

NYSDOH STATEWIDE MOSQUITO-BORNE DISEASE ACTIVITY REPORT July 27, 2016

The New York State Department of Health (NYSDOH) collects, compiles, and analyzes information on mosquito-borne disease activity in New York State (NYS) and produces this weekly report during the mosquito season. Data in this report reflects testing performed by both NYSDOH's Wadsworth Center Laboratories (WC) and the New York City Department of Health and Mental Hygiene's (NYCDOHMH) Public Health Laboratory (PHL). Reports are generally issued on Wednesdays and reflect data reported through the previous Saturday.

Summary:

From July 17 through July 23:

- West Nile Virus (WNV):
 - 6 WNV-positive mosquito pools were identified (Rockland 1, Suffolk 5).
 - 0 human cases of WNV infection were reported.
 - 0 equine cases of WNV infection were reported.
- Eastern Equine Encephalitis Virus (EEEV):
 - 0 EEEV-positive mosquito pools were identified.
 - 0 human cases of EEEV infection were reported.
 - 0 equine cases of EEEV infection were reported.
- Zika Virus (ZIKV):
 - *Aedes albopictus* was not identified in any additional counties. *Aedes aegypti* was not identified anywhere in the State.
 - 0 mosquito pools were positive for Zika virus.
 - 52 human cases (Erie 1, Monroe 1, Nassau 4, Orange 1, Rockland 1, Suffolk 1, Westchester 1, NYC 42) were reported to NYSDOH, all of which were travel-associated.¹
 - 2 pregnant women with laboratory evidence of possible Zika virus infection were reported to the Centers for Disease Control and Prevention's (CDC) Zika Pregnancy Registry by NYSDOH.²
 - NYCDOHMH directly reports pregnant women with laboratory evidence of possible Zika virus infection who reside within NYC to CDC's Zika Pregnancy Registry.
 - No cases of local, mosquito-borne transmission (LMBT) were identified.³
- Chikungunya Virus (CHKV), Dengue Virus (DENV), and Malaria:⁴
 - No human cases of CHKV infection were reported to NYSDOH. No cases of LMBT were identified.
 - No human cases of DENV infection were reported to NYSDOH. No cases of LMBT were identified.
 - 2 human cases of Malaria infection (Broome 1, Monroe 1) were reported to NYSDOH, which were travel-associated. No cases of LMBT were identified.

Year to date:

- WNV:
 - 11 WNV-positive mosquito pools have been identified.
 - 0 human cases of WNV infection have been reported.
 - 0 equine cases of WNV infection have been reported.
- EEEV:
 - 0 EEEV-positive mosquito pools have been identified.
 - 0 human cases of EEEV infection have been reported.
 - 0 equine cases of EEEV infection have been reported.
- ZIKV:
 - *Aedes albopictus* has been identified in 4 counties (Nassau, Rockland, Suffolk, Westchester) and NYC. *Aedes aegypti* has not been identified anywhere in the State.
 - 0 mosquito pools have been positive for Zika virus.
 - 488 human cases have been reported to NYSDOH, all of which were travel-associated.
 - 28 pregnant women with laboratory evidence of possible Zika virus infection have been reported to the CDC's Zika Pregnancy Registry by NYSDOH.
 - NYCDOHMH directly reports pregnant women with laboratory evidence of possible Zika virus infection who reside within NYC to the Zika Pregnancy Registry.
 - No cases of LMBT have been identified.
- CHKV, DENV, and Malaria:⁴
 - 3 human cases of CHIK infection have been reported to NYSDOH, all of which were travel-associated. No cases of LMBT have been identified.
 - 26 human cases of DENV infection have been reported to NYSDOH, all of which were travel-associated. No cases of LMBT have been identified.
 - 30 human cases of Malaria infection have been reported to NYSDOH, all of which were travel-associated. No cases of LMBT have been identified.

¹ Travel-associated cases are defined by recent travel to a country or region with known active ZIKV transmission OR sexual contact with a recent traveler from these areas.

² CDC criteria for reporting pregnant women with laboratory evidence of possible Zika virus infection differ from that used to report actual cases of ZIKV. Additional information can be found at <http://www.cdc.gov/zika/hc-providers/registry.html>, http://www.cdc.gov/mmwr/volumes/65/wr/mm6521e1.htm?s_cid=mm6521e1_w, and <https://www.cdc.gov/nndss/conditions/zika-virus-disease-and-zika-virus-congenital-infection/case-definition/2016/>.

