

CAPITAL REGION, MOHAWK AND HUDSON VALLEY DSRIP

COMMUNITY NEEDS ASSESSMENT

Albany Medical Center PPS
Ellis PPS

December 2014

Albany Medical Center PPS and Ellis PPS

This report is based on primary data collected by the Healthy Capital District Initiative (HCDI), available data from New York State and numerous other sources referenced within. The voluminous research assembled here wouldn't have been possible without the extraordinary efforts of Liz Kormos, of Kormos and Company LLC, John Shaw and Colleen McVeigh from Next Wave and Michael Medvesky; for which I am deeply grateful. Caution is always prudent when interpreting data as each measure and analysis is limited by the methods used. All analyses and conclusions made are based upon the information available to us at the time of the study. Due to unforeseen circumstances and/or unanticipated events, some of the assumptions may not materialize and the results achieved may vary from the report. We are not responsible for future efforts and other management actions upon which the results will depend.

An electronic copy of this report and all appendices can be found at:

EXECUTIVE SUMMARY

This Community Needs Assessment (CNA) presents the greater health systems' resources and utilization, as well as the health needs for the general population, Medicaid insured and uninsured populations for 11 counties. The needs of these counties were examined to assist the Ellis PPS and Albany Medical PPS prepare proposals for the New York State Department of Health (NYSDOH) Delivery System Reform Incentive Program (DSRIP).

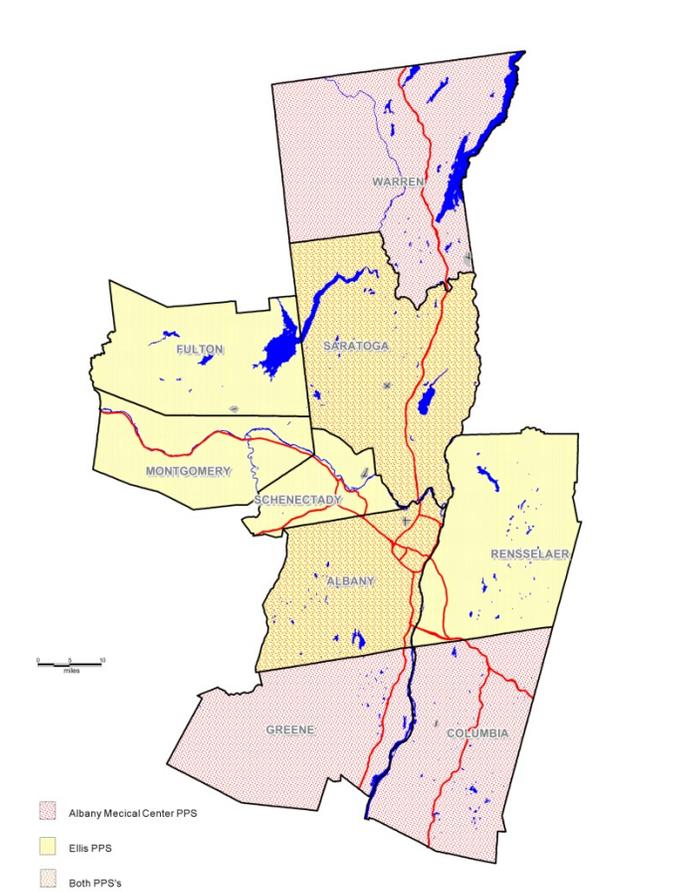

In response to parameters set by the NYSDOH stipulating which counties a PPS could serve and ongoing examination of the population health needs in the region, the final service area for the Albany Medical Center PPS changed to include Warren County and exclude Schenectady, Rensselaer, Dutchess and Ulster Counties.

As a result, the CNA presents tables and figures for 10 counties which include Dutchess and Ulster Counties, while incorporating the health needs data in the narrative for Warren County when it was greater than the upstate or 10 county averages. Other key Warren County data identifying healthcare and community based providers is in Appendix A; local Community Health Improvement Plans, Community Service Plans and public health indicators in Appendix D; targeting hotspots for service priorities in Appendix F, utilization and health data driving project selection in the Albany Medical Center Chart of Projects in Appendix H; and demographic data is in the Albany Medical Center organizational application.

The Ellis PPS includes Albany, Schenectady, Rensselaer, Saratoga, Fulton and Montgomery Counties. The current Albany Medical PPS includes Warren, Saratoga, Albany, Greene and Columbia Counties.

Albany Medical PPS and Ellis PPS

Figure 1 Albany Medical Center PPS and Ellis PPS Service Areas

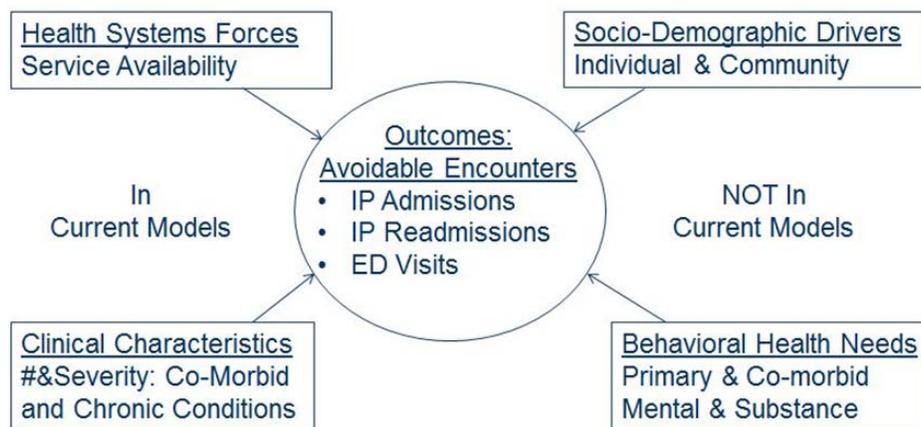

As outlined in DSRIP materials, the community needs assessment (CNA) for the performing provider system (PPS) goes beyond a traditional CNA.

- The intent of DSRIP is to rationalize the Medicaid program by focusing on reduction of avoidable hospital encounters: inpatient admissions, inpatient readmissions, and emergency department visits.
- DSRIP is focused on the Medicaid and uninsured populations rather than the total population of the entire community.
- The focus of this CNA is person-centered and looks at all major drivers of avoidable encounters in this Medicaid and uninsured population, including;
 - o Service availability and clinical characteristics included in traditional models

Albany Medical PPS and Ellis PPS

- o Socio-demographic drivers and behavioral health needs – both of which are under-recognized in current models.
- o A review of the current literature suggests that each of the above bullets represent about half of the variability in avoidable encounters.

Figure 2 Person Centered: Link All Available Driver Data to Better Target Community Resources and Needs

The figure below illustrates the overall CNA process followed.

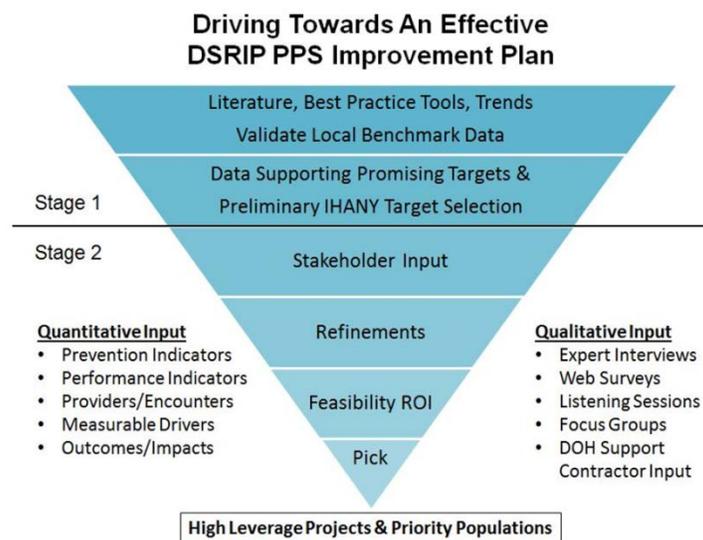

- Stage 1 included literature review and secondary review of baseline information provided by the New York state Department of Health (NYSDOH), plus initial primary data analysis to refine this information. Results were used to do preliminary project selection.
- Stage 2 is an iterative refinement and focusing on picking high leverage projects (i.e. those having the largest impact on avoidable encounters). It utilized both
 - o Qualitative input from all interested stakeholders, including the beneficiaries themselves and

Albany Medical PPS and Ellis PPS

- o Quantitative input to refine opportunity gaps, evaluate the efficiency and return on investment of project approaches, and target priority populations to refine approaches and plan intervention rollouts.

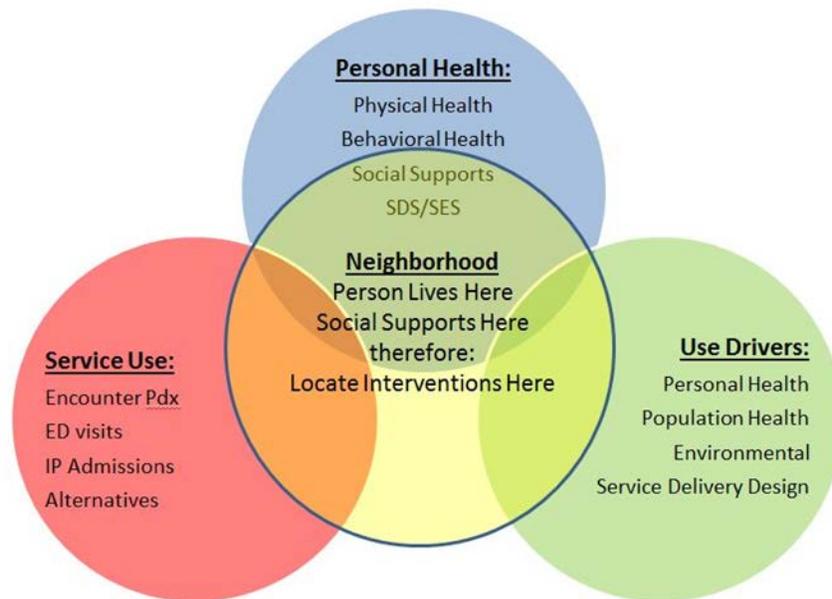

This process focus is to prioritize improvement efforts to achieve the goal of reducing avoidable encounters as quickly and effectively as possible.

Figure 3 Driving towards an effective DSRIP PPS Improvement Plan

Our person-centered CNA combines inter-related data points to focus improvements. Service use data points describe the health care services currently utilized as well as gaps and alternatives to these services. We then distinguish the characteristics of the person, their needs, and their resources vs. the services they use. The qualitative and quantitative analysis performed in Stage 1 and Stage 2 identifies which of these characteristics are drivers of or associated with avoidable service use. We then summarize the above in Neighborhoods (combinations of zip codes) across the 10 counties to help focus project intervention scale, placement, and roll-out scheduling.

Figure 4. A Person Centered Community Needs Assessment Combines Inter-related Data to Focus Improvements

1. MAJOR FINDINGS – NEEDS AND SOLUTIONS SUPPORTED

The Community Needs Analysis determined that service use was significantly impacted by widespread barriers to primary care when and where consumers need it. Insufficient care coordination is a major health service use driver as it puts greater demands on the Medicaid and Uninsured population to manage their care than they have the capacity to fulfill. This is particularly true for consumers with behavioral health or multiple chronic conditions as personal health characteristics. Avoidable utilization of hospital services is most concentrated in super-utilizers who are more likely to have substance abuse, behavioral health, or multiple chronic conditions and live in the highest need neighborhoods of the region.

1. IMPAIRED ACCESS TO NEEDED CARE

- a. **Rates for Medicaid members using primary care are lower than Benchmarks in all 10 counties**, while preventable ED use is higher in all 10 counties. There are few local Patient Centered Medical Homes (PCMH) currently certified.
- b. **Medicaid members and uninsured cannot find primary care services available at times or locations they need.** Common themes expressed in consumer surveys, local

listening sessions, and focus groups of this population was that life barriers prevented access to primary care and clinics at times and locations convenient to the provider. Expanded office hours and urgent care are not available where these people live. Lack of transportation, working two jobs and risking of losing them if taking time off for health appointments, child care responsibilities, and lack of informal supports make the ED the only place to obtain care in many high need neighborhoods. Poor access to care was reflected in worse rates than New York State in all counties for diabetes screening, three cancer screenings, chlamydia screening and in half the counties prenatal care, which leads to high risk and high cost low birth weight deliveries.

c. **Triage screening for appropriate ED use is not practical in the current delivery system.** When people arrive at the ED evenings and weekends currently, the only service option available is the ED itself. Even during normal business hours when other services could be available, there is insufficient Triage space or processes to screen and divert people that may need less costly services.

d. **Solutions Supported:**

i. Domain 2 Integrated Delivery System Transformation Projects like formal Integrated Delivery Systems, increased certification of Primary Care Medical Homes and/or Advanced Primary Care Models, ED care triage for at risk populations, and converting excess beds into a Medical Village can help address these access barriers – particularly in rural areas.

2. CARE COORDINATION BARRIERS TO EFFECTIVE CARE

a. Lack of Coordination by Providers increases demands on consumers to take up the slack. Their ability to self-manage chronic conditions is measurably impaired by:

- i. Presence of moderate or significant behavioral health conditions, life management skills, stable housing, and informal supports are all challenged by mental impairments and/or substance use disorders. This diminished capacity to self-manage is frequently exceeded by the demands expected by the current delivery system to manage complex chronic conditions.
 - ii. Presence of multiple chronic physical conditions The complexity of and knowledge needed to effectively manage several co-morbid conditions, medications, primary and specialist appointments, and daily life places demands that exceed capacity of the general population. The dually eligible have added age and/or disability demands and reduced capacity, placing them at higher risk. In the community, increased knowledge and engagement combined with effective informal supports are necessary to avoid ED use and admissions, including community health workers and navigators where needed. This subpopulation tends to be white, educated – and overwhelmed.
- b. Coordination of Behavioral Health and Physical Health Services is difficult within current delivery system. Medicaid members and uninsured with both physical and behavioral health conditions are currently treated for either one or the other condition. The current delivery system does not make treating both (i.e. the whole person) easy, or in some cases possible with current regulations and delivery silos. People with a diagnosed and treated behavioral health condition are frequently

admitted for a physical condition. Likewise, under-diagnosed depression and anxiety complicate the treatment of physical conditions and lead to excess ED visits and admissions, as does under treatment due to medication barriers and fears. When referrals between settings are made, both providers and the consumers agree that appointments take too long to secure, reducing their likelihood of being kept and often too far in the future to be effective. Substance use disorders are particularly high impact, especially in combination with either physical or mental impairments.

c. Solutions Supported:

- i. Integration of behavioral health and physical health services to make cross referrals timely and effective and development and access to ambulatory detox services and implementing behavioral health crisis stabilization.
- ii. Addressing cardiovascular and asthma/COPD through better use of evidence-based medicine, medication adherence, and home visits to enhance knowledge and support.
- iii. Domain 4 Population efforts to strengthen the MI/SUD infrastructure, reduce tobacco use in high risk populations, and prevent major chronic conditions like CVA and cancer.

3. HOSPITAL USE CONCENTRATED IN A FEW SUPER-UTILIZERS

- a. Eleven percent (11%) of Medicaid members and uninsured represent over half of ED visits, almost 40% of admissions, and all 30 day readmissions. These individuals were defined as having more than 2 ED visits in 6 months and/or a 30 day readmission in the last 3 years. Super-utilizers are twice as likely to have significant behavioral health conditions, twice as likely to have multiple chronic

conditions, and three times as likely to have been treated for substance abuse.

- b. These super-utilizers are clustered in several high need neighborhoods. Neighborhoods like the South End in Albany and Hamilton Hill in Schenectady have high proportions and numbers of these super-utilizers, along with poverty rates almost double the regional average and a more diverse racial mix. Other high need neighborhoods like Troy/Lansingburgh and Amsterdam have elevated rates of anxiety and depression driving ED and inpatient use. The neighborhoods are identified in the CNA report, and additional indicators and characteristics are provided in Appendix F.
- c. There are higher than expected proportions of Socio Demographic Status (SDS) indicators in this subpopulation. There were 6% higher poverty rates, 4% higher English language learner rates, 3% higher rates of foreign born, 3% higher rates for education less than high school graduate, and 3% higher unemployment rates in the zip codes where they live. We also found much higher numbers of Hispanics than in the overall Medicaid/Uninsured population (11.3% vs. 5.9%) and higher numbers of Blacks (17.4% vs. 15.5%).
- d. **Solutions Supported:**
 - i. Focus piloting and roll-out of high-impact/high touch interventions across projects in the targeted sub-populations in the targeted neighborhoods. Community health workers and engaged community based organizations are critical to these efforts.

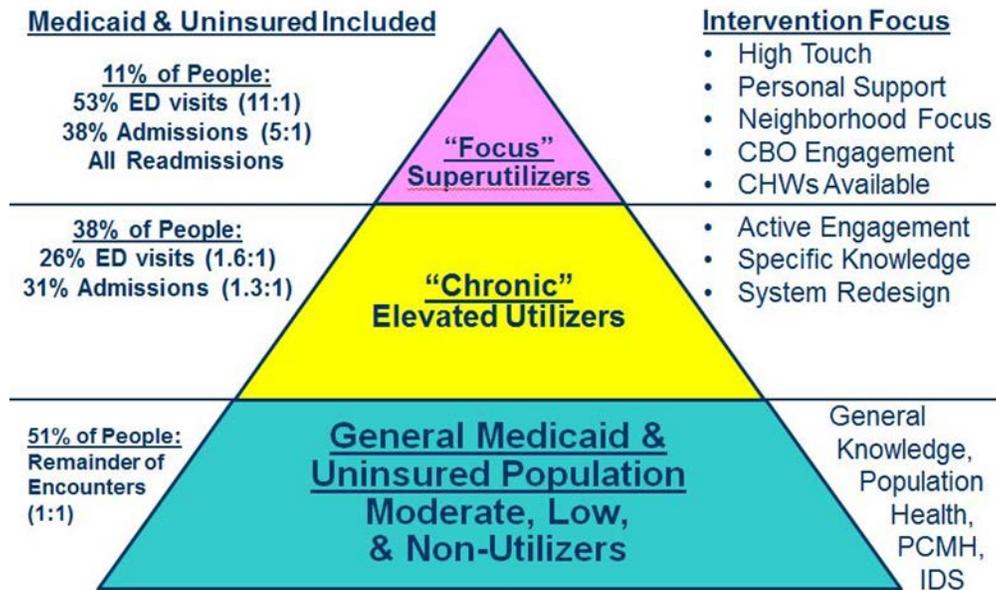

These major findings can be visualized in Figure 5 and indicate for whom the DSRIP interventions are intended:

Albany Medical PPS and Ellis PPS

1. Interventions to address Access issues overall through overall system redesign are at the bottom (blue) section of the pyramid. They “raise all boats” and apply to all of the subpopulations, including the General population of moderate and low utilizers.
2. Interventions to address the elevated Coordination, knowledge, and support needs of people with Chronic behavioral and physical conditions are in the middle (yellow) section of the pyramid.
3. Super-utilizers in the top (pink) section will benefit from personal high touch interventions beyond those of traditional health care delivery to address the SDS drivers of their ED and IP hospital use.

Figure 5 High Leverage Priority Interventions Pyramid

Intervention Groups* & Priorities Supported by CNA

* **Intervention Groups:** **Focus**=ED **Superutilizers** (Behavioral Health driven) or 30 day Readmission History, **Chronic**= 4+ of 10 Chronic Physical Conditions or Sig/Mod Behavioral Health Diagnosis, **General**=none of above (Relative Risk/ROI values justify (but set limits) on spending more to achieve greater return. 1=General Population)

A. HEALTH CARE AND COMMUNITY RESOURCES

1. DESCRIPTION OF HEALTH CARE RESOURCES

I. Healthcare Providers

A complete assessment of the healthcare resources was conducted for the entire 11 County area including those not members of the Ellis PPS and Albany Medical PPS (there was insufficient time to update the maps in this section to include Warren County).

Table A-1 shows the more detailed number of key provider locations by type and County with data from the Managed Care Provider Network. The Managed Care Provider Network was used instead of AHRF data because AHRF data on physicians is based on the American Medical Association (AMA) database which often lists the physician's home address instead of their practice address. Studies have shown that the AMA database can overstate physician supply by as much as 20%.¹² Many physicians in the region practice over multiple counties. Table A-1 shows the number of locations instead of the number of FTE's.

Source: DSRIP Managed Care Provider Network Data https://www.health.ny.gov/health_care/medicaid/redesign/providernetwork/. Note: the numbers above represent the count of addresses and do not represent the number of FTE's. The total number of unduplicated providers in the ten county area is 11,882

Figure A-1 shows the numbers of primary care provider (PCP) locations by county. Albany County has a large number of PCP physician and physician extender locations (Nurse Practitioners and Physician Assistants). The more rural counties (Fulton, Montgomery, Greene and Columbia) have far fewer. As seen in Figure A-1 physician extenders make up a significant percentage of the number of primary care practitioners in Albany, Saratoga, Fulton and Montgomery counties.

Albany Medical PPS and Ellis PPS

Figure A-1 Number of Primary Care Provider Locations by Type and County

Source: DSRIP Managed Care Provider Network Data, Note: the numbers above represent the count of addresses and do not represent the number of FTE's.

The percent of primary care providers by location that are PCMH certified is shown on Table A-2. Warren, Ulster and Fulton County have the highest percent of physicians certified followed by Montgomery and Schenectady County. The percent certified in the urban areas of Rensselaer and Albany are low. Columbia has only 2 PCMH certified physicians and Greene County does not have any providers that are PCMH certified.

Table A-2 PCMH and Primary Care Provider Location by County

Type	Albany	Schen	Renss	Saratog	Fulton	Montg	Columb	Greene	Ulster	Dutch	Warren	11 County

The location of primary care providers, those locations with PCMH level 3 certification and the distribution of Medicaid beneficiaries per square mile is shown on Figure A-2. Except for greater Kingston, there is a relative proportional density of primary care providers in the areas where

Albany Medical PPS and Ellis PPS

beneficiaries are concentrated, but the numbers of providers that are PCMH certified is small in most counties as noted above.

Figure A-2 Distribution of Primary Care Providers, PCMH Certified Providers and Medicaid Beneficiaries per Square Mile by Neighborhood

New York State designated Health Homes provide care management for high need/high risk individuals with multiple chronic conditions. Individuals qualifying for Health Homes have one serious and persistent

Albany Medical PPS and Ellis PPS

mental health condition, HIV/Aids or have at least two chronic conditions including: substance abuse disorder, asthma, diabetes, heart disease, hypertension, BMI>25 or other chronic illness. Health Homes provide care management that improves the quality of health and health care, reduces costs, prevents avoidable inpatient admissions and ED visits, reduces the need for long term care, enhances the coordination/integration of medical and behavioral health, and links to community and social supports. The goals of the Health Home program align with the goals of DSRIP.

In the area there are seven Health Homes providing the majority of Health Home services (Table A-3).

Criteria Used to Identify Health Home Safety Net Providers for DSRIP: A) Organization has more than \$10,000 in Care Management claims billed to NYS Medicaid in 2013 (either directly or indirectly, criteria pending CMS approval), B) Organization meets Safety Net Designation based on NPI match.

Albany Medical PPS and Ellis PPS

Table A-4 shows the enrollment of Health Homes as of October 2014 by County. Dutchess and Schenectady Counties currently have the largest number of enrollees followed by Albany, Rensselaer and Ulster Counties.

Source: DSRIP Dashboard B9 as of 10/2014

Table A-5 shows the number of mental health provider locations. The numbers of locations is high in the more densely populated counties of Albany, Ulster and Dutchess. There are a very small number of mental health providers designated as substance abuse providers and counselors. There are only three physicians and five social workers who are designated as specializing in substance abuse in the whole eleven county area. This may indicate a shortage of these professionals or a lack of mental health providers designating this as a specialty. Detailed counts of health care providers by county and lists of individual providers can be found in CNA Appendix A-1.

Albany Medical PPS and Ellis PPS

Table A-5 Number of Mental Health Provider Locations by County

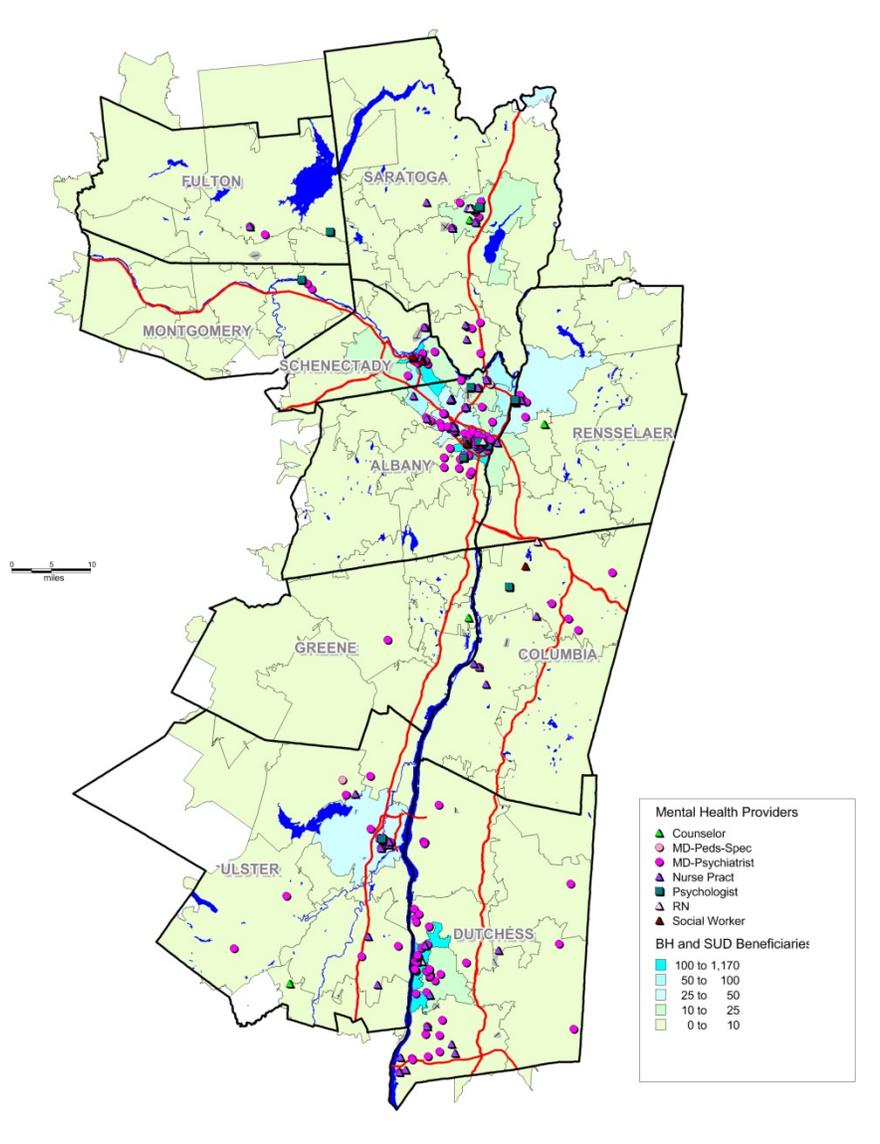

Source: DSRIP Managed Care Provider Network Data

The distribution of mental health provider locations in relationship to the density of beneficiaries with mental health conditions is shown in Figure A-3. There are a large number of mental health providers in the urban areas of Albany, Dutchess and Schenectady Counties. The numbers in Troy and the rural areas of Columbia, Greene, Fulton and Montgomery are far fewer.

Albany Medical PPS and Ellis PPS

Figure A-3 Distribution of Mental Health Providers and Beneficiaries with Severe Mental Health per Square Mile by Neighborhood

Source: DSRIP Managed Care Provider Network Data, DSRIP Medicaid Chronic Conditions Inpatient Admissions and Emergency Room Visits by County Beginning_2012

Table A-6 shows the number of providers per 100,000 population (2013), Counties with fewer than the Upstate NY (NYS excluding NYC) average are highlighted in red. Except for a few providers notably psychologists and cardiac physicians, Albany County appears to have close to sufficient healthcare providers as compared to the Upstate averages. Montgomery and Ulster have fewer primary care physicians per 100,000 population than the other counties, but Montgomery has a high proportion of primary care physician extenders. The proportion of mental health

Albany Medical PPS and Ellis PPS

psychiatrists is lower than the Upstate average in Rensselaer, Saratoga, Schenectady, Fulton, Columbia and Warren. Psychologists are needed in almost every county except Warren, Ulster and Dutchess. The supply of social workers and counselors is quite high in most counties as compared to Upstate except in Warren, Ulster and Dutchess.

Table A-6 Healthcare Provider Locations per 100,000 Population by Type and County

Source: DSRIP Managed Care Provider Network Data, ACS 2013, note all other = other specialists

Note: May include an overestimate of provider capacity since some providers provide services at multiple locations and this analysis assumes all providers are full time at each location. Therefore the need calculations are conservative.

The numbers of primary care and mental health providers was analyzed for the top neighborhoods showing high need (See Section B for neighborhood methodology). The number of key primary care providers by neighborhood is shown on Table A-7. Six of the need neighborhoods have no PCMH's. Only 7 high need neighborhoods have Federally Qualified Health Center's (FQHC).

Source: DSRIP Managed Care Provider Network Data, ACS 2012, Note: the numbers above were calculated with the count of addresses and do not represent the number of FTE's per 100,000.

The geographic location hospitals, urgent care, federally qualified health centers and PCMH in relationship to the neighborhoods with the highest need is shown in Figure A-4 (see Section B-1. for high need neighborhoods). The lack of urgent care, FQHC's and PCMH providers is apparent in most of the high need neighborhoods (Figure A-4).

Albany Medical PPS and Ellis PPS

Figure A-4 Location of Hospitals, Urgent Care, Federally Qualified Health Centers and PCMH Certified Practices

A similar picture was seen for mental health professionals with many of the high need neighborhoods having a lack of mental health professionals. Hamilton Hill stands out with few psychiatrists, and no psychologists or counselors. Other neighborhoods with a lack of psychiatrists include: Hudson, Rt 20 New Scotland, Delaware, Kingston, Amsterdam, Troy/Lansingburgh, Arbor Hill, and Gloversville. Psychologists appear to be more abundant. Counselors and certified social workers are lower in many of the same neighborhoods (Table A-9).

Source: DSRIP Managed Care Provider Network Data, ACS 2012

An analysis was done using population projections by Cornell Program on Applied Demographics for 2020 to determine future needs. As seen below in Figure A-5 the overall population of the region is not expected to change dramatically and therefore the need for providers based on the total numbers per 100,000 will not change. The aging of the population will drive increased demand for certain specialties related to chronic care conditions (Figure A-6). The historical use rates are based on historical ways of organizing and delivering care which will likely change as more care is delivered in an integrated manor and through technological innovations such as telemedicine and remote monitoring.

Source: 1,2,3,5,6,13,14,15,16 NYSDOH Data files; 4,9,10,11,17,18,19 NPI Database; 7 HRSA data file. Database as of June 2014.

The assessment of the health care gaps or excess capacity for hospital beds and nursing home beds is based on the Department of Health bed need methodology as described by the Commission on Health Care Facilities in the 21st Century published in 2006. The number of beds per thousand has been declining since 1980. The Berger Commission made recommendation to reduce the hospital bed count by 4,200 and reduce the number of nursing home beds by approximately 3,000. In 2006 there were 3.3 hospital beds per 1,000 New Yorkers as compared to 2.8 beds per 1,000 nationally. Since then most of the Commission's recommendations have been implemented. Today there are 3.0 beds per 1,000 in New York and 2.6 beds per thousand in the U.S. As seen in Figure A-7 the numbers of inpatients continues to decline.

Albany Medical PPS and Ellis PPS

Figure A-7 Inpatient Trend by County

Source: DSRIP Dashboard C6

There are 3,910 certified hospital beds in 22 facilities in the 10 County area. There are 9,473 nursing home beds in 57 facilities.

Table A-11 shows the number and type of hospital beds by County. Fulton, and Greene County have no psychiatric beds. Only Albany, Rensselaer, Montgomery and Dutchess County have chemical dependency beds. AIDS, bone marrow transplant, pediatric ICU and the majority of neonatal beds are found in Albany County.

Figure A-8 shows the geographic location of the hospitals, nursing homes and urgent care center. As seen in Figure A-8 most of the hospitals are located in the densely populated urban areas but the urgent care centers are located in the suburban locations. This lack of urgent care close to the Medicaid and uninsured population could be a factor in why so many are disproportionate users of hospital emergency rooms as their source of primary care. As seen below there are no urgent care centers in downtown Albany, Troy, Schenectady, Amsterdam, Hudson or Johnstown. Federally Qualified Health Centers are located in the urban Tri-Cities and in Amsterdam, Hudson, Fishkill and Poughkeepsie.

Albany Medical PPS and Ellis PPS

Figure A-8 Location of Hospitals, Nursing Homes, Urgent Care, and Federally Qualified Health Centers

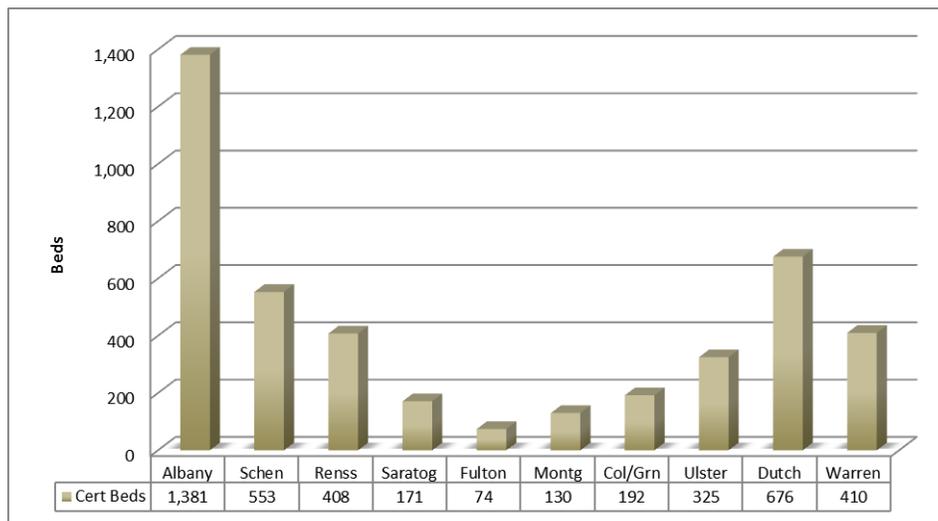

Source: DOH Hospital and Nursing Home Profile

The number of beds by County is shown in Table A-13 and the number of beds by type is shown in Table A-13. An analysis of bed need based on NYS beds per 100,000 is shown on Table A-12. Albany County has the highest number of hospital beds. The occupancy is above the state average but a calculation of beds per 100,000 indicates an excess of 455 beds in Albany County based on 2013 patient days. Schenectady County shows an excess of 84 beds and Warren County shows an excess of 213 beds. Estimated occupancies at hospitals in Warren, Rensselaer, Fulton, Columbia, and Ulster are lower than the state average.

Note: Calculation is based on total certified beds by provider county and inpatient days provided in those beds

The number of nursing home beds by County is shown in Figure A-10 and nursing home beds by type in Table A-13 and an assessment of need is shown in Table A-14. Albany and Dutchess Counties have the highest number of nursing home beds. Rensselaer, Montgomery and Columbia Counties are shown to have a higher number of beds per population age 65 and older, and excess beds per the Berger Commission estimate of need in 2016. Schenectady County is shown to have excess beds per the Berger Commission but is slightly below the State average for beds per population age 65 and older. Population projections by Cornell Program

Albany Medical PPS and Ellis PPS

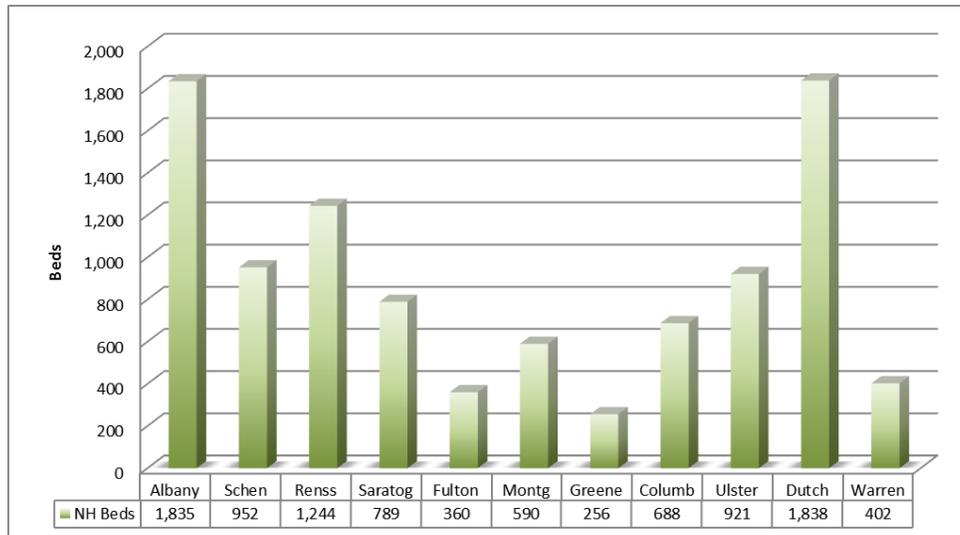

on Applied Demographics for 2020 show that the number of beds per 1,000 will decrease to 36.7 with the aging of the population (Table A-14). Rensselaer, Montgomery and Columbia will still be over today's average numbers of beds per 1,000 in 2020.

II. Healthcare Provider Characteristics

A survey of both providers and community based organizations was conducted in October of 2014 to provide information on capacity, service area, Medicaid status and areas of expertise (the survey and detailed results of the survey can be found in CNA Appendix B-1).

Table A-15 shows the profile of the healthcare and community based providers surveyed. The providers were divided into three groups: those providing medical services such as hospitals, urgent care centers, health centers, dentists, skilled nursing facilities, etc. ; those community based organizations (CBO’s) that are receiving Medicaid reimbursement for services such as mental health agencies, community health educators, schools, employment services, etc. ; and community based organizations not receiving Medicaid reimbursement. As seen in Table A-15 a wide variety of provider organizations that are providing Medicaid reimbursed services responded to the survey. Of the 184 total respondents 56.5% provided medical services and 27.5% were CBO’s with medical and other services. The 104 medical service providers listed 189 different services and the 51 CBO’s listed 109 different services.

Table A-15 Profile of Surveyed Healthcare Providers

Source: DSRIP 10 County Provider Survey

The survey asked providers which counties they served. There were multiple respondents from every county in the 10 county survey area (Figure A-11).

Albany Medical PPS and Ellis PPS

Figure A-11 Which Counties do the majority of your patients/clients come from?

Source: DSRIP 10 County Provider Survey

Sixty percent (60%) of the providers reimbursed by Medicaid replied that they were safety net providers. Ninety eight percent (98%) of the providers said they had the capacity to accept new patients. Ninety five percent (95%) indicated they were accepting new Medicaid patients and 69% said they were accepting new uninsured patients. Fifty four percent (54%) said they offer a sliding scale payment plan to those unable to pay.

Seventy nine (79%) of providers said they served a significant number of minority populations including inner city Hispanic (79%) and inner city black (79%) populations.

A large number of providers had services that were available 24 hours per day 7 days per week (45%). These were mostly the hospitals, nursing homes and residential providers. Another 20% of respondents offered extended and/or weekend hours (Table A-16) with 33% offering regular 5 day a week office hours.

Source: DSRIP 10 County Provider Survey

Seventy five percent of providers are within half a mile to public transportation with 18% greater than a mile from public transportation. Eighty nine percent (89%) have sidewalks adjacent to their locations.

Almost all providers use patient satisfaction surveys, but far fewer participate in other quality measurement programs like HEDIS (7.7%), CAHPS (8.2%). Fourteen percent (14%) do participate in meaningful use of EHR technology. Thirty four percent (34%) participate in a RHIO.

The providers showed a wide area of expertise encompassing almost every area of need. Specific areas of expertise among survey respondents included chemical dependency programs, mental health programs, traumatic brain injury case management services, educational programs, vocational supports, programs for youth and adolescents, jail services, palliative care, developmental disability services, domestic violence and trauma counseling, intensive case management, maternal and child health among others.

2. DESCRIPTION OF COMMUNITY-BASED RESOURCES

I. Community Based Providers

The community based resources available in the ten county region were assessed. A total of 1,247 unique CBO’s were identified. As seen in Table A-17 a wide variety of CBO’s were identified including those that provide basic services such as food, clothing and shelter to the needs of fragile populations such as seniors and the mentally ill to educational services for children. These resources can be leveraged to stabilize and improve the health of the population.

Albany Medical PPS and Ellis PPS

The largest number of CBO's are located in Ulster and Dutchess Counties. The rural counties such as Fulton, Montgomery, Columbia, Greene and Warren have far fewer CBO's to support their population. Most of the CBO's are located in the urban areas within their counties.

Figure A-12 The number of CBO's by County

Source: HCDI Team Research

II. Community Based Provider Characteristics

A survey of both providers and community based organizations was conducted in October of 2014 to provide information on the assessment of capacity, service area, certification status, population served, gaps, and areas of expertise (the survey and detailed results of the survey can be found in CNA Appendix B-1). The survey targeted community based providers (CBO's) as well as providers reimbursed by Medicaid. Table A-18 shows the profile of the community based organizations surveyed. The 27 CBO's responding reported providing 37 different types of services. Given the number of CBOs in the service area is far greater than the number that responded to the survey, it is not possible to accurately characterize capacity and gaps without further data collection. It is recommended that service design include further outreach to related CBOs.

Albany Medical PPS and Ellis PPS

Source: DSRIP 10 County Provider Survey

The survey asked providers which counties they served. Respondents were from all 10 counties in the area (Figure A-13).

Figure A-13 Which Counties do the majority of your patients/clients come from?

Source: DSRIP 10 County Provider Survey

Albany Medical PPS and Ellis PPS

Ninety three percent (93%) of the CBO's said they had the capacity to accept new clients. CBO's said they served a significant number of minority populations including inner city Hispanic (71%) and inner city black (71%) populations.

Eighty percent (80%) of CBO's are within half a mile to public transportation with 6.7% of respondents greater than a mile from public transportation. Eighty five percent (85%) have sidewalks adjacent to their locations. All of the CBO's use patient satisfaction surveys.

Specific areas of expertise among CBO survey respondents included alcohol and drug prevention, educational programs, self-management programs, consumer directed personal assistance, health professional education, employment services, community drop in center and translation services among others.

B. DESCRIPTION OF COMMUNITY TO BE SERVED

The ten county area was analyzed by county and zip codes for data obtained from DOH; by census tract for data from the American Community Survey (Census); and then further refined by neighborhoods. The neighborhoods were created by grouping adjacent zip codes into areas that most closely approximated known neighborhoods or areas in the case of more rural regions. Table B-1 shows the 84 neighborhoods derived from 296 zip codes.

Table B-1 10 County Neighborhoods by County

1. HOT SPOTS ACROSS PHYSICAL AND BEHAVIORAL NEEDS

“Hot spotting” is the process of identifying where the greatest opportunity exists to improve utilization of services (e.g. the most avoidable encounters for fewest people). In Figure B-4, this population is referred to as the “Focus” population. They are the individuals with the highest utilization ratio compared to the general population. Given the number of avoidable visits this group could avoid, more labor intensive interventions aligned with the needs of this population (e.g. high touch home visits) can be cost effective.

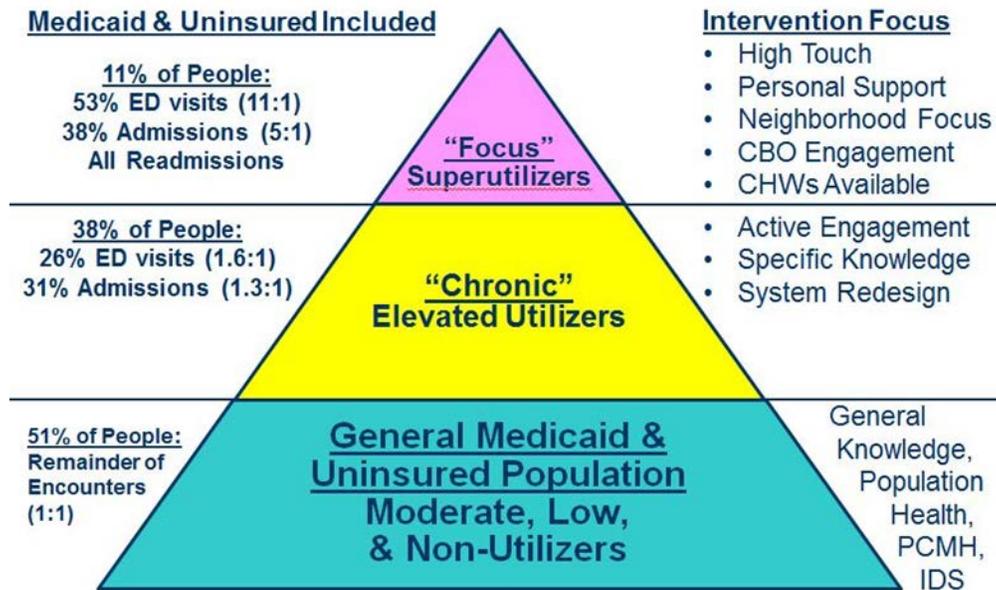

To improve the overall avoidable use of hospital ED and IP services, and expand scale of those engaged, we added the concept of “warm spotting.” It is similar to hot spotting, but the utilization rates aren’t as disproportional to the general population, so less intensive engagement is merited. These are people with elevated use of services identified as “Chronic” in our intervention priority pyramid. Specific interventions aligned with their needs (e.g. specific knowledge and improved engagement in self-care – Domain 3) can be cost effective at modest increased cost per person.

System Transformation can move the baseline and “raise all boats” – for the above as well as the remainder of the population (e.g. the General Medicaid and Uninsured populations at the bottom of our pyramid). Specific interventions include Domain 2 system transformation and Domain 4 population health interventions can improve utilization for all.

This can be seen graphically in the figure below that summarizes our findings:

Figure B-4 High Leverage Priority Interventions Pyramid

Intervention Groups* & Priorities Supported by CNA

* **Intervention Groups:** **Focus**=ED **Superutilizers** (Behavioral Health driven) or 30 day Readmission History, **Chronic**= 4+ of 10 Chronic Physical Conditions or Sig/Mod Behavioral Health Diagnosis, **General**=none of above (Relative Risk/ROI values justify (but set limits) on spending more to achieve greater return. 1=General Population)

Source: SPARCS Encounter data, CNA analysis

I. Designing the Model

The literature review identified that disproportionate avoidable hospital use is concentrated in a few super-utilizer beneficiaries. Dr. Jeffrey Brenner’s Camden Coalition is the most frequently cited where he found 50% encounter and cost savings in this targeted population using coordinated patient centered approaches³. Key informant interviews of PPS teams indicated that this is common in the local region as well. They suggested that more than 2 ED visits in a 6 month period represented a Super-utilizer/frequent flier. When we tested this definition

³http://www.rwjf.org/content/dam/farm/meetings_and_conferences/speeches_and_presentations/2012/rwjf72538 RWJF Aligning Forces for Quality (AF4Q) announces Dr. Brenner’s success (costs cut by 50% for super-utilizers that in turn consumed 50% of cost = 25% overall savings) lead to two more pilots, plus 6 more starting in 2012.

Albany Medical PPS and Ellis PPS

quantitatively, we found that 6.2% of people on Medicaid or uninsured using the hospital represented 48% of the total ED visits across the 10 counties. Similarly, we found that on the Inpatient side, 3.2% of people on Medicaid or uninsured using the hospital represented 23% of the total admissions. Details by county can be found in CNA Appendix F-2.

The interventions matched to this very high need population tend to be costly, e.g. high touch personal home visits. The repeat encounter rates justify spending more to achieve a greater return for this group of people that may not be feasible for people with more moderate needs.

To better understand the dynamics and drivers of frequent hospital ED and IP use for further refinement, we ran a statistical analysis to determine the top 10 major factors associated with the inpatient and ED categories identified above are listed in Figure B-5.

Figure B-5 Top 10 Super-utilizer Characteristics

Inpatient Frequent Fliers:	ED Frequent Fliers:
<ul style="list-style-type: none"> • <u>Assoc. w Increased Use</u> <ul style="list-style-type: none"> – Anxiety – Chronic Kidney – Home Health – Pneumonia – <u>BH_Significant</u> – ESRD – UTI – HF – RA_OA • <u>Assoc. w Decreased Use</u> <ul style="list-style-type: none"> – Age 65 plus 	<ul style="list-style-type: none"> • <u>Assoc. w Increased Use</u> <ul style="list-style-type: none"> – Anxiety – Tobacco – Asthma – UTI – Preventable Composite* – Depression – Opioid Overuse – HTN_Malig • <u>Assoc. w Decreased Use</u> <ul style="list-style-type: none"> – Age 65 plus – Nursing Home
<p>*NYSDOH uses in NH Quality Pool – <u>Dxs</u> for infections, fluid balance, CHF, etc.</p>	

As you can see in Figure B-5, anxiety was associated with both inpatient and ED frequent use. A significant behavioral health diagnoses was a characteristic for inpatient while depression and opioid overuse (an AHRQ metric) were characteristics for the ED. Seniors, as an age group, was associated with decreased use for both inpatient and ED use.

Albany Medical PPS and Ellis PPS

Several chronic physical health conditions appear on the lists, with a NYSDOH composite measure also associated with frequent ED use.

Using the super-utilizer definitions, which are largely driven by behavioral health characteristics and chronic physical conditions, we explored combinations of these indicators associated with high encounter rates for ED visits, admissions, and readmissions per year. We looked for combinations that represented the largest number of encounters for the fewest number of people. The two combinations with the highest predictive rates were:

- People who have at least one 30 day readmission and/or
- People who are ED super-utilizers.

The total of these groups represent 11% of Medicaid Beneficiaries and uninsured and 53% of the ED visits, 38% of the admissions, and all of the readmissions in the 10 Counties. For drill-down analysis, we considered these people to be priority hotspot targets – the “Focus” group.

Upon review of the major characteristics of super utilizers outlined above, project teams suggested that multiple chronic physical conditions be explored for further drill down in addition to the specific chronic conditions analyzed to date. “Multiple chronic conditions” are frequently cited as drivers of hospital use. However, the Agency for Healthcare Research and Quality (AHRQ), the Centers for Medicare & Medicaid Services Chronic Condition Warehouse (CCW), the Robert Wood Johnson Foundation (RWJF), and others each define “multiple chronic conditions” with a different number, type and threshold of chronic conditions.

For the CNA analysis, we started with the above definitions, then utilized the clinical judgment of physicians from both local PPS’s, with several rounds of evidence-based data validation to pick 10 chronic physical conditions: atrial fibrillation, acute myocardial infarction, hypertension, malignant hypertension, asthma, COPD, chronic kidney disease, end-stage renal disease, diabetes, and pneumonia. We then ran a sensitivity analysis and determined that people on Medicaid or uninsured with four or more of these 10 conditions represented 7.3% of the people and 23.1% of the encounters used in this definition.

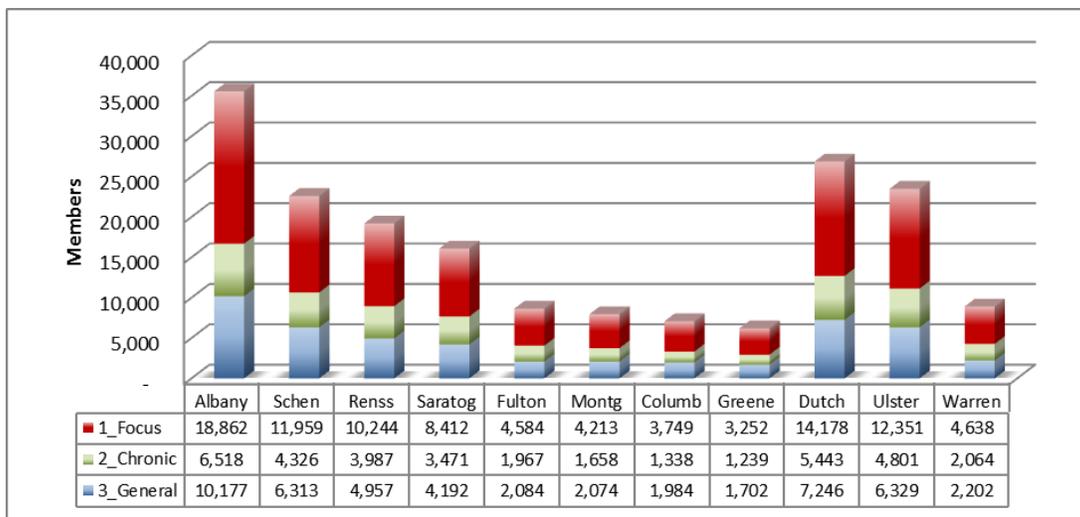

We examined the remaining use rates for Medicaid and Uninsured patients after removal of the focus super-utilizers, and found elevated

Albany Medical PPS and Ellis PPS

use rates (30-60% vs. the remaining general Medicaid and Uninsured population) for those with a moderate or significant Behavioral Health diagnosis or Multiple Chronic Physical Conditions as defined above. We labeled this subpopulation “Chronic” and the process “Warm spotting.” The remaining Medicaid members and uninsured were labeled as “General Medicaid and Uninsured.”

We utilized this refined three-tier risk stratification in further drill-down reports throughout our analysis. Figure B-6 shows the number and distribution of the three tiers by County.

Figure B-6 Members by Target Groups

II. Target Group Overlap with Socio Demographic Status (SDS) Indicators

We also examined Socio-Demographic Status (SDS) disparity indicators in the zip code where the Medicaid Member or Uninsured person lives, and possible racial differences associated with each of the Target Groups and found:

1. For the Focus Target Group, we found as expected higher proportions of SDS indicators – 6% higher poverty rates, 4% higher English Language Learner, 3% higher foreign born, 3% higher Education less than High School Graduate, 3% higher unemployment in the zip codes where they live. We also found much higher numbers of Hispanics than in the overall

Albany Medical PPS and Ellis PPS

Medicaid/Uninsured population (11.3% vs. 5.9%), higher numbers of Blacks (17.4% vs. 15.5%), and somewhat higher numbers of Whites (66.5% vs. 64.3%).

2. For the Chronic Target Group, we found lower numbers of SDS indicators above, but slightly higher numbers for College Graduates (0.6% higher for Associates Degree, 1.1% higher for 4 year Degree, 1.5% higher for more than 4 yr.). There was a disproportionately higher number of Whites in this subpopulation (73.3% vs. 64.3%) and lower numbers for the other race/ethnicity categories.
3. For the General Population Group, we found slightly higher SDS indicators – 2% higher foreign born, 1% higher English Language Learners, 1% higher poverty rates. There were lower proportions of Whites and Hispanics in this group (due to higher numbers above), and higher proportions for Blacks (16.8% vs. 15.5%), Asian/Pacific Islanders (1.6% vs. 1.1%), Native Americans (0.11% vs. 0.09%), and “Other” (19.6% vs. 13.2%). Note that the high proportion in “Other” may be a coding issue in claims, particularly maternity, during busy times of day, and hospitals out of area, where registrars are rushed.

III. Target Group Overlap with Neighborhoods

The top twenty neighborhoods based on both the number of persons and the concentration (number per square mile) of “Focus” or Chronic” members is shown in Table B-2. For these neighborhoods, there are more individuals who fit the Focus definition than are members of the general population, suggesting that interventions can target neighborhoods as well as patients.

Table B-2 Top Tier (Super-utilizers and Chronic) Neighborhoods

Neighborhood	County
Amsterdam	Montgomery
Arbor Hill/Center Square	Albany
City of Poughkeepsie	Dutchess
Cohoes	Albany
Delaware/2nd Ave	Albany

West End(incl. West Hill)	Albany

Source: SPARCs Analysis

Super-utilizer = person is ED Super-utilizer and/or had a 30 day all cause Readmission 2011-2013

Chronic = Multiple Chronic Physical Condition or Moderate or Significant Behavioral Health

Neighborhoods like the South End in Albany and Hamilton Hill in Schenectady have high proportions and numbers of these super-utilizers, along with poverty rates almost double the regional average and a more diverse racial mix. Other high need neighborhoods like Troy/Lansingburgh and Amsterdam have elevated rates of anxiety and depression driving ED and inpatient use.

IV. Focusing Interventions and Measuring Scale

The Intervention Group framework is designed to focus interventions on the people, locations, and ED/admission drivers associated with both. In addition, speed and scope need to be specified in the DSRIP PPS Application. Detailed drill-downs are provided in the Section F Appendices to facilitate this.

Detailed listings of the number of people, encounters (ED visits, admissions, and readmissions), encounter rates, and relative encounter risk can be found in CNA Appendix F-3 along with county and neighborhood drill-down data.

Similar information for the uninsured and low Medicaid utilizer (Project 11) population can be found in CNA Appendix F-4.

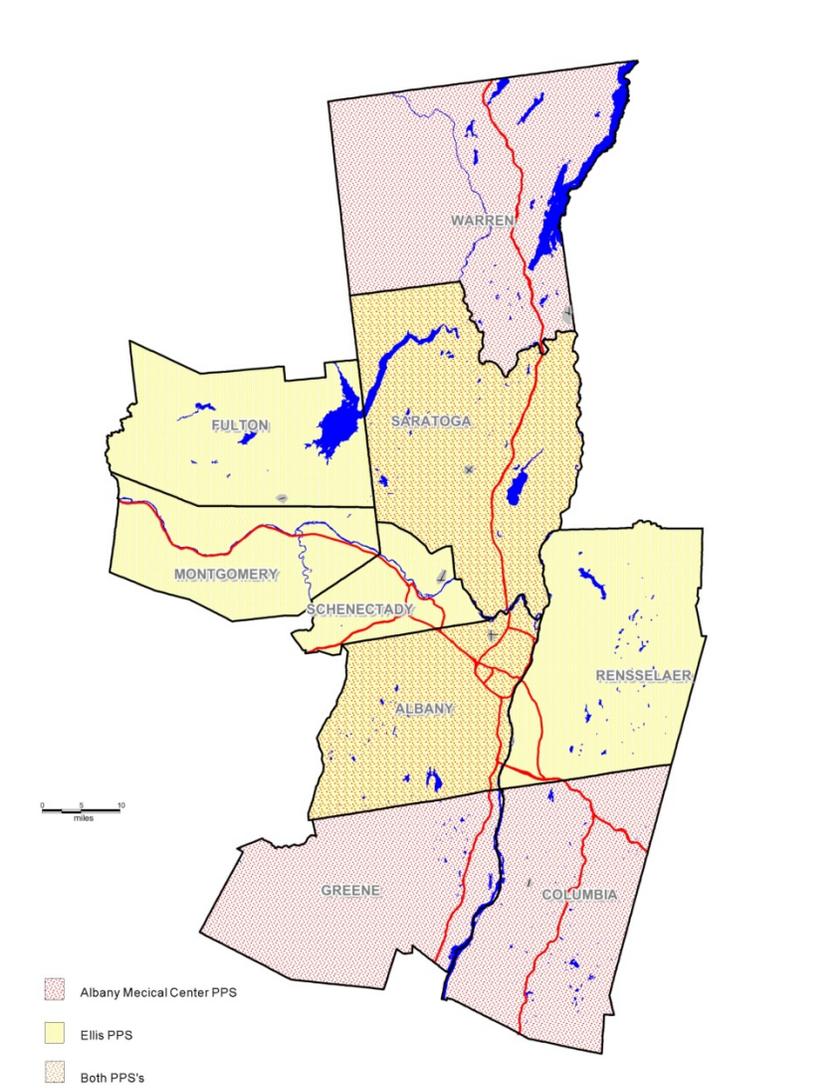

The top ED Presenting and inpatient principal diagnoses by County and neighborhood can be found in CNA Appendix F-5 for the Medicaid and uninsured population and CNA Appendix F-6 for the uninsured and low Medicaid utilizer (Project 11) population.

The single most common ED patient diagnosis across most counties and Neighborhoods is “Symptoms; signs; and ill-defined conditions”. This is primarily related to the 2_Chronic target group (Multiple Chronic Physical Conditions and/or moderate or significant behavioral health diagnosis).

2. DEMOGRAPHICS OF POPULATION SERVED

This section describes both the overall community demographics of the 10 county area and the demographics of the Medicaid population. The community demographics include information on the uninsured, illegal immigrant and homeless populations. The Ellis PPS includes Albany, Schenectady, Rensselaer, Saratoga, Fulton and Montgomery Counties. The current Albany Medical PPS includes Warren, Saratoga, Albany, Greene and Columbia Counties (Figure B-7).

Figure B-7 Albany Medical Center PPS and Ellis PPS Service Areas

I. Community Demographics

A) POPULATION DEMOGRAPHICS

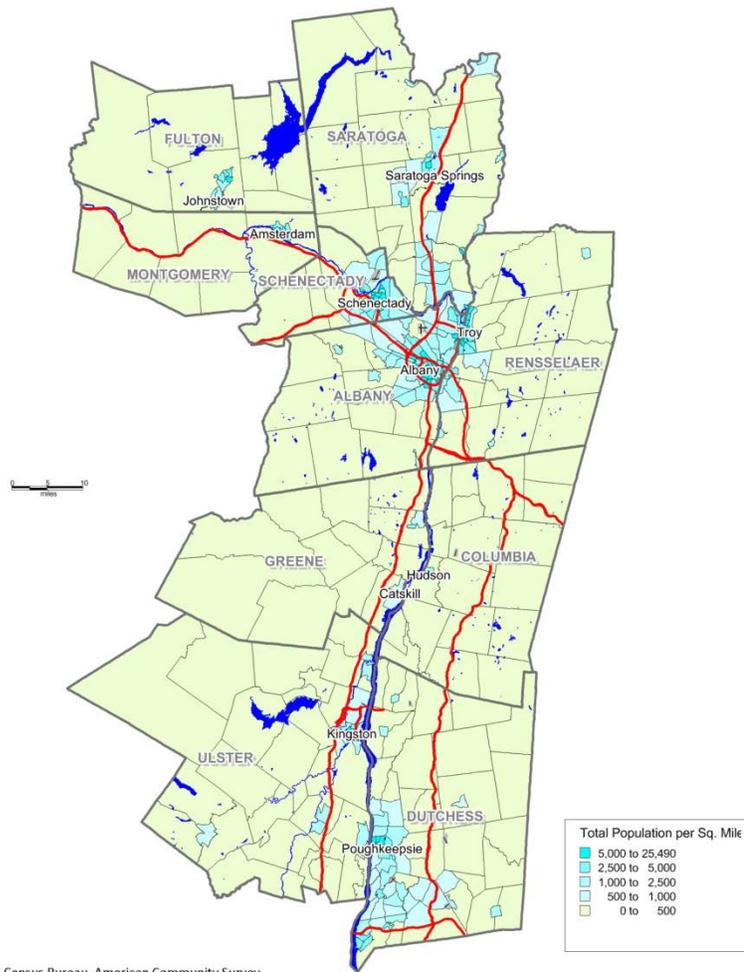

The 10 county service area includes a 2013 estimated total population of 1,539,156. The county populations range from Albany County's 306,945 to Greene County's 48,455. There is also a mix between urban and rural counties (CNA Appendix C-1).

Comparing population density per square mile, the 10 counties range from 758.5 for Schenectady and 584.3 for Albany to the rural counties with 75.2 for Greene and 75.6 for Warren (Figure B-8)(CNA Appendix C-2). All but one of the 10 counties had municipalities with populations over 10,000 in 2010 (CNA Appendix C-3). The exception was Columbia County where the City of Hudson had a 2010 population of 6,713.

Compared to New York State (NYS), the 10 county service area had smaller childhood and larger elderly populations (for <15 years of age: NYS-17.8%; 10 county-15.4%; for 65+ years of age: NYS-14.5%; 10 county-17.5%). Of the 10 counties, Montgomery (18.8%) and Schenectady (18.1%) counties had the largest < 15 year old populations, while Greene (14.1%), Columbia (15.1%), and Ulster (15.2%) had the smallest childhood populations. For the senior population, 75 years of age and older, the rural counties of Columbia (8.6%), Montgomery (8.5%), and Fulton (7.9%) had the largest percentages. Saratoga (6.3%) and Rensselaer (6.4%) counties had the lowest percent of the population over 75 years of age (CNA Appendix C-1).

The 10 counties exhibited similar population shifts between the 2000 and the 2010 Census (CNA Appendix C-4). All the counties exhibited an increase in the total population. The aging "baby-boomers" can be seen in the 45-64 year, and 65-74 year age groups. All counties exhibited major increases in the 45-64 year age group, and all but 3 counties showed increases in the 65-74 year age group. Montgomery (13.9%) and Fulton (7.8%) counties showed the largest decreases in the 75 + age group, while Saratoga (24.1%) and Dutchess (22.8%) counties showed the largest increases.

