinical situation*

2

12/10/2015

## NICU Policies Support/Facilitate Safe Sleep Practices Northwell Health – Safe Sleep Practices Clinical Practice Guideline

2. Infants up to 2 months of age may be swaddled and placed on their back.
- D. Room sharing without bed sharing. A separate infant crib with 4 side rails in the same room as the caregiver is recommended. An infant should not share a bed or sleeper chair, with another child or adult while asleep. Avoid co-bedding for twins and higher order multiples.
- E. Avoid commercial devices marketed to reduce the risk of SIDS such as wedges, positioners, special mattresses and sleep surfaces or home monitors. There is no evidence that these devices reduce the risk of SIDS or suffocation or that they are safe.
- F. Consider offering a pacifier at naptime and at bed time if bottle feeding or once breastfeeding is well-established (usually 3-4 weeks of age). The pacifier should not be hung around the infant's neck. Detach the pacifier from the infant's clothing for sleep.
- G. Avoid smoking around the infant and avoid use of alcohol and illicit drugs.
- H. Encourage tummy time to promote motor development, facilitate development of upper body strength and avoid plagiocephaly. The infant should be awake and supervised at all times during tummy time.
- I. If an infant sling or soft carrier is used, ensure that the head is up and above the fabric, the face is visible and the nose and mouth are free of obstruction
- J. Encourage good prenatal care for subsequent pregnancies

### V. Parent education and documentation:

- A. Prior to discharge from the NICU or regular nursery, parents must be provided with education about safe sleep practices as outlined above, as well as about interventions such as breastfeeding and immunizations which may reduce the risk of SIDS.
  1. Distribute safe sleep materials to parents
- B. Document parent teaching regarding safe sleep practices in the medical record.
- C. Encourage parents to view a video such as "SIDS and safe sleep" or other videos available from NYS Office of Child and Family Services (Safe sleep as simple as A,B,C)
- D. Document in the medical record when parents have watched the video.

 NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy

 		HOSPITAL MANUAL (HM) Page 1 of 11
POLICY AND PROCEDURE MANUAL		
DEPT/SERVICE: PATIENT CARE SERVICES		KEY WORDS: Safe Sleep (SIDS)
CATEGORY: Provision of Care, Treatment and Services		
SUBJECT: Safe Infant Sleeping Environment		
DATE FIRST ISSUED: 6/17/2013		DATE LAST REVISED: 1/14, 1/15, 5/15, 5/18
DATE EFFECTIVE: 6/8/15		SUPERCEDES: 5/15
<p><b><u>POLICY STATEMENT:</u></b></p> <p>According to the (CDC, 2017), “In 2015, there were about 3,700 sudden unexpected infant death (SUID) in the United States. These deaths occur among infants less than 1 year old and have no immediate obvious cause”. Since the 1990’s data has shown, an unsafe sleeping environment is a contributing factor for SUIDS/SIDS. Accidental suffocation and strangulation in bed, SIDS, and unknown causes, were the common reported types of sudden unexpected infant death.</p> <p>A major decrease in the incidence of sudden infant death syndrome (SIDS) occurred when the American Academy of Pediatrics (AAP) released its initial recommendation in 1992 that infants be placed in a non-prone position for sleep. The incidence of SIDS has leveled off in recent years, while the incidence of other causes of sudden unexpected infant death (SUID) that occur during sleep (including suffocation, asphyxia and entrapment) has increased.</p> <p>As healthcare providers, practicing and educating parents and caregivers on maintaining safe sleep environments, is integral in reducing risk factors related to SIDS/SUIDS.</p> <p><b><u>PURPOSE:</u></b></p> <ul style="list-style-type: none"> <li>• To help maintain a safe sleep environment and reduce the risk of SIDS and other sleep-related causes of infant death.</li> <li>• Establish guidelines and parameters for infant positioning.</li> <li>• To provide parents and caregivers with standard evidence-based guidelines to promote safe sleep practices prior to discharge.</li> </ul> <p><b><u>SCOPE:</u></b> M.D’s, CNM’s, NP’s, PA’s, RN’s, LPN’s, PCA’s/PCT’s</p>

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 2 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**GUIDELINES**

**SIDS-** is the sudden death of an infant less than one year of age. SIDS cannot be explained with thorough investigation which includes autopsy, review of the clinical history, and examination of the crime scene.

**SUID-** is the sudden and unexpected death of an infant less than one year of age in which the manner and cause of death are not immediately obvious prior to investigation. Causes of sudden unexpected infant death include, but are not limited to, metabolic disorders, hypothermia or hyperthermia, neglect or homicide, poisoning, and accidental suffocation. (CDC, 2017)

**SUPC** (Sudden Unexpected Postnatal Collapse) any condition resulting in temporary or permanent cessation of breathing or cardiorespiratory failure in a well-appearing, full-term newborn with Apgar scores of eight or more, occurring during the first week of life. Many, but not all, of these events are related to suffocation or entrapment.

**NAS** (Neonatal Abstinence Syndrome): Is a constellation of symptoms that occur in a newborn who has been exposed to addictive opiate drugs. This is most commonly due to prenatal or maternal use of substances that result in withdrawal symptoms in the newborn. It may also be due to discontinuation of medications such as fentanyl or morphine used for pain therapy in the newborn (postnatal NAS).

**POLICY:**

**I. Staff Education:**

1. All staff will be educated on safe-sleep practices as the standard of care for intrapartum, and postpartum management of the newborn. Safe sleep practices and patient education is included in the orientation of new staff to the Maternal Child Health Services.

NICU Policies Support/Facilitate Safe Sleep Practices  
 NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 3 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**II. Prenatal:**

1. Safe sleep education will be provided and reinforced throughout the prenatal period, for all OB patients. Education is provided in trimester classes given by the Women's Health Staff.
2. Education on infant safety, is also provided at the Childbirth Education classes.
3. The American Academy of Pediatrics recommends that infants are placed on their back to sleep, but when infants can easily turn over from their back to their stomach, they may adopt whatever position they prefer for sleep. This recommendation by the American Academy of Pediatrics will be included in all our Safe Sleep education and teaching..
4. Safe sleep education provided to the patient will be documented in the EMR

**III. Intrapartum:**

1. On admission the patient will be assessed on their awareness and understanding of safe sleep practices.
2. After delivery, the newborn will be placed skin-to-skin immediately after birth, and will remain skin-to-skin uninterrupted through the first breastfeeding, or for at least an hour if exclusively formula-feeding. The infants will be placed on their backs during transitional care in the radiant warmer, and in the bassinet. Safe sleep practices will be demonstrated and reinforced to the patient and family.

**(The following recommendations for skin to skin bonding, when the mother is awake and fully alert, will decrease the risks of SUPC (see page 1 for definition.)**

- Infant's face can be seen
- Infant's head is in "sniffing" position
- Infant's nose and mouth is not covered
- Infant's head is turned to one side
- Infant's neck is straight, not bent
- Infant's shoulders and chest face mother's
- Infant's legs are flexed
- Infant's back is covered with blanket
- Mother-infant dyad is monitored continuously by the staff in the delivery environment and regularly on the postpartum unit
- When mother want to sleep, infant is placed in bassinet or with another support person who is awake and alert.

NICU Policies Support/Facilitate Safe Sleep Practices  
 NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy

KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL	HOSPITAL MANUAL (HM) Page 4 of 11
DEPT/SERVICE: PATIENT CARE SERVICES	KEY WORDS: Safe Sleep (SIDS)
CATEGORY: Provision of Care, Treatment and Services	
SUBJECT: Safe Infant Sleeping Environment	

**III. Intrapartum: (Cont.)**

3. Education provided to the patient is to be documented in the EMR.
4. On transfer to the Mother/Baby unit the nurse will report to mother/baby nurse the safe sleep education provided to the patient. Mother will hold infant in her arms securely during transfer to the mother/baby unit.

**IV. Postpartum:**

1. All infants > 32weeks will be placed on their back to sleep during every nap and nighttime for the first year unless otherwise ordered by the physician. Side sleeping is no longer advised and should be used only if there is a physician order.
2. If determined by the newborn health care provider, an infant requires alternative sleep positions or special sleeping arrangements, the provider must document in the EMR the indications and detail the alternative sleep positions or special sleeping arrangements (i.e. infants on phototherapy) . Caregivers will put the infant to sleep as specified in the written instructions.
3. On admission patient will be provided admission packet which includes information on safe sleep.
4. Patient education on safe sleep begins on delivery day and consistently reinforced until day of discharge. Safe sleep education will be included in the rooming-in admission process for the newborn.
5. Infants should receive all recommended vaccinations at birth. Evidence suggests that immunization reduces the risk of SIDS by 50 percent (CDC, 2017).
6. Patient education on safe sleep will be documented in the nurse postpartum care note daily.

**V. Breastfeeding:**

1. Breastfeeding is recommended.
2. Breastfeeding is associated with a reduced risk of SIDS. If possible, mothers should exclusively breastfeed or feed with expressed human milk (i.e., not offer any formula or other non-human milk-based supplements) for six months, in alignment with AAP recommendations.

NICU Policies Support/Facilitate Safe Sleep Practices  
 NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy

KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL	HOSPITAL MANUAL (HM) Page 5 of 11
DEPT/SERVICE: PATIENT CARE SERVICES	KEY WORDS: Safe Sleep (SIDS)
CATEGORY: Provision of Care, Treatment and Services	
SUBJECT: Safe Infant Sleeping Environment	

**VI. Neonatal Intensive Care Unit (NICU)**

1. Infants should be placed in the supine position for sleep as soon as medically stable and significantly before anticipated discharge.
2. If determined by the newborn health care provider, an infant requires alternative sleep positions or special sleeping arrangements, the provider must document in the EMR the indications and detail the alternative sleep positions or special sleeping arrangements. Caregivers will put the infant to sleep as specified in the written instructions.
3. Place all infants on their backs to sleep and the head of the bed flat.
4. Infants with upper airway compromise, life-threatening GE reflux (not mild to moderate apnea/bradycardia), respiratory distress, or a greater degree of prematurity may be placed prone or side lying until resolution of symptoms.
5. Preterm infants and ill newborns may benefit developmentally and physiologically from prone or side lying positioning and may be positioned in this manner when continuously monitored and observed.
6. Infants with Neonatal Abstinence Syndrome (NAS) with difficult to control symptoms may be placed in a prone position for brief periods of time.

**NAS & Prone Positioning**

**Infant Irritable**

Comfort Measures

- Rocking (including use of swings/Mamaroo)
- Holding (volunteers)
- Swaddling
- White noise
- Appropriate Skin-to-skin care
- Infant massage

**Irritability continues > 12 hours that necessitates prone positioning at times**

Consult with MD/NNP to review scores and meds

**Re-assess need for prone positioning and ALWAYS use comfort measures BEFORE placing an infant prone!**

NICU Policies Support/Facilitate Safe Sleep Practices  
 NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 6 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**VI. Neonatal Intensive Care Unit (NICU) (Cont.)**

7. NICU infants should be placed exclusively on their backs to sleep when stable and in the convalescent stage of their development.
8. Placement of NICU infants on their backs to sleep should be done well before discharge in order to model safe-sleep practices to their families.
  - i. **Begin Home Sleep Environment (if not done earlier) when-**
    - a. Morphine dose 0.16mg every 3 hours
    - b. Average abstinence scores of < 6 over 24 hours
    - c. No scores > 10 in the last 24 hours
    - d. No prn doses needed in the previous 24 hours
  - ii. **Implement the "home sleep environment" at least 1 week before discharge if not sooner.**
    - a. **KEY POINT** -implement when infant is ready for "home sleep" and not earlier in the hospitalization
    - b. \*Swing time should be limited to awake/fussy times.
  - iii. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls, and stuffed animals should not be used. Positioning devices (snugglies) may be used for developmentally sensitive care of the extremely premature.
  - iv. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "sleep sack" may be used. Kangaroo Care is encouraged, mother and baby will be closely supervised during Kangaroo Care.

**The following recommendations for skin to skin bonding, when the mother is awake and fully alert, will decrease the risks of SUPC (see page 1 for definition.)**

- Infant's face can be seen
- Infant's head is in "sniffing" position
- Infant's nose and mouth is not covered
- Infant's head is turned to one side
- Infant's neck is straight, not bent
- Infant's shoulders and chest face mother's
- Infant's legs are flexed
- Infant's back is covered with blanket
- Mother-infant dyad is monitored continuously by the staff in the delivery environment and regularly on the postpartum unit
- When mother want to sleep, infant is placed in bassinet or with another support person who is awake and alert.

<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**VI. Neonatal Intensive Care Unit (NICU) (Cont.)**

**\*If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable**

9. Environmental temperature should be maintained at 72 to 78 degrees F.
10. The following guidelines should be used to transition NICU patients to the Home Sleep Environment (HSE):
  - a. Babies with a gestational age of 34 weeks and beyond AND greater than 1500 grams without respiratory distress should be placed in HSE.
  - b. Babies with gestational age 34 weeks and beyond with respiratory distress may be positioned prone until respiratory symptoms are resolving.

Babies with gestational age under 34 weeks should be assessed when reaching a post-conceptual age of 33 weeks and weight greater than 1500 grams: (Wellspring Health-York, 2011)

  1. If the baby has respiratory distress, staff may continue with prone positioning until respiratory symptoms are resolving.
  2. If the baby has no respiratory symptoms, then the primary nursing team should discuss the infant's neuromuscular status with Occupational Therapy. Once the baby no longer requires positioning devices, begin to follow HSE guidelines.

**VIII. Safe Sleep Practices**

**The following instructions will be included in the safe sleep education:**

- Mattresses should be firm and maintain their shape. There should be no gaps between the mattress and the side of the crib, bassinet, portable crib or play-yard.
- Only mattresses and tightly-fitted sheets designed for the specific type of product should be used.
- All soft objects and loose bedding should be kept out of the crib; this includes fluid protective chux's.
- Infants should be dressed appropriately for the environment, with no more than one additional layer than an adult would wear to be comfortable. Infants must be supervised to ensure they are not overheated or chilled.

NICU Policies Support/Facilitate Safe Sleep Practices  
 NYCHHC Kings County Hospital Center - Safe Infant Sleep Environment Policy

<b>KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL</b>	<b>HOSPITAL MANUAL (HM) Page 8 of 11</b>
<b>DEPT/SERVICE: PATIENT CARE SERVICES</b>	<b>KEY WORDS: Safe Sleep (SIDS)</b>
<b>CATEGORY: Provision of Care, Treatment and Services</b>	
<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**VIII. Safe Sleep Practices (Cont.)**

- Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "wearable blanket" may be used. If temperature instability occurs, an additional layer of clothing can be used. Swaddling the baby with an additional blanket or wearable blanket is also acceptable.
- The patient will be instructed to physically check on the infant frequently during napping or sleeping and shall remain in close proximity to the infant in order to hear and see them if they have difficulty during napping/sleeping or when they awaken.
- Bed-Sharing is not recommended.
  - \* Parents will be instructed and educated on admission as to the risks of bed sharing. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet. The mother/parent should then be re-educated on safe sleep practices as soon as practical.
- Toys and stuffed animals will be removed from the crib when the infant is sleeping.
- Only one infant may occupy a crib at one time.
- While at home, car safety seats, strollers, swings, infant carriers, infant slings, boppy pillows, and other sitting devices should not be used for sleep/nap time.
- Neonatal rounding is to continue as per policy (See Neonatal Fall Prevention Policy). Newborn safety practices during rooming-in should be monitored regularly and documented.
- Quiet time will take place between the hours of 2-4pm. This will provide the patient with quiet time for herself and her newborn. During this time safe sleep practices should be reinforced.
- Each patient is required to view safe sleep video before discharge. Viewing of the video by the patient/family will be documented in the EMR.
- Environmental temperature should be maintained at 72 to 78 degrees F.

<b>SUBJECT: Safe Infant Sleeping Environment</b>	

**IX. Pediatric OPD**

**If temperature instability occurs, an additional layer of clothing can be used.  
Swaddling the baby with an additional blanket or wearable blanket is acceptable.**

- Parents are educated on safe sleep practices during the well-baby follow-up by the provider.
- Education is provided to the parents on all pediatric patients up to 6 months of age.
- Education on safe sleep is documented by the provider in the EMR.
- Literature is available for the parent/parents in the pediatric clinic and is provided by the pediatric nurse.

**X. Home Sleep Environment (HSE) Guidelines**

The following information for the mother/ family will be included in the education for safe sleep on discharge:

1. All healthy infants should be placed on their backs to sleep.
2. All infants should be placed in a separate but proximate sleeping environment (crib, infant bassinet, play-yard, portable crib, or portable play-yard).
3. All infants should be placed on a firm sleep mattress. Remove all soft-loose bedding, quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from the sleeping area.
4. Never place a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam mattress.

KINGS COUNTY HOSPITAL CENTER POLICY AND PROCEDURE MANUAL	HOSPITAL MANUAL (HM) Page 10 of 11
DEPT/SERVICE: PATIENT CARE SERVICES	KEY WORDS: Safe Sleep (SIDS)
CATEGORY: Provision of Care, Treatment and Services	
SUBJECT: Safe Infant Sleeping Environment	

**X. Home Sleep Environment (HSE) Guidelines (cont.)**

1. Avoid bed sharing with the infant.
  - \* Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling off the bed, and infants have suffocated in bedding.
  - \* Infants have died from suffocation due to adults rolling over on them.
  - \* Sleeping with an infant when fatigued, obese, a smoker, or impaired by alcohol or drugs (legal or illegal) is extremely dangerous and may lead to the death of an infant.
2. If a blanket must be used, the preferred method is to swaddle/bundle the infant no higher than the axillary or shoulder level.
  - **Swaddling should be discontinued when the infant shows signs of rolling over.**
3. The use of a “wearable blanket” may be used in place of a blanket.
4. Avoid the use of commercial devices marketed to reduce the risk of SIDS.
5. Avoid overheating. Do not over swaddle/bundle, overdress the infant, or over heat the infant’s sleeping environment.
6. Consider the use of a pacifier (after breastfeeding has been well established) at sleep times during the first year of life. Do not force an infant to take a pacifier if he/she refuses.
7. Avoid maternal and environmental smoking.
8. Breastfeeding is beneficial for infants.
9. Home monitors are not a strategy to reduce the risk of SIDS.
10. Encourage tummy time when the infant is awake to decrease positional plagiocephaly.
11. All mothers should be shown the safe sleep DVD before discharge, and review the appropriate home sleep environment.

## NICU Policies Support/Facilitate Safe Sleep Practices Olean General Hospital – Safe Sleep Practice/Infant Positioning Policy

Olean General Hospital		Policy and Procedure Manual			
<b>TITLE:</b>	<b>Safe Sleep Practice/ Infant Positioning</b>			<b>POLICY #:</b>	
<b>Department or Hospital-Wide Section Name:</b>	<b>Nursing Division-OB/Pediatrics</b>	<b>Revision Date:</b>		<b>Revision #:</b>	
Committee approvals – see meta data information		<b>Original Effective Date:</b>			

1) **STATEMENT OF POLICY:**  
 SIDS (Sudden Infant Death Syndrome) is considered to be the sudden death of an infant younger than one year of age that remains unexplained after a complete investigation. There has been a significant decrease in the number of infants who have died from SIDS due to healthcare providers and public health campaigns educating parents and caregivers of the risk factors related to SIDS. Healthcare professionals have a vital role in educating parents and families regarding the "Back to Sleep" campaign. The "Back to Sleep" campaign was started in 1994. In 1992 the SIDS rate was 1.2 deaths per 1000 live births. In 2001, the SIDS rate was 0.56 deaths per 1000 live births, which was a decrease of 53% over a ten-year period. The decreasing SIDS rate is occurring due to a reduction in prone positioning. In 1992, prone positioning was seen in 70%, compared to 13% in 2006. As important role models, healthcare professionals are critical in communicating SIDS risk reduction strategies to parents and families, and by practicing safe sleep practices while infants are still in the hospital. There are factors that have been identified that place an infant at an increased risk of SIDS. They include: stomach sleeping, sleep surfaces that are soft (loose, fluffy bedding), overheating during sleep, maternal smoking (during pregnancy or in the infant's environment), and bed sharing.

**PURPOSE:**

- a. Establish guidelines and parameters for infant positioning.
- b. Establish appropriate and consistent parental education on safe sleep positions and environment.
- c. Establish consistent safe sleep practices by healthcare professionals for infants prior to discharge.

