- Medicaid ER and Inpatient Spending 84
- Medicaid Primary Care and Community Based Behavioral Healthcare 85
- Other NYS-specific Measures 86

July 15, 2016: Measurement Year 2 2
I. Overview of Requirements

Throughout the five demonstration years, Performing Provider Systems (PPS) will report on progress and milestones and be evaluated using specific quality measures associated with their projects. This section describes the domains and the methodology for establishing goals and annual improvement increments that will be used to determine performance attainment in each demonstration year.

Domains

All DSRIP measures are organized into 4 Domains. The lead partner for each PPS will be required to report measures for all four domains as specified in the project plan. The project requirement details for Domain 1 are available from the Independent Assessor organization. Domain 2, 3 and 4 measures are described in this measure specification and reporting manual.

Domain 1 – Overall Project Progress
Domain 2 – System Transformation
Domain 3 – Clinical Improvement
Domain 4 – Population-wide

Reporting Requirements for Measures

In this document, there are two responsible parties noted for reporting requirements: 1) PPS – data reported by the PPS to the New York State Department of Health (NYS DOH); and 2) NYS DOH – NYS DOH data sources used to calculate measures.

II. Methodology for Establishing Performance Goals, Annual Improvement Targets, and High Performance

Performance Goals

Performance goals are intended to reflect best performance expected in New York State and the performance goals are the same, consistently applied to all PPS each year. The performance goal for each measure will not be changed throughout the DSRIP demonstration. CMS suggested using the top decile as a mechanism for establishing performance goals. For measures where the goal is to reduce an outcome or occurrence and a lower result is desirable, the lower decile is used, and for measures where the goal is to increase the occurrence and a higher result is desirable, the upper decile is used.

Several sources were considered for establishing goals. National data (NCQA’s Quality Compass for Medicaid) top decile results were compared to NYS Medicaid managed care (MMC) results for 2013. The NYS MMC results exceeded the national data for the majority of the measures. The 2013 MMC data was used to calculate results for quality measures by zip code of the member’s residence (excluding members with dual eligibility). Zip codes with less than 30 in the denominator or eligible population were excluded, and the 90th percentile was determined for the performance goal. Two quality measures had a small number of zip codes with 30 enrollees for the measure, therefore the top decile of health plan data was used for the performance goal. Efficiency measures (i.e., potentially preventable admissions, readmissions and emergency room visits) are population-based measures that have a skewed distribution when examined by zip code. For these measures, the performance goals were established by using all PPS baseline results, and reducing the best performing baseline result by 20% of the gap to the default goal, so that the performance goal will provide every PPS with a goal that moves beyond the best current performance.
If data for the measure was not available for 2013, the performance goal was set to a default of 100%/0% for use in the first measurement year. The performance goals for these measures have been reset using the first measurement year PPS results. The performance goals were established with the same methodology as above by using PPS results from measurement year 1, and reducing the best performing baseline result by 20% of the gap to the goal. All performance goals that have not been set using MY 1 results will be established with PPS results from MY 2. Performance goals using dually eligible members will be established using results from MY 3.

If the measure specifications are changed to the degree that prior results are not comparable, CMS and NYS DOH have established a process for resetting performance goals. Details about the process are in section VIII.

**Annual Improvement Targets (AITs)**

Annual improvement targets for measures for a PPS will be established using the methodology of reducing the gap to the goal by 10%. The most current PPS measurement year (MY) result will be used to determine the gap between the PPS result and the measure’s performance goal, and then 10% of that gap is added to the most current PPS result to set the annual improvement target for the current MY (baseline for Measurement Year 1 and so on). Each subsequent year will continue to be set with an improvement target using the most recent year’s result. This will account for smaller gains/losses in subsequent years as performance improves toward the goal or measurement ceiling. If a PPS result for a MY meets or exceeds the performance goal, then the annual improvement target and the high performance target (where applicable) for the next MY will equal the PPS’ most recent result. Information on how achievement values are determined using AIT and performance goals is contained in the [Achievement Value Guide](#).

**Figure 1.**

![Performance Goal, Annual Improvement and High Performance](image)
As illustrated in Figure 1, the following example demonstrates the process for determining the annual improvement target (AIT):

<table>
<thead>
<tr>
<th>Process Step: Determine AIT</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Establish gap amount</td>
<td>Goal – PPS’ result = gap</td>
<td>88.6 – 62.4 = 26.2</td>
</tr>
<tr>
<td>Calculate 10% of gap amount (increment)</td>
<td>Gap *.10 = increment</td>
<td>26.2 * .10 = 2.62</td>
</tr>
<tr>
<td>Set annual improvement target (AIT) by adding increment to PPS’ result</td>
<td>Increment + PPS’ result = AIT</td>
<td>2.62 + 62.4 = 65.02</td>
</tr>
</tbody>
</table>

In this example, the annual improvement target for the PPS would be 65.02%, and the PPS result would need to meet or exceed that value to get the achievement value for payment for P4P measures. If the PPS’ result demonstrated a 20% reduction in the gap, and the measure is eligible for high performance funds, the PPS would receive additional payment. Determining the AIT and high performance is explained below:

<table>
<thead>
<tr>
<th>Process Step: Determine High Performance</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Establish gap amount</td>
<td>Goal – PPS’ result = gap</td>
<td>88.6 – 62.4 = 26.2</td>
</tr>
<tr>
<td>Calculate 10% of gap amount (increment)</td>
<td>Gap *.10 = increment</td>
<td>26.2 * .10 = 2.62</td>
</tr>
<tr>
<td>Set annual improvement target (AIT) by adding increment to PPS’ result</td>
<td>Increment + PPS’ result = AIT</td>
<td>2.62 + 62.4 = 65.02</td>
</tr>
<tr>
<td>Evaluate high performance (HP) using actual PPS performance for MY</td>
<td>(Increment*2) + PPS’ result = HP OR higher than performance goal</td>
<td>5.24 + 62.4 = 67.64 OR PPS &gt; 88.6</td>
</tr>
</tbody>
</table>

The PPS result for the most recent MY is used to determine the next MY’s annual improvement target:

<table>
<thead>
<tr>
<th>Process Step: Determine next MY AIT</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Establish gap amount</td>
<td>Goal – PPS’ MY1 result = gap</td>
<td>88.6 – 62.4 = 26.2</td>
</tr>
<tr>
<td>Calculate 10% of gap amount (increment) MY2</td>
<td>Gap *.10 = increment for MY2</td>
<td>26.2 * .10 = 2.62</td>
</tr>
<tr>
<td>Set annual improvement target (AIT) by adding increment to PPS’ result</td>
<td>Increment + PPS’ MY1 result = AIT MY2</td>
<td>2.62 + 62.4 = 65.02</td>
</tr>
<tr>
<td>PPS result for MY2 is used for MY3 gap amount</td>
<td>Goal –MY2 PPS result = new gap for MY3</td>
<td>88.6 – 65.02 = 23.58</td>
</tr>
<tr>
<td>Calculate 10% of gap amount (increment) MY3</td>
<td>Gap *.10 = increment for MY3</td>
<td>23.58 * .10 = 2.36</td>
</tr>
<tr>
<td>Set annual improvement target (AIT) for MY3 by adding increment to PPS’ result</td>
<td>Increment + PPS’ result = AIT MY3</td>
<td>2.36 + 65.02 = 67.38</td>
</tr>
</tbody>
</table>

In this example, the MY2 annual improvement target was 65.02%. The PPS’ result (65.02%) for MY2 met the AIT and MY2’s result is then used to set MY3’s AIT of 67.38%.
High Performance Measures

Ten measures are part of the high performance funds. These measures relate to avoidable hospitalizations, behavioral health and cardiovascular disease with the latter markers aligning with the nationwide Million Hearts Initiative on cardiac outcomes, in order to tackle the leading cause of mortality in New York State.

The ten measures eligible for high performance are:
1. Potentially Preventable Emergency Room Visits (All Population)
2. Potentially Preventable Readmissions (All Population)
3. Potentially Preventable Emergency Room Visits (BH Population)
4. Antipsychotic Use in Persons with Dementia (SNF Long Stay Residents) NEW
5. Follow-up after Hospitalization for Mental Illness
6. Antidepressant Medication Management
7. Diabetes Monitoring for People with Diabetes and Schizophrenia
8. Cardiovascular Monitoring for People with Cardiovascular Disease and Schizophrenia
9. Controlling High Blood Pressure
10. Medical Assistance with Smoking and Tobacco Use Cessation - Discussion of Cessation Strategies

A PPS can achieve high performance through two methods: 1) achieving a reduction in gap to goal by 20% or more in any annual measurement year for a high performance eligible measure; or 2) meeting or exceeding the measure’s performance goal for the measurement year for a high performance eligible measure.

Pay for Reporting (P4R) Measures

In cases where the measure type is Pay for Reporting (P4R), performing provider systems can earn incentive payment for successfully reporting the measures the PPS is responsible for reporting to NYS DOH within the timeframes for each MY. Measures that NYS DOH has the responsibility of reporting will be credited to the PPS in P4R situations.

Pay for Performance (P4P) Measures

In cases where the measure type is Pay for Performance (P4P), a PPS will receive achievement values for results that meet or exceed the annual improvement target or exceed the performance goal. Improvement targets are determined based on a PPS’ previous annual performance in the measure and will be calculated by NYS DOH using the methodology described previously in this section.

If the denominator for a measure is less than 30 members or events, the data is considered too small to determine a statistically valid result; this is referred to as small cell size. Measure results with small cell size are not used for determining the achievement value for the measure. Prior to receiving the achievement value for the measure, PPS will need to have results for two consecutive years that are based on denominators greater than 30. For information about how these situations impact annual achievement value awards, see the Achievement Value Guide.

However, to provide PPS with as much information as possible, the results based on small cell size WILL be shared in PPS annual reports and used to create the AIT for the next measurement year so the PPS can understand current status.
III. **Defining the Eligible Population for Performance Measurement**

**IMPORTANT NOTES:**

1. The eligible population is comprised of all members attributed to the PPS who qualify for the measure. The eligible population is **NOT** limited to people who have gone to providers or sites that are involved in project specific activities, or people residing in a specific county or area.

2. Calculation of measure results are member-centric, evaluating each member for meeting criteria for the measure. The member is then attributed to the PPS as of the measurement time frame, such as end of the measurement year. Member eligibility information is evaluated for the measurement window, such as 12 months irrespective of PPS attribution.