Figure B-8 Total Population per Square Mile

Source: US Census Bureau, American Community Survey
5 Year Estimates 2008-2012 (DP-3) by Census Tract

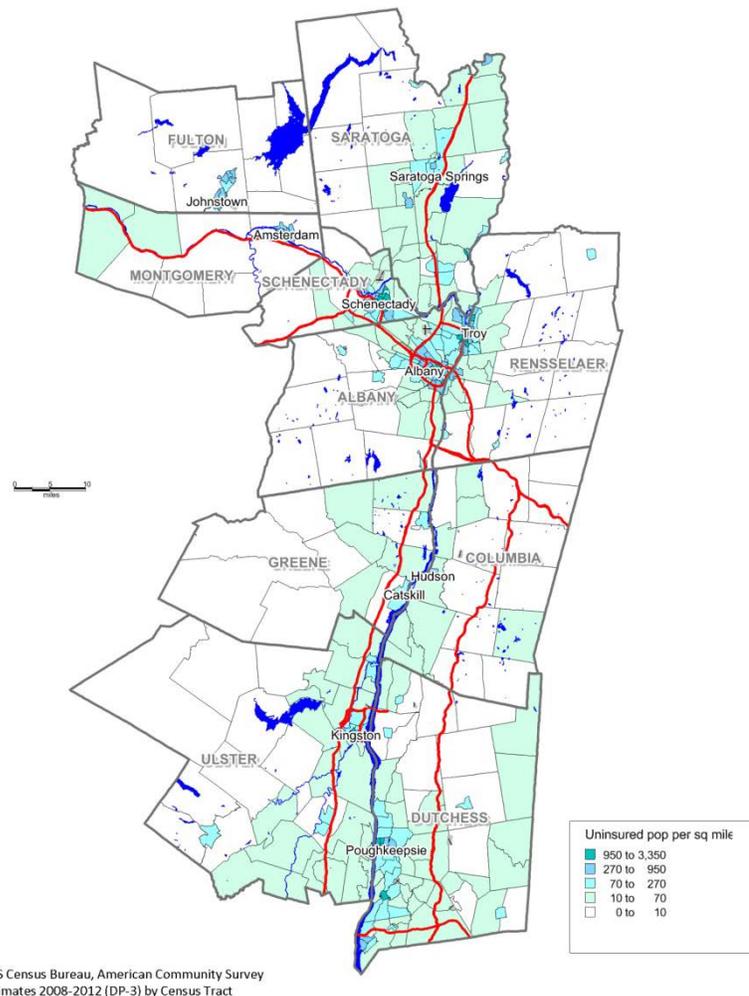

According to 2011 Census estimates, the 10 county area had approximately 15,700 children 0-19 years of age, and 122,000 adults 18-64 years old, without health insurance. The service area had similar percentage of total population for uninsured children (4.2%) compared to NYS (4.1%), and a lower rate for adults (12.3%) compared to NYS (16.3%). For children, Columbia (5.2%, n=713) and Greene (4.9%, n=520) had the highest rates of uninsured. Of the uninsured children, Dutchess (21.2%, n=3,464) and Albany (19.8%, n=2,974) had the highest percentage living in their county. For the 18-64 year old population, all counties were below the NYS average (CNA Appendix C-5).

Of the approximately 122,000 adults who were uninsured, 21.0% (n=24,651) resided in Dutchess, 17.4% (n=22,222) in Albany, and 13.8%

Albany Medical PPS and Ellis PPS

(n=18,181) in Ulster counties (CNA Appendix C-5). The uninsured congregate in the urban areas, but pockets are seen in western Fulton and Montgomery, northern Saratoga, western Greene, eastern Columbia, northeast Dutchess and southwest Ulster counties. (Figure B-9).

Figure B-9 Uninsured Population per Square Mile

Information was obtained from the Pew Research Center of ratios of illegal immigrants using the foreign born data available from the American Community Survey. Based on this data an estimate of illegal immigrants was made for the region and is shown on Figure B-10 which shows that Dutchess County has the largest population of illegal immigrants followed by Albany County. Illegal immigrants are a greater

Albany Medical PPS and Ellis PPS

proportion of the population in Dutchess, Albany and Schenectady Counties (Figure B-11).

Figure B-10 Estimate of Illegal Immigrants by County

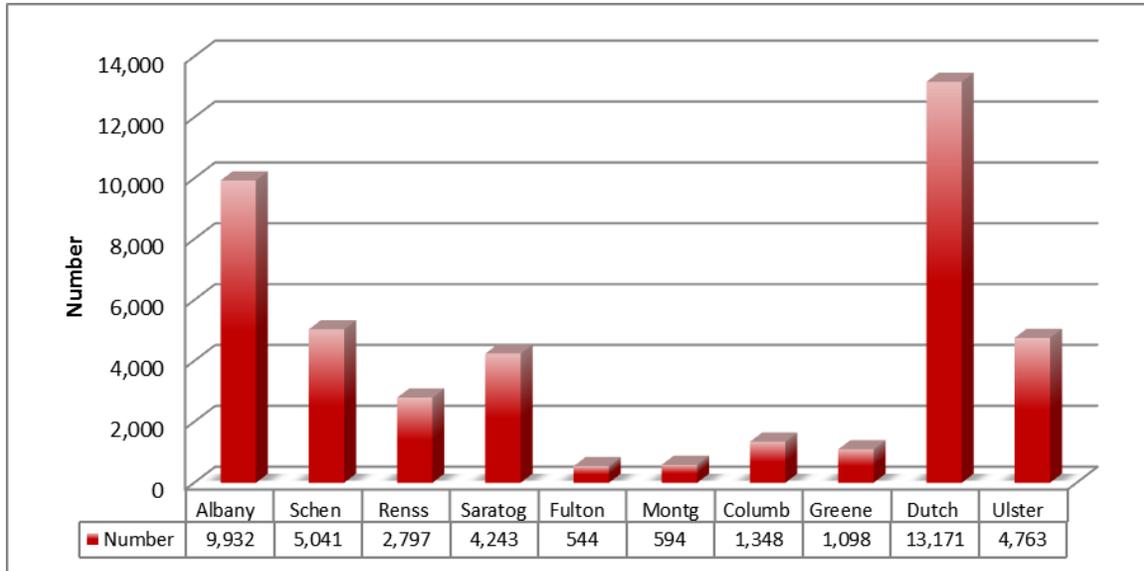

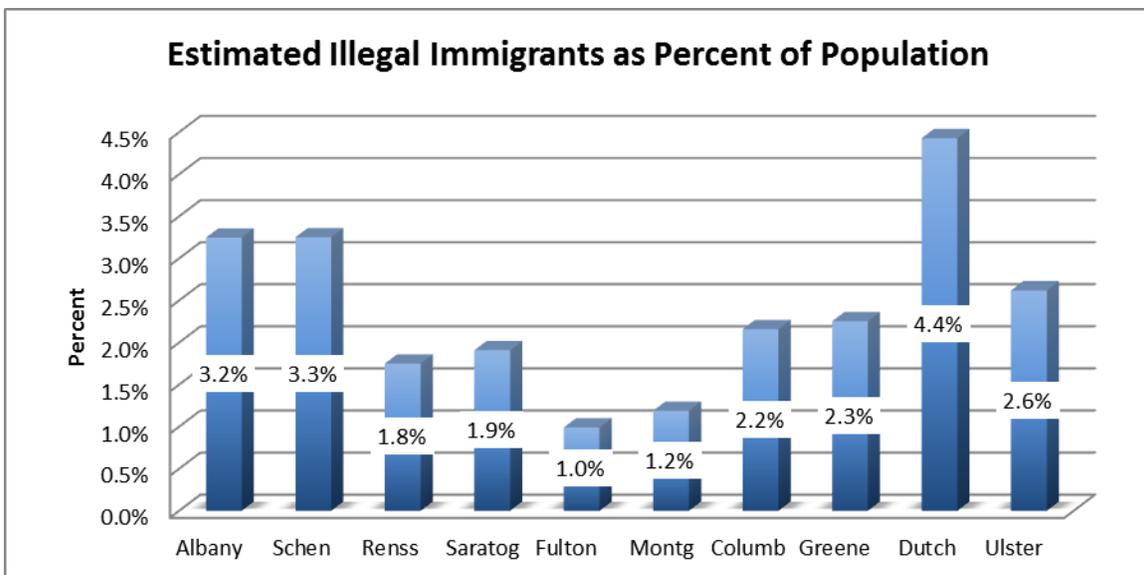

Figure B-11 Estimated Illegal Immigrants as Percent of Population

Statistics on the numbers of homeless was obtained from The Supportive Housing Network of New York. Table B-3 shows the proportion of homeless by age group. The largest numbers of homeless are in Albany, Schenectady and Dutchess Counties (Figure B-12).

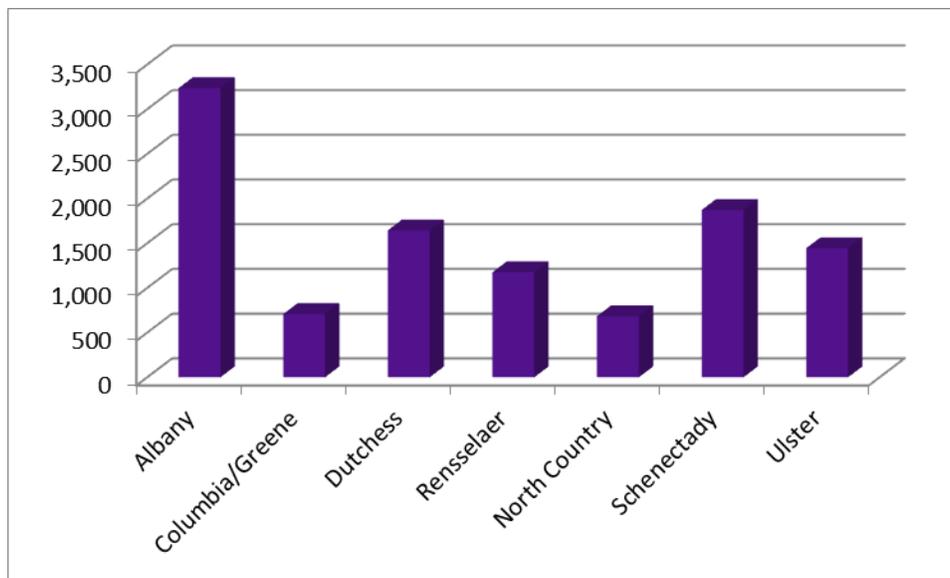

Albany Medical PPS and Ellis PPS

Table B-3 Numbers of Homeless Individuals

Calendar Year-to-Date 2014						
01/01/2014 to 10/01/2014						
	TOTAL	55-64	65-74	75+	TOT 55+	% 55+
Albany	3,236	332	56	10	398	12.3%

Total	10,763	924	123	27	1,074	10.0%

Source: The Supportive Housing Network of New York

Figure B-12 Numbers of Homeless by Area

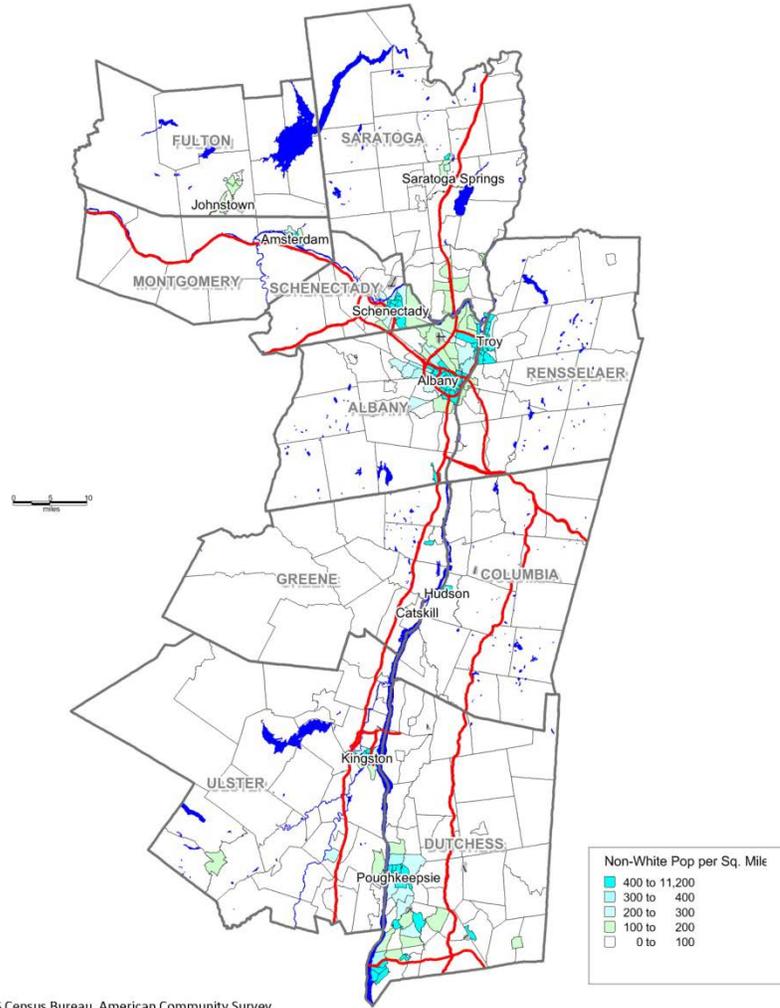

Source: The Supportive Housing Network of New York

Fulton, Warren and Montgomery counties had predominantly White non-Hispanic populations, while Dutchess, Albany, and Schenectady counties had the largest minority populations. Albany, Schenectady and Dutchess counties had Black non-Hispanic populations greater than 10%; Montgomery and Dutchess counties had Hispanic populations of greater than 10% (CNA Appendix C-6).

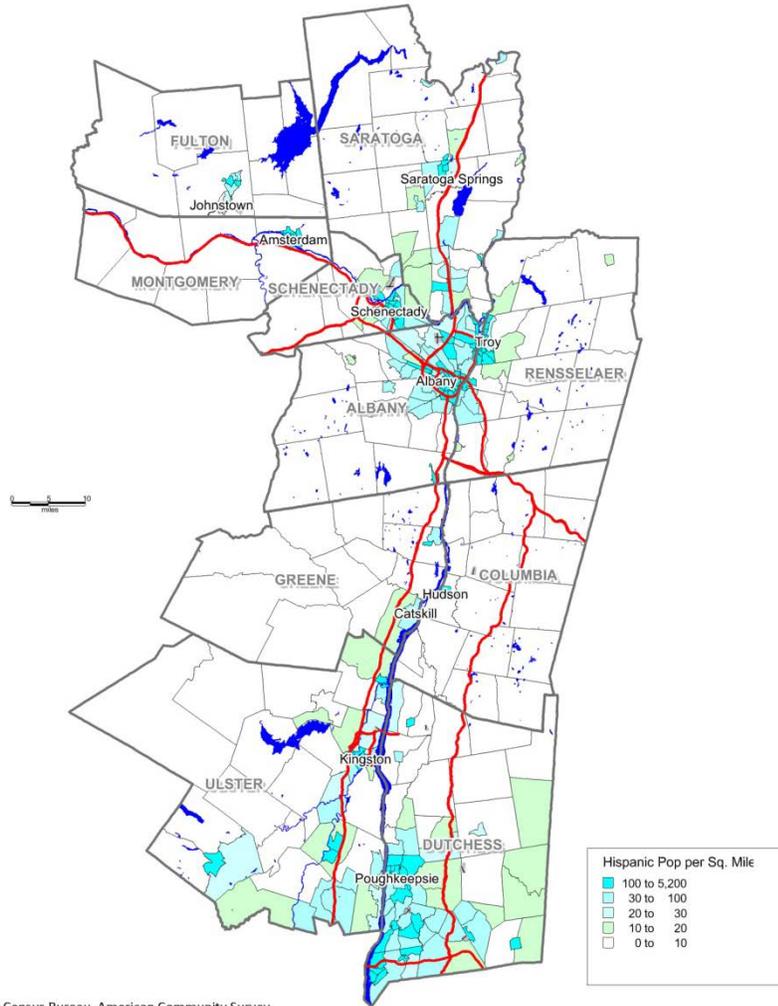

Albany Medical PPS and Ellis PPS

Figure B-13 Non White Population per Square Mile

Source: US Census Bureau, American Community Survey
5 Year Estimates 2008-2012 (DP-3) by Census Tract

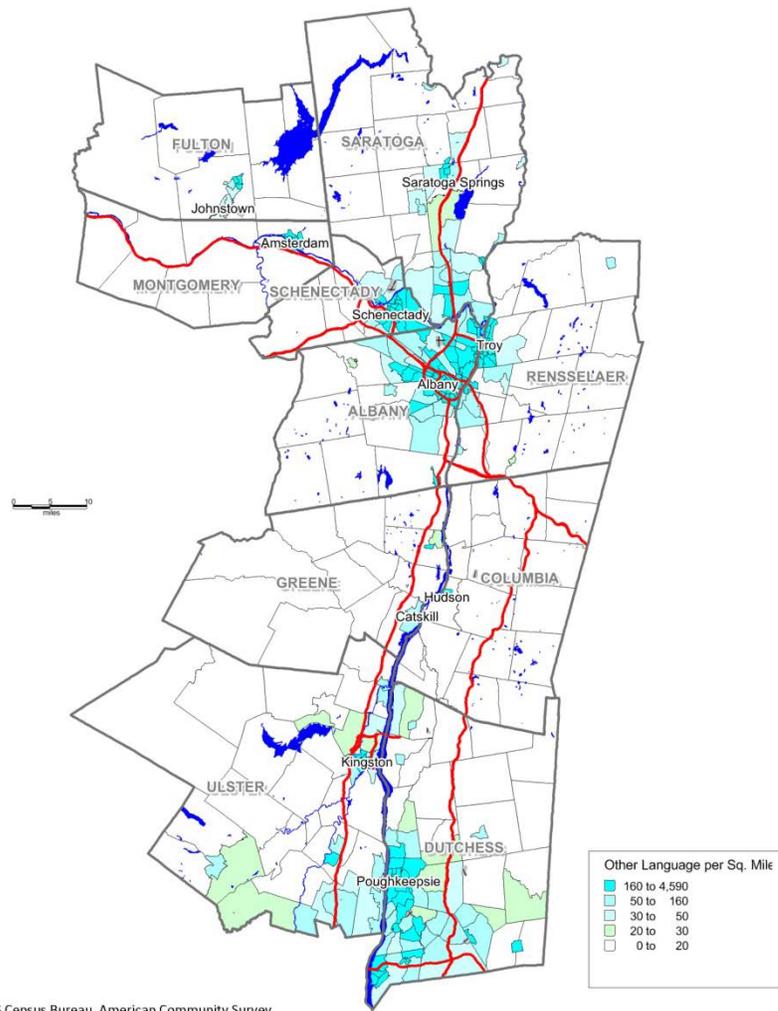

Figure B-14 Hispanic Population per Square Mile

Over 151,000 service area residents (10.4%) spoke a language other than English at home, with 50,000 residents (3.4%) speaking English “less than very well”. Dutchess and Montgomery counties had the largest number of non-English speaking residents as well as those who didn’t speak English well. Montgomery County had the largest Spanish-speaking population (CNA Appendix C-7).

Albany Medical PPS and Ellis PPS

Figure B-15 Population with Other Language Spoken per Square Mile

Of the 10 service area counties, almost 115,000 residents were foreign-born (7.4%). Dutchess and Albany counties had the largest foreign-born populations. About 54% of the foreign-born population were naturalized citizens (CNA Appendix C-8).

When reviewing educational attainment in the 10 county service area, about 107,000 residents, aged 25 years and older, had less than a high school education, or 10.2% of the population. While this rate was better than the NYS average of 15.1%, two counties were above the NYS average: Montgomery (16.5%) and Fulton (15.2%), with Greene County

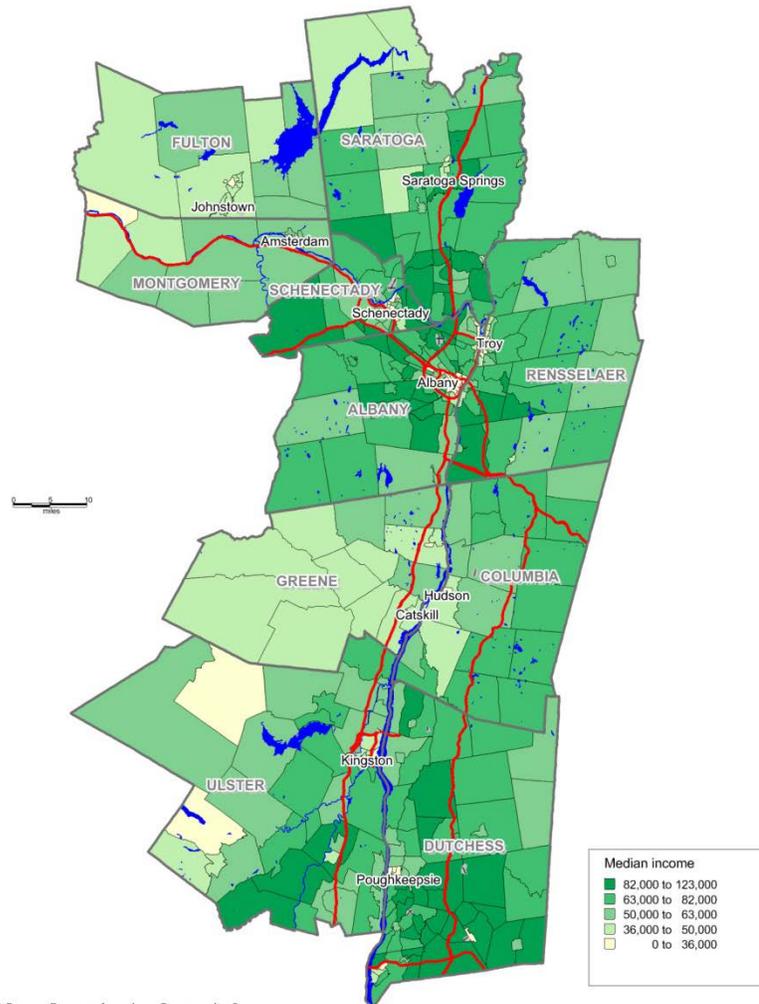

Albany Medical PPS and Ellis PPS

close at 14.7%. (CNA Appendix C-9). For residents with a four year college degree or greater, the 10 county service area had a rate of 31.2%, slightly lower than the NYS rate of 32.7%. Fulton (14.5%), Montgomery (16.1%), and Greene (19.1%) counties had the lowest rates for residents with a bachelor's degree or greater.

B) ECONOMIC DEMOGRAPHICS

Median household income ranged from \$42,830 for Montgomery, and \$45,333 for Fulton counties, to \$67,712 for Saratoga and \$71,508 for Dutchess counties (CNA Appendix C-10). There were over 117,000 households with incomes under \$25,000 per year in the 10 County service area (19.7%). Fulton and Montgomery counties had the largest percentages, while Saratoga and Dutchess the smallest percentage of such households (CNA Appendix C-10). White non-Hispanic and Asian non-Hispanics had higher median household incomes in the 10 county service area compared to Black non-Hispanic and Hispanic households (CNA Appendix C-6).

Figure B-16 Median Income

Source: US Census Bureau, American Community Survey 5 Year Estimates 2008-2012 (DP-3) by Census Tract

Over 75,000 service area residents (5.1%) were living at <50% of the FPL; 167,000 (11.3%) at < 100% FPL; and 213,000 (14.5%) at < 125% FPL (CNA Appendix C-11). Across the three FPL’s, Montgomery and Fulton counties had the highest percentages, while Dutchess and Saratoga counties the smallest percentage living below the FPLs. The geographic distribution of those living below the poverty line is shown in Figure B-17. The greatest concentrations are in the Tri City urban area as well as in Amsterdam, Johnstown, Kingston, Hudson and, Poughkeepsie. There are also pockets of poverty in Ballston Spa and Saratoga Springs. (CNA Appendix C-11).

For the 10 County service area: females had higher % living below the FPLs compared to males; the % living below the FPLs decreased with age;

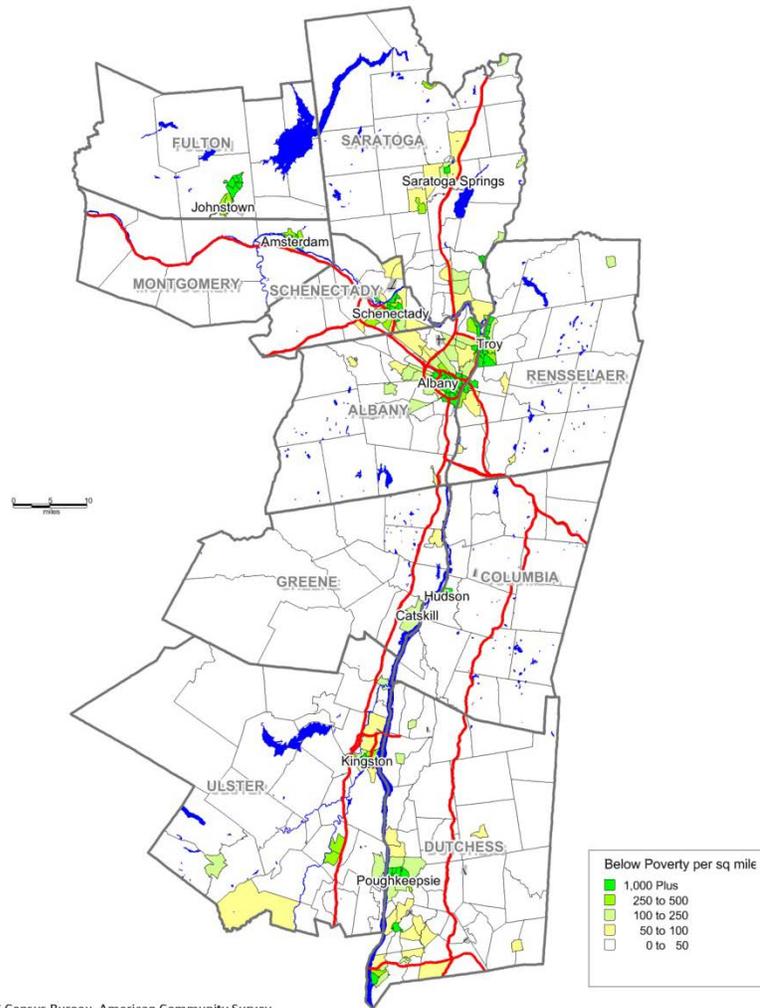

Albany Medical PPS and Ellis PPS

and people with disabilities had a higher % living below the FPLs compared to the population without a disability (CNA Appendix C-11). Approximately 185,000 residents of the 10 county service area, or 12.3%, indicated that they lived with a disability. The Black non-Hispanic and Hispanic families had a higher percent living at < 100% FPL, compared to White non-Hispanic and Asian non-Hispanic families (CNA Appendix C-6).

While the 10 county service area's unemployment rate of 8.0% as of July 2013 is better than the NYS rate of 8.5%, there were still approximately 61,000 individuals who were looking for work but unemployed (CNA Appendix C-12). As with other socioeconomic indicators, Fulton (10.6%), Montgomery (10.4%) and Greene (9.4%) counties had the largest rates of unemployment.

Albany Medical PPS and Ellis PPS

Figure B-17 Population Below Poverty per Square Mile

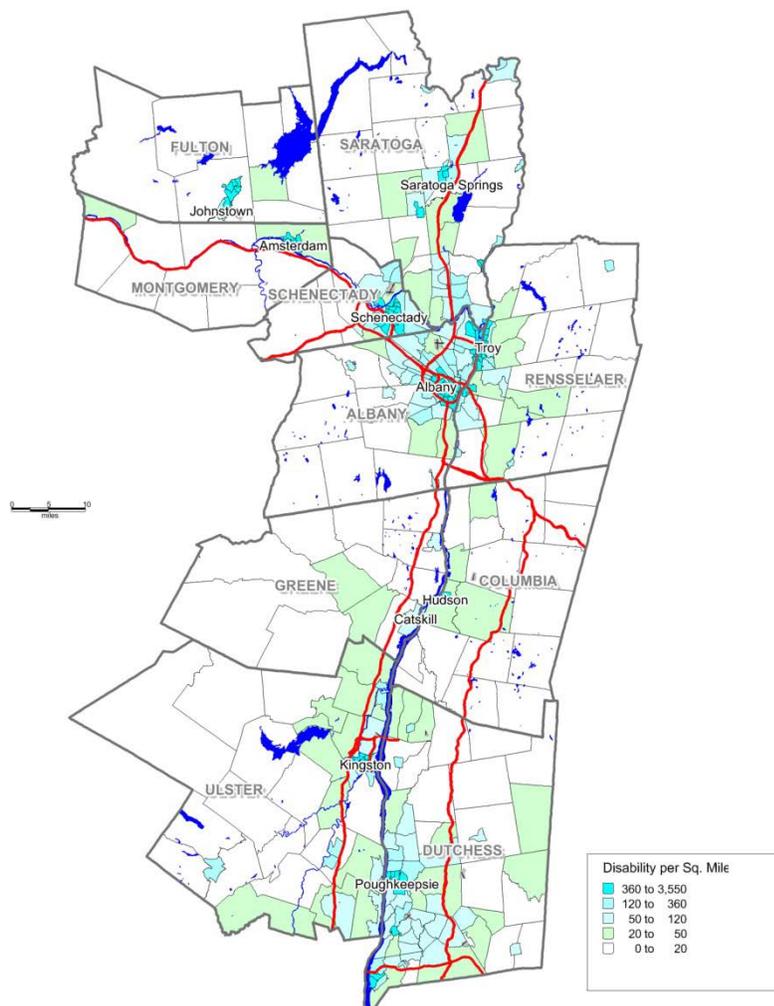

Source: US Census Bureau, American Community Survey
5 Year Estimates 2008-2012 (DP-3) by Census Tract

C) DISABILITY

Approximately 185,000 residents of the 10 county service area, or 12.3%, indicated that they lived with a disability. This percentage is higher than the NYS average of 10.9%. All but Saratoga County (10.1%) had percentages higher than the State average. Fulton County at 16.4% (n=8,871) and Montgomery County at 16.1% (n=7,921) had the highest disability percentages of the 10 counties (Figure B-18) (CNA Appendix C-13). As one would expect, the percentage of disabled increases with age in the 10 county service area: 5.1% (n=16,687) in the < 18 year age group; 10.0% (n=96,086) in the 18-64 year age group; and 33.8% (n= 77,228) in the 65+ age group. Fulton and Montgomery counties had the highest disability rates across the age groups.

Figure B-18 Disabled Population

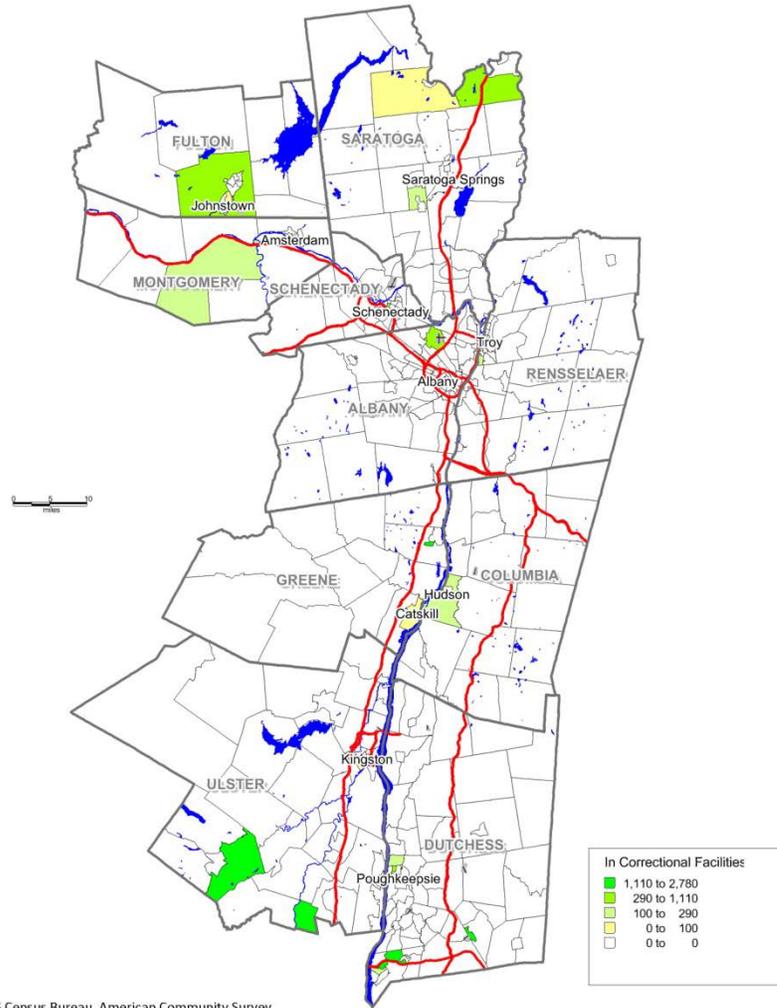

D) GROUP QUARTERS

Most census-based demographic information represents the resident population. Group quarters information from the Bureau of Census (2010 Census) offers information on specific types of the institutionalized and non-institutionalized populations. There were almost 71,000 individuals living in group quarters in the 10 County service area. Of this group, approximately 15,900 (22.4%) were in adult or juvenile correctional facilities; 10,200 (14.5%) in nursing or skilled nursing facilities; 29,900 (42.3%) in college or university housing; and 14,000 (19.9%) in other non-institutionalized facilities such as emergency and transitional shelters, adult group homes, or adult residential treatment centers. There were large correctional facility populations in Greene, Dutchess and Ulster counties. Dutchess (n=2,300), Albany (n=1,831), Ulster (n=1,273), Rensselaer (n=1,133) and Schenectady (n=988) counties had large nursing home populations. Albany, Dutchess, Rensselaer, Ulster, Saratoga, and Schenectady counties had large student populations (CNA Appendix C-14).

Figure B-19 shows the distribution of institutionalized population in correctional facilities. The population residing in nursing homes is shown in Figure B-20. The correctional facility population shows the rural settings where most prisons are located. The distribution of the nursing home population reflects the breadth of nursing homes scattered throughout the region.

Figure B-20 Population in Nursing Homes

Source: US Census Bureau, American Community Survey
5 Year Estimates 2008-2012 (DP-3) by Census Tract

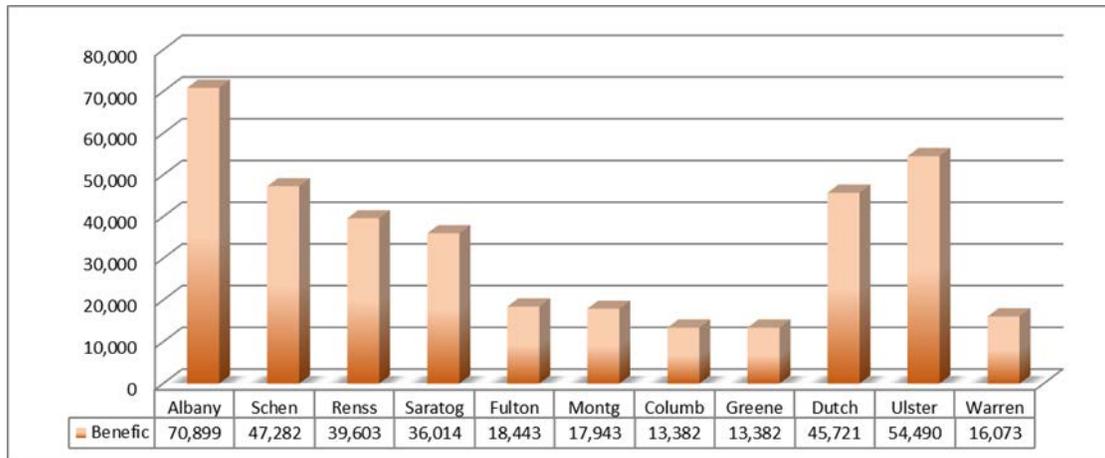

II. Medicaid Member Demographics

There were 373,232 unique Medicaid members enrolled between March 2013 and February 2014 in the 11 county service area, or 23.3% of the population. This was slightly lower than the NYS, excluding NYC (Upstate) rate of 23.2%. Montgomery (35.3%, n=17,615) and Fulton (33.2%, n=18,103) counties had the highest rates of Medicaid enrollees, while Dutchess (17.4%, n=51,533) and Saratoga (15.5%, n=34,757) counties had the lowest rates. Of the roughly 345,000 Medicaid enrollees, 19.9%

Albany Medical PPS and Ellis PPS

(n=68,554) lived in Albany, 14.9% lived in Dutchess, and 12.5% (n=43,315) lived in Ulster counties (Figure B-21, CNA Appendix C-15). Medicaid beneficiaries seem to also congregate in the urban areas. However, as with the previous maps, there are pockets of Medicaid enrollees in the rural areas. (Figure B-22).

Figure B-23 shows the breakdown of dual eligible versus non dual eligible beneficiaries in 2012 (the most recent data available with breakdown by dual eligible).

Albany Medical PPS and Ellis PPS

Figure B-23 Medicaid Beneficiaries by County and Dual Eligibility (2012)

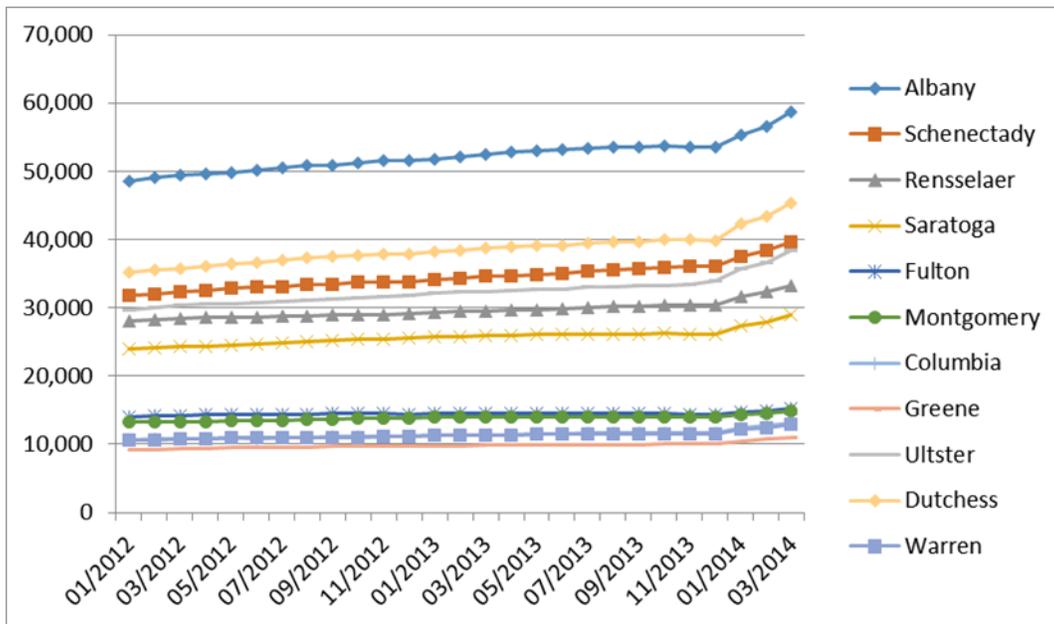

Source: Beneficiaries, Inpatient Admissions and Emergency Visits by county, 2012

An increasing number of Medicaid enrollees have been seen in all of the counties within the service area, with the 10 county numbers increasing 13.4% from March 2013 to March 2014. Counties with the largest increases in Medicaid enrollees during this period include Ulster (18.5%) and Dutchess (17.2%) counties. The smallest increases occurred in Fulton (4.6%) and Montgomery (5.8%) counties (Figure B-24,,CNA Appendix C-16).

Albany Medical PPS and Ellis PPS

Figure B-24 Medicaid Enrollment Trend

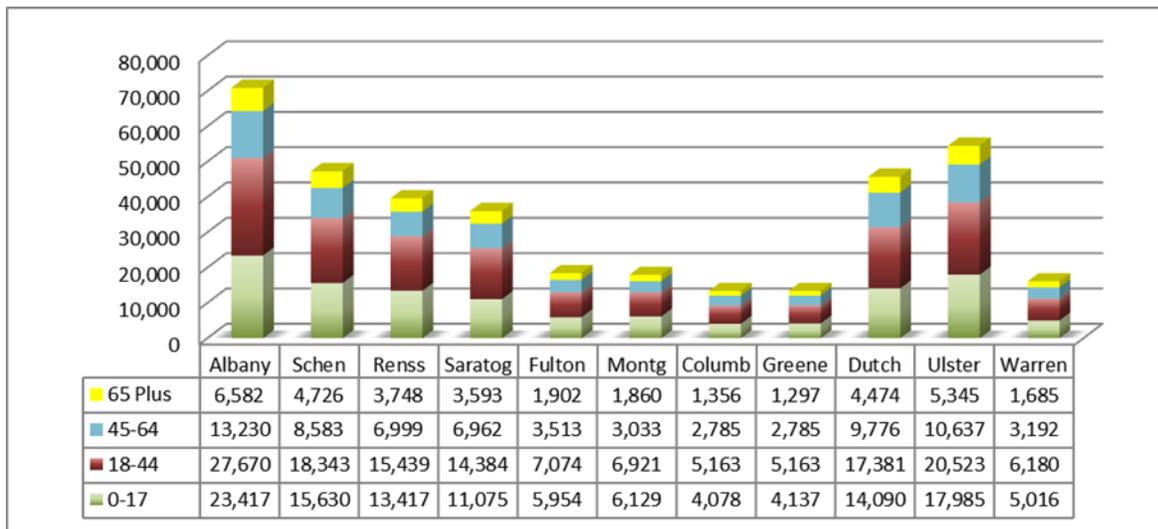

Source: Source: NYSDOH DSRIP Medicaid Dashboards, DSRIP-B-8 Medicaid Enrollment

The Medicaid enrollment rates for each of the 10 counties decreases with age. The 10 county rates were: 47.3%--0 to 5 years; 36.2%--6 to 11 years; 26.9%--12 to 17 years; 24.7%--18 to 44 years; 14.4%--45 to 64 years; and 13.8%--65 years and older. Of the approximately 115,000 childhood Medicaid enrollees in the service area, 19.9% (n=22,872) resided in Albany, 15.1% (n=17,331) resided in Dutchess, and 14.1% (n=16,145) resided in Schenectady counties. Of the 197,000 enrollees age 18 to 64 in the service area, 19.8% (n=39,086) lived in Albany, 14.7% (n=28,901) lived in Dutchess, and 13.0% (n=25,520) lived in Schenectady counties. Of the 33,442 Medicaid enrollees 65+ years of age, 19.7% (n=6,596) resided in Albany, 15.6% (n=5,301) resided in Dutchess, and 13.7% (n=4,568) resided in Ulster counties. (Figure B-25,CNA Appendix C-15).

Albany Medical PPS and Ellis PPS

Figure B-25 Medicaid Beneficiaries by County and Age Group

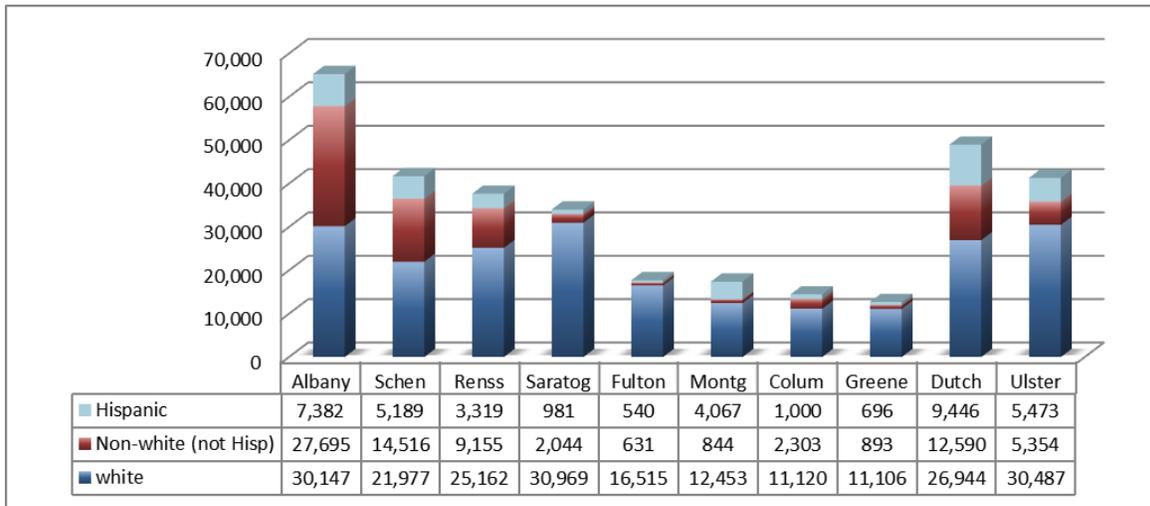

Source: NYSDOH DSRIP Medicaid Dashboards, DSRIP-B-8 Medicaid Enrollment

When reviewing the 10 county Medicaid enrollees by gender, 192,068 were female, and 150,706 were male. The Medicaid enrollment rate was higher for females (24.6%) than males (19.9%). This was also true across each of the 10 counties. The 10 county rates were slightly lower than the Upstate rate for females (24.8%) and males (20.4%) (CNA Appendix C-17).

Of the 345,347 Medicaid enrollees in the 10 counties: 62.8% were White non-Hispanic; 15.0% were Black non-Hispanic; 11.0% were Hispanic; 4.3% were Multiple Race; 2.7% were Asian; 0.3% were American Indian; and 3.9% were Unknown race/ethnicity. Montgomery County had the largest Hispanic Medicaid enrollment of 65.9% (n=4,067), with Schenectady's rate also high at 52.0% (n=5,189). The 10 county Medicaid enrollment rate for the Multiple Race population of 50.3% was higher than the Upstate rate of 40.9%. Schenectady had the highest Multiple Race enrollment rate of 72.5% (n=3,248) with Albany's rate at 63.3% (n=4,013) (Figure B-26)(CNA Appendix C-18).

3. HEALTH STATUS OF THE POPULATION

I. Health Status of the General Population

A) PREVENTION AGENDA PLANNING EFFORTS

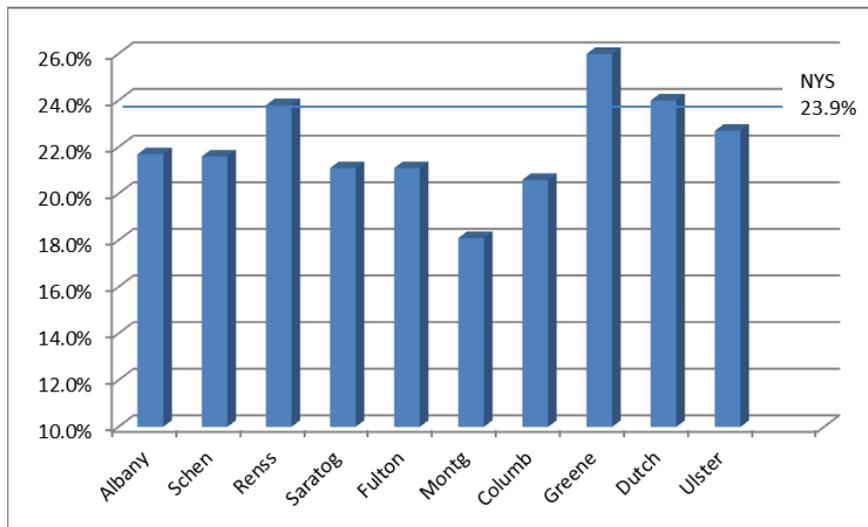

Prevention Agenda planning efforts were recently completed by the health departments and hospitals in the 11 County service area. Priority Focus Areas included: obesity/diabetes (11 counties); mental health/substance abuse (11 counties); chronic disease preventive care and management (7 counties); asthma (3 counties); smoking-related illness (3 counties) maternal and infant health (2 counties) (CNA Appendix D-1).

B) GENERAL MORTALITY

The service area averaged about 13,500 deaths per year. All 10 counties had age-adjusted mortality rates higher than NYS. Fulton, Montgomery, Columbia, and Greene counties age-adjusted mortality rate fell into the 4th quartile of NYS counties (CNA Appendix D-2).

There were over 3,000 premature deaths (< 65 years) in the service area. Greene County fell into the 4th quartile with a rate of 26.0% (Figure B-27, CNA Appendix D-3).

Figure B-27 Premature Death (<65) Rate by County

Source: NYSDOH Prevention Agenda Dashboard, NYS excluding NYC

The Leading Causes of Death for the 10 counties mimicked Upstate: 1- Heart Disease; 2-Cancer; 3-Chronic Lower Respiratory Disease (CLRD); 4- Stroke; 5- Unintentional Injury (CNA Appendix D-4).

The Leading Causes of Premature Death for the 10 counties mimicked Upstate for the 2 leading causes: 1-Cancer; 2-Heart Disease. The 3rd and 4th leading causes of premature death fluctuate between Unintentional Injury (5 counties) and CLRD (5 counties). The 5th leading cause of death varies between stroke, diabetes, and suicide (CNA Appendix D-5).

C) HOSPITALIZATIONS AND ED VISITS

The 10 County service area averaged over 15,500 adult preventable hospitalizations per year. Fulton County’s rate of 163.7/10,000 fell into the 4th quartile and Montgomery (138.5) and Warren (134.6) counties into the 3rd quartile of NYS counties (CNA Appendix D-6).

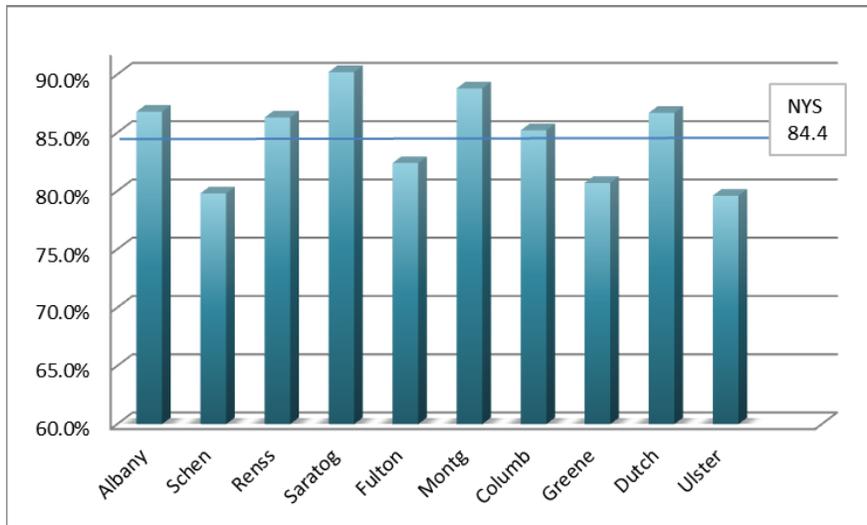

The service area averaged about 175,000 hospitalizations per year. Fulton (1,290/10,000) and Montgomery (1,266) counties had age-adjusted hospitalization rates in the 4th quartile , while Warren County (1,182) fell into the 3rd quartile (CNA Appendix D-6).

The service area averaged 560,000 ED visits per year. Montgomery (6,462/10,000), Fulton (4,834) and Schenectady (4,710) had adjusted ED visit rates that fell into the 4th quartile (CNA Appendix D-6).

D) ACCESS TO CARE INDICATORS

When reviewing the % of adult residents with a regular health care provider, 3 service area counties fell into the 4th quartile: Ulster (79.6%); Schenectady (79.8%); and Greene (80.4%) (Figure B-28, CNA Appendix D-7).

Figure B-28 Age-Adjusted Percent of Adults (=18) with Regular Health Care Provider

Source: NYSDOH Prevention Agenda Dashboard; County Health Rankings; EBRFSS 2008-09 Report, NYS excluding NYC

Eight of the 10 service area counties had physician to population ratios higher than NYS. The highest ratios occurred in Greene (2,880:1) and Fulton (2,044:1) counties (CNA Appendix D-7).

Seven of the 10 service area counties had mental health provider to population ratios higher than NYS. Greene (1,532:1), Montgomery (1,376:1) and Fulton (1,149:1) counties ratios fell into the 4th quartile of NYS counties (CNA Appendix D-7).

E) CANCER

The 10 County service area averaged 820 cases and 292 deaths per year from colorectal cancer. Eight of the 10 counties had age-adjusted incidence rates above NYS, with Columbia (53.1/100,000) and Montgomery (49.4) counties falling into the 4th quartile. Seven counties had age-adjusted colorectal mortality rates above NYS. Fulton

Albany Medical PPS and Ellis PPS

(21.1/100,000) and Columbia (18.7) counties fell into the 4th quartile (CNA Appendix D-8).

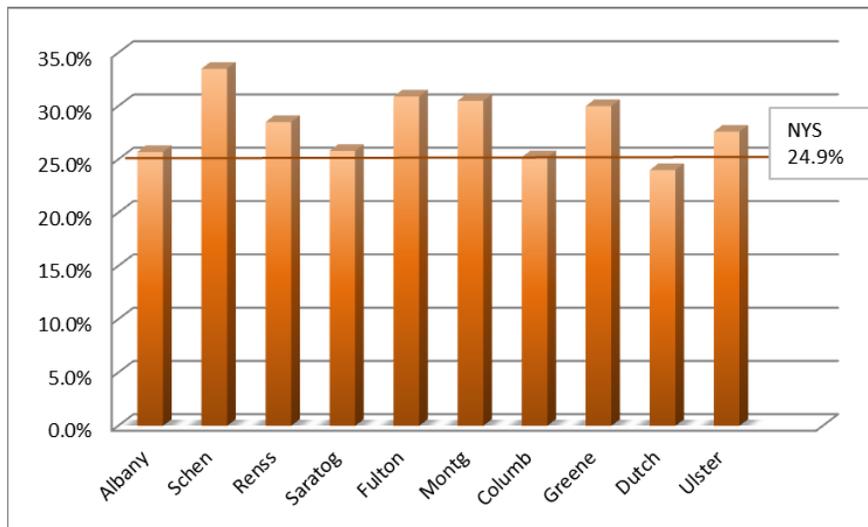

Of the service area residents, 50-75 years of age, who received appropriate colorectal screening, 7 of the 120 counties had lower screening rates than NYS. Fulton (59.3%), Columbia (59.3%), and Montgomery (61.6%) had the lowest screening rates of the 10 counties (CNA Appendix D-8).

The 10 County service area averaged 1,270 cases of female breast cancer with 227 deaths per year. Albany (141.0/100,000) and Dutchess (138.4) counties had age-adjusted incidence rates that fell into the 4th quartile, while 5 counties had age-adjusted mortality rates that were in the 4th quartile: Greene (26.2/100,000); Warren (24.5); Saratoga (24.4); Albany (23.5) and Dutchess (23.0) counties (CNA Appendix D-8).

F) OBESITY

When reviewing the % of Adults who are obese in the service area, 8 of the 10 counties showed rates increasing from 2008-09 to 2013-14. Nine of the 10 counties had obesity rates higher than NYS (CNA Appendix D-9). Schenectady County's rate of 33.5% put it in the 4th quartile, while Fulton (30.9%), Montgomery (30.5%), Warren (30.5%), and Greene (30.0%) counties had obesity rates in the 3rd quartile of NYS counties (Figure B-29) (CNA Appendix D-10).

Figure B-29 Adult Obesity Rates by County

Source: NYSDOH Prevention Agenda Dashboard; Community Health Indicator Reports, NYS excluding NYC

Eight of the 10 service area counties had school student obesity rates higher than NYS. Greene County (20.4%) had the highest student obesity rate, followed by Warren (19.7%), Schenectady (19.5%) and Columbia (19.1%) counties (CNA Appendix D-10).

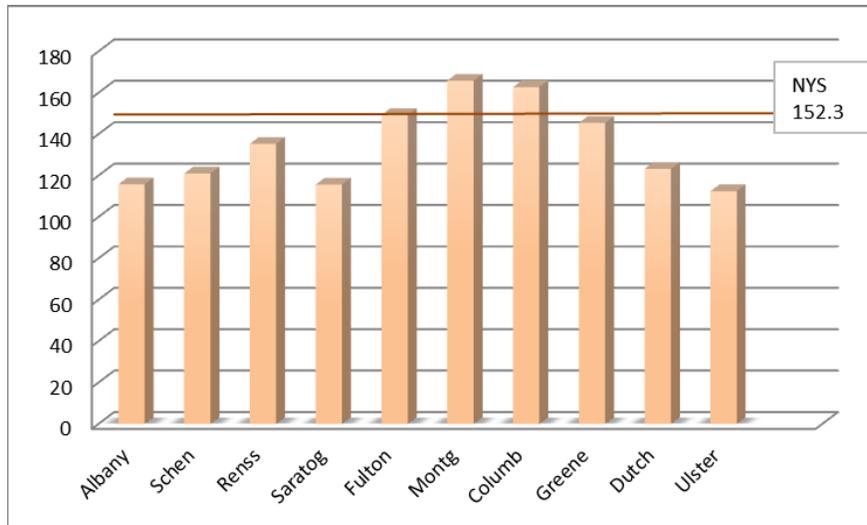

G) CARDIOVASCULAR DISEASE

There was an average of 2,725 heart attack hospitalizations and 550 heart attack deaths per year in the 10 County service area. Fulton (24.6/10,000) and Montgomery (22.4) counties had age-adjusted heart attack hospitalization rates falling into the 4th quartile, while Schenectady (18.9) and Warren (17.6) fell into the 3rd quartile. Only Montgomery County's age-adjusted heart attack mortality rate of 37.0/100,000 fell into the 3rd quartile of NYS counties (CNA Appendix D-11).

Albany Medical PPS and Ellis PPS

The 10 County service area averaged 5,177 hospitalizations and 2,465 deaths per year due to coronary heart disease. Only Fulton (38.6/10,000) and Montgomery (38.5) age adjusted hospitalization rates fell into the 3rd quartile. For age-adjusted coronary heart disease mortality rates, Montgomery (165.8/100,000) and Columbia (162.7) counties were in the 4th quartile of NYS counties (Figure B-30) (CNA Appendix D-11).

Figure B-30 Coronary Heart Disease Mortality Age Adjusted Rate

Source: NYSDOH Community Health Indicator Reports

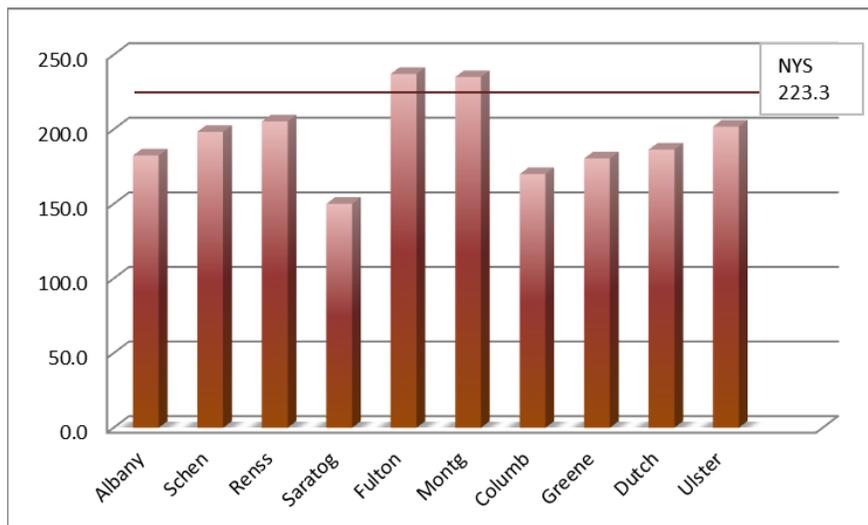

There were 4,279 Congestive Heart Failure (CHF) hospitalizations and 357 deaths per year in the 10 County service area. Only 3 counties had CHF hospitalization rates greater than NYS. Montgomery County's age-adjusted CHF hospitalization rate of 32.6 per 10,000 put it into the 4th quartile of NYS counties. However, all service area counties had age-adjusted CHF mortality rates equal to, or above, NYS. Montgomery (23.7/100,000), Rensselaer (22.3), Albany (20.0), and Schenectady (19.8) counties fell in the 4th quartile (CNA Appendix D-12).

The 10 County service area had approximately 4,500 cerebrovascular (stroke) hospitalizations and 600 deaths per year. Ulster (29.1/10,000), Fulton (28.5), and Montgomery (27.6) counties had age-adjusted stroke hospitalization rates in the 4th quartile of NYS counties. Rensselaer (36.6/100,000), Fulton (36.0), and Saratoga (35.4) had age-adjusted stroke mortality rates in the 3rd quartile of NYS counties (CNA Appendix D-12).

H) DIABETES

The service area averaged 2,184 hospitalizations per year where diabetes was the primary diagnosis, but 34,217 where diabetes was listed in any diagnosis. For the age-adjusted diabetes (primary diagnosis) hospitalization rate, only Fulton County’s rate of 19.2/10,000 fell into the 4th quartile. Warren (17.6), Montgomery (16.9), Rensselaer (15.2) and Albany (14.2) counties rates fell into the 3rd quartile. Fulton (237.2) and Montgomery (235.1) counties fell into the 4th quartile for diabetes age-adjusted hospitalizations (any diagnosis); Warren (210.6), Rensselaer (205.3), and Ulster (201.9) counties fell into the 3rd quartile (Figure B-31) (CNA Appendix D-13).

Figure B-31 Diabetes (Any Diagnosis) Hospitalization Rate by County

Source: NYSDOH Community Health Indicator Reports

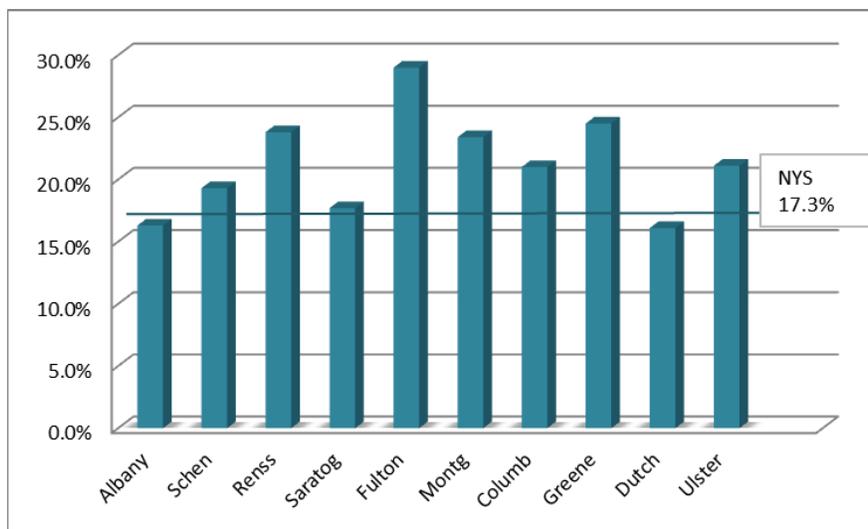

Warren County’s age-adjusted diabetes mortality rate of 22.9/100,000, and Montgomery County’s rate of 19.4/100,000 were in the 4th quartile, while Schenectady and Rensselaer rates were in the 3rd quartile of NYS counties (CNA Appendix D-13).

The 10 County service area averaged about 660 Diabetes short-term complication hospitalizations per year in the 18 year and older population. Both Fulton (8.6/10,000) and Montgomery (8.3) fell into the 4th quartile, while Schenectady and Rensselaer counties fell into the 3rd quartile of NYS counties (CNA Appendix D-14).

1) **RESPIRATORY DISEASES**

Five of the 10 service area counties have seen their smoking prevalence rates similar or increasing from 2008-09 to 2013-14. Eight of the 10 counties had higher smoking prevalence rates than Upstate, with Fulton (29.0%), Greene (24.5%), and Rensselaer (23.8%) having rates in the 4th quartile, and Montgomery (23.4%), and Columbia (21.0%) falling into the 3rd quartile of NYS counties (CNA Appendix D-9).

Figure B-32 % Cigarette Smoking in Adults (18+yrs)

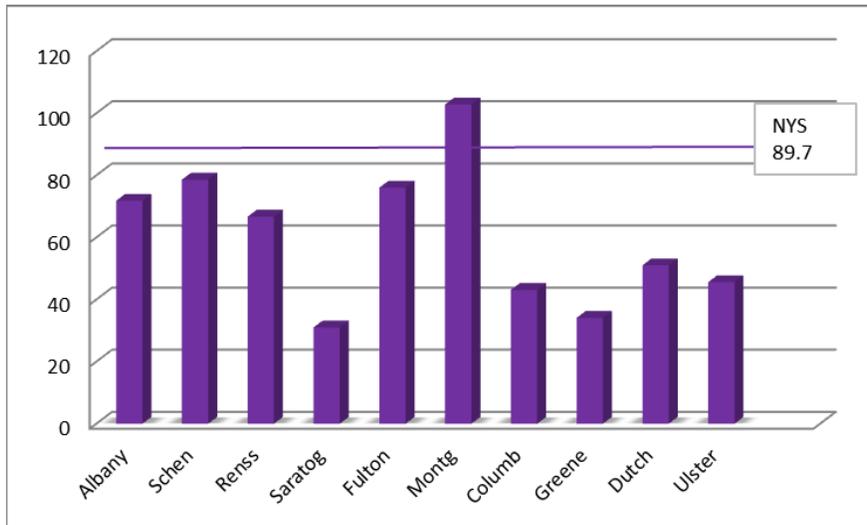

Source: Expanded Behavioral Risk Factor Surveillance System (EBRFSS)- Prevention Agenda Tracking Indicators

Results from the consumer survey showed that 10% smoked every day and another 10% smoked some days. The total rate of 20% is somewhat lower than the published data.