2) **EQUIPMENT:** Bassinettes, Open Cribs, Isolettes, Infant Warmers

3) **DESIGNATED PERSONNEL:** OB Nurses, Pediatric Nurses, Pediatricians

4) **PROCEDURE:**

- a) **Infants in the Newborn Nursery:**
  1. Place all infants on their backs to sleep and the head of the bed flat.  
 \*Infants with a medical contraindication to supine sleep position (i.e. congenital malformations, upper airway compromise, and severe symptomatic gastroesophageal reflux) should have a physician's order along with an explanation documented.
  2. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls, and stuffed animals should not be used.
  3. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet and can be returned to the newborn nursery at the discretion of the nurse. The mother/parent should then be re-educated on safe sleep practices as soon as practical.
  4. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "sleep sack" may be used. Sleep sacks may be used on infants < 38 pounds and 1 year of age.  
 \*If temperature instability occurs, infants may have an additional blanket used by tucking the blanket around the mattress and covering the infant no higher than the axillary or shoulder level.
  5. The infant's feet should touch the bottom of the bed so he/she cannot wiggle down below the blanket.
  6. Environmental temperature should be maintained at 72 to 78 degrees F.
- b) **Infants in the Neonatal Intensive Care Nursery (NICU):**
  1. Place all infants on their backs to sleep and the head of the bed flat.
    - \* Infants with upper airway compromise, life-threatening GE reflux (not mild to moderate apnea/bradycardia), respiratory distress, or a greater degree of prematurity may be placed prone or side lying until resolution of symptoms.
    - \* Preterm infants and ill newborns may benefit developmentally and physiologically from prone or side lying positioning and may be positioned in this manner when continuously monitored and observed.
    - \* Infants with Neonatal Abstinence Syndrome (NAS) with difficult to control symptoms may be placed in a prone position for brief periods of time
    - \* NICU infants should be placed exclusively on their backs to sleep when stable and in the convalescent stage of their development. (see number 6 for guidelines)

## NICU Policies Support/Facilitate Safe Sleep Practices Olean General Hospital – Safe Sleep Practice/Infant Positioning Policy

- \* Placement of NICU infants on their backs to sleep should be done well before discharge in order to model safe-sleep practices to their families.
- 2. A firm sleep surface should be used (firm mattress with a thin covering). Use of soft bedding such as pillows, quilts, blanket rolls, and stuffed animals should not be used.
- 3. Infants should be swaddled/bundled no higher than the axillary or shoulder level. A "sleep sack" may be used.
  - If temperature instability occurs, infants may have an additional blanket used by tucking the blanket around the mattress and covering the infant no higher than the axillary or shoulder level.
- 4. The infant's feet should touch the bottom of the bed so he/she cannot wiggle down below the blanket.
- 5. Environmental temperature should be maintained at 72 to 78 degrees F.
- 6. The following guidelines should be used to transition NICU patients to the Home Sleep Environment (HSE):
  - a. Babies with a gestational age of 34 weeks and beyond AND greater than 1500 grams without respiratory distress should be placed in HSE.
  - b. Babies with gestational age 34 weeks and beyond with respiratory distress may be positioned prone until respiratory symptoms are resolving.
  - c. Babies with gestational age under 34 weeks should be assessed when reaching a post-conception age of 33 weeks and weight greater than 1500 grams:
    - 1. If the baby has respiratory distress, staff may continue with prone positioning until respiratory symptoms are resolving.
- 7. Once it is determined that an infant is ready for home sleep environment, the following actions should be completed:
  - a. Have parents watch the safe sleep DVD and then provide modeling and review of the appropriate home sleep environment.
- c) **Infants in the Pediatric Unit: (Infants less than 1 year of age)**
  - 1. Follow the guidelines for the Newborn Nursery.
  - 2. If a blanket is needed for the infant, the infant's feet should touch the bottom of the bed so he/she cannot wiggle down below the blanket. If no blanket is needed, the infant may be positioned in the bed appropriately.
  - 3. If an infant is found in bed with a sleeping mother/parent, the infant should be placed in their bassinet or crib. The mother/parent should then be re-educated on safe sleep practices as soon as practical.
- d) **DOCUMENTATION:**
  - A. Document the infant's position on the Newborn Nursery, NICU, or Pediatric EMR.
  - B. Family/Parental teaching: All parents and caregivers will be educated on SIDS and safe sleep environments and positioning.
    - 1. All healthy infants should be placed on their backs to sleep.
    - 2. All infants should be placed in a separate but proximate sleeping environment (crib, infant bassinette, or Pac 'N' Play).
    - 3. All infants should be placed on a firm sleep surface. Remove all soft-loose bedding, quilts, comforters, bumper pads, pillows, stuffed animals and soft toys from the sleeping area.
    - 4. Never place a sleeping infant on a couch, sofa, recliner, cushioned chair, waterbed, beanbag, soft mattress, air mattress, pillow, synthetic/natural animal skin, or memory foam mattress.
    - 5. Avoid bed sharing with the infant.
      - Risk of bed sharing:**
      - \* Adult beds do not meet federal standards for infants. Infants have suffocated by becoming trapped or wedged between the bed and the wall/bed frame, injured by rolling off the bed, and infants have suffocated in bedding.
      - \* Infants have died from suffocation due to adults rolling over on them.
      - \* Sleeping with an infant when fatigued, obese, a smoker, or impaired by alcohol or drugs (legal or illegal) is extremely dangerous and may lead to the death of an infant.
  - 6. If a blanket must be used, the preferred method is to swaddle/bundle the infant no higher than the axillary or shoulder level or use an appropriate size blanket that can be tucked in around the crib mattress and position the infant's feet at the bottom of the bed.
  - 7. The use of a "sleep sack" may be used in place of a blanket.
  - 8. Avoid the use of commercial devices marketed to reduce the risk of SIDS.
  - 9. Avoid overheating. Do not over swaddle/bundle, overdress the infant, or over heat the infant's sleeping environment.
  - 10. Consider the use of a pacifier (after breastfeeding has been well established) at sleep times during the

## NICU Policies Support/Facilitate Safe Sleep Practices Olean General Hospital – Safe Sleep Practice/Infant Positioning Policy

first year of life. Do not force an infant to take a pacifier if he/she refuses.

11. Avoid maternal and environmental smoking.
12. Breastfeeding is beneficial for infants.
13. Home monitors are not a strategy to reduce the risk of SIDS.
14. Encourage tummy time when the infant is awake to decrease positional plagiocephaly.

C. Document all parental teaching (include if the contract was signed and whether the Safe Sleep DVD was viewed) related to sleep safe practices in the mothers EMR.

**NAS (Newborn Abstinence Syndrome) & Prone Positioning**

Infant Irritable  
Comfort Measures

- Rocking
- Holding (volunteers)
- Swaddling
- Etc.

IF irritability continues despite efforts to calm

- May position infant prone
- Re-assess symptoms of withdrawal when infant awakens
- Consult with Pediatrician

Irritability continues > 12 hours that necessitates prone positioning at times

- Consult with Pediatrician

Re-assess need for prone positioning and ALWAYS use comfort measures BEFORE placing an infant prone!

Getting ready for home--

- Discontinue prone positioning if used.
- Discuss with primary nursing team, Pediatrician

Begin Home Sleep Environment (if not done earlier) when-

- Average abstinence scores of < 6 over 24 hours
- No scores > 10 in the last 24 hours

When implementing the "home sleep environment" prior to discharge:

- KEY POINT -implement when infant is ready for "home sleep" and not earlier in the hospitalization.
- Review information and safe sleep DVD with parents if not already completed

Family Education

- Need extra education when prone
- DO NOT say, "I couldn't get him to sleep so I put him on his belly", or "She was very fussy last night and slept better being on her belly", or "belly sleeping is okay here in the NICU because our babies are monitored- don't do this at home"
- DO say, "To help her calm I put her on her belly for a brief time. This position is sometimes needed to help with withdrawal symptoms".
- Be consistent with messages

### GOOD SAMARITAN HOSPITAL MEDICAL CENTER (NICU)

The biggest change within the organization is the increase in awareness amongst the staff on the NICU/MBU about safe sleep practices; the staff now has additional knowledge to aid in safe sleep education and how they can help to continue to make the NYSPQC Safe Sleep Project successful.

*To read more about Good Samaritan Hospital Medical Center (NICU), see **Section 10**.*

Driver: Spread bright spots  
Cribbs for Kids National Safe Sleep Certification NYS Hospitals

[Cribbs for Kids® National Safe Sleep Hospital Certification Program](#)

As of June 2019, 28 New York State birthing hospitals have achieved the initiative's Safe Sleep Certification! The list of certified NYS hospitals at each level (Gold, Silver, or Bronze) is shown below. In 2016, only five hospitals in NYS had the certification. This rapid growth demonstrates an impressive commitment to infant safe sleep among birthing hospitals across the state.

*About: The National Safe Sleep Hospital Certification Program was created by Cribbs for Kids and is endorsed by leading health and safety organizations. Its goal is to award recognition to hospitals that demonstrate a commitment to community leadership for best practices and education in infant sleep safety. By becoming certified, a hospital is demonstrating that it is committed to the mission of making babies as safe as possible in their sleep environments and eliminating as many sleep related deaths as possible.*

### Cribs for Kids® National Infant Safe Sleep Initiative

Since 1998, Cribs for Kids® has been providing safe-sleep education and providing a safe, portable crib to families who cannot otherwise afford a safe place for their babies to sleep. If you are interested in becoming a Cribs for Kids® partner, or finding a partner near you, visit <https://cribsforkids.org/our-partners/>.

### New York State's Family Support Programs for Pregnant and Parenting Families

New York State has family support programs for pregnant and parenting families. The programs are available throughout New York State and are provided at no cost to the families. These programs have been proven to improve outcomes for mothers, babies and families. Families can get a family support provider who comes to their home to give support and guidance on their journey through parenting.

To learn more, or to find a family support provider in your area, visit: [https://www.health.ny.gov/community/pregnancy/home\\_visiting\\_programs/](https://www.health.ny.gov/community/pregnancy/home_visiting_programs/).

**Primary Driver 2:** Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep

**Secondary Driver 1:** Individualized education and assessment of belief, knowledge and intent, sharing evidence behind best practices

**Strategies & Key Change Ideas**

- Deliver key messages on safe sleep and breastfeeding at key times--standardized messages for every appointment. Key messages can include:
  - Back to sleep for every sleep
  - Use of firm sleep mattress
  - Benefits and management of breastfeeding
  - Rooming sharing but no bed sharing
  - Skin to skin
  - Soft objects away from sleep area
  - Pacifier at nap and bedtime after breastfeeding is firmly established
  - Avoid smoke exposure
  - Avoid alcohol & illicit drugs
  - Importance of receiving regular prenatal care
  - Importance of immunizations
- Create a plan for sleeping and feeding the infant using Georgetown Universities Module 7 Plan

June 27, 2019 4

**Objective: Sustainability**

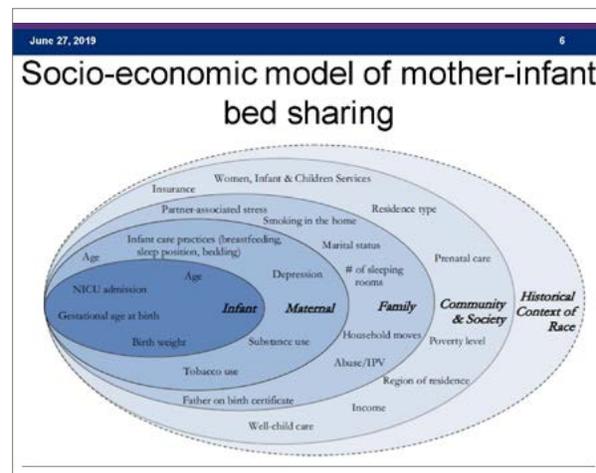

- Safe sleep education and practices across the pediatric health care continuum
  - Supporting the role of the PCP
  - Educating the community and community providers/entities interfacing with families of young infants
  - Balancing breastfeeding (BF) guidance and the realities of BF in the early weeks w/ safe sleep recommendations
- Balancing breastfeeding guidance and the realities of BF in the early weeks w/ safe sleep recommendations
  - Impact of room sharing on sleep hygiene for young infants and parents and on parent stress/distress
  - What is the evidence for successful behavior change

June 27, 2019 5

**NICHQ: Successful quality improvement efforts aspire to be sustainable**

- Successful quality improvement efforts aspire to be sustainable
  - New ways of working become the normal ways of working for the team, organization, systems or facility
  - Think about all changes through the lens of sustainability
  - Nurture and revisit sustainability during and after the project's official end
  - Measure, collect data, report and REPEAT
  - Celebrate your project's sustainability

**Safe Infant Sleep Interventions: What is the Evidence for Successful Behavior Change?**

Table 1. Barriers to and incentives for behavior change (adapted from Grol[5]), as they pertain to safe infant sleep practices.

Level	Barriers/Incentives	Examples of barriers specific to infant sleep practices
Innovation	Advantages in practice, feasibility, credibility, acceptability, attractiveness, personal relevance	<ul style="list-style-type: none"> <li>Parents do not understand rationale for back sleep position</li> <li>Parents feel that infant is "innocent" so SIDS</li> <li>Parents believe that recommended sleep practices will place baby at risk (e.g., choking)</li> </ul>
Individual professional (Healthcare provider)	Awareness, knowledge, attitude, motivation to change, behavioral routines	<ul style="list-style-type: none"> <li>Healthcare provider does not believe that babies should sleep supine</li> <li>No standard of care for infant sleep practices in hospital or daycare center</li> </ul>
Breaking down barriers (Infant caregiver)	Knowledge, skills, attitude, compliance	<ul style="list-style-type: none"> <li>No money to buy crib</li> <li>Concern that infant will be uncomfortable without blankets</li> <li>Maternal smoking during and after pregnancy</li> </ul>
Culture and tradition (Social context)	Opinion of colleagues, cultural norms, collaboration, feedback	<ul style="list-style-type: none"> <li>Bedsharing in family or cultural norms</li> <li>Elder family members are trusted sources of information and may encourage prone positioning</li> <li>Parents often receive unsafe bedding as gifts for baby</li> </ul>
Legislation and regulation (Organizational, economic, and political context)	Organization of care processes, staff, capacities, resources, structure, financial arrangements, regulations, policies	<ul style="list-style-type: none"> <li>No safe sleep regulations in child care</li> <li>No safe sleep education given at both hospitals</li> </ul>

June 27, 2019 8

**Maternal Report of Advice Received for Infant Care** (Eisenberg et al, *Pediatrics* 2015)

- Nationally representative sample 1031 mothers of infants 2-6 m age (**Study of Attitudes and Factors Effecting Infant Care Practices, SAFE**)
  - Oversampled black and Hispanic mothers
  - Assessed advice received from health professionals, family and media
  - Immunizations, BF, sleep location and position, pacifier use

June 27, 2019 9

**Maternal Report of Advice Received for Infant Care** (Eisenberg et al, *Pediatrics* 2015)

- Results
  - MDs most prevalent source advice
  - ~ 20% mothers reported no MD advice for BF or sleep position
  - > 50%: no advice on sleep location or pacifier use
  - Prevalence advice from family or media was 20-56% for nearly all care practices
  - Advice given was often inconsistent w/ recommendations (10-15% BF; > 25% sleep position or location)
  - Black and Hispanic mothers and 1<sup>st</sup> time mothers more likely to report consistent advice (nurses credited as source recommendation consistent advice)

June 27, 2019 10

**Inconsistency in MD Infant Care Advice** (Eisenberg et al, *Pediatrics* 2015)

- When advice was not consistent
  - Doctor support for both the behavior that was consistent and at least 1 behavior not consistent with recommendations
    - 25.7% inconsistent sleep position (22% recommended supine + one other position, usually side lying)
    - 28.7% inconsistent sleep location (19% advice for recommended practice of infant's own bed/parents' room and another location)

June 27, 2019 11

**Reasons for Mother–Infant Bed-Sharing**

Table 6 Infant sleep recommendations [11] Salm Ward et al MCHJ 2015

- Back to sleep every sleep
- Firm sleep surface
- Room-sharing without bed-sharing

If bed-sharing is planned, avoid bed-sharing

- When a mother smokes or takes sedatives
- When an infant is less than three months of age
- With a current smoker or if mother smoked during pregnancy
- With someone who is excessively tired
- With someone who has or is using medications or substances that could impair alertness
- With anyone not a parent (including other children)
- With multiple persons
- On a soft surface such as a waterbed, old mattress, sofa, couch or armchair
- On a surface with soft bedding, including pillows, heavy blankets, quilts, and comforters

June 27, 2019 12

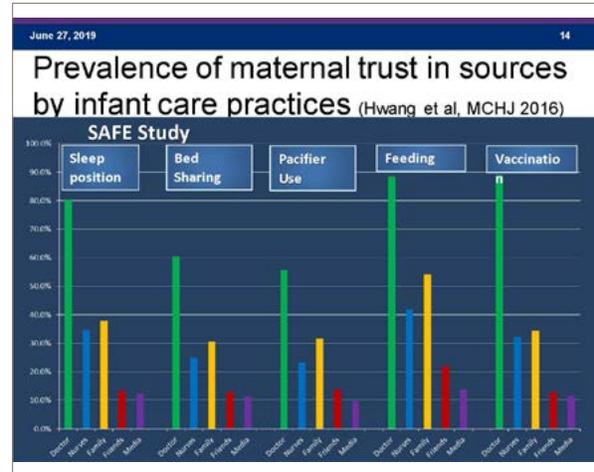

**Infant Care Advice from other sources** (Eisenberg et al, *Pediatrics* 2015)

- Family reported as source advice 30-60% time, variable consistency w/ recommendations
  - > 20% advice about BF
  - ~ 2/3 advice about sleep position, location, pacifier use not consistent w/ recs (nearly 33% mothers)
- Media
  - ~70% mother report BF advice from media (~20% info not consistent w/ recommendations)
- As w/ MD advice combination of consistent and inconsistent behaviors recommended

Campbell D.

Safe Sleep After Discharge Home – Life According to Baby: Challenges & Opportunities

NYSPOC Safe Sleep Project Learning Session, June 2017. Intended audience: Public health and health care professionals.

June 27, 2019 15

Infant sleep location and breastfeeding practices in the US, 2011-2014 (Acad Pediatr 2016)

- Study of Attitudes and Factors Effecting Infant Care Practices (SAFE)
  - Nationally representative sample of 3218 Eng/Span speaking mothers from 32 US birth hospitals
    - Oversampled non-H black and Hispanic mothers
  - Many mothers have not adopted recommended infant sleep location or feeding practices
  - Receiving advice from multiple sources promotes adherence to recommended practices
  - Providing advice on infant sleep recommendations didn't negatively affect BF rates

Department of Health

June 27, 2019 16

Infant sleep location and breastfeeding practices in the US, 2011-2014 (Acad Pediatr 2016)

- Majority of mothers, 65.5 %, reported room sharing w/o bed sharing v. 20.7% bed sharing
- Mothers who bed shared were 2.5 x more likely to exclusively or partially BF
- Majority of mothers usually room share w/o bed sharing regardless of feeding practices
- Dose response increase in adherence w/ sleep location or BF when advice given
- Receiving sleep location advice didn't affect feeding practices

Department of Health

June 27, 2019 17

Sleep locations and sleep surfaces

- Room sharing w/o bed sharing
  - 58.2% breastfeeding mothers
  - 70% non-breastfeeding mothers
- 15.1% non-breastfeeding mothers bed share all or part of the night
- Most common sleep surface is crib, 55%
  - 1/3 mothers report using bassinet, pack and play, adult bed/mattress, car seat
  - 10% mothers report sofa for infant sleep (not associated w/ BF practice)

Smith et al, Acad Pediatr 2016)

Department of Health

June 27, 2019 18

Sleep arrangements, parent infant sleep and family functioning 1<sup>st</sup> y

- Compared with families whose infants were solitary sleepers by 6 months, persistent co-sleeping was associated with:
  - Sleep disruption in mothers but not in infants
  - Mothers in persistent co-sleeping arrangements reported that their infants had more frequent night awakenings
- Persistent co-sleeping was also associated with mother reports of marital and co-parenting distress, and lower maternal emotional availability with infants at bedtime

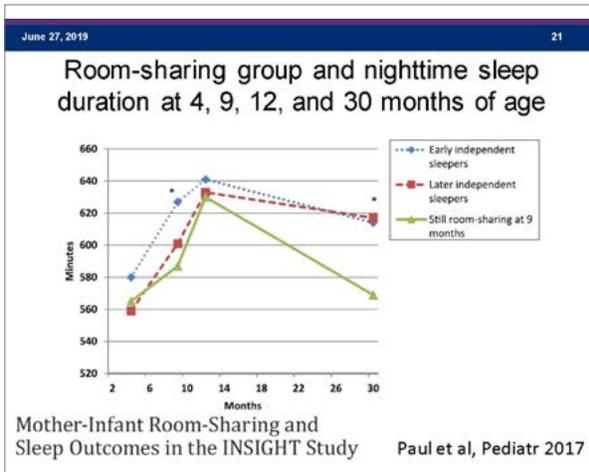

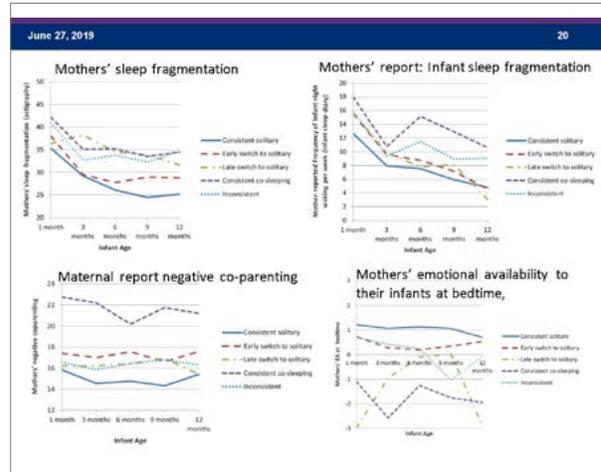

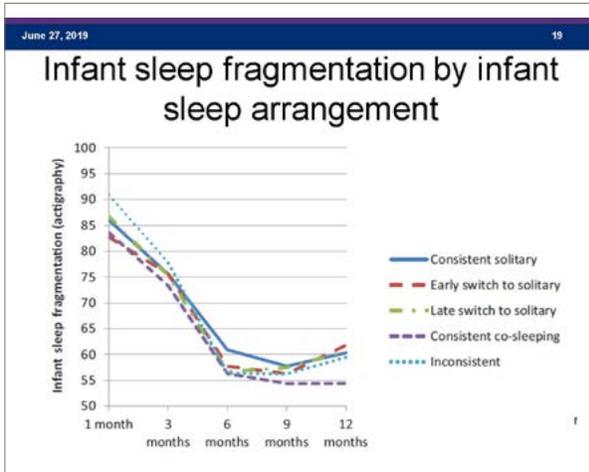

Teti et al, Devel Psychol 2016

Department of Health

Campbell D.

Safe Sleep After Discharge Home – Life According to Baby: Challenges & Opportunities

NYSPQC Safe Sleep Project Learning Session, June 2017. Intended audience: Public health and health care professionals.