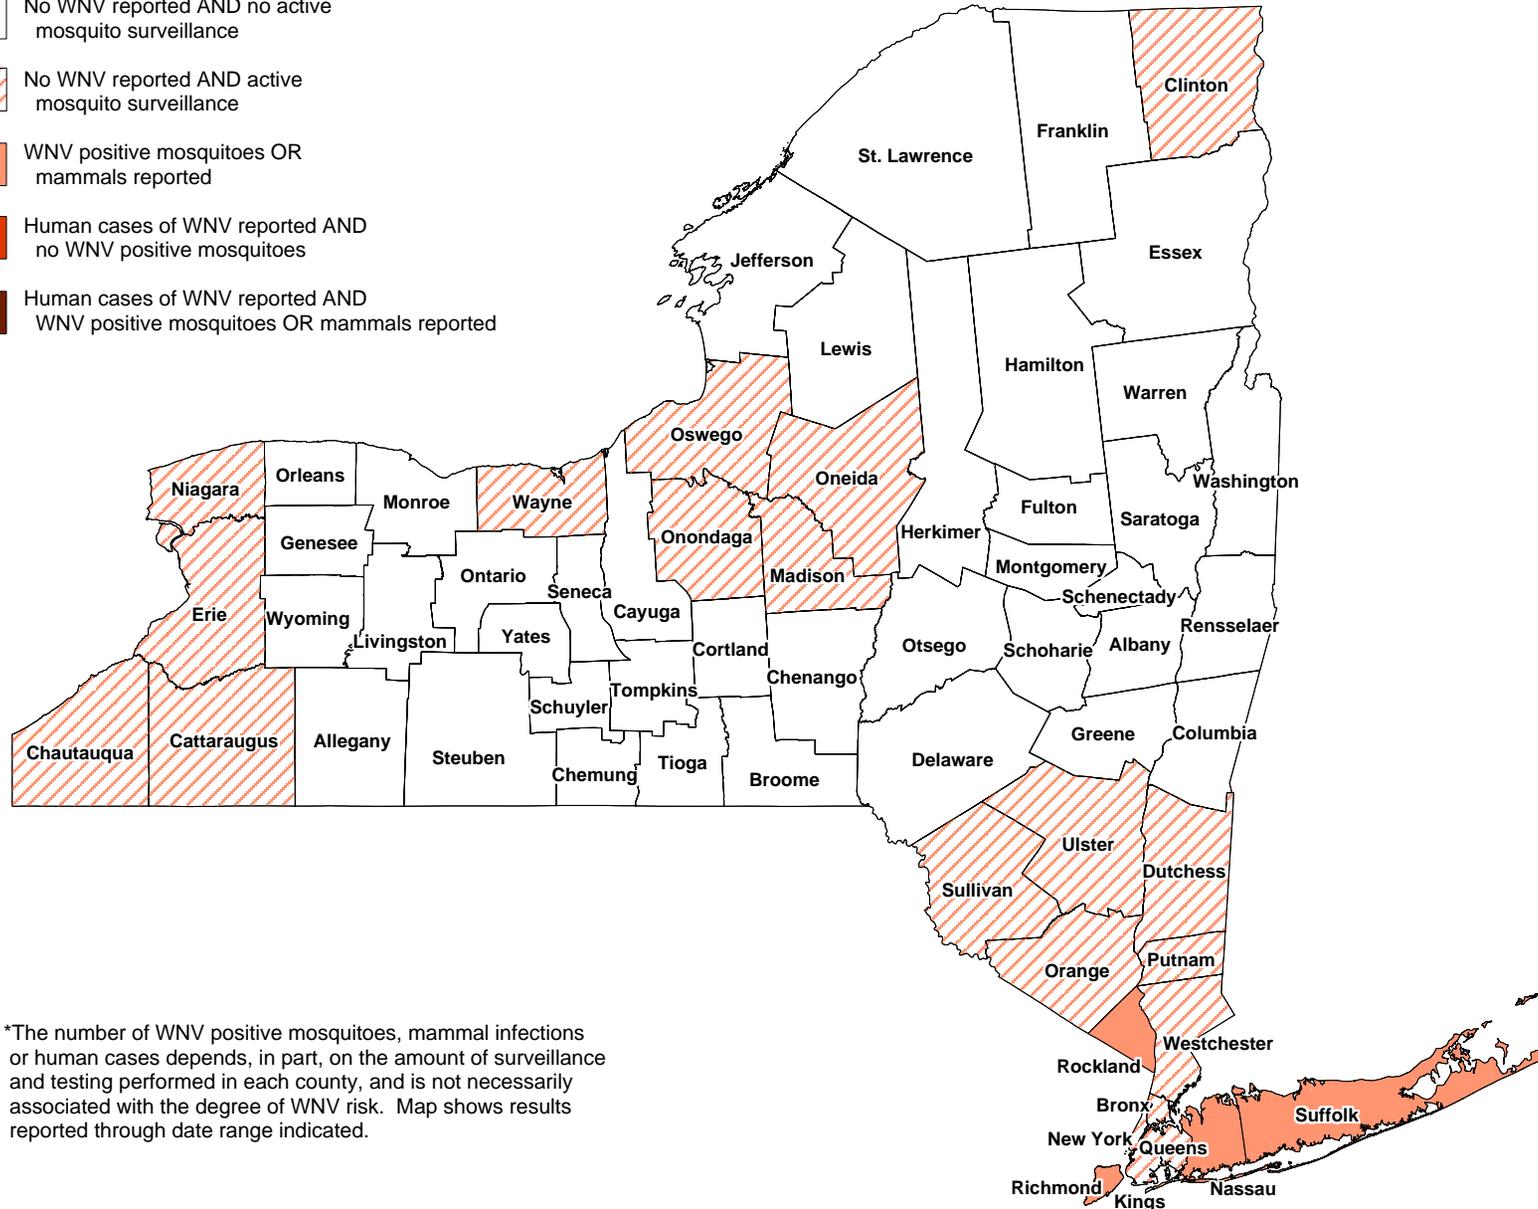

³ Local, mosquito-borne transmission is defined by the absence of the following epidemiological risk factors: recent travel to a country or region with known active ZIKV transmission OR sexual contact with a recent traveler from these areas; recent blood transfusion; recent laboratory exposure to ZIKV; or mother-to-child transmission during pregnancy.