The 10 County service area averaged 1,600 hospitalizations. For the age-adjusted asthma hospitalizations rates, Fulton (15.6/10,000), Warren (12.5) and Albany (12.3) fell into the 4th quartile, while Rensselaer, Dutchess, Montgomery, Ulster, and Schenectady counties fell into the 3rd quartile of NYS counties (Figure B-33) (CNA Appendix D-15).

Figure B-33 Asthma Emergency Department Visits per 10,000 Population

Source: Community Health Indicator Reports; Information on Asthma in NYS-ED Visits

There was an average of about 8,200 ED visits for asthma for the 10 county total population. For the age-adjusted ED visit rates, Montgomery (102.8/10,000), Schenectady (78.6), Fulton (76.0), Albany (71.8) and Rensselaer (66.7) fell into the 4th quartile of NYS counties (CNA Appendix D-15).

There was an average of 5,250 hospitalizations, and 812 deaths due to CLRD per year in the service area. Warren (47.3/10,000), and Fulton (47.2) fell into the 4th quartile, while Rensselaer (35.7) and Montgomery (32.0) were in the 3rd quartile of counties for age-adjusted CLRD hospitalization rates. For age-adjusted CLRD mortality, Fulton County (75.5/100,000) fell into the 4th quartile while Rensselaer (54.6), Columbia (48.0), and Warren (47.3) fell into the 3rd quartile of NYS counties (CNA Appendix D-16).

J) MATERNAL AND CHILD HEALTH

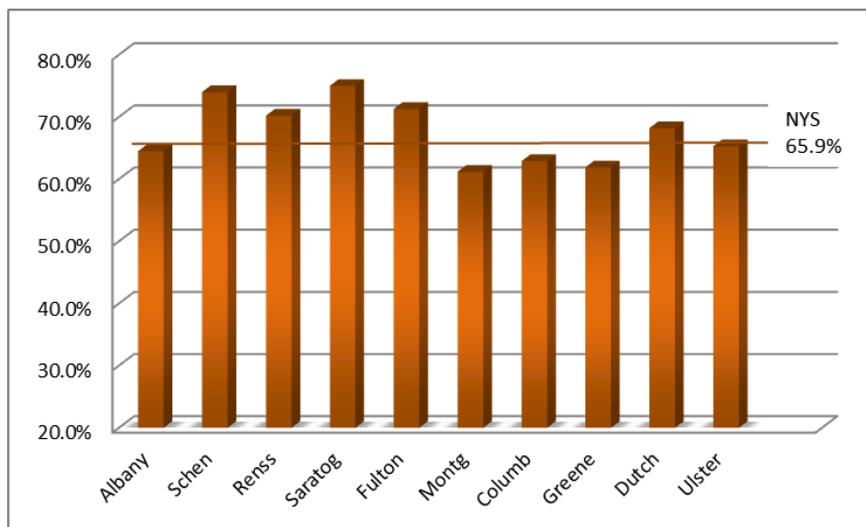

There was an average of over 1,500 premature (< 37 weeks gest.) births per year in the 10 County service area for a rate of 10.6% of all births. Greene County (13.3%) fell into the 4th quartile, and Albany (11.3%), Schenectady (11.2%), Montgomery (10.9%) and Warren (10.5%) counties fell into the 3rd quartile of NYS counties (CNA Appendix D-17).

Albany Medical PPS and Ellis PPS

For the premature birth rate in the Medicaid population, Greene (16.9%), Columbia (13.0%), and Schenectady (11.8%) were higher than NYS (11.7%). Five of the 10 counties had lower prematurity rates for the Medicaid births than non-Medicaid births. The lowest ratios were in Montgomery (0.79) and Saratoga (0.80) counties. Greene (1.31) and Columbia (1.25) counties had Medicaid/non-Medicaid prematurity ratios in the 4th quartile (CNA Appendix D-17).

Approximately 4,500 births in the 10 County service area were without adequate prenatal care (as defined by the Kotelchuck index). Warren (54.9%), Montgomery (61.2%), Greene (61.9%), and Columbia (62.9%) counties fell into the 4th quartile. Albany, Ulster, and Dutchess counties were in the 3rd quartile for adequate prenatal care (Figure B-34)(CNA Appendix D-18).

Figure B-34 Percent of Births with Adequate Prenatal Care

Kotelchuck Index takes into consideration time of 1st visit, number of visits and estimated gestational age at delivery

Source: NYSDOH Community Health Indicator Reports

There was an average of 100 infant deaths per year in the 10 County service area, for an infant mortality rate of 6.2 per 1,000 live births, and higher than the NYS rate of 5.1/1,000. Albany (8.6), Warren (8.6), Greene (8.3) and Schenectady (7.0) fell into the 4th quartile of NYS counties;

Albany Medical PPS and Ellis PPS

Columbia and Montgomery counties were in the 3rd quartile (CNA Appendix D-19).

The latest NYS birth defects data available from the Congenital Malformations Registry is for 2005-2007 births. The 10 county prevalence rates per 10,000 births were slightly higher than the Upstate prevalence rates for all the selected birth defects. Montgomery, Ulster and Dutchess had the highest of the 10 county rates for Cleft Lip/Palate; Greene and Schenectady for Down's Syndrome; Schenectady and Montgomery for Hypospadias; Dutchess for Spina Bifida; and Montgomery for Upper/Lower Limb Deficiencies (CNA Appendix D-20).

Of those children covered by government-sponsored insurance programs in the 10 County service area, less than 400 children aged 0-15 months did not get the number of recommended well child visits; 3,800 children 3-6 year olds did not receive the recommended number of recommended visits; and 13,250 children, 12-21 years, did not receive the recommended number of well child visits. For the children 0-15 months, the area rate was 90.1% and only Albany (83.4%) was in the 4th quartile. For children 3-6 years, the area rate was 79.7% with Ulster (75.4%), Schenectady (76.1%) and Albany (76.5%) counties falling into the 3rd quartile. For the children 12-21 years, the area rate was 59.3% with Ulster (52.7%), Schenectady (57.1%) and Albany (57.4%) counties in the 3rd quartile (CNA Appendix D-21).

There were approximately 250 service area children per year, less than 72 months of age, with high blood lead levels (10+ ug/dl) for a rate of 9.8 per 1,000 children tested. Every county was above the NYS rate, with Montgomery (29.8), Fulton (27.5), Columbia (14.1), Albany (13.4) and Rensselaer (11.2) falling into the 4th quartile of NYS counties (CNA Appendix D-22).

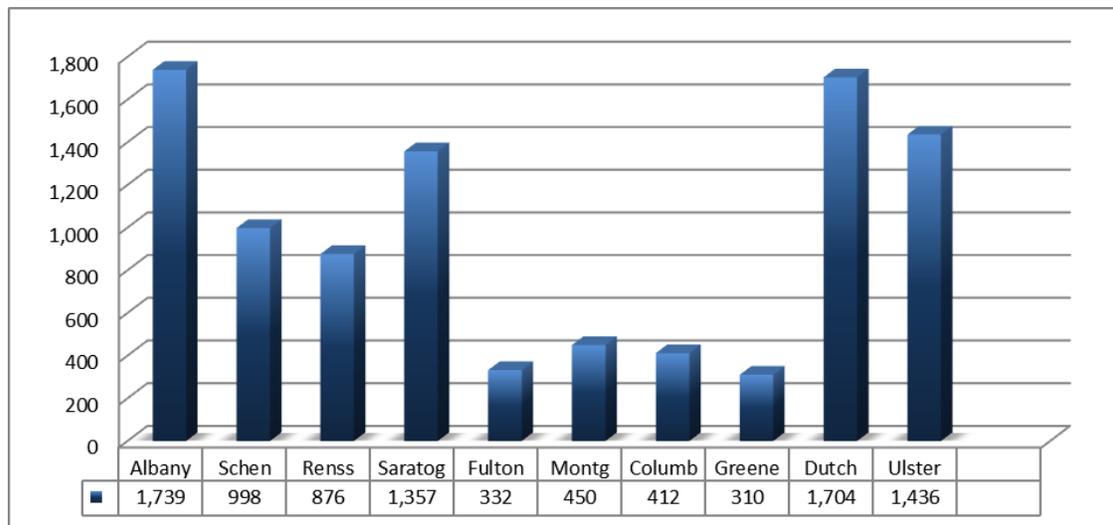

The 10 County service area experienced 500 adolescent (15-17 years) pregnancies in 2012 for a rate of 17.1 per 1,000 women. Schenectady (31.3), Montgomery (27.9), Albany (22.6) and Fulton (22.5) counties were in the 4th quartile, and Rensselaer and Warren (17.4) in the 3rd quartile of NYS counties (CNA Appendix D-23).

K) IMMUNIZATIONS

Albany Medical PPS and Ellis PPS

Approximately 9,600 children in the 10 County service area, aged 19-35 months, were not fully immunized for an area rate of 56.6%. Ulster (38.2%), Montgomery (42.7%), and Columbia (46.4%) were in the 4th quartile, and Warren (52.0%), Fulton (53.8%) and Dutchess (54%) fell into the 3rd quartile of NYS counties (Figure B-35, CNA Appendix D-24).

Figure B-35 Number of Children Age 19-35 months Not Immunized (2013-14)

Source: NYSDOH Prevention Agenda Dashboard, NYS excluding NYC

The service area had over 31,000 females, 13-17 years of age, not fully immunized for HPV, for an area rate of 26.4%. Ulster (20.8%), and Fulton (20.9%) counties fell into the 4th quartile, while Dutchess (21.9%), and Columbia (27.9%) fell into the 3rd quartile of NYS counties (CNA Appendix D-24).

There were approximately 61,000 service area adults, 65 years of age and older, who did not receive an influenza immunization in the past year, for an area rate of 74.9%. Greene (63.7%), and Fulton (68.9%) counties were in the 4th quartile, while Montgomery (69.3%), Albany (72.7%), Warren (73.4%) and Ulster (73.6%) counties fell into the 3rd quartile (CNA Appendix D-24).

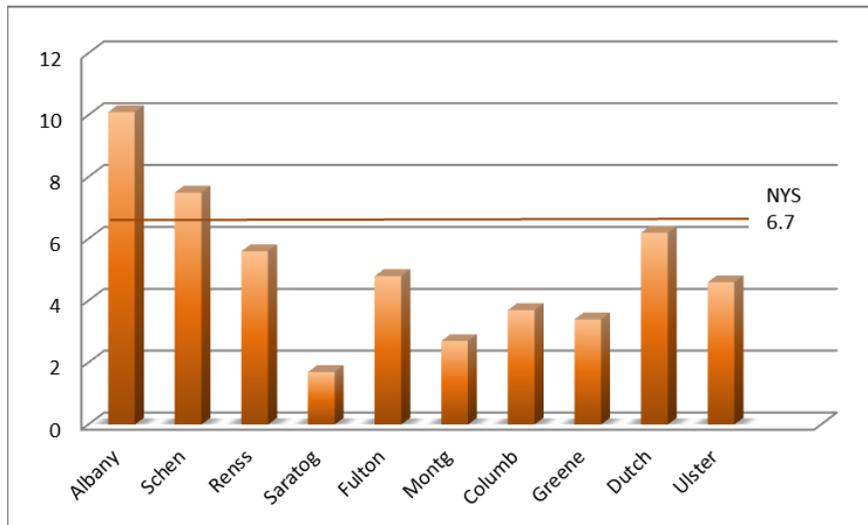

L) INFECTIOUS DISEASES

There was an average of 90 new HIV cases per year in the service area, for a rate of 5.9/100,000. Albany (10.1) and Schenectady (7.5) counties

Albany Medical PPS and Ellis PPS

had rates in the 4th quartile, with Dutchess (6.2), Rensselaer (5.6), Fulton (4.8) and Ulster (4.6) in the 3rd quartile of NYS counties (CNA Appendix D-25).

Figure B-36 HIV Rate per 100,000 (2010-2012)

Source: NYSDOH Prevention Agenda Dashboard, NYS excluding NYC

There were almost 400 cases of gonorrhea in the service area for women 15-44 years of age; a service area rate of 133.0/100,000. Schenectady (197.6), Albany (173.4) and Dutchess (173.7) counties had rates in the 4th quartile, while Fulton, Ulster, Greene and Rensselaer counties fell into the 3rd quartile of NYS counties (CNA Appendix D-26).

The 10 County service area had almost 3,400 women, 15-44 years of age, diagnosed with a chlamydia infection in 2012 for a rate of 1,151.4/100,000. Schenectady (1688.3), and Albany (1,444.8) were in the 4th quartile, while Fulton, Montgomery, Rensselaer, and Greene counties fell into the 3rd quartile for chlamydia infections (CNA Appendix D-26).

The 10 County service area had 2,800 cases of Lyme disease per year. Columbia County at 574.6/100,000, Greene County at 521.6, and Rensselaer County at 310.0, had the three highest Lyme disease rates in NYS. In addition, Ulster, Saratoga, Dutchess and Albany counties also fell into the 4th quartile for Lyme disease rates. (CNA Appendix D-27).

M) MENTAL HEALTH AND SUBSTANCE ABUSE

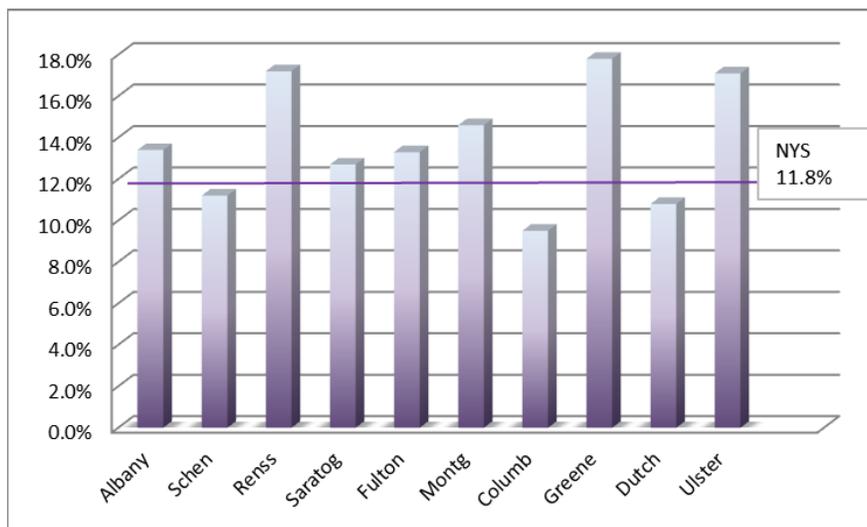

Albany Medical PPS and Ellis PPS

Seven of the 10 service area counties had rates of binge drinking higher than the Upstate average of 17.4%. Greene (25.3%) and Fulton (22.8%) counties fell into the 4th quartile, while Columbia (20.1%), Saratoga (18.9%), Montgomery (18.9%), Rensselaer (18.6%), and Warren (18.2%) counties fell into the 3rd quartile (CNA Appendix D-9).

The 10 County Service are averages 422 cirrhosis hospitalizations per year. Warren(3.6/10,000), Montgomery (3.0) and Rensselaer (2.6) counties fell in the 4th quartile for the age-adjusted rates. The service area averaged 150 cirrhosis deaths per year. All counties had age-adjusted cirrhosis mortality rates higher than NYS. Fulton (11.9/100,000), Rensselaer (10.8) and Greene (10.6) counties fell into the 4th quartile of NYS counties (CNA Appendix D-28).

When reviewing the service area for adults with 14 or more poor mental health days in the past month, 8 counties had rates higher than Upstate (11.8%). Greene (17.8%), Rensselaer (17.2%), Ulster (17.1%) and Montgomery (14.6%) fell into the 4th quartile while Albany, Fulton, Saratoga and Warren fell into the 3rd quartile of NYS counties (Figure B-37)(CNA Appendix D-9)

Figure B-37 Percent of Adults (18+) with Poor Mental Health for 14+ days last month

Expanded Behavioral Risk Factor Surveillance System (EBRFSS)- Prevention Agenda Tracking Indicators 2012-2013

The 10 County area had an average of almost 1,200 self-inflicted injury hospitalizations. Nine of the 10 counties had age-adjusted rates higher

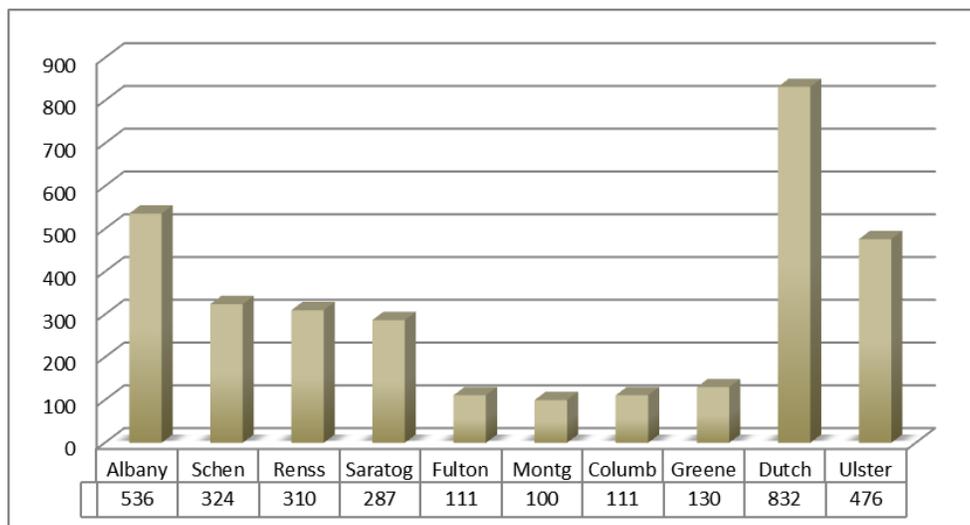

Albany Medical PPS and Ellis PPS

than NYS. Warren (13.6/10,000), Schenectady (12.1), Montgomery (12.0), and Fulton (11.6) counties had self-inflicted hospitalization rates in the 4th quartile, while Rensselaer and Saratoga in the 3rd quartile (CNA Appendix D-29).

There was an average of 162 suicides per year in the service area. Every county in the service area had an age-adjusted suicide mortality rate higher than NYS. Warren County (14.7/100,000) fell into the 4th quartile, and Montgomery (12.3), Saratoga (12.1) and Schenectady (11.6) counties fell into the 3rd quartile of NYS counties (CNA Appendix D-29).

There were over 3,200 drug-related hospitalizations in the 10 County service area (Figure B-38). Greene (30.4/10,000), Dutchess (29.0), and Ulster (27.5) counties had age-adjusted drug-related hospitalization rates in the 4th quartile, while Fulton, Schenectady, Montgomery and Fulton counties fell into the 3rd quartile (CNA Appendix D-30).

Figure B-38 Drug Related Hospitalizations 2010-2012

Source: NYSDOH Community Health Indicator Reports

The service area averaged over 150 drug-related newborn discharges per year for a rate of 104.6 per 10,000 newborns. Schenectady's rate of 207.7 was the highest of the 10 counties and in the 4th quartile; Warren County (145.4) also fell into the 4th quartile. Fulton, Greene, Rensselaer, Albany and Montgomery counties were in the 3rd quartile of NYS counties (CNA Appendix D-30).

Albany Medical PPS and Ellis PPS

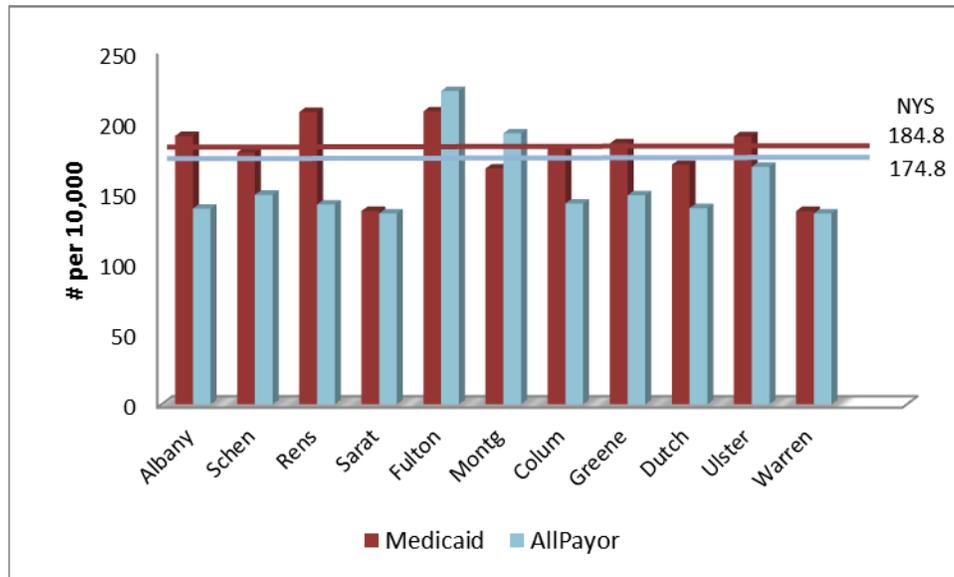

Information from the above Section is also contained in CNA Appendix D-31, 10 County Public Health Indicator Matrix. The appendix presents rates and populations at risk for 148 indicators by Prevention Agenda Priority Areas. County rates were identified as being in the 3rd or 4th quartile for all NYS counties.

II. Health Status of the Medicaid Population

A) PREVENTABLE ADMISSIONS AND VISITS - MEDICAID VS. ALL PAYER POPULATION

Prevention Quality Indicators (PQI) represent conditions that could be prevented or reduced with appropriate primary care. For the AMC/Ellis PPS service area, when comparing all payers to the Medicaid population for the composite PQIs, the county Medicaid population usually had higher rates than the all payer population. The exception was Montgomery County where the Medicaid population had better PQIs for Overall Composite as well as the Chronic, Circulatory and Diabetes Composites. (Figure B-39) (CNA Appendix E-1).

Figure B-39 Prevention Quality Indicators (PQI) Overall Composite All Payer & Medicaid

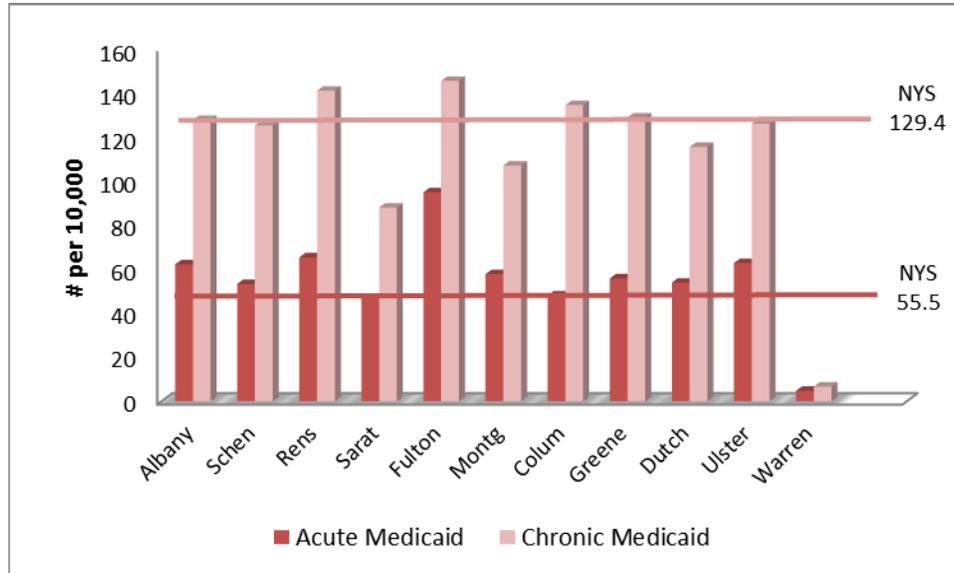

Source: Salient Performance Data - Hospital Inpatient Prevention Quality Indicators by County

For the Circulatory Composite, 7 of the 10 service area counties also had the Medicaid population doing better than the all payer population (CNA Appendix E-1). When reviewing the Composite PQI categories for the all payer population, Fulton County was higher than the NYS rate for all categories, and Montgomery County was higher for all but the Respiratory Composite. Ulster County had higher all payer PQIs than the

Albany Medical PPS and Ellis PPS

NYS rate for Acute, Chronic, Circulatory and Respiratory Composites.
(Figure B-40).

Figure B-40 Prevention Quality Indicators (PQI) Acute and Chronic Medicaid Rates

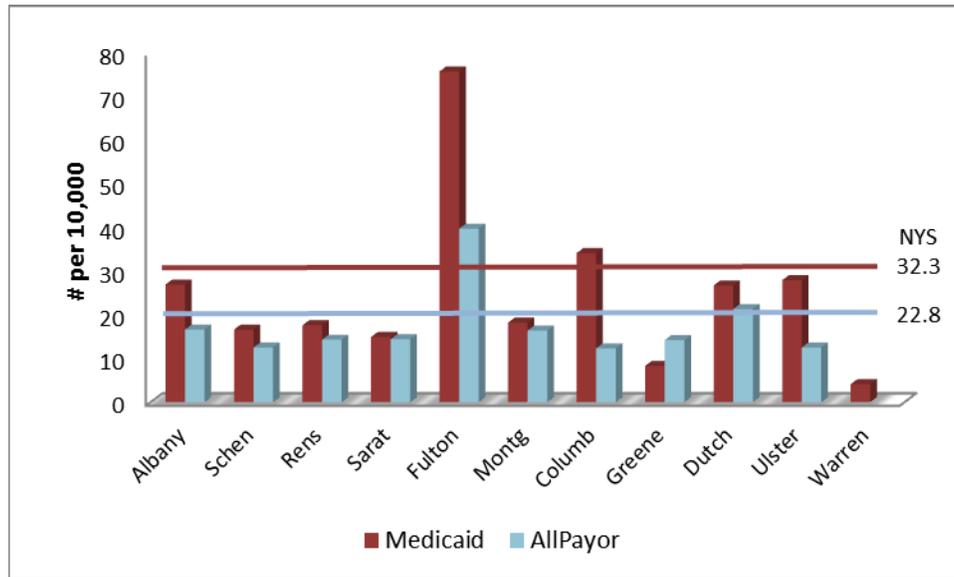

Source: Salient Performance Data - Hospital Inpatient Prevention Quality Indicators by County

The Pediatric Prevention Quality Indicators (PDI) are ambulatory care sensitive indicators but for the childhood population. Similar to the 10 County service area PQIs, the childhood Medicaid population usually had higher PDIs than the all payer population. The exception was Greene County, where the Medicaid population fared better than the all payer population for all the PDI Composite rates, and Saratoga County's Medicaid population had better Chronic and Pediatric Asthma Composite rates than the all payer population (Figure B-41). When reviewing the all payer PDI rates, Fulton County was higher than NYS for Overall, Chronic, and Pediatric Asthma Composite PDI rates, while Albany County was higher than NYS for the Acute PDI Composite rate (CNA Appendix E-2).

Albany Medical PPS and Ellis PPS

Figure B-41 Pediatric Quality Indicators (PDI) Overall Composite All Payer & Medicaid Rate

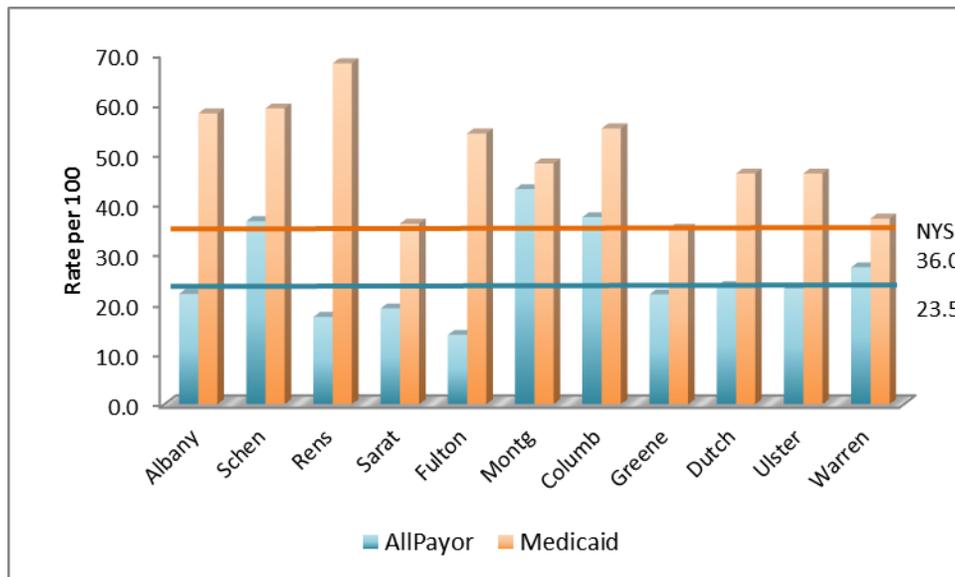

Source: Salient Performance Data - Medicaid Inpatient Prevention Quality Indicators (PDI) for Pediatric Discharges by Patient County: Beginning 2011

When reviewing the Potentially Preventable Emergency Department Visits (PPV) for the 10 county service area, all counties had much higher Medicaid rates compared to the all payer rates (Figure B-42). While the NYS difference between the PPV all payer versus Medicaid population is 12.5 per 100 (Medicaid-36.0; all payer-23.5), 6 of the 10 counties had differences over 20 per 100: Rensselaer-50.6; Fulton-40.2; Albany-36.0; Ulster-22.9; Schenectady-22.5; and Dutchess-22.5. Four counties had higher all payer PPV rates than NYS (23.5 per 100): Montgomery- 42.9; Columbia-37.3; Schenectady-36.5; and Warren (27.4) (CNA Appendix D-31).

Albany Medical PPS and Ellis PPS

Figure B-42 Potentially Preventable ED Visits All Payer & Medicaid Rate

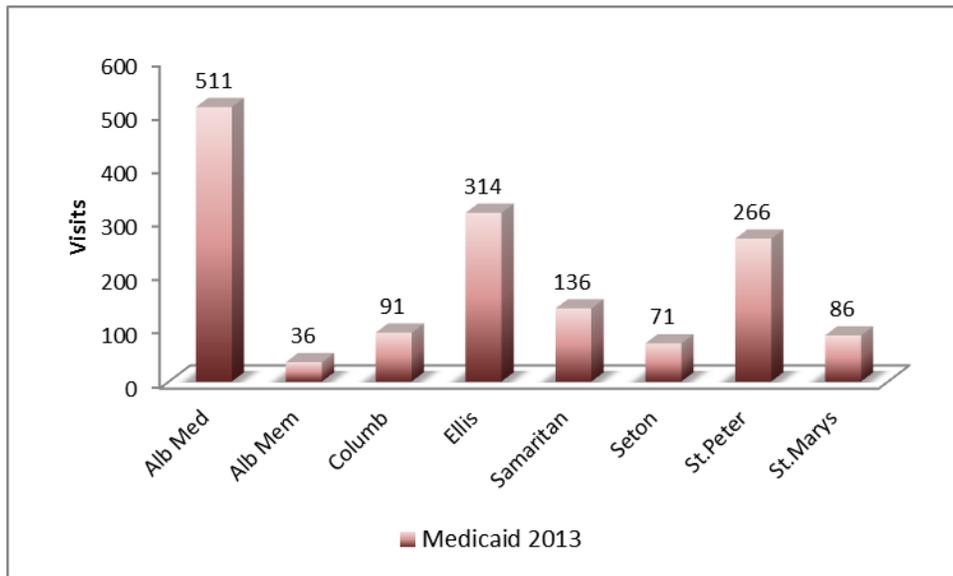

Source: Salient Performance Data - Medicaid Potentially Preventable Emergency Visit (PPV) Rates by Patient County: Beginning 2011

Potentially Preventable Readmissions (PPR) determines whether a readmission is clinically related to a prior admission based on the patient's diagnosis, procedures in the prior admission, and the reason for readmission. High PPR rates indicate a need to coordinate post-hospital care. The 2011-12 NYS PPR rate per 100 at risk admissions was 7.9 for all payers and 6.8 for the Medicaid population. All Capital District hospitals had Medicaid PPR rates lower than the comparable all payer rates. The 2013 NYS PPR rate for the Medicaid population of 6.31 per 100 at risk admissions was a reduction from the 2011-12 rate. All the Capital District hospitals also showed a reduction in the PPR rate except St. Peters Hospital which showed a slight increase from 5.4 to 5.48 per 100. Albany Medical Center was the only hospital with a Medicaid PPR rate (6.49) greater than NYS. Albany Medical Center Hospital (n=511), Ellis Hospital (n=314) and St. Peters Hospital (n=266) had the largest number of potentially preventable Medicaid readmissions in 2013 (Figure B-43 and Figure B-44)(CNA Appendix D-31).

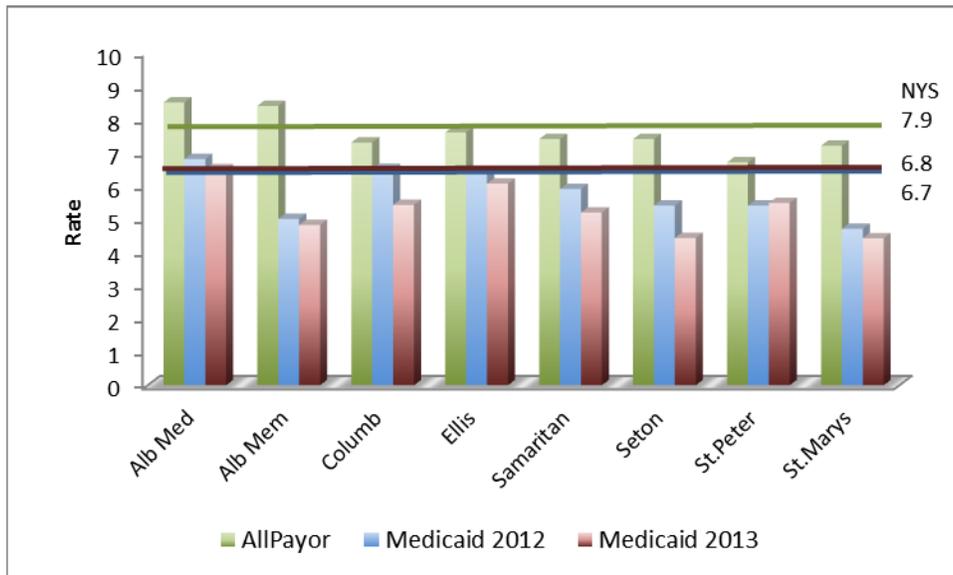

Albany Medical PPS and Ellis PPS

Figure B-44 Potentially Preventable Re-admissions (PPR) Rate Risk Adjusted

Source: Salient Performance Data - Medicaid Hospital Inpatient Potentially Preventable Readmission Rates by Hospital: Beginning 2011

B) PREVENTABLE ADMISSIONS (PQI) - MEDICAID POPULATION

There were approximately 3,200 adult PQI hospitalizations per year in the Medicaid population residing in the AMC/Ellis PPS service area. Of these PQIs, 21% were from Albany, 15% from Dutchess, and 12% from Rensselaer counties. NYS had a PQI Overall Composite rate of 184.8 per 10,000 Medicaid recipients. Of the 10 counties in the service area, 4 had rates higher than NYS, and fell into the 4th or 5th Quintile of NYS counties: Fulton (247.7); Rensselaer (206.9); Albany (189.9); and Ulster (189.7) counties.

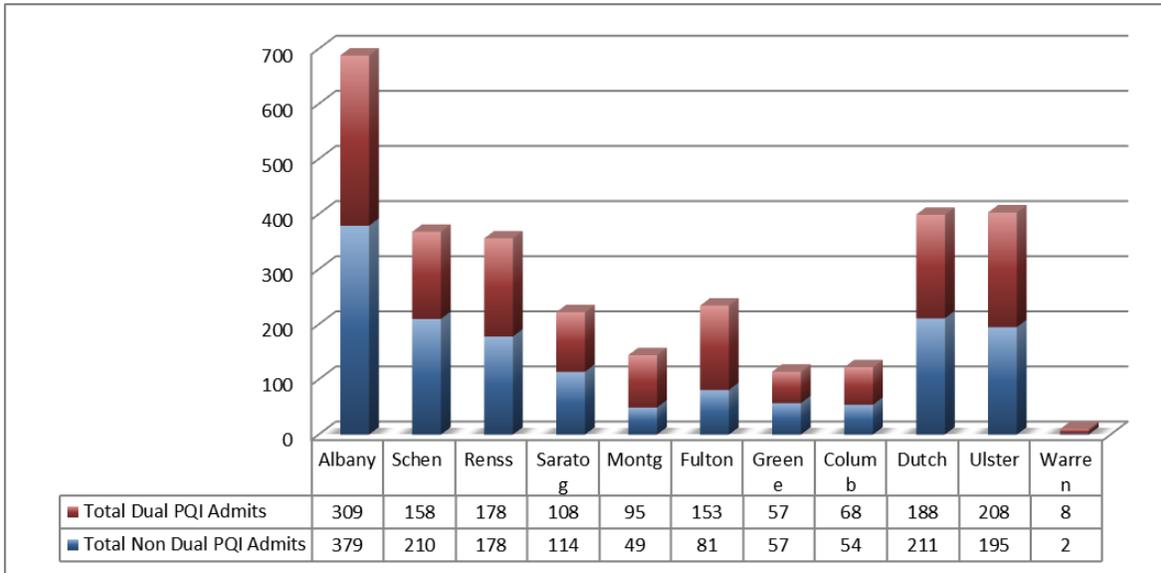

There were over 1,100 Medicaid Acute Composite PQIs per year in the service area. Of these, 20% were from Albany, 15% from Dutchess, and 12% from Rensselaer. Six of the 10 counties had Acute PQI rates greater than NYS (55.5 per 10,000), with Fulton (94.8) and Rensselaer (65.3) counties falling in the 4th or 5th Quintile of all NYS counties. There were about 2,100 Medicaid Chronic Composite PQIs per year in the service area. Of these, 22% were from Albany, 15% from Dutchess and 12% from Schenectady counties. There were 3 counties with rates higher than NYS (129.4 per 10,000), but 4 counties falling into the 4th or 5th Quintile for Chronic Composite PQIs: Fulton (145.4); Rensselaer (140.9); Columbia (134.9); and Greene (128.8). (CNA Appendix E-5).

There were an equal number of Dual and Non-Dual PQI admissions in the 10 County service area (Figure B-45).

Geographically, the Medicaid PQI admissions come predominantly from the urban areas of Albany, Schenectady, Troy, Kingston, Poughkeepsie and Beacon (Figure B-47). The top neighborhoods for PQI are Troy/Lansingburg (Rensselaer County), Arbor Hill/Center Square and South End/Riverfront, West End, Delaware/2nd Avenue in Albany County and Northeastern Saratoga County.

Albany Medical PPS and Ellis PPS

Albany Medical PPS and Ellis PPS

Figure B-46 Prevention Quality Indicators (PQI) Overall Composite Medicaid by Neighborhood per Square Mile

Source: DSRIP Medicaid Beneficiaries Inpatient Admissions and Emergency Room Visits by Zip Code Beginning_2012

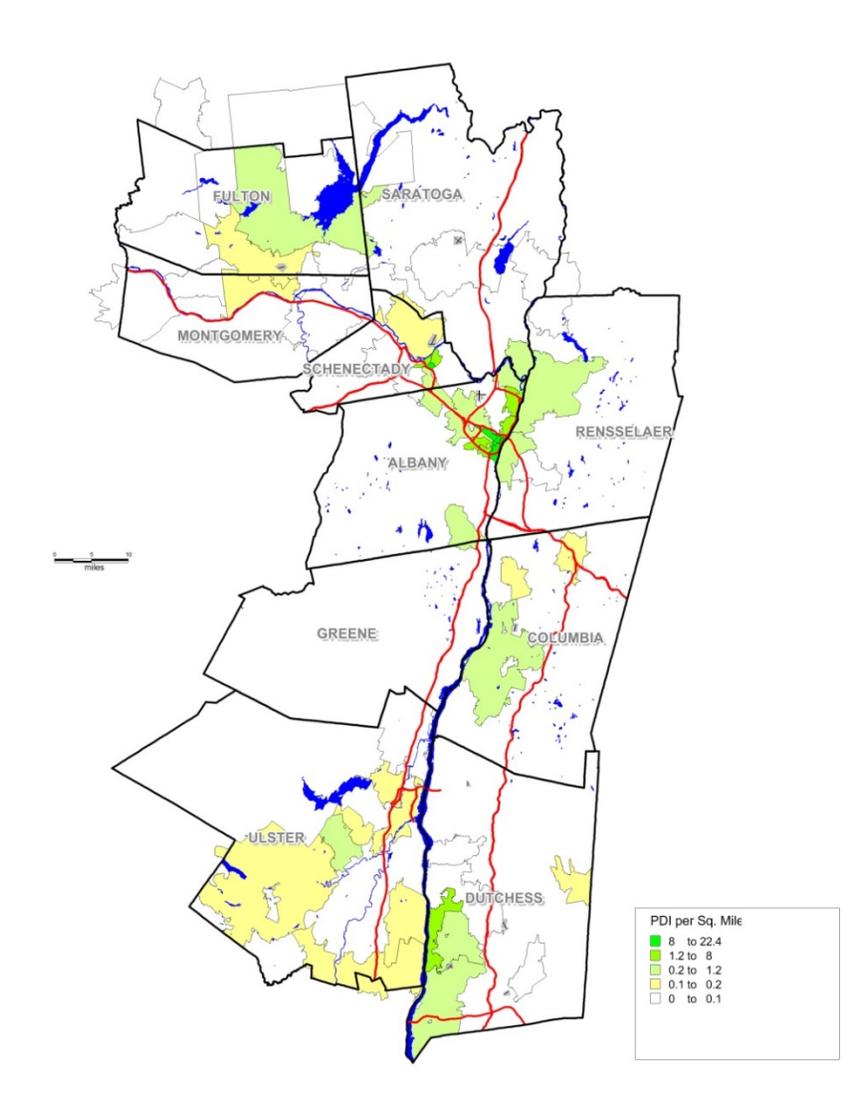

C) PEDIATRIC PREVENTION QUALITY INDICATOR (PDI)

There were about 220 Medicaid Overall PDIs per year in the 10 County service area: 25% from Albany; 18% from Dutchess; and 13% from Ulster counties. The NYS Overall PDI Composite rate was 32.3 per 10,000 Medicaid recipients. Fulton (75.7), Columbia (34.1), Ulster (27.9), Albany (26.9) and Dutchess (26.7) counties all fell in the 4th or 5th Quintile for all NYS counties. There was an average of 34 Acute and 85 Chronic

Albany Medical PPS and Ellis PPS

Composite Medicaid PDIs in the AMC/Ellis PPS service area. Albany (11.2 per 10,000), Fulton (8.1), Ulster (8.0), and Saratoga (7.7) fell into the 4th or 5th Quintile for the PDI Acute Composite, and were all higher than the NYS rate of 7.5 per 10,000. The NYS rate for the PDI Chronic Composite was 24.8 per 10,000 Medicaid recipients. Fulton County (71.6) was almost 3 times the NYS rate, and together with Columbia (28.7), and Dutchess (21.5) counties, fell in the 4th or 5th Quintile of all NYS counties (CNA Appendix E-5). The geographic distribution of the PDIs is similar to that of the PQIs (Figure B-47).

Figure B-47 Pediatric Prevention Quality Indicators (PDI) Medicaid per Square Mile by Neighborhood

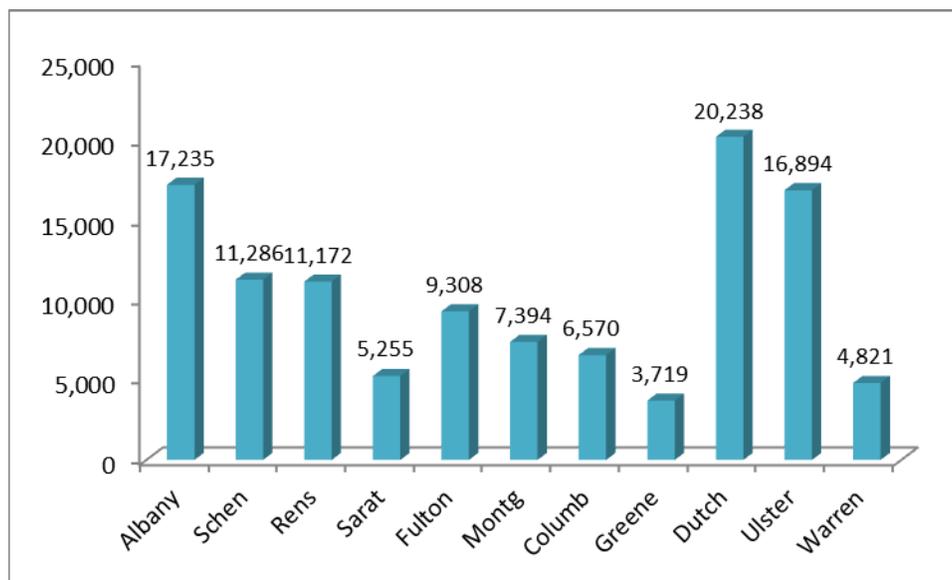

Source: Salient Performance Data - Medicaid Inpatient Prevention Quality Indicators (PDI) for Pediatric Discharges by Patient Zip Code: Beginning 2011

Albany Medical PPS and Ellis PPS

D) POTENTIALLY PREVENTABLE EMERGENCY VISIT (PPV)

There was an average of 154,000 Medicaid PPVs in the 10 County service area (Figure B-48). Of these 22% were from Albany, 15% from Schenectady, and 15% from Rensselaer. All 10 counties had equal to or greater Medicaid PPV rates than NYS (35 per 100 Medicaid recipients). Rensselaer (68), Schenectady (59), Albany (58) and Columbia (55) counties were in the 4th or 5th Quintile of all NYS counties for Medicaid PPVs. (CNA Appendix E-5).

Figure B-48 Potentially Preventable ED Visits (PPV)

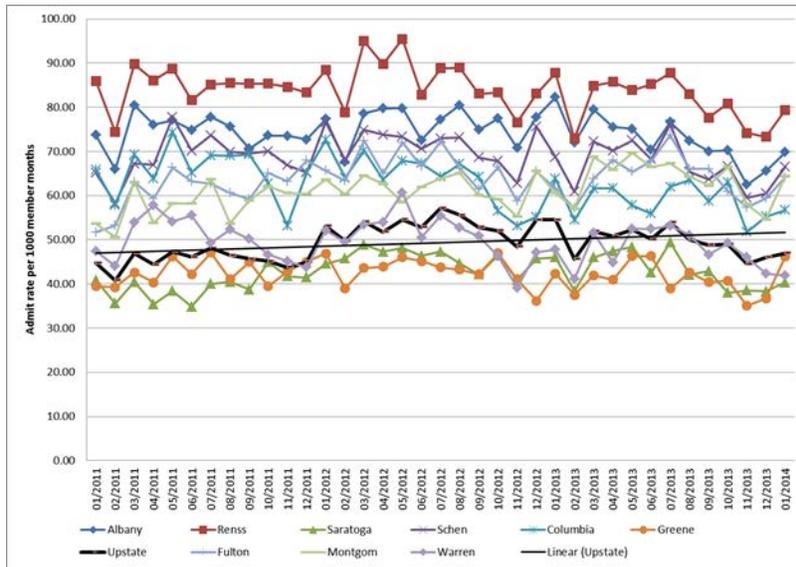

Source: DSRIP Salient Performance Data - Medicaid Potentially Preventable Emergency Visit (PPV) Rates by Patient County: Beginning 2011

ED visits have trended up slightly between January 2011 and January 2014. The ED visit rates in all counties in the service area were above the Upstate average with the exception of Saratoga, Greene and Warren counties (Figure B-49).

Albany Medical PPS and Ellis PPS

Figure B-49 ED Rate per 1,000 Member Months by County

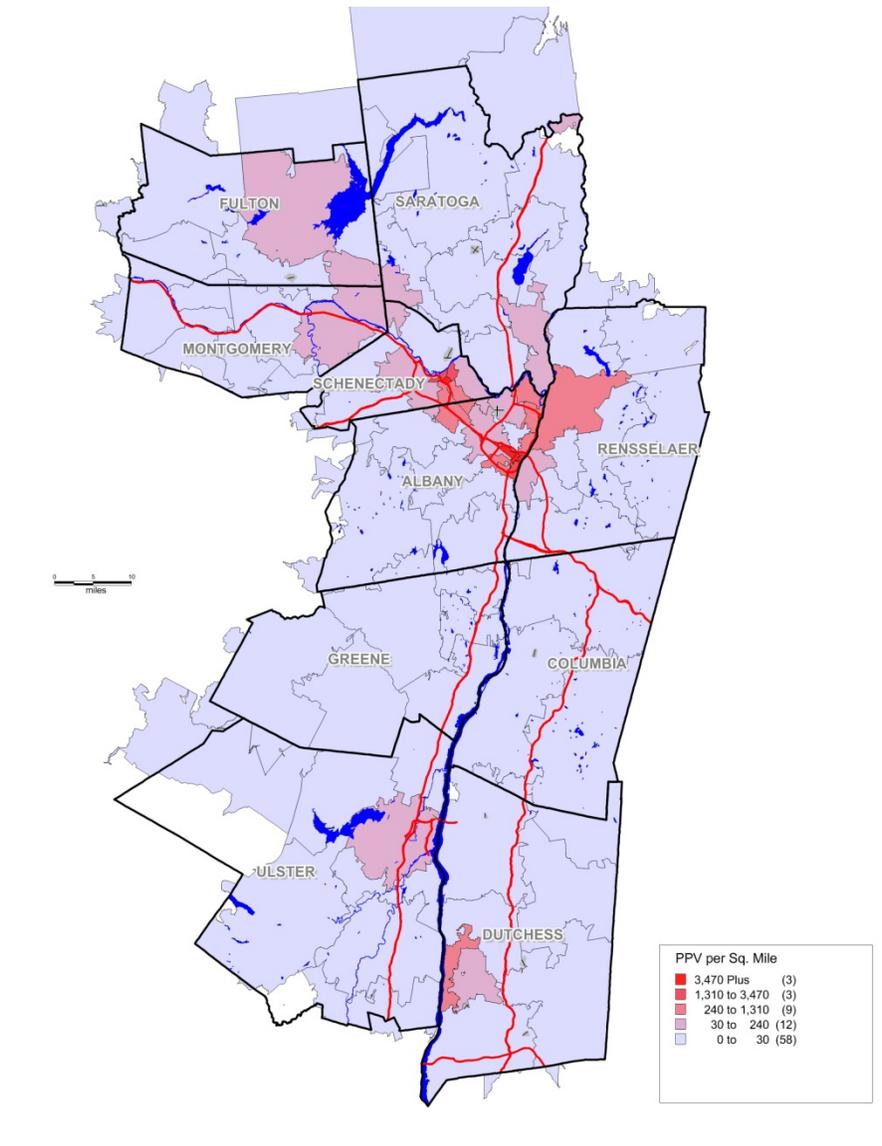

Source: DSRIP Dashboard C2

The PPV geographic distribution is similar to the PQI and PDI distributions (Figure B-51). The greatest concentrations of PPV is found in the Schenectady County neighborhood Hamilton Hill followed by Arbor Hill/Center Square and West End (including West Hill) in Albany County.

Albany Medical PPS and Ellis PPS

Figure B-50 Potentially Preventable ED Visits (PPV) Medicaid per Square Mile by Neighborhood

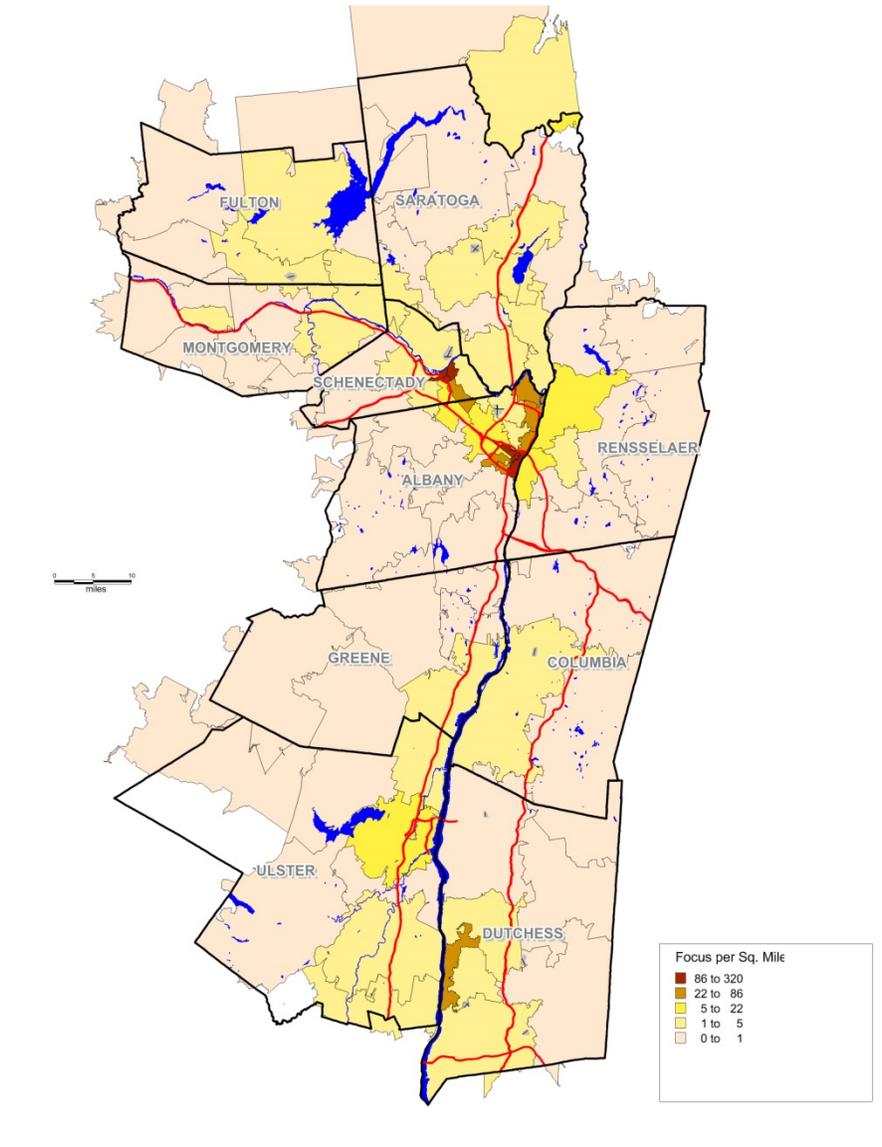

Source: DSRIP Salient Performance Data - Medicaid Potentially Preventable Emergency Visit (PPV) Rates by Patient Zip Code: Beginning 2011

Albany Medical PPS and Ellis PPS

SPARCs analysis was performed to identify the super-utilizers of the ED defined as those using the ED two or more times in a 6 month period. The geographic distribution of the super-utilizers (Figure B-51) is similar to the geographic pattern of the preventable ED visits. The top neighborhoods for super-utilizers were Hamilton Hill in Schenectady County, Troy/Lansingburgh in Rensselaer County followed by West End, Arbor Hill/Center Square and the South End/Riverfront in Albany County. Gloversville/Mayfield in Fulton County also ranked high for super-utilizers.

Albany Medical PPS and Ellis PPS

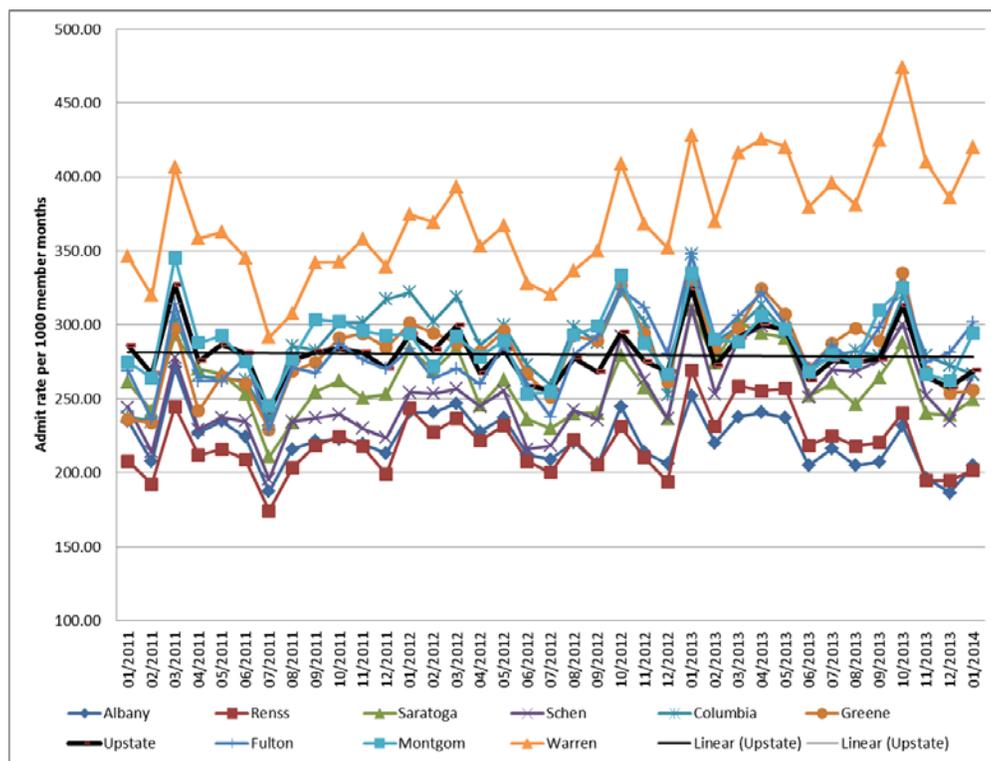

Figure B-51 Focus Group – ED Super-Utilizer and/or 30 day all cause Re-admission 2011-2013

E) PRIMARY CARE VISIT RATES

An indicator of over utilization of the ED is the primary care visit rate. Primary care visit rates have remained stable from January 2011 to January 2014 for the Service Area, with only Warren, Fulton and Montgomery counties having rates at or above the Upstate rate (Figure B-52). All Service Area counties have primary care visit rates lower than the Upstate NY rate of 316 visits per 1,000 member months (2013) except for Warren and Dutchess Counties (409)(Figure B-53). The percent of members with primary care visits were lowest in Rensselaer, Albany, Greene and Schenectady counties indicating an underutilization of primary care (Figure B-54).

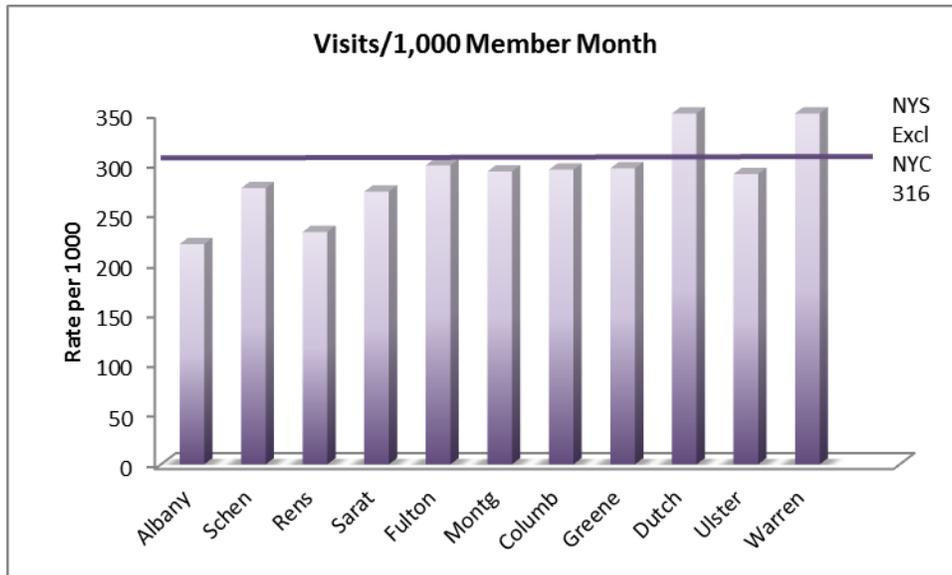

Figure B-52 Primary Care Visit Rate per 1,000 Member Months

Source: DSRIP Dashboard C4

Figure B-54 Percent of Members with Primary Care Visits

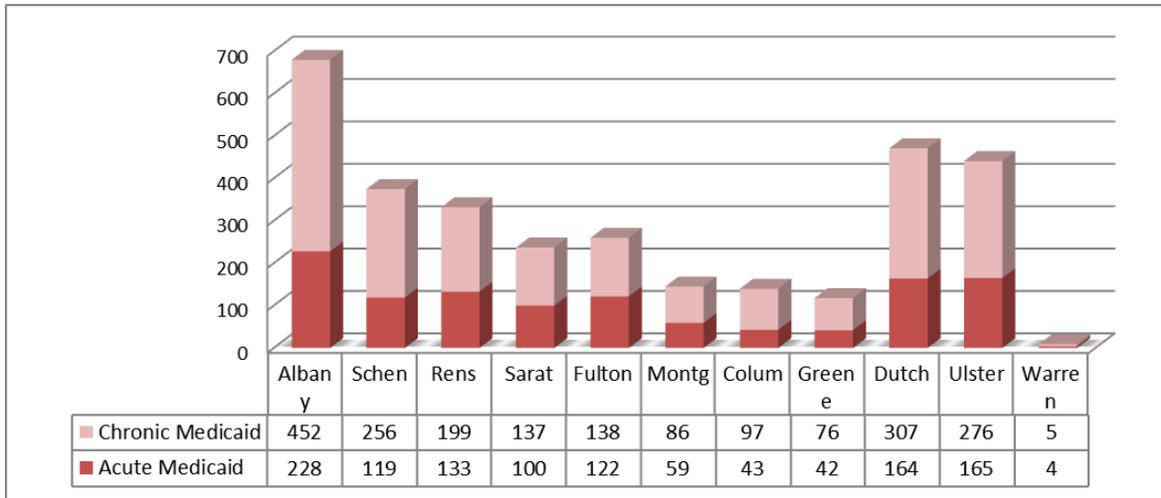

Source: DSRIP Dashboard C4

III. Medicaid Chronic Care

A) CHRONIC CARE OVERVIEW

For the 11 County Service Area, there are 1 ½ to 2 times the Chronic PQIs than Acute PQIs in the Medicaid population (Figure B-55).

Figure B-55 Prevention Quality Indicators (PQI) Acute and Chronic Medicaid Admissions

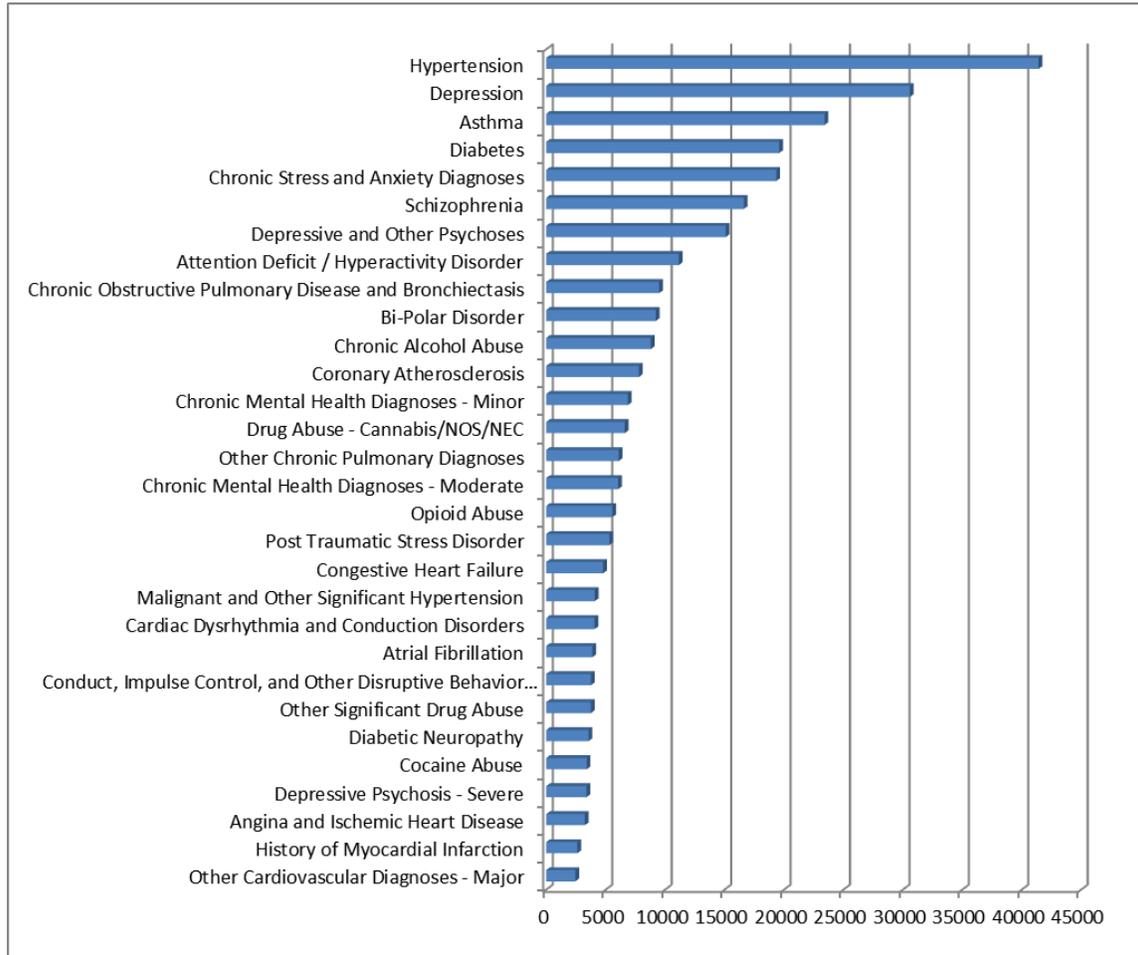

Source: DSRIP Chartbooks (Average of 2011 and 2012 visits), Census 2011

The 5 leading Chronic Conditions in the 10 County Medicaid population were: hypertension; depression; asthma; diabetes; and chronic stress and anxiety (Figure B-56). Similarly, the leading causes of Medicaid inpatient admissions were: hypertension; Depression and other depressive psychoses; asthma; diabetes; and chronic stress and anxiety diagnoses (Figure B-57). For ED visits the 5 leading conditions are chronic stress and anxiety diagnoses, schizophrenia, depression, diabetes and bi-polar disorder (Figure B-58).