**Maternal Self-Efficacy** (Mathews et al, J Commun Health 2016)

- Differences in African American maternal self-efficacy regarding practices impacting risk for sudden infant death
- Mothers were more likely to believe that:
  - Prone placement (70.9 vs. 50.5 %,  $p < 0.001$ )
  - Bed sharing (73.5 vs. 50.1 %,  $p < 0.001$ )
  - Having soft bedding in the sleep area (78.3 vs. 59.5%,  $p < 0.001$ ) increased their infant's risk for suffocation than it did for SIDS
- Mothers had higher self efficacy, viz. increased confidence that their actions could keep their infant safe, with regards to suffocation than SIDS (88.0 vs. 79.4%,  $p < 0.001$ )

**Messaging affects behaviors of African American mothers** (J Pediatr 2016; J Commun Health 2017)

- Intervention group: enhanced messaging emphasizing safe sleep practices for both SIDS risk reduction and suffocation prevention
  - Enhanced message: more likely to state that they avoided soft bedding to protect their infant from suffocation
  - Mothers have a strong belief in vigilance as a strategy to protect their infants
  - Mothers who believed that there is no way to prevent SIDS or suffocation also were more likely to use soft bedding

**Messaging affects behaviors of African American mothers** (J Pediatr 2016; J Commun Health 2017)

- Strong belief among some mothers that SIDS will occur regardless of how the infant is sleeping, if it is meant to be ("God's will")
- Maternal belief that bed sharing increased the risk of SIDS or suffocation declined over 6 months ( $p < 0.001$ ) and did not differ by group assignment
- However, AA mothers no less likely to bed share with their infants b/o enhanced messaging

## Campbell D.

June 27, 2019 27

#### Opportunities for Successful Behavior Change

- Interventions focused on:
  - Health messaging
    - Answer Q's posing barrier to adherence
  - Education of professionals
  - Breaking down barriers
  - Utilizing culture and tradition
  - Regulation and legislation

Moon et al, Curr Pediatr Rev 2016

June 27, 2019 28

#### Health Messaging

- Sound bites:
  - "Back to sleep" or "Safe sleep"; "A, B, Cs: alone, back, crib"
- Answer the Q's that pose a barrier to adherence
  - Choking risk; quality/duration of sleep
  - Why is it important? How does it work?
  - Health belief model
    - Some parents consider their baby "immune" to SIDS/sleep-related death
- Provide messages that promote realization that every infant is potentially at risk
  - "Sell" intervention as credible, feasible, a priority

Moon et al, Curr Pediatr Rev 2016

June 27, 2019 29

#### Education of Professionals

- Health and child care providers
- Train/educate professionals about:
  - Safe sleep messages
  - Modeling appropriate behaviors for families
  - HCPs (MDs, nurses), 1<sup>st</sup> responders and childcare providers have same concerns as parents
    - Risk of aspiration
    - Diminished sleep quality
  - NICU patients are increased risk group
- Incentivize hospitals and/or families

Moon et al, Curr Pediatr Rev 2016

June 27, 2019 30

#### Breaking down barriers

- Financial
  - Cribs for Kids w/ reminder gadgets
- Toxic habits
  - Smoking, EtOH, drug use + bedsharing
- Cultural norms and family traditions
  - Bedsharing, use thick blankets
  - Interventions to understand and eliminate barriers: goal to increase accessibility to innovation and change attitudes of caregivers
    - Bedtime Basics for Babies
    - Sleep Baby Safe and Snug book
    - Halo™ in-hospital SleepSack program

Moon et al, Curr Pediatr Rev 2016

Campbell D.

*Safe Sleep After Discharge Home – Life According to Baby: Challenges & Opportunities*

NYSPOC Safe Sleep Project Learning Session. June 2017. Intended audience: Public health and health care professionals.

June 27, 2019 31

### Utilizing Culture and Tradition

- Incorporate traditions and norms that are protective for health
  - “Honor the past, learn for the future”
  - Charlie’s Kids: Sleep Baby Safe and Snug (Eng/Span)
  - Baby shower: safe sleep or infant safety theme
  - Re-introduce traditional infant sleep areas to increase safety when infants sleep in parents’ bed as part comprehensive educational program
    - Baby box program (Sleep Awareness Family Education at Temple, SAFE-T)
    - Wahakura (6’ high woven flax basket)
    - Pāpi-Pod® Safe Sleep Program (portable plastic container fitted with firm mattress as part of comprehensive educational program [1<sup>st</sup> used as emergency infant bed after NZ earthquakes])

June 27, 2019 32

### Regulation and Legislation

- Targets organizational, economic and political context
- Most legislation and regulations have focused on child care professionals
  - ~20% SIDS occurs in child care setting
    - Associated with unaccustomed prone position
  - 43 states regulate infant sleep position (variability in requirements)
  - 17 require SIDS risk reduction training licensed child care providers (30% family child care is unlicensed)
  - State laws targeting hospital care (PA, CA, CT, NE, IL, MI, TX, FL)

June 27, 2019 33

### The Role of Quality Improvement

- Standardize in-hospital infant safety/sleep practices and education
- Mini-RCA following any sentinel event
- Just-in-time training/coaching
  - DOSE: direct on-scene education – 1<sup>st</sup> responders
- Professional educational interventions
- Incentivize achieving culture of safety
  - Safe sleep certification

**Goodstein, M.**

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIIN Coaching Call. May 2019. Intended audience: community-based organizations.

## Infant Sleep Safety: Beyond the Low-Hanging Fruit

Michael Goodstein, MD, FAAP

## Disclosures

I have documented that I have no financial relationships to disclose or Conflicts of Interest (COIs) to resolve.

I have documented that my presentation will not involve discussion of unapproved or off-label, experimental use of a product, drug or device

## Objectives

- Safe Swaddling
- Bed Sharing
- Health Equity
- Providing Education

## To Swaddle or Not to Swaddle? That is the Question

**Pros:**

- Calms the infant; promotes sleep; decreases number of awakenings
- Encourages use of the supine position

**Cons:**

- Increased respiratory rate and reduced functional residual lung capacity
- Exacerbates hip dysplasia if the hips are kept in extension and adduction
- "Loose" swaddling becomes loose bedding
- Overheating, esp if the head is covered or the infant has infection
- Effects on arousability to an external stimulus remain unclear (conflicting data). There may be minimal effects of routine swaddling on arousal.

## Swaddling

- There is insufficient evidence to recommend routine swaddling as a strategy to reduce the incidence of SIDS.
- Swaddling must be correctly applied to avoid the possible hazards
- Swaddling does not reduce the necessity to follow recommended safe sleep practices.

## Swaddling- Is it Safe?

- McDonnell 2014, J Peds
  - Wearable blankets, swaddles: 10 deaths
    - 80% positional asphyxia, prone sleeping
    - 70% additional risk factors
  - Regular blankets, 12 deaths
    - 58% positional asphyxia, prone sleeping
    - 92% additional risk factors

Infant Deaths and Injuries Associated with Wearable Blankets, Swaddle Wraps, and Swaddling (J Pediatr. 2014;164:1152-6).

Goodstein, M.

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIIN Coaching Call. May 2019. Intended audience: community-based organizations.

### Swaddling- More Questions...

- Pease 2016, Pediatrics
- Pooled OR = 1.38
  - Prone = 12.99
  - Side = 3.16
  - Supine = 1.93
- Increased risk with age
- Limitations:
  - Heterogeneity, definitions, other risk factors

Swaddling and the Risk of Sudden Infant Death Syndrome: A Meta-analysis. Pease. Pediatrics. PEDIATRICS Volume 137, number 6, June 2016: e2 0153

[www.healthychildren.org](http://www.healthychildren.org)

- Swaddling (wrapping a light blanket snugly around a baby) may help calm a crying baby. If you swaddle your baby, be sure to place him on his back to sleep. Stop swaddling your baby when he starts to roll.

### How should a baby be swaddled?

### Swaddling in the US: A National Survey

- 1500 mothers
- Weighted replication of US birth population
- 97% swaddle
- 67% swaddle every day
- 86% start first week of life
- Swaddling techniques:
  - Arms in flexed: 30%
  - Arms in at sides: 53%
  - Arms out: 17%

### Swaddling in the US: A National Survey

#### Swaddling in Hospital

Provider	Discussed	Demonstrated
Nurse	73%	71%
Doctor	26%	14%
Lactation counselor	11%	8%
Midwife	14%	10%
Nobody	19%	19%

### Swaddling in the US: A National Survey

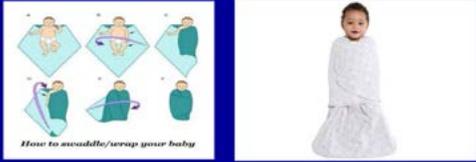

- Receiving blankets: 88.5%
- Swaddling devices: 82.9%
- Reasons for swaddling:
  - Better sleep: 71%
  - Decreased fussiness: 57%
  - Warmth: 54%
  - More comfortable for baby: 45%
  - They did it in the hospital: 31%
  - Help keep baby on back for sleep: 30%
  - Family tradition: 8%

Goodstein, M.

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIIN Coaching Call. May 2019. Intended audience: community-based organizations.

### Swaddling in the US: A National Survey

- 60% of babies get out of their swaddle
  - 42% escaped frequently
  - Most commonly with blankets: 52%

*How to swaddle/wrap your baby*

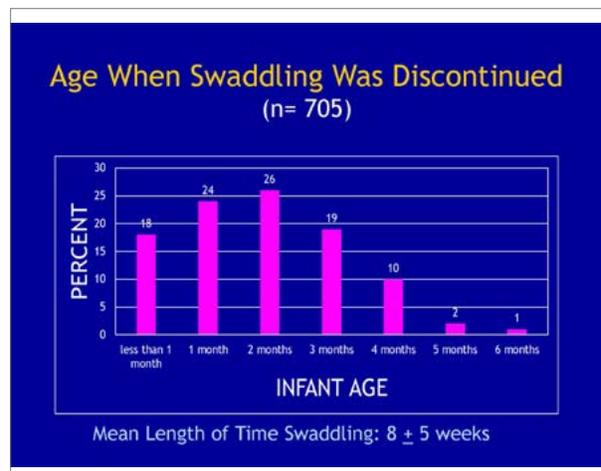

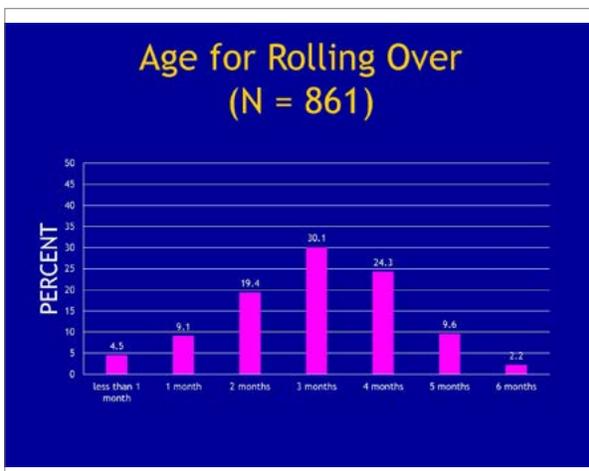

### Rates of Swaddling Failure

- Receiving blankets: 52% (749/1446)
- aden + anais®: 38% (69/182)
- SwaddleMe®: 20% (141/689)
- Halo®: 16% (50/322)
- Miracle Blanket®: 15% (32/215)
- Nested Bean®: 17% (18/105)
- Swaddle Up®: 12% (33/271)
- Woombie®: 14% (24/168)

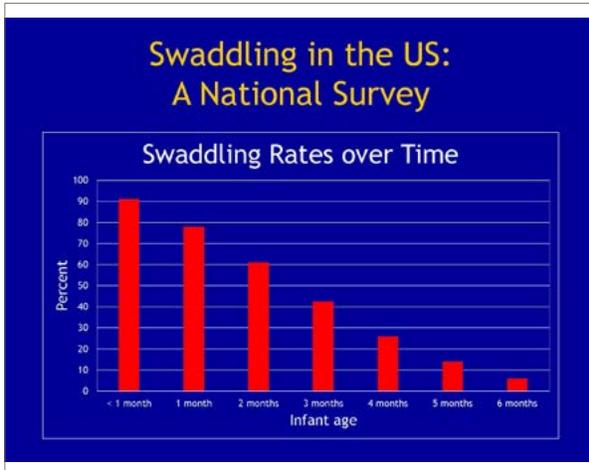

### Swaddling in the US: A National Survey

- Mean age rolling over: 12.2 +/- 5 weeks
- Mean age rolling over in swaddle: 10.5 +/- 5 weeks
- 7% of babies roll over in the swaddle

Goodstein, M.

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIIN Coaching Call. May 2019. Intended audience: community-based organizations.

### Swaddling in the US: A National Survey

- Outpatient HCP discusses swaddling: 26%
  - 64% HCP did NOT discuss when to stop
  - 18% recommended stopping when baby tries to roll over

### Infant Sleep Location

- Infants should sleep in parents' room, close to parents' bed, but on a separate surface designed for infants
- Ideally for first year of life, but at least for the first 6 months

### Feeding the Baby at Night

- Acknowledgment that parents may fall asleep while feeding baby
  - Safer to feed on bed than on sofa, couch, or armchair if you might fall asleep
  - No pillows, sheets, blankets, or other items that could obstruct infant breathing or cause overheating should be in bed
  - Return infant back to separate sleep surface as soon as parent awakens

### Say NO to Couches, Sofas and Cushioned Armchairs!

- Never place baby for sleep on these surfaces
- Never sleep with a baby on these surfaces
- One of the MOST dangerous places for infant (OR 5.1-66.9)

### High-Risk Bed Sharing Situations

- Age of < 4 months
- Preterm or LBW
- Smoked during pregnancy
- Bed sharer is current smoker (even if not smoking in bed)
- Bed sharer has used/is using meds or substances that could impair alertness or arousal
- Bed sharer is not parent (including other children)
- Soft surface (waterbed, couch, armchair)
- Soft bedding (pillows, quilts, comforters)

Goodstein, M.

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIIN Coaching Call. May 2019. Intended audience: community-based organizations.

### Bedsharing in Low-Risk Breastfed Infants

- Blair et al: AOR 1.6 (95% CI 0.96-2.7)
  - Age <14 weeks
  - Parents: No cigarettes or alcohol
  - Independent of feeding method (more BF in bedsharing group)
  - Controls: separate room sleeping, smoking, alcohol
- Carpenter et al: AOR 5.1 (95% CI 2.3-11.4)
  - Age <3 months
  - Parents did not smoke
  - Mother: No alcohol or drugs
  - Breastfed infants

### Independent Review Dr. Robert Platt

- Very small numbers of low-risk babies
  - 24 in Blair's study
  - 12 in Carpenter's study
- Does not believe that data support definitive differences in 2 studies
- Some evidence of increased risk in the youngest group, but cannot say how large the increased risk is
- Cannot conclude that bed sharing in this group is safe

### Infant Sleep Location and Breastfeeding Practices in the US, 2011-2014

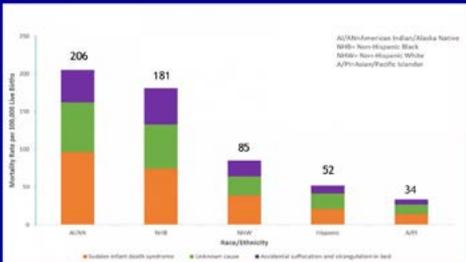

- N = 3218 studied at DOL 60
- Exclusive BF = 30.5%, partial BF = 29.5%
- Usually room share = 65.5%, Bed sharing = 20.7%
- Mothers who bed shared were more likely to report exclusive breastfeeding (AOR 2.46, 1.76-3.45) or partial breastfeeding (AOR 1.75, 1.33-2.31).
- Receiving advice to room share or breastfeed increased adherence to recommendations in a dose response manner, and **did not DECREASE BREASTFEEDING RATES!**

Smith. Academic Pediatrics 2016

### Health Disparities

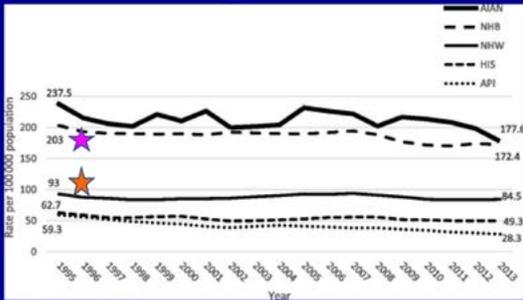

- Black Infants More Likely Than White Infants To Receive Care In A Lower-Scoring NICU, Research Suggests.
  - Reuters (3/25) reports, "In a large national study that included nearly 90 percent of all preterm and low-birth-weight babies born in the U.S. in a recent three-year period," investigators "found that black infants were more likely than white infants to receive care in a lower-scoring neonatal intensive care unit (NICU)."

### SUID Rates by Race/Ethnicity: 2013-2016

SOURCE: CDC/NCHS, National Vital Statistics System, Period Linked Birth/Infant Death Data.

### Racial and Ethnic Trends in Sudden Unexpected Infant Deaths: United States, 1995-2013

Parks, Pediatrics 2017

Goodstein, M.

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIN Coaching Call. May 2019. Intended audience: community-based organizations.

### State-Level Progress in Reducing the Black-White Infant Mortality Gap United States, 1999-2013

- State-level variations:
  - Black IMRs (range = 6.6-13.8)
  - Black-White rate ratios (1.5-2.7)
  - Percentage relative improvement in IMR (range = 2.7% to 36.5% improvement)
  - Black-White rate ratios (from 11.7% relative worsening to 24.0% improvement).
  - 13 states: statistically significant reductions in Black-White IMR disparities.

Speights. Am J Public Health. 2017

### SUID Rates: State Variations

FIGURE 2  
SUID rates per 100,000 live births, United States, 2000-2002 and 2013-2015. SUID is defined as infant deaths that were assigned ICD-10 codes for SIDS (R95), other ill-defined and unspecified causes of mortality (R99), and ASSB (W75). Map classes are equal quintiles across both periods.

Erck Lambert. Peds. 2018

### Social-Ecological Model for Infant Safe Sleep

- Structural/Systemic Factors:
  - segregation
  - Education opportunities
  - Structural racism
  - Intergenerational poverty
- Lu: life course approach
  - Epigenetic changes
  - In utero effects
  - multigenerational
- Holistic approach
  - Social, economic disparities
  - Healthcare
  - Communities and families
  - Improve pre-pregnancy and prenatal care
  - HOME VISITATION PROGRAMS

### Issues with Health Equity

- Black mothers are more likely to:
  - Not use supine positioning
  - Formula feed
  - Bed share
  - Place soft bedding in sleep area

### UNSAFE SLEEP PRACTICES WITH BABIES ARE COMMON.

	Overall 22%	Not Placing Baby on Back to Sleep	Overall 61%	Any Bed Sharing	Overall 30%	Any Soft Bedding
Race/Ethnicity						
White	16%		53%		33%	
Black	38%		77%		41%	
Hispanic	27%		67%		53%	
Asian or Pacific Islander	21%		77%		55%	
American Indian or Alaska Native	20%		84%		30%	
Age of Mother (years)						
19 or less	30%		77%		49%	
20-24	28%		69%		46%	
25-34	19%		58%		34%	
35+	19%		57%		30%	

SOURCE: Pregnancy Risk Assessment Monitoring System (PRAMS), 2015.

### Keep Soft Objects and Loose Bedding Out

- Risk of SIDS, suffocation, entrapment, strangulation
- Pillows, pillow-like toys, quilts, comforters, sheepskins, bumpers
- Loose bedding (blankets, sheets)
- Infant sleep clothing can be used instead

Goodstein, M.

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIIN Coaching Call. May 2019. Intended audience: community-based organizations.

### Unsafe Bedding: NISP Trends 1993-2102

- Decrease from 86% to 55%
- Rate of decline decreases 2001-10
- 83.5% for teen mothers
- Predictors of adjusted OR > 1.5
  - Young mothers
  - Non-white race, ethnicity
  - Less than college education

Trends in Infant Bedding Use: National Infant Sleep Position Study, 1993-2010. Shapiro-Mendoza, Peds, 2015

### Soft Bedding for Older Infants

- Many parents recognize soft bedding is risk
- Increased complacency as baby gets older
- **Soft bedding is THE most important risk factor for infants 4-12 months old** (Colvin 2015)
- Infants roll into bedding and cannot extract themselves

### Why Use Soft Bedding?

- Comfort/Warmth
  - Extrapolation of own feelings
  - Misinterpret firm with taut
    - Soft + taut ≠ firm
- Safety
  - Blankets, pillows, rolls to prevent falls

### Addressing Racial Inequities in Breastfeeding in the Southern US

- Intensive QI intervention to improve compliance with the Ten Steps
- CHAMPS: MS, TN, TX, LA
- BF initiation increased:
  - All: 66% to 75%
  - AA: 46% to 63%
- Exclusive BF increased:
  - All: 34% to 39%
  - AA: 19% to 31%

Merewood A, Bugg K, Burnham L, et al. Addressing Racial Inequities in Breastfeeding in the Southern United States. Pediatrics. 2019; 143(2):e20181897

### Merewood, et al.

#### C Skin-to-Skin after Vaginal Birth

#### F Rooming-in

### Reducing Racial Disparities

**Disparity fell by 9.6% (95% CI, 1.6–19.5)!**

**Goodstein, M.**

*Infant Sleep Safety: Beyond the Low-Hanging Fruit.* NYS Safe Sleep IM CoIIN Coaching Call. May 2019. Intended audience: community-based organizations.

**Decreasing Racial Disparities:  
Stacy Scott**

- helping families understand the existing recommendations and why they matter.
- ...means having conversation built on mutual trust
- ...isn't something that just exists naturally
- "There is underlying tension, which stems from historic trauma and implicit bias."

**Shifting the Power**

- Advice of family and fellow community members
  - those that share and understand their lived experience.
  - Familiar voices with shared experience = TRUST
    - Community health workers
    - Home visitors
    - doulas

**Sensitivity to Existing Barriers**

- Unique experiences
  - Gun violence
  - Animal and bug bites
  - Can't afford a crib or PNP
  - Non-traditional relationships

**Communication**

- "Health care providers are encouraged to have open and non-judgmental conversations with families"
- Motivational Interviewing
- Listen. Observe. Validate. Educate

**Counseling Strategies**

- |  |   |
|--|---|
| <p><b>Follow the Recommendations</b></p> <ul style="list-style-type: none"> <li>• "Red Rules"</li> <li>• Car seats: sometimes?</li> <li>• Accepting deviations undermines the rules</li> <li>• Better for establishing policies</li> </ul> | <p><b>Risk Reduction</b></p> <ul style="list-style-type: none"> <li>• Some is better than none</li> <li>• Decreasing barriers</li> <li>• More reality based: parent-focused</li> <li>• Partnership</li> <li>• Better at individual level</li> </ul> |
|--|---|

**Thank You!**

"Red Rules" - rules that should always be followed.

## From the Hospitals and CBOs

### From the Hospitals

#### NEWARK WAYNE COMMUNITY HOSPITAL

##### The Road to Becoming a Gold Safe Sleep Champion

Before Newark Wayne Community Hospital became a Gold Champion, we first had to prove the use of an up-to-date policy, complete staff education on safe sleep and ensure our hospital website had safe sleep information on it. We then attended two community outreach programs to educate the public on safe sleep. This included attendance at the Wayne County Fair and teaching safe sleep practices at a babysitting class. Both activities were well received by the public.