3. Members who are dually eligible (Medicare and Medicaid) will **NOT** be included in PPS measure results for claims-based measures for measurement years 1 and 2. Dually eligible members will be included in PPS results for measurement years 3 through 5. Results will be reported separately (non-duals/duals) for measures so that performance goals, increments and trends will not be reset for the PPS. Combined dual/non-dual results will also be calculated. Achievement values associated with measures with more than 5% of the denominator consisting of dually eligible members will be proportioned for the dual/non-dual results.

Several measures currently include dual eligibles as the measure specifications do not require claim derived information. These measures include: Health Home enrollment measures (3 measures), Skilled Nursing Facility measures (Long-Stay Residents Depressive Symptoms and Antipsychotic Use for Persons with Dementia), and Hospital measures (ED for Uninsured and H-CAHPS). These measures will not be reported separately.

**Measure Eligible Population**

Members are attributed to a specific PPS for performance measurement based on the qualifying services the members used, their assigned PCP or area of residence. In addition to the member’s attribution to a PPS, performance measures use specific criteria to determine eligibility for the measure.

Measures are developed to capture the population for which a particular service is recommended; this is called the eligible population. To define the eligible population, measures often apply criteria such as age or diagnosis of a health condition to identify members in the eligible population. While some measures may apply to everyone in the PPS (population-based), others may capture a smaller group within the PPS membership that meet added measure specific criteria such as diagnosis of a health condition (episode-based).

For example, Figure 2 below shows how the PPS membership is narrowed to those with a diagnosis and then further to the measure’s eligible population or denominator for an episode-based measure, *Antidepressant Medication Management*.
IV. Baseline Results for Project Approval - Completed

Specifically, with the exception of behavioral health Domain 3 measures (3.a.i – 3.a.v), if the performing provider system’s performance on the 2012 and 2013 data for the majority of the measures associated with a Domain 3 project was within 10 percentage points or 1.5 standard deviations to the performance goals, the project was not approved. If baseline PPS data was not available (such as measures requiring medical record data or survey responses), the PPS baseline result was assumed to be 0% for the purposes of approving projects. For example if a project had seven associated measures, baseline PPS results were available for three of the measures and unavailable for four, the PPS would be approved as the majority of the measures (i.e. four of the seven) were not within 10 percentage points or 1.5 standard deviations.

In January 2015 all PPS passed the project approval test using available data.

V. Measure Reporting Schedule

Each measurement year will encompass twelve months, from July 1 of the year prior to June 30 of the reporting year. The reason for using a mid-year time period is to allow for a claim lag of six months so data will be as complete as possible when the PPS performance is calculated for the measurement year. Results for the measurement year will be finalized in January of the following year to allow for six month run out of billing data. The DSRIP time frame for providing results to the Independent Assessor to make determinations of the MY award is in March of the year after the MY. Measures which require information from medical records or other data sources will be collected from the PPS. NYS DOH will provide the PPS with information about the eligible members, the required data elements and formats, and the file submission process (see Section IX, XI and Appendix B). Measures are required to be reported each year and will not be allowed to be rotated. The PPS will gather and report this information by December of the reporting year.
The following provides the timeline for activities in the measurement year (Table 1). This is illustrated in Figure 3.

Figure 3 – Annual Measurement Year Cycle Timeline
VI. Reporting Submission Process

Measures or reports indicated as ‘PPS’ for reporting responsibility will be provided by the PPS. For several of the measures in Domain 3, the reporting responsibility is shared between the PPS and NYS DOH. The PPS reporting will be done through a member detail file. The information from the PPS member detail file will be incorporated into the final result calculation by NYS DOH. Table 2 lists the PPS reporting requirements for each Domain. Several requirements are specific to projects.

Table 2 – Performing Provider Systems Reporting Responsibilities

<table>
<thead>
<tr>
<th>Domain 1</th>
<th>Domain 1 Measures will be reported through the MAPP system DSRIP Implementation Plan tool. PPS will report on progress towards and completion of organizational milestones as well as project requirements. PPS will also report progress towards and achievement of project speed and scale commitments set forth in the application.</th>
</tr>
</thead>
</table>
| Domain 2 | • PPS reported metrics will be collected per instructions from the Independent Assessor  
Project Specific PPS Requirements  
Patient Activation (Project 2.d.i) **TO BE REVISED PENDING CMS APPROVAL**  
• Patient Activation Measure – PPS will conduct the assessment for the uninsured population and non- and low-utilizer population  
• C&G CAHPS Survey (3.0 version) – PPS will contract with a certified CAHPS vendor to conduct this survey annually for the uninsured population. The vendor will provide NYS DOH with a de-identified response set. (NOTE: This is separate from the NYS DOH sponsored C&G CAHPS for Medicaid members) |
| Domain 3 | PPS and NYS DOH shared - NYS DOH prepares sample and calculates final results; PPS provides Member Detail File for the following measures:  
• Screening for Clinical Depression and Follow Up  
• Controlling High Blood Pressure  
• Comprehensive Diabetes Care  
• Viral Load Suppression  
• Prenatal/Postpartum Care  
• Frequency of Ongoing Prenatal Care (same sample as Prenatal/Postpartum Care)  
• Childhood Immunization  
• Lead Screening for Children (same sample as childhood immunization)  
Project Specific PPS Requirements  
Prenatal (Project 3.f.i)  
• Early Elective Delivery – Hospitals will review medical records for all inductions and cesarean sections that occur prior to the onset of labor between 36 0/7 and 38 6/7 weeks and complete the New York State Perinatal Quality Collaborative (NYSPQC) Scheduled Delivery Forms for these deliveries  
Palliative Care (Project 3.g.i – 3.g.ii) **TO BE REVISED PENDING CMS APPROVAL**  
• Community Project – Implementation of proposed measures and data requirements will be conducted during Measurement Year 3. For MY2, revised palliative care measures were under review by CMS. In order to acknowledge this, PPS can earn these AV based on the successful reporting of Domain 1 reporting requirements based on guidance issued in March 2016.  
• Nursing Home Project – Implementation of proposed measures and data requirements will be conducted during Measurement Year 3. For MY2, revised palliative care measures were under review by CMS. In order to acknowledge this, PPS can earn these AV based on the successful reporting of Domain 1 reporting requirements based on guidance issued in March 2016. |
| Domain 4 | Domain 4 Measures are based on the NYS Prevention Agenda and will be calculated in accordance with NYS Prevention Agenda data source methodology located [here](#). The measures will be calculated in alignment with PPS service areas where geographically-limited data is available. Measures will be reported against NYS Prevention Agenda benchmarks, but achievement is based on reporting of applicable measures. |
VII. Resources for Technical Assistance

Several resources are available for collecting data for measures required to be calculated by the PPS. All of the resources can be requested by sending an email to dsrip@health.ny.gov:

1. Measure specifications are available from the Measure Stewards for each measure. A number of measures are from the National Committee for Quality Assurance’s HEDIS® (Volume 2) which is available for purchase. Some of the measure descriptions with some details are available on the National Quality Forum website (http://www.qualityforum.org/).

2. The Independent Assessor Performance Facilitators can provide technical assistance in collection and use of performance data.

3. The NYS DOH’s Office of Quality and Patient Safety (OQPS) staff can provide technical assistance for specifications or file layout.

4. Technical specifications for all NYS-specific measures such as Screening for Clinical Depression and Follow up and Viral Load Suppression have been developed by OQPS (Appendix D).

5. IPRO is available to help with any specification clarifications for medical record reviews.
VIII. Measure Descriptions, Specifications, and Performance Goals

Measure descriptions and information for Domain 1 measures are included in Table 3 and Table 4. Tables 5 and 6 contain information for the measures associated with Domains 2 and 3 respectively, including the projects associated with each measure. Table 7 contains the Prevention Agenda indicators associated with the Domain 4 Population-wide Strategy Implementation. Reporting responsibility is indicated for each measure. Measures identified as PPS’ responsibility will be obtained from information provided by the PPS. For several Domain 3 measures, responsibility is shared between NYS DOH and the PPS. The PPS will provide medical record review information in the member detail file which NYS DOH will incorporate into the final result calculation. Measures indicated as NYS DOH’s reporting responsibility will be calculated by NYS DOH and results will be provided to the PPS.

NYS DOH Measure Calculation Process

NYS DOH uses Medicaid claims and encounters as the basis for calculation of claims-based measures and identification of the eligible population for measures requiring medical record data. Programs used to calculate measure results have been developed using the measure steward specifications. Validation procedures for these programs included: review by external staff experienced in Healthcare Effectiveness Data and Information Set (HEDIS®) source code review, replication of Medicaid managed care submitted data produced from certified HEDIS® software results, and comparison of all Medicaid results from previous years. Medicaid transaction data for the measurement year (July 1 of previous year to June 30 of current year) will be considered finalized with the inclusion of the current year December billing information in the transaction systems, allowing a six-month run out of claims data.

Measure specifications are updated annually and implemented in result calculations beginning in July of each measurement year. Prior to implementing the measure specification changes, impacts to measure results are tested to determine changes creating a significant impact to results, following procedures detailed in the Measure Retirement and Specification Modifications section below. Due to the timing of implementing new specifications, impact to measures may not be known at this time. Known changes are highlighted in the table below, but additional measures may be determined to have significant impact and require adjustments to performance goals and previous results (if applicable). Measures affected by significant impact will be communicated to PPS outside of this manual in an update document. Two measure proposals are pending CMS review and approval. Implementation of the prosed measures will be communicated to the PPS outside of this manual.

Highlight of Measure Changes

<table>
<thead>
<tr>
<th>Measure</th>
<th>Change</th>
<th>Reason for Change</th>
<th>Impact for Achievement Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potentially Preventable Readmission for Skilled Nursing Facility</td>
<td>Replacement. Antipsychotic Use for Persons with Dementia for Long Stay Residents</td>
<td>The low number of readmissions at individual SNFs involved with the project would make it difficult to monitor the impact of interventions on readmissions.</td>
<td>None. Performance Goal, MY0 baseline and MY1 results available for replacement measure. Annual AV available all MYs.</td>
</tr>
</tbody>
</table>
Meaningful Use Certified Providers who conduct bidirectional exchange

Revision. The two aspects of bidirectional exchange will be captured separately. 1. Make information available in SHIN-NY 2. Access information through the SHIN-NY

The criteria for determining bidirectional exchange have been clarified with Qualified Entities.

