Effective immediately, the Bureau of Architecture & Engineering Review (BAER) is revising the drawing review requirements per 10 NYCRR (New York State Hospital Code) as described below. These changes are intended to facilitate the timeliness of mandatory drawing submittal and review for Article 28 projects by identifying the specific components necessary for review. Rather than a full set of construction documents, this protocol seeks a “focused” submittal based on definitive Article 28 requirements.

State Hospital Code (SHC) Drawings shall be submitted during the design development phase (60% completion) to provide the opportunity to accommodate any document review comments into the final project documents.

After review and approval of the State Hospital Code (SHC) Drawings, any substantial changes should be discussed with BAER staff prior to the submission of the final construction documents (100% completion).

Submission Requirements for Approval of State Hospital Code (SHC) Drawings

A. The following documents shall be submitted to the BAER for review during the design development phase (60% completion) when required for approval.

B. The drawings shall identify all pertinent code references and technical standards utilized for project design. For example: the applicable sections of 10 NYCRR, the applicable chapters of the referenced edition of NFPA 101 and the referenced edition of FGI Guidelines for Design and Construction of Hospital and Health Care Facilities, 2010 Edition.

5) 2010 ADA Standards for Accessible Design

  I) Medical Care Facilities
   a. Medical care facilities that are subject to this section shall comply with the provisions
      of the 2010 Standards applicable to medical care facilities, including, but not limited to, sections 223 and 805.
      In addition, medical care facilities that do not specialize in the treatment of conditions that affect mobility shall disperse the accessible patient
II) 223 Medical Care and Long-Term Care Facilities

a. 223.1 General. In licensed medical care facilities and licensed long-term care facilities where the period of stay exceeds twenty-four hours, patient or resident sleeping rooms shall be provided in accordance with 223. [See additional requirements at 28 CFR 35.151(h) and 28 CFR 36.406(g).]

b. EXCEPTION: Toilet rooms that are part of critical or intensive care patient sleeping rooms shall not be required to comply with 603.

c. Advisory 223.1 General. Because medical facilities frequently reconfigure spaces to reflect changes in medical specialties, Section 223.1 does not include a provision for dispersion of accessible patient or resident sleeping rooms. The lack of a design requirement does not mean that covered entities are not required to provide services to people with disabilities where accessible rooms are not dispersed in specialty areas. Locate accessible rooms near core areas that are less likely to change over time. While dispersion is not required, the flexibility it provides can be a critical factor in ensuring cost effective compliance with applicable civil rights laws, including titles II and III of the ADA and Section 504 of the Rehabilitation Act of 1973, as amended. Additionally, all types of features and amenities should be dispersed among accessible sleeping rooms to ensure equal access to and a variety of choices for all patients and residents.

d. 223.1.1 Alterations. Where sleeping rooms are altered or added, the requirements of 223 shall apply only to the sleeping rooms being altered or added until the number of sleeping rooms complies with the minimum number required for new construction.

i. Advisory 223.1.1 Alterations. In alterations and additions, the minimum required number is based on the total number of sleeping rooms altered or added instead of on the total number of sleeping rooms provided in a facility. As a facility is altered over time, every effort should be made to disperse accessible sleeping rooms among patient care areas such as pediatrics, cardiac care, maternity, and other units. In this way, people with disabilities can have access to the full-range of services provided by a medical care facility.

III) 223.2 Hospitals, Rehabilitation Facilities, Psychiatric Facilities and Detoxification Facilities. Hospitals, rehabilitation facilities, psychiatric facilities and detoxification facilities shall comply with 223.2.

a. 223.2.1 Facilities Not Specializing in Treating Conditions That Affect Mobility. In facilities not specializing in treating conditions that affect mobility, at least 10 percent, but no fewer than one, of the patient sleeping rooms shall provide mobility features complying with 805.

b. 223.2.2 Facilities Specializing in Treating Conditions That Affect Mobility. In facilities specializing in treating conditions that affect mobility, 100 percent of the patient sleeping rooms shall provide mobility features complying with 805.

c. Advisory 223.2.2 Facilities Specializing in Treating Conditions That Affect Mobility. Conditions that affect mobility include conditions requiring the use or assistance of a brace, cane, crutch, prosthetic device, wheelchair, or powered
mobility aid; arthritic, neurological, or orthopedic conditions that severely limit one’s ability to walk; respiratory diseases and other conditions which may require the use of portable oxygen; and cardiac conditions that impose significant functional limitations. Facilities that may provide treatment for, but that do not specialize in treatment of such conditions, such as general rehabilitation hospitals, are not subject to this requirement but are subject to Section 223.2.1.

IV) **805 Medical Care and Long-Term Care Facilities**

a. 805.1 General. Medical care facility and long-term care facility patient or resident sleeping rooms required to provide mobility features shall comply with 805.

b. 805.2 Turning Space. Turning space complying with 304 shall be provided within the room.

c. 805.3 Clear Floor or Ground Space. A clear floor space complying with 305 shall be provided on each side of the bed. The clear floor space shall be positioned for parallel approach to the side of the bed.

d. 805.4 Toilet and Bathing Rooms. Toilet and bathing rooms that are provided as part of a patient or resident sleeping room shall comply with 603. Where provided, no fewer than one water closet, one lavatory, and one bathtub or shower shall comply with the applicable requirements of 603 through 610.