*Question: What were lessons learned from community-based organization partners?*

#### STONY BROOK MEDICINE

- Commercialized baby products continue to be a challenge.
- Social media can influence parents' infant safe sleep practices positively or negatively. We worked with our hospital-based social media team to promote evidence-based safe sleep practices during Baby Safety Month in September. We created an "Ask the Experts" webpage that highlights the key steps to keep infants safe while they sleep:  
<https://www.stonybrookchildrens.org/babysafety>.

## From the Hospitals and CBOs

### From the CBOs

CBOs share lessons learned, successes, and tips for sustaining improvement.

#### REACH CNY, INC., ONONDAGA COUNTY HEALTH DEPT.

We learned from our partners that parents may initially place their babies down to sleep in a safe place at night, but the baby may not remain there for the duration of the night.

- Nightly feedings (breastfeeding and/or formula feeding)
- Difficulty soothing the baby back to sleep in the crib
- Cultural reasons
- Personal reasons, including fatigue

#### MOTHERS & BABIES PERINATAL NETWORK

##### Tips for Sustaining Improvements:

- Collaboration with hospitals & local CBOs to provide awareness & education on safe sleep practices
- Media campaigns to provide education and information to the public
- Fundraising efforts to obtain cribs & safe sleep kits for families in need

For more successes and lessons learned, as well as team storyboards from the NYS Safe Sleep IM CoIN, [see Section 10 - Success Stories & Lessons Learned.](#)

# First Candle – Child Caregiver Breastfeeding Checklist

## Child Caregiver Breastfeeding Checklist

As you explore child care outside your home, bring this checklist with you. This guide will help you assess a caregiver's support regarding breastfeeding as you decide who will care for your baby. Your child's "caregiver" is anyone who will be caring for your baby: child care centers, home child care, faith-based providers, friends, neighbors and family members.

### QUESTIONS TO ASK BEFORE DECIDING WHO WILL CARE FOR YOUR BABY:

These questions are designed to help you identify a caregiver's support regarding breastfeeding. It is important to discuss mutual expectations with potential caregivers, who should respect and follow your baby's feeding practices.

- Do you have a breastfeeding policy in place?
- Do you welcome and encourage mothers and staff to breastfeed their own infants onsite at any time?
- Will you feed my baby when he/she is hungry by recognizing hunger and fullness (feeding cues), rather than on a strict schedule?
- Will my baby be held while being fed?
- Are you willing to hold off feeding right before I pick up my baby so I may breastfeed at home?
- Do you create/make a feeding plan for each infant with information from parents and are these plans adjusted to accommodate baby's needs?
- Will you keep a feeding log with times and amount of feedings and share it with me each day?
- Have all child care staff, volunteers, floaters and substitutes received training and follow proper handling and storing to meet breast milk requirements?

### LOOK FOR THESE SIGNS OF AN ENVIRONMENT THAT SUPPORTS BREASTFEEDING:

- Breast milk handling and storing instructions are posted in the kitchen area.
- Breastfeeding space is comfortable, quiet and clean with a nearby outlet for pumping if needed.
- Ample refrigerator space is provided for your milk.
- Caregivers wash their hands before preparing and feeding infants and children.
- Posters & signs create a welcoming place for breastfeeding.

# First Candle – Child Caregiver Safe Sleep Checklist

## Child Caregiver Safe Sleep Checklist

As you explore child care outside your home, bring this checklist with you. This guide will help you assess infant safe sleep as you decide who will care for your baby. Your child's "caregiver" is anyone who will be caring for your baby: child care centers, home child care, faith-based providers, friends, neighbors and family members.

### QUESTIONS TO ASK BEFORE DECIDING WHO WILL CARE FOR YOUR BABY:

These questions are designed to identify safe sleep "best practices." All potential caregivers should be willing and able to respect and follow your parenting practices and routines you follow at home.

- Will the sleep space be an approved crib, play yard or other approved sleep surface?
- Will my child have his/her own sleep space that is the same each day?
- If my baby falls asleep in a swing, car seat or bouncy seat, since it is NOT a recommended sleep space, will he/she be moved to an approved sleep surface?
- Is the caregiver within sight and sound of my baby during sleep?
- Is the sleep area inspected before each sleep session and clear of toys and unnecessary blankets?
- Does the child caregiver have safe infant sleep policy/practices in place?
- Are all caregivers, including regular staff, volunteers, floaters and substitutes trained in and following safe infant sleep guidelines?

### ALWAYS ASK TO SEE THE SLEEP AREA

Confirm that every sleep area follows these American Academy of Pediatrics (AAP) recommendations:

- Babies are always placed on their backs to sleep.
- Firm sleep surface, such as a mattress in a safety approved crib, play yard other sleep surface is covered by a fitted sheet with no other bedding.
- EMPTY CRIB - No soft objects, pillows, blankets, toys, bumper pads, bottles or any other items are in baby's sleep area.
- Babies are dressed appropriately for the room temperature, and not in clothes that could cause overheating.
- Nothing with ties such as bibs, pacifiers, cords or other attachments is on infants while sleeping.
- No products claiming to reduce the risk or prevent SIDS (such as wedges, positioners, or other products that claim to keep infants in a specific position) are in the sleep space.
- Posted safe sleep guidelines to remind all staff, volunteers, floaters and substitutes of these important practices.
- No electrical cords or window blind cords are near the crib where they can create a safety hazard.

- Are you willing to hold off feeding right before I pick up my baby so I may breastfeed at home?
- Do you create/make a feeding plan for each infant with information from parents and are these plans adjusted to accommodate baby's needs?
- Will you keep a feeding log with times and amount of feedings and share it with me each day?
- Have all child care staff, volunteers, floaters and substitutes received training and follow proper handling and storing to meet breast milk requirements?

### LOOK FOR THESE SIGNS OF AN ENVIRONMENT THAT SUPPORTS BREASTFEEDING:

- Breast milk handling and storing instructions are posted in the kitchen area.
- Breastfeeding space is comfortable, quiet and clean with a nearby outlet for pumping if needed.
- Ample refrigerator space is provided for your milk.
- Caregivers wash their hands before preparing and feeding infants and children.
- Posters & signs create a welcoming place for breastfeeding.

# First Candle – Child Caregiver Safe Sleep Checklist

## Child Caregiver Safe Sleep Checklist

As you explore child care outside your home, bring this checklist with you. This guide will help you assess infant safe sleep as you decide who will care for your baby. Your child's "caregiver" is anyone who will be caring for your baby: child care centers, home child care, faith-based providers, friends, neighbors and family members.

### QUESTIONS TO ASK BEFORE DECIDING WHO WILL CARE FOR YOUR BABY:

These questions are designed to identify safe sleep "best practices." All potential caregivers should be willing and able to respect and follow your parenting practices and routines you follow at home.

- Will the sleep space be an approved crib, play yard or other approved sleep surface?
- Will my child have his/her own sleep space that is the same each day?
- If my baby falls asleep in a swing, car seat or bouncy seat, since it is NOT a recommended sleep space, will he/she be moved to an approved sleep surface?
- Is the caregiver within sight and sound of my baby during sleep?
- Is the sleep area inspected before each sleep session and clear of toys and unnecessary blankets?
- Does the child caregiver have safe infant sleep policy/practices in place?
- Are all caregivers, including regular staff, volunteers, floaters and substitutes trained in and following safe infant sleep guidelines?

### ALWAYS ASK TO SEE THE SLEEP AREA

Confirm that every sleep area follows these American Academy of Pediatrics (AAP) recommendations:

- Babies are always placed on their backs to sleep.
- Firm sleep surface, such as a mattress in a safety approved crib, play yard other sleep surface is covered by a fitted sheet with no other bedding.
- EMPTY CRIB - No soft objects, pillows, blankets, toys, bumper pads, bottles or any other items are in baby's sleep area.
- Babies are dressed appropriately for the room temperature, and not in clothes that could cause overheating.
- Nothing with ties such as bibs, pacifiers, cords or other attachments is on infants while sleeping.
- No products claiming to reduce the risk or prevent SIDS (such as wedges, positioners, or other products that claim to keep infants in a specific position) are in the sleep space.
- Posted safe sleep guidelines to remind all staff, volunteers, floaters and substitutes of these important practices.
- No electrical cords or window blind cords are near the crib where they can create a safety hazard.

## First Candle – Safe Sleep Guidelines Infographic

# Safe Sleep Guidelines

- 

### 1. Back To Sleep

Babies should always sleep on their back.
- 

### 2. Share A Room

Infants should share a bedroom with parents, but not the same sleeping surface, preferably until the baby turns 1 but at least for the first six months.
- 

### 3. Decrease Risk

Room-sharing decreases the risk of SIDS as much as 50 percent.
- 

### 4. Firm Sleep Surface

An infant should be placed on his or her back on a firm sleep surface such as a crib or bassinet with a tight-fitting sheet. The crib should be otherwise bare – no blankets, pillows, stuffed animals or bumpers.
- 

### 5. Breastfeed

If possible, mothers should breastfeed exclusively or feed with expressed milk for at least 6 months. Breastfeeding reduces the risk of SIDS.
- 

### 6. No Sofa Sleeping

Infants should never be left to sleep on sofas, armchairs or in sitting devices.

Every year 3,500 babies die from Sudden Infant Death Syndrome and other sleep-related infant deaths, such as accidental suffocation. By following the Safe Sleep Guidelines from the American Academy of Pediatrics, the risk of SIDS can be dramatically reduced and other sleep-related deaths can be eliminated. First Candle is committed to the elimination of SIDS and other sleep-related infant deaths through education and research, while providing support for grieving families who have suffered a loss. **For more information visit [www.firstcandle.org](http://www.firstcandle.org).**

## First Candle – Sample Child Care Facility Policy

### **Our Safe Sleep Policy**

*Our policy follows the American Academy of Pediatrics (AAP) recommendations.*

Our babies are placed on their backs to sleep for all sleep times in a safety approved crib, play yard or other approved sleep surface with a firm mattress covered by a tight-fitted sheet with no other bedding.

NOTHING BUT BABY will be in the crib, no soft objects, toys, pillows, blankets, bumper pads, or bottles.

Separate sleep surfaces will be provided and no co-bedding for twins and higher-order multiples.

To avoid overheating, babies are dressed appropriately for the sleep area temperature.

Nothing with ties such as bibs, pacifiers, cords or other attachments on infants while sleeping.

We do NOT allow babies to sleep in swings, bouncy seats or car seats, and they will be moved to approved sleep surface when they arrive.

Cribs will be placed away from window blind cords and electrical cords to avoid safety hazard.

We are a smoke free facility.

# Missouri – Sample Infant Safe Sleep Policy for Child Care Facilities

## SAMPLE INFANT SAFE SLEEP POLICY

Facility Name:

Facility DVN:

Date Adopted:

**Purpose:** The purpose of the Safe Sleep Policy is to maintain a safe sleep environment that reduces the risk of sudden infant death syndrome (SIDS) and sudden unexpected infant deaths (SUIDS) in children less than one year of age. Missouri law (§ 210.223.1, RSMo.) requires all licensed child care facilities that provide care for children less than one year of age to implement and maintain a written safe sleep policy in accordance with the most recent safe sleep recommendations of the American Academy of Pediatrics (AAP). Missouri child care licensing rules require licensed child care facilities to provide parent(s) and/or guardians(s) who have infants in care be provided a copy of the facility's safe sleep policy.

Sudden infant death syndrome is the sudden death of an infant less than one year of age that cannot be explained after a thorough investigation has been conducted, including a complete autopsy, an examination of the death scene, and a review of the clinical history.

Sudden unexpected infant death is the sudden and unexpected death of an infant less than one year of age in which the manner and cause of death are not immediately obvious prior to investigation. Causes of sudden unexpected infant death include, but are not limited to, metabolic disorders, hypothermia or hyperthermia, neglect or homicide, poisoning, and accidental suffocation.

Child care providers can maintain safer sleep environments for infants that help lower the chances of SIDS. Our goal is to take proactive steps to reduce the risk of SIDS in child care and to work with parents to keep infants safer while they sleep. To do so, this facility will practice the following safe sleep policy:

### Safe Sleep Practices

1. Infants, less than one (1) year age, will always be placed on their backs to sleep. When, in the opinion of the infant's licensed health care provider, an infant requires alternative sleep positions or special sleeping arrangements, the provider must have on file at the facility written instructions, signed by the infant's licensed health care provider, detailing the alternative sleep positions or special sleeping arrangements. Caregivers will put the infant to sleep as specified in the written instructions.
2. When infants can easily turn from their stomachs to their backs and from their backs to their stomachs, they shall be initially placed on their backs, but shall be allowed to adopt whatever positions they prefer for sleep. The American Academy of Pediatrics recommends that infants are placed on their back to sleep, but when infants can easily turn over from their back to their stomach, they may adopt whatever position they prefer for sleep. We will follow this recommendation by the American Academy of Pediatrics.
3. Sleeping infants shall have a supervised nap/sleep period. The caregiver shall be positioned where he or she can hear and see the infant. The caregiver shall physically check on the infant frequently during napping or sleeping and shall remain in close proximity to the infant in order to hear and see them if they have difficulty during napping/sleeping or when they awaken.
4. Equipment such as a sound machine, that may interfere with the caregiver's ability to see or hear a child who may be distressed, is prohibited.

Rev (4/16)

1

# Missouri – Sample Infant Safe Sleep Policy for Child Care Facilities

5. Steps will be taken to keep infants from overheating by regulating the room temperature, avoiding excess bedding, and not over-dressing or over-wrapping the infant. Infants should be dressed appropriately for the environment, with no more than one (1) layer more than an adult would wear to be comfortable in that environment. Caregivers will conduct physical checks of the infant to ensure the infant is not overheated or distressed.
6. The lighting in the room must allow the caregiver/teacher to see each infant's face, to view the color of the infant's skin, and to check on the infant's breathing and placement of the pacifier (if used).
7. All caregivers will receive in-person or online training on infant safe sleep based on AAP safe sleep recommendations. This training must be completed within 30 days of employment or volunteering and will be completed every three years.

## Safe Sleep Environment

1. Room temperature will be kept at no less than 68°F and no more than 85°F when measured two feet from the floor. Infants are supervised to ensure they are not overheated or chilled.
2. Infants' heads and face will not be covered during sleep. Infants' cribs will not have blankets or bedding hanging on the sides of the crib. We may use sleep clothing (i.e. sleep sack, sleepers) that is designed to keep an infant warm without the possible hazard of covering the head or face during sleep/nap time.
3. No blankets, loose bedding, comforters, pillows, bumper pads, or any object that can increase the risk of entrapment, suffocation or strangulation will be used in cribs, playpens or other sleeping equipment.
4. Toys and stuffed animals will be removed from the crib when the infant is sleeping. When indicated on the *Infant and Toddler Feeding and Care Plan* or with written parent consent, pacifiers will be allowed in infants' cribs while they sleep. The pacifier cannot have cords or attaching mechanisms.
5. Only an individually-assigned safety-approved crib, portable crib, or playpen with a firm mattress and tight-fitting sheet will be used for infant napping or sleeping.
6. Only one infant may occupy a crib or playpen at one time.
7. Sitting devices such as car safety seats, strollers, swings, infant carriers, infant slings, and other sitting devices will not be used for sleep/nap time. Infants who fall asleep anywhere other than a crib, portable crib, or playpen must be placed in the crib or playpen for the remainder of their sleep or nap time.
8. No person shall smoke or otherwise use tobacco products in any area of the child care facility during the period of time when children cared for under the license are present.
9. Home monitors or commercial devices marketed to reduce the risk of Sudden Infant Death Syndrome (SIDS) shall not be used in place of supervision while children are napping and sleeping.
10. All parents/guardians of infants shall be informed of and given the facility's written Safe Sleep Policy at enrollment.
11. To promote healthy development, infants who are awake will be given supervised "tummy time" for exercise and for play.

Outline of safe sleep education: please check as you discuss each topic.	√
Explanation of SUDI/SIDs – leading cause of death among infants 2-4 months of age. Risks we cannot change. Risk we can change. Responsibility of parents in reducing risks. Safe Sleep makes a difference!	
Place baby on the back for sleep, face up, nothing covering the face. Explain why SIDS risk is higher when infant placed on stomach	
Room Share – Don't Bed Share	
Don't Sleep with baby on sofa, recliner, waterbed, bean bag, air mattress or soft mattress. Beware of accidentally falling asleep while holding the baby. (risks of wedging, rolling off, becoming trapped, blankets, adult/child roll over infant)	
No pillows, soft toys, stuffed animals, bumpers in crib – use only firm mattress w/ tightly fitted crib sheet. Decorate the room, not the crib!	
Use of sleep sack or layer clothing. Do not overheat baby: best if room temperature is less than 70 degrees	
Explain the importance of discontinued use once the child reaches <b>30lbs., 35 inches or can climb out of the unit.</b>	
Emphasize the importance of supervised tummy time	
No smoking around infant or in infant's environment during pregnancy and after.	
Educate how to set up and use portable crib – emphasize locking crib.	
Breastfeeding education and support – good for mom and baby.	
Childcare away from home requires same safety as at home.	
Completion of Warranty Card

# Mothers & Babies Perinatal Network Cribs for Kids® Program – Registration Form

## Safe Sleep Pledge

My baby is precious and depends on me for safe care day & night.

These are the things I will do to take special care of my baby:

I will always put my baby down to sleep or for a nap on her back, with his/ her face up.

I will keep soft things out of and away from her sleeping place...this means no blankets, quilts, pillows, soft toys, or bumper pads in the place where she sleeps.

I will never lay my baby down or sleep with my baby on a couch, soft mattress, waterbed, bean bag chair, or recliner.

I will be sure that my baby is safe from cigarette smoke in the house and the car.

I will tell others who take care of my baby about these safe ways to take care of my baby.

I so pledge \_\_\_\_\_  
(parent/guardian signature)

# Southern Tier Health Care System, Inc. – Promoting Safe Sleep: Roles for Community-based Organizations

## SOUTHERN TIER HEALTH CARE SYSTEM

Our agency has done a lot of work to promote safe sleep in our region. The first document included here is an overview of the steps that our organization has taken as a community-based organization to lead safe sleep efforts in the region. The second is a copy of the safe sleep policy that was adopted by Olean General Hospital following their participation in the OCFS Hospital Safe Sleep Project as they worked to achieve Cribs for Kids Safe Sleep Hospital Certification at the gold level. The last document is a set of visuals that our agency uses when educating parents about the ABCs of safe sleep. Especially when we are having conversations about recommendations such as room sharing or use of sleep sacks to reduce the risk of loose blankets, we find it helpful to have clear visuals to refer to.

## Promoting Safe Sleep: Roles for Community-Based Organizations

### Background

As a nonprofit rural health care network with a mission to improve the health and wellness of the residents of southwestern New York, Southern Tier Health Care System (STHCS) has actively worked to promote infant safe sleep. The organization became aware of the critical importance of using a multi-faceted approach to address unsafe sleep fatalities in the Western New York region through the CEO's involvement in the Health Foundation for Western and Central New York's Health Leadership Fellows Program.

In its unique role as a community-based organization, STHCS has led regional safe sleep efforts and formed effective partnerships with health care providers to implement safe sleep initiatives. The ultimate goal of STHCS' safe sleep initiatives is to increase the proportion of the population adhering to the American Academy of Pediatrics' safe sleep recommendations and to decrease SIDS/SUID deaths. STHCS has used a multi-faceted approach to impact the infant sleep practices of parents and caregivers. The approach emphasizes collaborative partnerships between STHCS and agencies who provide direct services for infants and their parents and caregivers.

We have found the following actions have allowed us to maximize our impact.

## Southern Tier Health Care System, Inc. – Promoting Safe Sleep: Roles for Community-based Organizations

### Become a Cribs for Kids Partner

- To help low-income parents without the means to create a safe sleep environment for their newborns, Southern Tier Health Care System became a Cribs for Kids Partner in February of 2016. [Cribs for Kids](#), a national organization dedicated to safe sleep, works to prevent infant deaths by educating parents and caregivers on the importance of practicing safe sleep and by providing portable cribs to families who cannot afford to create a safe place for their babies to sleep. Since the Cribs for Kids program at STHCS began, the program has trained over 400 parents and caregivers in the ABCs of safe sleep and provided over 300 portable cribs to low income families. This is a keystone of STHCS' safe sleep initiatives. It allows STHCS as a community-based organization to stay actively involved in providing solutions and engaging in concrete action to support its partners.
- Provide robust, individualized training to families that receive a free portable crib through the Cribs for Kids program. Staff who provide cribs to parents and caregivers must engage the recipients in conversation-based education in a non-judgmental manner. Parents should have ample time and opportunity to ask questions, express concerns and learn how they can control the risk factors for SIDS and SUID.

### Involve providers of prenatal and postnatal care and other organizations

- Train professionals such as pediatricians, OB/GYNs, nurses, community health workers to provide both a consistent safe sleep message and appropriate role modeling for parents and caregivers.
- Build a team of safe sleep ambassadors including agencies such as the county Departments of Social Services, WIC programs, crisis pregnancy centers, pediatricians, maternal infant health programs and others to ensure consistent multi-level messaging. Safe sleep ambassadors commit to providing safe sleep education, asking parents and caregivers about infant sleep practices and ensuring that parents and caregivers have a plan to keep their babies safe during sleep. This is an essential piece of the program. Having a broad base of safe sleep ambassadors who serve as champions ensures that safe sleep messaging has a broad reach. The use of ambassadors also acknowledges that parents and caregivers are more receptive to recommendations and guidance in the context of a trusting relationship. Individual conversations with safe sleep ambassadors are often much more effective than broad advertising or marketing campaigns.
- Connect agencies with a Cribs for Kids program to empower workers who are interfacing with parents and caregivers to ask about safe sleep. Sometimes a worker may be hesitant to ask about safe sleep if they will be unable to assist the parent or caregiver if they disclose unsafe sleep plans. When the worker is confident that a local Cribs for Kids partner will be able to assist by providing a free portable crib, the worker can ask about safe sleep, knowing they can help solve the problem if the parents do not have an established plan or place for infant sleep.
- Recruit agencies who provide care at different times during the prenatal and postnatal period to be safe sleep ambassadors. This ensures that parents have multiple opportunities to hear a consistent safe sleep message. It also recognizes the fact that parents may not have specific safe sleep questions until after the baby is born and they are faced with a particular challenge or situation.