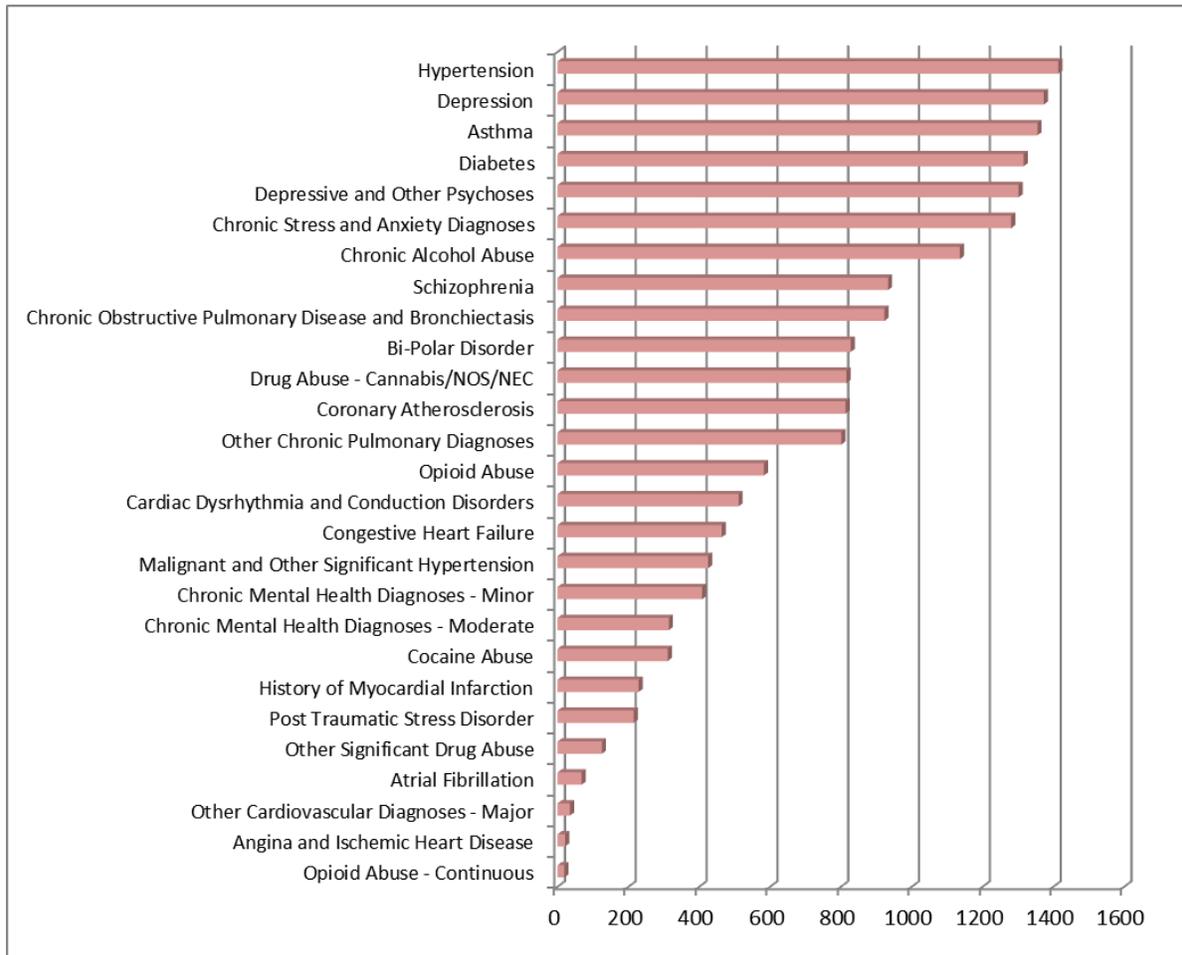

Albany Medical PPS and Ellis PPS

Figure B-56 Medicaid Beneficiaries by Chronic Condition

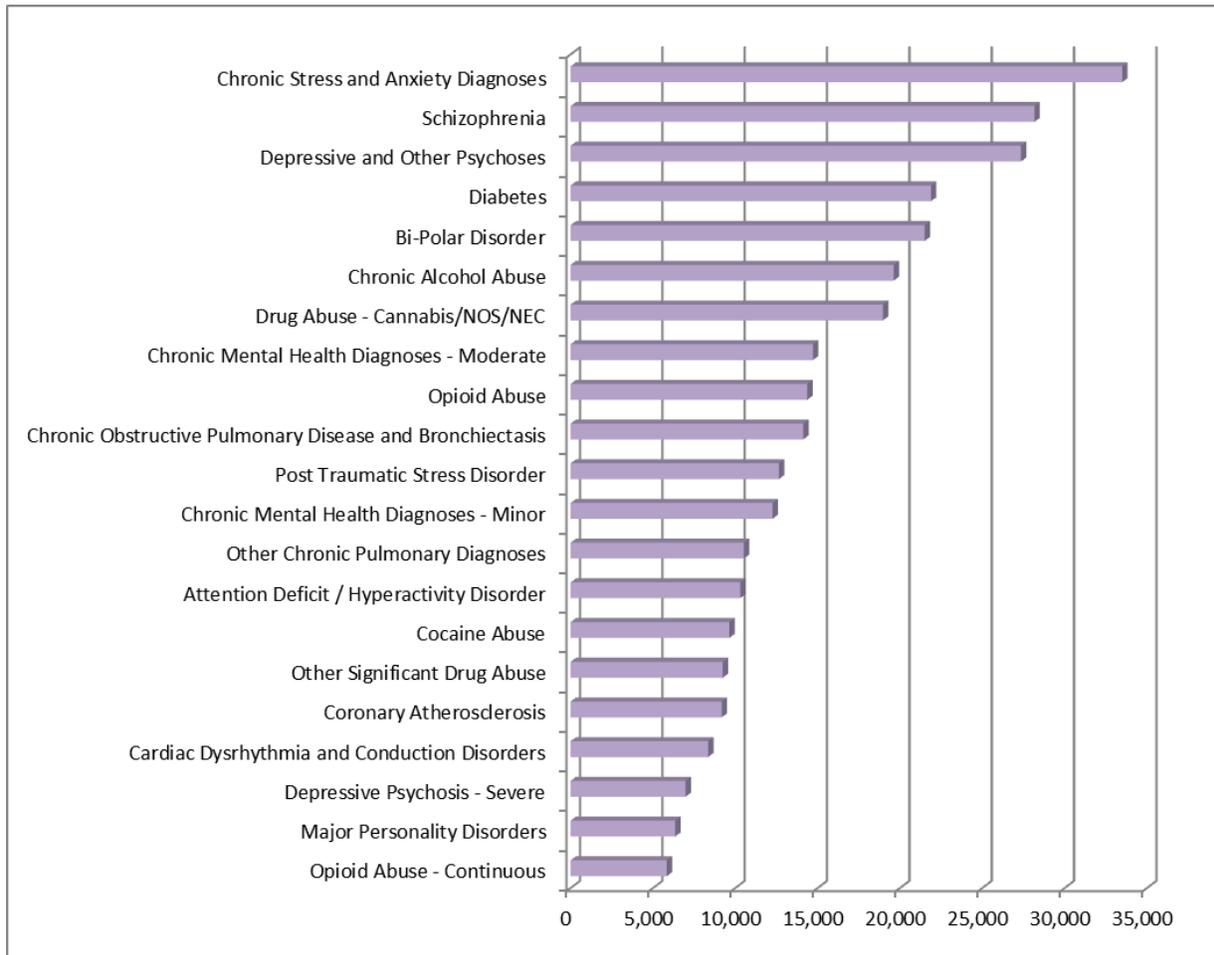

Source: Salient PerformanceData - DSRIP Medicaid Chronic Conditions 10 County Inpatient Admissions and Emergency Room Visits by County Beginning 2012

Figure B-57 Medicaid Inpatient Admissions by Chronic Condition

Figure B-58 Medicaid ED Visits by Chronic Condition

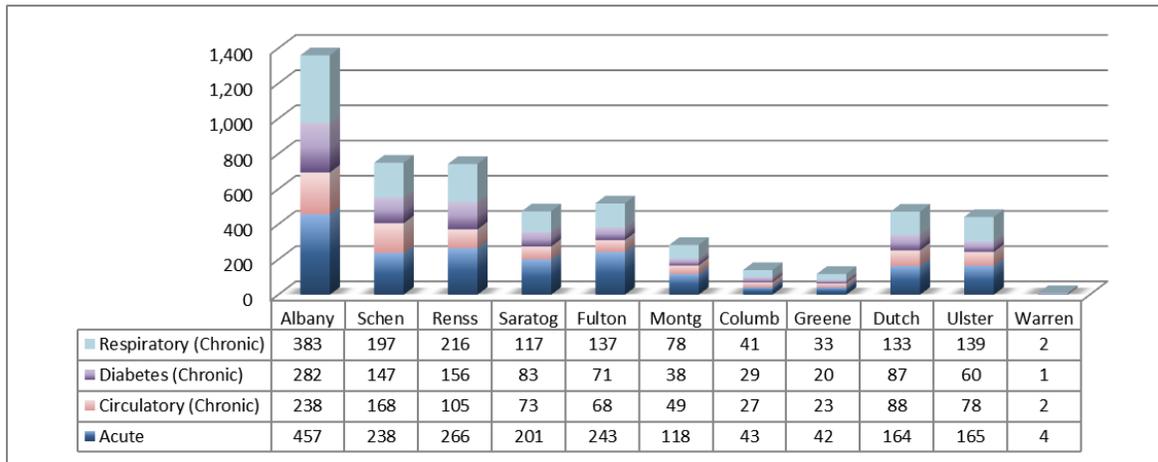

Source: Salient Performance Data - Medicaid_Chronic_Conditions__10 County Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012

When breaking down the Chronic PQIs by specific composites, there are more Respiratory PQIs, followed by Diabetes and Circulatory Composite PQIs (Figure B-59).

Albany Medical PPS and Ellis PPS

Figure B-59 Prevention Quality Indicators (PQI) Composite Count

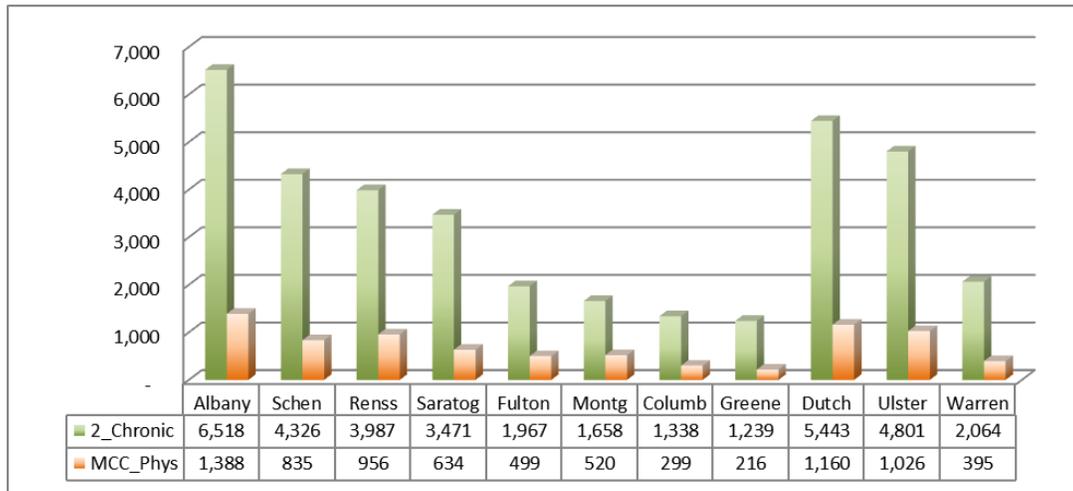

Source: DSRIP Chartbooks and the PQI dataset for Medicaid Recipients

As seen Figure B-57 and Figure B-58 above, those with chronic conditions and with behavioral health issues constitute the heavy users of both ED and inpatient services. SPARCS analysis identified a target group (2_Chronic) that has multiple chronic physical conditions and/or moderate or significant behavioral health disorders. Figure B-61 shows the geographic distribution of these chronic individuals. Figure B-60 shows the number and concentration by county. The highest concentrations are in the urban tri city areas, especially Hamilton Hill in Schenectady and Troy/Lansingburgh in Rensselaer and West End in Albany county, with pockets in Fulton (Gloversville) , Ulster (Kingston) and Dutchess Counties (Poughkeepsie).

Albany Medical PPS and Ellis PPS

Figure B-60 Number of Chronic (2_chronic) and Multiple Chronic Condition (MCC_Phys) People

Source: SPARCs Analysis

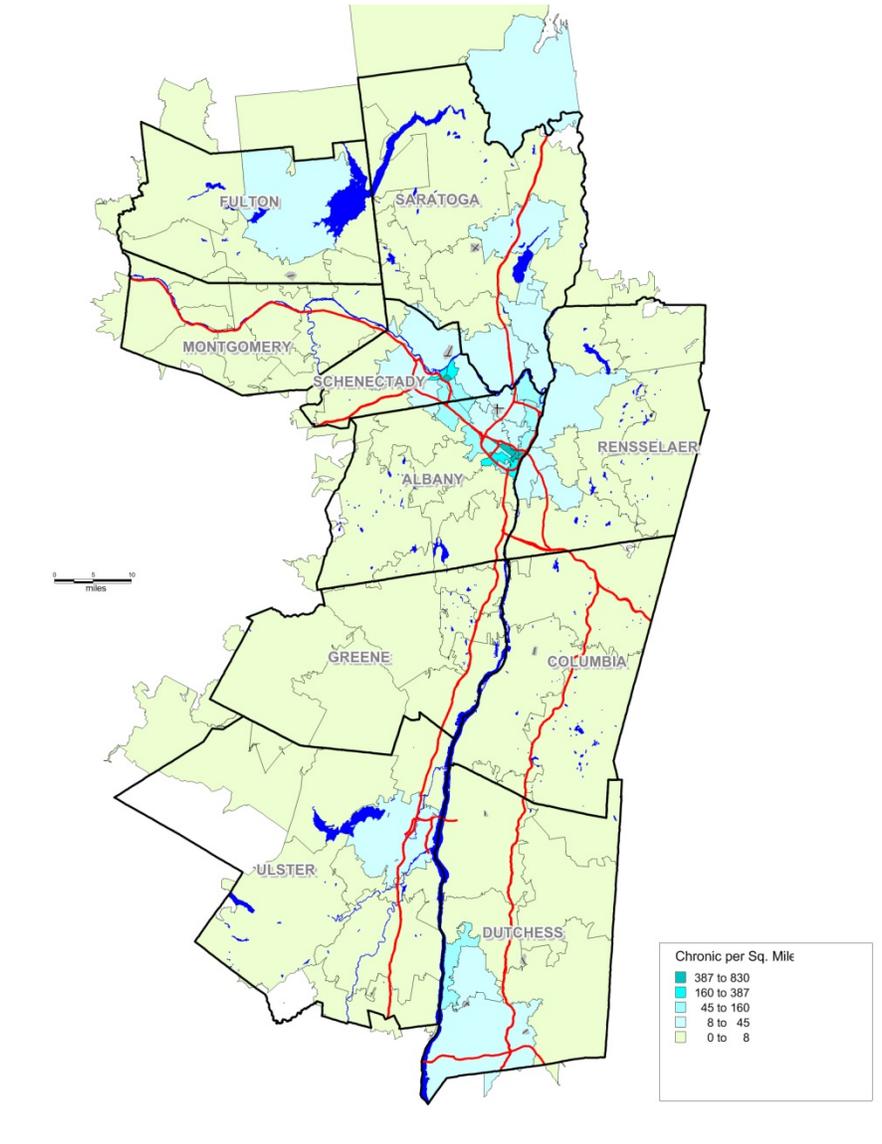

2_Chronic = Multiple Chronic Physical Condition or Moderate or Significant Behavioral Health

MCC_Phys = Multiple Chronic Physical Condition = 4+ of 10 Chronic Physical Conditions

SPARCs analysis was done to further define a sub-group of those with four or more of the 10 most common chronic physical conditions. These individuals are a good proxy for palliative care because of the likelihood of also having pain and other disease management issues (Note: the difference between the total 2_Chronic bar and the MCC_Phys bar represents Medicaid members and Uninsured with a moderate or significant behavioral health diagnosis and less than 4 chronic physical conditions). Figure B-60 shows the numbers and distribution by County.

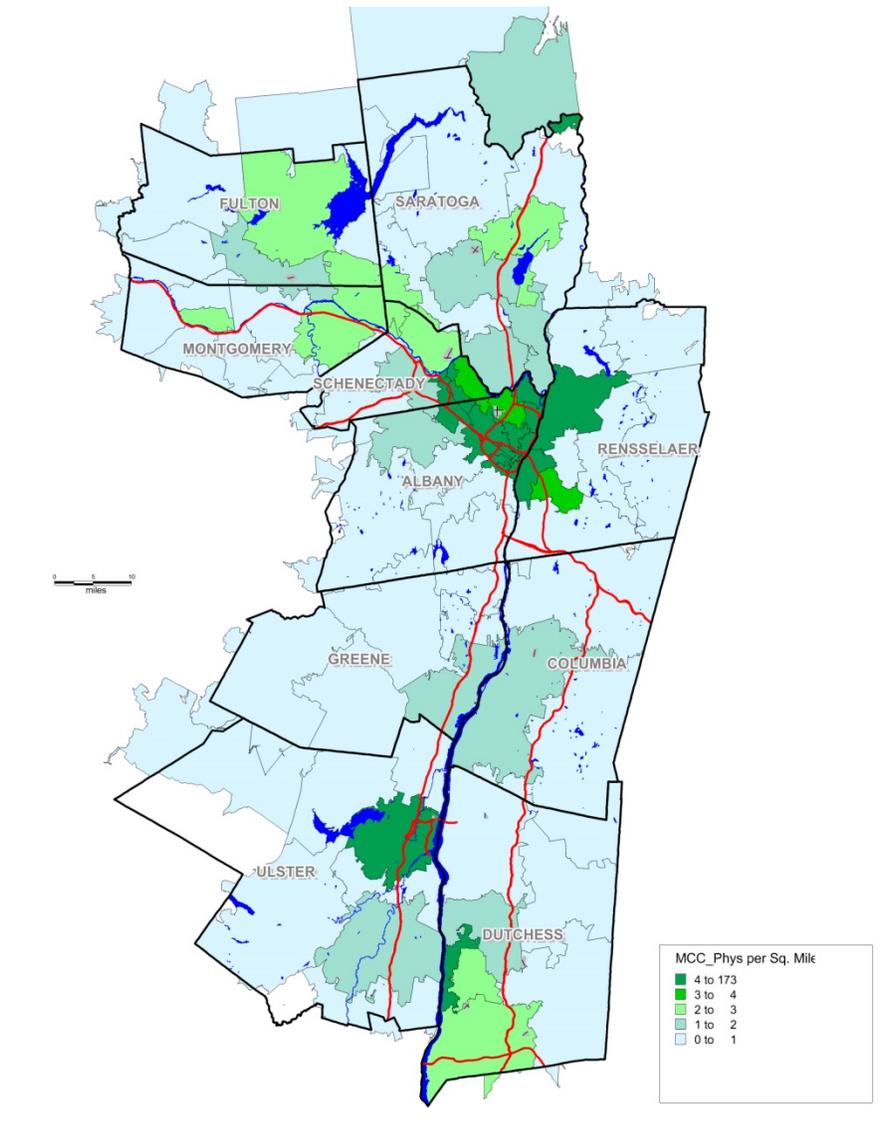

The geographic distribution is similar to the broader chronic group with some differences (Figure B-62). The top neighborhoods for the this group were Troy/Lansingburg in Rensselaer County, Kingston in Ulster, Poughkeepsie and Fishkill in Dutchess, Hamilton Hill in Schenectady County, West End in Albany County and Gloversville in Fulton County.

Figure B-61 Map of Chronic Utilizers

Sources: SPARCS Analysis, Multiple chronic physical conditions or Moderate or Significant Behavioral Health

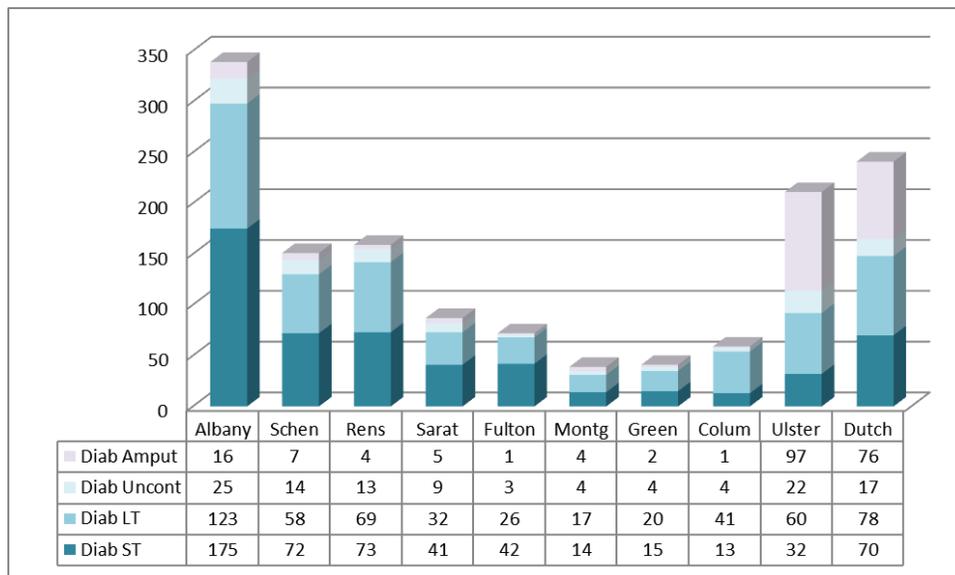

Figure B-62 Four or More Chronic Conditions

A) DIABETES

The 10 County service area averaged 584 Medicaid Diabetes Composite PQIs per year. Most were comprised of Diabetes Long Term (n=262) and Short Term (n=249) Complication PQIs. In addition, the service area averaged 56 Adult Uncontrolled Diabetes PQIs and 28 Lower Extremity Amputations in Diabetics PQIs for Medicaid recipients (Figure B-63). Of the average 584 Medicaid Diabetes Composite PQIs, 24% were from Albany, 15% from Dutchess, and 13% from Rensselaer counties. Four of the 10 counties had Medicaid Diabetes Composite PQI rates higher than the NYS rate of 37.2 per 10,000 Medicaid recipients, and fell into the 4th or 5th Quintile: Rensselaer (44.9); Columbia (42.4); Albany (38.8); and Fulton (38.6) counties.

Figure B-63 Diabetes PQI by Diagnosis

Source: Salient Performance Data - Hospital Inpatient Prevention Quality Indicators by County

Of the average 262 Medicaid Diabetes Long Term Complication PQIs per year, 23% were from Albany, 15% from Dutchess, and 13% from Rensselaer counties. Two counties were higher than the NYS Medicaid Long Term Diabetes Complication PQI rate of 20.3 per 10,000 Medicaid recipients, and fell into the 4th or 5th Quintile: Columbia (31.1); and Rensselaer (21.6) counties. For the average of 249 Medicaid Diabetes Short Term Complication PQIs per year, 25% were from Albany, and 15% were from Schenectady and 15% from Rensselaer counties. Five of the

Albany Medical PPS and Ellis PPS

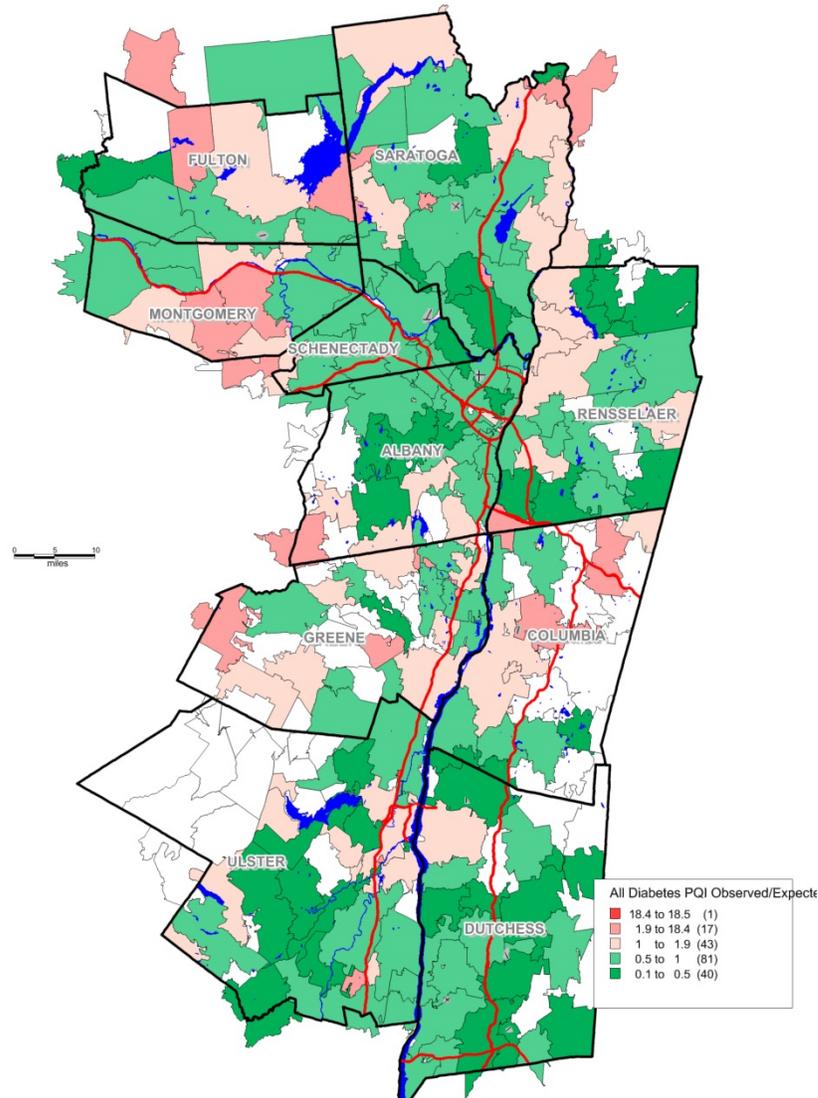

10 service area counties had Medicaid Diabetes Short Term Complication PQI rates higher than the NYS rate of 11.3 per 10,000 Medicaid recipients. Four of these counties were also in the 4th or 5th Quintile: Fulton (19.1); Rensselaer (17.3); Albany (15.1); and Schenectady (14.6) counties. Of the 56 Medicaid Uncontrolled Diabetes PQIs in the service area, 22% were from Albany, 20% from Ulster, and 15% from Dutchess counties. Only Ulster (5.9 per 10,000) and Rensselaer (4.5) counties fell into the 4th or 5th Quintile for Medicaid Uncontrolled Diabetes PQIs (CNA Appendix E-6).

There were an average of only 15 Medicaid Pediatric Diabetes Short Term Complication PDIs in the AMC/Ellis PPS service area. Although the PDI rates are unstable due to the small numbers, Columbia County at 11.0/10,000 Medicaid recipients, Albany (5.8) and Montgomery (4.6) counties were in the 4th or 5th Quintile for all NYS counties for Short Term Diabetes Complication PDIs (CNA Appendix E-6).

A Clinical Improvement Metric, Comprehensive Diabetes Care, is the percentage of Medicaid recipients living with diabetes, who received at least one HbA1c test within the past year. All of the 10 service area counties had rates below the NYS rate of 80%. Six of the counties were in the 4th or 5th Quintile for Comprehensive Diabetes Care: Ulster (65%); Columbia (69%); Dutchess (70%); Saratoga (71%); Fulton (72%) and Greene (72%) counties (CNA Appendix E-6).

The geographic distribution of observed over expected Diabetes Composite PQIs is presented in Figure B-64. While many of the risk areas are urban, there are a number of rural pockets in the 10 county service area.

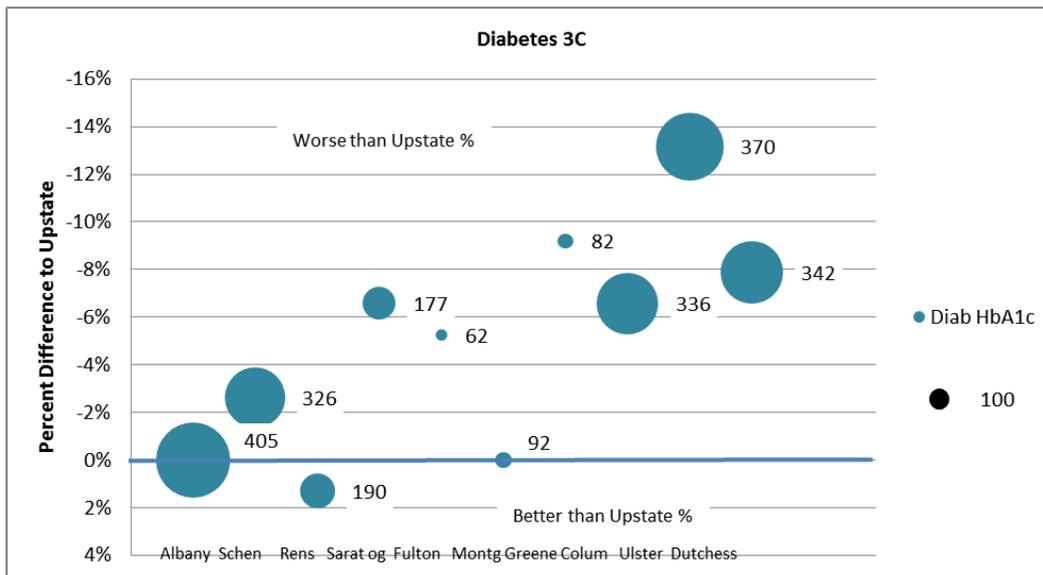

Figure B-64 Diabetes PQI Observed over Expected (2012)

Source: HealthData Medicaid Inpatient Prevention Quality Indicators (PQI) for Adult Discharges for Patient Zip Codes: Beginning 2011

All the Service area counties are below the NYS average for the Comprehensive Diabetes Care-HbA1c clinical improvement metric. When compared to Upstate all counties except Rensselaer were below the Upstate average (Figure B-65; CNA Appendix E-13).

Figure B-65 Diabetes Clinical Process Improvement Metrics

B) RESPIRATORY HEALTH

The 10 County service area had an average of 910 Medicaid Respiratory Composite PQIs; 805 (88%) of these were COPD/Asthma in Older Adults PQIs, and 105 (22%) were Asthma in Younger Adults PQIs. Of the 910 Medicaid Respiratory Composite PQIs, 21% were from Albany, and 15% from Ulster and Dutchess counties. Seven of the 10 counties had Medicaid Respiratory Composite PQI rates higher than NYS (50.0 per 10,000 Medicaid recipients); 5 of these fell in the 4th or 5th Quintile: Fulton (65.8); Rensselaer (60.8); Ulster (59.1); Albany (54.1) and Columbia (53.1) counties.

A similar county distribution was seen for the 805 Medicaid COPD/Asthma in Older Adults PQIs. Six of the 10 service area counties had Medicaid COPD/Asthma in Older Adults PQI rates higher than the NYS rate of 81.4 per 10,000 Medicaid recipients. Three of these counties fell into the 4th or 5th Quintile: Fulton (102.8); Rensselaer (102.7) and Ulster (100.3) counties.

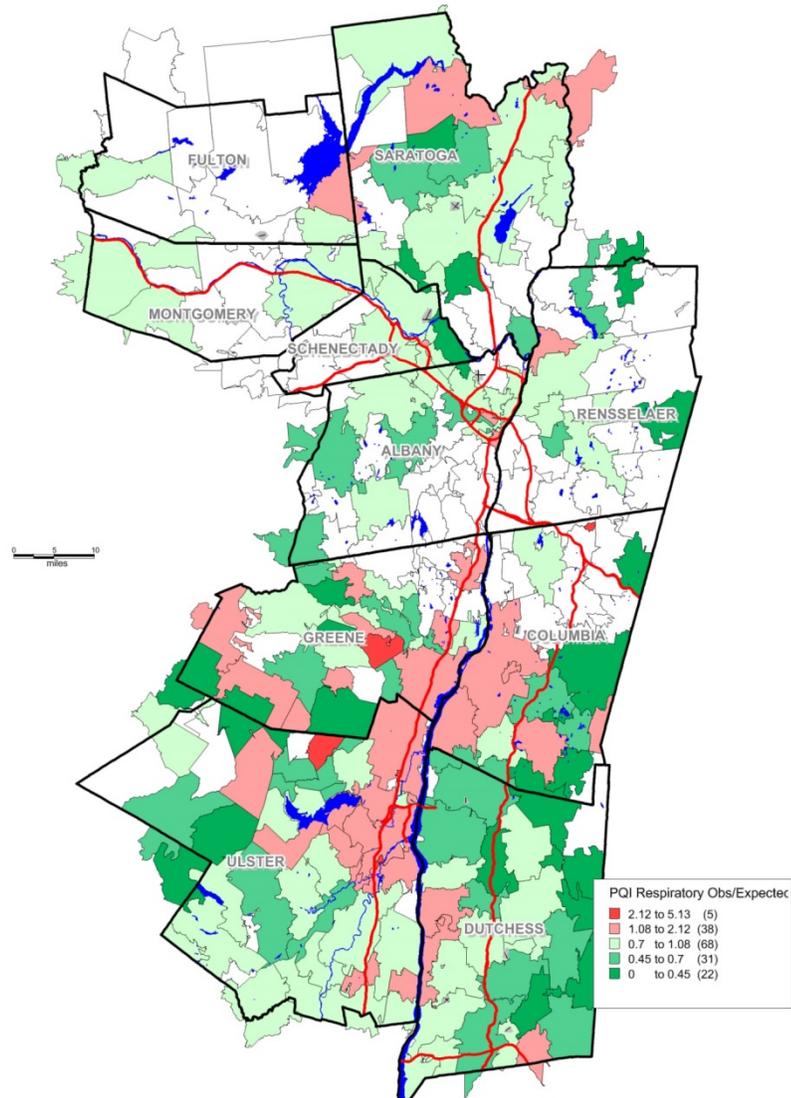

For the average of 105 Medicaid Asthma in Younger Adults PQIs, 30% were from Albany, 18% from Dutchess and 11% from Rensselaer counties. Seven of the 10 service area counties fell into the 4th or 5th Quintile for Asthma in Younger Adults PQIs: Fulton (24.8per 10,000

Albany Medical PPS and Ellis PPS

Medicaid recipients); Montgomery (17.3); Albany 17.2); Columbia (17.2); Dutchess (15.5); Rensselaer (12.5) and Greene (11.3) counties. (Figure B-66, CNA Appendix E-7).

The geographic distribution of observed over expected Respiratory Composite PQIs is presented in Figure B-66. While many of the risk areas are urban, there are a number of rural pockets in the 10 county service area, including northern Saratoga, southeastern Columbia, central and western Greene, and northeastern Ulster counties.

Figure B-66 Respiratory PQI Observed over Expected (2012)

Source: HealthData Medicaid Inpatient Prevention Quality Indicators (PQI) for Adult Discharges for Patient Zip Codes: Beginning 2011

The AMC/Ellis PPS service area averaged 138 Medicaid Pediatric Asthma PDIs; 27% were from Ulster, 23% from Albany counties, and 13% from Fulton County, even with its small number of pediatric Medicaid recipients. Fulton County’s Medicaid Pediatric Asthma PDI rate of 90.6 per 10,000 Medicaid recipients was about 3 times the NYS rate of 31.9 per 10,000. In addition to Fulton, Dutchess (31.8) and Ulster (21.2) counties had Medicaid Pediatric Asthma PDI rates that fell into the 4th or 5th Quintile of all NYS counties (CNA Appendix E-7).

C) CARDIAC HEALTH

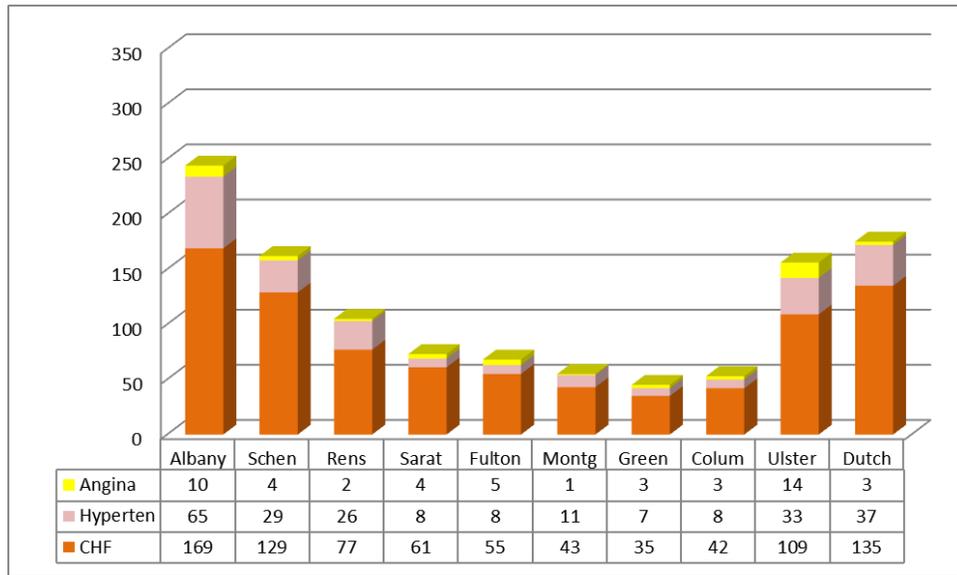

The 10 County service area experienced an average of 568 Medicaid Circulatory Composite PQIs per year; roughly 75% of these were Adult Heart Failure PQIs (n=428), 21% Adult Hypertension PQIs (n=116) and 4% Adult Angina without Procedure PQIs (n=24). For the 568 Medicaid recipients with the Circulatory Composite PQI, 21% were from Albany, 15% from Dutchess and 15% from Schenectady counties. The Circulatory Composite PQI rate was 42.2 per 10,000 Medicaid recipients. Schenectady (44.0 per 10,000), Greene (43.4); and Fulton (39.1) counties fell into the 4th or 5th Quintile for all NYS counties.

Of the average 428 Medicaid Adult Heart Failure PDIs, 20% were from Albany, 16% from Dutchess, and 15% from Schenectady counties. While only 3 counties were equal to or higher than the NYS rate of 29.2 per 10,000 Medicaid recipients, 5 of the 10 counties had Medicaid Adult Heart Failure PQI rates that fell into the 4th or 5th Quintile: Schenectady (33.4); Greene (31.6); Fulton (29.2); Columbia (28.7); and Montgomery (28.1) counties.

There were an average of 116 Medicaid Adult Hypertension PDIs per year, with 28% from Albany, 16% from Dutchess, and 14% from Ulster counties. The Medicaid Adult Hypertension PDI rate for NYS was 10.4 per 10,000 Medicaid recipients. Five of the 10 service area counties fell into the 4th or 5th Quintile for Medicaid Adult Hypertension: Albany (9.9 per 10,000); Rensselaer (9.5); Ulster (9.4); Montgomery (9.1); and Greene (8.4) counties (Figure B-67, CNA Appendix E-8).

Albany Medical PPS and Ellis PPS

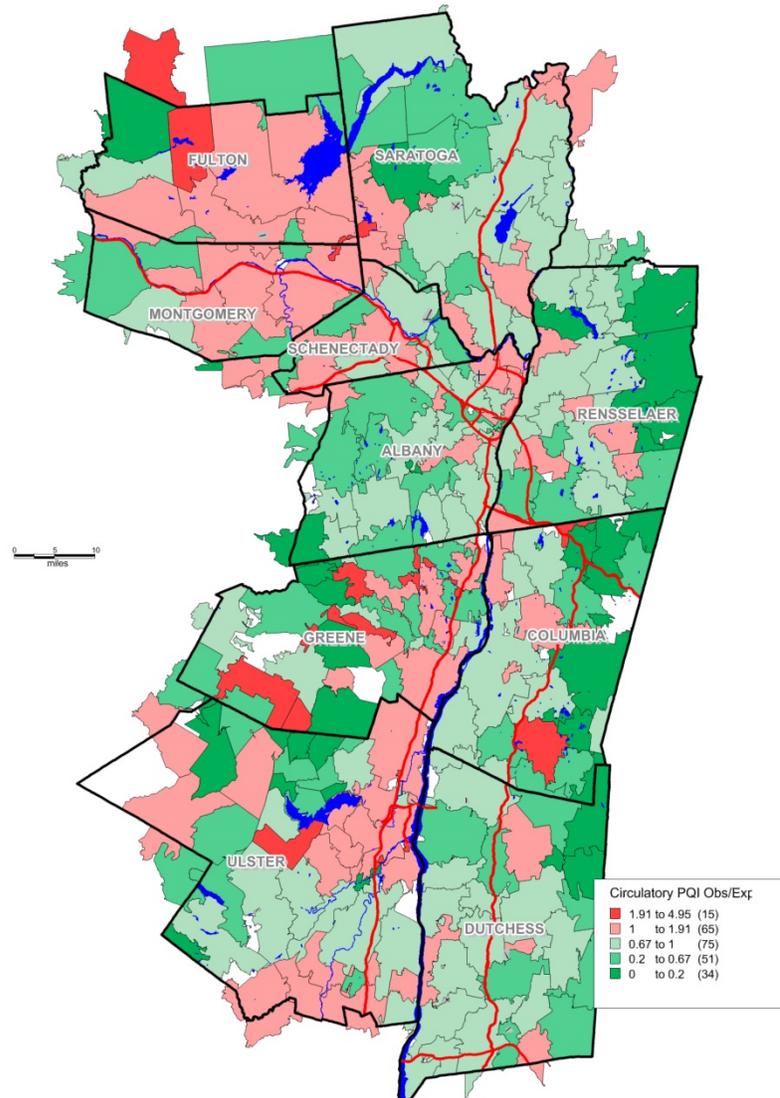

Figure B-67 Cardiac PQI by Diagnosis

Source: Salient Performance Data - Hospital Inpatient Prevention Quality Indicators by County

The geographic distribution of observed over expected Circulatory Composite PQIs is presented in Figure B-68. While some of the risk areas are still in urban areas, there are a number of rural pockets in the 10 county service area, including most of Fulton and Montgomery counties, and pockets in Greene, and Ulster counties.

Figure B-68 Circulatory PQI Observed over Expected (2012)

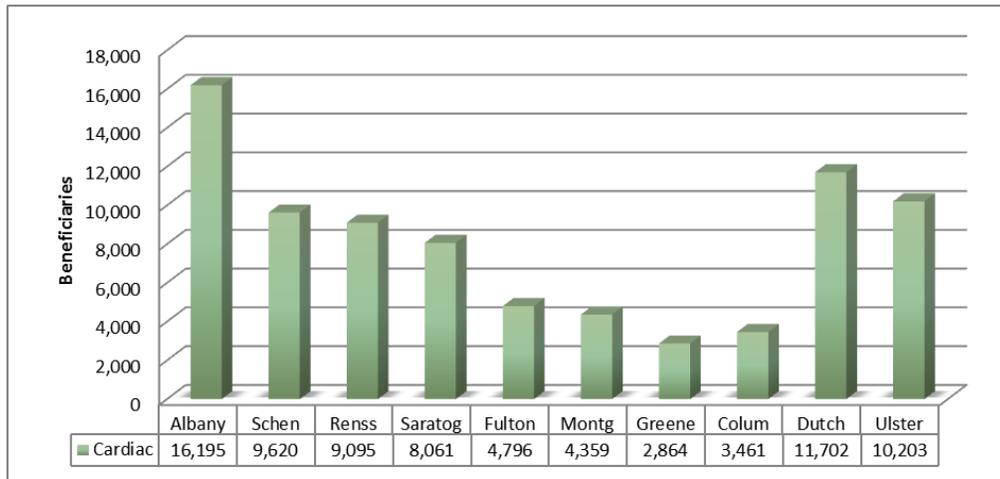

Source: HealthData Medicaid Inpatient Prevention Quality Indicators (PQI) for Adult Discharges for Patient Zip Codes: Beginning 2011

There were over 80,000 Medicaid beneficiaries with cardiac conditions in the 10 County area (Figure B-69). These beneficiaries had 65,525 inpatient admissions in 2012 (Figure B-70).

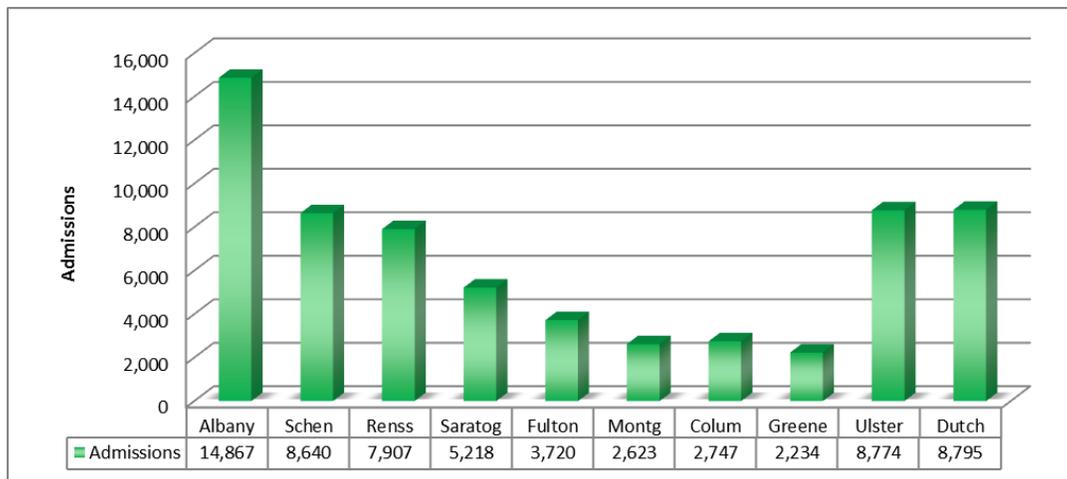

Albany Medical PPS and Ellis PPS

Figure B-70 Medicaid Cardiac Admissions

Source: Salient Performance Data - Medicaid_Chronic_Conditions_10 County Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012

There were almost 108,000 cardiac-related ED visits by Medicaid beneficiaries in the 10 County Service Area in 2012.

Figure B-71 Medicaid Cardiac ED Visits

Source: Salient Performance Data - Medicaid_Chronic_Conditions__10 County Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012

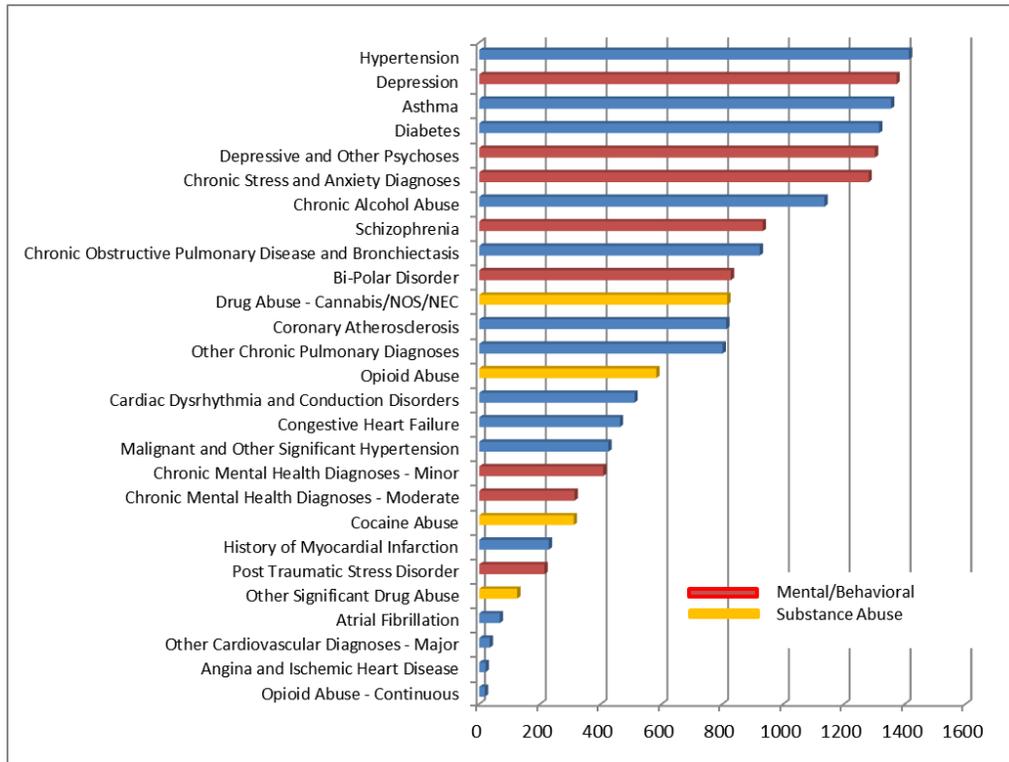

D) RENAL DISEASE

While neither PPS utilizing this CNA has a specific renal disease project, chronic renal disease is a major chronic driver of ED and inpatient use. Many of the PPS DSRIP projects utilize chronic disease focused interventions. We therefore incorporated both chronic renal disease and end stage renal disease (ESRD) in our Multiple Chronic Physical Condition metric (MCC_phys) developed for the CNA to assure these needs are both identified and addressed. This combination metric as well as individual metrics for chronic renal disease and ESRD were included in County and Neighborhood scale and speed drill down targeting reports in Appendix F-3.

E) BEHAVIORAL HEALTH

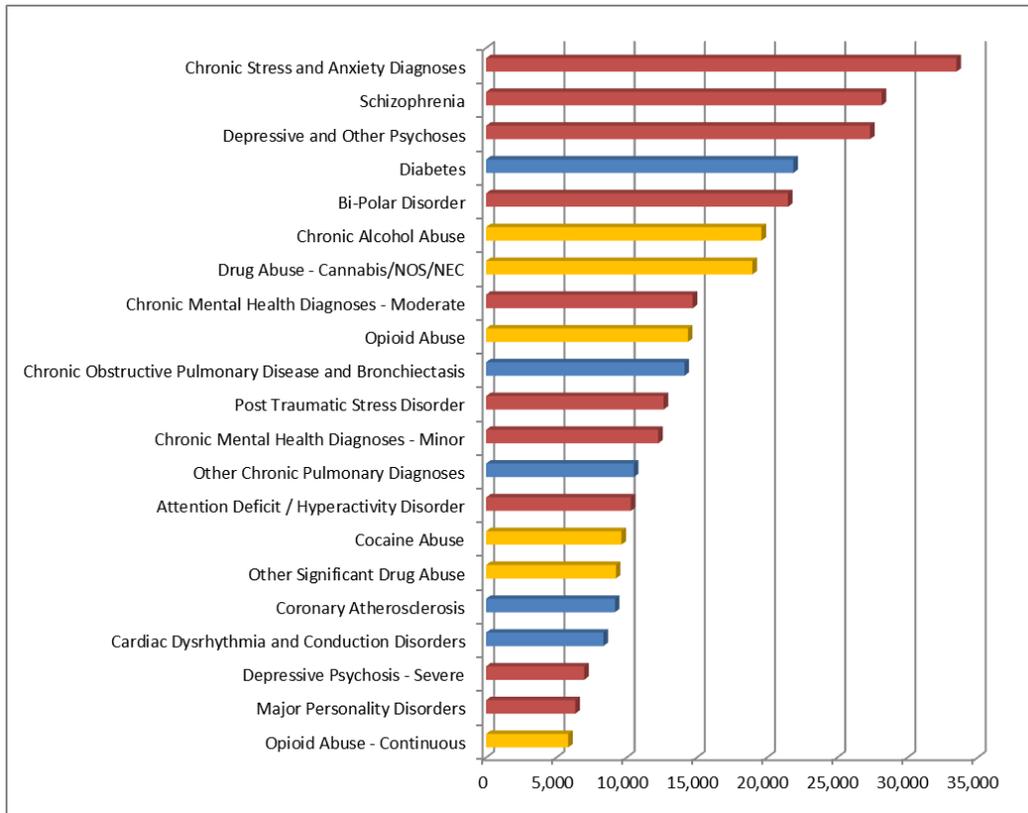

As can be seen in Figure B-72 and Figure B-73, mental health and substance abuse are major causes of hospitalizations and ED visits in the 10 County Service Area Medicaid population during 2012.

Figure B-72 Inpatient Admissions by Chronic Condition

Source: Salient Performance Data - Medicaid_Chronic_Conditions__10 County Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012

Figure B-73 ED Visits by Chronic Condition

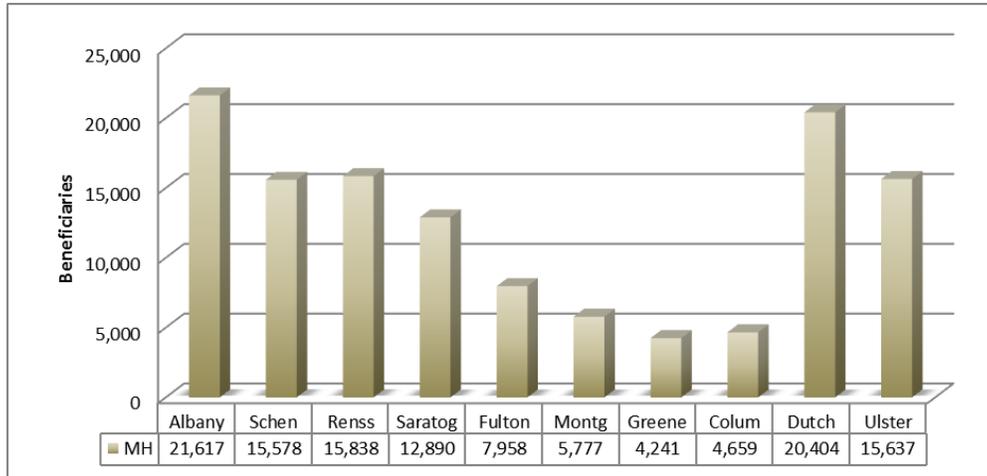

Source: Salient Performance Data - Medicaid_Chronic_Conditions__10 County Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012

There were approximately 125,000 Medicaid beneficiaries in the 10 County service area with mental health conditions in 2012. (Figure B-74). Depression and Depression Psychoses, Stress and Anxiety, Schizophrenia; and ADHD are the leading diagnoses in the Medicaid population (Figure B-75). There were almost 75,000 mental health-related hospitalizations to the Medicaid population in the 10 County service area in 2012. (

Albany Medical PPS and Ellis PPS

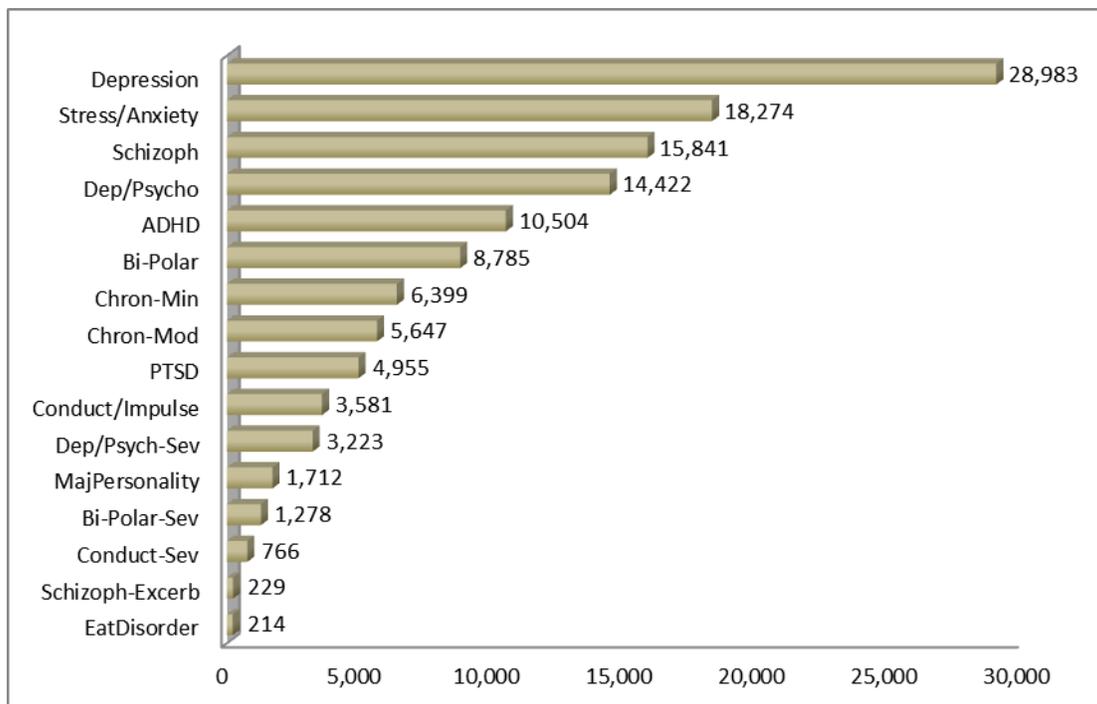

Figure B-76. The 10 County service area Medicaid population had almost 236,000 mental health-related ED visits in 2012. (Figure B-77).

Note: At least 1 Claim for SUD = Presenting or Principal diagnosis is SUD

There are eleven Clinical Improvement Metrics available for Behavioral Health. Adherence to Antipsychotic Medications for People Living with Schizophrenia is defined as the percentage of Medicaid recipients living with schizophrenia, ages 19 to 64 years, who were dispensed and received an antipsychotic medication for at least 80% of their treatment period. The 2013 NYS rate for the “Adherence” indicator was 61.6%. Three of the service area counties fell below the State rate: Albany

Albany Medical PPS and Ellis PPS

(55.5%); Schenectady (56.7%); and Greene (56.7%) counties. Five of the 10 counties experienced a decrease in the rates from 2010 to 2013 (Figure B-86,CNA Appendix E-9).

Figure B-86 Schizophrenia Process Improvement Metrics

Source: DSRIP Clinical Metrics Beginning 2012

Antidepressant Medication Management-Effective Treatment for Acute Phase is defined as the percentage of Medicaid recipients who received an antidepressant medication during the entire 12-week acute treatment phase. The 2013 NYS rate for the “Antidepressant Medication-Active” indicator was 46.8%. Two of the 10 service area counties had rates that fell below the State average: Montgomery (46.7%) and Schenectady (46.8%) counties. However, 8 of the 10 counties showed decreases in the rates between 2012 and 2103. (CNA Appendix E-9; Figure B-87).

Antidepressant Medication Management-Effective Treatment for Continuation Phase is defined as the percentage of Medicaid recipients who received an antidepressant medication during continuation treatment phase. The 2013NYS rate for the “Antidepressant Medication-Continuation” indicator was 38.6%. Two of the 10 service area counties had rates that fell below the State rate: Montgomery (32.8%); and Schenectady (38.5%) counties. All counties showed improvement in the rates between 2012 and 2103 (CNA Appendix E-9).

Albany Medical PPS and Ellis PPS

Diabetes monitoring for People Living with Diabetes and Schizophrenia is defined as the percentage of Medicaid recipients living with schizophrenia and diabetes, ages 18 to 64 years, who have both LDL-C test and an HbA1c test. The 2013 NYS rate for the “Diabetes Monitoring” indicator was 68.8%. Of the 5 service area counties, with information available, 3 had rates in the 4th or 5th Quintile: Ulster (38.9%-2012); Dutchess (53.9%); and Schenectady (61.0%) counties, whereas three of the four counties, using data for both 2012 and 2013, showed decreasing rates (CNA Appendix E-9; Figure B-87).

Diabetes Screening for People Living with Schizophrenia or Bipolar Disorder Who are Using Antipsychotic Medications is defined as the percentage of Medicaid recipients living with schizophrenia or bipolar disorder, ages 18 to 64 years, who were dispensed an antipsychotic medication and had a diabetes screening test. The 2013 NYS rate for the “Diabetes Screening” indicator was 75.4%. Of the 10 service area counties, 4 fell below the NYS average: Saratoga (57.4%); Dutchess (71.1%); Rensselaer (74.2%); and Schenectady (75.3%) counties. Six of the 8 counties, for which there was information available, showed decreasing rates between 2012 and 2013 (CNA Appendix E-9; Figure B-87)

Follow-up after Hospitalization for Mental Illness within 30 Days is defined as the percentage of Medicaid recipients who were seen on an ambulatory basis or who were in intermediate treatment with a mental health provider within 30 days of discharge following a mental health related admission. The 2013 NYS rate for the “30 Day Follow-up” indicator was 54.4%. Only 2 of the 10 service area counties had rates that fell below the NYS rate: Dutchess (49.5%), and Albany (54.2%) counties. Six of the 10 counties showed decreased rates between 2012 and 2013 (CNA Appendix E-10; Figure B-87).

Follow-up after Hospitalization for Mental Illness within 7 Days is defined as the percentage of Medicaid recipients who were seen on an ambulatory basis or who were in intermediate treatment with a mental health provider within 7 days of discharge following a mental health related admission. The 2013 NYS rate for the “7 Day Follow-up” indicator was 38.5%. Only 3 of the 10 service area counties had rates that fell below the NYS average: Dutchess (35.3%); Albany (35.4%); and Ulster (41.9%) counties (CNA Appendix E-10).

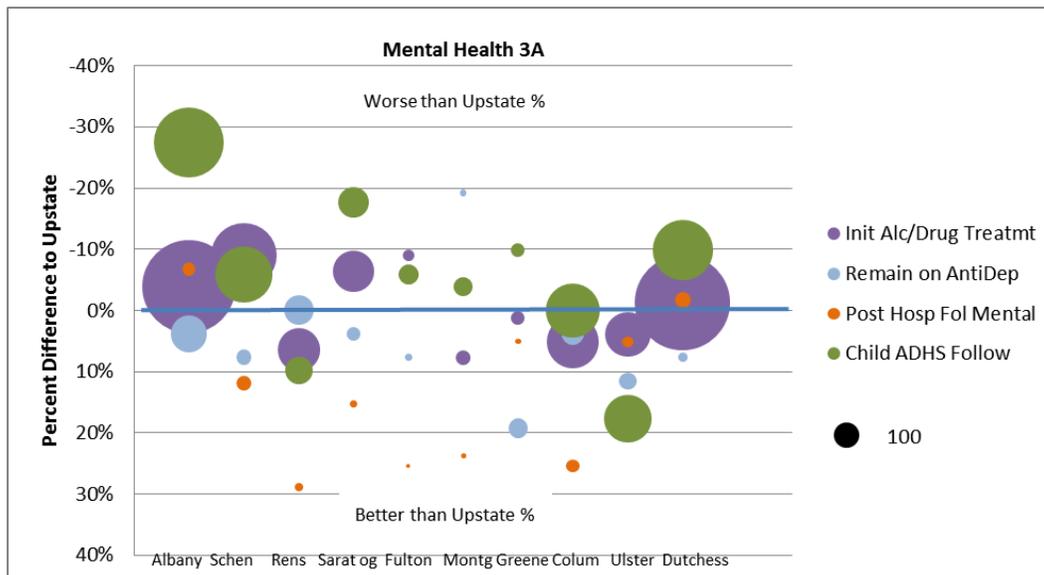

Albany Medical PPS and Ellis PPS

Follow-up Care for Children Prescribed ADHD Medication-Initiation Phase is defined as the percentage of Medicaid children with a new prescription for ADHD medication and who had one follow-up visit with a practitioner within 30 days after starting the medication. The 2103 NYS rate for the “ADHD Follow-up-Initiation” indicator was 54.7%. Four service area counties had rates that fell below the NYS average: Dutchess (49.5%); Warren (52.8%); Albany (54.2%); and Ulster (55.9%) counties. Six of the 10 counties had decreased rates between 2012 and 2013 (CNA Appendix E-10; Figure B-87).