⁴ NYCDOHMH directly reports human cases of CHKV, DENV and malaria infection to CDC.

2016 West Nile Virus Surveillance Summary

Positive Test Results* (1/1/2016 - 7/23/2016)

-  No WNV reported AND no active mosquito surveillance
-  No WNV reported AND active mosquito surveillance
-  WNV positive mosquitoes OR mammals reported
-  Human cases of WNV reported AND no WNV positive mosquitoes
-  Human cases of WNV reported AND WNV positive mosquitoes OR mammals reported

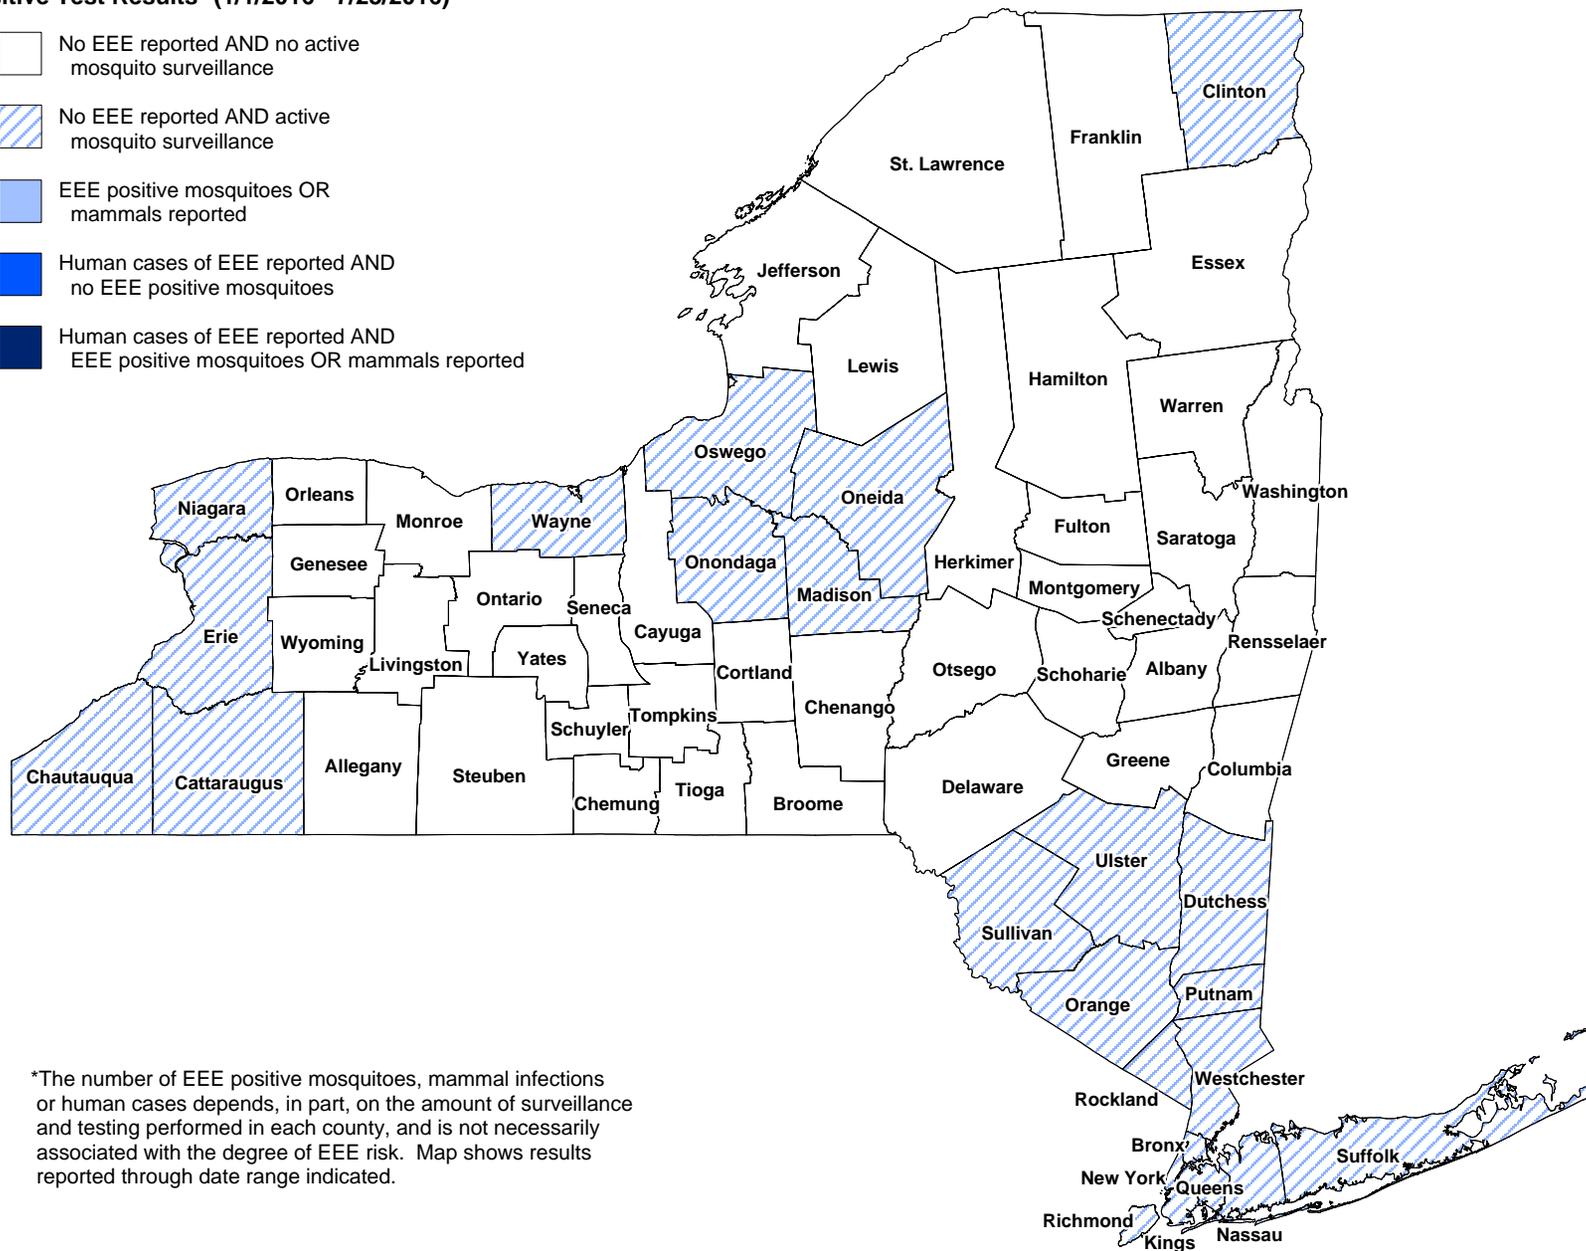

*The number of WNV positive mosquitoes, mammal infections or human cases depends, in part, on the amount of surveillance and testing performed in each county, and is not necessarily associated with the degree of WNV risk. Map shows results reported through date range indicated.

2016 Eastern Equine Encephalitis Virus Surveillance Summary

Positive Test Results* (1/1/2016 - 7/23/2016)

-  No EEE reported AND no active mosquito surveillance
-  No EEE reported AND active mosquito surveillance
-  EEE positive mosquitoes OR mammals reported
-  Human cases of EEE reported AND no EEE positive mosquitoes
-  Human cases of EEE reported AND EEE positive mosquitoes OR mammals reported