# Southern Tier Health Care System, Inc. – Promoting Safe Sleep: Roles for Community-based Organizations

## Involve hospitals in a leadership role

- Provide technical assistance to help hospitals achieve [Cribs for Kids Safe Sleep Hospital Certification](#), which requires the hospitals to implement a safe sleep policy, provide education for staff and new parents, model no loose blankets in the crib, conduct safe sleep audits in the nursery and provide community outreach. This voluntary certification establishes a strong commitment on the part of the hospital to actively promote safe sleep. Additional information about Cribs for Kids Hospital Certification is available from [Cribs for Kids](#).
- Assist hospitals to utilize the [Halo® In-Hospital SleepSack Program](#), which provides free SleepSack wearable blankets so hospitals can replace traditional blankets and model no loose blankets in the crib. A community-based organization can also assist by covering nominal shipping costs to ensure that the program is truly at no cost to the hospital.
- Partner with nurses in maternity and pediatric units in hospitals, who are already providing education about abusive head trauma, to provide safe sleep education. Work with nurses to make sure the information is comprehensive, but also easily communicated given the limited time and complex demands placed on nurses providing care.

## Evaluate the results of the safe sleep initiatives

- STHCS conducts follow-up surveys with participants of the Cribs for Kids program in which respondents report their knowledge, attitudes, intentions, and behaviors regarding infant safe sleep. The follow-up surveys also allow an opportunity for reeducation, if needed.
- Monitor and evaluate local SUID/SIDS death data to determine which aspects of the intervention are helpful and what risk factors need increased emphasis in subsequent education efforts with parents.
- Despite the challenges and limitations of evaluating prevention efforts, if an intervention is effective at increasing the proportion of the population adhering to safe sleep recommendations and decreasing in SIDS/SUID deaths, there is a greater likelihood of sustainability.

## Maintain ongoing safe sleep messaging

- Social media and marketing campaigns help keep images of safe sleep environments fresh in the minds of parents and caregivers. By placing safe sleep messaging in strategic places, marketing can combat some of the misconceptions held by the public about infant sleep. Safe sleep ambassadors should be included as partners in messaging campaigns.

## Conclusion

None of STHCS' safe sleep initiatives stand alone and the success of the initiatives are wholly dependent on partnerships between agencies who all share the goal of preventing infant fatalities due to unsafe sleep. These partnerships create layers of intervention and help ensure that few, if any, parents are unaware of the ABCs of safe sleep and the risks of surface sharing. As a community-based organization, we have been able to lead and coordinate safe sleep efforts in the region and create a consistent message for our partners to effectively promote safe sleep.

### Smoking Cessation and Pregnancy Campaign

Quit4Baby!

Get Help Quitting

Helpful Resources In Pregnancy

Home

If you're pregnant and you smoke, your baby shares every cigarette you smoke. Smoking during pregnancy causes many health problems for both you, and your unborn baby, including higher risk of birth defects and even death.

Quitting smoking will help you and your baby be healthy. Quit today and your baby will get more oxygen, even after just one day. Your baby will grow better and be less likely to be born too early.

Because smoking is an addiction, quitting can be hard. If you're a Medicaid member, Medicaid and your health care provider can help you get the best treatment for your addiction. Medicaid covers appointments with your health care provider to help you stop smoking – so there is no cost to you.

Once you talk with your health care provider to develop your quit smoking plan, you can also get more help with your smoking addiction by calling the New York State Smokers' Quitline at

1-866-NY-QUITS (1-866-697-8487) or visiting [www.nysmokefree.com](http://www.nysmokefree.com). It's a free and confidential service to help you become smoke-free.

# Introduction from the NYSPQC Data Team

Data and quality improvement tools are important components of the NYSPQC model. The tools provided in this section and [Section 3: Quality Improvement Tools](#) allow data to be consistently collected and analyzed across hospitals and organizations to facilitate your team's learning. Using monthly data to evaluate the improvements your team makes on processes and outcomes is important to know if the changes your team tests and implements result in progress towards your aim.

The data collection tools for the NYSPQC Safe Sleep Project were developed with the help of the NYSPQC Neonatal Clinical Expert Workgroup. The measures and caregiver survey for the community-based NYS Safe Sleep IM ColIN were developed in collaboration with the national Safe Sleep IM ColIN led by NICHQ. These tools have been vetted and updated throughout the project and modified as facilities expressed the need for changes. The data tools in this section were used by participating hospitals and organizations to achieve desired goals. Additional data collection and quality improvement tools can be found on the NYSPQC website: [www.nyspqc.org](http://www.nyspqc.org).

## Project Measures

### NYSPQC Safe Sleep Project Measures

Sampling is allowed for all measures, with a required minimum sample size of at least 20. Hospitals with fewer than 20 births per month are required to submit data on 100% of their population.

#### 1. Percent of medical records with documentation of safe sleep education (from data collected on Form 1. Documentation of Safe Sleep Education)

**Measure 1 =** 
$$\frac{\text{Number of medical records with documentation of safe sleep education}}{\text{Number of medical records reviewed}}$$

#### 2. Percent of infants, sleeping or awake and unattended in crib, in a safe sleep environment (from data collected on Form 2. Crib Check Tool)

**Measure 2 =** 
$$\frac{\text{Number of infants, sleeping or awake and unattended in crib, positioned supine, in safe clothing, with head of crib flat and crib free of objects}}{\text{Number of cribs audited}}$$

**Measure 2a =** 
$$\frac{\text{Number of infants, sleeping or awake and unattended in crib, positioned supine}}{\text{Number of cribs audited}}$$

**Measure 2b =** 
$$\frac{\text{Number of infants, sleeping or awake and unattended in crib, in a sleep sack, swaddled, or in safe clothing}}{\text{Number of cribs audited}}$$

**Measure 2c =** 
$$\frac{\text{Number of infants, sleeping or awake and unattended in crib, with the head of crib flat}}{\text{Number of cribs audited}}$$

**Measure 2d =** 
$$\frac{\text{Number of infants, sleeping or awake and unattended in crib, with the crib free of objects}}{\text{Number of cribs audited}}$$

#### 3. Percent of caregivers who reported they received information on how to put their baby to sleep safely (from data collected on Form 3. Caregiver Survey)

**Measure 3 =** 
$$\frac{\text{Number of caregivers who responded "Yes" when asked if they received information on how to put their baby to sleep safely}}{\text{Number of completed surveys}}$$

Revised: December 9, 2015

# NYSPQC Safe Sleep Project Data Tools

## Project Measures

#### 4. Percent of primary caregivers indicating they understand safe sleep practices (from data collected on Form 3. Caregiver Survey)

**Measure 4 =** 
$$\frac{\text{Number of primary caregivers indicating they understand safe sleep practices (indicating infant should be alone, on back, in crib, without items in the crib)}}{\text{Number of caregivers who reported they received information on how to put their baby to sleep safely}}$$

**Measure 4a =** 
$$\frac{\text{Number of primary caregivers indicating baby should be put to sleep alone (not in bed with adults or other children)}}{\text{Number of caregivers who reported they received information on how to put their baby to sleep safely}}$$

**Measure 4b =** 
$$\frac{\text{Number of primary caregivers indicating baby should be put to sleep on his/her back}}{\text{Number of caregivers who reported they received information on how to put their baby to sleep safely}}$$

**Measure 4c =** 
$$\frac{\text{Number of primary caregivers indicating baby should be put to sleep in a crib, bassinet or portable crib}}{\text{Number of caregivers who reported they received information on how to put their baby to sleep safely}}$$

**Measure 4d =** 
$$\frac{\text{Number of primary caregivers indicating baby should be put to sleep without items in the crib (i.e., blankets, toys, bumpers, pillows, sleep positioners, etc.)}}{\text{Number of caregivers who reported they received information on how to put their baby to sleep safely}}$$

**Measure 4e =** 
$$\frac{\text{Number of primary caregivers indicating they do not understand safe sleep practices}}{\text{Number of caregivers who reported they received information on how to put their baby to sleep safely}}$$

#### 5. Percent of caregivers indicating they plan to practice safe sleep (from data collected on Form 3. Caregiver Survey)

**Measure 5 =** 
$$\frac{\text{Number of primary caregivers indicating they are "very likely" or "somewhat likely" to practice safe sleep with their infant}}{\text{Number of completed surveys}}$$

## Documentation of Safe Sleep Education - Form

### NYSPQC Safe Sleep Project Form 1. Documentation of Safe Sleep Education Form

**Instructions:** Each month, review medical records of mothers or infants for documentation of safe sleep education for those discharged home during the month.

Month and Year of Discharge:

Numerator	Number of medical records reviewed for either mothers or infants discharged home following birth hospitalization <b>with</b> documentation of safe sleep education	
Denominator	Number of medical records reviewed for either mothers or infants discharged home following birth hospitalization	

Questions can be directed to [NYSPQC@health.ny.gov](mailto:NYSPQC@health.ny.gov).

For more information, visit [www.NYSPQC.org](http://www.NYSPQC.org).

Revised: 9/14/2015

## Documentation of Safe Sleep Education - Log

**NYSPQC Safe Sleep Project**  
**Form 1a. Documentation of Safe Sleep Education Log**

**Instructions:** Each month, review medical records of mothers or infants for documentation of safe sleep education for those discharged home during the month.

For each month of data collection, enter below the medical record number, mark if the record reviewed was from the mother or infant, and if there was documentation of safe sleep education in the medical record.

Once all data is completed, enter the aggregate total into the aggregate data collection tool and submit aggregate totals to the NYSPQC. This data collection tool is optional for internal purposes only, and will not be submitted to the NYSPQC.

Month and Year of Discharge:

Medical Record Number	Medical Record of:		Was there documentation of safe sleep education in the medical record? (Y/N)	Reviewer Initials

System ID: \_\_\_\_\_

### NYSPQC Safe Sleep Project Form 3. Caregiver Survey

**Instructions:** This is an anonymous, voluntary survey that is intended to help us improve our hospital's education for caregivers (parents, guardians, etc.). Please complete to the best of your ability.

For hospitals where the caregiver is completing the survey independently, it may be helpful for a staff member to complete questions 1 through 4.

**1. Where is the baby being discharged from (select one):**

- Rooming-in mother's room
- Well Baby Nursery
- Step Down Unit
- Neonatal Intensive Care (NICU)
- Other, please specify: \_\_\_\_\_

**2. Who is completing the survey (select one):**

- A parent/caregiver is completing this survey independently
- A staff member is administering this survey to the parent/caregiver

**3. Date of Safe Sleep Education (MM/DD/YYYY):** \_\_\_\_\_

**4. Date of Survey (MM/DD/YYYY):** \_\_\_\_\_

**5. Caregiver's Race (select all that apply):**

- White/Caucasian
- Black or African American
- American Indian or Alaska Native
- Asian or Pacific Islander
- Not reported
- Other

**6. Caregiver's Ethnicity (select one):**

- Hispanic
- Not Hispanic
- Not reported

**7. Caregiver's Insurance Status (select all that apply):**

- Private health insurance
- Medicaid or other public insurance
- TRICARE or other military health care
- No health insurance
- Not reported
- Other, please specify: \_\_\_\_\_

## Caregiver Surveys

### Caregiver Survey (English)

Medical Record Number (for facility use only): \_\_\_\_\_

Sequence Number: \_\_\_\_\_  
System ID: \_\_\_\_\_

**8. Who is the person taking the survey? (select one)**

Mother  
 Father  
 Grandparent  
 Aunt/Uncle  
 Foster Parent  
 Other, please specify: \_\_\_\_\_

**9. Caregiver's Age: \_\_\_\_\_ years**

**10. Caregiver's Highest Level of Education (select one):**

Less than high school  
 High school graduate  
 More than high school

**11. During the infant's hospital stay, did you receive information on how to put your baby to sleep safely? (select one)**

Yes  
 No  
 I don't know

**12. If you answered "Yes" to question 11, how should you put your baby to sleep safely? (select all that apply). If you did not answer "Yes" to question 11, please skip this question.**

Alone (not in bed with adults or other children)  
 On his/her back  
 In a crib, bassinet or portable crib (pack and play)  
 Without items in the crib (i.e., blanket, toys, bumpers, pillows, sleep positioners, etc.)  
 I don't know

**13. How likely are you to practice safe sleep with your infant? (select one)**

Very likely  
 Somewhat likely  
 Neutral  
 Not very likely  
 Not at all likely

**14. Are there things that would keep you from practicing safe sleep? (select all that apply)**

No  
 I don't have a crib, bassinet or portable crib (pack and play)  
 I don't have space in the home for a crib, bassinet or portable crib  
 I don't think that it is important  
 I don't believe in it  
 I believe in a family bed  
 I need more information  
 Other, please specify: \_\_\_\_\_

### ST. MARY'S HEALTHCARE AMSTERDAM

Safe sleep Caregiver Survey: The surveys help us to recognize when a parent is in need of additional education prior to discharge. We have a 95% rate of parents who understand safe sleep. 5% are parents that are unwilling to adopt the practices.

### Proyecto Sueño sin riesgos del NYSPQC Formulario 3. Encuesta a cuidadores

#### Instrucciones:

Esta es una encuesta anónima y voluntaria cuyo objetivo es ayudarnos a mejorar la educación que nuestro hospital brinda a quienes tienen a su cargo el cuidado de un bebé (padres, tutores, etc.). Complétela lo mejor que pueda.

#### 1. ¿Dónde estuvo el bebé antes de que le dieran el alta?

- La misma habitación que la madre
- Unidad de Recién Nacidos Sanos
- Unidad de Terapia Intermedia
- Unidad de Cuidados Intensivos Neonatales (Neonatal Intensive Care Unit, NICU)
- Otro lugar (especifique): \_\_\_\_\_

#### 2. ¿Quién completa la encuesta?

- Uno de los padres/un cuidador completa esta encuesta por su cuenta
- Un miembro del personal la completa por los padres/el cuidador

#### 3. Fecha de la capacitación sobre sueño sin riesgos: \_\_\_\_\_

#### 4. Fecha de la encuesta: \_\_\_\_\_

#### 5. Raza del cuidador (elijá todas las opciones que correspondan):

- Blanco/caucásico
- Negro o afroamericano
- Indígena de los EE. UU. o nativo de Alaska
- Asiático o habitante de las islas del Pacífico
- No contesta
- Otra

#### 6. Origen étnico del cuidador:

- Hispano
- No hispano
- No contesta

#### 7. Seguro del cuidador:

- Seguro médico privado
- Medicaid u otro seguro público
- TRICARE u otro programa de atención médica para militares
- No tiene seguro médico
- No contesta
- Otro (especifique): \_\_\_\_\_

Revised: 9/14/2015

# NYSPQC Safe Sleep Project Data Tools

## Caregiver Surveys

### Caregiver Survey (Spanish)

Sequence Number: \_\_\_\_\_

System ID: \_\_\_\_\_

**8. Relación del cuidador con el bebé:**

- Madre
- Padre
- Abuelo/a
- Tía/tío
- Padre/madre de acogida
- Otro (especifique): \_\_\_\_\_

**9. Edad del cuidador: \_\_\_\_\_**

**10. Máximo nivel de educación del cuidador:**

- Educación inferior a la secundaria
- Educación secundaria completa
- Educación superior a la secundaria

**11. Durante la permanencia del bebé en el hospital, ¿usted recibió información sobre cómo dormir a su bebé?**

- Sí
- No
- No sé

**12. Si respondió "Sí" a la pregunta 11, ¿cómo debe dormir a su bebé? (Marque todas las opciones que correspondan). Si no respondió "Sí" a la pregunta 11, saltee esta pregunta.**

- Solo (no en la cama con adultos ni otros niños)
- Boca arriba
- En su cuna, moisés o en una cuna portátil (practicuna)
- Sin ningún objeto en la cuna (p. ej., mantas, juguetes, protectores, almohadas, cojines posicionadores, etc.)
- No sé

**13. ¿Qué tan probable es que usted implemente las pautas de sueño sin riesgos con su bebé?**

- Muy probable
- Probable
- Ni probable ni improbable
- No muy probable
- Improbable

**14. ¿Hay algo que le impida implementar las pautas de sueño sin riesgos? (Marque todas las opciones que correspondan).**

- No
- No tengo cuna, moisés ni cuna portátil (practicuna)
- En mi casa no tengo espacio para una cuna, un moisés ni una cuna portátil
- No creo que eso sea importante
- No creo en eso
- Creo en la cama familiar
- Necesito más información
- Otro (especifique): \_\_\_\_\_

Revised: 9/14/2015

## Sustain Measure Tools

### Sustain Tool

Description: Modeling infant safe sleep during the birth hospitalization is essential to educating parents on the behaviors that should be practiced in the home environment. As a means of assessing ongoing improvement and sustainment of infant safe sleep practices, the NYSPQC continued data collection for one project measure beyond the project period, from August 2017 to October 2018. This project measure was related to the Crib Check Tool, and was the percent of infants, sleeping or awake-and-unattended in crib, in a safe sleep environment.

#### ALICE HYDE MEDICAL CENTER

Over the course of the NYSPQC Safe Sleep Project, our safe sleep data results have improved. We learned that many parents were not aware that safe sleep is more than putting the baby on their back to sleep. **The data we collected showed us where we needed to improve to ensure that safe sleep practices were a priority in parent education.** Using the NYSDOH safe sleep resources to educate parents through this project has improved understanding of safe sleep practices.

#### WHITE PLAINS HOSPITAL

Our nursing staff as well as support staff are hardwired in educating their patients about safe sleep practices. The safety handout, as well as the safety poster, are part of the admission process and used during rounds. We have added a safe sleep education check box in the teaching record to ensure consistent documentation is taking place daily as well as on discharge. **During staff meetings, staff are informed about our monthly safe sleep data results and it is posted on our unit display board.**

# NYSPQC Safe Sleep Project Data Tools

## Sustain Measure Tools

### Sustain Measure Aggregate Data Collection Tool

**New York State Perinatal Quality Collaborative Safe Sleep Project  
ATTACHMENT 1 - Safe Sleep Sustain Measure Aggregate Data Collection Tool**

**Instructions:** Each month, review the cribs of at least 20 infants without medical contraindications for safe sleep. **Only audit the sleeping environment of infants who are in their cribs, and either asleep or awake-and-unattended\***. Please provide aggregate numbers, as applicable, for each unit where an audit occurred, as shown below (well-baby, rooming-in, stepdown, NICU). The number of audits should total to at least 20 cribs audited per month. This form is used to collect aggregate data to be submitted via the NYSDOH Health Commerce System.

Year: \_\_\_\_\_ Month: \_\_\_\_\_

**Total**

Total Number of Cribs Audited in ALL UNITS	
--	--

**Well-baby Unit**

Total Number of Cribs Audited	
Total Number of Infants in a Safe Sleep Environment**	
Number of Infants Positioned Supine	
Number of Infants in Sleep Sack / Swaddled / Safe Clothing	
Number of Infants with the Head of Crib Flat	
Number of Infants with the Crib Free of Objects	

**Rooming-in**

Total Number of Cribs Audited	
Total Number of Infants in a Safe Sleep Environment**	
Number of Infants Positioned Supine	
Number of Infants in Sleep Sack / Swaddled / Safe Clothing	
Number of Infants with the Head of Crib Flat	
Number of Infants with the Crib Free of Objects	

**Stepdown Unit**

Total Number of Cribs Audited	
Total Number of Infants in a Safe Sleep Environment**	
Number of Infants Positioned Supine	
Number of Infants in Sleep Sack / Swaddled / Safe Clothing	
Number of Infants with the Head of Crib Flat	
Number of Infants with the Crib Free of Objects	

**Neonatal Intensive Care Unit (NICU)**

Total Number of Cribs Audited	
Total Number of Infants in a Safe Sleep Environment**	
Number of Infants Positioned Supine	
Number of Infants in Sleep Sack / Swaddled / Safe Clothing	
Number of Infants with the Head of Crib Flat	
Number of Infants with the Crib Free of Objects	

\*Infants should be counted as awake-and-unattended if the parent/caregiver is not actively engaged with the infant.

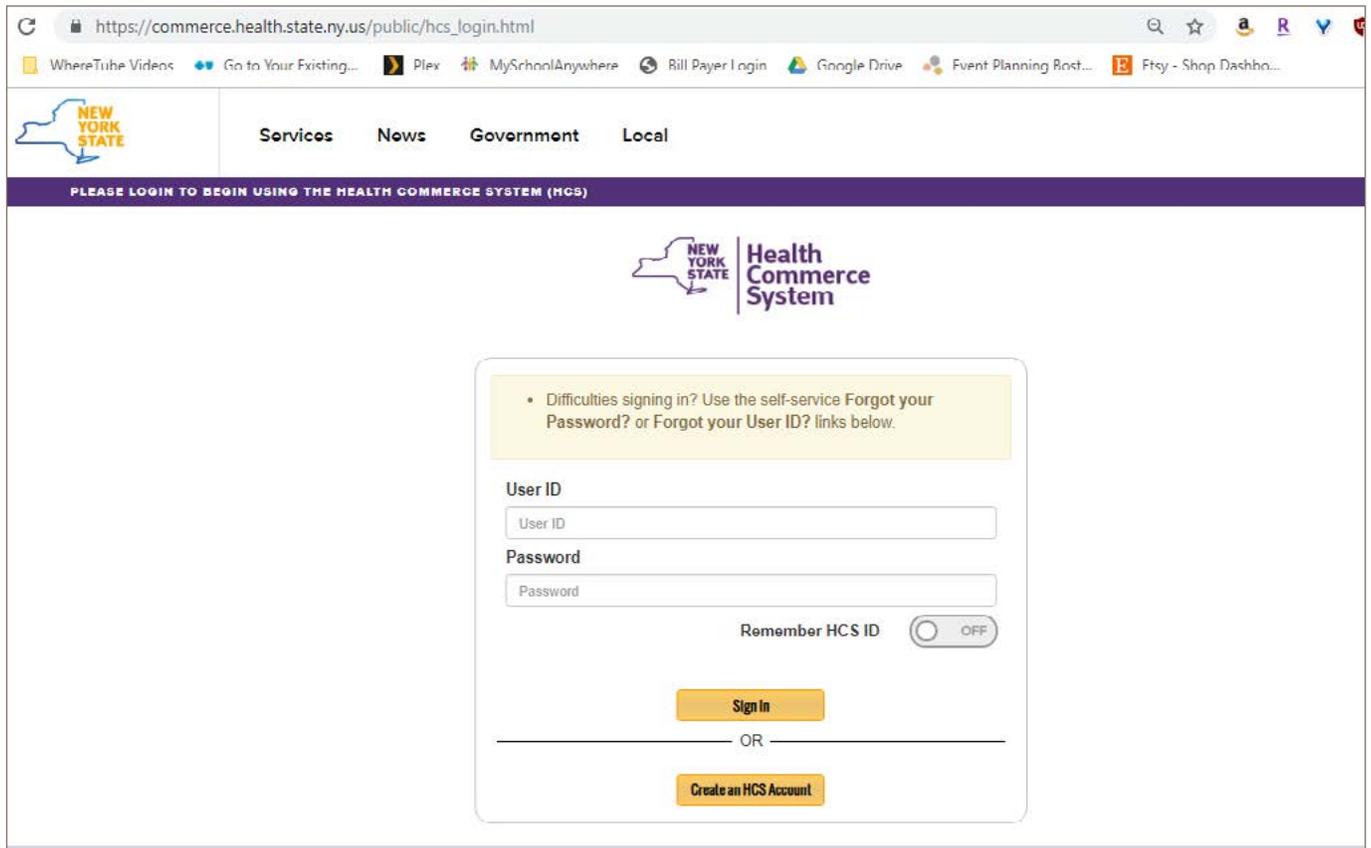

\*\*Safe sleep environment is defined as meeting all four components of safe sleep (supine, safe clothing, head of crib flat, crib free of objects).