Follow-up Care for Children Prescribed ADHD Medication-Continuation Phase is defined as the percentage of Medicaid children with a new prescription for ADHD medication and who remained on medication for a period of 7 months and who, in addition to the initiation phase, had at least 2 follow-up visits with a practitioner within 9 months. The 2013 NYS rate for the “ADHD Follow-up-Continuation” indicator was 58.8%. Four of the 7 service area counties with information available had rates that fell below the NYS average: Albany (29.3%); Saratoga (38.6%); Rensselaer (50.0%); Schenectady (52.6%) and Warren (53.3%) counties (CNA Appendix E-10).

Initiation of Alcohol and Other Drug Dependence Treatment is defined as the percentage of Medicaid recipients who initiated treatment after 14 days of the diagnosis after the first new episode of alcohol or drug dependence. The 2012 NYS rate for the “Initiation of Treatment” indicator was 78.0%. Five of the 10 service area counties had rates that fell below the NYS rate: Fulton (70.9%); Schenectady (71.4%); Saratoga (72.5%); Albany (75.1%); and Dutchess (76.7%) counties (CNA Appendix E-10; Figure B-87).

Figure B-87 Mental Health Process Improvement Metrics

Source: DSRIP Clinical Metrics Beginning 2012

Engagement of Alcohol and Other Drug Dependence Treatment is defined as the percentage of Medicaid recipients who initiated treatment and who had 2 or more additional services with a diagnosis of AOD within 30 days of the initiation visit. The 2013 NYS rate for the “Engagement of Treatment” indicator was 24.8%. Four of the 10 service area counties had rates that fell below the NYS average: Saratoga (20.7%); Fulton (21.2%); Montgomery (21.8%); and Columbia (23.9%) counties (CNA Appendix E-10).

One hundred and fifteen physicians responded to a survey about primary care and behavioral health (Appendix B-5). Of the physicians surveyed 53% said they currently integrated behavioral health (mental health and/or substance abuse disorders (SUD)) into their practice. Although a majority were very or somewhat confident in providing mental health services a majority were not confident in providing SUD services, especially medication treatment. When asked where those that have both medical and behavioral health disorders should be treated, 42% said in a co-located setting with another 40% indicating in a behavioral health setting. Only 10% said these patients should be treated in a primary care setting. Forty seven percent (47%) of respondents were not using any behavioral health screening tools. A large percentage of respondents

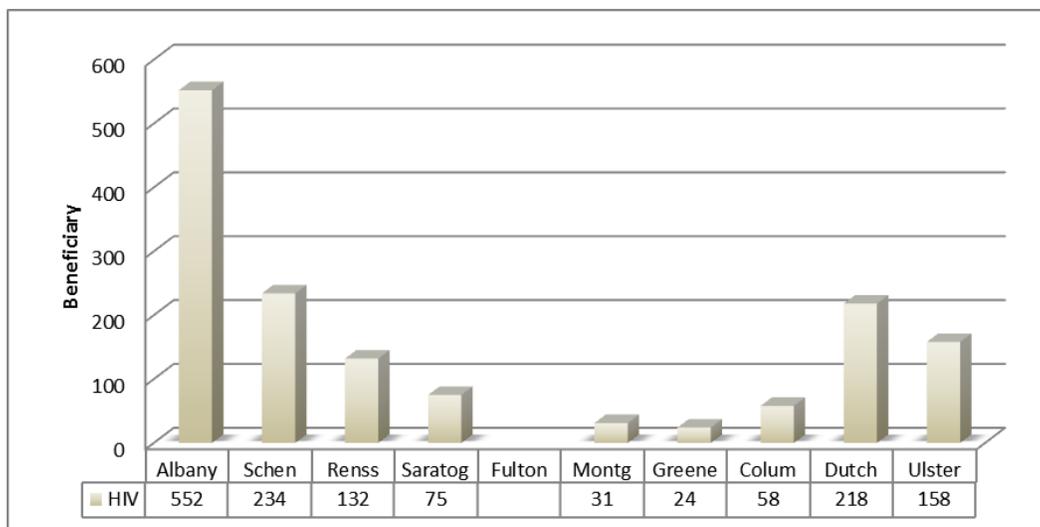

Albany Medical PPS and Ellis PPS

(77%) said they would be willing to deploy evidence based models of care for these patients. When physicians were asked if they were licensed to prescribe buprenorphine/Suboxone with only 6% responding yes and less than half of those currently prescribing (3 out of 115 respondents) . The main reason given for not being licensed was training and inadequate support systems. The next question provided a list of additional services and incentives such as on-site behavioral personnel, advanced training and technical assistance, on-site care coordination, financial support to offset training and licensure costs and asked which would make them more likely to prescribe buprenorphine/Suboxone. Sixty one percent (61%) said none of these would make them more willing. The remaining respondents choose a variety of the options (5-9%) with another 8% saying all of these would be necessary.

F) HIV/AIDS

There were almost 1,500 Medicaid beneficiaries with an HIV/AIDS diagnosis in the 10 County service area in 2012, with Albany, Schenectady and Dutchess counties having the largest populations (Figure B-88). This population had over 800 HIV/AIDS-related hospitalizations (Figure B-89), and 2,400 HIV/AIDS-related ED visits (Figure B-90).

Figure B-90 HIV ED Visits

Source: Salient Performance Data - Medicaid_Chronic_Conditions_10 County Inpatient_Admissions_and_Emergency_Room_Visits_by_County_Beginning_2012

There were 3 Clinical Improvement Metrics available for HIV/AIDS: Comprehensive Care for People Living with HIV or AIDS-Engagement in Care, Comprehensive Care for People Living with HIV or AIDS-Syphilis Screening and Comprehensive Care for People Living with HIV or AIDS-Viral Load Monitoring.

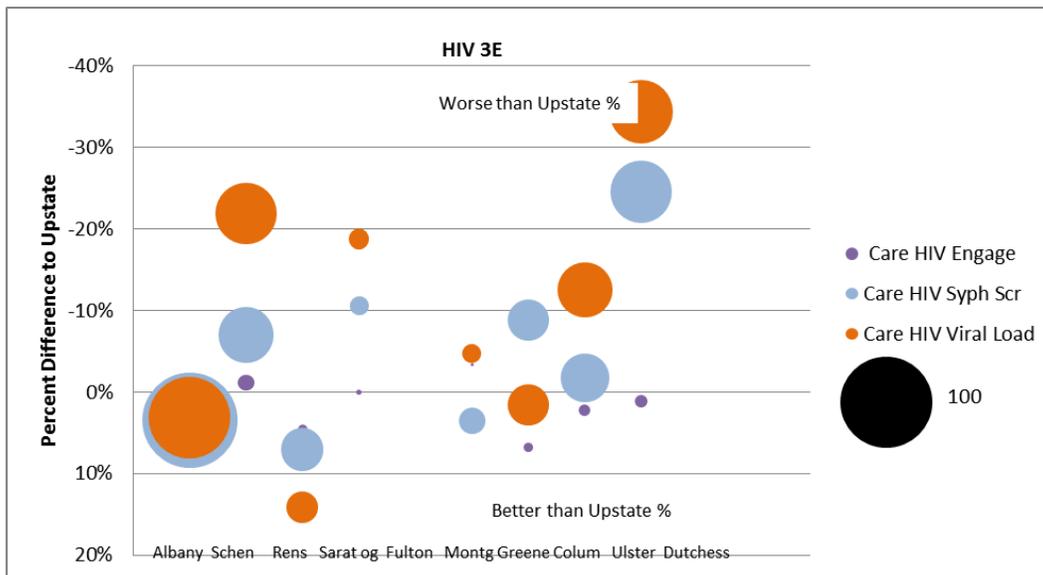

Albany Medical PPS and Ellis PPS

Comprehensive Care for People Living with HIV or AIDS-Engagement in Care is defined as the percentage of Medicaid recipients living with HIV/AIDS, ages 2 years and older, who had two visits for primary care or HIV-related care with at least one visit during each half of the year. The 2013 NYS rate for “Engagement in Care” indicator was 89.3%. Of the 5 service area counties with information, only Dutchess County at 87.2% had a rate that was lower than NYS. Four of the 5 counties had their rates decrease between 2012 and 2013 (CNA Appendix E-11; Figure B-91).

Comprehensive Care for People Living with HIV or AIDS-Syphilis Screening is defined as the percentage of Medicaid recipients living with HIV/AIDS, ages 19 years and older, who were screened for syphilis in the past year. The 2013 NYS “Syphilis” indicator was 71.0%. Again, of the service area counties with information, four of 5 fell below the NYS rate: Ulster (37.0%); Schenectady (45.7%); Albany (59.2%); and Dutchess (64.4%) counties. Three of the 5 counties had their rates decrease between 2012 and 2013 (CNA Appendix E-11; Figure B-91).

Comprehensive Care for People Living with HIV or AIDS-Viral Load Monitoring is defined as the percentage of Medicaid recipients living with HIV/AIDS, ages 2 years and older, who have two viral load tests performed with at least one test during each half of the past year. The 2013 NYS rate for the “Viral Load Monitoring” indicator was 66.1%. Of the 5 service area counties with information, three had rates that fell below the NYS rate: Ulster (41.3%); Schenectady (45.0%); and Dutchess (59.6%) counties. Two of the 5 counties had their rates decrease between 2012 and 2013 (CNA Appendix E-11; Figure B-91).

Figure B-91 HIV Clinical Process Improvement Metrics

Source: DSRIP Clinical Metrics Beginning 2012

G) DISEASE SCREENING AND WELL CHILD VISITS

There were 5 Clinical Improvement Metrics available for Disease Screening, Management and Well Child Visits.

Cervical Cancer Screening is defined as the percentage of Medicaid women ages 24 to 64 years, who had cervical cytology performed every 3 years, or women ages 30 to 64 years, who had cervical cytology/human papillomavirus (HPV) co-testing performed every 5 years. The 2013 NYS rate for the “Cervical Cancer Screening” indicator was 70.1%. All of the 10 service area counties had cervical cancer screening rates that were below the Upstate NY rate. All 10 county rates fell below the NYS average, with 8 falling in the 4th quartile of NYS counties: Columbia (49.8); Dutchess (53.0%); Greene (53.2%); Albany (54.7%); Rensselaer (55.1%); Saratoga (58.0%); Ulster (58.5%); and Schenectady (60.2%). All counties showed an increase in screening rates between 2012 and 2013 (CNA Appendix E-12).

Chlamydia Screening among Young Women was defined as the percentage of Medicaid sexually active young women, ages 16 to 24 years, who had at least one test for chlamydia during the past year. The 2013 NYS Chlamydia screening rate was 68.2%. Nine of the 10 counties had lower screening rates than the NY rate. Four of these counties,

Albany Medical PPS and Ellis PPS

Warren (43.0%), Columbia (52.3%), Ulster (53.5%) and Saratoga (57.5%) had rates that fell into the 4th Quartile. All counties showed an increase in screening rates between 2012 and 2013. (CNA Appendix E-12).

Breast Cancer Screening among Women is defined as the percentage of Medicaid women, ages 50 to 74 years, who had a mammogram anytime between October 1 two years prior to the measurement year and December 31 of the measurement year. The 2012 NYS rate for the “Breast Cancer Screening” indicator was 63.0%. All of the 10 service area counties had breast cancer screening rates lower than the NYS rate, but only Ulster County’s rate of 48.9% was in the 4th quartile (CNA Appendix E-12).

Colorectal Cancer Screening is defined as the percentage of Medicaid Adults ages 50-75 years, who had appropriate screening for colorectal cancer. The 2013 NYs rate for the “Colorectal Screening” indicator was 50.2%. All 10 service area counties had colorectal screening rates below the NY rate. Only Ulster (37.3%) Columbia (38.2%) and Greene (38.3%) counties had screening rates that fell into the 4th quartile. Four of the 10 counties had screening rates that decreased between 2012 and 2013 (CNA Appendix E-12).

Well-Child Visits in the First 15 Months of Life is defined as the percentage of Medicaid children who had five or more well-child visits with a primary care provider in the first 15 months of life. The 2012 NYS rate for the “Well-Child” indicator was 85.0%. All the 10 service area counties had rates that were higher than the NYS rate, with only Ulster (88.8%) and Albany (89.6%) falling below 90% (CNA Appendix E-12; Figure B-92).

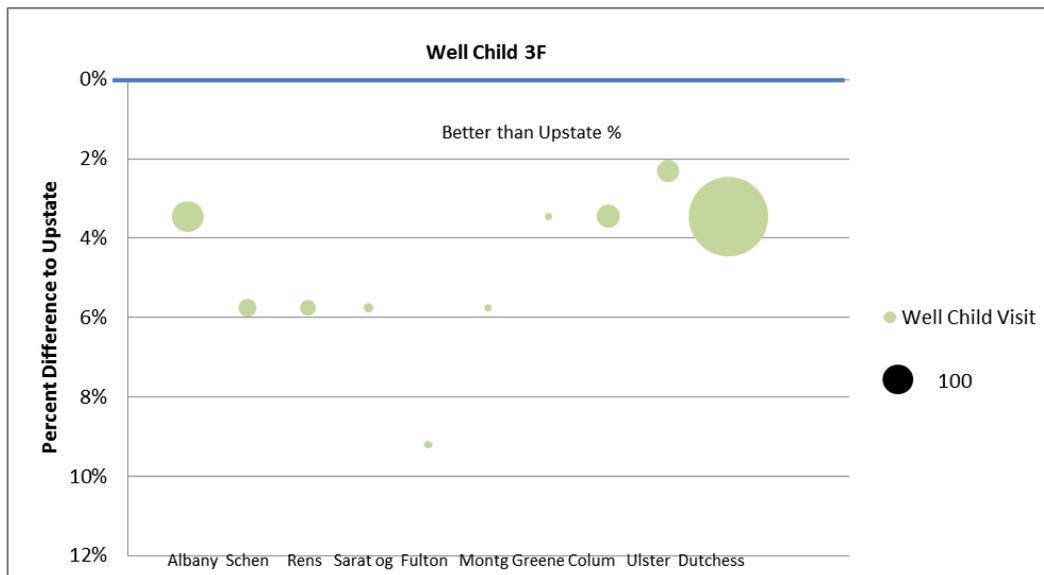

Comprehensive Diabetes Care-HbA1c Screening is defined as the percentage of Medicaid recipients living with diabetes who received at least one Hemoglobin A1c (HbA1c) test within the past year. The 2013 NYS rate for the “Diabetes-HbA1c” indicator was 80.7%. Nine of the 10 counties had screening rates below the NYS average, with Schenectady County (71.7%) falling in the 4th quartile, and Ulster (73.1%); Dutchess (73.9%); Fulton (74.2%); and Saratoga (74.2%) counties falling in the 3rd quartile of NYS counties. Only 2 counties showed decreased rates between 2012 and 2013 (CNA Appendix E-13).

Albany Medical PPS and Ellis PPS

Comprehensive Diabetes Care-Lipid Profile Screening is defined as the percentage of Medicaid recipients living with diabetes who received at least one Lipid Profile test within the past year. The 2013 NYS rate for the “Diabetes-Lipid Profile” indicator was 76.6%. All of the 10 counties had screening rates below the NYS average, with Schenectady (56.9%), Ulster (59.0%), and Dutchess (63.2%) counties falling in the 4th quartile, and Saratoga (68.5%) and Columbia (68.9%) falling in the 3rd quartile of NYS counties. (CNA Appendix E-13).

Asthma Medication Ratio (AMR) is the ratio of controller medication to the total asthma medication used by a patient with asthma. An AMR of 5.0 or lower is an indication for asthma medication consultation. The 2013 NYS average for Medicaid recipients is 62.1% with appropriate ratios. Six of the 10 counties had rates below NYS. Columbia (53.7%), Montgomery (55.5%), Warren (56.1%), and Ulster (57.8%) counties fell into the 4th quartile, while Albany (59.8%), Schenectady (61.1%), and Rensselaer (61.7%) fell into the 3rd quartile of NYS counties (CNA Appendix E-13).

Figure B-92 Well Child Clinical Process Improvement Metrics

Source: DSRIP Clinical Metrics Beginning 2012

H) PALLIATIVE CARE

Palliative care provided several challenges in determining need. A review of the literature indicated a number of need targeting methodologies, however, each of them provided different definitions. These need targeting methodologies primarily addressed chronic conditions associated with palliative care need. In order to address this lack of consensus, we asked local palliative care providers to indicate the need drivers most frequently observed in their practices. We incorporated this input into our Multiple Chronic Physical Condition metric (MCC_phys) definition. We also incorporated a combination metric they identified (diabetes and anxiety). Our scale and speed targeting analysis by county and Neighborhood in Appendix F-3 incorporates both of these metrics, as well as related metrics for Diabetes & Depression and Diabetes & Significant Mental Impairment. Additional input from the Salient data became available subsequent to completion of the CNA analysis. This utilized yet another target list of palliative care related chronic conditions for specific Medicaid members attributed to the PPS. This information was also provided to the PPS as input to their speed and scale estimates.

Current provider knowledge and use of palliative care was gathered from two rounds of provider surveys. One hundred and fifteen physicians responded to a survey about palliative care (Appendix B-5). Forty four percent (48%) of the physicians responding were primary care or primary and specialty care. The majority of physicians currently address advance illness in their practices with discussion of medical options (75%) and conversation regarding end of life choices (73%). Whereas 52% of respondents used palliative care interventions, 30% of respondents were not familiar with palliative care interventions indicating an opportunity to expand palliative care into practices. Up to 30% of physicians were planning to incorporate various interventions or were open to receiving education on palliative care interventions. The largest gap where providers indicate they would incorporate if given education is in complex family dynamic discussions. This education combined with effective targeting of hotspot need provides a direction for effective palliative care intervention initiatives.

C. CHALLENGES FACING THE COMMUNITY

1. CONTRIBUTING CAUSES OF POOR HEALTH STATUS

I. Behavioral Risk

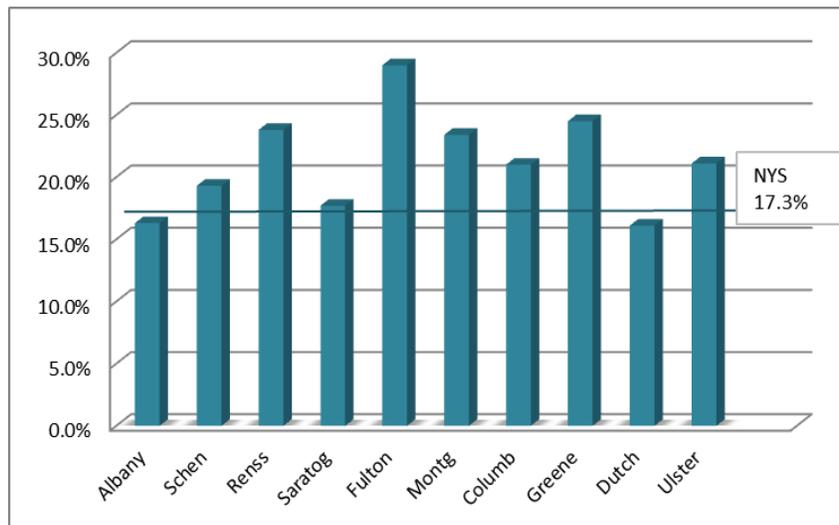

Tobacco use is the leading cause of preventable death in the United States⁴. It affects not only those who use tobacco, but also people who live and work around smokers. In the recent Prevention Agenda planning efforts of counties and hospitals in the 10 County service area, three counties (Schenectady, Columbia, Ulster) identified reduction of smoking-related illness as a focus area, while three counties (Albany, Rensselaer, Schenectady) had reduction of smoking prevalence in the population with mental illness, as a priority focus area. (CNA Appendix D-1).

The recent 2013-14 EBRFSS data on adult (18+ years) smoking prevalence indicate that recent gains in the reduction of smoking has leveled off in a number of Service Area counties. Five of the 10 counties have actually seen the rates similar or increasing from 2008-09 (CNA Appendix D-9). Eight of the 10 counties had higher smoking prevalence than Upstate (17.3%). Fulton (29.0%), Greene (24.5%) and Rensselaer (23.8%) had rates in the 4th quartile if NYS counties, while Montgomery (23.4%) and Columbia (21.0%) counties fell in the 3rd quartile (Figure C-1).

Source: Expanded Behavioral Risk Factor Surveillance System (EBRFSS)- Prevention Agenda Tracking Indicators, NYS excl NYC

Excessive use of alcohol is harmful not only to the health of those who drink, but also to the health and well-being of their families. Excessive and chronic alcohol use can lead to injuries, hospitalizations and death. Binge drinking is an alcohol-related indicator collected by the EBRFSS. Binge drinking is defined as males having 5 + drinks, or females having 4+ drinks at a time at least once in the past month. Six of the 10 service area counties had 2013-14 rates of binge drinking higher than the Upstate average of 17.4%. Greene (25.3%) and Fulton (22.8%) counties fell into the 4th quartile, while Columbia (20.1%), Saratoga (18.9%), Montgomery (18.9%) and Rensselaer (18.6%) were in the 3rd quartile of all NYS counties for rates of binge drinking. Four of the 10 counties had binge drinking rates increase from 2008-09 to 2013-14 (CNA Appendix D-9). The Service Area averaged 422 cirrhosis hospitalizations per year, with Montgomery (3.0/10,000) and Rensselaer (2.6/10,000) falling into the 4th quartile of risk. The Area also averaged 150 cirrhosis deaths per year, with Fulton (11.9/100,000), Rensselaer (10.8/100,000) and Greene (10.6/100,000) falling into the 4th quartile (CNA Appendix D-28).

Albany Medical PPS and Ellis PPS

Figure C-2 Percent of Adults (18+ years) Binge Drinking during the past month

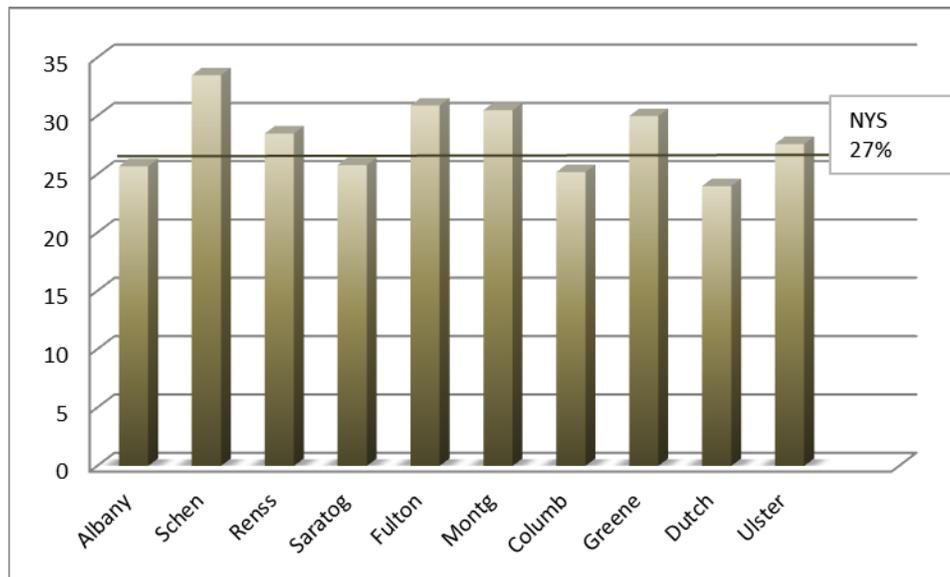

Source: Expanded Behavioral Risk Factor Surveillance System (EBRFSS)- Prevention Agenda Tracking Indicators, NYS excl NYC

Good nutrition and regular physical activity are important to health. However, excessive calorie consumption and insufficient physical activity can lead to overweight and obesity and thus to increased risk for conditions such as coronary heart disease, diabetes, and some cancers. When reviewing the recent 10 county Prevention Agenda planning efforts, every county identified obesity/diabetes as a priority focus area (CNA Appendix D-1). The 2013-14 EBRFSS figures on the percent of adults who are obese show increasing obesity rates, compared to the 2008-09 rates, for 8 of the 10 service area counties (CNA Appendix D-9). Nine of the 10 counties also had obesity rates higher than the NYS average of 24.9%. Schenectady had the highest adult rate of 33.5%, and fell into the 4th quartile of all NYS counties; Fulton (30.9), Montgomery (30.5%) and Greene (30.0%) counties fell into the 3rd quartile. (Figure C-3, CNA Appendix D-9).

Albany Medical PPS and Ellis PPS

Figure C-3 Percent Adults (18+ years) who are Obese

Source: Expanded Behavioral Risk Factor Surveillance System (EBRFSS)- Prevention Agenda Tracking Indicators, NYS excl NYC

Seven of the 10 counties had school student obesity rates higher than the Upstate average of 17.7%. Greene County had the highest student obesity rate at 20.4%, followed by Schenectady (19.5%) and Columbia (19.1%) counties. For children, aged 2-4 years, in the WIC program, 14.4% were obese in NYS. Seven of the 10 counties had higher WIC children obesity rates. Columbia (17.8%) and Ulster (17.5%) fell into the 4th quartile of all NYS counties. No leisure time physical activity has been associated with obesity. The Upstate adult rate for no leisure time physical activity was 21.2% in 2008-09, the latest year available. Of the 10 service area counties, Ulster (24.4%) fell into the 4th quartile, and Fulton (24.3%), Montgomery (24.1%), and Rensselaer (23.6%) fell into the 3rd quartile of all NYS counties. (CNA Appendix D-1, CNA Appendix D-10).

The recent Prevention Agenda planning effort also identified mental health and substance abuse as a major issue. All 10 counties identified mental health/substance abuse as a priority focus area. The recent EBRFSS collected data on adults (18+ years) with 14 or more poor mental health days in the past month. The Upstate rate for poor mental health days was 11.8% of the adult population. Seven of the 10 Service Area counties had rates higher than Upstate. Greene (17.8%), Rensselaer (17.2%), Ulster (17.1%) and Montgomery (14.6%) fell into the 4th quartile of all NYS counties. Albany (13.4%), Fulton (13.3%) and Saratoga (12.7%)

Albany Medical PPS and Ellis PPS

counties were in the 3rd quartile (CNA Appendix D Attachment-1; CNA Appendix D-9). The service area averaged 1,200 self-inflicted injury hospitalizations with Schenectady (12.1/10,000), Montgomery (12.0/10,000) and Fulton (11.6/10,000) falling into the 4th risk quartile. The 10 County area also averaged 162 suicides per year. Montgomery (12.3/100,000), Saratoga (12.1/100,000) and Schenectady (11.6/100,000) counties fell into the 3rd quartile of NYS counties (CNA Appendix D-29).

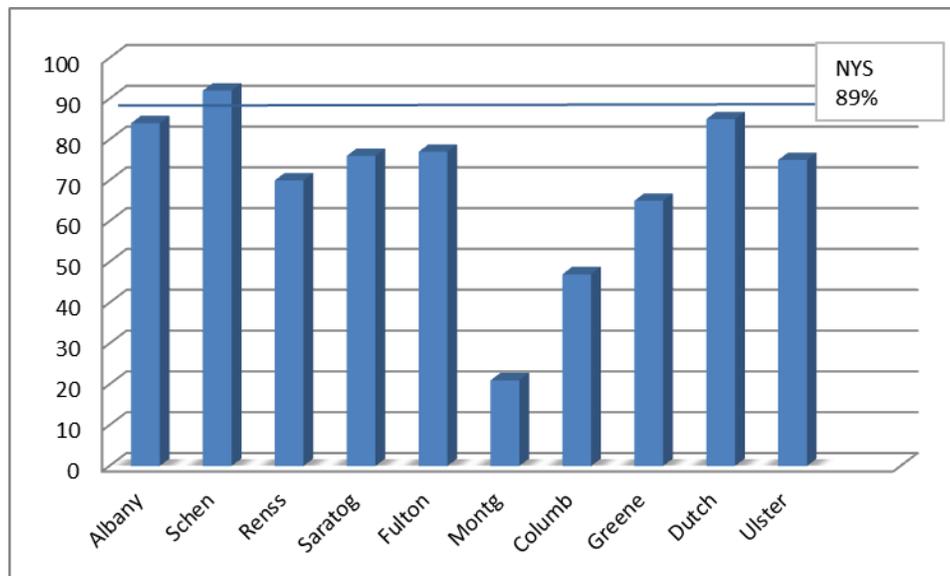

II. Environmental Factors

Clean air and water are core components of a healthy community. Air pollutants such as fine particulate matter are harmful to the population's health and environment. Contaminants in drinking water can lead to poisoning, illness, and increased cancer risk. The 10 County service area have fine particulate matter (PM_{2.5}) measures lower than the NYS (11.7). The counties range from 10.9 in Dutchess and Rensselaer counties to 11.3 in Fulton and Montgomery counties (CNA Appendix G-1). When reviewing the percent of the population exposed to water exceeding a violation limit, only Warren (35%) and Rensselaer County (32%) had a rate higher than the NYS population average of 27%. Considering the data being heavily influenced by large public water supplies, the county rates were mostly lower than the overall population average. In addition to Rensselaer, Greene (21%) and Ulster (19%) counties fell into counties in the 4th quartile, while Saratoga County (9%) fell into the 3rd quartile for all counties (CNA Appendix G-1). The NYSDOH Prevention Agenda Dashboard includes information on the percentage of the population that lives in a jurisdiction that adopted the Climate Smart Communities pledge for 2013. Counties ranged from 100% for Albany, Schenectady, and Ulster, to 0% for Fulton and Montgomery counties (CNA Appendix G-1).

The built environment can play a role in promoting a healthy community. Having adequate access to locations for physical activity can be a factor in reducing obesity in the population. When reviewing the percent of the population with adequate access, 7 of the 10 service area counties had percentages lower than the NYS rate of 89%. Montgomery (21%) and Columbia (47%) fell into the 4th quartile, while Greene (65%) fell into the 3rd quartile of NYS counties (Figure C-4) (CNA Appendix G-2).

Albany Medical PPS and Ellis PPS

Figure C-4 Percent of Population with Adequate Access to Locations for Physical Activity, 2010 and 2012

Source: County Health Rankings and Roadmaps, NYS 2014

Safe roads and automobile travel is another component of a health built environment. There were about 120 motor vehicle-related deaths per year in the Service Area. While 8 of the 10 service area counties had motor vehicle mortality rates higher than NYS rate of 6.1/100,000 (only Albany and Schenectady had lower rates), Greene County with a rate of 12.6 was the only county that fell into the 3rd quartile of risk. When reviewing alcohol-related motor vehicle injuries and deaths there were about 750 Service Area injuries/deaths per year. All 10 counties had higher rates than NYS (33.0/100,000). Fulton (66.4), Warren (66.0), Ulster (62.2), and Greene (61.3) fell into the 4th quartile while Columbia (55.3), Saratoga (52.1), and Montgomery (51.3) fell into the 3rd risk quartile (CNA Appendix G-3).

A poor built environment can lead to falls, especially in the vulnerable populations of the elderly and children. The Service Area averaged almost 4,600 elderly fall hospitalizations per year. The 10 County fall hospitalizations in the elderly (65+ years) population of 193.8/10,000 was comparable to the NYS rate of 193.4. However, Montgomery (255.8), Warren (232.0), Albany (222.6), and Ulster (210.3) counties fell into the

Albany Medical PPS and Ellis PPS

4th quartile, while Rensselaer (191.8), Greene (191.7) and Fulton (183.2) counties fell into the 3rd quartile of all NYS counties. The 10 County service area averages over 3,000 fall-related ED visits to children 1-4 years of age. Five of the counties had rates higher than NYS (504.1/10,000). Fulton (723.2), Montgomery (653.5) and Albany (615.0) fell into the 4th quartile (CNA Appendix G-4).

A safe workplace is also an important component to a health community. The 10 County service area averaged about 1,600 work-related hospitalizations to employed persons 16+ years of age. The Service Area rate of 223.8/100,000 was higher than the NYS rate of 167.1. Fulton (269.5), Columbia (269.2), and Greene (260.7) counties had rates that fell into the 4th quartile, while Ulster (249.5) and Dutchess (244.6) counties fell into the 3rd quartile. There was an average of 485 occupational-related ED visits in the 15-19 year old Service Area population. Again, the 10 County rate of 40.1/10,000 was higher than the NYS rate of 28.1. Warren (76.5) and Montgomery (74.0) counties fell into the 4th quartile, while Columbia (54.2), Schenectady (54.2) and Ulster (53.4/10,000) fell into the 3rd risk quartile (CNA Appendix G-5).

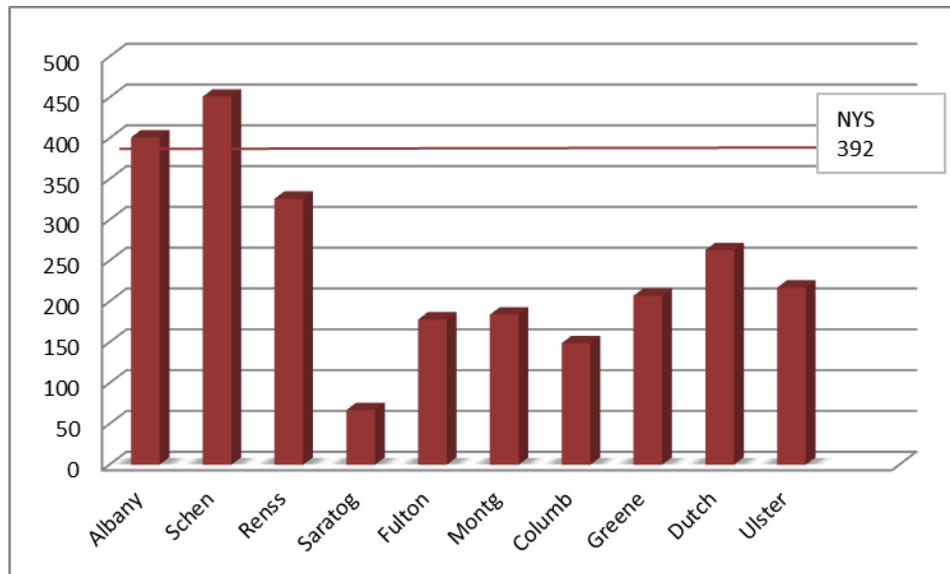

The NYSDOH Heavy Metals Registry collects occupational blood lead levels for the NYS population. There was an average of about 170 elevated blood lead levels per year in the 10 County service area. The Area rate of 24.1/100,000 employed persons 16+ years of age was slightly higher than the NYS rate of 23.4. Four counties fell into the 4th quartile: Columbia (58.8); Fulton (42.8/100,000); Greene (40.1/100,000); and Dutchess (34.5). Ulster (26.6), Warren (24.4), and Saratoga (23.6/100,000) fell into the 3rd quartile of risk (CNA Appendix G-5).

Community Safety is another important component of a healthy community. Unsafe neighborhoods can cause anxiety, depression, and stress. Fear can also keep people indoors and away from exercise and healthy foods. Violent crimes are defined as offenses that involve face-to-face confrontation between the victim and the perpetrator, including homicide, forcible rape, robbery and aggravated assault. The NYS violent crime rate was 392/100,000. Two of the Service Area counties, Schenectady (451) and Albany (401) had rates higher than NYS, and fell into the 4th quartile. Rensselaer (326) and Dutchess (263) also fell into the 4th risk quartile. Four of the 10 counties also fell into the 3rd

Albany Medical PPS and Ellis PPS

quartile: Ulster (217); Greene (207); Montgomery (184/100,000) and Fulton (1780) (Figure C-5).

Figure C-5 Violent Crime Rate

Source: NYSDOH Community Health Indicator Reports; County Health Rankings and Roadmaps, NYS 2014

The 10 County service area averaged 390 assault hospitalizations per year. While all Service Area counties had rates less than NYS (4.4/10,000), Dutchess (3.5) and Albany (3.4) counties fell into the 4th risk quartile. Five counties fell into the 3rd quartile: Schenectady (3.0); Rensselaer (3.0); Greene (2.1); Montgomery (2.0/10,000) and Ulster (1.9). The Service Area averaged 34 homicide deaths per year. Only 2 of the 10 county rates were higher than the NYS rate of 4.1/100,000. Schenectady (4.7), Montgomery (4.2/100,000) and Rensselaer (3.1) counties fell into the 4th quartile, while Dutchess (2.4) and Albany (2.1) counties fell into the 3rd quartile (CNA Appendix G-6).

III. Socioeconomic Status

Socioeconomic status is a key factor in the health of a community. Income provides resources that affect choices about housing, education, childcare, food and medical care. Employment, not only provides income, but also other benefits such as health insurance. Poor educational attainment has been linked with lower incomes. The low

Albany Medical PPS and Ellis PPS

socioeconomic status population has higher risk factors such as obesity rates and smoking prevalence.

Median household income ranged from \$42,830 for Montgomery, and \$45,333 for Fulton counties, to \$67,712 for Saratoga and \$71,508 for Dutchess counties. There were over 117,000 households with incomes under \$25,000 per year in the 10 County service area (19.7%). Fulton and Montgomery counties had the largest percentages, while Saratoga and Dutchess the smallest percentage of such households (CNA Appendix C-9). Over 75,000 service area residents (5.1%) were living at <50% of the FPL; 167,000 (11.3%) at < 100% FPL; and 213,000 (14.5%) at < 125% FPL. Across the three FPL's, Montgomery and Fulton counties had the highest percentages, while Dutchess and Saratoga counties the smallest percentage living below the FPLs (CNA Appendix C-9). About 107,000 service area residents, 25 years of age and older, were without a high school education. Montgomery, Fulton and Greene counties had the highest percentages in the 10 counties (CNA Appendix C-9). There were about 61,000 Service Area residents unemployed, but seeking employment (8.0%). Fulton and Montgomery counties had the highest unemployment rates (CNA Appendix C-12).

The NYS poverty rate (<100%FPL) for children < 18 years of age was 23%. Only 2 counties were at or above the NYS rate: Montgomery (31%; 4th quartile) and Fulton (23%; 3rd quartile). When reviewing the percent of children living in households headed by a single parent, 6 counties were greater or equal to the NYS rate of 35%. Counties in the 4th quartile include: Fulton (48%); Montgomery (39%); Albany (36%); and Schenectady (36%). Rensselaer (35%), Columbia (35%), Greene (32%), and Ulster (32%) counties fell into the 3rd quartile of NYS counties (CNA Appendix G-7).

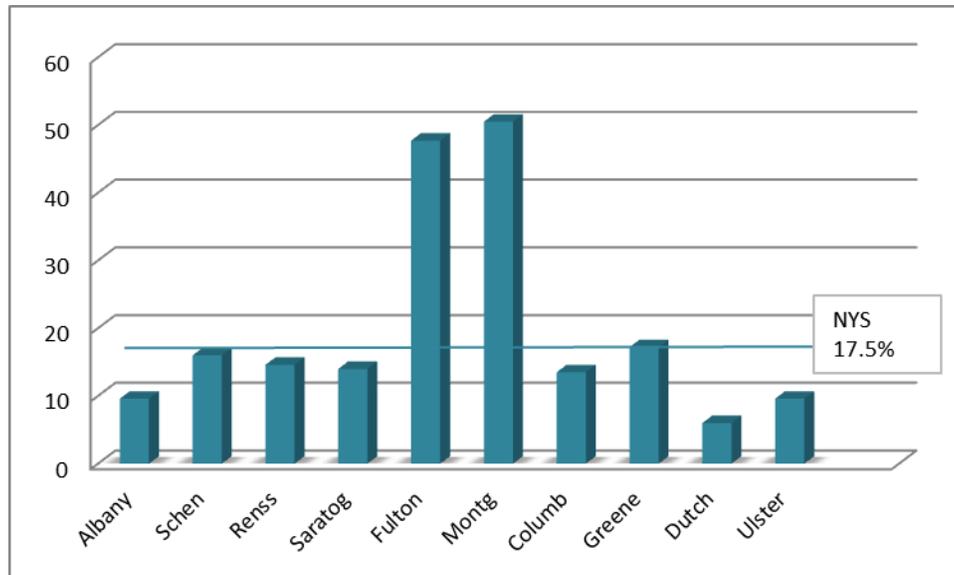

IV. Housing and Access to Affordable Food

Poor, dilapidated housing can be a detriment to the health of the community. Poor housing conditions have been associated with lead poisoning and asthma, while crowding eases the spread of communicable diseases. Pre-1960 housing has a higher risk for exposure to lead based paint. Approximately 47.6% of the Service Area housing units were "Pre-1960", lower than the NYS rate of 57.8%. However, Montgomery

Albany Medical PPS and Ellis PPS

(66.6%), Schenectady (64.5%) and Fulton (59.6%) had percentages higher than NYS. When reviewing owner occupied housing units < \$100,000, the 10 County service area rate of 14.0% was lower than the NYS rate of 17.5%. Montgomery (50.5%) and Fulton (59.6%) had rates much higher than NYS (Figure C-6).

Figure C-6 Owner Occupied Housing Units <\$100,000

Source: US Census Bureau, American Community Survey 5 Year Estimates 2008-2012 (DP-4); County Health Rankings and Roadmaps, NYS 2014.

Extreme crowding can be defined as the percentage of housing units with 1.51+ occupants per room. The 10 County rate of 0.5% was lower than the NYS rate of 1.7%. Columbia (0.8%) Albany (0.6%), Dutchess (0.5%), and Ulster (0.5%) had the highest rates in the Service Area. While dated (2006-2010), information is available on severe housing problems. This is defined as the percentage of households with at least 1 of 4 housing problems: overcrowding, high housing costs, lack of kitchen, or lack of plumbing facilities. While none of the 10 counties had percentages higher than the NYS rate of 24%, Ulster (19%), and Dutchess (18%) counties fell into the 4th quartile. Counties in the 3rd quartile included: Greene (17%); Fulton (16%); Albany (16%); and Schenectady (16%) (

CNA Appendix G-8).

Albany Medical PPS and Ellis PPS

Access to affordable, healthy foods is a key ingredient to a healthy community. Poor nutrition can hinder growth and development, while consumption of unhealthy foods can lead to obesity. “Food Insecurity” represents the percentage of the population who did not have access to a reliable source of food during the past year. All of the Service Area counties had percentages lower than the NYS rate of 15%. However, Albany (12%), Fulton (12%) and Montgomery (12%) counties fell into the 4th risk quartile, while Greene County (11%) fell into the 3rd quartile of NYS counties. “Limited Access to Healthy Foods” is defined as the percentage of the population who are low income and do not live close to a grocery store. Living close to a grocery store is defined differently in rural and non-rural areas; in rural areas it means living less than 10 miles from a grocery store, whereas in non-rural areas, it means less than 1 mile. Low income is defined as < 200% FPL. All 10 counties had percentages of limited access greater than NYS (2%). Counties in the 4th quartile included: Montgomery (19%); Schenectady (10%); Dutchess (6%) and Ulster (6%). Albany (5%), Rensselaer (5%) and Columbia (5%) counties fell into the 3rd quartile. The “Food Environment Index” is a measure ranging from 0 (worst) to 10 (best) which equally weights two indicators of the food environment: limited access to healthy foods; and food insecurity. Only Montgomery (6.9) and Schenectady (8.1) counties had an index lower than NYS (8.3) and both fell into the 4th quartile of NYS counties. Albany (8.4), Fulton (8.4), Rensselaer (8.5), and Ulster (8.5) counties fell into the 3rd quartile (CNA Appendix G-9).

2. STAKEHOLDER FEEDBACK

To determine the challenges facing the community the Community Needs Assessment included a number of methodologies to reach a variety of stakeholders in the DSRIP process. Beyond the input garnered from each PPS's PAC and their project teams and membership, the CNA team engaged stakeholders through a provider and CBO survey, a consumer survey, 8 focus groups and 6 listening sessions. The listening sessions and focus groups were held in six counties:(Albany, Schenectady, Rensselaer, Saratoga, Fulton and Montgomery). The eight focus groups were held with Medicaid members and the uninsured and concentrated on three groups: chronic disease, mental health and substance abuse (CNA Appendix B-3). Three listening sessions were held with providers, including physicians and CBO's and five sessions were held with members and the general community (CNA Appendix B-2).

An online survey was made available to a broad variety of providers and CBO's including those not members of either PPS (CNA Appendix B-1). The consumer survey was directed primarily to the Medicaid and uninsured population. Detailed information on the surveys, focus groups and listening sessions can be found in CNA Appendix B-1 Provider Survey, CNA Appendix B-2 Listening Sessions, CNA Appendix B-3 Focus Groups, and CNA Appendix B-4 Consumer Survey.

While approaching the issues and concerns to be addressed from different perspectives, there was general agreement on major themes, resources, and possible solutions. The major themes arose in all forms of stakeholder feedback.

Major themes common to all stakeholders included the following (each explored in more detail in the following sections):

1. Confusion/Knowledge Gap
2. Convenient Service Access
3. Lack of Member Engagement
4. Communication & Listening
5. Transportation

Albany Medical PPS and Ellis PPS

6. Home Environment and Living Conditions (Unstable Housing, Frequent Moves, Lack of Social Supports and Communication Resources)
7. Lack of Coordination & Consistent Follow-up
8. High Numbers of Members with Anxiety, Depression, and Chronic Conditions
9. Regulatory Barriers
10. Under-resourced CBOs
11. Lack of Adequate Staff
12. Lack of Adequate Financial Resources

I. Confusion & Knowledge Gaps

Most people, even those working in health care, lack a full grasp of the current complex and fragmented health delivery system – and their own role in relation to the total. Lack of understanding can lead to frustration and feelings that there is nothing they can do to improve their situation. Members described the anger they felt when they discovered (after the fact) that their Medicaid coverage didn't actually cover the services their children needed. They declared bankruptcy after trying to pay on their own.

In each session, participants of all backgrounds continually expressed that they were not aware of system aspects that others were sharing. Members routinely confuse Medicare and Medicaid.

Members and uninsured attending sessions appeared initially withdrawn, resigned, and sad. They expressed personal experiences they interpreted as discriminatory because of their Medicaid or no-pay status. As they learned more, they became more engaged in the discussions, started asking questions or offering thoughts about how they could improve their own situation, and in some cases, left with a plan of how to do so – with a smile.

When asked how they respond if they get sick – do they seek care in the ED, one Uninsured participant said they rely on themselves, and go to

Albany Medical PPS and Ellis PPS

work sick if they need to. Another expressed that they rely on “Dr. Jesus”. They had not explored applying for Medicaid, presuming that they would not qualify, and didn’t want to waste the effort.

In the focus groups most individuals reported that the biggest issues were what Medicaid does and does not cover and understanding the information presented to them.

This was especially prevalent in regards to Primary Care providers and where they can receive mental health or behavioral services. This is complimented by many cases what participants in groups referred to as “red tape” or unnecessary measures or procedures in regards to getting services such as going through multiple channels when it could be streamlined with one source.

Individuals across condition types find that it is incredibly difficult to digest the information that is presented to them. That the language associated with collateral materials regarding medication prescribed and conditions to which they are diagnosed are not written in language that is comprehensible to their abilities. To add to this frustration, when individuals seek out professionals to assist them with understanding the collateral material, they find that individuals are not very helpful, and that the lack of communication between agencies increases the level of difficulty for those to understand and utilize health care services.

In the consumer survey over 40% of respondents said they did not know where to go for substance abuse services and 30% did not know where to go for mental health services. Given the high prevalence of mental health and substance abuse issues in the Medicaid population, this lack of knowledge indicates a gap in care. Twenty five percent said they didn’t know where to go for diabetes testing, 35% for cancer screening, 41% for weight loss programs and 25% for HIV and STD testing.

Over fifteen percent of consumers said lack of information on what services are available was a major barrier to getting good health and healthcare for themselves and their families.

Many of them need/ desire a better way to receive information about the services available, why some services may not be available, where they can find health care providers and how they could get to those health care providers (transportation options).

II. Convenient service access

Preventive health services are last on a Member's priority list. They are worried about food, eviction, struggling with babies, or caring for elderly parents. Even necessary follow-up orders and filling of prescriptions will not happen if it is not convenient. Focus group participants wanted to have healthy lifestyles and mentioned wanting to lose weight or quit smoking. They seemed very aware of the benefit of healthy eating and said that obtaining food was not an issue in our area.

Many of the focus group-individuals feel there are not enough clinics or providers in general throughout the counties where they can go to receive care. Additionally those with chronic health would like assistance in the evening or after surgeries as they are not capable to help themselves. Limited hours of operation and out of area location were cited by all. Transportation limitations make it incredibly inconvenient for individuals to get the services they need.

Across all focus groups in this study, wait time is the largest contributing factor as a barrier to receiving appropriate health care services. Wait times along with the lack of communication when scheduling appointments made it feel impossible for those to obtain the care they need. This is especially problematic for those with substance abuse and mental health. Focus group participants from multiple geographic locations said that they tried to schedule appointments when symptoms and stressors first arise that cause complications to their mental health. However, due to the wait times in conjunctions with the lack of communication, many individuals had to go to extreme lengths (i.e. suicide attempts) before they were brought to a facility or seen by an individual who could provide them the care they needed. Lack of communication, coupled with short appointment visits and long lead times has also caused them not receive medication in a timely manner, thereby compromising their mental, emotional, and physical state of health.

"Mental health services are one of the worst in this area as for services, waiting period if you come out of the hospital to wait for an appointment. If you have a crisis, needing medications, all kinds of big problems in the mental health resources. So there's money being cut. So you go in this week and next week you got a different job. So there's a lot

Albany Medical PPS and Ellis PPS

of problems with that. And finding someone that does take Medicaid if you're in the system.”(focus group participant)

The working poor use the ED because they have no time available to make an appointment with a physician during business hours and may not have a PCP. Members will not take an hour or more off of work to go to an appointment – they cannot afford to. As one participant characterized their frustration as “Member waiting times are ignored altogether”. The free clinic in Schenectady went bankrupt paying for prescriptions, eliminating a key source of services for the many uninsured.

Forty nine percent of the consumer survey respondents said they had received care in the emergency room in the last year. Half of those used the emergency room more than once, with 35% using it more than 3 times. The main reason for using the ED was pain (44%), the problem was getting worse (30%) and seriousness of the condition (26%). Twenty five percent (25%) said they went to the ED because their doctor's office was not open and 17% said they were told to go to the ED by their health provider. Twenty percent said going to the ED was quicker.

Thirty percent said they use the ED as their usual place to get healthcare services. Interestingly 93% said they also used a doctor's office and use a doctor's office when they are sick indicating that most have a primary care physician but that they still use the ED for non-emergent services. Eighty five percent said they had visited a doctor for a routine exam or checkup. Of those that hadn't seen a doctor in the last two years, 30% said the reason was they couldn't afford the charges.

The most prevalent condition reported by consumers was high blood pressure (41.4%), followed by dental problems (33%), arthritis (32%), visual problems (32%), diabetes (27%), stomach/intestinal problems (27%), mental health (21%). Clearly this population has a number of significant chronic conditions but many are not accessing care for those problems. In the last 12 months, 41% of consumers said they did not have a cholesterol testing, 53% did not have cancer screening, 76% no nutrition education and 45% did not see a dentist.

Only 55% had seen a dentist in the last year. The major reasons for not seeing a dentist were cost (41%) or that they did not like going or were

Albany Medical PPS and Ellis PPS

afraid to go (24%). Focus group participants also mentioned dentistry saying they would rather have them pull your teeth than give you a root canal because it cost less.

Twenty six percent of consumers leave their county for healthcare, the majority traveling between adjacent counties such as Albany County (20%), Schenectady (12%), Rensselaer (12%). Twelve percent travel to New York City for care when leaving their county. Most of the travel was to access specialty services (35%) but 26% left for primary care services. Twenty seven percent were referred by their primary care physician out of the county and 23% said the provider they needed was not available in their home county. A respondent to the consumer survey commented that there are few places for mental health and eating disorders in Columbia County.

Fifteen percent of consumers answered that there were barriers that made it difficult for them to get healthcare. Language was only mentioned by 2.8% as a barrier reflecting the relatively low percentage of foreign speakers. When asked what were barriers to good health and healthcare 14% of consumers chose lack of healthcare services on the weekends and evenings as a major problem.

III. Lack of Member Engagement

Members not only need to be engaged, but empowered to have a voice in their own care. Some Members noted the difficulty of understanding all the complex processes needed to manage their own health, they conclude that their providers or the system does not care about them (in some cases feel discriminated against), and don't have the time to deal with an additional complication in their complex lives (see also Confusion and Knowledge Gaps).

IV. Communication & Listening

Sixty-two different languages are spoken in some areas. Rushed providers may not have the time or take the time to listen effectively. Cultural norms, language other than English, overall literacy, technical Health Care literacy, and overly brief encounters are all challenges for good communication. Language and cultural competence was mentioned as a barrier by 34% of the provider survey respondents and

Albany Medical PPS and Ellis PPS

38% mentioned incompatible computer and communications technology. In the consumer survey only 3% mentioned language as a barrier (the survey was made available in Spanish and English).

Members, particularly minorities, can be distrustful of healthcare providers. Members complained that providers would not listen to their repeated concerns. “I told my PCP for years that I had a bladder problem, but they wouldn’t listen. I finally went to an Urologist for a second opinion, who did tests and confirmed I had a physical anomaly causing the problem - which they treated successfully. I changed PCPs.”

Frequently, when providers don’t listen, Members interpret it as discrimination because they are on Medicaid rather than just poor care delivery. When other participants shared similar poor care experiences that were not Medicaid related, the Members appeared to relax.

Many of the focus group participants across all health conditions felt they were not being heard, that appointments were rushed, and with mental health they were just pushed to use a variety of medications based on which doctor they saw, not that they were properly diagnosed with the medication that was appropriately needed. Time seemed to be a large barrier. Many felt that doctors would see them for 10 minutes then bill them for an hour so they could see as many people as possible. Because of this mindset the quality of care and doctor relations is poor and individuals do not feel they are really being helped or that their health is being appropriately attended to.

One of the largest complaints for individuals facing different health conditions was the communication and discrepancies of coverage associated with Medicaid, specifically CDPHP. Many individuals found that they were not aware of what was and was not covered prior to signing up for Medicaid. Additionally, frustration arose from individuals when they believe that certain care was covered but found it laborious to locate a provider for that particular healthcare service that also accepted Medicaid. This was especially prevalent for individuals who have been diagnosed with mental and behavioral issues as facilities and practitioners who accept their insurance is limited in the counties that participated within this study.

Albany Medical PPS and Ellis PPS

Other issues with communication are between mental health professionals and the primary care physicians. In one mental health session, it was stated that their PCP claims their problems are mental, while mental health claims the individuals problems are physical.

There was also miscommunication from the physician who was not listening to the patient and stated they did not need the medication they came for.

V. Transportation

Getting the right services to the right person at the right time can be accomplished by either moving the patient to the services or moving the services to the patient.

Many members rely on public transportation, family, friends, and available community transportation services. The ED is usually on a bus line, while the PCP may not be. The logistics of transportation to and from appointments can be extremely difficult and time consuming to manage.

Seventy percent of the providers responding to the survey reported being within a quarter mile of public transportation, with 17% being more than a mile away. Eighty eight percent of provider survey respondents had sidewalks adjacent to their location and only 10% said there were any barriers that made it difficult for handicapped person to access their location.

Consumer survey respondents reported that 78% use their own car to get to healthcare services, with 21% using a friend or relative and 11% using public transportation. Six and a half percent use a taxi and 5% use an ambulance.

Focus group participants complained about the rules around getting Medicaid paid transportation. They could get a Medicaid 'cab' but only for a specific reason or visit. One participant said all she wanted was a bus pass but they won't provide one and told her to use the more expensive service. Child care and transportation were mentioned by many.

Areas outside of Albany and Schenectady (especially Fulton and Montgomery Counties) make it difficult for individuals to get to the

Albany Medical PPS and Ellis PPS

services they need. Calling 3 to 5 days in advance for transportation, that sometimes comes late and people miss their appointments anyway. For one focus group held in Amsterdam (Montgomery County) this was associated with the fact that transportation comes from Syracuse and therefore makes it difficult to get transportation in a timely manner. If they are late, regardless whose fault it is they lose their appointment and have to start the whole process again. Often transportation will bring individuals to their appointments, but not to get their medication after their appointments.

VI. Home Environment and Living Conditions (Unstable Housing, Frequent Moves, Lack of Social Supports and Communication Resources)

The Medicaid and Uninsured populations, particularly in urban areas, do not have stable housing or communication tools, leading to many barriers. They are at high risk for a cascading downward spiral from a single event (lose job, get sick, eviction, foreclosure, bankruptcy, etc.). These poor conditions and the stress they cause lead to undiagnosed PTSD that impacts other health conditions. Forty four percent of provider survey respondents mentioned safe and adequate housing as a major barrier.

When asked about local Community supports, some Medicaid Members and Uninsured expressed that they didn't really have any, since they recently moved to the area – they were on their own, socially isolated. One Focus group participant had recently arrived in Albany because his landlord in NYC raised his rent \$300 a month and he was in danger of becoming homeless. He was very concerned about being able to manage a transfer from his managed care plan in NYC to the Medicaid in Albany.

Frequent changes of address, combined with impaired communication access (internet, changing cell numbers or running out of minutes on minutes-only phones, etc.) make it difficult to coordinate care over time.

In the focus groups it was stated that for many the lack of rehabilitative housing for those with substance abuse and mental health issues they are forced to stay in the hospital a lot longer than what would be necessarily.

Only 36% of the consumers responding to the survey said they owned their own home, with 42% renting and 12% living temporarily with friends or family.

Housing CBOs expressed that much of the available housing stock is old and in such poor repair that it represents a health risk (mold, asbestos, pest control, lead, etc.).

Providers expressed that they frequently had to deal with barriers to a safe discharge. It was stated in the Focus Group that for many, because of the lack of rehabilitative housing for those with substance abuse and

mental health, they are forced to stay in the hospital a lot longer than what would be necessary, and that is charged to their Medicaid.

VII. Lack of Coordination & Consistent Follow-up

Many stories shared of one health care provider not talking to another, inability for them to connect on a timely basis and member frustration – leading to lack of follow-up – too hard to manage multiple appointments over time.

PCPs noted the difficulty in getting a timely BH consult. Similarly, BH providers noted the difficulty in obtaining needed and timely physical care for patients. Others noted a gap in communication between hospitals and nursing homes, resulting in long ED wait times for nursing home residents.

In the focus groups it was discussed that follow up appointments were just as difficult to obtain than original appointments, months out and sometimes they would need care sooner than what was possible. In many cases these follow up appointments would occur several months after the original appointment. This became an issue especially for individuals with mental health and behavioral issues as well as those with chronic illnesses as in some instances they would need care sooner than what was possible through their primary care services. This would thereby force individuals to attend urgent care or the hospital for issues that could have been assisted through a traditional primary care visitation.

Coordination between agencies, scheduling, and the process of switching care between counties was also discussed as laborious and difficult. Processes and protocols involved with many of these communication methods was stated to be time consuming, ranging from weeks to months at a time to change services to a new county, to update a prescription, or to schedule an appointment to meet with their primary care physician to discuss their health needs. People stated that have to make sure they have enough meds to last them 1 to 2 months because the transition process takes that long and if they don't they go without life necessary medication.

Albany Medical PPS and Ellis PPS

Seventy percent of provider survey respondents said uncoordinated care was a major impediment to the delivery of healthcare for their Medicaid and uninsured patients and clients. Forty one percent of open ended responses to the provider survey said that lack of coordination was a major barrier.

Consumers mentioned difficulty navigating the healthcare system as one of the major problems in getting good health and healthcare for themselves and their families (12.6%).

Service navigation and coordination is difficult to manage, and requires sufficient knowledge of options.

VIII. High Numbers of Members with Anxiety, Depression, Substance Use Disorders, and Chronic Conditions

Mental health was mentioned as a condition by 21% of the consumer survey respondents.

Medications are the major treatment component for these disorders. However PCPs are frequently not comfortable managing these medications without behavioral health involvement. There is considerable anxiety over being able to refill needed medication especially when moving from one county to the next.

All individuals in the focus groups struggle with these issues, there is a large population whose needs are currently not appropriately addressed to the best that they could be from patient perspective.

Within the mental health and behavioral condition groups, it was often expressed during this study that individuals felt they were not heard or treated till they took drastic measures. "I had to get arrested before they would pay attention. I had to take drastic measures and do something bad to get noticed." "Me too, I had to cut my wrists and walk into urgent care before anyone would listen to me, and then they just put me on a 72 psych hold."

IX. Regulatory Barriers

There are significant regulatory barriers to providing a range of needed services at a single site. The most frequent frustration expressed was barriers to co-locating physical health, mental health, and substance

Albany Medical PPS and Ellis PPS

services. Provider, CBO, and Member Stakeholders all mentioned that if needed services were not immediately and conveniently available, these necessary encounters are not likely to occur. Both Members and Providers mentioned common waits of weeks or months for an appointment. Providers are discouraged and frustrated with the pace of change and the silos of care. Tele-health was mentioned by providers as a means to providing care to nursing homes and other facility based sites. The current regulations only allow for tele-health use in rural areas. The current reimbursement is also not conducive to encouraging providers to outlay the needed capital for tele-health.

In the focus groups uninsured participant said: "I haven't had health insurance for 2.5 years. I can't get help from Medicaid or DSS because I make x amount of dollars over. I went on the website NY state. I can't get any help for that. What's stopping me is nobody will take into consideration the \$1500 a month I'm paying in child support. So I can't afford my own health insurance. Now if I make more money, they take out more money for child support. And I'm still not making any headway. So this is my dilemma."

The difficulty in maintaining coverage when moving from one part of the region or state to another is a serious problem; especially for those with chronic conditions, mental health and substance abuse disorders. One respondent to the consumer survey stated: "The difficulty is continuing to re-certify for services whether it is health care, food stamps. It is degrading, humiliating and exhausting. Even with a Master's degree it is difficult to understand the forms. The workers are cruel and impatient. It is beyond frustrating to have to deal with the system. We don't want to have to do this and see it as a temporary fix but even in that situation we are treated like we are trying to scam the system. It is so sad that people have to be treated like this." Another said "No one takes straight Medicaid and Medicare or they aren't accepting new patients or they give you a new patient appointment at the end of dec..." "But I think people are really judged by the service and the insurance they have. I've had my own experience with that. And I think it's sad. I think it's sad. I think that we all deserve to have health care."

The current time consuming Certificate of Need (CON) based process for skilled nursing facilities (SNF) to add Home Care and Day Care services

Albany Medical PPS and Ellis PPS

limits the feasibility to provide these lower cost services. Particularly in rural areas, there may be no access for Members, since there is insufficient volume to make services efficiently available on a stand-alone basis.

X. Under-resourced Community Based Organizations

Community Based Organizations (CBOs) expressed that they were already overtaxed, thought DSRIP initiatives would offload large responsibilities to them from health providers, but did not see any specific funding or other support for this. CBOs expressed strongly that they do not understand their future role in DSRIP. They want to help meet DSRIP goals, but are not clear how to do so.

Some, particularly those that do not currently bill Medicaid services, expressed the fear that the DSRIP limit of only 5% of funding for non-safety net stakeholders will guarantee that insufficient resources will be available to them.

Grant-funded and self-funded CBO programs face a constant risk of losing that funding. They worry about ongoing resources for sustainability. For example, the YMCA offers disease management programs (diabetes, Parkinson's, etc.) designed to help people self-manage at home. They worry about another economic downturn forcing them to discontinue these programs.

Fifty three percent of provider survey respondents said that a lack of community resources and support was a major impediment to the delivery of healthcare.

XI. Lack of Adequate Staff

There is a large and growing identified need for Community Health Workers (CHWs) and service Navigators. Some participants characterized the need as "drastic". A lack of sufficient Behavioral Health professionals was frequently mentioned, particularly in rural areas. Care management services are needed to arrange for and follow a person across levels and providers.

Fifty eight percent (58%) of provider survey responses and 55% of the open ended responses to the provider survey mentioned inadequate

Albany Medical PPS and Ellis PPS

staff, especially qualified mental health professionals (58%), specialists (47%) and clinical staff (38%).

In the focus groups overall the lack of staff available to treat people on a regular basis was mentioned by all groups. An opiate addict responding to the consumers survey stated that it is hard to find physicians that prescribe suboxone or methadone.

For chronic care patients it was the quality and transition of nursing staff where they had the greatest problems. This is particularly prevalent for individuals who need daily assistance based on their conditions (paraplegics, blindness, etc.). They cited that with the introduction of new or additional staff, more time is spent on the part of the patient to re-teach the aids then to actually receive care. Additionally, quality of services, with specific regard to housekeeping, is inconsistent across staff.

Lack of staff creates stress for the medical community as well as those who wish to receive care. Many people would love to be a caregiver to their parent, but they can't because they would lose their job. Providing training and paying informal care givers would allow individuals to assist their family, reduce stress on staff, and allow them to make money.

A number of focus group participants stated that they would love to be a caregiver to those with chronic health issues (parents, aunts, uncles, etc.) but they can't because they would have to sacrifice their current employment. Many of these individuals stated that if facilities were to provide them training, they would become informal caregivers to assist their family members and allow them to make money/be employed. Informal Caregivers are a critical resource for care in the community, but under recognized, under- valued, and their numbers shrinking as the population ages. Volunteers can also provide Community supports and substitute for other formal and informal care.

