

Analytics and Reporting Collaborative?

Hi!

Is there any interest in a group for discussing analytics and reporting? I am sure that we have all come up with multiple solutions for the same (relatively narrow but continuously shifting) set of problems. For the amount of time that we spend in front of computers, we could be collaborating on these solutions or even more innovated approaches to leveraging analytics.

For example: [This post by Swathi Gurjala was really helpful and saved me a lot of time and effort.](#)

To keep this going, I have attached a spreadsheet version of the Domain 1 Project Requirements Milestones and Metrics PDF. (Note: This only contains the projects that we are working on at MCC. I will post a complete version when I have a chance.)

Adobe Acrobat was used to convert the PDF to a somewhat messy XLS file that I reformatted using python to complete the row-level hierarchy. I then used [OpenRefine](#) to do the rest of the fiddly parts.

We have several versions built on this foundation. Some versions track and highlight topic areas, other work stream-level rollups, etc. A reconciled version of those now lives in our analytics database where it is continually amended with new information.

How would you annotate this data differently? Did you use a different method to convert the PDF to something useful? What other kinds of information would you add?

I'm looking forward to our discussions.

Best,
Jamie

Please, excuse my misspellings. I didn't know we couldn't edit posts.

Hi all, the first link directs to a file that I created a while ago using the draft of Measure Specification Manual that was out for public comment as well as information from Attachment J. So, it has outdated information. However, knowing the interest in it, I have attached it here. I hope this helps.

Thanks, Swathi. I should have thought of that, myself! Collaboration, for the win!
Also, here is a file listing the updated measures from the April 5th version of the Measure Specification and Reporting Manual.

I propose we try to set up a monthly conference call/webinar and take on a different topic each time. Thoughts?

Hello Jamie, you are thinking of setting up our own Analytics group on the MIX, yes? That would be wonderful. I can certainly follow up with some KPMG folks that helped us set up our HRD-PHC group for the actual process of setting a group up.

Hello all,
Thank you very much for your interest in joining the Analytics and Reporting Collaborative group as Jamie suggested. However, because all of us are already in the DSRIP IT group, the consensus was to expand the IT group to include the Analytics folks rather than to create a new group and get

fragmented. So this is now the IT and Analytics group where we can share great ideas and solutions for the analytics and reporting challenges!