Revised: August 31, 2017

1. Organization Name: \_\_\_\_\_
2. Name of staff conducting survey: \_\_\_\_\_
3. Date of survey: \_\_\_\_\_
4. Date of first post-partum safe sleep education: \_\_\_\_\_
5. How was first post-partum safe sleep education performed?
  - Individual session
  - Group session
6. Has the caregiver received post-partum safe sleep education in addition to the initial session dated above?
  - Yes
  - No
  - Unknown
- 6a. If Yes, how many? \_\_\_\_\_

#### Caregiver/Infant Information:

7. Infant Date of Birth (Month/Day/Year): \_\_\_\_\_
8. Caregiver Insurance Status:
  - Private health insurance
  - Medicaid or other public insurance
  - TRICARE or other military health care
  - No Health Insurance
  - Other, please specify: \_\_\_\_\_
9. Caregiver Race (Please Select All that Apply):
  - White/Caucasian
  - Black or African American
  - American Indian or Alaska Native
  - Asian or Pacific Islander
  - None identified
  - Other
10. Caregiver Ethnicity:
  - Hispanic
  - Not Hispanic
  - Not Identified

# NYS Safe Sleep IM CoIIN Data Tools

## Phase One Survey

*NYS Safe Sleep IM CoIIN Caregiver Survey (Nov. 2015)*

### NYS IM-CoIIN Safe Sleep Project Community Caregiver Survey

**11. Caregiver's Relation to Infant:**

- Mother
- Father
- Grandparent
- Aunt/Uncle
- Foster Parent
- Other, please specify: \_\_\_\_\_

**12. Age of Caregiver:** \_\_\_\_\_

**13. Education of Caregiver:**

- Less than High school
- High School Graduate
- More than High School

**Sleep Questions:**

**14. In which *one* position do you most often lay your new baby down to sleep *now*? Check ONE answer.**

- On his or her side
- On his or her back
- On his or her stomach

**15. In the past 2 weeks, how often has your new baby slept alone in his or her own crib, bassinet, or pack and play?**

- Always
- Often
- Sometimes
- Rarely
- Never

**16. When your new baby sleeps alone, is his or her crib, bassinet or pack and play in the same room where you sleep?**

- No
- Yes

# NYS Safe Sleep IM CoIIN Data Tools

## Phase One Survey

NYS Safe Sleep IM CoIIN Caregiver Survey (Nov. 2015)

### NYS IM-CoIIN Safe Sleep Project Community Caregiver Survey

17. Please tell us which things describe how your new baby usually slept during the *past 2 weeks*. For each item, check **No** if it didn't apply to your baby in the past 2 weeks or **Yes** if it did.

- |  | No                       | Yes                      |
|--|--------------------------|--------------------------|
| a) In a crib, bassinet, or pack and play   | <input type="checkbox"/> | <input type="checkbox"/> |
| b1) In a box, empty drawer or laundry basket   | <input type="checkbox"/> | <input type="checkbox"/> |
| b2) If the answer to (b1) is "Yes": Does the drawer or laundry basket have a tightly-fitting mattress? | <input type="checkbox"/> | <input type="checkbox"/> |
| c) On a twin or larger mattress or bed   | <input type="checkbox"/> | <input type="checkbox"/> |
| d) On a couch, sofa, futon, or armchair  | <input type="checkbox"/> | <input type="checkbox"/> |
| e) In an infant car seat, stroller or swing  | <input type="checkbox"/> | <input type="checkbox"/> |
| f) With a thick blanket, like a quilt or comforter   | <input type="checkbox"/> | <input type="checkbox"/> |
| g) With a thin blanket, like a receiving blanket   | <input type="checkbox"/> | <input type="checkbox"/> |
| h) In a sleeping sack, wearable blanket or one piece sleeper   | <input type="checkbox"/> | <input type="checkbox"/> |
| i) With toys, pillows or cushions, including nursing pillows   | <input type="checkbox"/> | <input type="checkbox"/> |
| j) With bumper pads (mesh or non-mesh)   | <input type="checkbox"/> | <input type="checkbox"/> |

18. Does your new baby ever share a sleep surface with a sibling, adult or pet?

- No  
 Yes

19. Does your new baby ever sleep in a bed, couch, recliner or other surface\*?

- No  
 Yes

\* other surface refers to another non-safe sleep space

20. Which of the following things did a *doctor, nurse or other health care worker* recommend about how your new baby should sleep? Check ALL that apply.

- Place your baby on his or her back to sleep  
 Place your baby to sleep in a crib, bassinet, or pack and play  
 Place your baby's crib or bed in your room  
 What things should and should not go in bed with your baby  
 A health care worker did not make any recommendations  
 Other, please specify: \_\_\_\_\_

## Phase Two

### *Safe Sleep IM CoIIN Aim and Measurement Strategy*

#### IM CoIIN Safe Sleep SMART Aim:

By 2020, the IM CoIIN Team will decrease SUID rates by  $\geq 10\%$  across four states by increasing adoption of the ABCs of safe sleep (alone, on back, in crib). States reporting racial disparities among sleep-related deaths at baseline will reduce disparities by  $\geq 5\%$ .

#### Outcome Measures:

##### A. Annual CoIIN Wide Measures by Race/Ethnicity

1. Infant Mortality Rate
2. Neonatal Mortality Rate
3. Post neonatal Mortality Rate
4. SUID Mortality Rate
5. Preterm-related Mortality rate
6. Preterm Birth Rate

##### B. Quarterly (Provisional) SUID Mortality Rate by Race/Ethnicity

#### Process Measures:

##### C. Quality Improvement Measures

1. Percentage of infants sleeping on back
2. Percentage of infants sleeping alone-always
3. Percentage of infants sleeping in crib

##### D. Optional measures

1. Percentage of infants sleeping in a safe crib/bassinet environment
2. Percentage of infants room sharing
3. Provider recommendations
4. Hospital safe sleep practices
5. Safe sleep discussions
6. Intention to practice safe sleep
7. Breastfeeding (Balancing Measure)

## Phase Two

### Safe Sleep IM CoIN Aim and Measurement Strategy

Measure Definitions, Data Collection/submission Plan:

Outcome Measures:

IM CoIN Wide Measures					
Measures	Measure Name	Numerator	Denominator	Data Source	Data Collection/ Submission
1. Infant Mortality Rate	CW1	Total number of resident infant deaths in first year of life	Total number of resident live births in same period (reported per 1,000 births)	State Vital Statistics Birth and Death Files	Annual by Race/ethnicity
2. Neonatal Mortality Rate	CW2	Total number of resident deaths among neonates between 0 and 27 days old	Total number of resident live births in same period (reported per 1,000 births)	State Vital Statistics Birth and Death Files	Annual by Race/ethnicity
3. Postneonatal Mortality Rate	CW3	Total number of resident deaths among infants between 28 days up to one year of age	Total number of resident live births in same period (reported per 1,000 births)	State Vital Statistics Birth and Death Files	Annual by Race/ethnicity
4. SUID Mortality Rate	CW4	Total number of resident infant deaths before one year of age with underlying cause of SUID (R95, R99, W75)	Total number of resident live births in same period (reported per 100,000 births)	State Vital Statistics Birth and Death Files	Annual by Race/ethnicity
5. Preterm-Related Mortality Rate	CW5	Total number of resident infant deaths before one year of age with underlying cause of a preterm-related condition	Total number of resident live births in same period (reported per 100,000 births)	State Vital Statistics Birth and Death Files	Annual by Race/ethnicity
6. Preterm Birth Rate	CW6	Number of resident infants born prior to 37 weeks gestational age	Total number of resident live births in same period	State Vital Statistics Birth Files	Annual by Race/ethnicity

				<input type="checkbox"/> In a sleeping sack or wearable blanket : No, Yes <input type="checkbox"/> With a blanket : No, Yes <input type="checkbox"/> With toys, cushions, or pillows, including nursing pillows: No, Yes <input type="checkbox"/> With crib bumper pads (mesh or non-mesh) : No, Yes  <i>This list might vary by state.</i>
--	--	--	--	--

Optional Measures:

Measures	Measure Name	Numerator	Denominator	Data Source	Data Collection/submission
1. Percentage of infants sleeping in a safe crib/bassinet environment	SS-PO1	Number of "no" responses to each of the 3 safe sleep crib/bassinet environment questions *Example numerator for sample of 20: 12 caregivers report 3 "no"=36 6 caregivers report 2 "no"= 12 2 caregivers report 0 "no"= 0 Total for numerator = 48	Total number of safe sleep crib/bassinet environment opportunities among the total sample *Example denominator for sample of 20 = 60 (3 opportunities X 20 caregivers = 60)	Each month ask the survey question below to a sample of 20 primary infant caregivers (or a 100% of primary infant caregivers if population is less than 20) with a child less than one year of age within pilot sites. OBs or pediatricians would sample from their clients with a child less than one year of age who had a visit in the previous month. Hospitals sample from mothers discharged the previous month. Conduct the survey via telephone or during a client encounter <b>Survey question: Please tell us how your new baby <i>most often</i> slept in the <i>past 2 weeks</i>.</b> For each item, check <b>No</b> if it doesn't <i>usually</i> apply to your baby or <b>Yes</b> if it does. <input type="checkbox"/> With a blanket: No, Yes <input type="checkbox"/> With toys, cushions, or pillows, including nursing pillows: No, Yes <input type="checkbox"/> With crib bumper pads (mesh or non-mesh): No, Yes	Monthly  Baseline data starting March 2018  Recommended submission date for 20th day of each month

# NYS Safe Sleep IM CoIN Data Tools

## Phase Two

### Safe Sleep IM CoIN Aim and Measurement Strategy

					
2. Percentage of infants room sharing	SS-PO2:	Number of primary infant caregivers that respond "yes" to the question: when your new baby sleeps alone, is his or her crib or bed in the same room where you sleep?	Total of primary infant caregivers answering the question	Each month ask the survey question below to a sample of 20 primary infant caregivers (or a 100% of primary infant caregivers if population is less than 20) with a child less than one year of age within pilot sites. OBs or pediatricians would sample from their clients with a child less than one year of age who had a visit in the previous month. Hospitals sample from mothers discharged the previous month. Conduct the survey via telephone or during a client encounter. <b>Survey question: When your new baby sleeps alone, is his or her crib or bed in the same room where <u>you</u> sleep?</b> <input type="checkbox"/> No <input type="checkbox"/> Yes	Monthly  Baseline data starting March 2018  Recommended submission date for 20th day of each month
3. Provider Safe Sleep Recommendations	SS-PO3:	Total number of "yes" responses to each of the 4 provider recommendations on safe sleep  *Example numerator for sample of 20: 10 caregivers report 4 "yes" responses = 40 4 caregivers report 2 "yes" responses = 8 6 caregivers report 0 "yes" responses = 0 Total for numerator = 48	Total number of provider recommendation opportunities among the total sample  *Example denominator for sample of 20 = 80 (4 opportunities X 20 patients = 80)	Each month ask the survey question below to a sample of 20 primary infant caregivers (or a 100% of parents if population is less than 20) with a child less than one year of age within pilot sites. OBs or pediatricians would sample from their clients with a child less than one year of age who had a visit in the previous month. Hospitals sample from mothers discharged the previous month. Conduct the survey via telephone or during a client encounter. <b>Survey question: Did a doctor, nurse, or other health care worker tell you any of the following things?</b> For each thing, check <b>No</b> if they did not tell you, or <b>Yes</b> if they did.  <input type="checkbox"/> Place my baby on his or her back to sleep <input type="checkbox"/> Place my baby to sleep in a crib, bassinet or pack 'n play <input type="checkbox"/> Place my baby's crib or bed in my room	Monthly  Baseline data starting March 2018  Recommended submission date for 20th day of each month

# NYS Safe Sleep IM CoIN Data Tools

## Phase Two

### Safe Sleep IM CoIN Aim and Measurement Strategy

					
				<input type="checkbox"/> What things should and should not go in bed with my baby	
4. Hospital Safe Sleep Practices	SS-PO4:	Number of infants without medical contraindication sleeping on their back and in a crib or bassinet without extra bedding	Total number of infants sampled	Each month sample 20 infants in NICU, nursery and/or rooming-in using a crib audit tool and check if the infant is: (1) sleeping on back (2) in a crib/bassinet without extra bedding	Monthly  Baseline data starting March 2018  Recommended submission date for 20th day of each month
5. Safe Sleep Discussion	SS-PO5:	Number of infants/primary caregivers/clients that have a documented safe sleep discussion in their record	Total number of infants/primary caregivers/clients sampled	Hospitals: Each month sample the medical records of 20 mothers that were discharged in the previous month and check if a safe sleep discussion was documented in medical record Clinics: Each month sample the medical records of 20 patients under one year of age (pediatricians) or who are primary caregivers of infants under one year of age (OBs/PCPs) who had a visit in the previous month and check if a safe sleep discussion was documented in the medical record Home visiting or other state agency: Each month sample the records of 20 clients who are primary caregivers of infants under one year of age and check if a safe sleep discussion was documented in the record	Monthly  Baseline data starting March 2018  Recommended submission date for 20th day of each month
6. Intention to Practice Safe Sleep	SS-PO6:	Number of primary caregivers of infants who answer 7 or higher to both questions: "how confident are you that you will practice safe sleep with your infant and how important is it for you to practice safe sleep with your infant"	Total number of primary caregiver of infants answering both questions	Hospitals: Each month sample 20 mothers being discharged and ask them: (1) On a scale from 0-10, how important is it for you to practice safe sleep with your infant? (2) On a scale from 0-10, how confident are you that you will practice safe sleep with your infant? Clinics: Each month sample 20 primary caregivers of patients under one year of age (pediatricians) or who are primary caregivers of infants under one year of age (OBs/PCPs) who had a visit in the previous month and ask them: (1) On a scale from 0-10, how important is it for you to practice safe sleep with your infant? (2) On a scale from 0-10, how confident are you that you will practice safe sleep with your infant?	Monthly  Baseline data starting March 2018  Recommended submission date for 20th day of each month
7. Breastfeeding (Balancing Measure)	SS-PO7:	Number of primary infant caregivers who report that their infants are currently breastfed	Total number of primary infant caregivers responding	Survey of infant primary caregivers during the 6 month visit Each month ask the survey question below to a sample of 20 primary infant caregivers (or a 100% of infant primary caregivers if population is less than 20) whose child has their 6 month visit during the current month. Conduct the survey via telephone or during a client encounter. <b>Survey question:</b> Are you currently breastfeeding or feeding pumped milk to your new baby?	Monthly  Baseline data starting March 2018  Recommended submission date for 20th day of each month

## Phase Two Survey

*NYS Safe Sleep IM CoIIN Caregiver Survey (October 2019)*

### NYS Safe Sleep IM-CoIIN Community Caregiver Survey

#### Sleep Questions: To be answered by primary caregiver

1. Did you receive education on the ABCs of Safe Sleep in the hospital when you had your baby?
  - Yes
  - No
  - N/A
  
2. Did you receive any of the following safe sleep resources from our organization?
  - Pack and play
  - Sleeping sack, wearable blanket or one-piece sleeper
  - Sleep Baby Safe and Snug board book
  - NYSDOH safe sleep materials (i.e. brochure, magnet, mirror cling)
  - Other: \_\_\_\_\_
  - None
  
3. Which of the following things did a *doctor, nurse, home visitor or other health care worker* recommend about how your new baby should sleep? Check ALL that apply.
  - Place your baby on his or her back to sleep
  - Place your baby to sleep in a crib, bassinet, or pack and play
  - Place your baby's crib or bed in your room
  - What things should and should not go in bed with your baby
  - A health care worker did not make any recommendations
  - Other, please specify: \_\_\_\_\_
  
4. Who do you trust most for information on how to care for your baby? (Please select one answer choice)
  - Doctor
  - Nurse
  - Home Visitor
  - Grandparent
  - Other family member
  - Friend
  - Other, please specify: \_\_\_\_\_
  
5. In which *one* position do you most often lay your new baby down to sleep *now*? Check ONE answer.
  - On his or her side
  - On his or her back
  - On his or her stomach
  
6. Why do you place your baby in this position to sleep? (Check all that apply)
  - Reduces the risk of Sudden Infant Death Syndrome (SIDS)
  - Afraid of baby vomiting, choking or spitting up
  - Baby comforts and stops crying
  - Taught to do that
  - Other, please specify (for choices other than back): \_\_\_\_\_

# NYS Safe Sleep IM CoIIN Data Tools

## Phase Two Survey

NYS Safe Sleep IM CoIIN Caregiver Survey (October 2019)

### NYS Safe Sleep IM-CoIIN Community Caregiver Survey

7. In the past two weeks, how often has your new baby slept alone (without people or loose items) in his or her own crib, bassinet, or pack and play?
- Always (100%)
  - Often (50%-99%)
  - Sometimes (25%-49%)
  - Rarely (1%-24%)
  - Never (0%)
8. When your new baby sleeps alone, is he or she in the same room as you?
- Yes
  - No
  - N/A
9. Does your new baby ever sleep with an adult *who is sleeping* (this includes napping, falling asleep with baby, or nighttime sleep)?
- Yes
  - No
10. Please tell us which of these options describe how your new baby was laid down to sleep during the past two weeks. For each item, check Yes if it applied to your baby in the past two weeks or No if it did not.
- |  | Yes                      | No                       |
|--|--------------------------|--------------------------|
| a) In a crib, bassinet, or pack and play   | <input type="checkbox"/> | <input type="checkbox"/> |
| b) In a box, empty drawer or laundry basket  | <input type="checkbox"/> | <input type="checkbox"/> |
| b1) If the answer to b is "Yes":<br>Does the box, drawer or laundry basket<br>have a tightly-fitting mattress? | <input type="checkbox"/> | <input type="checkbox"/> |
| c) On a twin or larger mattress or bed   | <input type="checkbox"/> | <input type="checkbox"/> |
| d) On a couch, sofa, futon, armchair, or recliner  | <input type="checkbox"/> | <input type="checkbox"/> |
| e) In an infant car seat, stroller or swing  | <input type="checkbox"/> | <input type="checkbox"/> |
| f) With a thick blanket, like a quilt or comforter   | <input type="checkbox"/> | <input type="checkbox"/> |
| g) With a thin blanket, like a receiving blanket   | <input type="checkbox"/> | <input type="checkbox"/> |
| h) In a sleeping sack, wearable blanket or one-piece sleeper   | <input type="checkbox"/> | <input type="checkbox"/> |
| i) With toys, pillows or cushions, including nursing pillows   | <input type="checkbox"/> | <input type="checkbox"/> |
| j) With bumper pads (mesh or non-mesh)   | <input type="checkbox"/> | <input type="checkbox"/> |
| k) With sibling or pet   | <input type="checkbox"/> | <input type="checkbox"/> |
11. Do you believe that following the ABCs of Safe Sleep will reduce the risk of Sudden Infant Death Syndrome (SIDS)?
- Yes
  - No
  - Not sure

## Phase Two Survey

*NYS Safe Sleep IM CoIIN Caregiver Survey (October 2019)*

### NYS Safe Sleep IM-CoIIN Community Caregiver Survey

**12. Is the baby currently being breastfed?**

- Yes, exclusively
- Yes, sometimes
- No

**13. Do you smoke tobacco or use vaping products?**

- Yes
- No

**13a. If yes, are you interested in information about quitting?**

- Yes, share information now
- No, already have the information
- No, not now but might want more information at our next visit
- No, not interested

**14. Do others in your household smoke tobacco or use vaping products?**

- Yes
- No

**14a. If yes, are others in the household interested in information about quitting?**

- Yes, share information now
- No, already have the information
- No, not now but might want more information at our next visit
- No, not interested

# NYS Safe Sleep IM CoIN Data Tools

**Phase Two Survey** Roy, A. *Data Collection: Caregiver Survey Updates. NYS Safe Sleep IM CoIN Coaching Call. January 2019. Intended audience: community-based organizations.*

1

**Data Collection:  
Caregiver Survey  
Updates – January 2019**

Amanda Roy, MPH  
Research Scientist  
Division of Family Health  
New York State Department of Health

June 23, 2019 2

## Data Collection Guidelines Key Takeaways

- The Caregiver Survey should only be given to women after they have had a baby, and, ideally, 30-60 days after delivery (new clients with infants >60 days to under one year are eligible)
- The survey should be given only to women who have received safe sleep education from your organization
- If safe sleep education is provided **before delivery**, conduct the survey 30-60 days after delivery
- If safe sleep education is provided **after delivery**, conduct the survey at least two weeks after the most recent safe sleep education and aim for 30-60 days after delivery (new clients with infants >60 days to under one are eligible)
- Caregiver surveys can be conducted in-person or by phone

June 23, 2019 3

## Changes to the Caregiver Survey

- **Organization Information**
  - Added questions 4 and 5 to gain more information regarding the safe sleep education provided by your organization.
    - Q4: When was safe sleep education delivered by this agency (check all that apply): Prenatally/Postpartum
    - Q5: How was the education delivered by this agency (check all that apply): Individually/Group Setting
  - **Removed date** of first post-partum safe sleep education.