XII. Lack of Adequate Financial Resources

Lack of sufficient dollars was expressed by all Stakeholder groups. There still appears to be no strong incentive to either provide or receive primary care. Many providers do not accept Medicaid. Focus group participant mentioned having a hard time finding a specialist for her condition because they would not accept Medicaid.

Albany Medical PPS and Ellis PPS

Gaps in Medicaid covered services limited valued treatment (e.g. not enough rehab/physical therapy after an accident to allow Member to stand in shower and bathe and be self-sufficient.

Many are caught in an area where their spend down funds are too high or they make slightly above the economic limits to gain the care they need. Therefore this causes many people to choose between having an okay job that may lead to something better while sacrificing care, or have no job and take what care they can.

Many have stated, time and time again, that they want to work but they feel as though people want to keep them down because they do not see a way out to better their situation and have affordable care.

Forty five percent of open ended responses to the provider survey mentioned lack of financial resources. Interestingly, 54% of the provider survey respondents said they offered a sliding scale payment plan. It is possible that members are not aware that providers are willing to do a sliding scale or offer extended payment terms.

In the consumer survey the cost of healthcare services was the top choice (22% major problem) for barriers to good health and healthcare, with insurance not being accepted for needed services (15%) and the lack of insurance coverage next (11%).

XIII. Other Barriers

Other barriers, such as environmental issue were not as important as the ones above. Only 3.5% of provider survey respondents mentioned environmental issues as a major problem. Twenty five percent mentioned access to nutritious food, 44% access to adequate and safe housing.

XIV. Service Delivery Integration Flow and Waste

In summary, qualitative input to the CNA identified that Medicaid consumers were generally satisfied with individual services provided, but less so in how these services are connected. They were particularly dissatisfied with paperwork, coverage/payment, and regulatory constraints impeding access to combinations of medical, mental, and

Albany Medical PPS and Ellis PPS

substance services needed. Consumers and providers alike expressed a need for:

- More readily available information about services available (including whether they are actually covered or not), particularly mental and substance services.
- More convenient service location (including transportation to get there), particularly alternatives to ED like Urgent care, primary care, and co-located primary care and mental/substance abuse disorder services.
- Less waiting time to schedule needed appointments and consultations, less time spent in waiting rooms, and more appointment times convenient to the consumer. This lack of convenience was identified by consumers as a major cause of missed appointments and preventive care. In addition, socio-demographic factors such as unstable housing, frequent moves, and the lack of communication resources contribute to the consumer not even being available for future appointments. This waste of consumer time leads to unnecessary waste of provider time and resources through more paperwork as well as more ED and inpatient hospital use to fix problems that could have been prevented.
- Better listening and communication between providers and consumers, as well as between providers during transition handoffs, and coordination between physical and behavioral health providers.

Comparing this qualitative input with quantitative Neighborhood hotspots of opportunity showed a correlation between the needs identified by both. This can easily be seen when comparing the maps provided throughout the CNA. Overall, improving immediate and convenient flow of consumers to the services they need was identified as a way to remove waste without affecting quality. Providers and consumers alike expressed hope that reforms implemented as a result of DSRIP regulatory waivers and PPS service integration and coordination improvements would make this possible.

D. ASSETS AND RESOURCES

One of the most illustrative ways to understand the assets and resources that can be mobilized and employed to support DSRIP strategies is to review how local health departments, hospitals, healthcare professionals, community-based organizations and the general population were involved with the development and implementation of the recent Community Health Assessments (CHA), Community Health Improvement Plans (CHIP), and Community Service Plans (CSP).

Albany Medical PPS and Ellis PPS

Source: NYSDOH -Prevention Agenda 2013-2017: NYS's Health Improvement Plan

Albany Medical PPS and Ellis PPS

Table D-1 presents a listing of local health departments and hospitals involved in the CHA/CHIP/CSP process for each of the 10 Service Area counties. Also included were the partner organizations that assisted in the development and implementation of the Plans. The following types of organizations were involved across the 10 counties: community health centers; health plans; local business; philanthropy; colleges/universities; school districts; faith-based; housing; mental/behavioral health; transportation; social services; and media.

An excellent example of such collaboration/mobilization is the Ellis Hospital-Schenectady County Public Health Services (SCPHS) CHA/CHIP/CSP effort. Both hospital and health department were part of a regional Capital District Public Health Priorities Task Force that also included: Albany and Rensselaer County Health Departments; St. Peters Health Partners and Albany Medical Center; CDPHP, Fidelis Care, Blue Shield of NENY; Schenectady Free Clinic, Whitney Young Health Services; Price Chopper, CAPCOM Federal Credit Union; Albany and Rensselaer County Departments of Mental Health; Albany City School District; Catholic Charities; Interfaith Partnership for the Homeless; Hudson-Mohawk Area Health Education Center; the Capital District Tobacco Free Coalition; the American Cancer Society; the Capital District Coalition for AIDS; SUNY School of Public Health; the Commission on Economic Opportunity and the Capital District Community Gardens. Ellis Hospital and SCPHS helped draft the CHIP for the Capital Region and together with 117 members from 77 organizations, are actively involved with the Asthma, Mental Health and Diabetes Task Force efforts.

In addition to working with the Regional CHA/CHIP/CSP effort, Ellis Hospital and SCPHS were involved with a more focused Schenectady County effort. A Schenectady Coalition for a Healthy Community was formed. The Coalition comprised of 62 organizations and held 28 meetings during the course of the Assessment and Plan development. In addition to the information from the 3 County HCDI Community Survey, Ellis/SCPHS undertook a door to door “U Matter Schenectady” survey that included high risk neighborhoods with large Medicaid populations. There were over 2,000 community respondents to the survey. As a result of planning effort, Schenectady County Health Priorities included: Smoking and Asthma; Diabetes and Obesity; Inappropriate Use of ED;

Albany Medical PPS and Ellis PPS

Mental Health/Substance Abuse; and Adolescent Pregnancy. Ellis Hospital and SCPHS are presently implementing their joint CHIP/CSP.

A review of the key partners working on the Ellis/SCPHS CHIP/CSP initiatives show the assets and resources that are presently being utilized. Smoking and Asthma: Hometown Health; Schenectady Strategic Alliance for Health; Asthma Coalition of the Capital Region; Sunnyview Rehabilitation Hospital; Center for Smoking Cessation; Schenectady Municipal Housing Authority; Schenectady Department of Social Services; City of Schenectady; Schenectady United Neighborhoods; League of Women Voters; Schenectady County Office of Community Services; and the YMCA. Diabetes and Obesity (non-duplicative of partners listed above): Schenectady Inner City Ministry; Cornell Cooperative Extension; Catholic Charities; Schenectady ARC; City Mission; Schenectady City School District; Union College; Schenectady County Community College; and Capital Care. Inappropriate ED Utilization (non-duplicative of partners listed above): Mohawk Ambulance. Mental Health/Substance Abuse (non-duplicative of partners listed above): National Alliance on Mental Illness; Schenectady County Probation; and Healthy Schenectady Families. Adolescent Pregnancy (non-duplicative of partners listed above): Planned Parenthood; Girls Inc.; Boys and Girls Club; and Schenectady Day Nursery.

Utilizing these assets and resources to address specific challenges facing the community outlined in Section C above is a problem-solving exercise. We outline in broad terms the assets and resources that the Community can bring to bear for each stage in the following sections and with a few key examples for each. For a full description of Providers and Community-Based Organization (CBO) assets, see Appendix A. For a full description and discussion of results of the Qualitative provider and consumer surveys, listening sessions, and focus group analysis, see Appendix B.

1. PROBLEM DEFINITION AND COMMITMENT TO CHANGE

The first step in any effective problem solving is to define the problem. It is clear from results of the qualitative analysis that there is a broad recognition and understanding of each of the major challenge areas outlined in the previous section across all stakeholder groups.

Albany Medical PPS and Ellis PPS

- Providers, community-based organizations, the general public, and individual Medicaid members and uninsured people all commented on these issues in the surveys, listening sessions, and focus groups.
- Of even more importance, all of the participating stakeholders demonstrated strong personal commitment and dedication to helping the Medicaid and uninsured populations to the best of their ability (including individual's commitment to improving their own personal health) and to the fullest extent that their organizational or personal resources will allow.

2. POSSIBLE ACTIONS

The next problem-solving step is to identify possible actions to address the identified challenges. The Prevention Agenda process of creating Community Health Improvement Plans and Community Service Plans (CHIP/CSP) assembled a broad coalition of community institutions to address prioritized public health needs for the general population. The DSRIP process engaged coalitions of providers, CBOs, and consumers to drill deeper into the high needs of the Medicaid and Uninsured populations. These local coalitions have been growing, getting stronger and coordinating their activities. Each county has identified two public health priorities and built CHIP plans to address these priorities. Many of those priorities are the same across counties, particularly mental health and addressing chronic disease. This process has already brought together varied professions that have not worked as closely together in the past. DSRIP personnel and financial resources can build upon these coalitions. Stakeholders outlined a broad range of interventions for each challenge area, particularly:

- Coordination and follow-up (particularly between Physical and Behavioral Health providers);
- High need challenges for people with anxiety, depression, and chronic conditions;
- Lack of adequate staff or reliable funding sources; and
- Convenient service access.

3. TESTING POSSIBLE SOLUTIONS

Once there is knowledge of the problem, a commitment to address it, and how - the next step is testing possible solutions to see if they work.

Albany Medical PPS and Ellis PPS

There is good distribution of primary care providers and CBOs in the areas where beneficiaries are concentrated implementing initiatives aligned with DSRIP goals (see Figure A-2 and Figure A-11 above). In highest need neighborhoods, there are Federally Qualified Health Centers (FQHCs), and free primary care services (Troy's Roarke Center, HCDI's Poverello Center in Albany, the Interfaith Partnership for the Homeless's Drop-in Health). Stakeholders described a wide range of local actions that were already working effectively, or could be improved to increase effectiveness. Some of these interventions are part of ongoing region-wide CHIP/CSP efforts, while others are local initiatives. Of note, many of these initiatives were not widely known across stakeholders from other local communities or areas of focus (housing, transportation, nutrition, social services, etc.). Participation in a learning collaborative within the region (and statewide as envisioned under DSRIP) promises to improve the value of this idea cross-fertilization. Some examples of solution testing locally include:

- Experience in building formal Accountable Care Organization (ACO) networks by both local PPSs has built organizational capacity for integration and has laid some of the important foundational elements for greater integration under DSRIP PPS initiatives.
- St. Peters Health Partners has been integrating and right-sizing the operations of 4 hospitals in the region, likewise building experience and organizational capacity.
- HCDI has been bringing providers, public health departments, insurers and community organizations together since 1998 to improve access to health care and health coverage as its core mission. This work has resulted in shared regional health priorities, community health improvement task forces and plans, grant and partner funded initiatives to address these priorities.
- The collaborative work of building the PPS with broad institutional partners and the investment in HIXNY (our local Regional Health Information Organization- RHIO) results in the majority of patients in the region having their health records on a platform accessible to the breadth of their providers (and themselves).

Albany Medical PPS and Ellis PPS

- New York State, particularly the DOH is a major asset for this region as we have found, with expertise available to draw upon and assist with accessing best practices as well as helping to engage constituencies. They are also funding regional planning through the Population Health Improvement Program that will add data analysis capacity, strengthen shared health workforce development strategies, fortify the participation of community partners particularly those with disparate health needs, and mobilize public engagement in population health improvement.
- Many stakeholders discussed involving local faith communities in health improvement efforts. Advantages cited include a location within the community, combined with a role as a trusted resource more likely to engage the local population.
 - Faith community nurses (FCN – sometimes called parish nurses) provide services, often on a volunteer basis, to members of religious congregations. Their work is focused on prevention and support rather than the provision of hands-on clinical services to congregants. The services provided by parish nurse/FCNs include health education, personal health counseling, referrals, and advocacy. A study profiling FCNs was performed by the Center for Health Workforce Studies in the School of Public Health at the University at Albany.⁵ There is an active FCN program in the region already that can serve as a model for expansion to other local communities.
 - The Schenectady Inner City Ministry (SICM) is an ecumenical partnership, founded in 1967, of 54 congregations (15 denominations) for ministries of social service and social justice. Ministers meet monthly to plan and implement initiatives to address current issues such as food insecurity, affordable housing initiatives, health and fitness, and economic development. It can also serve as a model for other local communities.

⁵ <http://www.albany.edu/news/fcn2007.pdf>

Albany Medical PPS and Ellis PPS

- Transportation coordination (and from the Medicaid member and uninsured person's view – convenience and effort) have a variety of formal (Capital District Transportation Authority – CDTA – STAR and ACCESS programs) and informal (faith community volunteers) programs available. Other health delivery providers and CBOs also provide transportation. Stakeholders suggested pooling all these resources to provide:
 - Coordinated Scheduling and resource pooling for all of these programs, and/or
 - Transportation Navigators to assist individuals.

4. BRINGING SOLUTIONS TO SCALE

Bringing successful interventions to scale is necessary to improve the population health of the region. The power of good practical ideas is a strength to build upon. Stakeholders heard about improvement efforts underway in other local communities in the listening sessions. The excitement and enthusiasm at the potential for duplicating these efforts in their own local community led to immediate requests for more information and contacts. Building upon this stakeholder engagement, “Champions” identified during the community needs assessment process are already conducting outreach to their colleagues to engage them to assist in carrying DSRIP projects forward to implementation. Some infrastructure initiatives already under way to bring initiatives to scale were also identified. Some of the major initiatives underway include:

- The local coalitions formed to develop the CHIP/CSP improvement plans remain engaged in Task Forces to implement these efforts. Many of these efforts complement DSRIP projects. In the case of Asthma, the local Performing Provider Systems are implementing two complementary DSRIP projects with broad input from the Task Forces, the local Asthma Coalition, and other engaged CBOs.

Albany Medical PPS and Ellis PPS

This approach leverages current evidence in the literature⁶ that multiple messaging sources combined with multiple complementary interventions have a multiplier effect in successful efforts to reduce avoidable hospital encounters.

- Many of the survey respondents stressed the need for stronger integration of social services into the delivery of care. The “Bridges Out of Poverty” program⁷ based in Schenectady focuses on building an understanding of socio-demographic factors and drivers in disadvantaged populations. Training and support is available to interested stakeholders across the region to assist in overall improvement of non-healthcare related determinants of health (social determinants) in local communities.
- Housing was described as an area that could readily be available for community engagement if they were given sufficient resources to do so, particularly improving the quality of existing housing stock. Local organizations such as the Troy Rehabilitation and Improvement Program⁸ are making a difference locally. They support efforts to improve living spaces and housing stock one neighborhood at a time, including management of micro-grants to allow homeowners to help themselves and the neighborhoods where they live. Local county offices of the Cornell Cooperative Extension⁹ have county-wide programs in lead abatement, environmental asthma trigger reduction, integrated pest management, etc.
- Developing a program to make homes, particularly senior homes, more accessible was suggested by a variety of stakeholders as a way to assist in keeping members in the community longer. Umbrella of the Capital Region (<http://theumbrella.org>) which

⁷ <http://schenectadybridges.com>

⁸ TRIP - <http://triponline.org>

⁹ http://www.cce.cornell.edu/learnAbout/Pages/Local_Offices.aspx

Albany Medical PPS and Ellis PPS

serves Albany, Schenectady, Rensselaer, and Saratoga counties is an organization that matches homeowners in need of help with handypersons recruited in large part from the retired workforce. It was honored with the national Met Life/Civic Ventures Encore Award for its program. TRIP has a related repair program in rural areas in Rensselaer County.

- Schenectady County Community College is adding a formal curriculum focused on development of effective Community Health Workers (CHW) to address the future workforce gap identified by many stakeholders. The curriculum is being developed with input from local providers and CBOs. Related CHW training and support programs are being implemented by local providers and CBOs.
- The State University of New York at Albany (SUNYA) and its School of Public Health is a significant local resource.
 - The Center for Health Workforce Studies is a national resource funded by HRSA. Staff are actively involved with the National Quality Forum's Workforce initiatives and very active in Academy Health's Annual Research Meeting.
 - The Institute for the Advancement of Healthcare Management sponsored multi-stakeholder breakfast meetings, health reform and health IT projects, and national speakers for Community-wide health improvement forums for over a decade.
 - Their Center for Excellence in Aging and Community Wellness is a Quality and Technical Assistance Center supporting evidence based health, particularly for diabetes and heart health;
 - The Center for the Elimination of Minority Health Disparities has been supported by the National Institutes of Health since 2004 to study and address minority health disparities in the greater capital region. They also have a certificate program to develop the cultural competence and leadership skills of graduate students to address issues of health disparities.

Albany Medical PPS and Ellis PPS

- They are also working on curriculum to develop care coordinators.
- Other local colleges are focused on health issues as well, providing educated and motivated interns to local organizations to assist in health improvement efforts.
 - Rockefeller University facilitated student capstone projects for the past two years using the Rethink Health Simulator Model to predict multi-year impacts of system changes. Many local health experts served as mentors for these students.
 - Rensselaer Polytechnic Institute President Shirley Jackson served on the President's Council of Advisors on Science and Technology (PCAST), including release of a 2014 Report to the President: Better Health Care and Lower Costs: Accelerating Improvement through Systems Engineering.
 - Union Graduate College is now offering a focus in Health Analytics.
- The Affordable Care Act has supported the expansion of navigator services throughout the region in health care institutions and community organizations. Each community has multiple organizations that can assist with enrollment into health insurance. These organizations can be a great resource for activating new enrollees in their health services in a manner that is most beneficial to them and cost-effective for the health care system.
 - These trained Community Resources can provide a model for other recommended Navigators – how to effectively utilize new coverage, how to coordinate transportation and multiple providers, etc.
- The Schenectady Coalition for a Health Community with the support of the Schenectady Foundation, performed a door to door consumer survey of the Medicaid and Uninsured population. This activity has resulted in a branded community engagement program with 10 focus areas. They have engaged over 150 people from over 100 organizations in their work. More on this can be found in their community health needs assessment.

Albany Medical PPS and Ellis PPS

- A growing number of School Districts are holding Asthma Education sessions for all their School Nurses to address pediatric Asthma and environmental triggers. Local Asthma Educator training was recently opened up to current and potential CHWs as well as a growing number of health care professionals.
- The regional YMCA offers disease management programs (diabetes, Parkinson's, etc.) designed to help people self-manage at home. These programs are offered throughout the region - where people live and congregate.

E. CHART OF PROJECTS

The accompanying Excel spreadsheet (CNA Appendix H-1) identifies the top five data points for each of the projects selected by either or both of the PPS's. They are focused primarily on "threshold" determination of need for the project.

These top five data points have changed and will continue to change as new data becomes available (e.g. the Stage 2 Qualitative results and Stage 2 Quantitative drill-downs) and Workforce and Financial considerations are added.

Initial priority data points were largely based upon:

- Gaps identified in DSRIP measures (PQI, PDI, PPR, PPV)
- Gaps identified in chronic disease drill downs
- Gaps identified in population health prevention agenda metrics
- Domain 3 Clinical Improvement Metrics
- Initial primary data analysis of Behavioral Health drivers of avoidable use

The current data points add consideration for:

- Stage 2 Qualitative analysis results
 - o Survey of Providers and CBOs
 - o Survey of Consumers
 - o Provider/CBO and Beneficiary/Community Listening Sessions
 - o Focus Groups
- Stage 2 Quantitative analysis results
 - o Recent incorporation of Multiple Chronic Physical Conditions
 - o Recent "Hot Spot" and "Warm Spot" targeting
 - o Results of recent project-specific Drill Downs

Albany Medical PPS and Ellis PPS

- o New data sources and analysis

Note that secondary data points to inform the specifics of the interventions in each project and priority locations for implementation roll-out can be gleaned from the full CNA and project specific drill-downs.

F. PROCESS AND METHODOLOGY

The HCDI-AMC/Ellis PPS CNA was completed in two phases. The Phase 1 objective was to provide information to clarify possible projects and target potential communities for these projects. Existing secondary data from NYSDOH and other sources were analyzed; preliminary analyses of SPARCS encounter data performed; and a series of small area maps were developed for AMC PPS and Ellis PPS for review. Phase 1 results were presented in person to both the AMC PPS Guidance Committee, and the Ellis PPS Steering Committee, and via individual Webinars to the AMC Project Advisory Committee members, and to a broader audience of Ellis PPS providers and other partner stakeholders. Results included summary of County CHA/CHIPs and the Hospital CSPs; analysis of 148 county-specific health indicators; PQI, PDI, PPV, and PPR rates all-payer vs. Medicaid; multivariate analyses of SPARCS Medicaid Inpatient and ED encounters, and small area geographic analyses of key indicators. AMC PPS and Ellis PPS “Proposed Projects” were categorized as: having sufficient evidence of need; not yet having sufficient evidence to continue; or other projects where evidence of need was found, but not identified as a “proposed project”.

Phase 2 involved collection of additional information to: identify population needs; clarify the specific DSRIP projects; and target high need sub-populations, their service use rates, drivers of excess use, and geographic areas for project start-up. Both AMC PPS and Ellis PPS providers and stakeholders formed Sub-Committees to assist with this effort. HCDI staff worked closely with these Sub-Committees during Phase 2 to provide relevant data and address questions.

1. SURVEYS

AMC PPS and Ellis PPS assisted in the creation of the provider and CBO lists for the provider survey, key informant interviews, and provider/CBO listening sessions. AMC PPS and Ellis PPS also assisted with the identification of beneficiaries for the consumer survey, community listening sessions, and focus groups. Sub-committee discussions helped focus questions for the listening sessions and focus groups. The provider survey was designed to ask for information not readily available from

Albany Medical PPS and Ellis PPS

secondary sources such as whether they were a safety net providers, hours of operation, profile of patients, whether they were accepting new patients, accessibility, access to public transportation, sliding scale payment, participation in quality measurement programs, RHIO use, and specific expertise. The remainder of the survey asked about barriers to care and which services would prevent avoidable inpatient admissions, re-admissions and ED visits. The web-based healthcare and community based organization (CBO) survey was conducted in October. Survey links were emailed to the PPS's membership consisting of 237 healthcare and community based organization (CBO) providers. An additional 279 CBO's identified from web searches without email addresses (516 total). These organizations were sent a postcard requesting their participation. Two additional email reminders were sent by the PPS's to the providers. The response rate was 35.7% (n=184).

An additional survey was sent to 540 physicians in November with 115 responses or a 21.3% response rate. Physicians were asked specific questions about behavioral and primary care and palliative care. Questions included question on how physicians address advanced illness, familiarity with palliative, integration of primary and behavioral health (BH) care, screening for BH, and referral patterns for behavioral health disorders (CNA Appendix B-5).

A web based consumer survey was designed to ask Medicaid and the uninsured about their health status and conditions, use of tobacco products, alcohol and drug use, where they usually go to get healthcare and dental care, emergency room use, knowledge of healthcare services, traveling to healthcare services, healthcare literacy, barriers to care, and recommendations on how to improve the delivery of healthcare and community based services. The web-based consumer survey (n=120) was conducted in October and early November. Medicaid and uninsured consumers for this survey were identified from PPS email lists (N=9,690) and from a purchased mail list from ExactData (N=8,295). Emails were sent to those with email addresses and postcards were sent to those without email address inviting them to participate. Several local CBOs also distributed the postcards to their clients. A drawing for prizes of \$500, \$250 and \$100 were offered as an incentive for participation. A reminder email was sent one week later to 6,639 email addresses. In addition several local CBO's distributed postcards to their clients.

Detailed information on the provider survey can be found in CNA Appendix B-1 and information on the Consumer Survey in CNA Appendix B-4.

2. KEY INFORMANT INTERVIEWS, FOCUS GROUPS & LISTENING SESSIONS

In addition to the surveys described above, three methods were used to incorporate the knowledge and experience of providers, community organizations and consumers: key informant interviews, focus groups and listening sessions. Key informant interviews conducted between October and November. One key informant consisted of a group of local Emergency Department staff who shared their perception of drivers of avoidable ED use. Eight focus were held with three targeted to those with chronic diseases, two for people with behavioral health needs, two addressing substance abuse and one covering those with both substance abuse and mental health needs. The eight focus groups were held in six different counties in highly assessable locations that were reachable by public transportation. A number of participants in the chronic care focus group in Fulton County (which included individuals that were blind and wheelchair users) were provided transportation to the focus group site.

Three provider/CBO listening sessions and five community/CBO listening sessions were conducted in different counties to gather provider, CBO and consumer input. Listening sessions were held in 5 different counties. Open-ended questions were posed to the participants, with follow-up questions to clarify initial responses.

Provider/CBO examples include:

- How might you better integrate physical and behavioral health?
- What are the regulatory barriers that might be waived under DSRIP that could improve outcomes?
- What do your Medicaid and Uninsured patients say needs to be fixed?
- If you were in charge of Medicaid, what is the first thing you would change?

Community/Beneficiary examples include:

- What can be done to improve my health care experience?

Albany Medical PPS and Ellis PPS

- Who should do it?
- What would help keep me from needing to go to the Hospital or ER?
 - Who could help me more than they do now?
- What worries me most about my health?
- What would make life easier for me or my family or my neighbors that have BOTH physical and depression/mental/substance health issues?

Details on the surveys, focus groups and listening sessions can be found in CNA Appendix B-2 and CNA Appendix B-3.

3. SPARCS ANALYSIS

AMC PPS and Ellis PPS Sub-Committees worked closely with HCDI on project-specific analytic requests utilizing SPARCS 2011-2013 inpatient and 2012 outpatient data, as well as additional small-area geographic analyses.

The community needs team designed further SPARCS analysis to identify high utilizer sub-populations and organize them into intervention groups aligned with the types of interventions appropriate to each (see Section B.2.III for further details). Refinements for these groups included adding secondary diagnosis and socio-economic factors. The group analysis included looking at Medicaid and Uninsured people who:

- Are Super-utilizers for both inpatient admissions and ED visits
- Have Individual Chronic Conditions and a Multiple Chronic Condition Composite
- Are in a Specific chronic care cluster for palliative care
- Have a Mental Impairments (MI) by type
- Have a Substance Use Disorder (SUD) by type of substance
- Have a Moderate or Severe Behavioral Health (BH) condition – MI and/or SUD
- Have combined BH and physical health indicators
- Have or live in zip codes with disproportionate Socio Demographic Status indicators (Poverty, language, race, ethnicity, etc.)

Albany Medical PPS and Ellis PPS

These analyses allowed for the identification of the types of beneficiaries most likely to have preventable inpatient admissions, re-admissions and ED visits. Results from the specific drill-down analysis was then integrated into a framework to measuring scale and facilitate targeting subpopulations with elevated relative risk for ED or IP encounters (Section B.1 Hot-spotting). Specific physical health and behavioral health indicators linked to projects selected by target group as well as summaries by local Neighborhood were generated and can be found in Appendix F.

4. DATA PRESENTATION

Key data was mapped using MapInfo and charted using Microsoft Excel. Consolidating zip codes into neighborhoods and density mapping (number per square mile) assisted the PPS's in identifying hot spots. Healthcare providers and CBO locations were geocoded and mapped. These maps provided a visual means of identifying potential gaps in care. Neighborhood analyses were conducted for PQI, PDI, PPV, PPR, chronic diseases, behavioral health and top primary diagnoses to further refine hot spots and target project efforts. Neighborhoods were formed from adjacent zip codes reducing the data from 300 zip codes in the 10 county area to 85 neighborhoods. Analysis by number and number per square mile combined with provider locations allowed for identification of highest need neighborhoods.

AMC PPS, Ellis PPS, and HCDI reviewed the quantitative and qualitative information to couple identified need with the appropriate DSRIP projects.

5. IDENTIFICATION OF DATA SOURCES

In addition to the SPARCS data, sources of primary data included: provider survey; consumer survey; focus groups; listening sessions; and key informant interviews. Secondary “demographic” data sources included the US Bureau of Census’s: 2013 Population Estimates; 2000 and 2010 Census (DP-1; P-42); American Community Survey 5 year estimates (DP-2; DP-3; S-1703); 2011 Bridge file; and 2011 Small Area Health Insurance Estimates (SAHIE) file. Unemployment data came from the Dept. of Labor-July 2013. Demographic information from the NYSDOH included: Vital Statistics of NYS-2012 (Tables 2 and 53); and the DSRIP Dashboard B-8, Medicaid Enrollment by Member County. Prevention Agenda County (CHA/CHIP) and Hospital (CSP) Plans came from their Individual County or hospital websites. Data sources for general population health status included the following from NYSDOH: NYS Prevention Agenda Dashboard; Community Health Indicator Reports (CHIR); County Health Assessment Indicators (CHAI); County Health Indicators by Race/Ethnicity (CHIRE); Leading Causes of Death in NYS; Expanded BRFSS Reports (2003; 2008-09); Environmental Public Health Tracker-Birth Defects. National data source used was the County Health Rankings and Roadmaps (RWJ Foundation). Avoidable hospitalization/ED data sources included: Health Data NY for “All-Payer” PQI, PDI, and PPV events by county and Zip Code, and PPR events by hospital; and for Medicaid - Avoidable Hospitalization Chart Book; and the PQI, PDI, PPV, and PPR data sets for Medicaid recipients by county and Zip Code. Medicaid hospitalization and ED data sources included: Clinical Metrics Chart Book; Medicaid Chronic Conditions, Inpatient Admissions and ER Visits by county and Zip Code data sets; and the DSRIP Dashboards B-2, B-3, B-4, B-5, B-7, B-8, C-1, C-2, C-3, C-4, C-5 and C-6. Provider information sources included: AMC PPS and Ellis PPS provider listing; Salient Provider and Member Work Books; and DSRIP Dashboards B-1 and B-6. Detailed demographic and health status information can be found in Appendix C and E.

Provider information was obtained using DSRIP Managed Care Provider Data, the PPS’s own lists of providers and an analysis of SPARCS data for Medicaid providers. PCMH providers were identified from the NCQA Patient-Centered Medical Recognition website. CBO’s were identified

Albany Medical PPS and Ellis PPS

through web searches and partner referrals. Gaps based on numbers of providers per 100,000 residents were completed using the American Community Survey population statistics. Certified health care facilities were identified from NYSDOH data files, NPI database and the HRSA data file. Hospital and nursing home data was obtained from the NYS DOH website and HealthData, Nursing Home Weekly Bed Census. Bed need analysis was based on beds per population (ACS data) and need rates as found in the Berger Commission report. Providers were categorized into service categories and geocoded and mapped. Detailed healthcare provider and community based organization data can be found in Appendix A.

In addition to the SPARCS data mentioned above, the statistical analysis utilized tools and information from :

- The NYSDOH (e.g. PQI/PDI/PPV/PPR, Chronic Conditions, Medicaid beneficiaries and use rates by county and zip, preventable hospital use indicators from the Nursing Home Quality Pool),
- The Agency for Healthcare Research and Quality (AHRQ – e.g. PQI/PDI definitions and software, the Clinical Classification Software, an Opioid Overuse composite measure),
- The National Quality Forum (NQF – e.g. measure specifications and history for NQF endorsed measures, tools for risk adjustment for socio-demographic status and population health),
- The Centers for Disease Control (CDC – e.g. Asthma Clinical Guidelines),
- The Environmental Protection Agency (EPA – e.g. successful Asthma intervention program initiatives),
- The Centers for Medicare and Medicaid Services (e.g. the Chronic Conditions Warehouse definitions and Medicare and Medicaid data),
- The US Census (e.g. demographics – especially identified socio-demographic drivers of health care utilization) and
- Qualitative input and feedback from the PPS project teams. This is the same source information utilized by NYSDOH for their analysis, but combined in multivariate analysis.

Albany Medical PPS and Ellis PPS

Results from these standard data sources, using SPSS statistical tools yield valid, reliable and reproducible results.

A. APPENDIX – PROVIDER AND COMMUNITY BASED ORGANIZATIONS (CBO)

Counts of Healthcare and CBO providers by specialty by county and detailed lists of providers and CBO's can be found at the following links:

DSRIP 10 County Provider Survey

1. October 2014

As part of the New York State Department of Health's Delivery System Reform Incentive Payment (DSRIP) Program (https://www.health.ny.gov/health_care/medicaid/redesign/delivery_system_reform_incentive_payment_program.htm) two Performing Provider Systems (PPS) encompassing 10 counties (Albany, Schenectady, Rensselaer, Saratoga, Montgomery, Fulton, Greene, Columbia, Ulster, and Dutchess) are conducting a single community needs assessment. Hospitals involved include St. Peter's Partners (St. Peter's Hospital, Albany Memorial, Seton Health, Samaritan), Ellis Hospital, St. Mary's Healthcare - Amsterdam [Ellis-PPS] and Albany Medical Center, Saratoga Hospital, Columbia Memorial Hospital, Kingston Hospital, Northern Dutchess Hospital and Vassar Brothers Hospital [Albany Medical PPS].

We are gathering information about the health needs of the area's population, especially those covered by Medicaid and the uninsured. As part of the project, we are asking those who provide healthcare and community based services to share their insights with us. We will ask some basic information about your organization and your opinions about a number of topics. Please use this survey to share your ideas on how best to improve the community's health.

Your answers are very important to us. You do not have to answer any question you do not want to, and you can end the survey at any time. The survey should take no more than 20 minutes of your time.

If you are not already a member of a PPS and wish to join as either a member or contribute as a subject matter expert, please contact either:

David Smingler at Ellis Medical Center at sminglerd@ellismedicine.org or
Dr. George Clifford at Albany Medical Center at CliffoG@mail.amc.edu

If you have any questions about the survey, please call Liz Kormos, HCDI Community Needs Consultant, at 518-309-3949 or email her at eakormos@gmail.com.

2. Location and Contact Information

Type of Provider

- CBO Health
- Health
- CBO Only

DSRIP 10 County Provider Survey

In which Counties do the majority of your patients/clients reside? (check all that apply)

- Albany
- Schenectady
- Rensselaer
- Saratoga
- Montgomery
- Fulton
- Columbia
- Greene
- Ulster
- Dutchess

Other (please specify)

Are you a Safety Net Provider? (Non-hospital based providers, not participating as part of a state-designated health home, must have at least 35 percent of all patient volume in their primary lines of business and must be associated with Medicaid, uninsured and Dual Eligible individuals)

- Yes
- No
- Don't know

The following have broad categories of providers and community based organizations described by the Department of Health for DSRIP. Please look at the selections under each and check only one description that best fits your organization. If you offer more than one service please choose the primary service and note the additional services in the comment box below.

Medical Services (Clinics, Hospital, CHC, Health Home, Physician, etc.)

Medical Support (lab, radiology, pharmacy, etc.)

Mental Health (Psychologist, OMH facilities, Psychiatric Social Work, etc.)

Substance Abuse Services (Addiction Treatment, Chemical Dependency, Alcohol Abuse, etc.)

DSRIP 10 County Provider Survey

Long Term Care (Nursing Home, Adult Care Facilities, Home Health, etc.)

Children's Services

Developmental Disability Services

Health Plans

Community Based Organizations - Advocacy

Community Based Organizations - Education

Community Based Organizaitons - Employment

Community Based Organizations - Food, Clothing, Housing

Community Based Organizations - Government

Community Based Organizations - Other Supports/Resources

If you are a Health Plan, which programs do you offer? (select all that apply)

- Medicaid Managed Care
- Family Health Plus
- MLTC Medicaid Plans
- Medicaid Advantage Plus
- PACE
- Other (please specify)

DSRIP 10 County Provider Survey

Please describe any other services you wish to note:

Who would be the primary contact for your organization regarding DSRIP? Please provide their name, email address and phone number so that we may contact them to potentially participate on a DSRIP project.

Name	<input type="text"/>
Email Address	<input type="text"/>
Phone Number	<input type="text"/>

Which of the following best describes your role in your organization?

- Director
- Physician
- Practice Manager
- Nurse
- Social Worker
- Other licensed health care professional

Other (please specify)

Please provide the name and address of your organization.

Practice Name or Organization	<input type="text"/>
Address	<input type="text"/>
Address 2	<input type="text"/>
City/Town	<input type="text"/>
State/Province	<input type="text"/>
ZIP/Postal Code	<input type="text"/>

Do you have more than one location from which you serve patients/clients?

- Yes, I already provided the addresses of our other sites to either Ellis or Albany Medical PPS
- Yes, I haven't yet provided the addresses of our other sites
- No
- Don't know

Sunday	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Please estimate the percent of your patients/clients by insurance coverage. All answer choices must total 100%. (Please do not include the percentage sign.):

Commercial Insurance (including managed care plans) %

Medicare %

Medicaid %

Medicare and Medicaid (Dual eligible) %

Uninsured %

Other insurance %

Please indicate below which age groups makes up the majority of your practice/clients (check all that apply)

- Young Children (<12 years of age)
- Teens
- Adults (18 to 64)
- Seniors (age 65 and older)

Other (please specify)

DSRIP 10 County Provider Survey

Do you serve a significant number of any of the following groups? (select all that apply)

- Inner city hispanic population
- Inner city black population
- Inner city white population
- Other ethnic inner city populations (please specify below)
- Guyanese
- Former Soviet Republic residents
- Rural Poor

Any Other Groups (please specify)

Are there any restrictions on the types of patients/clients you can serve?

- Yes
- No
- Don't know

If yes, please describe

Do you have the capacity to accept new patients/clients?

- Yes
- No
- Don't know

Are you accepting new Medicaid patients/clients?

- Yes
- No
- Don't know

Are you accepting new uninsured patients/clients?

- Yes
- No
- Don't know

DSRIP 10 County Provider Survey

How many more patients/clients do you have capacity for? (write the number in the box below)

Do you offer a sliding scale payment plan for those unable to pay?

- Yes
- No
- Don't know

Do you participate in any of the following quality measurement programs? (select all that apply)

- Healthcare Effectiveness Data and Information Set (HEDIS)
- Consumer Assessment of Healthcare Providers and Systems (CAHPS)
- Medicare Compare
- Physicians Quality Reporting Initiative (PQRI)
- Meaningful Use of EHR Technology
- Patient Satisfaction Surveys

Other (please specify)

Does your organization have any specific certifications or designations?

- NCQA Patient-Centered Medical Home (PCMH)

Other (please specify)

Do you participate in a RHIO (Regional Health Information Exchange Organizations)

- Yes, Health Information Xchange New York (HIXNY)
- Yes, other RHIOs (please specify below)
- No
- Don't know

Other RHIO, Please specify:

DSRIP 10 County Provider Survey

How far is your location from public transportation?

- Less than a quarter mile
- Less than half a mile
- Less than a mile
- Greater than a mile

Are there sidewalks adjacent to your location?

- Yes
- No

Are there any barriers that make it difficult for a handicapped person to access your location?

- Yes
- No
- Don't know

If yes, please describe

Please describe any unique programs or services that you offer patients/clients.

5. Access to Health Care and Social Services

What is the greatest barrier or obstacle to providing healthcare for Medicaid patients in the Capital Region?

DSRIP 10 County Provider Survey

What is the greatest barrier or obstacle to providing healthcare for uninsured patients in the Capital Region?

What do you see as major impediments to the delivery of health care to your Medicaid and uninsured patients/clients? (mark all that apply)

- Availability of qualified clinical personnel
- Availability of specialists
- Availability of qualified mental health personnel
- Availability of primary care
- Availability of community resources and support
- Uncoordinated care
- Clinical personnel with language and cultural competence skills
- Incompatible computer and communications technology
- Access to evidence-based clinical information

Other (please specify)

DSRIP 10 County Provider Survey

In your professional experience, please indicate the degree to which the following are barriers to good health for your Medicaid and uninsured patients/clients.

	Not a problem	Minor problem	Moderate problem	Major problem	Unknown/Not applicable
Lack of insurance coverage	<input type="radio"/>				
Lack of patient/client compliance	<input type="radio"/>				
Lack of patient/client health and wellness knowledge	<input type="radio"/>				
Language barrier	<input type="radio"/>				
Lack of medication compliance	<input type="radio"/>				
Mental health or behavioral issues	<input type="radio"/>				
Substance abuse	<input type="radio"/>				
Transportation to and from healthcare facilities	<input type="radio"/>				
Transportation to community based resources	<input type="radio"/>				
Lack of urgent care services	<input type="radio"/>				
Lack of healthcare services on weekends and evenings	<input type="radio"/>				
Lack of social supports	<input type="radio"/>				
Difficulty navigating the health care system	<input type="radio"/>				
Lack of adequate or safe housing	<input type="radio"/>				
Access to affordable nutritious food	<input type="radio"/>				
Environmental issues (air pollution, toxic waste, etc.)	<input type="radio"/>				

Other Problems (please specify)

DSRIP 10 County Provider Survey

Which one or more services would reduce the amount of admissions, readmissions to the hospital and emergency room visits by Medicaid enrollees and the uninsured? Rate each of your choices as having a High, Medium or Low impact. Choose NA or leave blank those you do not choose.

	Reduce Admissions	Reduce Re-admissions	Reduce Emergency Room visits
Urgent care extended evening hours	<input type="text"/>	<input type="text"/>	<input type="text"/>
Urgent care available on weekends	<input type="text"/>	<input type="text"/>	<input type="text"/>
Urgent care available 24/7	<input type="text"/>	<input type="text"/>	<input type="text"/>
Primary care accessible by public transportation	<input type="text"/>	<input type="text"/>	<input type="text"/>
Co-location of primary care and behavioral care	<input type="text"/>	<input type="text"/>	<input type="text"/>
Transportation to healthcare services	<input type="text"/>	<input type="text"/>	<input type="text"/>
24/7 nurse helpline	<input type="text"/>	<input type="text"/>	<input type="text"/>
Substance abuse services accessible by public transportation	<input type="text"/>	<input type="text"/>	<input type="text"/>
Transportation to substance abuse services	<input type="text"/>	<input type="text"/>	<input type="text"/>
Temporary residence with social support services	<input type="text"/>	<input type="text"/>	<input type="text"/>
Temporary assisted living for medical patients	<input type="text"/>	<input type="text"/>	<input type="text"/>
Temporary assisted living for mental health or substance abuse patients	<input type="text"/>	<input type="text"/>	<input type="text"/>

Health education programs	<input type="text"/>	<input type="text"/>	<input type="text"/>
Wellness programs	<input type="text"/>	<input type="text"/>	<input type="text"/>
Care coordinators	<input type="text"/>	<input type="text"/>	<input type="text"/>
Monitoring of chronic care patients (phone, electronic, etc.)	<input type="text"/>	<input type="text"/>	<input type="text"/>

Please give us your ideas:

DSRIP 10 County Provider Survey

Do you have any recommendations on how we can improve either the delivery of health care services or the access of health care services?

Do you have any recommendations on how we can improve either the delivery of social services or supports to improve the health of Medicaid enrollees and the uninsured?

Is there anything else you would like to add?

Which one or more services would reduce the amount of admissions, readmissions to the hospital and emergency room visits by Medicaid enrollees and the uninsured? Rate each of your choices as having a High, Medium or Low impact. Choose NA or leave blank those you do not choose.

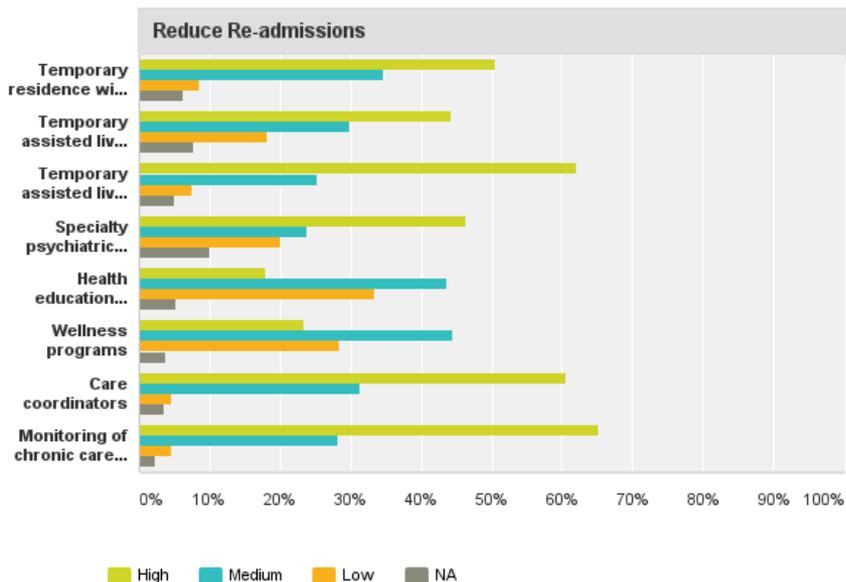

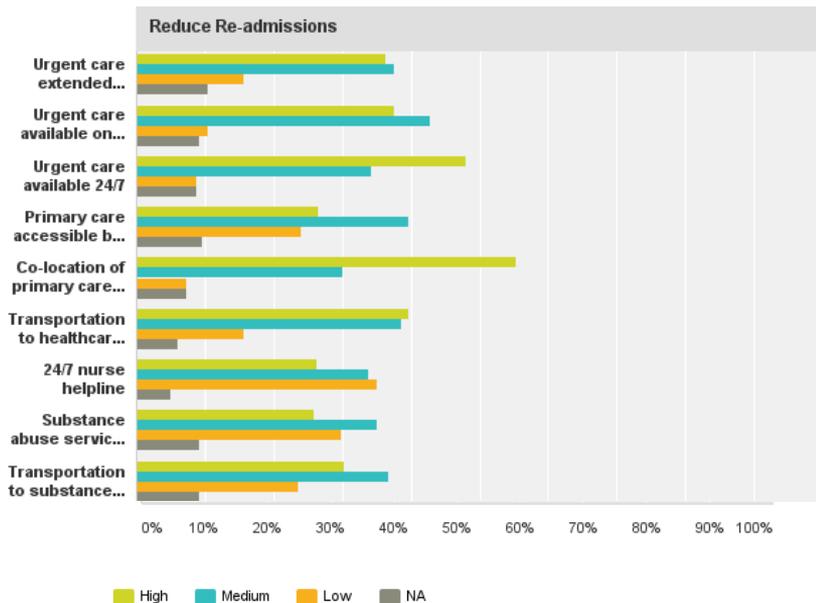

Answered: 112 Skipped: 72

Reduce Emergency Room visits					
	High	Medium	Low	NA	Total

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
1			2	Patients have competing priorities Children often have Medicaid, but their mothers do not recertify. Patients often are no-shows for appointments	2	Patients have competing priorities Patients often are no-shows for appointments						
2			3	Their compliance with plans and doctor's recommendations.	12	The need for funding to cover our expenses.						
3	0											
4			7	Limited substance abuse and mental health treatment options, primary care providers not willing or competent in serving at-risk populations	7	Same as above	7	Find primary care providers "friendly" to the needs of people with mental health and substance use issues and provide more open access to them. Integrate care coordination into EDs and other providers. Ambulatory detox. Mobile health units/embed medical staff with existing outreach programs				
5	2	Chronic care patients and behavioral health patients are served better with face to face contacts. Phone contacts are for the most part worthless.					2	Many doctors practice in groups. Evening and weekend office hours for doctors should be an alternative to Emergency Room visits. This would be for those patients with primary care physicians.	10	Hopefully the DSRIP will lead to reducing state operated health facilities (like mental health) and put the resources into community based services.		
6	7	Investment in prevention care and assessment will result in the highest return on savings, including consistent education throughout the network of providers on what services can and should be provided in clinics/offices, not the ER, so that this can be reinforced with patients everywhere. Also, appropriate coordination of care so that when someone is assessed to need critical mental health, substance use, or other medical follow up there is immediate connection to an appropriate care provider -referrals and delays of even 2-3 days in appointment times will dramatically lower patient engagement.	2	Limited providers accepting Medicaid for services	2	Limited providers with the ability to see uninsured patients due to insurance coverage	7	Build an appropriate network of providers that work together to support better care for patients in the community, using technology to provide the basis for shared appointments and information. Invest in prevention care and assessments to ensure patients are engaged earlier in care, not when they are sick and provide easy access entry points (to replace the ER as the entry to care).	7	Same as above.	3	Do not minimize the importance of general health education and patient engagement through easy access points that replace the ER as entry points for care when patients have concerns (both sites and electronic access). Work with patients who access well services (such as reproductive health care) to engage them in more comprehensive patient education and engagement.
7							12	Enhance reimbursement to keep elders with dementia and challenging behaviors in NYS facilities rather than out of state!			12	Need to change the way that payment takes place to SNFs so that patients do not stay in the Acute Care Hospital setting for want of a payment source for a SNF bed!

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
8			12	Cost of care delivery is not being met by reimbursements. Examples of high costs are staffing, we have a highly saturated market for providers at all levels - nurses, NPs, PAs and physicians, real estate and the market are expensive for rent/purchase of facilities	12	Cost of care delivery is not being met by reimbursements. Examples of high costs are staffing, we have a highly saturated market for providers at all levels - nurses, NPs, PAs and physicians, real estate and the market are expensive for rent/purchase of facilities, philanthropy which supports at least 10% of our costs is difficult in this area based on the Chronicle of Philanthropy statistics on giving						
9			7	Lack of coordination, inadequate reimbursement	2	Lack of access for basic needs, lack of coordination					4	Hospice does not capture accurately the # of dual eligibles we serve. We know of the SNF residents because of the room and board transfer, but because hospice is fully covered by medicare, we often do not know if a community-based patient also has medicaid.
10			1	Complexity of Medicaid eligibility, approval	1	Knowledge, transportation	11	I believe that there is a void in behavioral health support systems. As a nursing home, we cannot find services for individuals with this need. They often bounce around the system. There also seems to be a lack of urgent care services so individuals just go to the emergency rooms. Regulations and fear of lawsuits also cause providers to refer individuals to higher levels of care then needed.	11	Facilitate locations for behavioral health at different levels in the system and ensure there is transportation available. Increase urgent care accessibility and also education about urgent care. Increased communication between providers and insurers about the "whole picture" of a resident. One issue may be treated in one location but many other issues may be present that cause a readmission or another visit to the ER		
11	0											
12			11	Availability of providers who will take Medicaid			2	Doctor's offices often do not have accessible examining tables that are easy for people in wheelchairs to use. Likewise for x-ray rooms etc. Provision of sign language interpreters, although required by law is often difficult to obtain. Preventable health problems that result in hospitalizations could be reduced if more access was provided.	11	The availability of more health care navigators to finds practitioners who accept Medicaid and to help people apply for Medicaid or other health insurance.		

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
13			2	Referring patients for medical care and having them keep their appointments and engage in care. Small number of dentists who accept Medicaid. Inability to obtain all physical and behavioral healthcare at one site.	12	Lack of deficit funding to support their needs. Difficulty in obtaining benefits and often even low cost insurance is to expensive.	8	Provide mental health and SUD services in medical offices and provide physical healthcare in mental health and SUD offices.	3	Assess their simplest needs and provide what is necessary to meet those needs. I.E. we were very successful in decreasing no show appointments when we gave the patients appointment books and reviewed their appointments during sessions. We've had people who couldn't get up in the morning for appointments until we gave them alarm clocks, then attendance improved.		
14			7	We are in the business of removing barriers inhibiting treatment for the medically underserved. The collaboration and integration with primary care and other specialty medical services, though, isn't always as we would like it to be.	7	Same as above.						
15	0											
16			11	Access to primary medical services due to shortage of providers Lack of urgent care centers in the City of Albany	2	Access to services	7	Create region wide care coordination services Evaluate the feasibility of the two PPS work together on common clinical indicators Establish late evening primary care services adjacent to major hospitals working with existing FQHCs Collaborate with Hixny to develop a comprehensive region wide continuity of care record for timely care coordination and a patient registry for population health management Develop a comprehensive home-based intervention with Community Health Workers with RN oversight for care management and coordination Distribute cell phones with limited free talk time to high-risk patients for access to their personal data online as well as to contact care managers	11	Develop fast-track options for hospitalized and ED patients receive needed referrals Recruit social workers to be part of care management teams to address social services needs.	7	I am really excited about the potential for this region-wide initiative and sincerely hope that the leaders can find mutually beneficial ways to collaborate to provide better services to our Medicaid patients. I have been working primarily children and families on Medicaid for the past 30 years and, for first time, I feel we have an opportunity to implement system-wide changes to improve the care and outcome for the recipients. thank you

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
17				Residential Redesign has not come to fruition yet, which falls under lag time for us to take more patients.		Getting them to a doctor (Primary Care) in order to get into the medicaid process, which Hospitality House can do. A discrepancy in geographical areas and outreach.		1.02Care coordination with respects to hospitals. Hospitality House offers is an intensive long-term residential substance abuse treatment program for males 18 and older who meet DSM IV dependence criteria for addiction. Evidence based clinical practice includes Motivational Interviewing, Cognitive Behavioral Therapy, Behavior Modification Techniques, Brief Therapy and Pharmacotherapies. Substance abusers suffers more health problems than the general public, due to poor diet, dental issues and cardio vascular damage from chemical abuse. Providing access to preventive health services helps reduce the need for expensive emergency or other health services. The majority of our patients have had repeated unsuccessful treatment attempts at shorter term facilities whom cannot offer the same intensive behavioral interventions associated with sustained change and recovery as our agency. This cycle of repeated hospitalization, usually preceded by an Emergency Department visit		Hospitality House has begun integrating Naloxone quarterly training for staff, patients, former patients and their families. Naloxone (Narcon) is an opioid antagonist drug used to counter the effects of opioid overdose, for example heroin or morphine overdose. This harm reduction effort, in addition to syringe injections, has been expanded to nose swab applications. We have also been working closely with a local outpatient clinic to offer Naltrexone treatments. Naltrexone (Vivitrol) is an opioid receptor antagonist used primarily in the management of alcohol dependence and opioid dependence. It is a once-monthly extended-release injectable formulation. Over the years we have been collaborating with numerous criminal justice entities, such as Parole, Probation and Drug Courts. These participants have traditional placed a heavy burden on emergency departments as they		Hospitality House strengthens the mental health infrastructure by supplying the right care in the right setting for those suffering from severe substance abuse and related issues as well as poor mental health. We continue to serve NYS MEB and substance abuse populations by collaborations with other substance abuse entities such as short-term inpatient rehab, halfway houses, and outpatient clinics, who have referred their clients to the intensive services we offer where other programs do not. We also provide specialized services that cater to those who are substance dependent and are involved with the criminal justice system. We have a unique approach that is changing as our environment changes, but we will always hold true to our value of abstinence, integrity, spirituality, and accountability to rebuild an addicts life.
18	1	PHARMACY CUSTOMIZED PATIENT MEDICATION PACKAGES AND PHARMACIST MONITORING OF PATIENT COMPLIANCE.	12	REIMBURSEMENTS	12	REIMBURSMENTS	12	PROVIDE REIMBURSMENT FOR PHARMACY SERVICES FOR CUSTOMIZED PATIENT MEDICATION PACKAGING, DELIVERY TO REMOTE/RURAL AREAS, AND MONITORING OF MEDICATION COMPLIANCE			7	CUSTOMIZED PATIENT MEDICATION PACKAGES (CPMP), MONITORING MEDICATION COMPLIANCE COMPLIANCE BY A PHARMACIST, TRACKING OF PRESCRIPTION, DELIVERY SERVICE OF CPMP ALL DIRECTLY IMPACT THE HEALTH OF PATIENTS AND NEEDS TO BE REIMBURSED AS A SERVICE. THESE SERVICES HAVE BEEN DOCUMENTED TO INCREASE COMPLIANCE, WHICH DECREASES HOSPITAL/NURSING HOME ADMISSIONS AND THEREFORE DECREASE HEALTHCARE COSTS.
19			11	Capacity to take new Medicaid individuals	12	Lack of some form of payment						
20	0											
21			11	Providers not accepting	12	In ability to pay	11	Providing more specialize service to the Fulton/Montgomery counties in their region

34	11	There is a need for a resource that is an alternative to the ER for Behavioral health support Behavioral health clients need access to a recovery center or a social club where they can have something to do	2	Access to services when needed - Behavioral Health clients are general not good at adhering to traditional appointment structures. This especially complicates their primary health care. Evening availability of clinical supports is lacking resulting in reliance on the ER. Insufficient social supports	2	Same as above	2	We need an urgent care for the Medicaid population as an alternative to the ER				
35			12	Low reimbursement rates that do not cover the true costs of providing services			7	The state needs to take the lead in creating an effective IT platform for integrated care coordination and care management across all providers and settings (note: this critical initiative can't be funded by cutting services or reimbursement for services).	5	Affordable, accessible and timely transportation is critical.		

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
36	5	Transportation and access to services is vital to serving this patient population.	12	Many managed care companies restrict access and length of stay regardless of support services.	12	We are not able to accept the uninsured.	8	By co-locating behavioral services and primary care services patients can access both types of care avoiding separate appointments and minimize transportation needs.	11	offer more case management services that stay connected to the patient on a more frequent basis. In NYS tx courts are more effective because the see the client weekly vs probation who sees them every 3 months or more.		
37		We support individuals with Developmental Disabilities, and operate a large Residential support program. Thus, we provide many of the services listed above, and most of those we support live in our residences.	9	In our industry, it would be the "Front Door" enrollment process administered by OPWDD. Most all our patients and services are overseen by OPWDD, and subject to their processes, which tend to be bureaucratic and cumbersome.								
38			11	The fact that we are not looking to be a provider of services. Believe there are providers in our community more capable to provide necessary services	11	See above answer	5	Mobile service. We are a rural community. The population served could be assessed further for utilization of such services. Incorporating Mental health with primary care.	10	Have Commissioners of Social Services participate in DSRIP		
39	10	-Psych/substance abuse emergency room/urgent care triage (crisis center/evaluation center); swift deflection to community services and supports to include clinic, care manager, crisis residence. -Maximize and/or develop safe, affordable housing opportunities across the behavioral health system and across the age contiuum, e.g., supportive housing; "low-demand" shelter beds; "adult-home-like" services with medical supports. -Increase treatment access/capacity across the age contiuum, e.g., clinic services -Maximize integrated behavioral health services to include mental health and addiction services, as well as physical health services when possible. -Increase the utilization of addiction screening tools (e.g., SBIRT) in all medical and behavioral health settings. -Maximize linkages with local law enforcement to include Crisis Intervention Training (CIT). -Maximize peer recovery services in mental health and substance use -Do not forget the importance and demonstrated effectiveness of prevention services; e.g., suicide prevention; youth addiction prevention; etc. -Pay attention to special populations, e.g. veterans;	11	There is simply not enough outpatient mental health services to address the needs of Capital Region residents with serious and persitent mental illness.	12	The aforementioned is true irrespective of payor source or patient ability to pay.	10	The promise of community reinvestment has never been realized in NYS. DSRIP offers a renewed promise that must not be broken to strengthen the behavioral health infrastructure. If the goal is to reduce hospital admissions than there must be a recognition that the outpatient system is already saturated and additional community resources, albeit more effective and efficient, must be part of the equation. Right now we have an outpatient system that is so saturated that in order to get treatment an individual must have a crisis, go to the hospital, and then get prioritized for outpatient treatment upon discharge. That is crazy and backwards.	10	Do not lose sight of the community expertise that is already out there. Include all-willing rproviders movign forward whenever possible. Utilize County Directors...as a matter of fact, over-utilizie us. It is our job to stay in-tune with community trends, challenges obstacles and achievements. We are required by Mental Hygiene Law to assess community need and to plan annually to try and address those needs.		Thank you for the opportunity.
40												
41				Compliance with medical regimen		no follow up. limited people to help them apply for insurance.		more social support staff in ER's missing a large group of pts who need HC navigation		more staff

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
44			1	Lack of information for the patients	12	Cost of care	7	Coordinated care. Provide multiple services at one location.				
45	11	crisis residence is very much needed	12	waiting lists and spend downs not made by consumers	11	getting them services at DSS in a quick and efficient manner. It is as if they try everything to deny instead of be helpful	8	colocation of primary care and behavioral health care as well as urgent care for both would be key in preventing ER visits as well as transportation to the facilities				
46	11	Comprehensive prenatal services are essential for this population. High risk patients do not travel out of the area for prenatal care.	11	Lack of specialists accepting Medicaid	5	Limited access due to lack of transportation	7	Improved policies in nursing homes, improved transportation to non-medical programs, improved care coordination and communication among providers. Improved availability of quality education programs and support. Nursing homes and emergency service providers do not communicate.	11	Increase the availability of access to medical homes. Improve workforce education. Develop a standard of care for all prenatal patients. Support patients behavioral health needs - optimize primary care teams to meet patient's medical and behavioral health needs.		I look forward to participating with your team to improve care service delivery.
47	11	Housing for SUD clients is critical. Care coordinators/peer supports are critical.	7	integration of service.	12	Cost of service and regulations.	8	Co-locate primary care in SUD disorder/Behavioral health clinics. Make the provision of ambulatory detox at community service providers easier from a regulatory and skilled staffing perspective, particularly if primary care is co-located.	12	Meaningful reimbursement for peer and social supports.		
48	5	Medicaid transportation for acute (urgent) care visits, allowing for the transport of family with the client. For all geographic areas. behavioral health Mobile Crisis team to function as a community based evaluation service for ER diversion.	11	Long wait period for appointments; no medicaid transportation other than ambulance for acute needs - resulting in over reliance on ambulance and ER; in southeast Rensselaer County - no primary care; limited public transportation from rural areas to suburban and urban care locations; overall limitations in behavioral health in caring for the MICA clients in an integrated venue; and need for dental care.	12	There are fewer uninsured persons than ever in our history. The Department has worked to link every uninsured client to an insurance navigator. There is no deficit funding to cover losses of fees.	8	Integration of SA, MH and PC. Mobile treatment for the rural areas, which would include behavioral health.	10	Development of affordable recreational activities in all communities; with health coaches working face to face with consumers to facilitate involvement. Health coaches or skill bidders re: financial management; meal planning and grocery shopping. to promote wellness. Service delivery which has a family focus and not restricted to teh individual.	11	Rural service delivery is unique and requires culturally sensitive planning. Most seervices are built in urban centers with teh expectation of the rural poor to find their way there - instead the population does not obtain the service. telemedicine and mobile services are a must - including social supports and skill building.

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
51	1	Health education (specifically education and programs about health literacy) need to focus on when to use the ER, what questions to ask providers (especially upon hospital discharge) and					1	The population we work with tends to use the ED to get their immediate health needs met. They are not educated about the importance of seeing a primary care physician. Also, people living in poverty have multiple issues that prevent them from planning for doctor's appointments. Often, people we serve live chaotic lives and it is easier to use the emergency room than to make and keep an appointment with a primary care doctor. In addition, health literacy is a huge issue. When many of our clients are discharged from the hospital after an inpatient stay, they do not understand the follow up instructions and lack the health literacy and supports to follow through on the instructions they are given.				
52							8	The introduction of telemedicine in nursing homes and some home bound individuals. Colocation of primary care and mental health services could be useful in affording individuals access to needed care.			11	A model where there is a stronger medical presence (MD's, PA's or NP's) in skilled nursing facilities would result in facilities being able to treat their residents in place rather than transporting them to acute care settings. This is more cost effective and would be better for the nursing home resident.
53												
54	0											
55	0											
56	6	Temporary housing assumes there is improvements to clients' challenges...and there may be a population to benefit from this type of housing. However, my experience is that the housing with supports (case management, low-cost meal programs, social/recreational opportunities and 24 hour staff availability) is a long term situation, and for chronic behavioral clients, probably permanent.		NA		NA				6		Supported housing should not be judged by meeting clinical thresholds but by lack of new or continued negative impacts on clients.

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
58	6	We need more attention paid to the social determinants of health	9	Bureaucracy	9	Fear on the part of many of the clients--especially deportations and financial issues	6	According to recent studies by the Robert Woods Johnson only 20% of outcomes are based on access and quality of medical services provided. The social determinants of health, individual choices and health education are by far more influential in producing improved health outcomes	3	Spend time to make them feel valued, supported and respected		
59			11	Access to mental health providers, specifically psychiatry.	9	Time frame to get enrolled in managed care.	8	Co located behavioral health services in pediatric offices and schools.	7	Prived care coordination and wrap around services in order to stabilize functioning of child and family.		
60	1	I think the idea of picking a few goals and then saturating the community (even small communities to begin with) with the message seems the most promising. It's not just our patrons at the library, but our employees who don't have healthcare insurance don't realize that they have options. They are just so used to going to the ER for services - it's worked for them for a long time - so they aren't looking for a change. They feel they are getting what they need, so aren't interested in changing. It is a lot of work to find a good doctor and then get themselves and their children to a possibly out-of-the-way location. Everyone knows where the hospital is.	11	Not enough service providers.	1	Making them aware of services that are available. Many who are eligible lack the resources to follow through on accessing healthcare.					11	Schenectady is in dire need of top quality rehabilitation and transitional housing for substance abuse and mental health patients.
61			11	change to MLTC transitions between mltc and mltc or other managed insurance too many "care coordinators" who do not speak same language no crosswalk to share data	1	smooth transition into exchanges not enough info in the public about what is available who is the go to agency to get the word out?						
62	0											
63	10	Provide the evidence based YMCA Diabetes Prevention Program to individuals in every community to aid in the prevention of obesity, diabetes and other health related issues.										
64	0											
65			2	availability of services, specifically primary care services. Also lack of rural services. No home MH services.	2	same as above.						
66			5	Adequate, reliable transportation	12	Financing	7	I have heard someone say of an idea about co-locating urgent care with emergency rooms, which seems to be an opportunity to triage people away from unnecessary ER care.	6	More, easier to access home modification and maintenance programs for low income homeowners. Adequate housing is an important factor to overall health and the ability to remain in the community.