Each component will receive 0.5 AV. Remains P4R all 5 years. Note - MY2 results may not be able to be compared to previous years due to significant impact of changed specifications on results.

Helpful, Courteous and Respectful Office Staff

Removed.

Review of measure mapping indicated this measure was not applicable to Domain 2 projects.

Getting Timely Appointments, Care and Information AV increased from 0.5 to 1 for MY 2, 3, 4, and 5

PQI 13 – Angina without Procedure

Replacement. PQI 8 – Heart Failure

Retirement of PQI 13 by the measure steward Agency for Healthcare Research and Quality (AHRQ). PQI 8 is a cardiovascular related indicator and will be used as the replacement.

None. Reset of Performance Goal, MY0, MY1, and AIT for MY2 will be produced for use in MY2 results. Previous AV award unchanged. Annual AV available all MYs.

PQI 90 – Composite of PQIS

Revision. PQI 90 with PQI 13 removed

The retirement of PQI 13 by the measure steward will remove the indicator from the overall composite and impact trend.

None. Reset of Performance Goal, MY0, MY1, and AIT for MY2 will be produced for use in MY2 results. Previous AV award unchanged. Annual AV available all MYs.

Statin Therapy for Patients With Cardiovascular Disease

Addition. Cholesterol Management for Patients with Cardiovascular Disease was removed in MY1

The measure Statin Therapy for Patients with Cardiovascular Disease was introduced by NCQA to reflect current treatment guidelines.

Add AV to project. Performance Goal, MY1 result and AIT for MY2 will be calculated and introduced in MY2 results. Annual AV available MY2, MY3, MY4 and MY5.

**Measure Retirement and Specification Modifications**

The measures associated with the Domain 2 and 3 projects will be collected for all five years of the demonstration and specifications will be held consistent to the extent possible. Many of the measures used in DSRIP are currently used in CMS Medicaid quality core sets, as well as health plan reporting for Quality Assurance Reporting Requirements (QARR is NYS’ version of HEDIS®), and the measure steward is often a national organization. Situations may arise when the measure stewards retire or alter measure specifications to reflect changes in clinical care guidelines, treatment recommendations, or current health care practices. To align collection of data from all health care providers, the measure modifications may also be incorporated in DSRIP.
Objective

The objective is to maintain the achievement value awards for measures associated with projects throughout the DSRIP demonstration years. Measure definitions and specifications will be maintained consistently throughout the measurement years (2014-2019) to the greatest extent possible.

Guiding principles

Should the measure steward retire or modify the specifications, we may accept and incorporate retirement or modifications to keep DSRIP measures relevant and meaningful to providers working to improve the quality of care. To that end, the guiding principles for the incorporation in DSRIP measures are as follows:

1. Clinically relevant and meaningful quality measures reflecting recommended care and current health care practices; and
2. Alignment and consistent use of measure specifications for DSRIP and core sets used by other programs in NYS, such as QARR, health homes or provider programs (e.g. incentives or Patient Centered Medical Home initiatives).

Determining Use in DSRIP

These two guiding principles are the key criteria for determining whether the retirement or modification will be incorporated into DSRIP. If clinical relevance is the reason for the recommended action by the measure steward, the modification will be incorporated into DSRIP. Clinically relevant, meaningful information will better engage providers in improvement activities by providing credible data for use in those activities. Improvement of care is facilitated by coordinated efforts among units of health care delivery (practices, health plans). Measure alignment between PPS and other units facilitates coordination and comparability of results at various levels of health care delivery.

Process for Adjusting Performance Goals, Annual Improvement Targets and Achievement Values

Using the two guiding principles, decisions will be made regarding retirement or implementation of modifications. CMS will be notified of all decisions, including impact to performance goals, annual improvement targets and achievement values prior to the measurement year that the change is introduced.

When the decision is made to retire a measure or to implement a modification with a measure, the method of implementing the change and its impact to the performance goal (PG) and annual improvement target (AIT) will be dependent on four factors:

- Necessity of implementation (clinical relevance and alignment concern)
- Availability of replacement measure for retired measure
- Ability to implement change in a stratified fashion
- Ability to compare results with modification to previous results or to re-calculate previous results with modification

Necessity – If the genesis for the retirement or modification is not due to clinical relevance and the measure is not used in other programs, the retirement or modification will not be implemented for DSRIP.

Availability of replacement measure for retired measure – If there is a standardized measure with similar focus available for replacement for the retired measure, the new measure will be introduced at the beginning of the next measurement year. The new measure will be associated with the same achievement value as the retired measure. See Adjusting Performance Goals, Annual Improvement Targets and Achievement Values below for details on how data sources affect the continuity of the total achievement values.
**Stratified implementation** – If the modification can be applied in a stratified manner, meaning that the portion of the result used in DSRIP remains unchanged, this portion will be used for the improvement evaluation for the PPS in determining the achievement value award.

**Comparability to Previous results** – Retirement of a measure would not allow comparability to previous results. A measure result with the modification will be considered to not affect comparability if the change in the result with the modification is less than 10 percent change from the previous results without the modification, or no significant impact. Significant impact is determined if revised specifications alter the previous year’s overall results by more than a 10 percent change. The method to determine percent change is to:

- divide the previous result (previous measurement year data with original specifications) by the new result (previous measurement year data if available or current measurement year data with revised specifications) and multiply the quotient by 100;
- then subtract 100 from the result for the percent change.

\[
\text{Percent Change} = \left( \frac{\text{Previous Result}}{\text{New Result}} \right) \times 100 - 100
\]

**Adjusting Performance Goals, Annual Improvement Targets and Achievement Values** – If the previous year’s result, compared to results with the changes implemented, is determined to have less than a 10 percent change, the performance goals, annual improvement targets and achievement values will not be affected in any manner.

If there is more than a 10 percent change or significant impact to the previous year’s result compared to results with the changed implemented, the performance goals and annual improvement targets will be re-established. If the data is available to re-calculate the previous year’s results with the modification, such as with claims-based measures, the revised result can be created using previous year’s claims. This would allow no interruption of achievement value awards. Non-claims based measures would need to have data collection before the baseline data would be available. The first year’s results with the revised measure will be considered the baseline and will be used to set the performance goal and the annual improvement target for the next measurement year. In the interim year, when the baseline data is being collected, the achievement value will be retained in the project as pay-for-reporting (P4R) award.

The decision process and any subsequent need for revising performance goals, annual improvement targets, and achievement values are described in two decision trees (Measure Retirement - Figure 4 and Measure Specification Modifications – Figure 5).

Annual achievement value (AV) awards are affected under two scenarios as shown in the two decision trees: in the case of measure retirement with no replacement and in the case of significant modification to non-claims-based measures. Details regarding impact of available achievement values on annual payments are contained in the [Achievement Value Guide](#).
Figure 4. Measure Retirement Decision Tree

- Measure retired by steward

  - Due to clinical relevance?
    - Yes
      - Replacement available?
        - Yes
          - Claims based?
            - Yes
              - Measure introduced in subsequent measurement year
              - Data from prior year used to create baseline data for measure
              - Baseline data to determine PG and AIT
              - AV each year
              - CMS notified of replacement
            - No
              - Measure introduced in subsequent measurement year
              - Results from that next year to set PG and AIT
              - P4R AV for interim year
              - P4P AV after 2 consecutive years of results
              - CMS notified of replacement and adjustment to AV value of project
        - No
          - Claims based?
            - Yes
              - Measure introduced in subsequent measurement year
              - Data from prior year used to create baseline data for measure
              - Baseline data to determine PG and AIT
              - AV each year
              - CMS notified of replacement
            - No
              - Measure introduced in subsequent measurement year
              - Results from that next year to set PG and AIT
              - P4R AV for interim year
              - P4P AV after 2 consecutive years of results
              - CMS notified of replacement and adjustment to AV value of project
    - No
      - Keep in DSRIP
      - No change to PG, AIT
      - AV each year

  - No
    - Replacement available?
      - Yes
        - Claims based?
          - Yes
            - Measure introduced in subsequent measurement year
            - Data from prior year used to create baseline data for measure
            - Baseline data to determine PG and AIT
            - AV each year
            - CMS notified of replacement
          - No
            - Measure introduced in subsequent measurement year
            - Results from that next year to set PG and AIT
            - P4R AV for interim year
            - P4P AV after 2 consecutive years of results
            - CMS notified of replacement and adjustment to AV value of project
        - No
          - Claims based?
            - Yes
              - Measure introduced in subsequent measurement year
              - Data from prior year used to create baseline data for measure
              - Baseline data to determine PG and AIT
              - AV each year
              - CMS notified of replacement
            - No
              - Measure introduced in subsequent measurement year
              - Results from that next year to set PG and AIT
              - P4R AV for interim year
              - P4P AV after 2 consecutive years of results
              - CMS notified of replacement and adjustment to AV value of project

PG = Performance Goal
AIT = Annual Improvement Target
AV = Achievement Value
Figure 5. Measure Specification Modification Decision Tree

Measure change by steward

Due to clinical relevance?

Yes

Alignment concern?

Yes

Stratified application?

Yes

• Change applied
  • PPS measured with original piece (e.g. age group)
  • No change to PG, AIT
  • AV each year

No

Claims based?

Yes

• Change applied to subsequent measurement year
  • Results from prior year with original specifications compared to prior year with modified specifications for percent change

No

Significant Impact?

Yes

• Results from the prior measurement year with modified specifications used to create revised results for the measure
  • Revised result used to determine PG and AIT
  • AV each year
  • CMS notified

No

• No change to PG, AIT
  • AV each year

Significant Impact?

Yes

• Results from the first measurement year with modified specifications used as baseline data for the measure
  • Baseline data to determine PG and AIT
  • P4R AV for interim year
  • P4P AV after 2 consecutive years of results
  • CMS notified

No

• No change to PG, AIT
  • AV each year

PG = Performance Goal
AIT = Annual Improvement Target
AV = Achievement Value
Common Scenarios

To demonstrate the process, several examples are provided. The examples described in this section are not intended to be inclusive of every situation which may arise, but address scenarios most likely to occur. If a new scenario arises during DSRIP, CMS and the NYS DOH will collaborate on the appropriate process to address the new scenario.

