

Quarterly Incarceration Rate for Health Home Enrollees

The health home shall be required to report the follow rate on a quarterly basis:

- $(\text{Number of unique incarceration events among health home enrollees during the quarter}) / (\text{Number of unique health home enrollees during the quarter})$

There is an expectation that this rate shall decline over time.

In order to develop this metric, health homes are expected to regularly perform an automated data match between their roster of enrollees and individuals incarcerated in the county jurisdiction in which those enrollees reside. These data on who is incarcerated lie within the Department of Corrections of each county jurisdiction. It is expected that the health home will build a relationship with the Department of Corrections in the county jurisdiction(s) where it operates to enable automated data matching. Ideally, this data match would be performed on a daily basis.