June 23, 2019 4

## Changes Continued

### Sleep Questions

- **Question 5** – defined alone in parenthesis to clarify meaning.
  - In the past two weeks, how often has your new baby slept alone (*without people or loose items*) in his or her own crib, bassinet, or pack and play?
- **Question 8** – clarified sleeping with an adult who is sleeping.
  - Does your new baby ever sleep with an adult who is sleeping (*this includes napping, falling asleep with baby, or nighttime sleep*)?
- **Question 11** – added “home visitor” to ensure your education/recommendations are being included in the caregivers’ response.
  - Which of the following things did a doctor, nurse, *home visitor* or other health care worker recommend about how your new baby should sleep?

June 23, 2019 5

## Reminders

### Sleep Questions

- **Question 4** – Who do you trust most for information on how to care for your baby?  
Select one answer choice

June 23, 2019 6

## FAQ

**Q:** When it says “the home visitor from your organization should administer the survey between 30-60 days after delivery” does that include people who have never received postpartum safe sleep education from that home visitor?

**A:** Clients who have received prenatal safe sleep education from your agency may be surveyed 30-60 days after delivery without having also received postpartum education from your agency. However, for clients who have not received prenatal safe sleep education from your agency, or for new clients who have already delivered, your agency will need to first provide safe sleep education and then administer the survey at least two weeks after providing education, and ideally 30-60 days after delivery.

# NYS Safe Sleep IM CoIIN Data Tools

**Phase Two Survey** Roy, A. *Data Collection: Caregiver Survey Updates. NYS Safe Sleep IM CoIIN Coaching Call. January 2019. Intended audience: community-based organizations.*

June 23, 2019 7

### FAQ

**Q:** For question 4, can nothing be checked? If the staff never delivered safe sleep education during pregnancy and haven't yet given the education postpartum (for example if they just began working with the client)? And then from there should they deliver the safe sleep education and then do the survey again in 2 weeks?

**A:** One of the answers to question 4 must be checked since all clients must receive safe sleep education from your agency prior to taking the survey. If the client did not receive education from your agency prenatally, your agency will need to deliver postpartum education. Then you can follow up to complete the survey at least two weeks after the education. The same client should not take the survey more than once.

June 23, 2019 8

### FAQ

**Q:** If the home visitor begins working with someone who has given birth more than 60 days ago, should the home visitor meet with the client and administer the safe sleep education and then contact the client 2 weeks from then to do the survey?

**A:** You can survey new clients who delivered more than 60 days previously, as long as the infant is under one year of age. Education would need to be delivered by your agency, then the survey can be completed at least two weeks later. The 30-60 days is a guideline for the recommended timeframe, but we will accept surveys outside of that timeframe.

9

### Caregiver Survey Data Collection Process

After safe sleep education is provided by your organization:

- CBO staff identify clients eligible for survey
- CBO staff complete the survey with eligible clients *during the postpartum period*
  - Target timeframe: 30-60 days after delivery
  - For clients who received postpartum education, at least 2 weeks since most recent education
- Monthly Goal: CBOs conduct at least 20 infant caregiver surveys per site or 100% if fewer than 20 eligible clients that month

# Promoting Positive Images of Safe Sleep

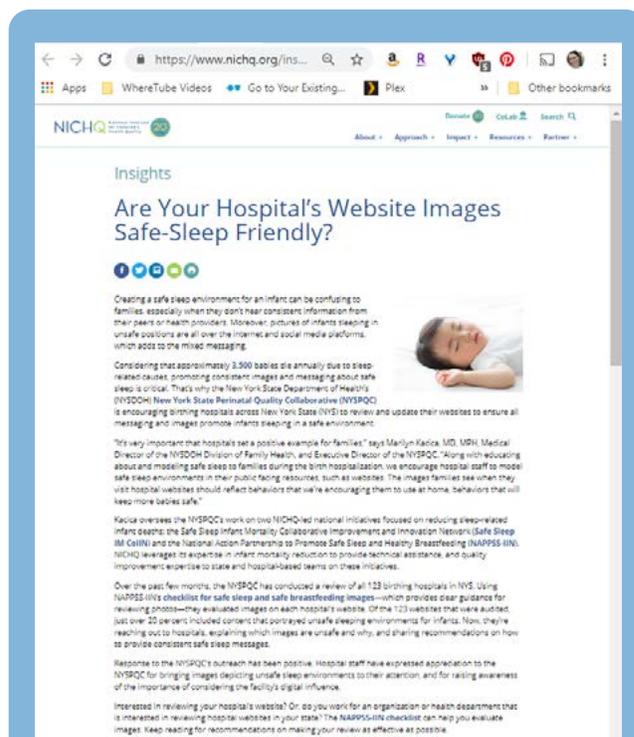

## Do all images used in your organization's resources model safe infant sleep practices?

In its 2016 safe sleep guidelines, the American Academy of Pediatrics recommended that organizations follow safe sleep guidelines in their messaging and advertising.<sup>4</sup> The NYSDOH encourages you to review images of sleeping infants to ensure they model safe sleep environments. Images to review may be located on walls, websites, educational materials, promotional materials, presentations or elsewhere. As part of the NYSDOH's continuing effort to support NYS birthing hospitals, healthcare practices and community-based organizations with promoting infant safe sleep practices to reduce infant mortality, see the resources below to assist your organization in promoting positive images of infant safe sleep.

Below is a list of resources to obtain safe sleep images. You may utilize these resources and should consider sharing them with your communications department or other colleagues as appropriate.

## Resources for Positive Infant Safe Sleep Images

- First Candle Safe Sleep Image Guidelines <http://firstcandle.org/safe-sleep-image-guidelines/>
- National Action Partnership to Promote Safe Sleep's Modeling Safe Practices: A Checklist for Infant Sleep & Breastfeeding Images [www.nccmch.org/suid-sids/documents/NAPPSS-ImageVettingChecklist.pdf](http://www.nccmch.org/suid-sids/documents/NAPPSS-ImageVettingChecklist.pdf)

To sign up for the NICHD Safe to Sleep® monthly newsletter, which contains safe infant sleep tips, answers frequently asked questions about SUID/SIDS, and provides safe sleep resources to service providers, follow this link: <https://nih.us11.list-manage.com/subscribe?u=f79cbe81f114e31aac0cdd2c&id=276fcaa911>.

### STONY BROOK MEDICINE

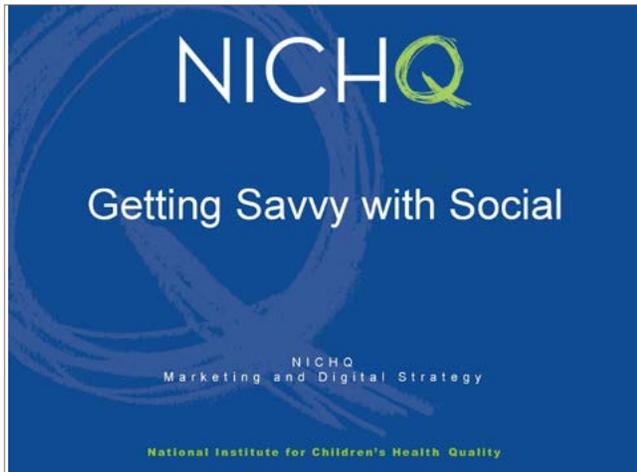

Social media can influence parents' infant safe sleep practices positively or negatively. We worked with our hospital-based social media team to promote evidence-based safe sleep practices during Baby Safety Month in September. We created an "Ask the Experts" webpage that highlights the key steps to keep infants safe while they sleep:

<https://www.stonybrookmedicine.edu/patientcare/babysafetymonth>.

# Social Media Tools and Resources

Forbes, C. *Getting Savvy With Social*

Safe Sleep IM CoLIN AP Call. December 2018. Intended audience: Hospitals, healthcare practices, community-based organizations, and public health agencies.

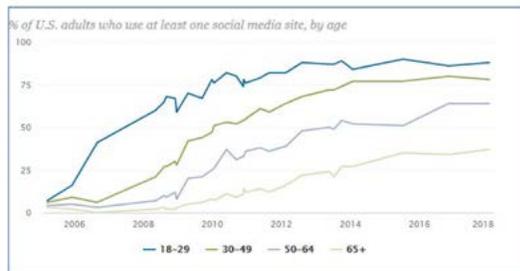

## Why Use Social Media

- Approximately seven in 10 Americans are on social media
- That number is even higher among populations experiencing significant health disparities
- Social media is prevalent across all income levels

Source: Pew Research Center

## Steady Trends

Source: Pew Research Center

## Basic Social Sharing Tips

## Post Best Practices

- Don't be selfish! Share, follow, like.

## Posting Best Practices

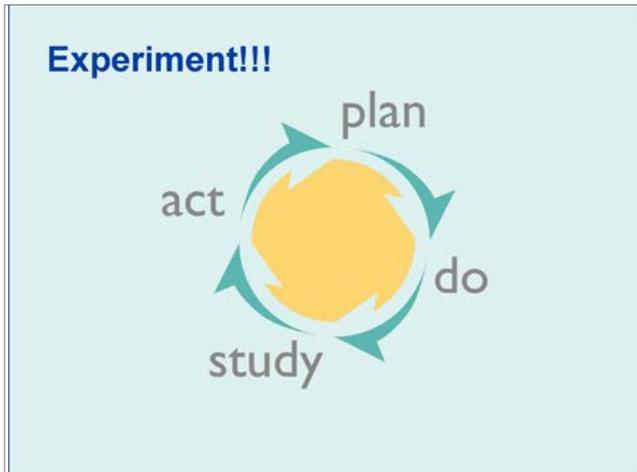

- twitter** • Minimum three a day, then experiment. Not more than one per hour, unless live tweeting an event.
- facebook** • Twice per day. More could result in a dramatic drop off in likes and comments.
- LinkedIn** • No more than once a day on weekdays.

# Introduction

This section features reflections from NYS birthing hospitals' and community-based organizations' (CBO) journeys to improve infant safe sleep. The information is provided by hospitals and CBOs that have participated in the following NYSDOH infant safe sleep improvement projects:

- NYSPQC Safe Sleep Project;
- NYS Safe Sleep Collaborative Improvement & Innovation Network to Reduce Infant Mortality (IM CoIIN); and
- National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPPSS-IIN).

The successes, challenges, lessons learned and recommendations featured in this section were shared by participating teams during project Learning Sessions and Coaching Calls, most often in the form of storyboards. The hospital and CBO perspectives provide the “story” behind many of the tools featured in this toolkit.

# NYSDOH Infant Safe Sleep Successes

- > **Enhanced collaborations** among participating hospitals and stakeholder organizations. From new collaborations, NYSDOH shared and co-branded media with partner organizations such as the Office of Children and Family Services (NYS OCFS).
- > **Sustainability of infant safe sleep practices in the birth hospital setting** through the establishment or updating of hospital policies and procedures, and building safe sleep education and documentation into birthing hospitals' electronic medical record (EMR) systems.
- > **Statewide hospital recognition for safe sleep practices.** In January 2019, 72 hospitals received the NYSQPC Safe Sleep Project's Quality Improvement Award. The award was given in recognition of the hard work and dedication of the hospitals' staff to improve safe infant sleep practices.
- > **Engagement of prenatal care providers** through a NYSDOH [Commissioner's letter \(section 4\)](#) to obstetricians and nurse midwives statewide to educate and reinforce safe sleep messages prior to delivery.
- > **Engagement of healthcare providers before and after birth** through a Commissioner's letter to reinforce safe sleep messages. Letters were sent to a range of perinatal care and primary care providers including pediatricians, pediatric and obstetric nurse practitioners, pediatric and obstetric physician assistants, family practitioners and nurses.
- > **New York State Public Health Law was amended** in July 2016, to include language that requires birthing hospitals and birthing centers to distribute infant safe sleep information to all maternity patients, including information on crib safety. In August 2019, NYS legislation included a ban on the sale of crib bumper pads.
- > **Development of a NYSDOH Infant Safe Sleep Toolkit** to spread the lessons learned, successes, and tools from the hospital and community-based safe sleep projects across the state.

## MAY 2019 WAS INFANT SAFE SLEEP MONTH IN NYS

In May 2019, Governor Cuomo signed a proclamation stating that May 2019 was Infant Safe Sleep Month. The proclamation and a press release regarding the proclamation are provided in [section 1](#).

# NYSPQC Safe Sleep Project

## University of Vermont Health Network Alice Hyde Medical Center

Reinforcement is the key to success. Continuity from shift to shift further enforces the importance of safe sleep. Education for families and caregivers starts in the prenatal office and continues through the entire stay. Re-education is done whenever needed for patients and care givers. We have our hospital policy that outlines the expectations of the nurse in the teaching and reinforcement of the safe sleep practices. Every parent is discharged with a teaching folder that includes safe sleep practices as a reference to use when at home. Our local community-based partners are very good at enforcing the teaching that we review while the patients are with us. Our team recognizes the importance of safe sleep practices, it is ingrained in the routine and teaching that the nurses do with the patients. It is also part of the shift assessment of the baby. We will continue to document the safe sleep teaching and reinforcement within the babies' medical record.

Over the course of the NYSPQC Safe Sleep Project, our safe sleep data results have improved. We learned that many parents were not aware that safe sleep is more than putting the baby on their back to sleep. The data we collected showed us where we needed to improve to ensure that safe sleep practices were a priority in the education we provide to parents. Using the NYSDOH safe sleep resources to educate parents through this project has aided in the improvement of understanding of all safe sleep practices.

## University of Vermont Health Network Champlain Valley Physicians Hospital

This has been a wonderful initiative to be part of because there is nothing more rewarding than saving the life of baby using these simple and easy steps. Because we feel that education for staff and caregivers is the most important key to success, we will continue to provide education based on current best practices. What we have learned from our data is that education and modeling safe practices have been the keys to our successes. We will continue to collect data using the crib audits and monitor caregiver education being provided.

# NYSPQC Safe Sleep Project

## New York-Presbyterian Columbia University Medical Center

Highlight of Project Accomplishments:

### System Changes

- Multidisciplinary team developed cross-campus Safe Sleep Policy
  - Includes an algorithm for NICU patients
- Safe Sleep education added to patient education ribbon in EMR

### Mother Baby Unit

- Rooming-in increased to above 85% - allowed for reinforcement of safe sleep practices and education to caregivers
- Documentation on safe sleep improved

### NICU

- Staff completed NIH Safe Sleep provider education module and submitted certificate of completion
- Sleep sacks were purchased for use on the unit
- Presentations were made during faculty meetings to make MDs aware of the safe sleep implementation as part of discharge process
- Day and night shift reminders are made during tier 1 huddles
- Our discharge packet now includes a NYSDOH safe sleep brochure
- Our discharge RN now reinforces practices during patient education classes

## Good Samaritan Hospital of Suffern

### Lessons Learned:

Reinforce safe sleep with frequent education for staff every two months. In collecting the data via the crib check tool for the NYSPQC Safe Sleep Project, we noticed that after using the crib cards for awhile we would then revert to our old habits. After we added bimonthly education for staff it helped staff to stay more consistent. Posting the data collected in a place where staff could see it also opened discussions about safe sleep and practice. The most essential improvements we accomplished with the NYSPQC Safe Sleep Project were to keep the head of the bed flat. That was one practice we maintained and plan to maintain by using a visual reminder.

## White Plains Hospital

Our nursing staff as well as support staff are hardwired in educating their patients about safe sleep practices. The safety handout as well as the safety poster are part of their admission process and used during their rounds. We have added a safe sleep education check box in their teaching record to ensure consistent documentation is taking place daily as well as on discharge. During staff meetings, staff are informed about our monthly safe sleep data results and it is posted on our unit display board.

## NYS Safe Sleep IM CoIN

In this section, CBOs share lessons learned, successes, and tips for sustaining improvement.

### REACH CNY, Inc.

We learned from our partners that parents may initially place their babies down to sleep in a safe place at night, but the baby may not remain there for the duration of the night due to:

- Nightly feedings (breastfeeding and/or formula feeding);
- Difficulty soothing the baby back to sleep in the crib;
- Cultural reasons; and/or
- Personal reasons, including fatigue.

### Mothers & Babies Perinatal Network

Tips for Sustaining Improvements:

- Collaboration with hospitals and local CBOs to provide awareness and education on safe sleep practices;
- Media campaigns may assist with education and information to the public; and
- Fundraising efforts are effective for providing cribs and safe sleep kits for families in need.

# National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPPSS-IIN)

## New York Presbyterian-Lawrence Hospital

Storyboard. NAPPSS-IIN Cohort A Harvest Meeting, May 2019.

### New York Presbyterian Lawrence Hospital

Harvest Meeting 2019

NICHQ

### Team Profile: New York Presbyterian Lawrence Hospital

AIM STATEMENT:

By May 2019, we will improve our exclusive breast feeding rate in our mother-baby unit throughout the hospital stay by 5%. We will especially aim to increase the rates of exclusive breast feeding in our Hispanic and non-Hispanic Black populations.

Additionally, we will increase the percent of care givers able to teach back the key elements of safe sleep at discharge to 90% and those indicating having a safe sleep plan and intent to carry through to 90%. We will achieve this by implementing evidence based practices to provide better care to mothers and their infants who deliver at our hospital

100% of staff caring for mothers and infants will receive training on safe sleep and breastfeeding and lactation support

90% of care givers will attest to having had a conversation and/or received information about the key elements of safe sleep by discharge

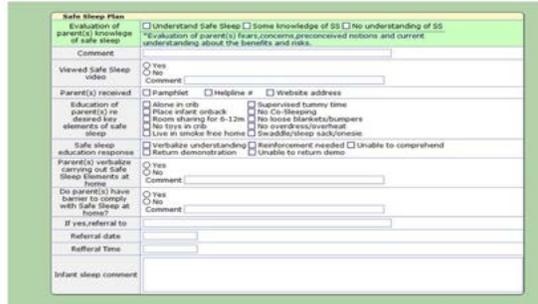

NICHQ

### Proud Moments

- Since joining the NICHQ project we have seen an overall improvement of the general status of infant cribs.
- Parents have also shown increased understanding of infant safe sleep through discharge and breastfeeding classes as verbalized through improved discharge interview comprehension and recall.
- Creation of safe sleep posters that have been placed in every patient room to reinforce safe sleep education, provide a reference for parents, as well as provide a teaching tool for nurses.
- We have recently created a safe sleep intervention to document our patient's understanding of safe sleep practices as well as plan to carry through at home.

NICHQ

### Proud Moments

NICHQ

### Teaching Tools

Baby sleep safety is as easy as ...

#### Safe Sleep for Baby

- Always Sleeps **A**lone, on **B**ack, in **C**rib
- Nothing in Sleep Area:  
No Toys, Bumpers, Blankets, Hats, Pillows
- Firm Mattress With Fitted Sheet
- Crib in Same Room as Parents For 6 to 12 Months
- Do Not Share Bed or Sleep on Couch/Chair
- Dress Infant in Sleep Sack or Onesie
- Do Not Overheat or Overdress
- No Smoking Around Baby

NICHQ

### Teaching Tools con't.

#### Breastfeeding Benefits

- Breast Milk Contains Antibodies
- Aids in Development of Baby's Immune System
- Reduced Allergies & Asthma in Babies
- Protects Against Crohn's Disease/Diabetes
- Provides Perfect Infant Nutrition
- Higher IQ Levels
- Decreased Risk of SIDS
- Nursing Your Baby Burns Calories
- Reduced Risk Of Cancer For Mom
- Breast Milk is More Digestible for Baby
- Less Risk of Childhood Obesity
- Special Bonding Between Mom & Baby

NICHQ

# National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPPSS-IIN)

## New York Presbyterian-Lawrence Hospital

Storyboard. NAPPSS-IIN Cohort A Harvest Meeting, May 2019.

### Addressing Disparities

- We have noted that we have a predominantly working to middle class clientele that is equally distributed between Whites, Blacks, and Hispanics.
- We do have a large immigrant population, with patients from all over Europe, Africa, Asia, and the Middle East. We struggle with language barriers and utilize language lines to address these barriers and communicate with patients effectively
- Across all cultures, infants of immigrant parents often over-swaddle, use extra fluffy blankets and pillow props in the crib compared to the infants of the American parents regardless of race or culture.
- American parents are also more receptive to safe sleep teaching compared to the immigrant parents who feel that the teaching is not always necessary and find the concepts foreign
- We continue to educate all patients the same way about safe sleep and breastfeeding but we make an extra effort to educate all family members to safe sleep practices that would be involved in infant care to attempt to change the previously held beliefs about unsafe infant sleeping.

### Policy

- We found it was useful for staffing purposes to as it helped to provide clear cut guidelines and even scripting though teach back about patient education regarding safe sleep.
- We used online learning modules to educate staff as well as nurse educators conduct teaching about safe sleep inpatient. We found this to be helpful to ensure everyone was educated about current safe sleep practices.
- We are attempting to modify our current policy to include safe sleep documentation about parent plan for safe sleep at home.
- We used many approaches as discussed above and found that not just one, but rather using them together worked to ensure that safe sleep education was understood by all staff.
- As part of the NICHQ project we frequently update staff members on the importance of safe sleep as well as current practice and policies that we discuss and find on the CoLab.

### Partners in the Work

- Our goal is to reach out to our local WIC program as well as the prenatal offices of our OB-GYN and our pediatric offices post discharge to ensure that this information is consistent and available throughout all stages of pregnancy and postpartum.
- We are working closely with the department of health who has provided us with many safe sleep education tools and resources.
- We would suggest forming partnerships early on with various groups (OB-GYN, pediatrics, community) to make sure there is continuity and consistency in patient education.