Scenario 1 - Measure specifications altered for reasons other than clinical relevance AND no alignment concern because measure is not in use in other levels of health care delivery in New York, such as health plan (QARR), meaningful use and health homes.

For example, a newer version of C&G CAHPS questionnaire is released with a modification in the response option schema for some questions. This could be done to echo new response options for other items in the survey version. The measure steward determines the modification is not based on validity of results and is not related to changes in clinical care recommendations.

Process decision: the original response option schema will be maintained to allow for consistent measurement. Maintaining measures specific to DSRIP will not introduce any confusion over the use of different measure versions within other levels of health care delivery.

Scenario 2 - Measure specifications altered for clinical relevance AND can be applied to DSRIP in a stratified fashion to allow consistent trending.

For example, if the upper age limit for a DSRIP measure was changed from 64 to 75 years, the specification modification could be applied in a manner that the original measure specifications would be maintained for consistency in trending. The PPS results for the measure could be stratified by age allowing consistent trending for the age group through age 64. The change in the age limit does not indicate an issue with relevance to the population through age 64.

Process decision: the measure specifications will be applied in a manner that allows for stratification of results so that the original specifications will be maintained to allow for consistent trending for evaluation of improvement. Stratified results would be provided; for example results for the 65 to 75 year age group separately from the results for the other age group.

Scenario 3 - Measure specifications altered for clinical relevance AND cannot be applied to DSRIP in a fashion to allow consistent trending. Common examples are modifications to coding, medications, other technical adjustments, or criteria related to recommended clinical care or treatment guidelines.

For example, measure specifications are modified to update new Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) codes which reflect recently added services relevant to the measure and allow more complete collection of the information.

Process decision: the modifications will be incorporated into the finalized version of the measure specification manual for the measurement year to allow for continued meaningful results of recommended quality care.

Scenario 4 - Measures which are retired by the measure steward because of changes in recommended quality care.

For example, the Cholesterol Management for Patients with Cardiovascular Conditions has been retired by NCQA due to recommendation changes regarding the LDL-c control level.

Process decision: the retirement will be incorporated.
Glossary for Measure Components

The terminology below is included in components for measures described in the tables below or in performance measurement procedures.

**Achievement Value**: The achievement value associated with the measure which the PPS will earn if associated criteria are met.

**Annual Improvement Target (AIT)**: The result the PPS needs to meet or exceed to attain the achievement value for the measure for the measurement year. The annual improvement target is established using the PPS’ result from the previous measurement year. For example, the result for Measurement Year (MY) 1 is used to set the annual improvement target for MY 2 (see Section II).

**Demonstration Year (DY)**: DYs are twelve month calendar year periods beginning on April 1st and ending on March 31st for all 5 of the demonstration years. For example, DY1 begins on April 1, 2015 and ends March 31, 2016. The DY is different from the measurement year (see below).

**Denominator**: The members of the eligible population who meet the measure’s additional criteria (e.g. all adult patients with diabetes) and are included in the result calculation. Note: many measures include specific denominator inclusion and exclusion criteria.

**High Performance Eligible**: The indicator is displayed for measures which are eligible for high performance funds.

**Measure Eligible Population**: Measures are developed to capture the population which is recommended for a particular service, called the eligible population. To define the eligible population, measures often have criteria such as age or diagnosis of a health condition to be included in the eligible population. While some measures may apply to everyone in the PPS (population-based), others may capture a smaller group within the PPS membership (episode-based). Population-based measures apply to the entire attributed PPS population over the measurement year. Episode-based measures are limited to only those members seen for that episode of care during the measurement year. Episode of care refers to all care provided over a measurement year for a specific condition (e.g. Diabetes - all diabetes care received in a defined time period for those members; HIV- all HIV care received in a defined time period for those members). Institutional-based measures apply to all people within the institution, such as nursing home measures.

**Measure Reporting Responsibility**: The collection process for each measure will be identified as calculated by the NYS DOH, or will be the responsibility of the PPS to collect or report. Measures that incorporate medical record data collected by the PPS with claims and encounters are shared responsibility of the PPS and NYS DOH. This will be detailed in Section IX in medical record guidelines.

**Measure Name**: The measure name or description is a brief statement of the measure. This will be used in the specifications, reporting templates and PPS reports containing results of the measures.

**NQF Number**: If the measure has a measure number from the National Quality Forum, whether currently endorsed or not, the number is included to facilitate access to more detailed specifications. Measures without an NQF number are listed as NA or Not Applicable.
Measure Status for DSRIP Payment: Pay for Performance (P4P) or Pay for Reporting (P4R). This designation specifies how the measure will be used for the purpose of DSRIP payment. Some measures are P4R throughout the entire demonstration period, while some measures also introduce a P4P achievement value in latter demonstration years (see tables 4 through 7).

Measure Achievement Value (AV): Several measures have more than one component. For such measures, the achievement value for the measure is proportioned among the components for a total AV of ‘1’ for the measure. This allows each measure to weigh equally in the overall achievement for a project.

Measurement Year (MY): A twelve month period from July 1 of the previous year to June 30 of the current year.

Numerator: Description of criteria to determine compliance for the particular measure (e.g. all patients with an HbA1c test). Note: many measures include specific numerator inclusion and exclusion criteria.

Payment: The payment methodology for DYs is displayed.

Performance Goals (PG): Many of the measures in domain 2 and 3 will have performance goals established to represent the best performance expected in NYS. The goals are used in calculating the gap to goal for the annual improvement targets and high performance targets, if applicable. This methodology used for establishing performance goals is described in Section II.

Specification Version: The version of the specifications used for the measure results is indicated, where applicable. When there are changes to the measure specifications, there can be differences with the NQF version. The indicated version of the measure steward’s specifications will be used.

Statewide Measure: The indicator is displayed for measures which are used to determine State performance for DSRIP. These measures are used to calculate state achievement of annual performance milestones in DY 3-5. The performance on these milestone can determine the amount of funding available to the program.

Steward: Specifies the organization that maintains or administers the measure (e.g. National Committee for Quality Assurance (NCQA), Agency for Healthcare Research and Quality (AHRQ)). The measure steward should be referred to for detailed specifications. This manual provides high-level requirements for collection of the measures.
Calculation of Domain 1 Process Measures

Domain 1 measures are process measures and are based largely on milestone reporting and completion of milestones and project requirements, as well as measures specific to Health Homes in accordance with Attachment J. Domain 1 measures are broken into two categories: organizational measures and project measures. Domain 1 achievement values are assigned for each project for both organizational and project components.

Organizational measures include the following sections: Governance, Workforce Strategy, Financial Sustainability, and Cultural Competency and Health Literacy.

Project requirements are based on Domain 1 DSRIP Project Requirements Milestones & Metrics and are described in more detail in Appendix A.

Calculation of Achievement Values for Domain 1 metrics is described in Tables 3 and 4 below.

Calculation of Domain 4 Population Health Measures

Projects in Domain 4: Population-wide Strategy Implementation are aligned to the NYS Prevention Agenda and align with projects in Domain 3. Performing Provider Systems selected one or two projects from at least one of the four priority areas:

- Promote Mental Health and Prevent Substance Abuse;
- Prevent Chronic Disease;
- Prevent HIV/AIDS; and
- Promote Healthy Women, Infants and Children

The Prevention Agenda has established performance goals for each priority area and defined indicators to measure progress toward achieving these goals, including reductions in health disparities among racial, ethnic, and socioeconomic groups and persons with disabilities. These performance goals will be utilized to report on performance of PPS Domain 4 projects (payment is based on reporting only). The PPS are responsible for reporting on progress in implementing their selected strategies.

The New York State Prevention Agenda Dashboard allows for a visual presentation of the Prevention Agenda tracking indicator data at state and county levels. It will serve as a key source for monitoring progress made around the state with regard to meeting the Prevention Agenda 2017 objectives. The state dashboard homepage displays a quick view of the most current data for New York State and the Prevention Agenda 2017 objectives, many of which are Domain 4 Pay for Reporting measures. The most current data are compared to data from previous time periods to assess the annual progress for each indicator. Specific data source methodology can be located here. Results of indicators are not specific to Medicaid and are not from the same time frame as the DSRIP measurement year. The most currently available data for some indicators may represent past years.

For each Prevention Agenda priority area and focus area, measurable targets have been identified with outcome goals. Achievement values for Domain 4 measures are based on Pay for Reporting only, but progress towards these Prevention Agenda benchmarks will be calculated and monitored for reporting purposes. When possible, Domain 4 measures will be calculated according to PPS service areas, depending on the availability of county-specific data.
Data Sources for Domain 4 Projects

Domain 4 measures rely on data sources such as those listed below. Each project measure will be tracked and published electronically in yearly reports for the State and counties (where county data is available) as a Prevention Agenda (PA) Tracking Indicator.

- Asthma Surveillance Data
- Baseline Data - State and County Tracking Indicators for the Priority Areas
- Cancer Registry
- Community Health Indicator Reports
- County Health Indicators by Race/Ethnicity (CHIRE)
- County/ZIP Code Perinatal Data Profile
- Expanded (County Level) Behavioral Risk Factor Surveillance System
- Health Data NY GOV
- Hospital-Acquired Infection Reporting System
- Leading Causes of Death in New York State
- Medicaid Redesign Team Health Disparities Work Group Data and Information
- New York State Prevention Agenda Tracking Indicator Dashboard
- Prevention Quality Indicators (PQI)
- Report on Managed Care Plans Performance in New York State
- Sexually Transmitted Diseases Data and Statistics
- The New York State Pregnancy Risk Assessment Monitoring System (PRAMS)
- Vital Statistics (births, pregnancies, deaths)

Other External Data Sources

- America’s Health Rankings
- Behavioral Risk Factor Surveillance System - National and State Prevalence Data
- Children in the States Factsheets (Children's Defense Fund)
- Chronic Disease Indicators - CDC

</table>
**Domain 1 Section** | **Metrics / Measurement Definition** | **AV Calculation Methodology**  
--- | --- | ---  
Cultural Competency and Health Literacy | Finalize cultural competency / health literacy strategy | One achievement value point for each project will be given for Cultural Competency / Health Literacy based on demonstrated progress towards completion of milestones, including completion of milestones by target dates specified by DOH or PPS, and ongoing reporting.*  
| Develop a training strategy focused on addressing the drivers of health disparities (beyond the availability of language-appropriate material) |  
**Project Measures**  
Quarterly Progress Reports | See Appendix A and Domain 1 DSRIP Project Requirements Milestones & Metrics guide. | One achievement value point for each project will be given for demonstrated progress towards completion or achievement of project metrics, for reporting of providers completing project requirements where applicable, and for additional required project reporting such as project budget, flow of funds, and health home P4R measures.  
Project Implementation Speed | Measure for evaluating performance against application commitments to speed of implementation of all project requirements. | One achievement value point following completion of project requirements by commitment date (see Appendix A for more details on completion of project requirements and applicable timeframes).  
Project System Change Implementation (DY2) | Measure for evaluating completion of major project system transformation requirements (See Appendix A). | One achievement value point for completion of project requirements classified as “Project System Changes”. See Appendix A for more details.  
Patient Engagement Speed | Measure for evaluating performance against discounted application commitments to member engagement. | One achievement value point for engaging at least 80% of discounted active engagement commitments in DSRIP application for each payment period. Definitions of active engagement have been published under a separate protocol document to the DSRIP Website.  

