INTRODUCTION

The Department inaugurated a new system for the management of information on facilities and services certified under the Public Health Law. The implementation of the Health Facilities Information System (HFIS) will enable the Department to maintain more accurate information on beds and services throughout the State and to issue and amend operating certificates (licenses) in a more timely manner.

The development of HFIS has also involved the updating and revision of the terminology for beds and services subject to certification, as shown on the enclosed list. You will note that the terms for most beds and services remain unchanged, but that some have been eliminated and others revised to describe more accurately a particular bed type or service category. If any of the revised terms apply to beds or services operated by your facility, the new term appears on your new operating certificate. The use of the new term requires no action on your part, nor does it indicate a need to alter in any way the manner in which your facility delivers the service in question. Further, the employment of the new term will not adversely affect payment or reimbursement for the service involved.

If you are providing a formerly certified service that no longer appears in the HFIS terminology, you may continue providing that service without interruption or alteration. The Department has merely determined that the service need no longer be subject to review and licensure and thus no longer needs specific authorization.

HFIS has nine main facility types:

- Adult Day Health Care Program
- Certified Home Health Agency
- Diagnostic & Treatment Center
- Diagnostic & Treatment Center extension Clinic
- Hospice
- Hospital
- Hospital Extension Clinic
- Long Term Home Health Care Program
- Residential Health Care Facility

Service and bed types are available to specific facility types; not all services are available to all facility types, nor are all bed types available to all facility types.

This pamphlet will assist you in cross-walking the old names of services and bed types to the new HFIS names. Should you have any questions please check the Department's website www.nyhealth.gov and click on the CON link. The Department will be implementing an 800 number for you to call with your questions or you may email the Department at hfismb@health.state.ny.us. Department staff will be happy to assist you in the transition to this new system.

SERVICES

The following lists all services. Services are available to specific facility types; not all services are available to all facility types, nor are all bed types available to all facility types.

In the crosswalks that follows:

- Grayed out cells indicate that the service did not exist in the old system or that it does not exist in HFIS
- Service crossed out means that the service has been decommissioned and there is no equivalent in HFIS
- Bolded service names are new to HFIS

Services are listed alphabetically by the Original Name. To see what a new service is called in HFIS, locate the old service name and check the New HFIS Service Name column.

The following services will no longer appear on any operating certificate. In some cases services have been further defined, in other cases they have been incorporated into normal services offered by a health care facility. .
