

Salient Interactive Miner (SIM) Collaboration

My intent in starting this thread is so that PPS's can collaborate on the use of the SIM tool. Given the complexity of the tool itself, I thought it would be beneficial for end users to have a place to share questions, tips & advice on using SIM.

I'm game! Where should we start?

By [Jamie Bono](#), 3 months ago4

One of our projects 2bvii INTERACT has a project requirement that asks to look into nursing home to hospital transfer (Project Requirement 1 Metric 2). We did not find any source of already existing data for this and so plan to look into Salient shortly.

Hi Swathi,  
As a starting point, I would suggest drilling into SvcCategory: Category of Service 0381 Skilled Nursing Facility [Freestanding] and 0286 Skilled Nursing Facility [Hospital Based], then changing your By to PatStatus: Patient Status. You will see a number of the Patient Status definitions that pertain to being transferred to a Hospital, e.g. 02 TRANSFER TO A DRG HOSPITAL. If you need additional navigation support to perform this action, please feel free to contact [hhssupport@salient.com](mailto:hhssupport@salient.com) for further guidance.  
Thanks!