*Progress will be demonstrated through quarterly reporting. Independent Assessor will make final determination regarding whether or not PPS has achieved organizational milestones or demonstrated satisfactory progress towards completion.*

IX. Random Sample, Medical Record Review Guidelines, and Early Elective Delivery Data Collection

Medical record chart/ Electronic Health Record Collection Steps

These guidelines apply to the following measures:

- Screening for Clinical Depression and Follow Up
- Controlling High Blood Pressure
- Comprehensive Diabetes Care
- Viral Load Suppression
- Prenatal/Postpartum care
- Frequency of Ongoing Prenatal Care (same sample as Prenatal/Postpartum Care)
- Childhood Immunization
- Lead Screening for Children (same sample as Childhood Immunization)

Step 1: NYS DOH will run the measure’s eligible population for the PPS’ attributed members. The measure’s eligible population is further defined by any measure-specific criteria based on the technical specifications for each measure (e.g. continuous enrollment, age or diagnosis).

Step 2: NYS DOH will draw a systematic random sample (n = 453) using a random index number after sorting the eligible population for each PPS. The random sample will include an oversample of 10% (453 + 46 = 499). Members will be identified as being included in the sample or being in the oversample. Members in the sample cannot be removed from the sample unless they meet an exclusion criteria for the measure. Members who are excluded from the measure, as defined by the specifications, will be excluded from the sample and the first member in the oversample will be brought into the sample, and so forth for each exclusion. Oversample members not included in the sample remain in the oversample. Every member in the sample and oversample will be accounted for in the member detail files returned to NYS DOH. (See Appendix B)

Step 3: The random sample, including the oversample, will be sent to the Medical record review (MRR) vendors using a secure file transfer mechanism. In addition to the sample, multiple files will be sent to the MRR vendor for each measure. These files contain member information such as Medicaid eligibility segments, PPS Identifier, Medicaid Client Identification Number, first and last name, and numerator information from administrative data. Additional files linking the member to services provided include information about the provider and visit/service information such as dates of visits/services, National Provider Identifier(s) (NPI) of the provider(s) associated with visits or services, and other measure specific requirements (i.e. HbA1C tests, or date of delivery).

Step 4: The MRR vendors will use abstraction tools and will develop training materials for review staff. The tool and materials must be approved by the licensed audit organization contracted by the Independent Assessor.
**Step 5:** Using the files as well as additional data sources, such as Qualified Entities (RHIOs) and health plans, the PPS and vendor will develop the record chases, using developed logic, to identify the practices and locations where records exist for the members that can be used in the medical record review.

**Step 6:** The PPS staff and MRR vendors are responsible for working with the providers to retrieve the required information from the medical records (paper or electronic). The PPS and vendors will coordinate the record retrieval and materials. Information is abstracted from records using trained medical record review staff. The abstracted information will be entered in the abstraction tool. If the medical record does not contain information for care provided in the measurement year, other medical records, if available, are pursued for review. Members cannot be excluded from the sample because no records are located. Each measure contains information about required and optional exclusions. Members meeting the measure criteria for exclusion can be removed from the sample and a member from the oversample will be moved into the sample. The PPS will receive additional administrative data from the State regarding claims or encounters for the measurement year that should be included in the chase logic for members who remain numerator non-compliant.

**Step 7:** In early December, the PPS and vendor will prepare a list of numerator compliant members for each measure by PPS. The licensed audit organization will determine a random sample and request a set of records from the PPS and vendor to use in validation. The licensed audit organization will conduct a medical record review validation for the sample of medical records (n = 30) per measure. If the validation process determines numerator-compliance findings to be invalid, the data will be invalidated and not incorporated into the PPS’s final result for that measure. Results from the licensed audit organization’s findings for each measure will be sent from the licensed audit organization to NYS DOH at the end of January.

**Step 8:** The PPS or MRR vendors will extract the abstracted data, determine numerator and denominator status for each member in the sample file and complete the member detail file.

**Step 9:** The PPS and MRR vendors will submit the completed member detail file to NYS DOH via a secure file transfer mechanism. Member attribution to the PPS will be reconciled. The information in the file, and the validation findings, will be incorporated with administrative data to calculate the PPS final result for the measure for the measurement year.
Reporting for Early Elective Delivery (Project 3.f.i)

Birthing hospitals associated with a PPS that has chosen project 3.f.i. will be required to review medical records for all inductions and cesarean sections that occur prior to onset of labor occurring at or after 36 0/7 weeks and before 38 6/7 weeks gestation during the time period of July 1 of the year prior through June 30 of the current year. Information collected for each qualifying delivery will be submitted to the NYS Perinatal Quality Collaborative by December 1 of the current year.

**Step 1:** The hospital will review all medical records for inductions and cesarean sections that occur prior to onset of labor occurring at or after 36 0/7 weeks and before 38 6/7 weeks gestation. Information about each qualifying delivery will be recorded on the appropriate form and submitted using the steps below.

**Step 2:** Trained medical record review staff should abstract information using the Scheduled Delivery Form for all scheduled deliveries with the relevant gestational age that occur within the measurement year (See Appendix C). If a hospital has zero inductions and cesarean sections that occur prior to onset of labor occurring at or after 36 0/7 weeks and before 38 6/7 weeks gestation, the hospital will be required to complete an aggregate data log indicating there were zero scheduled deliveries for that time period.

**Step 3:** The completed forms will be submitted through the NYS DOH Health Commerce System (HCS) using the application called the *NYS Perinatal Quality Collaborative (NYSPQC) Scheduled Delivery Form System*. Each hospital will need to have a designated person with an HCS account and proper roles assigned to access this secure system. For questions about getting an HCS account, or locating who in your organization may have an already existing account, please e-mail NYSPQC@health.state.ny.us.

**Step 4:** The information submitted will be used to calculate the PPS’s final result for the measure for the measurement year. For each PPS calculation, hospital-specific results will be aggregated and averaged across all birthing hospitals within each PPS network. If a hospital participates with more than one PPS, the hospital does not need to enter information more than once. The same hospital-specific data will be used for each PPS network in which the hospital participates.

**X. Aggregate Data Reporting**

Several measures will be reported by the PPS in aggregate, such as workforce milestones in Domain 1. The PPS will provide aggregated data to the Independent Assessor at the required intervals. Instructions about the file variables and mechanism for reporting data will be forthcoming from the Independent Assessor.
XI.  Member Detail File Requirements and Layout

Each MRR vendor will submit the member detail file to NYS DOH via a secure file transfer by the February deadline for the measurement year. Information which contains invalid Client Identification Numbers or invalid values in the denominator or numerator fields will not be used. See Appendix B for the file layout and column value definitions.

XII.  Final Result Calculation

For measures requiring medical record data, NYS DOH will incorporate information from the member detail file with the administrative data for the measurement year to calculate the PPS’ final results for the measurement year. Measures calculated by NYS DOH will be produced in February following the measurement year after the January refresh of the December encounter and claims data are loaded in the Medicaid data system. This allows a six month run out of claims and encounters prior to calculating measure results.

XIII.  Data to Performing Provider Systems and Independent Assessor

NYS DOH will aggregate all results and provide information to the Independent Assessor. The Independent Assessor will determine whether annual improvement targets and high performance levels (where applicable) were attained. PPS will receive reports containing final measure results, achievement value attainment, and high performance attainment for the completed measurement year, as well as annual improvement targets and high performance levels for the next measurement year.
Appendix A – Domain 1 Project Milestones and Metrics

Domain 1 Project Milestones & Metrics are based largely on investments in training and recruiting personnel, identifying project leadership, and developing clinical protocols that will strengthen the PPS’ ability to successfully meet DSRIP project goals. Additionally, the project requirements include specific provider-level commitments to increase the availability of NCQA-certified PCPs, invest in HIT, and fully establish the project programs (medical villages, Ambulatory ICUs, etc.). Each requirement’s milestone and associated metrics are detailed. These requirements also comprise of the completion time period in addition to the unit level of reporting, both which are discussed in further detail below.

Completion of project requirements falls into three key timeframes:

1) **System Transformation Changes Due by DY2**
   Based upon the work plan section in Attachment I (NY DSRIP Program Funding and Mechanics Protocol), no more than the first two years will be utilized to implement major system changes related to the project. For example, project requirements within this category include developing clinical protocols, training for care coordinators, identifying key project personnel, performing population health management activities, and using EHRs or other technical platforms to track actively engaged patients.

2) **Requirements Requiring Completion by DY3**
   A number of project requirements detail prescribed end dates within their description. Two of these project requirements are safety net providers actively sharing medical records with RHIO/SHIN-NY by the end of DY3 and PCPs achieving NCQA 2014 Level 3 PCMH certification by the end of DY3.

3) **Completion Adhering to Speed and Scale Commitments**
   The due dates for these project requirements are at the discretion of the PPS and should be consistent with commitments made in the speed and scale sections of the approved application. Example requirements include: implementing open access scheduling, deploying a provider notification/secure messaging system, and converting outdated or unneeded hospital capacity.

Completion of project requirements is also delineated by the unit level of reporting:

1) **Project-Unit Level Reporting**
   These are Domain 1 requirements reported at the project-wide level and demonstrating the PPS’ overall project performance and success. Some of these requirements are performing population health management activities, developing a comprehensive care plan for each patient, establishing partnerships between primary care providers and participating Health Homes, and developing educational materials consistent with cultural and linguistic needs of the population.

