

Patient Engagement Materials

Good morning!  
Has anyone started to develop informational materials to support patients engagement? We are particularly interested in DSRIP-related materials to support patients moving from ED care to Primary care, as part of Project 2.b.iii - ED Care Triage.  
Thanks, in advance, for any insights you can lend!

Hi Meredith, we have a contractor for our cultural competency and health literacy plan who will be helping develop patient engagement materials. I will also ask our ED care triage team and see if they have any patient engagement resources that they use.... thanks,

The company CURISAL has an integration platform that works with other systems and they have great patient engagement and care team applications