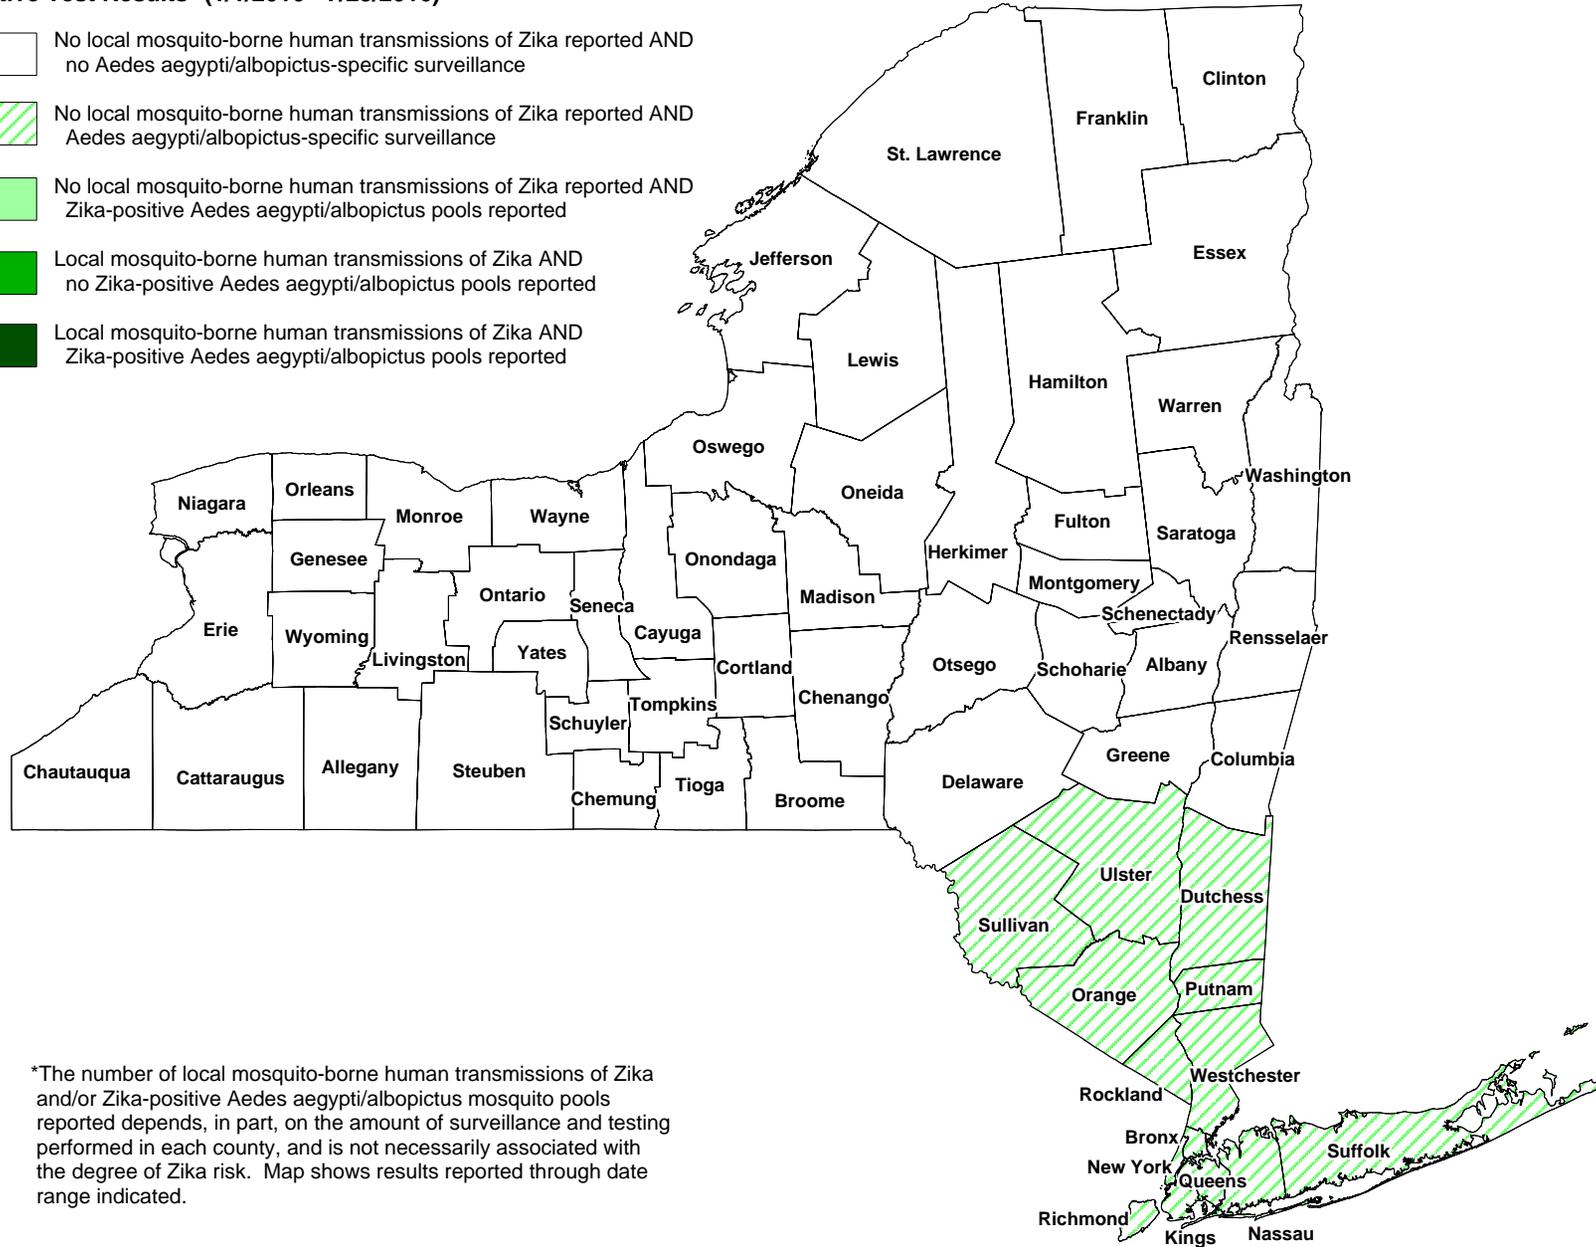

*The number of EEE positive mosquitoes, mammal infections or human cases depends, in part, on the amount of surveillance and testing performed in each county, and is not necessarily associated with the degree of EEE risk. Map shows results reported through date range indicated.

2016 Zika Virus Surveillance Summary

Positive Test Results* (1/1/2016 - 7/23/2016)

-  No local mosquito-borne human transmissions of Zika reported AND no *Aedes aegypti/albopictus*-specific surveillance
-  No local mosquito-borne human transmissions of Zika reported AND *Aedes aegypti/albopictus*-specific surveillance
-  No local mosquito-borne human transmissions of Zika reported AND Zika-positive *Aedes aegypti/albopictus* pools reported
-  Local mosquito-borne human transmissions of Zika AND no Zika-positive *Aedes aegypti/albopictus* pools reported
-  Local mosquito-borne human transmissions of Zika AND Zika-positive *Aedes aegypti/albopictus* pools reported