2) **Provider-Unit Level Reporting**
   These are Domain 1 requirements for which performance and success must be demonstrated and reported at the individual provider/practice site level. **Note:** Applicable provider types, by which reporting will be demarcated, refer to the classifications each PPS selected along with speed and scale submissions.
Appendix B – Performing Provider System Member Detail File Layout

The information from the medical record review will be used to determine denominator and numerator status for each member in the sample for the PPS. Members may be involved in more than one measure, and all of the measure information for that member will be in the single row. Files will be completed using the following file layout and formats in the table below. All rows will be the same length. Zero fill all columns that are not applicable to the member, such as measures not associated with the PPS’ projects.

Members identified as 1 through 453 in the sample file are considered to be the denominator for the measure and those identified from 454 through 499 are considered the oversample. For the member detail file, those who were in the denominator should be reflected with a value ‘1’. If a member meets exclusion criteria for the measure, the member’s denominator status will be ‘8’ indicating exclusion. The first member in the oversample will then be pulled into the denominator. All members from the oversample who are not included in the denominator will be indicated as ‘9’ in the denominator column. If the sample has less than 453 members and some are excluded, the final denominator will be less than 453. Most numerator status columns for the measure will also be indicated as ‘1’ if the member is numerator compliant for the measure or ‘0’ if numerator non-compliant. Two measures use a count of events in the numerator fields, so there may be more values than ‘1’ and ‘0’ in those columns.

MY2 File Layout Changes – Three additional numerator columns for ‘Screening for Clinical Depression and Follow Up Plan’ have been incorporated into the file layout due to revised measure technical specifications. These have been inserted in columns 13, 14 and 15. All ensuing columns have been renumbered accordingly.

Appendix C - New York State Perinatal Quality Collaborative (NYSPQC) Scheduled Delivery Form (Project 3.f.i)

New York State Perinatal Quality Collaborative – Scheduled Delivery Form

Scheduled as defined all inductions and cesarean sections prior to onset of labor between 36 6/7 and 38 6/7 weeks gestational age

A. Patient Demographics

1. Permanent Facility Identifier (PFI):
   - 2. Facility Name:
   - 3a. Sequence Number:
   - 3b. System ID:

4. Admit Date (Month and Year): mm/yyyy
   - Delivery Type:
     - 7. Vaginal: Spontaneous [ ] Operative [ ]
     - 8. Cesarean: Primary [ ] Repeat [ ]
     - 9. Induced Labor: Yes [ ] No [ ]

5. Maternal Age: _______ years

6. NOTES:

   - 10. Patient ethnicity: Hispanic [ ] Non-Hispanic [ ] Ethnicity Unknown [ ]
   - 11. Patient race: White [ ] Black or African American [ ] American Indian/Alaskan Native [ ]
     - Asian [ ] Native Hawaiian/Other Pacific Islander [ ] Other Race [ ]
     - Race Unknown [ ]

   - 12. Primary Insurer: Medicaid [ ] Uninsured [ ] Private [ ] Other [ ]

B. Clinical Data

13. Final Gestational Age at Delivery: _______ weeks _______ days

14. Was gestational age documented in the chart? Yes [ ] No [ ]

15. Was gestational age of less than 39 weeks confirmed by one of the following?
   - First or second trimester ultrasound < 20 weeks
   - Fetal heart tones documented for 30 weeks by Doppler ultrasonography
   - 36 weeks since positive serum/urine human chorionic gonadotropin pregnancy test result

16. Was fetal lung maturity documented by amniocentesis? Yes [ ] No [ ]

17. For inductions, was the Bishop Score of cervical status 8 or greater for a primigravida birth mother or 6 or greater for a multigravida birth mother?
   - Score 28 primigravida, 26 multigravida. Determined, did not meet criteria [ ]
   - Not measured or cannot be calculated [ ]

Patient Counseling (18a and 18c are only required for PRCs participating in the OB Prenatal Education Project)

18a. Was there documentation in the medical record that the maternal and fetal risks and benefits of scheduled delivery between 36 0/7 and 38 6/7 weeks were discussed with the mother? Yes [ ] No [ ]

18b. Was there documentation in the medical record of the mother’s preferred language? If yes, please specify the language. Yes [ ] No [ ]

18c. Was patient education provided in the mother’s preferred language? Yes [ ] No [ ]

Reason for Scheduled Delivery

19. Was there documentation in the medical or prenatal record of the primary reason for scheduled delivery? Yes [ ] No [ ]

Which of the following was the PRIMARY reason documented in the medical records for a scheduled delivery between 36 0/7 and 38 6/7 weeks gestation? (Reasons can be maternal, fetal, psychosocial)

**SELECT ONLY ONE AND Specify Below as Needed***

20. Maternal Reasons for Scheduled Delivery

   - Premature rupture of membranes [ ]
   - Prepregnancy hypertension [ ]
   - Hematological condition (specify in #23 below)

   - Prolonged rupture of membranes [ ]
   - Gestational diabetes [ ]
   - Active genital herpes infection [ ]

   - Chorioamnionitis [ ]
   - Diabetes Type I/II [ ]
   - Prior myomectomy [ ]

   - Placental abruption [ ]
   - Heart disease (specify in #23 below)
   - Prior vertical or "T" incision c-section [ ]

   - Placenta previa/Visa previa [ ]
   - Liver disease (specify in #23 below)
   - History of poor pregnancy outcomes (specify in #23 below)

   - Gestational hypertension [ ]
   - Renal disease (specify in #23 below)
   - History of fast labor (<3 hrs) and distant from hospital [ ]

   - Preeclampsia/Edema [ ]
   - Pulmonary disease (specify in #23 below)
   - HIV [ ]

   - Placenta Accreta [ ]
   - Other (specify in #23 below)

NYSPQC Scheduled Delivery Form *Medical Record # and initials for site use only will not be sent to NYSDOH Revision Date: 6-30-2014
Appendix D – New York State-Specific Measures

Screening for Clinical Depression and Follow Up Plan

Changes for MY 2 specifications
- Clarification added regarding determining the standardized screening score or result
- Additional exclusion codes and categories were added
- Numerator components added to provide additional information about opportunities to improve care

Description:
Percentage of Medicaid enrollees age 18 and older who were screened for clinical depression using a standardized depression screening tool, and if a positive screen, received appropriate follow-up care. The intention of the measure is to capture early identification and intervention for persons with positive scores on screening tools within the context of routine preventive care visits.

Definitions:

- **Screening**
  Completion of a standardized, validated clinical or diagnostic tool used to identify people at risk of developing or having a certain disease or condition. This measure looks for screening with a standardized tool being conducted in the practitioner’s office during preventive care or evaluation and management visits.

- **Adult Standardized Screening tool (Ages 18 and older)**
  An assessment tool that has been normalized and validated for the adult population (e.g. Patient Health Questionnaire [PHQ-9], Beck Depression inventory [BDI or BDI-II], Mood Feeling Questionnaire [MFQ], Center for Epidemiologic Studies Depression Scale [CES-D], Depression Scale [DEPS], Duke Anxiety-Depression Scale [DADS], Geriatric Depression Scale [GDS], Hopkins Symptom Checklist [HSCL], Zung Self-Rating Depression Scale [SDS], Cornell Scale Screening, PRIME MD-PHQ-2, and Edinburgh Postnatal Depression Scale [EPDS]). Assessment tools may be named or a complete tool may be embedded in the medical record and not named.

- **Depression screen scoring**
  Standardized depression screening tools do not diagnose depression, but rather indicate whether or not there is a need for more detailed follow-up by a clinician. Standardized depression screening tools are typically scored, and the scoring includes established cut points for depression based on established sensitivity, specificity and positive and negative predictive values of the scores for detecting depression. Established scoring cut points for the most commonly used screens in primary care (PHQ) are detailed in Medical Record Specifications below.

- **Follow Up Plan**
  Documentation of follow up must include one or more of the following in the 30-day period following the initial positive screen (inclusive of the screening visit date):
  - Recommended or prescribed antidepressant medication;
  - Recommended or made referral or follow up visit with behavioral health provider;
• Recommended or scheduled follow up outpatient visit with any provider, including the PCP or other provider administering the original screen, for further assessment within 30 days of the positive screen;
• Further assessment on the same day of the positive screen which includes documentation of additional depression assessment indicating no depression (such as positive score from PHQ-2 with a negative PHQ-9 or documented negative findings after further evaluation);
• Referral to emergency department for crisis services on the same day of the positive screen; or
• Arrangement for inpatient admission for mental health diagnosis on the same day as the positive screen.

Intake Period: July 1 of the prior year through June 1 of the measurement year.

DSRIP Measurement Year: July 1 of the prior year through June 30 of the current year. For example, measurement year 2 is July 1, 2015 to June 30, 2016.

Eligible Population:
Product Line: Medicaid
Ages: 18 years or older as of July 1 of the measurement year. Report two age stratifications and a total result.
• 18 - 64 years
• 65 years and older
• Total
Continuous Enrollment: Continuous enrollment in Medicaid for the measurement year. The allowable gap is no more than one month during the measurement year.
Anchor Date: June 30 of the measurement year.
Event diagnosis: Members who had a qualifying outpatient visit during the intake period (listed in table CDF-A)

CDF-A: Qualifying outpatient visits

Denominator:
A systematic sample drawn from the eligible population.
Required Denominator Exclusions (listed in table CDF-B)

- Remove members with: A diagnosis of a depressive disorder in the year prior to the measurement year or prior to the date of the first standardized screen in the measurement year. If there is no standardized screen in the measurement year, remove any member with a diagnosis at any time in the measurement year.
- A diagnosis of Bipolar disorder in the year prior to the measurement year or prior to the date of the first standardized screen in the measurement year. If there is no standardized screen in the measurement year, remove any member with a diagnosis at any time in the measurement year.
- A diagnosis of severe intellectual disability or dementia in the year prior or during the measurement year.

Numerator

Members who were screened for clinical depression with a standardized tool in the measurement year and if positive, had appropriate follow up care within 30 days (inclusive) of the positive result.

