Detecting Zika Virus RNA and Antibodies*

*These are estimates based on limited data available at this time.
† This curve may not be representative of pregnant women. Some pregnant women have been reported to exhibit prolonged viremia.
‡ When Zika infection occurs following a prior Flavivirus infection, such as dengue, the Zika IgM antibody response may be lower and last for a shorter amount of time than shown in this graph.
§ Approximately 80% of those infected are asymptomatic.
