Signature of Cardholder

Card # _____

Exp. date _____ Billing address ZIP code _____

*** Note: If cancellation is received more than 3 business days prior to the first day of the course, the course fee less \$35 for processing will be refunded.*

Radon Measurement Course. The radon measurement course prepares the attendee to perform quality radon measurements. The two-day course is fast paced. About 2-3 hours of home work will be assigned the first night. If attendees are traveling a long distance to make the class, they should consider getting a room locally for the first night. The course is also designed to prepare the attendee for the NEHA and NRSB radon measurement proficiency exams.

Radon Mitigation Course. The radon mitigation course prepares an attendee with construction experience to design and install radon mitigation systems. Hands-on segments of the course provide the knowledge needed for more complicated radon mitigation system installations. This course does not prepare the attendee for the radon mitigation certification exams because they include many questions regarding radon measurement. This course is suitable for a worker who will assist a certified radon mitigation contractor. The combined radon measurement and mitigation course is the appropriate course for attendees seeking to become certified radon mitigation contractors.

Combined Radon Measurement & Mitigation Course. The combined radon measurement and mitigation course provides the attendee the necessary radon measurement and mitigation information and hands-on training to install radon mitigation systems and to pass the NEHA or NRSB radon mitigation certification exams.

National Certifications. New York is not a licensure state for radon measurement and mitigation. The only credentials available to radon measurement or mitigation professionals are certification. Two national associations offer certifications recognized by New York and Pennsylvania (as well as most other states). When someone calls the state to obtain a list of qualified radon testers or mitigators, they send the list of companies certified with NEHA or NRSB.

NEHA (The National Environmental Health Association). Information regarding NEHA and its radon certification program can be found at radongas.org.

NRSB (The National Radon Safety Board). Information regarding NRSB and its radon certification program can be found at www.nrsb.org/nrsb-edu.htm