Administrative Specifications

<table>
<thead>
<tr>
<th>HCPCS Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>G8431</td>
<td>Screening for clinical depression is documented as positive and follow up plan is documented</td>
</tr>
<tr>
<td>G8510</td>
<td>Screening for clinical depression is documented as negative; a follow up plan is not required</td>
</tr>
</tbody>
</table>

NOTE: Use of HCPCS codes in administrative data will need to be verified by the PPS to ensure the use of this code by a provider is associated with a standardized depression screening tool and follow up plan as indicated. As providers are encouraged to use the HCPCS codes to allow monitoring of improvement in administrative data, the PPS needs to ensure the coding is associated with the standardized tools, with scoring and follow up documentation if indicated.
Medical Record Specifications

Required Denominator Exclusions

- Remove members with medical record documentation of:
  - Any history of bipolar disorder or of a depressive disorder prior to the date of the first standardized screen in the measurement year. If there is no standardized screen in the measurement year, remove any member with a diagnosis of bipolar disorder or depressive disorder at any time in the measurement year. Diagnoses of depressive disorders include major depressive disorder (MDD), persistent depressive disorder (dysthymia), or unspecified depressive disorder.
  - Severe mental and/or physical incapacity where the person is unable to express himself/herself in a manner understood by others. Examples include members with delirium or severe cognitive impairment.

Numerator

The following steps are used to determine numerator component compliance and will be used in the calculation of numerator events:

**Step 1** Review all qualifying visits within the intake period to determine if a standardized depression screen was conducted. If the member has qualifying visits with more than one provider, records from each of the applicable providers can be used in the review. Additionally, information from all visits with the providers associated with at least one qualifying visit can be included in the review. For example, if the member had three visits with a provider in the intake period and two of the three are not a qualifying visit, information from the two non-qualifying visits can be included in the review for standardized screening. Visits with providers that are not associated with at least one qualifying visit cannot be included in the review.

**Step 2** Identify all of the members with a standardized screening tool documented during the intake period. If a member has more than one visit with a standardized screen during the intake period, use the result from the first date. Members with one or more completed standardized screening tools are compliant for numerator component 1.

**Step 3** For all the members with a documented screening, determine the result of the screening. Identify members whose result is negative by: 1) Clinician documentation that screening results are negative, or, if there is no clinician documentation of screening results; 2) Negative screening score using the cut point criteria specified for the tool. Members who screen negative are compliant for numerator component 2.

Negative screens for PHQ tools:

- PHQ-9: A member with a PHQ-9 score < 5 is considered to have screened negative for depression.
- PHQ-2 with numeric scale: A member with a PHQ-2 score < 3 when a scored PHQ-2 instrument is used is considered to have screened negative for depression.
- PHQ-2 without a numeric scale: A member who answers “no” to both of the two questions is considered to have screened negative for depression.
**Step 4** For all the members with a documented screening, determine the result of the screening. Identify members whose result is positive by: 1) Clinician documentation that screening results are positive, or, if there is no clinician documentation of screening results; 2) Positive screening score using the cut point criteria specified for the tool. Members who screen positive are compliant for numerator component 3.

Positive screens for PHQ tools:

- **PHQ-9**: A member with a PHQ-9 score ≥ 5 is considered to have screened positive for depression.
- **PHQ-2 with numerical scale**: A member with a PHQ-2 Score ≥ 3 when a scored PHQ-2 instrument is used is considered to have screened positive for depression.
- **PHQ-2 without numerical scale**: A member who answers “yes” to either of the two questions is considered to have screened positive for depression.

**Step 5** For all of the members from Step 4, count members for whom follow-up care was provided within 30 days (inclusive) of the date of the positive screen. Members who have documented follow up plans are compliant for numerator component 4.

Follow up documentation must include one or more of the following within 30 days following the positive screen:

- Recommended or prescribed antidepressant medication;
- Recommended or made referral or follow up visit with behavioral health provider;
- Recommended or scheduled follow up outpatient visit with any provider, including the PCP or other provider administering the original screen, for further assessment within 30 days of the positive screen;
- Further assessment on the same day of the positive screen which includes documentation of additional depression assessment indicating no depression (such as positive score from PHQ-2 with a negative PHQ-9 or documented negative findings after further evaluation);
- Referral to emergency department for crisis services on the same day of the positive screen; or
- Arrangement for inpatient admission for mental health diagnosis on the same day as the positive screen.

**Step 6** Sum the total of the members compliant with numerator component 1 AND 2 (screened negative) and with numerator component 1 AND 3 AND 4 (screened positive with documented follow-up plan) for the total numerator events.

Numerator Events = Screened negative (members compliant with both Numerator components 1 and 2) + Screened positive with documented follow up plan (members compliant with Numerator components 1, 3 and 4)
References

Screening for Clinical Depression and Follow Up flow chart

Eligible Population

- Is member 18 or older as of July 1st of the year prior to the current year?
  - Yes
    - Continuous enrollment in the measurement year?
      - Yes
        - Had at least one outpatient visit during the intake period?
          - Yes
            - Not included in eligible population
          - No
            - Not included in eligible population
        - No
          - Not included in eligible population
    - No
      - Not included in eligible population

Exclusions

- Did the member have a diagnosis of major depression in the year prior to the measurement year or prior to the first standardized screen in the measurement year? Or if no standardized screen, did the member have a diagnosis of major depression at any time in the measurement year? OR Did the member have a diagnosis of bipolar disorder in the year prior to the measurement year or prior to the first standardized screen in the measurement year? Or if no standardized screen, did the member have a diagnosis of bipolar disorder at any time in the measurement year? OR Did the member have a diagnosis of severe intellectual disability or dementia in the year prior or during the measurement year?
  - Yes
    - Not included in eligible population
  - No
    - Was the member screened with a standardized tool for clinical depression at least once during the intake period?
      - Yes
        - Numerator component 1 Compliant
      - No
        - Numerator component 1 Non-compliant
      - If the member had more than one standardized screen for depression during the intake period, use the first screen completed in the intake period
        - Yes
          - Numerator component 1 Compliant
        - No
          - Numerator component 1 Non-compliant
      - Was the score missing or unable to be determined?
        - Yes
          - Numerator component 1 Non-compliant
        - No
          - Was the result of the screen negative for depression?
            - Yes
              - Numerator component 2 Compliant
            - No
              - Was the result of the screen positive for depression?
                - Yes
                  - Numerator component 3 Compliant
                - No
                  - Did the member receive appropriate follow up care within 30 days of the positive screen?
                    - Yes
                      - Numerator component 4 Compliant
                    - No
                      - Numerator component 4 Non-compliant
Additional Notes on documentation of screening and results:

**Use of standardized tools embedded in forms or electronic medical records** –
If all of the questions and response categories from a standardized screening tool are used within medical records that allow the same consistency of creating a score for determining positive and negative results, the information would be acceptable evidence of numerator compliance whether the name of the tool is present or not. The key requirements for numerator compliance are:
- All questions from a standardized tool are included
- Same standardized tool response options are available
- Documented score or finding of negative or positive screen
- Follow up plan documented if positive

**Example:** PHQ-2 questions, with responses, score or finding, and follow up if indicated = numerator compliant

<table>

</table>

“Score 5; Positive screen, Referral and appointment made with Capital Psychiatric Clinic on XX/XX/XXXX” (within 30 days of the positive screen).

**Use of Summary of Findings from Standardized tools** –
Documentation that indicates a standardized tool was used for screening for clinical depression with a score, and if the score indicates a positive screen, the follow up plan is documented.

**Example:** Standardized tool completed, with score or finding and follow up if indicated = numerator compliant

“PHQ-2 assessment completed, negative screen. No follow up indicated”

**Use of Summary of Findings from Symptom Queries** –
Documentation about findings from queries or discussion without specific questions from a standardized tool or score is NOT numerator compliant.

**Example:** No indication of tool, or finding, or general query statements = numerator non-compliant

“depression screening negative” or “depression screen done” or “denies depression”
Viral Load Suppression

Description: The percentage of Medicaid enrollees who qualified through at least one method as living with HIV/AIDS during the year prior to the measurement year who had a HIV viral load less than 200 copies/mL at last HIV viral load test during the measurement year.

Definitions:
- **HIV Viral Load**: The HIV viral load is the number of copies of the human immunodeficiency virus (HIV) in the blood or bodily fluid.
- **HIV Viral Load Test**: The HIV viral load test measures the number of HIV copies in a milliliter of blood.
- **DSRIP Measurement Year**: July 1 of the prior year through June 30 of the current year. For example, measurement year 1 is July 1, 2014 to June 30, 2015.

Eligible Population:
- **Product Line**: Medicaid
- **Ages**: All members of the eligible population ages 2 and older as of June 30 of the measurement year.
- **Continuous Enrollment**: 12 months continuous enrollment for the measurement year. The allowable gap is no more than one month during the measurement year.
- **Anchor Date**: June 30 of the measurement year.
- **Index Episode Event**: Identify members as having HIV or AIDS who met at least one of the following criteria during the year prior to the measurement year with at least one of the 4 methods listed below:
  - **Method 1**: At least one acute inpatient encounter (Acute Inpatient Value Set) with a diagnosis of HIV (HIV Value Set) or an inpatient DRG for HIV during the year prior to the measurement year (Table HIV-A)

</tr>
</tbody>
</table>

Method 3  
At least one ED Visit (ED Value Set/ Table HIV-C), with a primary or secondary diagnosis indicating HIV/AIDS (HIV Value Set/ Table HIV-B).

Method 4  
At least one dispensing event for ARV medications (Table HIV-D) during the year prior to the measurement year AND without a primary or secondary diagnosis of Hepatitis B or HTLV-1 (Table HIV-E) in any setting (Acute Inpatient Value Set, Ambulatory Visits Value Set, Table HIV-A, and Table HIV-C). Members identified as having HIV/AIDS because of at least one dispensing event, where Truvada (Tenofovir disoproxil fumarate + emtricitabine or TDF/FTC) or Stribild was dispensed, must also have at least one diagnosis of HIV/AIDS (HIV Value Set / Table HIV-B) during the year prior to the measurement year. A dispensing event is one prescription of an amount lasting 30 days or less. To convert dispensing events for prescriptions longer than 30 days, divide the days’ supply by 30 and round down.

Table HIV-D: An excel file with NDC Codes to Identify Antiretroviral Medications is available at: http://www.health.ny.gov/health_care/managed_care/plans/index.htm

Denominator

A systematic sample drawn from the eligible population.

