

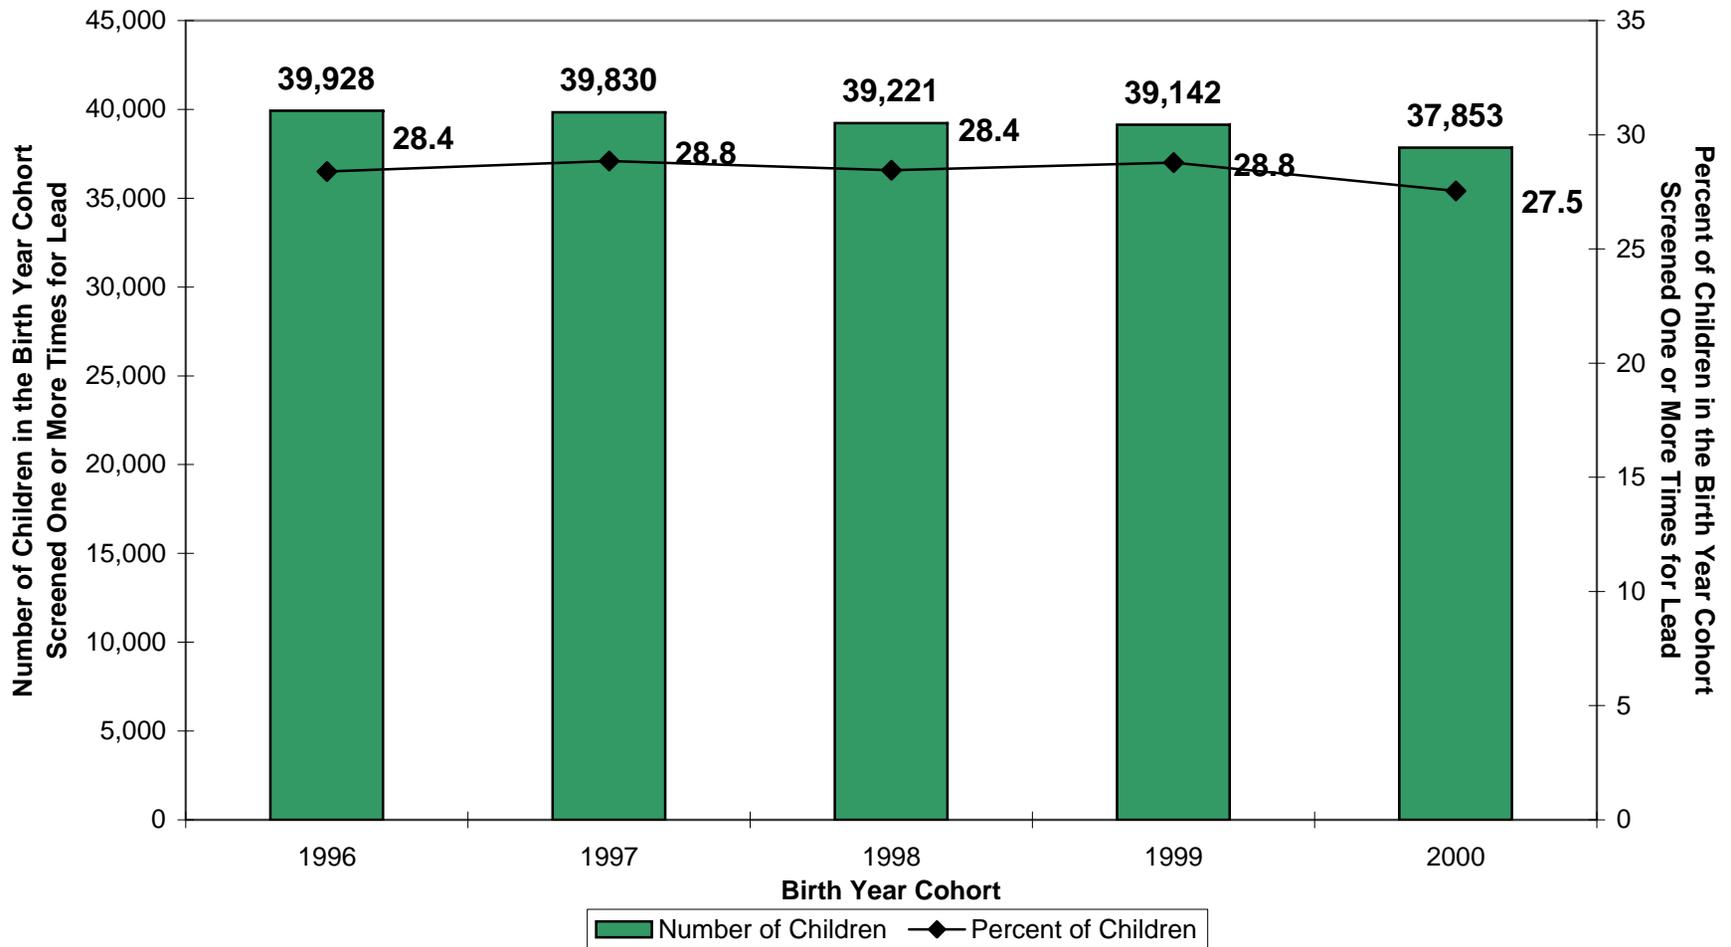

**Figure 4: Number and Percent of Children Screened One or More Times
Between Ages Three Years and Six Years;
1996 - 2000 Birth Cohorts (1999 to 2005 Blood Lead Test Data),¹
New York State Excluding New York City**

¹ Birth Cohorts beyond birth year 2000 are not included in this analysis because those children had not turned five years of age by 2005. Data are incomplete for children born in 2000, because they do not include children between the ages of five and six years.
