

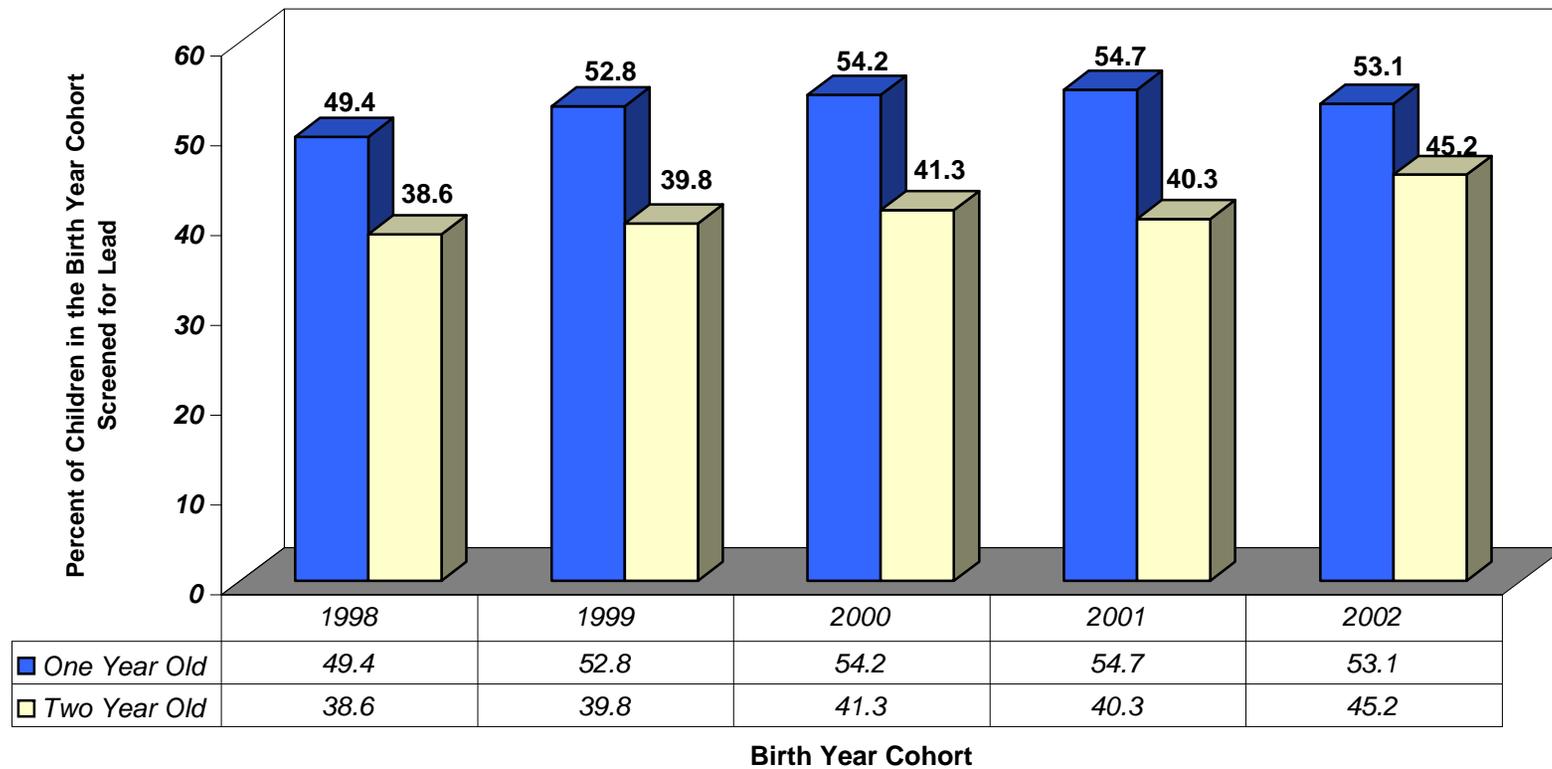

Figure 1: Percent of Children Screened At or Around Age One Year and At or Around Age Two Years;¹ 1998 - 2002 Birth Cohorts (1998 to 2005 Blood Lead Test Data),² New York State Excluding New York City

¹ At or around age one year is defined as 9 months to < 18 months and at or around age two years is defined as 18 months to < 36 months.

² Birth Cohorts beyond 2002 are not included in this analysis because those children had not yet turned 36 months of age by 2005, and the opportunity for blood lead testing remained available after 2005.