Denominator Required Exclusions

Medical record

- Any member found to be HIV negative during the measurement year or the year prior.
  - Evidence for determining HIV negative status include: negative diagnostic test results such as HIV Antibody test results or HIV rapid test results, documentation in the medical record of HIV negative status, or provider attestation of HIV negative status for the member. Statements such as “rule out HIV,” “possible HIV”, “questionable HIV” are not sufficient to confirm the diagnosis if such statements are the only notations of HIV in the medical record.
  - Evidence must be dated for the measurement year or year prior. If the documentation is for the year prior, there must not be any further documentation of HIV positive status after the negative notation. For example, a member with a negative HIV test in the year prior must have the documentation for the measurement year reviewed for indication of no more recent HIV test or status. Documentation of the negative HIV status must be before June 30 of the measurement year.
  - Attestations may be obtained from providers after the measurement year as long as the document specifies the member’s HIV negative status for the measurement year. Attestations from providers must be from the providers associated with the member’s health care. Obtaining attestations from all involved providers is necessary to ensure that the appropriate providers associated with the diagnosis are the ones attesting to the HIV negative status.
  - Exclude from the eligible population all members who had a nonacute inpatient admission during the measurement year.

Numerator

The number of Medicaid enrollees in the denominator with a HIV viral load less than 200 copies/mL for the most recent HIV viral load test during the measurement year.

Medical Record Specifications

Numerator

The following steps are used to determine numerator compliance:

**Step 1**
Review all medical record documentation for visits during the measurement year to determine dates of viral load testing.

**Step 2**
If there is more than one viral load test during the measurement year, determine the most recent viral load test in the measurement year.

**Step 3**
Determine the viral load level from the most recent viral load test during the measurement year. Results for particular assays may need to be converted to determine if the result equates to below 200 copies/mL (such as log-10 results).
  - Test results indicating viral load levels of less than 200 copies/mL; or
  - Documentation of levels less than 200 copies/mL with the test date.

**Step 4**
Sum the total of members identified in Step 3 for the total numerator events.

**NOTE**
Members without a viral load test during the measurement year or missing the result for the most recent test in the measurement year are numerator non-compliant.
Viral Load Suppression flow chart

**Eligible Population**
- Is member 2 or older as of June 30 of the measurement year?
  - Yes
  - Not included in eligible population
  - No
    - Continuous enrollment in the measurement year?
      - Yes
        - Had at least one qualifying event in the year prior to the measurement year?
          - Yes
            - Not included in eligible population
          - No
          - Not included in eligible population
      - No
        - Not included in eligible population

**Exclusions**
- Does the member have evidence of being HIV negative during the measurement year or the year prior?
  - Yes
    - Not included in eligible population
  - No

**Numerator**
- Was a viral load test done during the measurement year?
  - Yes
    - If the member had more than one viral load test during the measurement year, use the most recent viral load test.
    - Was the score missing or unable to be determined?
      - Yes
        - Numerator Non-compliant
      - No
        - Was the result of most recent viral load test result less than 200 copies/mL?
          - Yes
            - Numerator Compliant
          - No
            - Numerator Non-compliant
  - No
    - Numerator Non-compliant
Emergency Department Use By the Uninsured ±

Description:
The percentage of emergency department visits during the measurement year for individuals who are uninsured at the time of the visits.

Purpose: Increasing health insurance coverage among those who are uninsured can increase access to medical care, improve one’s health status, and reduce the burden of medical costs on the patient. ¹

Data Source: New York State SPARCS Outpatient file

Eligible Population: Patients with emergency department visits at hospitals (Article 28) participating in a Performing Provider System (PPS) network

Denominator Description: Emergency department visits that do not result in an inpatient admission

Denominator Exclusions: Emergency department visits for out of state residents are excluded

Numerator Description: The emergency department visits among individuals with self-pay revenue codes (i.e., 0450, 0451, 0452, 0456, 0459) in all payer typology fields

Numerator Exclusions: not applicable

± A lower rate is desirable.

¹ Healthy People.gov (see https://www.healthypeople.gov/2020/topics-objectives/topic/Access-to-Health-Services)
Meaningful Use Certified Providers who have a Participating Agreement; and
Meaningful Use Certified Providers Who Conduct Bidirectional Exchange (two measures)

Description:
The percentage of Meaningful Use certified providers who are identified in the measurement year data file as having:

Participating Agreement - a participating agreement with at least one Qualified Entity (RHIO)

Bidirectional Exchange – evidence they conduct bidirectional exchange using the Statewide Health Information Network for New York (SHIN-NY)* with at least one Qualified Entity (or RHIO).

Purpose:
Increasing the number of eligible providers who participate with Qualified Entities and adopt, implement, upgrade, or demonstrate meaningful use of certified electronic health record (EHR) technology improves the quality, safety, and efficiency of care while reducing disparities; promotes public and population health; improves care coordination; and promotes the privacy and security of patient information.

Data Source: Data files submitted by the Qualified Entities in New York State

Eligible Population: Providers who are participating in a Performing Provider System (PPS) who are Meaningful Use certified (able to use electronic health record technology)

Participating Agreement
Denominator Description: Number of providers who are Meaningful Use certified who are participating in a PPS

Denominator Exclusions: Providers who are not Meaningful Use certified

Numerator Description: Number of providers who have signed a participation agreement with at least one Qualified Entity

Numerator Exclusions: not applicable

Bidirectional Exchange
Denominator Description: Number of providers who are Meaningful Use certified who are participating in a PPS

Denominator Exclusions: Providers who are not Meaningful Use certified

Numerator Description: Number of providers who conduct bidirectional exchange by meeting both criteria: 1) make data available and 2) access data using the Statewide Health Information Network for New York (SHIN-NY) with at least one Qualified Entity

Numerator Exclusions: not applicable

* The SHIN-NY is a “network of networks” that links New York’s eight regional Qualified Entities (QEs) throughout the state. Each Qualified Entity (or RHIO – Regional Health Information Organization) operates its own network that collects electronic health records from participating providers.
Primary Care Providers Meeting Patient Centered Medical Home or Advanced Primary Care Standards

**Description:**
The percentage of primary care providers meeting Patient Centered Medical Home (PCMH) (NCQA) or Advanced Primary Care Standards (as developed under the NYS Health Innovation Plan (SHIP)) during the measurement year.

**Purpose:**
Patient centered medical home and advanced primary care are promising models for transforming the organization and delivery of high quality primary care for all Medicaid members. Increasing the implementation of PCMH and advanced primary care has many benefits including, but not limited to, better coordinated and personalized care, improved access to medical care, improved health outcomes, especially for patients who have chronic conditions, increased provider satisfaction and efficient, cost-effective care.

**Data Source:** Provider Network Data System (PNDS), NCQA PCMH Certification File, and APC status file (as developed under SHIP)

**Eligible Population:** Primary care providers participating in a PPS network

**Denominator Description:** The number of primary care providers in the PPS network

**Denominator Exclusions:** Large medical groups or clinics that are categorized by an organizational National Provider Identifier (NPI)

**Numerator Description:** The number of primary care providers meeting patient centered medical home or advanced primary care standards *using any level and any standard year*

**Numerator Exclusions:** not applicable
Non-use of Primary and Preventive Care Services ±

Description:
The percentage of attributed members with no evidence of primary care or preventive care services in the measurement year.

Purpose:
Improving health care services depends in part on ensuring that people have a usual and ongoing source of care. People with a usual source of care have better health outcomes and fewer disparities and costs. ²

Data Source: Medicaid Data warehouse

Eligible Population: The attributed population in the measurement year

Denominator Description: All PPS attributed members as of June 30th of the measurement year, who meet continuous enrollment and age criteria for the Adult Access to Preventive or Ambulatory care and Children’s Access to Primary Care measure specifications

Denominator Exclusions: Members eligible for Medicaid and Medicare (dual) at any time in the measurement year

Numerator Description: The percentage of attributed members who do not have at least one service with a preventive services CPT or equivalent code in the measurement year

Numerator Exclusions: not applicable

± A lower rate is desirable.

¹ Healthy People.gov (see https://www.healthypeople.gov/2020/topics-objectives/topic/Access-to-Health-Services)
**Medicaid Spending on Emergency Room and Inpatient Services ±**

**Description:**
Total Medicaid spending on emergency room (ER) and inpatient (IP) services during the measurement year per PPS attributed member per month.

**Purpose:**
The Affordable Care Act[^2] is working to improve quality and lower health care costs. The sources of inefficiency that are leading to increasing health care costs include payment for emergency room and inpatient care, and a lack of focus on disease prevention and engaging patients in primary care.

**Data Source:** Medicaid Data Warehouse

**Eligible Population:** All attributed members in the measurement year

**Denominator Description:** Total months enrolled in Medicaid (Member Months) for members attributed to the PPS as of June 30th of the measurement year

**Denominator Exclusions:** Members eligible for Medicaid and Medicare (dual) at any time in the measurement year.

**Numerator Description:** Total Medicaid amount paid for ER and IP services in the measurement year for the PPS attributed members

**Numerator Exclusions:** not applicable

± A lower rate is desirable.

**Medicaid Spending on Primary Care and Community Based Behavioral Health Care**

**Description:**
Total spending on primary care (PC) and community behavioral health care (CBHC) during the measurement year per PPS attributed member per month.

**Purpose:**
The Affordable Care Act $^3$ is working to improve quality and lower health care costs. Important to this effort are primary care providers, and the integration of physical health and behavioral health services.

**Data Source:** Medicaid Data Warehouse

**Eligible Population:** All attributed members in the measurement year

**Denominator Description:** Total time enrolled in Medicaid (Member Months) for members attributed to the PPS as of June 30th of the measurement year

**Denominator Exclusions:** Members eligible for Medicaid and Medicare (dual) at any time in the measurement year

**Numerator Description:** Total paid amount for PC and CBHC services in the measurement year for the PPS attributed members

**Numerator Exclusions:** not applicable

---

Other NYS-Specific Measures:

- Medicaid Provider Reimbursement with Methods other than Fee-for-Service (FFS) – in development and will be shared when final.

- PAM Level – measure specifications are pending CMS approval and detailed guidance will be shared once final.

- Palliative Care Measures - measure specifications are pending CMS approval and will be shared once final. Palliative care measures will be implemented in MY3. For MY2, revised palliative care measures were under review by CMS. In order to acknowledge this, PPS can earn these AV based on the successful reporting of Domain 1 reporting requirements based on guidance issued in March 2016.
