## II. Procedural Information (Cont.)

### Total Contrast Volume in 72 hours

If exact information on amount of contrast used at another institution is unavailable, you should first try to get the exact information. If the only information you can obtain from an outside institution shows that a procedure using contrast was done, but not the amount of contrast used, you may do the following:

- In the Total Contrast box, report the amount of contrast you can document (the PCI reported on the form, any diagnostic cath or other procedures at your facility, etc).
- Indicate the other procedures (not included in total) by using the space on the data entry application for “Stent 7 – specify.” This is the last line on the lesion specific grid.
- The codes are:
  - 1 - another PCI
  - 2 - diagnostic catheterization
  - 3 - CT scan
  - 4 - other
- Do not use any quotes or punctuation.
- If you need to use multiple codes, leave a blank space between them.
- Do not use any field other than the one for “Stent 7 - specify”.
- Do not type any other kind of notes, use only the codes provided.