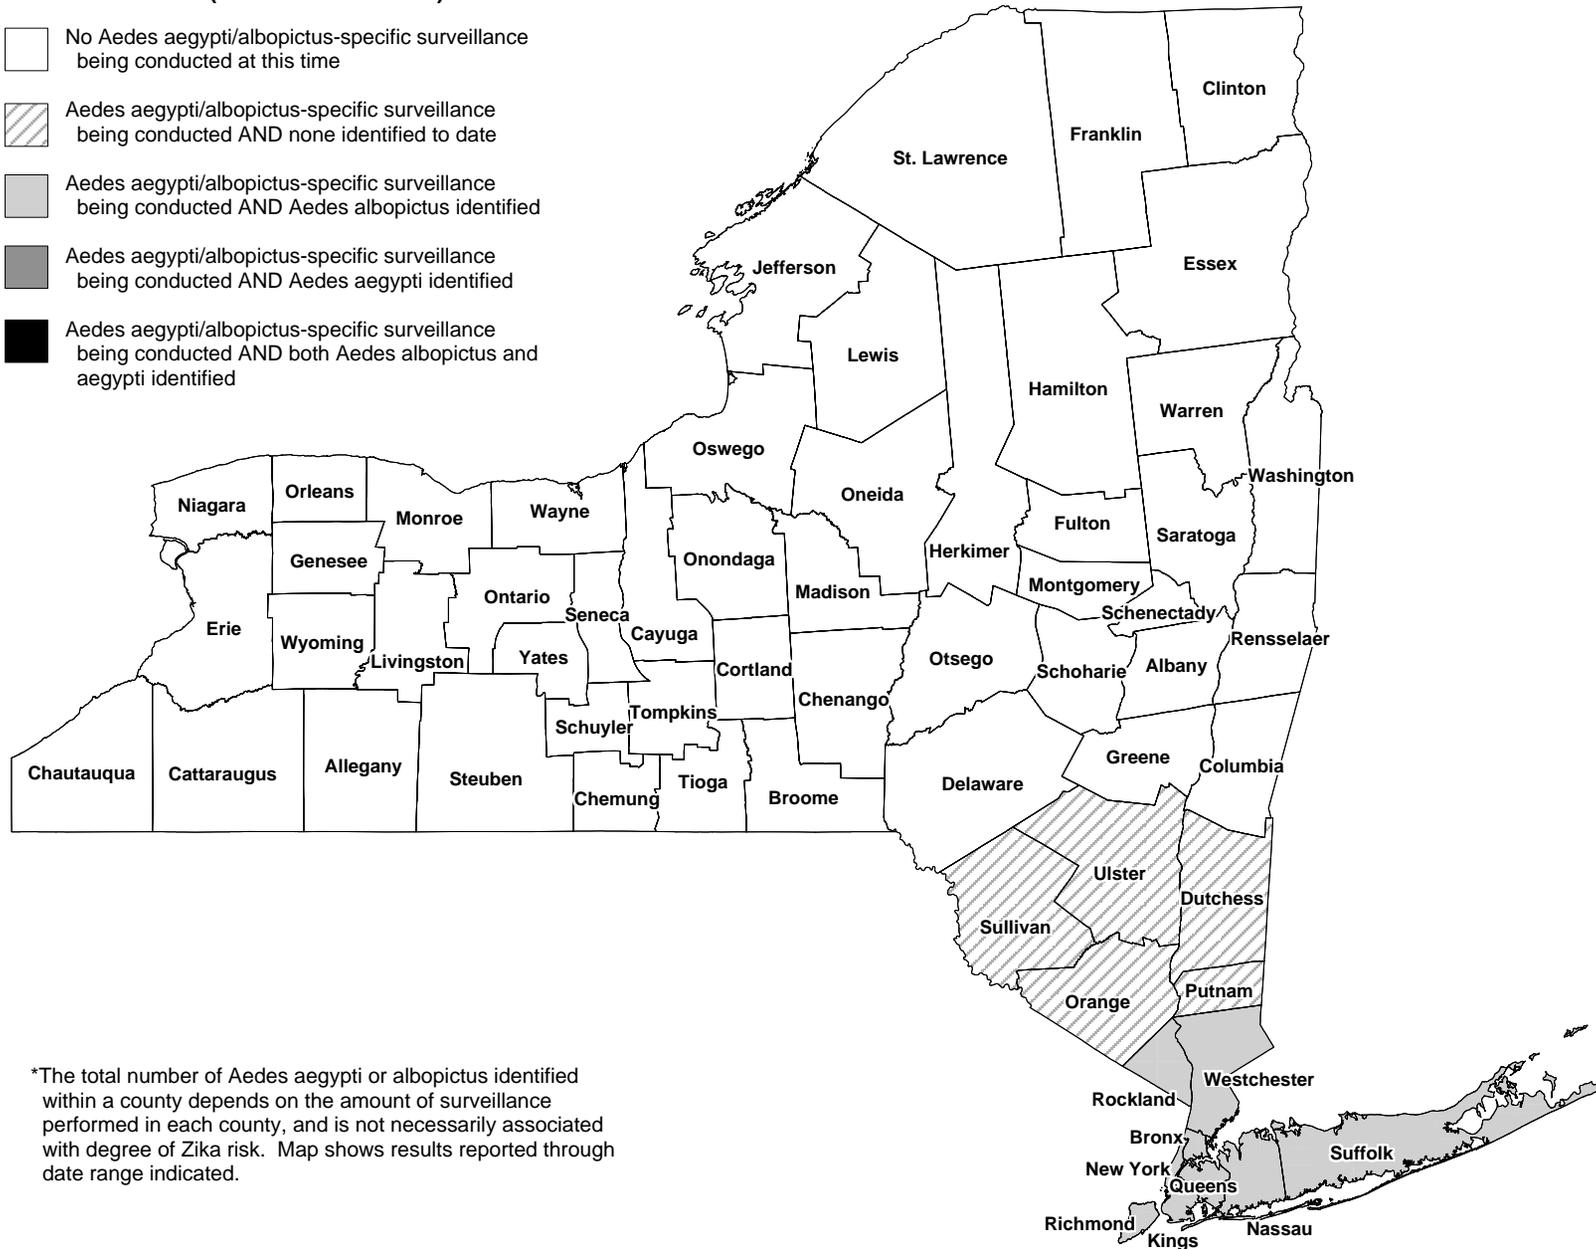

*The number of local mosquito-borne human transmissions of Zika and/or Zika-positive *Aedes aegypti/albopictus* mosquito pools reported depends, in part, on the amount of surveillance and testing performed in each county, and is not necessarily associated with the degree of Zika risk. Map shows results reported through date range indicated.