70			3	co-pays if any convincing people to utilize health care providers transportation encouraging follow through	3	all of the above						
71		Wow! That was an overwhelming list! And I am already past the 20 minutes to do this survey . To choose one of 17 times 3 columns of choices which offer up to 4 choices from a pick list is way too much!	5	Lack of transportation outside the service area of the Capital District Transportation Authority.	5	1.) Lack of transportation outside the service area of the Capital District Transportation Authority. 2.) The qualifying requirements when people own land but have very little money: school and property taxes consume a large amount of their funds. 3.) Pride, the appropriate type, of not being dependent upon "welfare".	9	One which comes to mind is the necessity of repealing Governor Cuomo's "Safe" Act as most males in upstate New York will not consider accessing mental health services based upon the very high probability of having their weapons confiscated and pistol licenses revoked which are their means of acquiring meat for their families and keeping their lands safe from vermin.				
72	11	Nursing Homes need better clinical support to be able to access and treat residents without sending them to the ER. Physicians are often unwilling or unable to manage residents in facilities and this is often due to the limited clinical abilities and resources of the facilities.	12	Reimbursement does not cover our costs. There are often significant barriers to discharge. We may accept a resident for rehab but then not be able to successfully discharge them due to poor housing/no safe discharge site. Hotels are not good discharge plans.	12	Same	11	Hospitals have "hospitalists." Nursing homes should have access to specially trained physician services on off hours. Wouldn't it be better if we could get a house call by a physician here rather than sending everyone to the ER all the time?	6	Provide more temporary housing upon discharge.		
73	0											
74			2	access to specific clinical specialty areas and good quality dental services.....very limited around the entire region.								
75	0											
76			5	Transportation, housing	6	Transportation, housing, prescriptions filled	5	Housing both crisis and permanent is a primary issue for pts. I don't know the answer but more resources are needed.				
77	4	Implementation of INTERACT tools in RHCF could assist in the reduction of hospital re-admissions and ED visits. Telehealth programs may prove beneficial for RHCF's who do not have medical coverage 7 days/week.	11	Availability of specialized services (i.e. mental health/ psychiatrist) for rural RHCFs.	9	Timeliness of Medicaid Applications and processing by county Medicaid Program.	4	Improvement of tools used to communicate patient conditions for discharges, transfers, and re-admissions. Access to clinical records between various levels of care/services (PAC, Acute, Homecare, Hospice, etc.).				
78			3	Compliance due to their mental health issues	2	access to community resources

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
84	11	Better medication reconciliation at time of DC, Integration of pharm, PCP and behavioral health, Utilization of Home care for home eval, services, coordination and tx. Many patients present much differently in the home vs PCP or other office visit.	13	We have been very fortunate to serve this population. Occasionally, there is a safety issue for staff but this is also true for non medicaid patients.			7	Collaboration of providers, Use of NPs, Possible creation of MD, NP, home care teams/pods by geographic area to serve populations. IT EMR investment Reward for good health	7	Better care coordination, waived services with measurable outcomes tied to social or support services.	7	Be sure there is collaboration between agencies/programs so that all providers will have opportunity to make a difference.
85	7	Integrating service providers as partners with health care professionals particularly for specialty populations like Medicaid recipients who have developmental disabilities would significantly improve the coordination of care and reduce the number of diagnostic procedures that are often ordered for people whose communications skills are limited. The relaxation of regulations mandating trips to the emergency room for people with developmental disabilities, particularly those with limited communications skills, when there is any significant health concern, would also be a huge help, because it would enable interaction with community health providers as the first step in the diagnostic process, while keeping people comfortable in their own homes (and less likely to have behavioral incidents as a result).	12	The extremely limited number of quality health professionals who will accept Medicaid as payment for their services is a huge barrier to appropriate health care for the people we serve. A secondary factor is the extremely limited number of health care professionals who are trained and/or comfortable in addressing the health care needs of people with developmental disabilities, especially those with behavioral challenges and/or limited communications skills.	11	The SEVERE lack of providers and/or clinics willing to provide pro bono care, and the lack of subsidies available to such providers and clinics to help them cover their basic costs in doing so.	9	Eliminate the regulations in the OPWDD world that virtually require usage of the emergency room as a first choice when there is any acute or unexplained health concern involving a person with a developmental disability. Grow behavioral health resources that are competent and comfortable in treating people with developmental disabilities, especially in the area of psychiatry. Herding people who already have communications and behavioral challenges into long waiting lines in Article 16 clinics is NOT the answer.	7	Stronger integration of social services into the direct delivery of health care is the key. People won't return for their follow up health care visits if they don't understand they need to; can't get transportation; don't have child care; and/or are afraid or don't understand what is happening. If they don't follow up, the chances are good they regress and show up back at the ER for re-admission. Health care practices need to integrate social services right into their practices, and Medicaid needs to fund that transformation--it will absolutely save money in the long run.	10	Wildwood stands ready to help our local PPNs in any way that we can to improve health care for Medicaid recipients, and particularly those with intellectual disabilities. This is a wonderful opportunity to improve a truncated, "siloed" system that has failed the people we serve for almost half a century, and we would be thrilled to help in any way we can. If we do this right, we WILL save Medicaid funds, and we WILL improve the quality of people's lives.
86				Access to specialty providers. Access to timely primary care appointments.				Care coordination amongst and between providers is still poor in some systems. Our clients often see multiple specialists and care and information is disjointed. Also, our clients often lack basic health literacy and do not have understand discharge and follow up plans. They also often lack support systems to assist them with their care (i.e. after a hospital discharge they often have no one available besides a care manager to review discharge instructions and follow up plans). Poverty also exacerbates chronic conditions as people are often focused on getting basic needs met and do not have the energy or time to follow medical protocols.				

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
87												Palliative Care services (advance care planning/goals for care discussions, pain & symptom management, and caregiver support with overlay of biopsychosocial and spiritual support) should be part of any new integrated delivery system for all populations. Palliative Care should be integrated with Chronic disease management - along with behavioral health services from the time of diagnosis. Integration of medical and social services is key to provision of care of seriously ill persons.
88			3	Getting patients to attend scheduled appointments	11	Availability of resources to help uninsured patients get asthma medications						
89			12	The reimbursement rate is much less than the cost of care. We lose approximately \$60 on each medicaid resident. Also, many Medicare and Managed Care residents come to us with no secondary insurance and must apply for Medicaid. This can take time, and we often end up writing off the resident contribution.	12	We can not absorb the cost.	9	The limitations of state borders in regard to Medicaid acceptance should be lifted.

95	11	Getting this population to understand that Urgent Care is better for them than an emergency room visit fiscally is key. There is an absolute lack of substance abuse treatment in Saratoga County and behavioral health. Transportation for service of any kind is helpful. Consider an urgent care van run through the trailer parks in the rural areas on the weekends. Phone care coordinators and the 24/7 nurses hotline with an incentive to call instead of just running to the ER is also worth a thought.	9	Getting the potential patient to go through the hoops of attaining Medicaid. Many are transient and may not have the paperwork to support the application. Some have lost everything and this includes their caretakers who would do the work of tracking paperwork. Travel in our county has always been a major issue for our customers.	4	Patience of the staff who are asked to enroll the uninsured. Our customers have been through a great deal and often have complex post traumatic or just plain PTSD. They react differently to the educated groups and are not your typical textbook scenario. It would serve the "enrollers" well to be from the population being enrolled or to at least have the ability to navigate the class language without being offended.	5	Transportation is key, we have an interest in serving the folks who can't get to us. We are most interested in a relationship with an entity that would work with us to bring services to those who access us. We serve 23,000 meals at the soup kitchen a year. We have had 11,000 families access our food pantry just last year. We have a lot of access.	4	Language barriers are not just related to country of origin but, to the classes. We are training our staff in this communication style and I would highly support your team do the same. The results are important enough to ignite the sort of change you are looking to see.		Great survey and look forward to the results.
96			9	Medicaid approval process	12	Nursing cannot be reimbursed for the uninsured	8	Coordination of urgent/primary care connected to a health care facility	11	Community visits to patients in need		
97			1	Navigating the complex realm of insurance coverae for individuals with Mental Illness.	12	Reimbursement for services do not cover the cost of providing the service and therefore providing uncompensated care puts the pogram into a furthe deficit.	8	Delivery of services could be improved if they were co-located with primary care and mental health services. Also temporry assisted living with medical, mental health and substance abuse services onsite would be beneficial.	6	Provide more permanent housing with support services that are provided above and beyond case management services, such as nursing, mental health and substance abuse servies which would reduce hospital admission.		
98			9	The administrative compliance with OMIG requirements.	11	Attracting qualified providers to upstate New York.	7	Through our own integration projects we have seen many successes. To be able to expand these services with wrap - around supports that meet basic needs such as housing, treatment compliance and care coordination would greatly reduce 30 day readmission rates as well as ER visits.	1	To clients with behavioral health issues, clients are not capable of navigating the social services systems to access services. For those that do have the supports to access services there seems to be a lack of available resources to address their basic needs.		
99	0

100	8	In addition to co-locating behavioral health services in PCP offices there is also a need to co-locate PCP services in behavioral health clinics. All too often our clients with Mental Health issues esp Schizophrenia do not access PCP services even though they have insurance. They are also the folks that have chronic health issues such as obesity, respiratory, diabetes and cardiac conditions. Need to do more work in the area of prevention around chronic diseases including mental health and addiction issues. Care coordination which could include both phone and in person monitoring, use of peer services where approp, involving family members where approp to support and keep the person engaged in tx. Focusing on recovery and assisting the individual in achieving the most optimal level of functioning which may include college, work need to be part of the plan.	3	Engagement. Inconsistent f/u with providers, not staying consistent with prescribed tx. Need for ongoing education on symptom management and self care. Folks not getting the right service at the right time. Lack of coordination between providers. In rural areas lack of transportation, lack of care coordination, peer and natural supports are big contributing factors.	12	In addition to the above financial burden of seeking health care and more crisis approach to symptom management are huge issues that need to be addressed.	8	Having satellite clinics in designated, rural areas that address both physical and behavioral health issues. Open access hours that assist the client in getting the desired service at the time it is needed. Increased coordination between inpt and outpt care, between behavioral and physical health providers, engaging and coordinating care for those in the criminal justice system who too often have both a behavioral health and physical health issue. Use of well trained peers and care coordinators may really assist in engagement, looking to the faith community who frequently touch the lives of those in our system. Electronic record that can be accessed by anyone that touches the live of that person who is entering any of our systems.	6	Use of peer supports to assist the person in understanding and navigating the social service system. Too often the rigidity and inflexibility in systems can be the barrier that prevents the person from getting the desired service/support.		I did not answer the question on insurance breakdown as I do not have the most up to date info.

132	7	Care Coordination, patient monitoring programs are effective only if case loads permit. I don't think Case Management/Care Coordination Programs can be effective at high caseloads and without sufficient resources for workers. High cost Medicaid consumers need "boots on the ground" assistance. They also need assistance in Non-Medical arenas (achieving stable housing).							3	If poor people with neglected health care conditions could be provided incentive, directly, to improve health outcomes (assuming no access issues), I believe many would. I understand this is politically difficult but I have seen the value of relatively inexpensive vouchers across the poor and the elderly.		
133	2	Most of the above do not apply to St. Margaret's residents. I have answered the questions pertinent to residents that return to their family's home. Otherwise, I would expect extended and ease of access to urgent, primary and specialty health care should help divert people from ER visits. Additionally, engaged care coordination focused on health education and wellness should help prevent unnecessary ER visits and prevent inpatient hospitalizations.	2	access to variety of specialty care physicians can be limited			11	shortage of reliable community nursing and home care staff limits health stability for clinically complex individuals living in the community	3	Community outreach, care coordination and patient education for improved health / wellness community healthy food networks & nutritional education targeted to address both specific chronic illnesses and general wellness		
134	8	Development of a team of NPs with behavioral health/substance abuse training who can work with home health agencies and provide community-based primary care to those with medical/behavioral health/substance abuse needs. Use of monitored medication dispensers to improve medication adherence. Increased use of telehealth monitoring of chronic conditions at home on an ongoing basis to avoid hospitalizations. Creation of temporary housing with a connection to home health services (and removal of the Medicaid regulatory barrier related to this). Improved communication and coordination of care between primary care providers and home health providers. Improved awareness by primary care providers of the effective use of home health services to maintain patients in the community.	8	We need a stronger infrastructure of home-based medical/behavioral health services...RNs, therapists, social workers and aides with expertise in not only addressing the medical / chronic care needs of patients but specially trained in caring for those with behavioral health and substance abuse issues as well. NYSDOH Regulatory barrier which does not allow a home care agency to bill for services provided to someone in a shelter (but does allow if the patient is in a motel/hotel). Ability for a home health clinician to talk with a physician to coordinate care. The ability to have a patient seen in the office in a timely manner to avoid a hospitalization.	2	If an individual has short-term needs for home health care and is uninsured, there is generally not an access to care issue. The greatest obstacle occurs when an individual has ongoing chronic needs; it is impossible for agencies (most of which already struggle with operating loss or very low margins) to accept a patient without insurance with ongoing needs.						

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
135			11	There is a lack of providers (i.e., dental) that accept Medicaid in the Capital Region. Transportation needed to access these services can also be an issue. Generally speaking, the existing Medicaid rate can be insufficient to reimburse the actual expenses incurred by provider agencies which, in turn, can have a deliterious impact on the delivery of services to Medicaid recipients.	4	Although our agency does not serve uninsured individuals, our intake services department plays a major role in referring these individuals to the local county Department of Social Services to establish eligibility for Medicaid and other entitlement programs.	11	We would recommend increasing the number of healthcare coordinators for people receiving Medicaid and Medicare.	1	There is a general need to educate individuals about the importance of adhering to healthcare recommendations and facilitate an incentive program for enrollees to partake in what is offered.		
136				Lack of quality doctors will to accept Medicaid.		Lack of funding, the poverty guidelines are outdated and need to be updated to real numbers.						
137	6	While some of these ideas sound reasonable the medicaid population we most oftern serve needs supports for family care so they can be assured their families are taken care of respite opportunities for children during appointments for parents, peer supports for youth and adults.	5	transportation	1	fear, poverty, cultural dynamics, health literacy,	7	opportunities for multiple provider visits on the same day so that clients/patients don't fear losing jobs	7	care coordination, peer assisted supports

139	0											
140			11	Certain community physcians do not accept Medicaid Long waiting periods for access to mental health services								
141							2	measuring someone's mental health treatment by only compliance to medication is not helpful. Urgent care for behavioral health is important. Better access to dental care.	12	Continue NY State support of funding for social supports for individuals with serious mental illness		

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
142	11	Most individuals who have become chemically addicted, in early recovery, need professional help with a nutritionist, immediate dental care and PT evaluation due to the overall deterioration of their body. Once stabilized, often times, sleep apnea, anxiety, irritability and depression can be more closely monitored and individually treated.	9	Finding a provider who will accept the individuals personal needs. Frequently, they must be dis-enrolled and entered into a provider that will accept their coverage, and this can take weeks-months to accomplish. Meanwhile, the individual may seek assistance at the ER so services are provided (physical/ dental pain, mental health and/or Rx for continued medication prior top acceptance with the proper insurance.	11	All of the above, with the addition of relapse. Medical attention is offered to those with an alcohol problem (Detox) but with the heroin epidemic specifically in the Capital Region, the only "detox" is to be incarcerated. Sadly, too many addicts, to save their lives, must chose this last option. Once released, if not admitted to residential treatment, they become homeless, relapse, and the cycle begins again and adding 80% re-admission to local ER's based out of the 25% wanted decease.	4	Listen to the consumer! Using a comprehensive assessment for all spheres of human development, a master plan of wellness can actually be designed. Meeting all the needs which are unique to each consumer, based on payment, has remained a challenge in our field of addiction.	9	Once and individual regains some control of their addiction, there are "no bridges" from governmental dependence to independence. An example, a consumer needs Medicaid to cover the expense of residential drug treatment. At the conclusion, either they stay on "Welfare" or get a job. If they become employed, the system closes their case within 14 days. It is an all or nothing situation. No savings account, no new insurance, no place to live, and eventually, the individual "gives up" , uses drugs/alcohol again, and then services and help is there again. The drain to the ER is explained in an earlier question.	10	Hospitality House has been treating the chemically dependent population for over 40 years. Given the very limited resources, given the extreme client profile we have specialized in (chronic relapse, criminal justice, and homeless population) where most programs would "pass on this client" as their outcome data would be compromised, this agency seeks these people out. By using the NYS OASAS IPMES, an outcome measurement tool, you will note that we meet not only the state standards, but exceed in all categories year after year resulting in successful outcomes; citizens of the community, contributors of society, and major reduction to medical services, and applying prevention standards to day to day lifestyle.
143									7	Require that any state/federal grantees coordinate with existing community service agencies in maximizing the award to achieve health social and/or health outcomes. Grants continue to be a problem in maintaining silos.		
144	0

145	2	Telehealth services used by Columbia Memorial Hospital in Greene County will be used for: (1)monitoring health conditions of people who are at risk; (2)patient education; (3)medication management; and (4)counseling and consultation via video-conferencing.	2	Lack of geographic access and lack of patient appreciation of the need to obtain important health care services	2	lack of geographic access to services and lack of patient appreciation of the need to obtain important health care services	11	(1) Paramedicine is a service in which paramedics, who are highly qualified emergency medical professionals, use their skills and training to provide non-emergency health services to people in their homes, including Medicaid enrollees. Paramedics can check on Medicaid patients shortly after their discharge from the ED or inpatient unit. Or, they can check on a patient whose Telehealth Kit has signaled CMH that the patient needs an immediate home visit. (2) A multi-year partnership between Columbia Memorial Hospital and the Greene County Rural Health Network (501C3) that focuses on weight-loss, tobacco cessation, co-location of behavioral health counselors in primary care offices, and diabetes screening and improved self-management, and better compliance with health screening guidelines.				Appoint the Greene County Rural Health Network to your Executive Committee. We are an agency that excels at creating and funding cutting-edge projects that become self-sustaining.
146	1	More educational programs with emphasis on prevention					6	More patient and family-focused services			3	Greater focus on prevention and less focus on cure
147	0											
148			12	Medicaid reimbursement rates and limited specialty network.	9	As a private medical practice the business model doesn't support providing uncompensated services.						
149	11	Community residential beds that have higher level staffing (e.g. nurse, social worker) on site would be helpful due to higher level needs of most residential clients compared to the past. This would require rate increases due to higher staffing cost.	12	Medicaid service reimbursement rates are below cost for OMH clinical services in particular. Despite having received new rates under APGs, our rates are still below cost ; this has driven many former providers to either downsize services to minimize losses or get out of the business completely. For the OMH residences, the rate issue is also a barrier- rates have not increased for years, putting tremendous financial pressure on the organization. Coupled with this is the increasing need level of the clients who are referred for services. Many are high need individuals who require more services than a community provider has available, yet the expectation is that these clients will be taken care of safely and effectively in the community.	12	The number of people with no insurance is increasing. We simply cannot afford to provide uncompensated care for an unlimited number of people. The uncompensated care pool reimbursement is only a minimal help; last year we received only a fraction of our uncompensated care from this source.

ID	A. #	A. Please give us your ideas:	B. #	B. Greatest barrier or obstacle for Medicaid	C. #	C. Greatest Barrier for Uninsured	D. #	D. Do you have any recommendations Healthcare Services	E. #	E. Recommendations delivery of social services or supports	F. #	F. Anything else
151				Helping individuals to make changes in their lifestyles that will promote better health, e.g. quit smoking.		Uninsured individuals generally won't access services until it is an extreme emergency. They are not receiving preventative healthcare.				I think there needs to be more education for those individuals enrolled in Medicaid to utilize primary care services first and foremost, and only in true emergencies to access the emergency room. Also, because so few dentists take Medicaid for payment, we see individuals utilizing the emergency room for extreme dental care because they do not have a dentist to contact.

164											10	Our agency can contribute to the DSRIP workplan for the capital region as we have many years of experience in delivering population based community education around alcohol and drug prevention. We also provide extensive life skills curricula in schools in the region. For over a decade we have collected data with many school districts on student use and attitudes regarding alcohol and other drugs.	
165				For us, the problem is that we are receiving new clients who come to live here in Albany with managed Medicaid from a health plan that is not accepted in the Capital District. That makes it impossible for our residents to receive medical or behavioral health services. We must get them switched into a plan that is accepted locally and that is a time consuming process. Until the switch is made they must access medical services at the local emergency room and that is exactly what we do not want to happen. They are vulnerable for the 45-60 days it takes to get them switched to a locally accepted plan.				We need statewide access to healthcare plans. Putting people in regional plans is prohibitive to residents who move into another region to receive specialized services.		Each "at-risk" person should have a coordinator/case manager assigned to monitor how they are meeting their needs. They would be more likely to call someone they had an established relationship with and this would help to head off allowing issues to become more serious.			
166	7	Coordinated and integrated case management services would help; transitional housing for crises oriented individuals would also provide an opportunity to develop new behaviors and supports;	11	staffing personal care staff PC-1 and PC-2; difficult working situations; inadequate reimbursement rates; bureaucracy; lack of clarity in the payment structure; highly mobile/transient population; lack of engagement of the population served.	12	no payment structure to support employment requirements/needs;						1	The system is getting increasingly complex for individual recipients and providers alike; I think that it is unrealistic to expect that this population will be able to navigate the system;
167	0												
168	0												
169			5	Transporation and getting to medical appointments, patients being able to afford their co-pays or treatment	12	same as above not getting paid for services							
170			12	rate does not cover cost

171	7	center of some sort that offers 24/7 respite services, peer support, medical intervention, psychiatric intervention (PA's/NPP's??) substance abuse intervention (CASAC), respite bed, collaboration with police unit (EDPRT), ability to transport patients where indicated (non-ambulance). This center is empowered to penetrate local systems for prioritization of its consumers. This center is ED diversion, and is considered the "hub" of all activity, in other words other agencies have plans in place to accomodate this center (aka open appointment slots, prioritized beds etc.) This center would also take lead in providing education and oversight of the initiatives to the community. This should really be marketed as an elite group, kinda like a SWAT team.	7	Capacity, non-compliance, lack of transportation, ease of utilizing ED and DSS for bio/psycho/social problems.	7	same as above.	7	see above.	7	see above.		
172			6	Alternative living for discharge	6	Social support serbices						
173	3	All of the above would provide people with alternatives to using ambulances or going to the hospital resulting in potentially avoidable admissions. Tobacco initiatives to decrease use of tobaco products could significantly reduce hospitalizations.	11	Shortage of practitioners and community providers that accept Medicaid patients.	11	Shortage of practitioners and community providers that readily accept uninsured patients. Resistance or lack of knowledge by uninsured patients regarding ways to obtain medical services. The system is not reaching the patients who need services.	5	Provide transportation to urgent care and to medical appointments in real time without haveing to plan it way in advance for both individuals with or without Medicaid or insurance. Better coordination and individualized services for people.	11	More rehabilitative services for people earlier following the onset of their illness. For example, the 1915i services will be available after someone has had a significant history within the system but services such as Supported Education could help people avoid multiple failures which can lead to a greater need for interventions including ER visits and hospitalizations.		Good luck, there is a lot of need to be addressed!

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
<p><u>Stakeholders Engaged</u> Separate Listening Sessions were scheduled for:</p> <p><u>Providers & CBOs:</u></p> <ul style="list-style-type: none"> • Schenectady (Schenectady Co.) • Amsterdam (Montgomery Co.) • Albany (Albany Co.) <p><u>Members & Community</u></p> <ul style="list-style-type: none"> • Amsterdam (Montgomery Co.) • Troy (Rensselaer Co.) • Albany (Albany Co.) • Schenectady (Schenectady Co.) • Ballston Spa (Saratoga Co.) 	<p>Attendance at the sessions was a mixture of Stakeholder types.</p> <p>While approaching the issues and concerns to be addressed from different perspectives, there was general agreement on major themes, resources, and possible solutions.</p> <p>The major themes arose in all sessions; however, each location contributed additional new specific ideas to the inventory. In subsequent sessions, these new ideas were raised as starting points for additional discussion.</p>	<p>Major Themes Common to all the sessions included the following (each explored in more detail in the following sections):</p> <ol style="list-style-type: none"> 1. Confusion/Knowledge Gap 2. Convenient Service Access 3. Lack of Member Engagement 4. Communication & Listening 5. Transportation 6. Home Environment and Living Conditions (Unstable Housing, Frequent Moves, Lack of Social Supports and Communication Resources) 7. Lack of Coordination & Consistent Follow-up 8. High Numbers of Members with Anxiety, Depression, and Chronic Conditions 9. Regulatory Barriers 10. Under-resourced CBOs 11. Lack of Adequate Staff 12. Lack of Adequate Financial Resources 	<p>Most resources mentioned were local resources personally known to participants.</p> <p>There was less awareness of region-wide resources or local resources in other areas that might be duplicated.</p>	<p>Rationalizing the delivery system from the Member's person-centered perspective vs. current uncoordinated silos would address many of the issues. This included:</p> <ul style="list-style-type: none"> • More Communication between all Stakeholders. • More Knowledge sharing, particularly with Members and the Community. • Removal of Regulatory Barriers

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
<p>1. Confusion & Knowledge Gaps</p>	<p>Most people, even those working in health care, lack a full grasp of the current complex & fragmented health delivery system – and their own role in relation to the total.</p> <p>Lack of understanding can lead to frustration and feelings that there is nothing they can do to improve their situation.</p> <p>Members described the anger they felt when they discovered (after the fact) that their Medicaid coverage didn't actually cover the services their children needed. They declared bankruptcy after trying to pay on their own.</p>	<p>In each session, participants of all backgrounds continually expressed that they were not aware of system aspects that others were sharing.</p> <p>Members routinely confuse Medicare and Medicaid.</p> <p>Members and Uninsured attending sessions appeared initially withdrawn, resigned, and sad. They expressed personal experiences they interpreted as discriminatory because of their Medicaid or no-pay status. As they learned more, they became more engaged in the discussions, started asking questions or offering thoughts about how they could improve their own situation, and in some cases, left with a plan of how to do so – with a smile.</p> <p>When asked how they respond if they get sick – do they seek care in the ED?, one Uninsured participant said they rely on themselves, and go to work sick if they need to. Another expressed that they rely on “Dr. Jesus”. They had not explored applying for Medicaid, presuming that they would not qualify, and didn't want to waste the effort.</p>	<p>Existing Coverage Navigators and Care Management Agencies already provide these services.</p>	<p>Get the word out to connect people to the right information or service – use trained Navigators and Care Managers.</p> <p>Members and Uninsured noted that their neighbors congregate in certain areas (City Mission, soup kitchens, community centers, etc.) and suggested using these locations for knowledge outreach.</p> <p>Member and Uninsured participants also suggested that the message had to come from someone already in the Community – outsiders were distrusted.</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
2. Convenient Service Access is Necessary	<p>Preventive health services are last on a Member's priority list. They are worried about food, eviction, struggling with babies, or caring for elderly parents. Even necessary follow-up orders and filling of prescriptions will not happen if it is not convenient.</p>	<p>Limited Hours of Operation and out of area location were cited by all. The working poor use the ED because they have no time available to make it to an appointment with a physician during business hours and may not have a PCP. Members will not give up an hour or two of work to go to an appointment – they cannot afford to.</p> <p>As one participant characterized their frustration as “Member waiting times are ignored altogether”.</p> <p>The free clinic in Schenectady went bankrupt paying for prescriptions, eliminating services to the uninsured.</p>	<p>Whitney Young is now providing mobile clinic outside school buildings, allowing primary care and treatment of siblings and other family members.</p>	<p>Expand mobile healthcare to Member's home (e.g. public and/or senior housing) or neighborhoods.</p> <p>Expand school-based clinics since high density provides efficiencies.</p> <p>Increase availability of off-hours care (including urgent care centers) in geographic locations that need them (i.e. Arbor Hill, Albany's South End)</p>
3. Lack of Member Engagement	<p>Members not only need to be engaged but empowered to have a voice in their own care.</p>	<p>Some Members noted the difficulty of understanding all the complex processes needed to manage their own health, conclude that their providers or the system does not care about them (in some cases feel discriminated against), and don't have the time to deal with an additional complication in their complex lives.</p>	<p>This is a primary focus of DSRIP Project 11.</p>	<p>Utilize community programs to help Members feel safe and security in daily life so they can then focus on healthcare needs.</p> <p>CBO strength is outreach and education, clinic strength is care, these organizations should be working together more closely and sharing information.</p> <p>Develop and give ready</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
				access to tools for the patient to engage themselves, i.e. apps that track appointments etc.
4. Communication & Listening	<p>62 different languages are spoken in some areas.</p> <p>Rushed providers may not have the time or take the time to listen effectively.</p> <p>Members, particularly minorities, can be distrustful of care providers.</p>	<p>Communication barriers include diverse cultural norms, language other than English, overall literacy, technical Health Care literacy, and overly brief encounters. You need to be able to spell to effectively use Google.</p> <p>Members complained that providers would not listen to their repeated concerns. “I told my PCP for years that I had a bladder problem, but they wouldn’t listen. I finally went to a Urologist for a second opinion, who did tests and confirmed I had a physical anomaly causing the problem - which they treated successfully. I changed PCPs.”</p> <p>Frequently, when providers don’t listen, Members interpret it as discrimination because they are on Medicaid rather than just poor care delivery. When other participants shared similar poor care experiences that were not Medicaid related, the Members appeared to relax.</p>	<p>Schenectady is opening a new literacy library and adding health information navigators at branches.</p> <p>The “Bridges out of Poverty” training program helps focus on socio-demographic drivers.</p> <p>One provider has “Prescription Assistance Counselors” to address “massive confusion” in this area.</p>	<p>Cultural competence training, including cultural norms is needed - beyond simple translation services</p> <p>Training in listening skills and sensitivity to offer options for care at medical schools would help.</p> <p>Part of the message to share is that “Poor care does not discriminate” – it affects everyone. More use of evidence-based quality indicators can help (and provide resources how to find good report cards).</p> <p>Members should be encouraged to ask (e.g. is there a Generic version available?) Pharmacists can help here.</p> <p>Training initiatives should start now in med school to change the next generation</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
				<p>of providers, incentive current providers to learn these concepts in some way.</p> <p>Develop/Incentive the use of collaborative communication tools for providers and CBOs</p>
<p>5. Transportation</p>	<p>Getting the right services to the right person at the right time can be accomplished by either moving the patient to the services or moving the services to the patient.</p> <p>Transportation services are available, but not as easily accessible as desired.</p>	<p>Many Members rely on Public Transportation, family, friends, and available Community Transportation services. The ED is usually on a bus line, while the PCP may not be.</p> <p>The logistics of transportation to and from appointments can be extremely difficult and time consuming to manage.</p>	<p>The flexible CDTA Star Bus is available (however even modest cost and time consuming paperwork mentioned as barriers).</p> <p>ACCESS transportation works (but requires 3 day notice).</p> <p>Medicabs are cost prohibitive.</p> <p>Church and faith groups that run buses/vans, etc. to get individuals to appointments.</p>	<p>Availability of an “Air Traffic Controller” type of resource to coordinate transportation – across areas, providers, and CBOs - would help address this.</p> <p>Technology can assist, particularly when only information transfer is needed. This can include remote monitoring email communications and telemedicine.</p> <p>Give more resources to CBOs like churches who run transportation services – they do this out of their own pocket.</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
<p>6. Home Environment and Living Conditions (Unstable Housing, Frequent Moves, Lack of Social Supports and Communication Resources)</p>	<p>The Medicaid and Uninsured populations, particularly in Urban areas, do not have stable housing or communication tools, leading to many barriers.</p> <p>They are at high risk for a cascading downward spiral from a single event (lose job, get sick, eviction, foreclosure, bankruptcy, etc.)</p> <p>These poor conditions and stresses potentially lead to undiagnosed PTSD that impacts other health concerns.</p>	<p>When asked about local Community supports, some Medicaid Members and Uninsured expressed that they didn't really have any, since they recently moved to the area – they were on their own, socially isolated.</p> <p>Frequent changes of address, combined with impaired communication access (internet, changing cell numbers or running out of minutes on minutes-only phones, etc.) make it difficult to coordinate care over time.</p> <p>Housing CBOs expressed that much of the available housing stock is old and in such poor repair that it represents a health risk (mold, asbestos, pest control, lead, etc.).</p> <p>Providers expressed that they frequently had to deal with barriers to a safe discharge.</p>	<p>Local neighborhood renewal efforts are focusing on both housing and health risk reduction.</p> <p>Some local efforts target home repair services as a way to keep Members in their homes. Many other participants expressed that they had not thought of this intervention, but agreed that it was a great idea.</p> <p>Retrofitting homes to be accessible (elderly/disabled friendly) improves ability to stay in the Community.</p>	<p>The neighborhood renewal efforts accomplish two goals. Repairs and improvements to housing stock leads to a safer living environment. Plus, the process brings neighbors together and improves social supports.</p> <p>The home repair models could be replicated in other Communities.</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
<p>7. Lack of Coordination & Consistent Follow-up</p>		<p>Many stories shared of one health care provider not talking to another, inability for them to connect on a timely basis and member frustration – leading to lack of follow-up – too hard to manage multiple appointments over time.</p> <p>PCPs noted the difficulty in getting a timely BH consult. Similarly, BH providers noted the difficulty in obtaining needed and timely physical care for patients.</p> <p>Service navigation and coordination is difficult to manage, and requires sufficient knowledge of options.</p> <p>Notable gap in communication between hospitals and nursing homes, resulting in long ED waits for residents, poor care transitions.</p>	<p>One substance provider already provides convenient hand-off access. Upon receiving a referral from the ED or an impending acute discharge, they send a van to transport the patient to substance use services so that there is no wait.</p>	<p>Co-location of Physical and Behavioral Health services addresses both convenient access and continuity of care over time.</p> <p>Locate service coordinators, resident advisors, and navigators in housing (e.g. HUD) and neighborhoods to assist Members would help.</p> <p>Significant focus needed on discharge planning to assist in transitions of care with appropriate follow-up. Use INTERACT tool between nursing homes and hospitals for communication.</p> <p>Get community organizations together to discuss how they can work together to serve their community as an integrated network.</p>
<p>8. High Numbers of Members with Anxiety, Depression, Substance Use Disorders, and Chronic Conditions</p>		<p>Medications are the major treatment component for these disorders. However PCPs are frequently not comfortable managing these medications without BH involvement.</p>		<p>“TelePsych” medication consults and support mentioned as one solution (IF payment exists).</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
<p>9. Regulatory Barriers</p>	<p>There are significant regulatory barriers to providing a range of needed services at a single site.</p>	<p>The most frequent frustration expressed was barriers to co-locating physical health, mental health, and substance services. Provider, CBO, and Member Stakeholders all mentioned that if needed services were not immediately and conveniently available, these necessary encounters are not likely to occur. Both Members and Providers mentioned common waits of weeks or months for an appointment. Providers are discouraged and frustrated with pace of change and silos of care. They also lack trust that the state will follow through on their own performance.</p> <p>The current time consuming CON-based process for SNFs to add Home Care and Day Care services limits the feasibility to provide these lower cost services. Particularly in rural areas, there may be no access for Members, since there is insufficient volume to make services efficiently available on a stand-alone basis.</p> <p>Telehealth services exists and could be useful, however the reimbursement is not conducive to the outlay and maintenance of such programs.</p>	<p>Several providers are ready to integrate these services as soon as waivers are in place.</p>	<p>Facilitate DOH, OMH, OASAS waivers to allow alignment and colocation as soon as possible.</p> <p>Consider waiving current CON requirements for SNFs to provide lower levels of care, at least in rural areas where no such alternative services exist.</p> <p>Waiver of three midnight rule to assist in better transitions of care.</p> <p>Adjust reimbursement for telehealth services to be more in keeping with the</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
10. Under-resourced CBOs	<p>CBOs expressed that they were already overtaxed, saw DSRIP initiatives would offload large responsibilities to them from health providers, but did not see any specific funding or other support for this.</p>	<p>CBOs expressed strongly that they do not understand their future role in DSRIP. They want to help meet DSRIP goals, but are not clear how to do so.</p> <p>Some, particularly those that do not currently bill Medicaid services, expressed the fear that the DSRIP limit of only 5% of funding for non-safety net stakeholders will guarantee that insufficient resources will be available to them.</p> <p>Grant-funded and self-funded CBO programs face a constant risk of losing that funding. They worry about ongoing resources for sustainability. For example, the YMCA offers disease management programs (diabetes, Parkinson's, etc.) designed to help people self-manage at home. They worry about another economic downturn forcing them to discontinue these programs.</p>	<p>A housing CBO "Champion" is implementing a pilot for engaging other CBOs through small local group efforts, focusing on a shared goal (e.g. housing).</p>	<p>Clarifying CBO roles and funding would go a long way to better engagement.</p> <p>Shared support for CBO logistics (scheduling, arranging transportation, etc. across agencies) would help them leverage their program resources.</p> <p>Billing opportunities and/or ongoing shared savings funding under DSRIP could provide sustainability.</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
<p>11. Lack of Adequate Staff</p>	<p>There is a large and growing identified need for <u>Community Health Workers (CHWs)</u> and <u>service Navigators</u>. Some participants characterized the need as “drastic”.</p> <p>A lack of sufficient <u>Behavioral Health professionals</u> was frequently mentioned, particularly in rural areas.</p> <p><u>Care management services</u> are needed to arrange for and follow a person across levels and providers.</p> <p><u>Informal Caregivers</u> are a critical resource for care in the community, but under-recognized, under-valued, and their numbers shrinking as the population ages.</p>	<p>There is, however, a lack of both training and payments for CHWs.</p> <p>It is unclear whether they would be staff of health providers, CBOs, informal Community volunteers – or all three.</p> <p>It is difficult to arrange timely BH sessions, resulting in many no-shows and waste of scarce time. Many BH Members cycle through ED, to OP clinic, to home, back to the ED.</p> <p>Even when initial BH intake occurs, consistent follow-up is challenging.</p> <p>Care management and navigation is now provided by plans, various providers, family members, etc. It is frequently not coordinated.</p> <p>An informal caregiver for their spouse expressed concerns about whether they would still be physically able to provide this care in the next 10 years as they age themselves. They worried about their own health and what would happen if they required care as well (fall or cooking injury). “People don’t want to sit home with their parents anymore – or can’t due to having to work.”</p>	<p>Two local CHW initiatives address this – a general CHW curriculum at Schenectady County Community College and another focused on Community and CHW Asthma Educators (sessions given 12/2, 12/8, 12/16).</p> <p>Volunteers and volunteer groups are increasingly getting together to identify and address shared concerns and goals. For example, the Schenectady Inner City Ministry (SICM) is a group of 57 ministers that meet monthly to focus local improvement efforts.</p> <p>Participants that volunteered regularly expressed strong feelings of</p>	<p>Learning from similar programs successful elsewhere will help.</p> <p>A clear model for logistics and financial support of CHWs and Navigators – communicated to the Community would help.</p> <p>Physical health providers indicated willingness to routinely manage moderate BH meds (thus saving time of BH providers), IF: 1. They have ready access to BH consults (“TelePsych” mentioned) AND 2. This access remains available for continuity of care in the event that future BH needs arise.</p> <p>In the short term, support services for informal caregivers are needed. In the long term, projected population demographics show growing numbers of elderly requiring care, but decreasing numbers in the next generation available to</p>

Listening Session Discussion Notes and Themes

Themes/Subthemes	I. Observations	II. Needs/Barriers	III. Resources	IV. Suggested Solution
	<p><u>Volunteers</u> can also provide Community supports and substitute for other formal and informal care.</p>	<p>As the population ages there are more people available to be volunteers and substitute for other formal and informal caregiving. However, connecting this potential workforce to specific health needs requires an effective process to do so.</p>	<p>fulfillment to see their efforts improve other people's lives. Highlighting these strong positive feelings and emotional well-being benefits can be used to attract others to become more involved.</p>	<p>provide that care. Other support systems including Volunteers need to be in place to fill this gap.</p>
<p>12. Lack of Adequate Financial Resources</p>	<p>Lack of sufficient dollars was expressed by all Stakeholder groups.</p>	<p>There still appears to be no strong incentive to either provide or receive primary care.</p> <p>Many providers do not accept Medicaid.</p> <p>Gaps in Medicaid covered services (e.g. not enough rehab/PT after accident to allow Member to stand in shower and bathe and be self-sufficient.</p>		

Ellis PPS DSRIP Focus Groups

Eight focus group of Medicaid beneficiaries and uninsured individuals around three topic areas: mental and behavioral health, substance abuse and chronic disease are scheduled as below. The focus groups, consisting of 8 to 12 individuals are being recruited, screened and scheduled by a professional firm, Zone5, who will also be moderating the groups. The focus groups will explore the barriers to healthcare that exist in the current system and gather ideas on solutions that are patient centered. Focus groups, as opposed to Listening Sessions, are small groups and do not include providers as attendees. The small group size allows for interactive discussion and exploration of topics beyond a question and answer format. All participants are encouraged to contribute to the discussion. An observation room (one way mirror) is available for up to 6 people at the Albany site on a first come basis. Contact Liz Kormos, lkormos@kormosandcompany.com or 518-309-3949 to reserve a place.

Example topics include:

- What are some of the challenges or barriers you or others may have to being healthy?
- Do you feel the health challenges are different for those with Medicaid or the uninsured versus those with private insurance?
- For the healthcare services that you have said you are able to get, how would you describe the quality of the services you receive?
- If you needed to find a specific health related resource (e.g. food, healthcare, housing) in this community and you did not know a where to find it, who would you call to find out if anything was available?

Focus Group Schedule (as of 10-30-14)						
County	Mental & Behavioral	Substance Abuse	Combined Mental & Sub Abuse	Chronic Disease	Location	Contact
Albany	Nov 11 - 3:30 to 4:30 pm	Nov 11 - 5:00 to 6:00 pm		Nov 11 - 6:30 to 7:30 pm	Zone5 Offices, 25 Monroe St #300, Albany	Todd Mosher, 242-7012 todd.mosher@zone5.com
Schenectady		Nov 12 - 6:30 to 7:30 pm		Nov 12 - 5 to 6 pm	Schenectady Library, 99 Clinton Str, Schenectady 4 to 8 pm, Swanker Boardroom	Janice Martin 388-4544 for pre-visit

Healthy Capital District Initiative

Analysis and Trends Report December 2014

Data and Aggregation presented by:
Zone 5

Methodology

Focus Groups

Zone 5 conducted a total of 8 focus groups for the Healthy Capital District Initiative. Participants were screened based on 3 major criteria types and were assigned to focus groups based on qualification of these factors.

Insurance Type

Selected participants must have currently received one of the three combinations of health insurance options to be considered for this study.

- Medicaid Insurance (includes Fidelis, CDPHP Medicaid Select Plan, Child Health Plus, and Family Health Plus)
- Medicaid and Medicare Insurance (dual eligible)
- No Insurance

Health Conditions

Participants included in this study must have presented the following medical conditions, as care associated with these conditions was pertinent to the client and the Healthy Capital District Initiative. The broad categories associated with medical care that was screened is; Mental Health/Behavioral Conditions, Substance Abuse, and Chronic Illnesses (including but not limited to COPD, cardiovascular disease, chronic asthma). One focus group conducted provided a combined participant pool of individuals who suffer from or are recovering from substance abuse as well as mental health and behavioral issues.

Regional Location

This study separated focus groups by county to discover discrepancies or differences in care that occur across different regional areas and the availability of care and services associated with geographic locations in the State of New York. Counties presented in this study were; Albany, Schenectady, Rensselaer, Montgomery, and Fulton.

Throughout this study we had over 80 participants that met the above criteria. Audio was recorded at all sessions with the exception of the combined mental health and substance abuse group. For that session, a member of the Zone 5 team was present to take notes to provide direct quotations that could then be attached to the

trends and insights presented. All notes and completed transcriptions are provided in the appendix of this report. All audio files and will be presented to the client in a separate file to be used as a reference to the data below. Due to the design of the locations, video could only be provided in one chronic care group and the groups that were held in the Zone 5 facility that is designed and outfitted to record video accordingly. Those videos will also be presented to the client in a separate file.

Overall Insights and Trends

The following data is an aggregation of the insights and trends presented from different health conditions as well as the similarities and differences that occurred across different regional counties.

Confusion and information gaps

Across all groups there were several prevalent themes that demonstrated a strong negative affect to a persons ability to obtain or utilize healthcare services throughout the New York counties that were used in the sample. One of these issues being that there is a great deal of confusion or lack of information presented to individuals. Individuals across condition types find that it is incredibly difficult to digest the information that is presented to them. That the language associated with collateral materials regarding medication prescribed and conditions to which they are diagnosed are not written in language that is comprehensible to the abilities of the masses. This creates levels of frustration for those who are looking to obtain help and be proactive about seeking prevalent information. To add to this frustration, when individuals seek out professionals to assist them with understanding the collateral material, they find that individuals are not very helpful, and that the lack of communication between agencies increases the level of difficulty for those to understand and utilize health care services.

“I’m glad I keep track of my paperwork and I know how to speak to the insurance company, which is Capital District Health Care CDHP, because it’s become more intricate to get the services that I need.

The book used to be this big about the services. Now the book is this, it’s almost like 600 pages of information that I have to glean through in the next 6 weeks. Is it 6 weeks from November 15 to whenever it cuts off? To make sure I’m getting the right, the best medical, the best insurance plan that I need for the services that I have. The paperwork has become almost horrendous!”

Coordination through communication

Coordination between agencies to schedule appointments and the process of switching care between counties was also discussed as laborious. Processes and protocols involved with many of these communication methods was stated to be time consuming, ranging from weeks to months at a time to change services to a new county, to update a prescription, or to schedule an appointment to meet with their primary care physician to discuss their health needs. When communication was established to switch care there were many discussions of tendencies for agencies to lack information pertinent information for an individual's file or not have information correctly presented in the system. This would thereby have negative repercussions on individuals seeking care. Due to these repercussions, individuals stated that they would have to ensure they have enough medication to last them 1 to 2 months during the time traditionally associated with the transition process as to not be without life necessary medication.

Following the discussion of switching services, the conversation steered to the complications regularly associated with setting up appointments. It was stated that from a few individuals that follow up appointments were equally as difficult to obtain as original appointments. In many cases these follow up appointments would occur several months after the original appointment. This became an issue especially for individuals with mental health and behavioral issues as well as those with chronic illnesses as in some instances they would need care sooner than what was possible through their primary care services. This would thereby force individuals to attend urgent care or the hospital for issues that could have been assisted through a traditional primary care visitation.

Communication and coverage discrepancies

One of the largest combatants for individuals facing different health conditions was the communication and discrepancies of coverage associated with Medicaid, specifically CDPHP. Many individuals found that they were not aware of what was and was not covered prior to signing up for Medicaid. Additionally, frustration arose from individuals when they believe that certain care was covered but found it laborious to locate a provider for that particular healthcare service that also accepted Medicaid. This was especially prevalent for individuals who have been diagnosed with mental and behavioral issues as facilities and practitioners who accept their insurance is limited in the counties that participated within this study.

This is complimented by several instances in which participants referred to “red tape” or unnecessary measures or procedures in regards to obtaining services. Examples of this were going through multiple channels to communicate updates on an individual’s insurance (i.e. typically changing counties) as mentioned above. It was presented from the participants that streamlined communication between one source would eliminate or diminish confusion for all parties engaged. These individuals stated that they need/desire a better way to receive information about the services available, why some services may not be available, where they can find health care providers and how they could get to those health care providers (transportation measures available).

“But one of the problems that I have, and it is specifically with Medicaid is that when you run out of your medication and you need something to be replaced right away because you’re on a certain regiment because of whatever ailment that you have, they’ll do that red tape.”

“Call some place, and then if that place, like last week I had a place where Access had me down to get picked up, and as they were coming to pick me up, I was like, wait. Has this been cleared by Fidelis? And sure enough, they called and Fidelis never even called Access to tell them it was okay.”

Services: offered and difficult to obtain

Chronic Illness

Individuals from this participant group expressed that did not necessarily have difficulties with a particular service; however it was

the quality and transition of nursing staff where they determined the greatest issues with health care services. This is particularly prevalent for individuals who need daily assistance based on their conditions (paraplegics, blindness, etc.) In several instances with the introduction of new or additional staffing, more time is spent on the part of the patient to re-teach the aids than actually receive care. Additionally, quality of services, with specific regard to housekeeping, is inconsistent across individuals. In some instances, although individuals are required to provide print outs of what services are complete, the degree to which it was completed or how items are interpreted (i.e. dusting, sweeping, etc.) vary depending on the nursing aid. This is a point of contention for patients as they will be billed the same regardless of the quality or amount of work that is completed.

“I would think that they. Like if someone new is going to come in say to drain my catheter, I would think that before they leave, that they would sort of I don’t know.

But wouldn’t they be looking at my file before they come and say okay, he’s a quad? And so, I would expect them to sort of know that before they came. I don’t know mean like a personal profile. He likes this kind of joke or he likes that kind of music, but just a general rundown.”

The other largest issue was the interchanging of services for those who are chronically ill. Some example instances of this consist of individuals with COPD had their breathing therapists taken away and instead provided additional housekeeping hours to compensate them. However, the valuation of the differences between services is unequal in the perspective of the patients. Services such as breathing therapy is a necessity for quality of life as opposed to housekeeping that is desirable but not critical for care.

“Yes. I changed my insurance to long-term care through Fidelis and they took my away my respiratory therapist. But they gave me more hours. They now give me twice a week. And it is not just my bedroom anymore. It is my whole apartment, and the housekeeper said this is still just my bedroom but it doesn’t say that on there.

And it wasn’t something I requested. It was something they just did.”

Substance Abuse

With reference to participants who identified with substance abuse, issues of quality and care revolved around three major points of

contention; dental care, specialists, and high co-pays of services desired. Dental care issues focused around the type of care that is generally offered to individuals. In many instances, individuals with Medicaid coverage found that dental hygienists would only pull teeth rather than perform root canals or fillings, as they are more expensive and time consuming. This was a point of aggravation as many individuals did not want their teeth pulled but no other alternatives were provided to ease their pain symptoms.

Mentioned in several groups with special attention to substance abuse and mental health, individuals felt that specialists (chiropractors, holistic medicine, etc.) should be offered as alternative treatments rather than prescription medication. In tangent to that, other participants stated on multiple occasions that physicians offered treatments that were not covered by the Medicaid plan that they currently had. This caused them to be either at a loss for treatment since they could not contact their physician due to long wait times or pay out of pocket for the treatment that was suggested.

“I said, well okay, but well we don’t take your insurance. And I was bothered by that, that they should have made that clear. Because when I called for the test, I told them what I had. They said what they took. So they would test me, but they wouldn’t treat me.”

Mental Health

In addition to the specialist desires that were discussed in substance abuse, other issues of quality and quantity of services offered were in relation to obtaining therapists and access to facilities that are available to meet the needs of these individuals. Similar to what has occurred with the chronic health care group, individuals have had to choose which therapist they go to or whether they will have access to a health facility program as both are not covered their Medicaid plan. This provides complications for individuals in programs such as PROS since therapy is not directly offered in the same capacity as a psychologist. This sacrifice is detrimental to the continuous development and treatment needed to achieve an appropriate level of mental health to obtain a steady lifestyle.

Other complications discussed in more detail pertain to inappropriate

billing methods that participants believe is a contributing factor to the sacrifice of service. It was discussed that many individuals event just passing by to say hello in the PROS treatment center then had to sign a blue billing slip and were charged for a casual exchange. This inefficient dispersion of funds limits the services that are available as treatments to those who subscribe to different plans as members of Medicaid. This thereby increases confusion and frustration across the participant base and causes them to lose faith in the medical community.

“So kind of billing companies inappropriately for the amount of time you’re actually being seen.”

Quality and quantity of services

Health care services are viewed by the consensus of this study to be diminishing regardless of health conditions or geographical representation. Quality of services ranging from the gentleness associated with a nursing aid for those in need of assistance with chronic care, to the time taken by mental health practitioners to listen to the needs of their patients.

Consistent quality and care was an emphasized during this study based on particular needs associated with health conditions. Individuals with chronic care stated that change in schedule or introducing new nursing aids lead to having to re-teach individuals how to be best assist them. As discussed above, this process is time consuming and can be frustrating when the assistance of basic tasks is necessary to daily living.

For individuals with mental and behavioral issues, quality and time were factors that determine the levels of treatment and care that they find to be most applicable to their health service needs. In many instances they felt they were only receive care for anywhere between 5-15 minutes at a time during their sessions, and within that time frame most practitioners were pushing medications rather than listening to the underlying needs of the individuals whom were there patients. This becomes increasingly frustrating for this sample population as a large portion of their needs is associated with the desire to be heard, not pushed medication without appropriate

knowledge or consideration on their part before administering this regiment into their lives.

Wait time and service protocols

Across all samples in this study, wait time is the largest contributing factor as a barrier to receiving appropriate health care services. Wait times associated with the lack of communication encountered when scheduling appointments makes it feel impossible for those to obtain the care they need. This is especially problematic for those with substance abuse and mental health. This sample discussed from multiple geographic locations that they have tried to schedule appointments when symptoms and stressors first arise that cause complications to their mental health. However, due to the wait times in conjunctions with the lack of communication, many individuals had to go to extreme lengths (i.e. suicide attempts) before they were brought to a facility or seen by an individual who could provide them the care they needed. Lack of communication, coupled with short appointment visits and long lead times has also caused this sample to not receive medication in a timely manner, thereby forcing them through withdrawals and compromising their mental, emotional, and physical state of being.

Wait times was greatly attributed by individuals as a factor of little to no availability of resources in comparison to the increasing number of individuals who need regular care. These fluctuations and problems with doctor/patient ratio increase the stress put on hospitals to provide assistance and treatments. Therefore this sample believes it is important to consider the cost balance between what it would be to open a new location as well as how this would decrease the stress on local hospital facilities.

“Mental health services are one of the worst in this area as for services, waiting period if you come out of the hospital to wait for an appointment. If you have a crisis, needing medications, all kinds of big problems in the mental health resources. So there’s money being cut. So you go in this week and next week you got a different job. So there’s a lot of problems with that. And finding someone that does take Medicaid if you’re in the system.”

Available providers and staffing

As presented earlier within this report, individuals have pinpointed an overall lack of staff available to treat individuals on a regular basis

according to their specific health care needs. In many instances, it was either sited that there are not enough facilities located through these counties, while others presented that they felt that it was more of an issue that there was not enough locations that were providing services to those who are on Medicaid.

“I’ve had some problems with that. For instance, they refer me to someone and I have to call my provider. They’re not available.”

This is problematic for both the patients and those who work in the medical community, as individuals need care on a regular basis; however there is only a limited amount of paid medical staff to assist these individuals.

To combat this lack of staffing many people stated that they would love to be a caregiver to those with chronic health issues (parents, aunts, uncles, etc.) but they can’t because they would have to sacrifice their current employment. Many of these individuals have presented that if facilities were to provide them training, they would become informal caregivers to assist their family members, reduce stress on staff, and allow them to make money/be employed.

Employment and financial resource effects on Medicaid

Financial constraints create difficulties for many individuals on Medicaid. In addition to problems with inconsistent care and available facilities, some individuals discussed how they are caught in an unfortunate circumstance that their “spend down” funds are too high in cost and do not have the financial ability to meet these spend downs and pay for them accordingly. One gentleman who was diagnosed with mental and behavioral conditions is in a situation where his employment does not pay for health care, but he makes slightly above the economic limit to be provided Medicaid to gain the care he needs. His and similarly discussed circumstances are forcing individuals into choosing between having a decent job that may lead to something better but in turn sacrificing care, or being unemployed and taking what care they can obtain while sacrificing other needs that could be combated by having financial stability. These individuals have stated on numerous accounts that they want

to work but they feel as though society wants to keep them down because they do not see a way out to better their situation and have affordable care. Based on these barriers, it was felt by the participants as a whole that the economic criteria associated with jobs that do not offer health benefits need to be reevaluated to assist individuals in need of care.

“I haven’t had health insurance for 2.5 years. I can’t get help from Medicaid or DSS because I make x amount of dollars over. I went on the website NY state. I can’t get any help for that. What’s stopping me is nobody will take into consideration the \$1500 a month I’m paying in child support. So I can’t afford my own health insurance.

Now if I make more money, they take out more money for child support. And I’m still not making any headway. So this is my dilemma. So if I think I’m going to get sick, I’m going to have to start saving a little money here in order to go to a hospital or an urgent care.”

Stigma associated with Medicaid and certain health conditions

With regards in particular to the mental health and behavioral community, participants in this study felt that there is a stigma attached to not only their condition but also the insurance that they receive.

“I say that word recovery, because for those who have mental health - I have PTSD myself, through life. We’re recovering. We’re in recovery. That is a big part of life, being able to recover. Some people cope with drugs and alcohol. Some people cope with cigarettes. Some people cope with food. That’s my coping skill. I love food.

But I think people are really judged by the service and the insurance they have. I’ve had my own experience with that. And I think it’s sad. I think it’s sad. I think that we all deserve to have health care.”

Those with mental health and behavioral issues find that individuals in hospitals and even physicians have stigma against their condition. This leads them to believe that regardless of what information they provide about their needs and current health position that they are pushed medication based on what the physician’s predispositions are. Additionally, given that they are on Medicaid; they believe that quality of care, wait times, and appointment length are not equal in the service provided to them that someone with private insurance would receive. Some of these individuals, especially with regards to those currently engaged in the St. Mary’s PROS program, have encountered situations where individuals have not been kind in reference to their condition and have been faced with offensive

language and treatment.

“...overheard her, I was in the waiting room upstairs, and she was just walking up and down. She got, one of the guys made her, she said, you’re nothing but a crack head. You’re a junky.

I had the man come to my room the next day. He came back. We went up there to the 6th floor. Today she doesn’t have a job. Because she went beyond the HPPA. You can’t do that. And they do stuff like that.”

It is apparent, that education is needed; not only for those who are diagnosed but information provided to staff on sensitivity and communication to better handle and disperse any inclinations of favoritism towards individuals who may have a mental health or behavioral condition or ailment.

Home Environment and Living Conditions

The Medicaid and Uninsured populations, particularly in urban areas, do not have stable housing or communication tools. Due to this cycle, lack of personal financial stability and care resources many individuals cannot balance their condition and have the monetary compensation needed for adequate housing and treatment.

Additionally it was stated that for many, because of the lack of rehabilitative housing for those with substance abuse and mental health, they are forced to stay in the hospital a lot longer than what would be necessarily. This time is then charged to their Medicaid. This creates a cycle where individuals are forced to remain in hospital care longer than needed, taking available space for those in critical condition, and Medicaid is being billed at a premium at the expense of these individuals. Some rehabilitative services are offered, but participants stated that in Albany the amount of homes and residency through RSS are declining and people are stuck going back to making poor choices because they do not know what else to do or how to receive appropriate help.

It is important consideration based on the findings presented in this study that Albany and surrounding urban areas bring back more RSS residency rehabilitation housing for those in need. This will alleviate stress to the staff in hospitals as well as reduce emergency room and urgent care visitation.

Convenient service and transportation

As stated above, many individuals expressed that they do not believe there are enough clinics or general help facilities within the counties sampled where they can go to receive care. It was also noted that in addition to not having convenient services available, the more rural counties sampled also had issues in relation to transportation; this notion was an especially prevalent topic of conversation during the Montgomery and Fulton groups.

Those with chronic health conditions also demonstrated an interest in services that are traditionally offered during the day to also become available in the evening on select days of the week or after surgeries. Services such as night aids would alleviate some of complications of tasks that need to be completed prior to going to bed (changing clothes, brushing teeth, getting into bed, etc.) It was expressed that these services would be particularly useful for individuals who do not have family members or would like to alleviate some of the pressure on family members by having someone assist them in the evening. This was especially prevalent for groups that are located in areas outside of the metropolis that have less reliable transportation methods making it difficult for individuals to get to the services they need.

For those who do not have access to public transportation, they need to call medical transportation services 3 to 5 days in advance to make an appointment to obtain transportation. However, even in instances when an appointment was established, medical transportation has been late and caused individuals to miss their appointments, be driven back, and billed for both the missed appointment and the transportation used. Frustration around this point was reaffirmed by statements of “regardless whose fault it is, if they are late then they lose their appointment and have to start the whole process again.” For the St. Mary’s PROS group in particular this was associated with the fact that transportation comes from Syracuse and therefore increases the level of difficulty to get transportation in a timely manner. In many instances for those who do receive transportation services, these medicabs will often bring

individuals to their appointments, but not to get their medication after their appointments. This makes it treacherous for those who need medication and prescription refills to maintain a proper mental and physical health.

“I have the same problem with my son. He can barely walk with a walker, and he bumps. And they want him to take an access van. He can’t get on the van. He needs a regular cab. And I would find them for the last 2-3 weeks. His doctor appointment comes, they pick him up in the van, he can’t go. So I have to change the doctor’s appointment. And it’s stressful on him, because he really wants to know what’s going on. And he doesn’t have no medicine to help him with anything. And it’s stressful for him.”

Sensitivity needed for Palliative Care/Elderly/Chronically Ill

The overarching theme associated with the discussion surrounding palliative care and consistent care for the elderly was the focus of sensitivity. Within the chronic care groups, many featured several individuals who were caregivers themselves for friends or loved ones in the earlier days of their lives. In some instances, especially with the Fulton group, individuals current caregivers were present throughout the discussion and could attest to some of the difficulties associated with the daily tasks surrounding older individuals, or individuals with ailments that cause different degrees of difficult in daily activities (i.e. blindness, paraplegics, etc.).

Many stated that the current care initiatives are decent but could be improved with sensitivity training for staff, both emotionally and physically. This refers to information and sensitivity training that relates to how the body ages, how skin and other physical aspects begin to deteriorate, and how even massaging skin can feel drastically different based on ailments and body types. For those who were paraplegics, it was also stated that having sensitivity training prior to meeting someone with this condition for the first time could be particular useful to avoid the “shock” factor that generally is expressed across their face when they encounter individuals with this condition.

In reference to end of life care, the topic followed a similar pattern. The necessity of creating a level of comfort, relaxation, and sensitivity to the person physiologically and the situation that they are currently in would be the most desired features expressed

through this sample audience. Other comments were general to this theme but very few specific suggestions were present during these conversations.

“So just trying to keep them comfortable and good spirits. Can’t really keep too many people with good spirits knowing they’re about to pass on, but at least you can leave a little bit of joy in their heart before they go.”

Potential Solutions

The following solutions are presented based on suggestions made during the focus groups as responses to the issues and barriers listed above section. The solutions that are presented were provided across the different health conditions and occurred across different regional counties sampled.

Stronger communication and engaged listening practices

In the above section, many stated and reiterated through a variety of avenues the necessity for a change in communication structure. Better communication across agencies when changing someone to a new county. Better communication between the mental health practitioner and the primary care physician to know what and why a patient is prescribed one medication over another. Better communication between the insurance company, what they provide and whom provides it to the patients in need. These issues and more could help be alleviated by a stronger network and communication of case managers or benefit consultants. These individuals are trained and understand all of the information that would be pertinent to both the medical side and patient side, by establishing more paid positions for benefits consultants, they would be able to assist with communication and create a level of ease between all of the parties engaged.

Along this sentiment, participants feel that medical facilities, organizations and insurance companies need to get the word out to connect people to the right information or service, and feel that by

instituting a stronger structure of benefit consultants or case managers they would be able to accomplish this task.

Discussion also presented catholic churches and other clinics as being areas where individuals could go to gain more information about not only their condition, but where they could find areas to assist them, and how to get in contact with individuals who could be advocates of liaisons for necessary communication to better their mental or physical health.

Advocates for services

In addition to stronger communication the desire for advocates, especially for those who are diagnosed with mental health and behavioral issues, was heavily expressed. Some stated that they are comfortably expressing themselves and their concerns, but they are aware that other individuals may not be as able to effectively and appropriately communicate their needs and situations and feel comfortable doing so. Therefore it was suggested by this sample across counties that a mental health professional be present in situations pertaining to when a patient is being prescribed medication or getting a renewed prescription. That way for individuals, who may be fearful of speaking up when they feel the medication selection is not appropriated based on conversations with their mental health professional, they will have an advocate to alleviate that stressor. Additionally, this process will strengthen the communication between these physician types and create a more effective patient care process for those individuals who are diagnosed with these conditions.

“If somebody needs emergency food stamps, or shelter, or somebody is homeless, they can’t wait 6 weeks for an interpreter for them to understand. And the whole writing back and forth for everyone, it doesn’t work. And finger spelling, it doesn’t work for the deaf. That’s not how they communicate.

So when people say, oh, well I’ll write a note back and forth. No. Well get someone who can sign. It’s not the same. So I find that’s really - and it’s usually people on Medicaid and Medicare. I find that there is a prejudice among people who need services.”

Providing more avenues of information, and making it easier to read/provide assistance to understand it

As it has been discussed in other solutions as well as being

prevalent in several barriers to healthcare, more avenues and presenting more easily digestible information would decrease or alleviate many of the communication barriers that exist currently.