### Talking with Moms and Caregivers...

- The interviewing process helped spark interactive conversations that involve the patient in learning about the best practices for safe sleep. We have found that open ended questions on the interview are helpful in learning what their beliefs are. We could then share the evidence that we know, answer their questions, and counsel as needed.
- Vignette:
  - One of the most memorable interviews our team has done was with a new mother who immigrated from Albania. She stated that she had a wonderful hospital experience and learned so much through the discharge and breast feeding class. She stated that she was unaware of SUID risk factors, as this was not really promoted in her country. She was so grateful for our guidance, education, and encouragement and stated that she will be very conscious of her infant safety when putting the baby to sleep, something that she would not have consciously done before.
  - Occasionally a mom will state that no one spoke with her about safe sleep but indicate she received just the right amount of information. When asked about this, they reply that the posters, reading materials in their welcome packet and video gave them enough information to reinforce safe sleep practices.

### Talking with Moms and Caregivers cont'd.

1. Posters on safe sleep practices and the benefits of breastfeeding
  2. Daily Discharge Classes
  3. Monday-Friday Breastfeeding Classes
- The questions that prompt the parents to recall key safe sleep practices (A,B,Cs) are helpful when doing teach back on their plan for safe sleep at home.

Mother Baby RNs who teach Discharge Class for parents.

### Breastfeeding P-D-S-As to Ascertain the Affect of Breastfeeding Programs

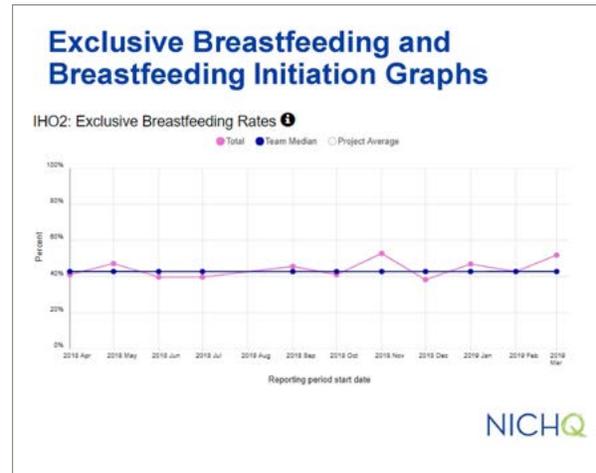

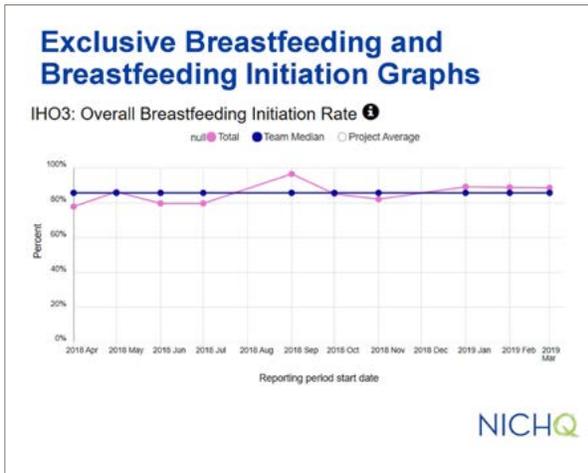

- **Breastfeeding Program**
  - Inpatient Breastfeeding class
  - NICU pumping kits to promote breastfeeding for NICU moms
  - 1-1 breastfeeding consults
  - Breastfeeding support group
  - Post discharge phone calls
  - Immediate skin-to-skin and breastfeeding within minutes of delivery for vaginal birth and within 2 hours for C-section births
  - Enforcing Couplet Care/ Rooming in
  - Delay bathing for 24 hours to promote breastfeeding
  - Prenatal Breastfeeding Class
  - Collection of Breastfeeding Statistics
  - Late preterm infant feeding protocol that promotes breastfeeding
  - Working on breastfeeding curriculum for nurses
  - Currently have RNs who are certified lactation consultants (CLC) and others who are working towards achieving this certification
- What changes were the easiest?
  - NICU pumping kits
- What changes were the hardest?
  - Breastfeeding class → can be challenging to get moms to attend class

# National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPSS-IIN)

## New York Presbyterian-Lawrence Hospital

Storyboard. NAPSS-IIN Cohort A Harvest Meeting, May 2019.

### Safe Sleep P-D-S-As

Safe Sleep Initiatives

- Discharge Class
- Safe Sleep Education Posters in Each Patient Room
- Safe Sleep Video mandated for every patient prior to discharge
- Safe Sleep Brochures (Safe Babies New York)
- ABC of Safe Sleep Crib Clings on every baby crib
- Welcome folder when admitted to postpartum with copious amounts of information for infant care, mother care, and breastfeeding.
- Safe sleep posters provided by the department of health are placed in Labor and Delivery.
- Prenatal course offered by labor and delivery for patients covers safe sleep and breastfeeding topics.
- Newborn Channel for Infant education provided through the hospital television

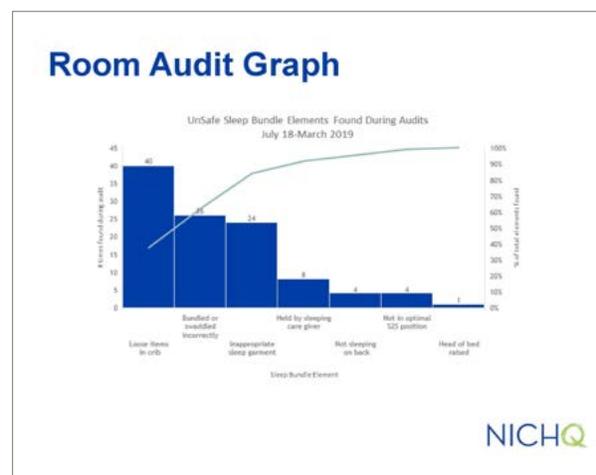

- What changes were the easiest?
  - Create and hanging safe sleep education posters
  - Introducing safe sleep video to patient education
- What changes were the hardest?
  - Discharge classes have been challenging to consistently offer as it requires a nurse to step away for an hour and conduct it.
  - Implementing safe sleep plan at home intervention in nursing documentation. It has taken time to finalized and is currently being modified and will require approval from upper management and staff education prior to initiation.

NICHQ

### Room Audit

- Room audits have enhanced staff awareness of infant safe sleep and the dangers of unsafe sleep practices. All staff has participated in some form of data collection and crib audits so they are aware of unsafe practices as well as scripting to correct unsafe practices without shaming parents for sleeping issue.
- Example:
  - Mrs. Jones, I noticed your infant is sleeping on her belly. Though she may be comfortable in this position, this is not a safe sleep practice as this position increases her risk for SUID.
  - When questions arise we educate about infant anatomy related to suffocation and choking as well as rebreathing CO2, changes in research and understanding of SUID, and SUID rates reduction through actively practicing safe sleep guidelines.
  - When cultural practice and differences arise we acknowledge their unique backgrounds but continue to promote current safe sleep practices with all family members present in the inpatient setting.

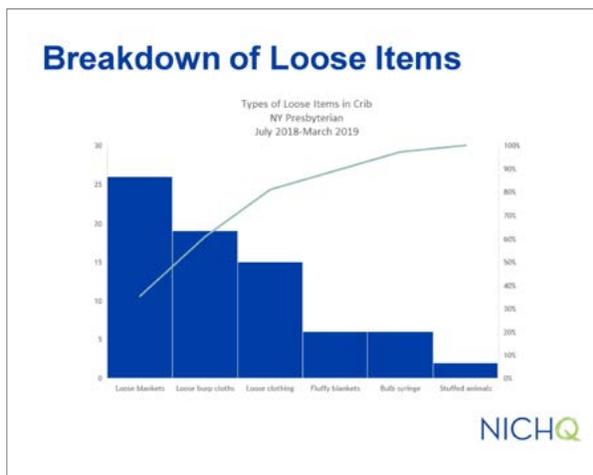

NICHQ

# National Action Partnership to Promote Safe Sleep Improvement and Innovation Network (NAPPSS-IIN)

### Reflection...

Looking back at your overall NAPPSS experience

- **We were most engaged when...**
  - > After NAPPSS webinar/meetings that discussed findings. Very informative and gave helpful information on data collection and education tools. Learning what other hospitals are doing was also very helpful in giving us ideas to try out in our hospital.
- **What surprised or puzzled us...**
  - > We found the data input to be very puzzling and sometimes challenging in the CoLab. There was a definite learning curve in collecting and inputting data as no one in our group has experience in research.
- **Our advice to ourselves about improvement work is...**
  - > We need to expand out data collection to include some of the research points in our interviews and survey. Mainly improving prenatal safe sleep education data as well as plan for infant safe sleep at home documented in chart.
  - > We also could improve our communication with Wisdom Council to aid in our project as well as provide much needed guidance and help.
  - > Need to expand team involvement in process, currently our team is very small and often can get overwhelmed with the immense amount of data collection, synthesis, and interpretation.
- **Our advice to others about improvement work is...**
  - > Importance of becoming familiar with the CoLab, data input, FDSA creation in CoLab, and where to find the key documents. This will make your data collection and overall experience much smoother and easier.

NICHQ

### Hospital's Choice

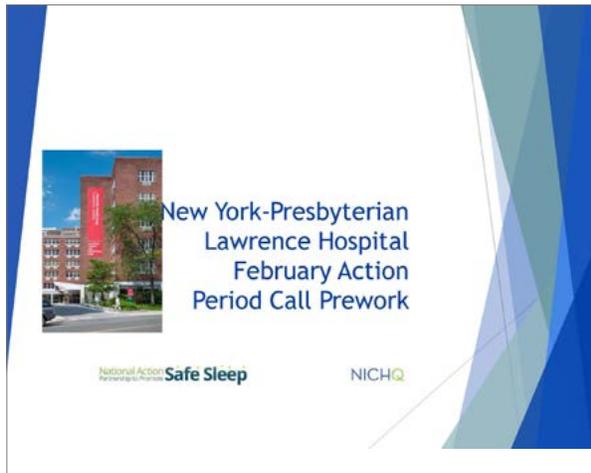

- **Less is more** → patients are sometimes overwhelmed with too much information.
- **Short and sweet** → make discussion and education concise and to the point, E.G. ABC helps tired moms and caregivers remember important and necessary information
- **Importance of teamwork** → encourage all staff, family members, and parents to be ambassadors of safe sleep to ensure that the safe sleep message is carried out into the community.
- **Team leader established** → where someone is responsible to oversee the entire project making sure the work is consistently being done and to keep the momentum going.

```

↓

- Going Well:** On admission to the post partum unit our patients receive a packet of information that includes the Safe Babies New York brochure and information on breastfeeding. We are currently providing daily inpatient breastfeeding classes/support groups with the purpose of enhancing our patient's breastfeeding education and experience. This is in addition to the 1:1 consults already being done by our lactation consultant. Breastfeeding support kits are given out to all breastfeeding mothers. We also have "Safe Sleep" and "The Benefits of Breastfeeding" posters in every room for our nurses to teach from.

## DRIVER

Health care professionals understand, actively endorse and model safe sleep practices.

### University of Vermont Health Network Champlain Valley Physicians Hospital

When we began the NYSPQC Safe Sleep Project, our initial PDSAs held few surprises. We knew the staff was aware of the importance of back to sleep, we were initiating the use of swaddles, and we were aware that most of the cribs had many objects in them. However, we learned several valuable lessons through this project:

- Education done on even a limited basis can have a huge impact. After educating just two nurses to provide education to infant caregivers about infant safe sleep practices, we saw immediate improvement in all the ABCs of infant safe sleep.
- The obvious is not always the issue. We started using the NYSDOH Safe Sleep DVD to provide the right information to the infant caregivers, but part of the issue was the need for safe sleep education among extended family and friends as well. We learned that we needed to provide the infant caregivers the tools to help them deal with everyone who interacts with their infant.
- Consistent information from everyone increases compliance. Reeducation of the pediatricians showed that it is important to give information in more than one form and from more than one source. The mesh bag that we attached to the cribs also included an informational card developed by the hospital which reinforced existing education. The bag gives infant caregivers a way to keep the crib free of objects while still being able to display gifts for the infant that have been brought to the hospital.

### Story behind the Data

- The staff was aware of the importance of “Back to Sleep” but there was room for improvement since our initial data showed 80-90% compliance. Reinforcing staff education and initiating consistent caregiver education helped to improve the data to 95- 100%.
- With the initiation of swaddle use and educating the staff about appropriate swaddling (with or without a sleep sack) this data has improved from 30 to 90%.
- Keeping the head of the crib flat has been an area with which staff has done well since the start of the initiative (95-100%). Education about newborn reflux helped convince some of the staff that “back” and “flat” were safe.
- No items in the crib has been our biggest challenge. Multiple education venues with staff, providers and caregivers brought to offend grandparents by not displaying gifts in the crib we realized this was what we needed to focus on. We eventually decided on a mesh bag that would attach to the crib as a way to display gifts but keep them out of the crib. A card was attached to the bag explaining its purpose and also includes the ABCs of safe infant sleep. Since the bags initiation in February 2017, our data has improved from 50% to 98-100%.

**What we have learned from our data is that education and modeling safe practices have been the keys to our successes.**

## DRIVER

Health care professionals understand, actively endorse and model safe sleep practices.

### Good Samaritan Hospital Medical Center (NICU)

The observation of safe sleep in the NICU was a challenge for the novice to expert nurses. The learned behavior of staff in a step-down unit with a growing preemie needs to change. For years, the position has been to have the head of bed elevated. After speaking with the neonatologists and staff, we will implement the need for a MD order for newborns who need to have head of bed elevated. Also, there was a need to re-enforce education to staff on swaddling and if more blankets and/or hat are needed to maintain thermoregulation, the infant needs to be back in a thermal controlled isolette.

Nurses are the front line to healthcare and are in a unique position to educate parents and caregivers about risk reduction of SIDS and other sleep-related causes of infant death.

The biggest change within the organization is the increase in awareness amongst the staff on the NICU/MBU; the staff now has additional knowledge to aid in safe sleep education and how they can help to continue to make this project successful.

The NYSPQC Safe Sleep Project was successful in that awareness of the importance of safe sleep was brought to the attention of the MBU/NICU units and the implementation of education poster will continue to serve as a friendly reminder to staff on how they can continue to promote the cause. Even small changes have and will continue to improve patient experiences. The current and continued success of the Safe Sleep project plays largely to the support received from our neonatologists, leadership team and the nursing staff.

## DRIVER

Health care professionals understand, actively endorse and model safe sleep practices.

## Rochester General Hospital

### Challenges:

Our biggest challenge is keeping objects out of cribs. Although greatly improved from our initial months of data collection, keeping burp cloths, bulb syringes and loose clothing out of cribs remains a challenge. We now have a Safe Sleep bulletin board where we post data updates that show improvement and areas to work on. This helps to keep goals for safe sleep in mind. Other challenges include:

- Immigrant population with language barrier and cultural differences: co-sleeping, bundling with thick blankets, lack of crib
- Transitioning premature infants from incubators to open cribs with a safe sleep environment
- Family members' influence on safe sleep environment
- Parental fatigue and bed-sharing
- Parental fatigue and attentiveness to education
- Replacing photographs on unit walls in which infants depicted in unsafe sleep environments

### Lessons Learned:

Our lessons learned included 1) nurse champions are key to spread and adoption of safe sleep messaging and 2) having staff assist with data collection (Crib Checks) increases buy-in.

The essential improvements we have made include: annual nurse education; distribution of sleep sacks with education; easier method of documentation of parent education in EMR, and development of Hospital Safe Sleep Policy. We will keep Nurse Champions involved in crib checks and messaging to sustain improvements.

# Primary Drivers

## DRIVER

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep.

## Good Samaritan Hospital of Suffern

### Lessons Learned:

- **Know your patient population and how they learn best.** We learned from community-based partners that the Hasidic culture utilizes extended family to care for newborn infants so the mothers may rest. So we extended our safe sleep education to grandmothers as well as the mothers. We also learned that many of our patients do not watch DVDs or television. In the hospital our patients preferred to be taught 1:1 by their nurse rather than watch the safe sleep DVD.

# Primary Drivers

## DRIVER

Infant caregivers have the knowledge, skills and self-efficacy to practice safe sleep for every sleep.

## White Plains Hospital

### Lessons Learned:

- Our Model of Care at White Plains Hospital includes infant oversight by multiple layers of clinical staff.
- This Model includes the Nursery Nurse, Postpartum Nurse, the Lactation team as well as Management all responsible for Safe Sleep education for each infant and their caregiver.
- Having multiple layers of oversight significantly increases the opportunities for safe sleep education. Although education will take place prior to discharge, we care for a diverse population with varied cultural beliefs and customs.
- Educating about the importance of current evidenced-based practices, while remaining culturally sensitive to family practices often passed down through generations.
- It is crucial that Safe Sleep Education begin on Admission. By starting on admission and through daily repetition we can ensure all patients go home receiving Safe Sleep Education consistently.
- It is important to provide different methods of education based on different learning styles and cultural background. Don't assume an experienced mother is aware of Safe Sleep practices. Taking time to educate not only the parents but extended family as well.

### Successes:

- Our Nursing Staff as well as Support Staff are hardwired in Educating their patients about Safe Sleep practices. The Safety Handout as well as the Safety Poster are part of their Admission Process and used during their rounds.
- We have added a Safe Sleep Education Check Box in their Teaching Record to ensure consistent documentation is taking place daily as well as on Discharge.
- During Staff Meetings, staff are informed about our monthly Safe Sleep Data results and it is posted on our unit display board.

## NYU Winthrop University Hospital

Safe sleep is part of the patient education program. The staff reviews and reinforces the safe sleep materials in the mother's admission packet. It is then documented on the mother's electronic medical record as part of the infant safety program.

The following materials are included in the mother's admission packet:

- NYSDOH "Follow the ABCs of Safe Sleep" brochure. Also included: ABCs of Safe Sleep magnet, cling, crib card;
- American Academy of Pediatrics leaflet "A Parent's Guide to Safe Sleep"; and
- Halo (Sleep Sack Swaddle) brochure "Safe Sleep for Your Baby".

# Primary Drivers

### Albany Medical Center

Albany Medical Center's grandparent update: A childbirth education class offering for grandparents designed for grandparents-to-be, this class is taught by an experienced childbirth educator and includes a discussion of current obstetrical practices as well as changes in infant care, feeding and safety that have occurred over the past several years.

### ***Question: What were lessons learned from community-based organization partners?***

Responses:

#### Stony Brook Medicine

- Commercialized baby products continue to be a challenge.
- Social media can influence parents' infant safe sleep practices positively or negatively. We worked with our hospital-based social media team to promote evidence-based safe sleep practices during Baby Safety Month in September. We created an "Ask the Experts" webpage that highlights the key steps to keep infants safe while they sleep: <https://www.stonybrookmedicine.edu/patientcare/babysafetymonth>.

# Primary Drivers

## DRIVER

Policies support/facilitate safe sleep practices.

### Strong Memorial Hospital

One challenge was elevated head of bed (HOB). An elevated HOB puts infants at risk for suffocating (obstructs airway) by sliding down in the bed or rolling over to prone position. To improve staff compliance, we created a row in the electronic medical record which required staff to document HOB position. The following discharge checklist is placed in the patient's room at 32 weeks gestation:

- My patient education has been updated, including parents have watched: Shaken Baby, Safe Sleep, Car Seat
- I have passed a \_\_\_day countdown with the HOB flat - or -
- I have passed a \_\_\_day countdown with HOB up because that is how I will be at home
- My parents have the HOB Up handout and know how to do this at home

We piloted an [algorithm](#) we modified with infants on the step-down team. The safe sleep algorithm was given to Attending and Advanced Practice Providers. It was also placed in their patient care binders and posted in nursing break areas.

To sustain improvements, we plan to:

1. Send weekly audit results to the team attending.
2. Be consistent in performing audits.
3. Find bedside nursing champions to help with the effort.
4. We are considering having an [order set "Ready for Safe Sleep"](#). Would include HOB Flat, Supine, in Sleep Sack. Require a conversation during rounds before elevating HOB.
5. Created a row in the electronic medical record which requires staff to document HOB position.

Policies support/facilitate safe sleep practices.

### The University of Vermont Health Network Alice Hyde Medical Center

Reinforcement is the key to success. Continuity from shift to shift further enforces the importance of safe sleep. Education for families and caregivers starts in the prenatal office and continues through the entire stay. Re-education is done whenever needed for patients and care givers. We have our hospital policy that outlines the expectations of the nurse in the teaching and reinforcement of the safe sleep practices. Every parent is discharged with a teaching folder that includes safe sleep practices as a reference to use when at home. Our local community based partners are very good at enforcing the teaching that we review while the patients are with us. Our team recognizes the importance of safe sleep practices, it is ingrained in the routine and teaching that the nurses do with the patients. It is also part of the shift assessment of the baby. We will continue to document the safe sleep teaching and reinforcement within the babies' medical record.

# Primary Drivers

## DRIVER

Policies support/facilitate safe sleep practices.

### St. Mary's Healthcare Amsterdam

#### Policy:

The policy has helped our organization model safe sleep practices for infants throughout the hospital including in our maternity unit and ICU. It also is a great resource for supporting teaching points for parents.

Now our community has a better understanding of the importance of safe sleep. We were also able to apply for Cribs for Kids® silver status to signify safe sleep practices within our hospital.

#### Advice for other hospitals:

A safe sleep policy provides the structure for consistent safe sleep education for all parents and families.

#### Room signs

- Signs in rooms are another visual approach to safe sleep for infants. The pictures are hung within each patient room.
- Parents notice the signs and are able to visualize how their infants sleep environment should look.
- Be sure to hang pictures that accurately represent what a safe sleep environment should look like.

#### White boards

- The white boards serve as a checklist to ensure that the education regarding safe sleep is complete.
- We are able to educate and 95% of our patients respond that they understand safe sleep in our survey.
- My advice would be to get a whiteboard for every maternity room.

#### Safe sleep survey

- The surveys help us to recognize when a parent is in need of additional education prior to discharge.
- We have a 95% rate of parents who understand safe sleep. 5% are parents that are unwilling to adopt the practices.

# Primary Drivers

Spread bright spots within facility and to other facilities.

### Newark Wayne Community Hospital

#### The Road to Becoming a Gold Safe Sleep Champion

Before Newark Wayne Community Hospital became a Gold Champion in the Cribs for Kids® National Safe Sleep Hospital Certification Program, we first had to prove the use of an up-to-date policy, complete staff education on safe sleep and ensure our hospital website included safe sleep information. We then attended two community outreach programs, the Wayne County Fair and babysitting classes, to educate the public on safe sleep. Both activities were well received by the public.
