Indoor target shooting can be a fun and rewarding hobby, but it can also create small airborne lead particles that can be breathed in or swallowed and cause negative health effects.

**Protect yourself at the firing range:**
- Use non-leaded or jacketed ammunition.
- Don’t eat, drink or smoke inside the range.
- Change into separate clothes and shoes or wear coveralls over street clothes when shooting at an indoor range.
- Wash hands and face immediately after shooting or after handling guns or ammunition.

**Protect yourself at home:**
- Don’t cast bullets at home.
- Wash clothes worn while shooting separately from street clothes.
- Keep shooting materials that may contain lead dust on them away from children.