2016 *Aedes aegypti*/*albopictus* Surveillance Summary

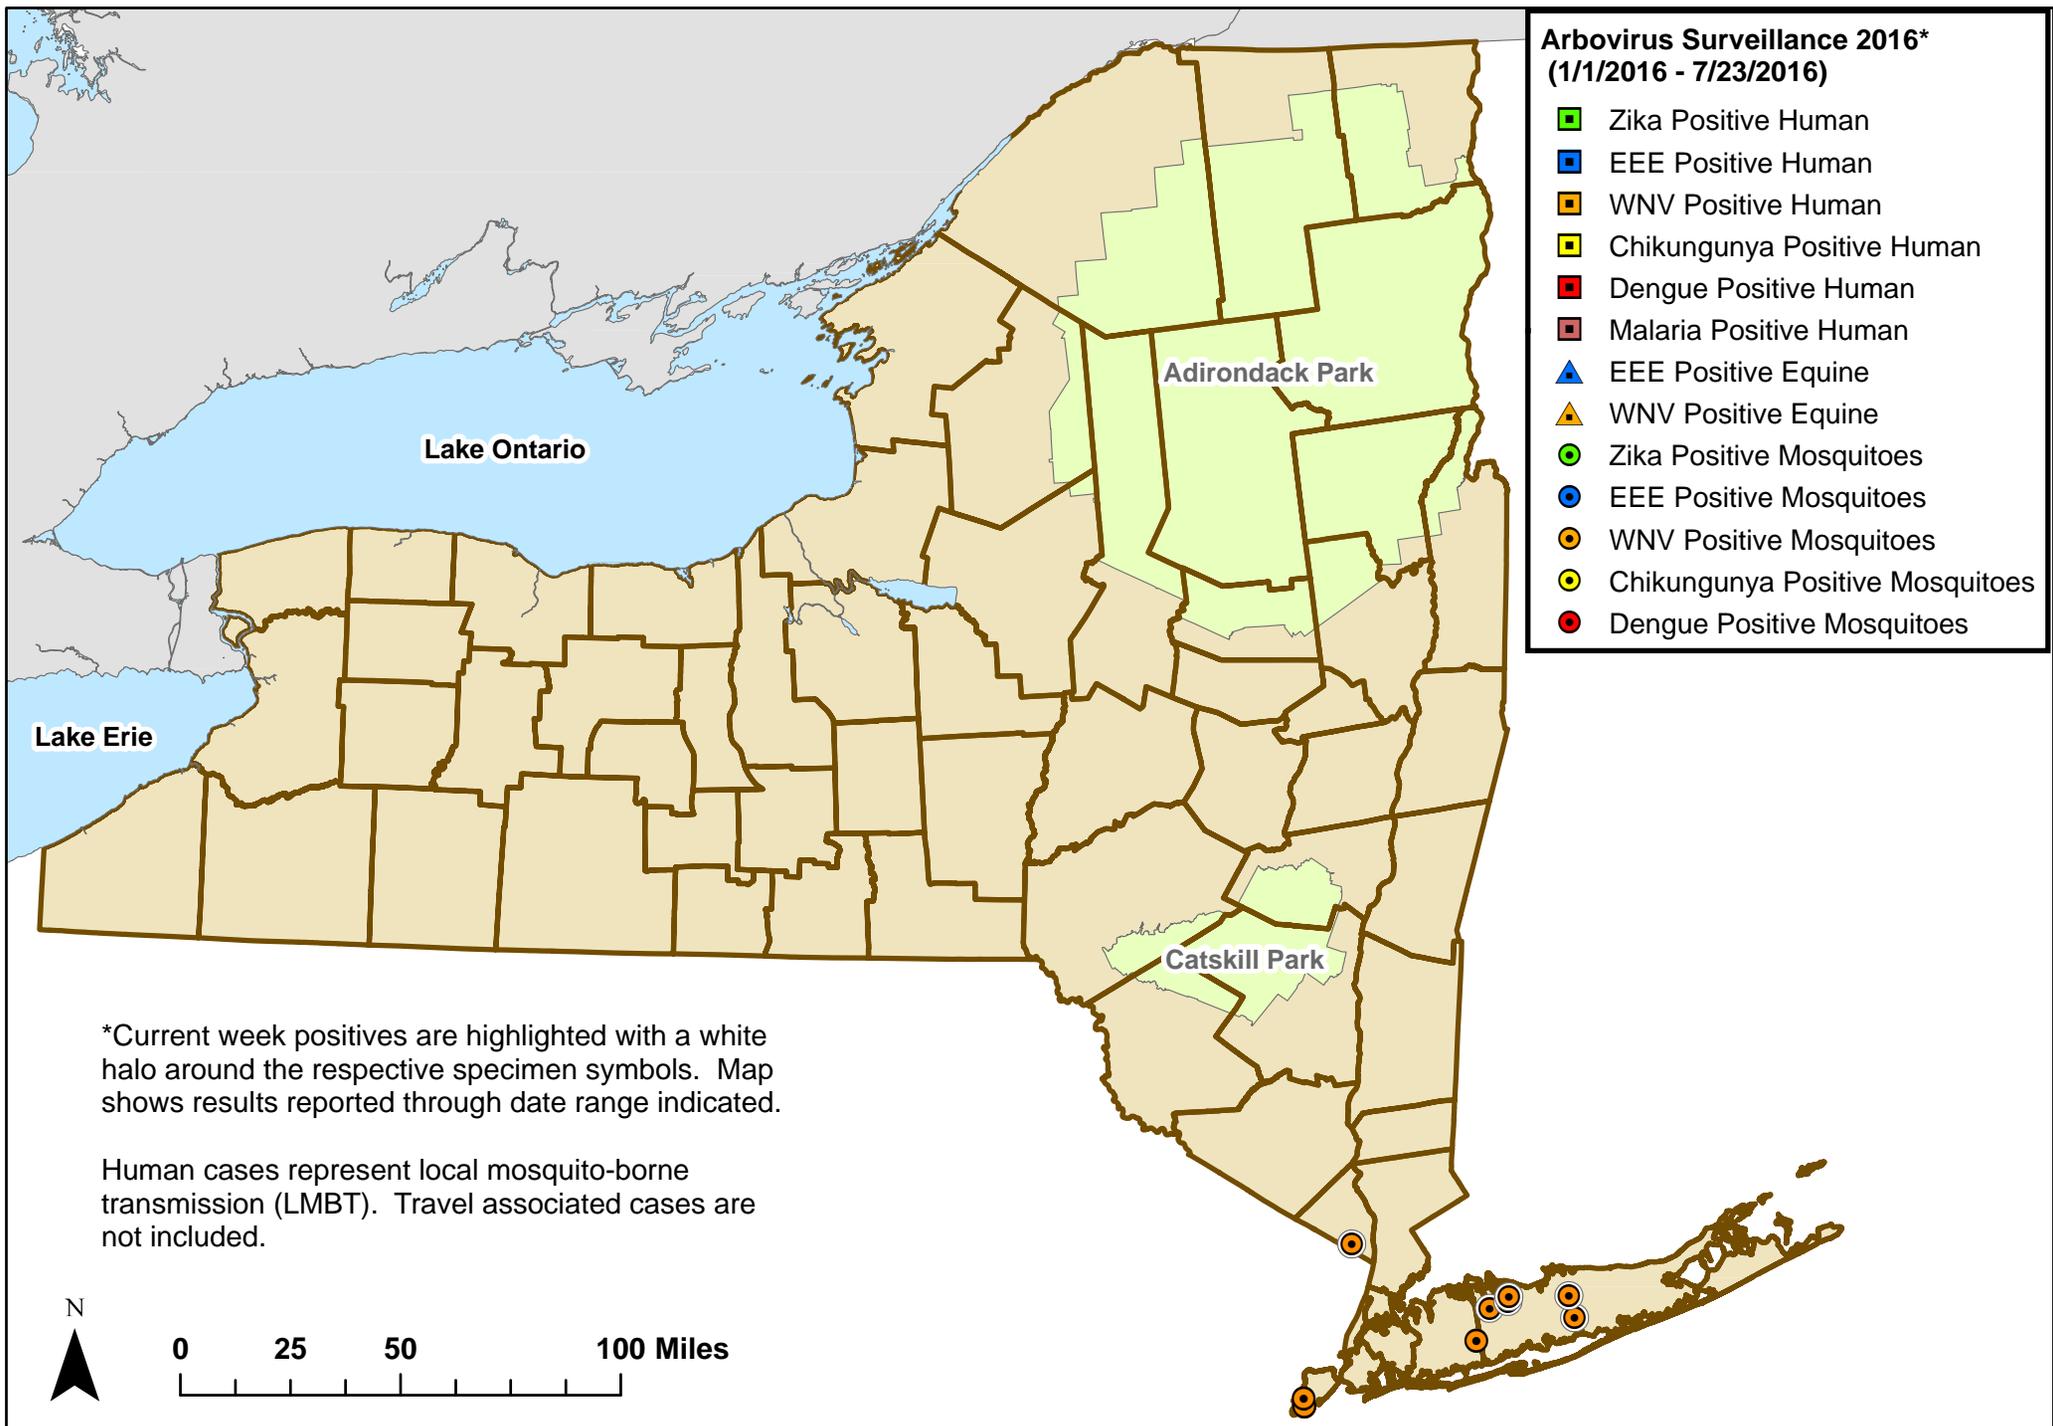

Surveillance Results* (1/1/2016 - 7/23/2016)

- No *Aedes aegypti*/*albopictus*-specific surveillance being conducted at this time
- Aedes aegypti*/*albopictus*-specific surveillance being conducted AND none identified to date
- Aedes aegypti*/*albopictus*-specific surveillance being conducted AND *Aedes albopictus* identified
- Aedes aegypti*/*albopictus*-specific surveillance being conducted AND *Aedes aegypti* identified
- Aedes aegypti*/*albopictus*-specific surveillance being conducted AND both *Aedes albopictus* and *aegypti* identified

*The total number of *Aedes aegypti* or *albopictus* identified within a county depends on the amount of surveillance performed in each county, and is not necessarily associated with degree of Zika risk. Map shows results reported through date range indicated.

2016 Mosquito-borne Illness Surveillance

*Current week positives are highlighted with a white halo around the respective specimen symbols. Map shows results reported through date range indicated.

Human cases represent local mosquito-borne transmission (LMBT). Travel associated cases are not included.