The consensus across all conditions and counties were that informative brochures or pamphlets that are concise but provide key points of information would be incredibly helpful from the patient perspective. This information would include more user-friendly language, and for areas that need to be more specific and could cause confusion, the introduction or strengthening of positions such as case managers would be integral to the success of patient understanding and consistent care. Additionally providing an area where individuals could go to speak with others who are experiencing similar issues and confusion would be greatly appreciated by this audience.

“And maybe even just having meetings of people who have similar health problems so that they could learn from each other about the difficulties with the paperwork or whatever, so that everyone isn’t so isolated.”

Education to reduce stigma

Stigma presented with special attention to mental health and behavioral issues is prevalent within this sample group. Presenting with decreased levels of trust and desire from this sample to reach out to discuss their conditions or find more information about physicians or facilities that can assist them. Society as a whole has a stigma associated with what they associate with this condition type. It is crucial that education and awareness be presented through information about these conditions in local areas such as health facilities or churches to increase understanding and decrease the negative stigma.

It is also important from the healthcare side to be more engaging in reform towards establishing a sensitive environment for those who have these conditions. This will allow individuals to place more trust in the medical community and vocalize their physical and mental wellbeing to receive the best treatment. To accomplish this task, it was presented by the sample that sensitivity training be better

developed and enforced to reduce the number of incidences where individuals lose faith in the medical community.

Transportation protocols

To alleviate the stress of transportation outside of urban areas, it was discussed that creating a streamlined system of communication to create appointments and scheduling to avoid the wait time associated with obtaining healthcare services. The current system requires that's physicians act as the liaison to set up medical transportation. If an online system was developed to demonstrate when times are available, how to maximize routes, and allow a digital forum for doctor's to approve or deny transportation it would ease communication and develop a more effective means to solve this barrier.

Congruency of quality of care and services offered across counties: More facilities and staff training available

To alleviate the stress associated with limited facilities, patients mentioned consideration associated with creating more facilities, or discussing with providers more possibilities of facilities that will accept Medicaid.

This is especially important for those individuals with mental health or behavioral conditions that need facilities or rehabilitation areas after receiving care. The amount of transition houses throughout the area continues to dwindle, forcing individuals to stay in hospitals a lot longer than is necessary. The creation or expansion of these transition establishments would provide individuals an area where they can return and embrace normal cohabitation while diminishing stress and capacity on medical establishments.

Additional suggestions were to provide training and paying informal caregivers to allow individuals to assist their family, reduce stress on staff, and allow them to make money. This acts as a way for not only individuals to have monetary compensation, but creates an atmosphere that is comfortable for the family member while not overworking medical professionals.

Crucial to the success of this initiative would be to provide regular and maintenance level training to informal caregivers. This creates a fostered learning of staying up to date in medical practices while meeting and upholding the standards of the medical industry. Individuals stated that they would like to help but in many ways don't know how or are fearful that they will be doing more damage than good. Through consistent training and implementation these concerns can be avoided and serve the community more effectively. This process would also strengthen areas outside of direct staffing to help alleviate the issues associated with under staffing and inability to provide constant care to those who need it.

Alternative protocols for mental health to decrease number of emergency room trips

Within the mental health and behavioral condition groups, it was often expressed during this study that individuals felt they were not heard or treated till they presented drastic measures to force them to be committed. The cost and treatment of this can weigh heavily on the medical community especially when transitional houses are limited and less implemented. It was discussed that alternative protocols need to be put in place to decrease the number of extreme measures being taken where individuals are then sent to the emergency room for individuals to receive care.

“I had to get arrested before they would pay attention. I had to take drastic measures and do something bad to get noticed.”

“Me too, I had to cut my wrists and walk into urgent care before anyone would listen to me, and then they just put me on a 72 psych hold.”

Many individuals do not want to take their lives, they are doing this a cry for help to get the attention for their condition that they desperately need assistance with. This is an area where case managers or additional local facilities could be critical to the decrease of emergency visitation as well as being cost effective for insurance and the medical community as a whole.

Specialist consideration

As it was presented in conversation through this qualitative measure

across all participant types, individuals would greatly desire the introduction of specialists to assistive with their quality of living and overall health.

“So I was down in Seattle all last year, and saw a lot of chiropractor, acupuncture, massage, things like that, because it was covered by insurance. Whereas it’s not here for the most part.”

Some of the most common specialists mentioned include, chiropractors and other holistic practices such as acupuncture to supplement the use of medication, which can be expensive and many times cause varying side effects. These side effects become increasingly problematic in situations where wait times or transportation does not allow an avenue for individuals to refill or receive medication.

Appropriate service valuation

Finally, it is understood and speculated by these participants that all services are likely to differ in costs. However, many believe the valuation or distribution of these services is not always appropriate based on the needs of the patient, especially when life critical services are switched for not life critical services. Therefore solutions presented by this audience would be to reevaluate to take greater consideration of the individual prior to switching or altering services. Additionally, if you present someone with an option of a service, it should be also be explicated presented that they do not have to receive it and that it is possible that as a new service is introduced, a past service could be removed from what they currently receive to cover the cost of the new introduction. In many instances, individuals were not aware of what they could be losing until after they had already consented. This lack of communication, as stated above, should be corrected through advocates or easily digestible reading materials so an appropriate and informed consent can be made before any changes are made.

Conclusion

Zone 5 conducted, analyzed and reported upon the general trends and insights expressed through a qualitative research type across different health condition expressions and amongst geographical representation. The above includes barriers; monetary, communication,

and informative in nature as well as speculated solutions that were provided by the audience based on responses and expanded upon to develop uniform thought across all parties engaged. Raw data and materials are too be provided in the Appendix of this document or in a separate file and are intended for research purposes only, the goal in which to provide insight on health care services, barriers, and solutions that would be pertinent to the Healthy Capital District Initiative.

Appendix:

Notes written during all sessions (Large Notepad) and notes from the sessions where audio was not allowed to be present. Audio files from the remaining sessions will be provided to you separately through a Dropbox file or on a DVD as well as full transcripts for those audio files will be provided as an appendix to this Report.

Note pad notes for each session

Chronic Illness Groups

Chronic Illness: Schenectady

- **Availability of services are limited**

Wait times (services, ER, medication)

Lack of information about services, medication, procedures, etc.

Prejudice with Medicaid/Medicare

- **Quality is poor, don't get the same type of service, people treat you differently**

Mental Health Services: not enough of them and therefore you have to wait forever; quality of care isn't as good because of limited resource

Specific to Schenectady Group:

- Information presented is too thick and dense, no user friendly especially for people who cannot see, read, or comprehend as well

More health initiatives are needed in the community to promote wellness and keep people active and involved to make them and others feel well

More pain clinics/free clinics are needed to help those who need care and to help them manage pain rather than just wait in the ER for hours on end just to receive ibuprofen

Chronic Illness: Fulton

- **Long term consistent care is needed**
- **They took away their therapist and gave them more house keep hours which they didn't care about**
- **Changed their services, similar as above**
- **Consistency and Continuity of Care**
- **Providing information pamphlet about services and the conditions that patients have**
- **Transportation: You need to notify them days in advance and communicate with Fidelis, you end up working with multiple case workers and it gets confusing and information and appointments for transportation get lost**

Specific to Fulton Group:

- Care offered based on individuals ages and experiences and conditions
 - Being aware of sensitive skin for the elderly
- Providing Night Aids, allow family and friends who help a night or two to themselves
- Switching services without their consistent Night Aids for after surgery, or after surgery care
 - They say don't let people alone after surgery but they won't let them stay at the hospital and they don't have people to help them at home
- Do the aids who help know the insurance they have and what is covered?
 - Communicating with insurance is incredibly difficult
 - Needed for later hours
 - Transportation to the ER is so expensive if you call an ambulance

- Lifelines needed to be built into quadriplegic chairs that give GPS and Speaking capabilities (what if their chair dies or they fall out, how can they get help in those emergency situations)
- Provide assistance and information for times and scheduling for appointments to get to certain services
- Providing more for oxygen and mobility services
- Bringing back therapists for OT and PT
- Having good social interaction with the patients via the nursing aids and the doctors

Solutions

- CHC should check in to be sure that people are doing what they are supposed to and that the quality is consistent across the board (housekeeping)
- Making sure they print out what they actual do
- Helping patients be more informed overall and have the aids be more informed of the patients because of the switching back and forth they feel they have to constantly have to re-teach people how to care for the chronically ill

Chronic Illness: Albany

- **Red Tape: There always seems to be an elongated process and a lot of red tape to jump through before you can obtain the services that you need**
- **Wait time: The wait for appointments and medicine are lengthy, weeks to months at a time to wait for particular services**
- **People feel that since they have health care they should not have to pay additional money for medication**
- **Care services being cut**
- **Lack of communication between health professionals, patients, and other professionals**
- **Wait time for appointments**
- **High Co-pays need to be reduced, individuals have limited monetary income as is and it makes it difficult to pay for the services and medication needed**
- **Specialists not allowed on Medicaid**
- **Uniform, universal care needed across the state**

- **Mental health care services need to be addressed (wait times are too long to see therapists, medication is being pushed rather than diagnosed appropriately, services have been cut forcing people to stay in the hospital longer or go to the hospital in the first place**
- **More information on who takes Medicaid, make that easier to find and available**

Specific to Albany Group:

- Many individuals had issues with Spend down in relation to the costs associated with medication
- There is no one working with you to help you get the care you need or understand why your medications are changed or why certain services are not covered as well as why only certain providers are available
- There needs to be an appropriate balance of patients and services provided to health care professionals to alleviate wait times and assist people in need

Solutions

- All health care professionals need sensitivity training to work with all individuals especially chronic health and mental and behavioral health

Substance Abuse

Substance Abuse: Albany

- **Drastic measures needed to be taken before help was given, this was alleviated slightly with Medicaid**
- **Problems with communication between multiple organizations involved in the process**
- **Wait time (appointments, medication)**
- **Problems with stigma associated with psychiatric care**
- **Issues related to receiving services and what was covered**
- **A lot of unnecessary steps and paperwork making things difficult to accomplish**

Overall

Lack of communication needs to be fixed

Services are inefficient and poor or non-consistent quality of work for the services provided and paid for by their insurance
Reach of services (where they work geographically, should be able to see a doctor in any new york county and have insurance work)

Specific to Albany Group:

- More personal connections needed with physicians
- Problems with Fidelis (birth control)
- Change of pharmacy's for medication, now there is not one nearby that they can travel to get their medication, confused about their next steps
- Money in pharmaceutical pushing (high costs of medication for clients)
- Denied medications needed for daily living
- Problems with prescriptions (receiving them, getting them filled on time, getting scripts from physicians when they needed them)

Substance Abuse: Schenectady

- **Not enough mental health services taking Medicaid**
- **Lack of communication overall, especially between the physician and the client**
- **Finding people who take Medicaid for services in general is incredibly difficult**
- **High copays associated with Medication makes it difficult for clients**
- **Dental is limited (They always want to just pull teeth rather than opt for other services like root canals)**
- **Wait time (services, appointments)**
- **Services are not covered in all geographic areas**

Specific to Schenectady Group:

- Pharmacies switching over and not taking CDPHP makes it difficult for individuals to receive their medication
- They don't consider salary compensation (if you make too much then you can't get the benefits the benefits you need (quote from gentleman who has children he pays support for))

- Transportation causes problems with getting to appointments (medicab and the bus, appointments in advance and if they re late and make you late then you lose your appointments anyway)
- Brand types of medication (only offer generics)
- Weekend coverage, or some hours available needed to avoid going to urgent care of the ER for mental health issue

Mental & Behavioral Health

Combined Mental Health/Substance Abuse: Montgomery (PROS)

Mental Health

- **Wait times**
- **Going to extremes to get help and care**
- **Conflicting doctor/mental health professional communication**
 - **Need to communicate better**

An advocate is needed so doctor's know why I need certain medications

Always feel rushed with appointments, that doctor's don't care or want them there

Transportation:

- **3 to 5 days in advanced to make an appointment to get a ride**
- **Inconsistent transportation (pick up times, late)**
- **Finding physicians who take your insurance**
- **Scheduling conflicts and communication causes a great deal of unnecessary stress**

Shouldn't need to get violent to be helped and get care

Waiting times at the ER are too long

Provide informational pamphlets (medication and services offered)

Specific to PROS Group:

Mental Health

Have had services withheld (told it wasn't covered or they didn't need it)

Insurance doesn't cover PROS and therapist outside

- Leads to issues of Double Billing

Blue slips for billing every time you even say hello to a doctor/therapist

Feel the need that they do not have the time or the ability to fully express their symptoms

Transportation

- Will take you in for an appointment, but not to get your meds after the appointment
- Staff needs to set up transportation

Ways to Spread Information about services and health care

- Word of Mouth
- Internet
- NAMH
- St. Mary's
- Mental Health Association
- St. Mary's Addiction Services
- DSS
- Catholic Charities
- Probation Office
- Newspaper
- PROS Newsletter

Solutions: Important things to Note

- Better food at Pros
 - Variety, Healthy

Eliminating Doctor Bias

Refer out to other places people can go for help

- Will lead to less hospital visits

Combining programs (therapy and PROS)

Creating a bus schedule of knowing when you will get picked up and have the drivers stick to it

Mental Health: Rensselaer

- **Finding Mental health services taking Medicaid**
- **Advocates needed (some people can't represent themselves or are afraid too)**

Problems with Providers (finding them, finding what is covered)

Specialist wait times (dermatology, chiropractic, dental)

Length of time you receive care and the length of time you wait to receive care

More Mental Health Facilities needed in Troy

Long appoint wait times

Lack of information about the process, what your insurance covers, what it doesn't

Solutions

- **More information about trauma care and overall medication and care accordingly**
- **High Co-pays**
- **Consistent care and service should be provided to everyone who pays, it shouldn't matter how they pay**

Specific to Rensselaer Group:

- Improper billing (billed for an hour when you saw them for 10 minutes)
- Doctor's should not suggest treatments that are not covered by their Medicaid
 - Instead direct people to where they can receive those services and where they would be covered by their insurance

Patient/Doctor ratio is poor and hurts individuals who need care

Medication delivery (getting only 3 or 5 pills which last for a few days then you go through withdrawals because you can't see someone to give you medicine that would last for a month)

Providing case workers and making them more available (they shouldn't be kept secret)

More care for the Elderly needed

Provide more jobs available for those who are trained in benefit planning so they can assist others and help them understand information's and guide them where to go and to fill out forms

Information being put into the system improperly causing issues for individuals who need to receive care, medication, and service

Mental Health/Behavioral: Albany

Specialists are not covered (Chiropractors, acupuncture, holistic, etc.)

Hard to find physicians who take Medicaid (Foot doctor, eye doctor)

Mental Health

- **Finding physicians is incredibly difficult**
- **Long wait times (3-5 months)**
- **High Copays on all medication**
- **The stigma associated with mental health**
- **Lack of information (conditions and medications)**

Other suggestions

- **Need a good advocate for mental health problems with doctors**
- **Better communication all around in all aspects**
- **Shorter wait times, in the ER especially**
- **Better doctor patient relations needed**

Specific to Albany Group:

- Appropriate mental health care needed for the homeless
- Dental:
 - Services are limited (They just want to pull your teeth, not root canals or fillings)
 - Wait time is weeks to months for care and services (forcing people in pain to go to the hospital)
 - Won't pay for crowns
 - They will not provide additional care (just pulling out teeth)

Mental Health

- Long lead time to make appointments to get medication
- Have to call in advanced to get an appointment just to have it cancelled or rescheduled
- More information needs to be available for those who need it
- Doctor's not listening to them, pushing pills then out the door
- They feel misdiagnosed because no one will hear them out
 - Mismanaged medications because of this problem
 - Mental health facilities and care are just deteriorating

Albany Med- Mental Health:

- Lacked respect for clients with mental health
- Wouldn't listen to them when they reached out for help or tried to discuss their issues

- Problems with the Psychiatrists located there (not listening, 10 minutes in then out with a script)

MICA: a helpful organization for combined mental health and addiction services

ER

- Forced to go because of long wait time to meet with physician and the condition became too serious to wait any longer
- Catch and Release (make you wait forever, see you for 10 minutes, send you home)

Suggestions:

RSS

- More programs
- Treatments
- Education
- Have more residencies so people can leave the hospital and will have a place to go and recover

Transcription from PROS Group

No audio provided at the discretion of the organization hosting the Focus Group

What does it mean to be healthy? Tell me what you think of when you think

of healthy daily practices (does that mean diet, exercise, etc.)

- Eat good
- Eat healthy
- Keep your mind healthy
- Take your meds/don't use drugs
- Exercise
- Take care of your self esteem
- Sleep enough
- Be mindful of your diet/ limit sugars & salts

Personally to be healthy they:

Tell me a little bit about the type of things you do to try and stay healthy (eat

well, exercise, be cautious, avoid factors that could cause you

physical harm,
 etc.) walk/exercise/exercise during TV commercials
 Walk home as an excuse to exercise
 limit portions while eating/less is good/smaller plate so you can put
 less on plate and looks like you're still eating all
 Cut sugar completely out of diet/carbs & bread
 Diagnosed with diabetes and now
 leave a little on plate from every meal so not eating everything
 make yourself eat even if you're not hungry
 don't eat after a certain time at night
 don't immediately lay down after eating/ do chores instead

Based what you've just said, would you say the people in your
 community are healthy? Why or why not?

Coming to this facility helps keep healthy
 Fast paced life is hard to eat healthy/don't want to take extra time
 to cook a meal
 community is healthier today then it was/media is showing healthier
 options like recipes/supplementing ingredients and exercises
 community is starting to get healthy again
 TV shows are helping to make people more aware of what's
 healthy and what's not
 helping making healthy foods more attainable/cheaper/able to make in
 a fast time
 fast food places are now offering healthier options

Factors Surrounding Healthcare Services (15-20 minutes)

I'd like to start our conversation on some aspects about current
 healthcare services that you utilize within the region (medical, dental,
 mental health, check ups, etc.)
 Tell me about a time you found it hard to get a health care
 service you needed. What types of services are the hardest to get?
 Couldn't get mental health appt/even in emergencies & really needed
 help

Didn't want to go to inpatient and say she was going to kill herself
cause she could lose her son

Wait time for appt even though they've known her for 35 years
and begging for help

3 month wait for appt

In and out of psych ward

Arrested/acted up then they pay attention - had to take drastic
measures/do something bad to get noticed

Mental health problems were interfering with being correctly
diagnosed with physical health problems/miscommunications between
different types of doctors

Doctors aren't on the same page- mental health & primary care
should have more communication so it helps overall to speed up
the process

Psychologist visits help

3rd floor=mental health unit

Difficulty attaining a psychologist here even though family wanted her
to see one (could've added on instead of in exchange for)

PROS- you don't get the one on one / the insurance doesn't cover
both

Addiction services or here, not both, last county (herkimer) someone
came from got a therapist and a psychiatrist

Double billing is an option

Hard to get transportation to different facilities

Fidelis medicaid

Cdphp medicaid

Both medicaid & medicare

Seeing a doctor here is like sitting on a clock/ in and out in
15min or less

Medication review- no psychologist and no one to advocate for
behavior which in turn affects medication

RUSHED* like you're not completely being heard/ asked basic
generic questions

Ex: do you feel like hurting yourself or somebody else/ can't
express themselves to fullest because questions are too general

Med changes may be made but needs to be more thought put into it/need to hear all issues involved/didn't finish issues and meds are already being changed

Have to sign new blue slip for everyone you talk to you (billing and accountability) = too much paperwork

*Insurance doesn't cover therapist outside of here

Transportation can be a big pain amsterdam bus is a joke/never show up to pick you up/signing up for a bus ride is ridiculous medicaid transportation has to be done too far in advance transportation from syracuse has no clue what's going on in this area

difficult to get through/ long time on phone/ cut off after being on hold

very frustrating for people who live in a community residence-limited time on phone

transport will take you to appt/ER but not to pick up meds baby & mom can't travel together because she can't ride the bus for medical reasons "how do you want me to get him to the doctor" "I guess I'm supposed to put him on the bus and meet him there?"

dentists are hard to find with cdphp / don't want to fill teeth, just pull teeth/may need root canal but they just pull it instead out of many choices only fidelis offers dental

bloodwork issues/ primary doc wanted a certain test which insurance didn't cover because couldn't pay

don't mind paying co-pay over rehab

too much to go through to figure out where to go through

no problems with fidelis*

wait time in the doctors office / more communication

schedule too many people in the same time frame

stressful to get what you need so you just stop going

transportation is biggest barrier

have licenses but no vehicle

only one person handling transportation

SUGGESTIONS:

Pamphlet with information

Sum up all info in one place

*very happy for this program, very beneficial, already feeling better
Intertwined mental health & drug/alcohol care is great to have together

Better understanding of mental health from primary care physicians/
seminar for doctors to better understand mental health

More information*

pass out bus schedules/ make a bus schedule that stays to routine/
won't go on route if no one calls/ nicer bus drivers

If you don't call the bus won't come/ no set bus routes*

"I've never heard of calling to order a bus."

Long wait times for transportation

Word of mouth for this program/ NAMMY/ St. Marys/ Mental health
association/ St. Mary's addiction services

DSS could know more about PROS/ Catholic charities/ Fulton
friendship house

Newspaper could advertise meetings/ PROS newspaper

better food* no variety of food options/ healthier options/ no more
canned & processed foods/ same old routine/spend all this money to
get services should be able to eat what they want

emergency situations shouldn't require violent extremes or getting
arrested to talk to someone/be paid attention to

"shouldn't have to be put in the predicament that you have to be
towed away to hospital"

shouldn't have to sit in separate room forever to see someone
everything boils down to money*

doctors on call should be able to be replaced by other doctors if
there's a bias/issue

Mostly all have had situations that could've been avoided if not for
poor communication

don't turn people away trying to get into the unit because it's full/
refer out or provide another option

less often visiting ER since being in PROS

This program has decreased visits to hospital

"This is an awesome program, it really is. I'm so grateful"

“I think this place helps me so much cause i get rid of the issues I have on a daily basis. If i have symptoms i talk about them while I’m here. I’ve learned a lot of things.”

“It’s nice that other people say the things that are going on in your head.”

“I want to go back to work because of this place. It’s given me the hope and courage that I can work part time”

FOCUS GROUP PARTICIPANTS WANTED:

The Healthy Capital District Initiative is seeking focus group participants to provide their opinions, feedback, and experiences with healthcare services.

There will be 8 Focus Groups in total, located in the following 4 counties:

- Albany
- Fulton
- Rensselaer
- Schenectady

We are seeking individuals who currently have Medicaid, both Medicaid and Medicare, or No Health Insurance.

All Participants will be compensated **\$30** cash for their participation as well as be provided food and drink prior to the session.

If you are interested and would like to see if you qualify for these focus groups please visit <http://bit.ly/1CQN3JB> to take a qualification questionnaire or call **(518) 242-7030**.

If you qualify, you will be contacted to confirm your participation.

This study will be anonymous and is used for research purposes only.

Healthy Capital District Initiative
RESEARCH STUDY DISCUSSION GUIDE

FOCUS GROUP SESSION

- I. Introduction (5 minutes)
- a. Focus group explanation (Why we are here, what a focus group is for, etc)
 - b. Purpose of today's group (research only, your opinions are valuable, experts in your own opinion, ensure confidentiality)
 - c. Ground rule (elaborate on answers, feel free to disagree with one another, talk one at a time, everyone should participate, honesty is the best policy, be polite and respectful)
 - d. Participant introduction go around (who you are (except PROS group), tell us where you grew up and a little about that place)

- II. General Health Questions (10 minutes)

I'd like to start our conversation on some aspects about health in general.

- a. What does it mean to be healthy? (what can people do to be healthy?)
- b. Tell me a little bit about the things you do to try and stay healthy?
- c. Based on what you just said, would you say the people in your community are healthy? Why or why not?

- III. Factors Surrounding Healthcare Services (15-20 minutes)

I'd like to start our conversation on experiences you have had with healthcare services (medical, dental, mental health, check-ups, etc.).

- a. Tell me about a time you found it hard to get a healthcare service you needed. What types of service are the hardest to get?

(First write down types of service on pad, prompt for additional services (see below) What about:).

- *Local hospital services*
- *Local emergency room*
- *Local physicians/healthcare providers*
- *Local Dental services*
- *Pharmacy services*
- *Counseling/mental health services*
- *Alcohol/drug abuse treatment services*

- *Public health*
 - *Health education*
 - *Preventive health services*
 - *Case management services*
- b. What things make it difficult to get health and healthcare services in this community for you and your family? (get responses and then prompt for things from the list below. For example: Is transportation an issue?, etc.)
- *Knowing what services are available*
 - *Understanding how to be healthier*
 - *Transportation*
 - *Access to healthy food*
 - *Cost of medication*
 - *Access to smoking cessation*
 - *Access to fitness resources*
 - *Lack of knowledge about issues affecting my health*
 - *Lack of preventive health services*
 - *Difficulty navigating the healthcare system*
 - *Need help with paperwork / forms*
 - *Understanding of providers' instructions*
 - *Cultural or language barriers*
 - *No after hour or weekend services available*
- c. Are there other factors that make it hard to get healthcare or stay healthy?
- d. When you have used healthcare services describe when you thought the service could be improved (ask and prompt for things like wait time, etc.)? What would improve that service?
- e. Which services do you think need the most improvement?

IV. Suggestions and Resources (15 minutes)

- a. What services (medical, mental health, dental, community services) should this community provide that aren't here now (write down all of them)?
- b. If you were the person deciding to add or improve any of the above health or healthcare service and you had only enough resources to do three in this community, which ones would you do? Which would you do first? (get consensus if possible)
- a. If you needed a healthcare service and did not know where to find it, who would you ask or call or where would you look to find it?

- b. What resources are available locally to help you? Which of those have you used in the past? Would you use them or recommend them to others?
- V. Add in Questions (palliative care, etc.) see below (5 minutes)
- VI. Wrap up Questions (5 minutes)
- a. Is there anything I haven't touched on that you think is important regarding healthcare services, resources or barriers to getting healthcare
 - b. Is there any experience you want to share that hasn't come up yet?
 - c. Discuss participants role in the process. Next steps: review feedback and make recommendations.
 - d. Thank you.

Additional Group Specific Questions

Chronic Care: Palliative Care *Will be intertwined with conversations regarding healthcare services (5 minutes)

- a. Has anyone here been a caregiver before for a family member or a loved one in the past?
- b. If so, what were the challenges that you faced during that time?
- c. Have you heard of the term 'palliative care'? (define for group if necessary)
- d. What services would make it easier for someone facing a serious illness?
- e.. What would you want in your final days?

Mental Health and Substance Abuse: Accessing care

- a. Accessing and coordinating care, both primary medical care and mental health care
- b. Finding mental health professionals (ability to get timely appointments, wait lists)
- c. Waiting times to get appointments
- d. Whether their different providers (regular doctors and mental health professionals) communicated with each other

DSRIP 10 County Healthcare Survey

DSRIP 10 County Healthcare Survey

Introduction

[Participar en la encuesta en Español](#)

The Healthy Capital District Initiative (HCDI), on behalf of the region's hospitals, is asking people who have Medicaid health insurance or no health insurance to take a survey to tell us about their health and health care needs. The results will be used by the region's hospitals to help them improve how they provide care.

Your opinions are very important to us and will help us understand how to better meet your health care needs.

As a thank you for your time, we will have a drawing for three prizes of \$500, \$250 or \$100 selected from all the completed surveys. To be entered into the drawing you will be asked for your drawing code at the end of the survey. The drawing code can be found on the front of the postcard or on the email sent to you. That number will only be used to award prizes.

Note: The survey is completely anonymous – we will not share any information that can identify who you are.

You do not have to answer any question you do not want to, and you can end the survey at any time.

The survey should take no more than 15 minutes of your time.

Thank you

Health Insurance

Do you have any of the following types of health insurance?

- Medicaid (includes Fidelis, CDPHP Medicaid Select Plan, Child Health Plus, and Family Health Plus)
- Medicare (for those over age 65 and the disabled)
- Both Medicaid and Medicare (dual eligible)

- I have no health insurance
- Don't know
- Other (please specify)

Health Insurance

DSRIP 10 County Healthcare Survey

If you have health insurance, did you purchase it through a New York State Health Exchange?

- Yes
- No
- Don't Know
- Other (please specify)

Health Insurance

Do you know where to go to get health insurance?

- Yes
- No

If yes, where would you go to get health insurance?

Healthcare

What County do you live in?

- Albany
- Schenectady
- Rensselaer
- Saratoga
- Montgomery
- Fulton
- Columbia
- Greene

Other (please specify)

DSRIP 10 County Healthcare Survey

How would you describe your overall health? (check one)

- Excellent
- Very Good
- Good
- Fair
- Poor

How would you describe your mental health? (check one)

- Excellent
- Very Good
- Good
- Fair
- Poor

Do you currently smoke or use tobacco products?

- Yes, every day
- Yes, some days
- Not at all

Do you have a problem with alcohol or drug use? (all answers are confidential)

- Yes
- No
- Other (please specify)

Are you currently receiving treatment for alcohol or drug use? (all answers are confidential)

- Yes
- No
- Other (please specify)

DSRIP 10 County Healthcare Survey

Where do you or members of your household usually go to get healthcare services? (includes: medical, dental, mental health and preventive services such as checkups & vaccinations) (check all that apply)

- Doctor office
- Dentist office
- Family Planning Clinic
- Hospital Clinic
- Hospital Emergency Room
- Health Center (Federally Qualified, such as Whitney Young or Hometown Health)
- Mental Health Center
- Midwife
- Nurse Practitioner/Physician's assistant
- Therapist/Counselor
- VA/Veteran's Clinic
- I/we don't go
- Other (please specify)

Do you have a healthcare provider for checkups and visits when you are sick?

- Yes
- No

How long has it been since you visited a doctor for a routine physical exam or check-up? (check one)

- In the past year
- In the past 2 years
- In the past 5 years
- Five or more years ago
- Never
- Don't know

DSRIP 10 County Healthcare Survey

If you haven't had a physical exam or checkup in two or more years, what are the main reasons (check as many boxes as apply)

- Cannot afford
- Too far to travel
- Did not have transportation
- Did not have the time
- I am healthy, I don't need to see a doctor
- I can't find a doctor who speaks my language
- I do not like going or I am afraid to go
- Did not have childcare
- Other (please tell us)

In the past 12 months, did you have a routine dental check-up?

- Yes
- No

If you haven't had a dental exam or checkup in two or more years, what are the main reasons (check as many boxes as apply)

- Cannot afford
- Too far to travel
- Did not have transportation
- Did not have the time
- I am healthy, I don't need to see a doctor
- I can't find a dentist who speaks my language
- I do not like going or I am afraid to go
- Did not have childcare
- Other (please tell us)

In the past 12 months did you receive care in an emergency room?

- Yes
- No

DSRIP 10 County Healthcare Survey

In the last 12 months, how many times were you in the emergency room (check one)

- None
- Once (1)
- Twice (2)
- 3 times
- 4 times
- 5 or more times

Other (please specify)

What is the main reason(s) for your last emergency room visit? (Please check all that apply)

- I thought the problem was too serious for a doctor's visit
- I was in a lot of pain and needed to see someone immediately
- My problem was getting worse
- My health provider (doctor, nurse, etc.) said to go to an emergency room
- A nurse helpline said to go to the emergency room
- My doctor's office was not open
- Emergency room has specialists, lab and imaging (x-ray) available at one location
- Did not know where else to go
- Couldn't afford to pay for services elsewhere
- Had no health insurance
- Had no regular doctor or clinic
- Emergency room is the closest healthcare provider
- I could be seen quicker at an emergency room
- I can get to the emergency room by public transportation
- I can get to the emergency room by calling an ambulance
- I usually go to the emergency room for care
- I could not find a local provider who speaks my language.
- I needed to get medications refilled, prescribed or filled

DSRIP 10 County Healthcare Survey

In the last 12 months have you been a patient in a hospital for an overnight stay or longer?

- Yes
- No

In the last 12 months, how many times were you been admitted to a hospital?

- None
- Once (1)
- Twice (2)
- 3 times
- 4 times
- 5 or more times

In the last 12 months, have you or your family traveled outside of your own county to get healthcare?

- Yes
- No

If you answered Yes to the previous question, where did you go to?

DSRIP 10 County Healthcare Survey

What service(s) did you leave your county for? (check all that apply)

- Primary Care
- Dental
- Ob/Gyn
- Family planning
- Pediatric
- HIV/STD
- Mental Health
- Substance Abuse Treatment
- Cancer care
- Specialty care
- Hospital care
- Other (please specify)

What was the main reason(s) for traveling outside your county for these services? (check all that apply)

- To get better quality care
- That healthcare provider is closer to my work or school
- The type of healthcare provider was not available in my county
- I was referred to that provider by my primary care doctor or another doctor
- Other (please specify)

DSRIP 10 Encuesta sobre el cuidado de la salud del condado

Introducción

Nosotros estamos preguntándole a las personas que tienen el seguro de salud de Medicaid, a aquellos que tienen ambos Medicaid y Medicare, y a los que no tienen seguro de salud en la Capital, Mohawk y las regiones del valle de Hudson para que nos digan acerca de las necesidades del cuidado de la salud.

Sus respuestas son muy importantes para nosotros y van a ayudarnos a entender mejor como satisfacer sus necesidades en cuanto al cuidado de la salud.

Nota: La encuesta es completamente anónima- nosotros no compartiremos ninguna información que pueda identificar quien es usted.

La encuesta no toma más de 15 minutos de su tiempo.

Para que pueda participar en el sorteo de uno de los tres premios en efectivo (\$100, \$250, o \$500), a usted se le preguntara por el código de la encuesta para el sorteo. Puede encontrar el código para el sorteo en la parte delantera de la tarjeta o en el correo electrónico que se le envió.

Pregunta de Exploración

1- Usted tiene alguno de los siguientes seguros de salud

- Medicaid (incluyendo Fidelis, CDPHP Medicaid Select Plan, Child Health Plus, and Family Health Plus)
- Medicare (para esos sobre 65 anos y los minusválidos)
- Ambos Medicaid and Medicare (Elegibilidad dual)
- Seguro a través de una compañía privada
- No tengo seguro de salud
- No se
- Otro (Por favor especifique)

- Asma
- Cáncer
- Herida o discapacidad
- VIH/Prueba de enfermedad de Transmisión sexual
- Uso de Alcohol/drogas
- Condiciones de salud mental
- Abuso de sustancia, alcohol o drogas
- Jóvenes o niños con problemas del comportamiento o problemas emocionales
- Problemas dentales
- Problemas visuales – incluyendo glaucoma
- Problemas de auditivos
- Otro (por favor especifique)

Barriers a Salud

DSRIP 10 Encuesta sobre el cuidado de la salud del condado

Como usted y los miembros de su familia viajan para obtener servicios de cuidado de salud? (incluyendo medico, dental, salud mental, y servicios preventivos) (marque todos los que apliquen)

- Ambulancia
- Taxi
- Con amigos o relacionados en carro
- En mi propio carro o vehículo
- A pie o en bicicleta
- En el transporte público (autobús)
- Con un chofer voluntario
- No voy/ o no vamos
- Otro (por favor especifique)

Existe alguna cosa que le haga difícil recibir servicios de cuidado de salud?

- Si
- No
- No se

If yes, please describe

Alguna vez siente que el lenguaje es una barrera (problema) en hablar con los proveedores de atención de la salud?

- Si
- No
- No lo sé

Con qué frecuencia usted tiene a alguien que lea los materiales sanitarios (pamphlets, instrucciones, etc.) ayuda? (marque uno)

- Todo el tiempo
- ocasionalmente
- De ningún modo

DSRIP 10 Encuesta sobre el cuidado de la salud del condado

Qué tan seguro está usted en el llenado de los formularios médicos por ti mismo?

- No confía en absoluto
- Ligeramente confianza
- algo confianza
- muy confiado
- extremadamente confianza

Con qué frecuencia tiene problemas para aprender acerca de su estado de salud a causa de problemas de lectura de materiales de atención de la salud?

- casi nunca
- De vez en cuando
- a veces
- a menudo
- Casi todo el tiempo

Cómo obtener atención de salud y servicios sociales

DSRIP 10 Encuesta sobre el cuidado de la salud del condado

Cuáles de los siguientes son barreras o obstáculos para una buena salud y para un cuidado de salud para usted y su familia? Por favor clasifique cada una como no un problema, un problema mínimo, problema moderado o un gran problema.

	No un problem	problema minino	problema moderado	un gran problema	Desconocido / No aplicable
Falta de cobertura de seguro de salud	<input type="radio"/>				
Seguro de salud no acepta los servicios que Necesitamos	<input type="radio"/>				
Costo de los servicios del cuidado de la salud	<input type="radio"/>				
Falta de información sobre los servicios que están Disponibles	<input type="radio"/>				
Barrera del idioma	<input type="radio"/>				
Doctor no acepta nuevos pacientes	<input type="radio"/>				
Falta de tratamiento de salud mental	<input type="radio"/>				
Falta de tratamiento para el abuso de sustancias	<input type="radio"/>				
Transporte de y desde las facilidades de cuidado de la salud	<input type="radio"/>				
Transporte a otros servicios comunitarios	<input type="radio"/>				
Falta de servicios para el cuidado de la salud durante las tardes y los fines de semana	<input type="radio"/>				
Falta de servicio de cuidado urgente disponible 24/7	<input type="radio"/>				
Falta de cuidado	<input type="radio"/>				

DSRIP 10 Encuesta sobre el cuidado de la salud del condado

infantil mientras se usan los servicios

Dificultad navegando el sistema de cuidado de la salud

Acceso a los incapacitados

Falta de adecuada o segura vivienda

Acceso a accesible y adecuada comida nutritiva

Problemas ambientales (contaminación, residuos tóxicos, etc.)

Otros problemas (por favor díganos)

Cual es la mayor barrera u obstáculo para que tenga servicios de cuidado de salud?

Usted tiene alguna recomendaciones en cómo podemos mejorar la prestación de la atención de servicios para el cuidado de la salud?

Hay alguna otra cosa que usted le gustaría añadir?

Hay alguna otra cosa que usted le gustaría añadir?

DSRIP 10 Encuesta sobre el cuidado de la salud del condado**A few more questions****Cuál es su código postal**

ZIP/Postal Code

Cuál es su género?

- Masculino
- Femenino
- Otro

Cual categoría mejor describe su raza?

- Blanca
- Negra/ Africano Americano
- Asiático o Nativo de la Polinesia
- Nativo Americano
- Otro/ Desconoce

Es usted hispano o latino

- Si
- No

Cuál es su país de nacimiento?

- Estados Unidos
- Otro (por favor especifique)

Si usted no nació en los Estados Unidos., cuánto tiempo tiene viviendo en este país?

DSRIP 10 Encuesta sobre el cuidado de la salud del condado**Cuál es el idioma que se habla en su casa la mayor parte del tiempo? (marque uno)**

- Inglés
- español
- árabe
- guyanés
- mandarín
- Otro (por favor especifique)

Cuál es su edad?

- 18-24
- 25-34
- 35-44
- 45-54
- 55-64
- 65-74
- 75-84
- 85 años o mayor

Mi estado civil es...

- Actualmente casado (a) y/o viviendo juntos, o viviendo con alguien en una relación conyugal similar al matrimonio
- Nunca casado (a) o no vivo con alguien en una situación similar al matrimonio
- Separado (a)
- Divorciado (a) o formalmente viviendo con alguien en una relación parecida al matrimonio
- Viudo (a)

DSRIP 10 Encuesta sobre el cuidado de la salud del condado

Cuál es el nivel más alto de educación que tiene?

- Menos que el 6to grado
- 7mo a 10mo grado
- 11 grado
- 12 grado
- Diploma equivalente a bachillerato
- Alguna Universidad
- Asociados degre
- Graduado de Universidad
- Maestría o doctorado

Mi situación laboral es...

- Actualmente estoy trabajando a tiempo complete (propietario o trabajando para otro)
- Actualmente trabajo medio tiempo (retirado o no)
- Actualmente desempleado pero buscando por empleo
- Actualmente desempleado y no buscando empleo
- Retirado y no trabajando
- Actualmente incapacitado y no empleado

Durante los últimos 12 meses, cuál fue su ingreso total del hogar antes de impuestos incluyendo los salarios y otros ingresos de todos los que viven allí?

- Menos que \$5,000
- \$5,000 a 9,999
- \$10,000 a \$19,999
- \$20,000 a \$29,999
- \$30,000 a \$39,999
- \$40,000 a \$49,999
- \$50,000 a \$75,000
- \$75,000 o mas
- Rechaza
- No sabe

DSRIP 10 Encuesta sobre el cuidado de la salud del condado

Describa su situación actual de vivienda (seleccione una respuesta)

- Propietario de cas
- Rentando una casa o apartamento
- Viviendo temporariamente con unos amigo/familiar
- Viviendo en un motel
- Viviendo en la calle
- Viviendo en un hogar de grupo
- Otro (por favor especifique

Si usted no nació en los Estados Unidos, ¿cuánto tiempo hace que vive en este país?

- Menos de un años
- Uno a cinco años
- Más de cinco años
- No se

Dibujo de Premios en Efectivo

Si usted desea participar en el sorteo por uno de los tres premios de \$500, \$250 o \$100 por favor entre el numero en el frente de la tarjeta postal, en el correo electrónico que se le envió, o en el numero que se le dio por la persona que le esta haciendo la siguiente encuesta. Ese número solo será usado para seleccionar el ganador.

Para inscribirse en el sorteo por favor proporcione su dirección de correo electrónico o número de teléfono (esta información sólo será utilizada para el dibujo y no será compartida).

dirección de correo electrónico

número de teléfono

Le gustaría participar en una discusión de grupo de una hora sobre las necesidades del cuidado de la salud? Si es seleccionado se le pagaran \$30 por su tiempo

Populations are from the 2011 US Census Bureau Bridge File

Median Household Income and Families Below Poverty are from US Census Bureau's American Community Survey-3 year estimates

County Pop. estimates are by race and Hispanic origin. The total county pop. estimate includes "Other" and unknown races

For income and poverty indicators, Hispanics are not excluded from the Black and Asian/Pacific Islander categories.

Pacific Islanders are not included in the Asian/Pacific Islander category.

Source: US Department of Labor Data as of July 2013

Labor force is the total number of employed and unemployed individuals.

Unemployed is defined as a person without a job, actively seeking employment and available for work.

Part-time workers are considered employed.

Source: NYSDOH DSRIP Medicaid Dashboards, DSRIP-B8-Medicaid Enrollment by Member County. US Bureau of Census 2013 Population Estimates

Albany County Health Department and St. Peter's Health Partners (St. Peter's, Albany Memorial)

Prevention Agenda Priorities:

- **Chronic Disease--Asthma**
- **Chronic Disease—Diabetes**
- **Mental Health/Substance Abuse (Opiate Abuse & Smoking in population with Mental Illness)**

CHIP/CSP Strategies

ASTHMA

- Improve and expand asthma care transition programs (ED and in-patient referrals);
- Primary care provider referrals for asthma education and self-management programs;
- Use of Asthma Action Plans by primary care providers and schools;
- Improve use of controller medications via affordable prescription options and by Community Pharmacy Intervention Program;
- Community asthma education efforts;
- Community environmental efforts such as no smoking policies for low income housing and in-home visits for asthma trigger evaluation.

DIABETES

- Increase screening/referrals by primary care providers, hospitals, and CBO's to National Diabetes Prevention Program (NDPP);
- Provide diabetes and nutrition education to mothers with gestational diabetes;
- Maintain ongoing coalition of diabetes service providers;
- Provide nutrition education to food pantry and food bank staff;
- Expand school, employment and/or community wellness programs.

SUBSTANCE ABUSE-Opiate Abuse

- Add opiate abuse modules to school health education programs;
- Promote "Take Back Drug" (old prescriptions) Program;
- Increase primary care provider knowledge of resources and best practices for opiate addiction;
- Assist primary care providers with prescription pattern reviews and/or motivational interviewing and SBIRT techniques;

- Co-location of behavioral health professionals/case managers at Primary Care offices;
- Increase providers licensed to prescribe medications to treat opiate addictions;
- Form task force to facilitate knowledge of opiate abuse resources and implement CHIP activities.

Mental Health-Smoking in Population with Mental Illness

- Provide information and technical assistance to Mental Health facilities to enable them to create tobacco-free environments.

Schenectady County Health Department and Ellis Hospital

Prevention Agenda Priorities:

- **Smoking and Asthma**
- **Diabetes and Obesity**
- **Inappropriate ED Utilization**
- **Mental Health/Substance Abuse**
- **Adolescent Pregnancy**

CHIP/CSP Strategies

ASTHMA and SMOKING

- Improve asthma patient care via care coordination (“Core Control” navigators focus on asthmatics utilizing ED for care), asthma education, and home visit assessments (Healthy Neighborhood);
- Provider education on NIH Asthma Guidelines;
- Smoke-free municipal housing units; outdoor tobacco-free policies;
- Reduce licensed tobacco retailers;
- Provide information and technical assistance to Mental Health facilities to enable them to create tobacco-free environments.

DIABETES and OBESITY

- Certified diabetes educator located in primary care setting; shared medical appointments for primary care with diabetic patients;
- Primary care providers screening all West Indian patients, regardless of BMI and age;
- Diabetic self-management classes in faith-based communities;
- Increase opportunities for physical activities in youth.

INAPPROPRIATE ED UTILIZATION

- Awareness of Core Central (health home) as alternative to ED visits via self-referral or community outreach;
- Study of ambulance calls for overuse of ambulance transport to ED;
- Continue “Right Care, Right Place” initiatives such as urgent care and “Fast Track”.

MENTAL HEALTH/SUBSTANCE ABUSE

- Reconfigure county mental health practitioners into Mental Health Task Force;
- Peer monitoring program at Core Central; add mental health navigator to Core Central;
- Resume social worker assigned to Family Health Center;
- Conduct chart review of newborn drug-related hospitalizations;
- Conduct chart review of post-partum mothers for post-partum depression.

ADOLESCENT PREGNANCY

- Increase awareness of existing teen pregnancy prevention programs among primary care providers and other community partners;
- Provide training on sexuality and pregnancy prevention to health care providers, particularly in school-based clinics.

Rensselaer County Health Department and St. Peter’s Health Partners (Samaritan and St Mary’s)

Prevention Agenda Priorities (HCDI):

- **Chronic Disease-Asthma**
- **Chronic Disease-Diabetes**
- **Mental Health/Substance Abuse (Opiate Abuse)**

Rensselaer-Added Priorities:

- **Obesity**
- **Tobacco Use in Population with Mental Illness**
- **Risky Sexual Behavior in Teens**

CHIP/CSP Strategies

See Albany County/St Peter’s Health Partners Strategies for HCDI-based Priorities (Asthma, Diabetes, Opiate Abuse).

OBESITY

- Food pantry recipients referred for nutrition counseling;
- Provide breastfeeding and lactation support;
- Implement "Activity Bursts in the Classroom" fitness program in schools.

TOBACCO USE AMONG POPULATION WITH MENTAL ILLNESS

- Provide information and technical assistance to Mental Health facilities to enable them to create tobacco-free environments.

RISKY SEXUAL BEHAVIOR IN TEENS

- Outreach and education via Social Media;
- Cross-agency outreach opportunities targeting teens;
- Develop and distribute list of identified services and providers of teen services;
- Close working relationships among agencies providing STD and teen pregnancy services.

Saratoga County Public Health Nursing Service and Saratoga Hospital

Prevention Agenda Priorities:

- **Prevent Chronic Disease through Prevention of Obesity**
- **Prevent Chronic Disease through High Quality Chronic Disease Preventive Care and Management in Clinical and Community Settings**
- **Promote Mental, Emotional and Behavioral (MEB) Health and Prevent Substance Abuse**

Saratoga Hospital Additional

- **Prevent HIV/STD,s Vaccine-Preventable Disease and HAIs**
- **Healthy Infants and Children**

CHIP/CSP Strategies**OBESITY IN CHILDREN AND ADULTS**

- Work with health care providers, hospitals, insurance companies in providing information on the benefits of breastfeeding;
- Work with hospitals to increase breastfeeding and provide post-hospitalization referrals for lactation counseling;
- Work with school districts and preschools to follow IOM recommendations regarding competitive foods and sugar sweetened beverages;
- Community education regarding physical activity and proper nutrition;

--Increase comprehensive worksite wellness programs among small and intermediate sized employers.

PROMOTE MENTAL HEALTH AND PREVENT SUBSTANCE ABUSE

--Public awareness campaign regarding prescription drug drop boxes throughout county;

--Increase support groups for individuals suffering from MEB issues;

--Investigate programs to reduce the stigma of mental illness and substance abuse, including suicide;

--Partner with stakeholders to improve access to psychological interventions and counseling;

-Provide MH counseling at Saratoga Community Health Center

--Conduct active screening for depression in clinical settings such as urgent care centers, EDs, and primary care sites.

HIGH QUALITY CHRONIC DISEASE PREVENTIVE CARE AND MANAGEMENT IN CLINICAL AND COMMUNITY SETTINGS

--Work with providers to utilize standardized education tool for diabetes and congestive heart failure (CHF) patients ("ZONE" educational tool);

--Promote diabetes and CHF self-management education training programs;

--Work with OFA in recruiting individuals to be "peer leaders" for diabetes and CHF self-management programs.

PREVENT HIV/STD, VACCINE-PREVENTABLE DISEASES AND HAI'S (Saratoga Hospital)

-Increase pertussis vaccination rates by vaccinating all parents and other caregivers of infants born at Saratoga Hospital;

--Reduce HAI's by reducing use of antibiotics at hospital and in community.

HEALTHY INFANTS AND CHILDREN (Saratoga Hospital)

-Open new extension clinics;

-Provide dental services at Saratoga Community Health Center.

Fulton County Public Health Service

Prevention Agenda Priorities:

- **Chronic Disease-Obesity in Children and Adults**
- **Chronic Disease-Access to High Quality Chronic Disease Preventive Care and Management in Clinical and Community Settings**
- **Maternal Infant and Child Health- Childhood Lead Poisoning**

Community Input

The Fulton County CHA/CHIP was developed in collaboration with Nathan Littauer Hospital.

Fulton was part of a Adirondack Rural Health Network (ARHN) Survey of selected healthcare and service providing agencies (12/12-1/13). There were 258 responses, for a response rate of 45.7%. 65 identified Fulton County as part of their catchment area. Survey results include:

Top Emerging Issues: obesity-related health issues; increase in substance abuse; mental illness.

Populations needing targeted interventions: poor; children; elderly; individuals with mental health issues; substance abusers.

Issues of Greatest Importance: general health and safety of physical environment; substance abuse; mental health screening and treatment; prevention of heart disease.

Concerns: technology not highly utilized; future funding (reimbursement rates, grants).

Gloversville was identified as a problematic area based on the Fulton County provider respondents.

Fulton County conducted a local Stakeholder Meeting in May 2013. A County Health Assessment Team (CHAT) was formed from staff of Fulton County Public Health and Nathan Littauer Hospital, and met from 7/13 to 10/13 to identify the Priorities Areas, and develop the CHIP/CSP.

The CHAT identified the following challenges: lack of transportation; access to care; mental health clientele disproportionately affected by smoking; “healthy foods” more costly; limited access to areas for play/exercise; smoking in pregnancy and exposure to second hand smoke; waiting list for appointments for mental health programs; lead poisoning (funding and staff).

St Mary’s- Amsterdam conducted a 2012 Community Health Needs Assessment with included both Montgomery and Fulton County residents. The 4 Focus Areas chosen and the identified interventions are listed under Montgomery County/St Mary’s strategies.

CHIP/CSP Strategies

OBESITY IN CHILDREN AND ADULTS

--Work with health care providers, hospitals, insurance companies in providing information on the benefits of breastfeeding;

--Work with hospitals to increase breastfeeding and provide post-hospitalization referrals for lactation counseling;

--Work with school districts and preschools to follow IOM recommendations regarding competitive foods and sugar sweetened beverages;

--Community education regarding physical activity and proper nutrition;

--Increase comprehensive worksite wellness programs among small and intermediate sized employers.

PROMOTE MENTAL HEALTH AND PREVENT SUBSTANCE ABUSE

- Public awareness campaign regarding prescription drug drop boxes throughout county;
- Increase support groups for individuals suffering from MEB issues;
- Investigate programs to reduce the stigma of mental illness and substance abuse, including suicide;
- Partner with stakeholders to improve access to psychological interventions and counseling;
- Provide MH counseling at Saratoga Community Health Center
- Conduct active screening for depression in clinical settings such as urgent care centers, EDs, and primary care sites.

HIGH QUALITY CHRONIC DISEASE PREVENTIVE CARE AND MANAGEMENT IN CLINICAL AND COMMUNITY SETTINGS

- Work with providers to utilize standardized education tool for diabetes and congestive heart failure (CHF) patients ("ZONE" educational tool);
- Promote diabetes and CHF self-management education training programs;
- Work with OFA in recruiting individuals to be "peer leaders" for diabetes and CHF self-management programs.

PREVENT HIV/STD, VACCINE-PREVENTABLE DISEASES AND HAI'S (Saratoga Hospital)

- Increase pertussis vaccination rates by vaccinating all parents and other caregivers of infants born at Saratoga Hospital;
- Reduce HAI's by reducing use of antibiotics at hospital and in community.

HEALTHY INFANTS AND CHILDREN (Saratoga Hospital)

- Open new extension clinics;
- Provide dental services at Saratoga Community Health Center.

CHIP Strategies

OBESITY IN CHILDREN AND ADULTS

- Expand walk/bike to school programs;
- Increase public awareness regarding low cost physical activity sites; develop physical activity resource guide;
- Promote community, school and workplace gardens; use of Farmers Markets;
- develop a resource guide for "Healthy Eating" in Fulton County.

ADULT DIABETES SCREENING (in collaboration with Nathan Litchfield Hospital)

- Collect baseline tests for persons with diabetes and monitor for 6 months;
- Coordinate with “Health Link Littauer” in the use of ADA’s Diabetes Risk Test and refer “at risk” for followup;
- Provider education;
- Consumer awareness of diabetes risk factors and need for testing.

CHILDHOOD LEAD (in collaboration with Nathan Littauer Hospital)

- Expand “point of contact” lead testing in pediatric primary care offices;
- Utilize Electronic Medical Records in pediatric practices to trigger lead screening.

Montgomery County Health Department and St Mary’s Hospital

Prevention Agenda Priorities:

- **Obesity in Children and Adults**
- **Falls in the Vulnerable Population**

St. Mary’s Community Health Needs Assessment (Fulton and Montgomery County Residents):

- **Nutrition and Weight Status**
- **Access to Health Care Services**
- **Substance Abuse**
- **Falls Prevention**

Community Input-St Mary’s CHNA

St. Mary’s Healthcare Community Health Survey was a telephone-based stratified random sample of 750 adults (355-Fulton; 395- Montgomery). It was conducted by Professional Research Consultants from 9/12-11/12. The Fulmont Community Health Improvement Coalition (FCHIC) was formed. 38 individuals from health, social service agencies and other CBOs, participated in 3 Focus Groups during Nov. 2012. The FCHIC identified the 4 Focus Areas and intervention strategies.

Community Input-Montgomery County CHA/CHIP

Bassett Research Institute was contracted to coordinate the process. 3 Community Forums were held from 4/13-7/13 to review information, choose priorities and develop the CHIP. St Mary’s CHNA information was also utilized in this process. The focus groups identified lack of public transportation and the large low socioeconomic population as major health challenges.

St Mary's Focus Area Strategies**NUTRITION AND WEIGHT STATUS**

- Implement "Get Fit Amsterdam" program;
- Develop open gym policies;
- Increase community venues offering healthier food choices;
- Provide breastfeeding and lactation support; St Mary's becoming a "Baby Friendly" hospital.

ACCESS TO CARE

- St Mary's Urgent Care open 7 days a week from 8 AM to 8 PM;
- Develop a guide of drug price comparisons and prescription assistance programs;
- Community education and utilization of hospital "enroller to increase health insurance enrollment.

MENTAL HEALTH

- Reduce suicide attempts in youth through school and community education;
- Conduct a chart review of St Mary's records associated with suicide attempts.

FALL PREVENTION

- Community Education; coordinate a "Fall Prevention Day";
- Develop and circulate information on fall risks and prevention;
- Recruit healthcare professionals in the fall prevention initiative.

Montgomery County--St Mary's CHIP/CSP Strategies**OBESITY IN CHILDREN AND ADULTS**

- Outreach to schools, businesses, CBO's in order to adopt policies and implement practices to reduce consumption of sugary drinks; offer water as a drink option at county venues and events;
- Use social media to promote awareness of obesity prevention strategies and practices;
- Expand public-private partnership to implement community-based obesity prevention services such as joint use agreements with local fitness facilities, recreation centers, or schools that allow free or low cost access for recreation and physical activity opportunities.

FALLS IN THE VULNERABLE POPULATION

- Screening of older adults using "Timed Up and Go" and Risk Assessment questionnaires;
- Integrate exercise and falls prevention into Physical Therapy;

- Promote evidence-based programs for healthcare providers such as “Stopping Elderly Accidents, Deaths and Injuries (STEADI)” Toolkit;
- Promote community-based programs for falls prevention;
- Target fall risk in housing located in disadvantaged areas.

Columbia County Health Department and Columbia Memorial Hospital

Prevention Agenda Priorities:

- **Chronic Disease-Reduce Obesity in Children and Adults**
- **Chronic Disease- Reduce Smoking and Related Illness**
- **Mental Health Promotion and Substance Abuse Prevention-Prescription Drug Use among Adolescents**
- **Arthropod-Borne Illness**
- **Occupational Injury**

CHIP/CSP Strategies

OBESITY IN CHILDREN AND ADULTS

- Increase physical activity in schools;
- Joint agreements between schools and community to improve physical activity;
- Promote “Eat Smart NY” Program;
- Implement “Healthy Mondays” Program;
- Promote breastfeeding by support at hospital, working with employers, and via public education.

REDUCE SMOKING AND RELATED ILLNESS (in collaboration with Rip Van Winkle Tobacco-Free Action of Columbia and Greene Counties)

- Conduct broad reaching media campaigns;
- Promote anti-smoking policies;
- Provide educational opportunities at schools.

PRESCRIPTION DRUG ABUSE PREVENTION AMONG ADOLESCENTS

- Implement prevention initiatives with Hudson City School District;
- Community-wide media campaign regarding the dangers of prescription drug misuse;
- Community collection program for unused prescription drugs;
- Work with Columbia/Greene Controlled Substance Task Force on: practice guidelines for providers; community prevention; and linkages to treatment.

ARTHROPOD-BORNE ILLNESS-LYME DISEASE

- Increase community signage;
- Continuing Education and Community Outreach.

OCCUPATIONAL INJURY

- Work with employers to increase awareness of problem, and educate employees on workplace safety.

Greene County Health Department

Prevention Agenda Priorities:

- **Chronic Disease-Obesity in Children and Adults**
- **Promote Mental Health and Prevent Substance Abuse**

CHIP Strategies

OBESITY

- Promote community weight-loss programs;
- Media and web campaigns on proper nutrition and physical activity;
- Work with schools to improve nutrition and physical activity;
- Promote "Eat Smart NY" Program;
- Promote Farmers Markets and make accessible to SNAP and WIC recipients;
- Promote 8-week Greenwalks Program;
- Increase awareness of hiking and biking trails.

PROMOTE MENTAL HEALTH AND PREVENT SUBSTANCE ABUSE

- Support efforts to integrate MEB disorder screening and treatment into primary care;
- Develop and conduct anti-stigma campaign;
- Recruit primary care physicians to participate in “Co-location” Program.

Dutchess County Health Department**Prevention Agenda Priorities:**

- **Chronic Disease-Reduce Obesity in Children and Adults**
- **Chronic Disease-High Quality Chronic Disease Preventive Care and Management**
- **Safe and Healthy Environment-Reduce the Burden of Tick Borne Diseases**
- **Promote Mental Health/Prevent Substance Abuse**

CHIP Strategies**REDUCE OBESITY IN CHILDREN AND ADOLESCENTS**

- Implement nutritional and physical activity initiatives in early childcare and school settings;
- Promote and expand worksite wellness programs;
- Offer provider and community education concerning healthy nutrition and physical activity;
- Promote policy changes at the local level to encourage healthy eating habits and to increase physical activity.

HIGH QUALITY CHRONIC DISEASE PREVENTIVE CARE AND MANAGEMENT

- Reduce barriers and increase the percent of children and adults with health insurance;
- Increase access to cardiovascular disease, cancer, and diabetes screening via community education, and collaboration with healthcare providers and community-based organizations in the identification of underserved groups and linking them to available screening programs;
- Increase access to evidence-based programs through technical assistance/quality improvement training to healthcare providers (especially those serving disparate communities);

-Improve clinical-community linkages that connect patients to self-management education and community resources.

REDUCE THE BURDEN OF TICK BORNE DISEASES

-Offer technical assistance and CMEs to providers to achieve consistency of healthcare for Lyme disease and other tick borne illnesses;

-Increase public knowledge of environmental alternatives and personal prevention procedures that reduce tick exposures.

PROMOTE MENTAL HEALTH AND PREVENT SUBSTANCE ABUSE

-Develop a county-wide Plan to address prescription drug abuse;

-Implement school-based educational programs regarding prescription drug abuse;

Implement a public education campaign regarding prescription drug abuse;

-Expand overdose prevention measures, including use of naloxone by first responders;

-Ensure access to and use of treatment for opioid dependence.

Ulster County Health Department

Prevention Agenda Priorities

- **Chronic Disease Prevention-Tobacco Use**
- **Chronic Disease Prevention-Youth Obesity**
- **Promote Mental Health/Prevent Substance Abuse- Suicide Prevention**

CHIP Strategies

TOBACCO USE (in collaboration with the Tobacco Free Action Coalition of Ulster County)

-Promote local legislation to prohibit new tobacco retail licenses from being granted within a designated distance from public and private schools, and increase the minimum age to purchase tobacco products from 18 to 21 years of age;

-Enhance Adolescent Tobacco Use Prevention Act (ATUPA) enforcement;

-Implement a community education campaign regarding the negative effects of tobacco marketing towards youth.

YOUTH OBESITY

-Implement "Eat Smart New York" Program—a nutritional educational program for Ulster County residents;

-Improve access to healthy foods and opportunities for physical activity through the “Creating Healthy Places to Live, Work and Play” Initiative;

-Improve and publicize the County Rail-Trail System.

SUICIDE PREVENTION

-Identify and reduce barriers to current suicide prevention programs available to county residents;

-Develop a suicide prevention Smart Phone application;

-Develop a public education campaign regarding safe and secure storage of firearms and safe disposal of unwanted prescription medications;

-Implement a “drop box” system for unused prescription medications throughout the county.

Warren County Health Department/Glens Falls Hospital

Prevention Agenda Priorities:

- **Prevent Chronic Disease-High Quality Chronic Disease Preventive Care and Management**
- **Promote Mental, Emotional, and Behavioral (MEB) Health**

CHIP Strategies

HIGH QUALITY CHRONIC DISEASE PREVENTIVE CARE AND MANAGEMENT

-Work with Glens Falls Hospital Cancer Services in practice-based system changes designed to increase cancer screening;

-Provide educational sessions to healthcare providers, home health agencies, and other organizations about the availability of colorectal screening kits, and develop a system to distribute kits;

-Home Care Agencies will utilize COPD management and diabetes foot care and education programs with their patients;

-County Maternal and Child Health nurses provide education on the dangers of second hand smoke and ideas for reducing exposure in order to reduce childhood asthma;

-WCDOH will work with Glens Falls Hospital by referring eligible patients to the Medicaid Home Health Program;

-Work with OFA in recruiting individuals to be “peer leaders” for Chronic Disease Self-Management Program;

-Work with Glens Falls Hospital in expanding the worksite wellness via the “Creating Healthy Places to Live, Work and Play” Program;

-Work with Glens Falls Hospital to strengthen the community chronic disease prevention messaging.

PROMOTE MENTAL, EMOTIONAL AND BEHAVIORAL HEALTH

-WCDOH will screen all clients in MOMS Program for post-partum depression and work with other providers so all pregnant women would be screened for depression;

-Homecare workers will conduct depression assessments for their adult patients, and make appropriate referrals as needed;

-Work with Warren-Washington County Office of Community Services to develop and implement school-based mental health services;

-Offer educational programs for schools and communities regarding suicide prevention that target both the adolescent and adult populations;

-Work with Warren-Washington County Office of Community Services to provide health education to the population that utilize mental health services.

% **Prenature Death** was the percent of all deaths that were among persons aged less than 75 years.

YPLL rate was the total years of life lost before the age of 75 years per 100,000--calculated by subtracting the age of those who died from 75.

*Triage: Volume associated with Beneficiaries with ANY admission or ED visit rate per population vs. Benchmark (NYS other than NYC).

Major intervention focus is diversion to other lower intensity delivery site.

**Manage: Volume associated with average number of admissions or ED visits exceeding Benchmark.

Major intervention focus is addressing "Frequent Fliers".

Observations Approximately half of the Admission Gap is associated with Behavioral Health Disorders (Southern 2 counties 70%), as is approximately 60% of the ED gap.

- Observations (vs. Population Mix)
- The 4 Core counties have higher gaps for BOTH Admissions and ED visits for Cardiovascular, Diabetes, Respiratory, and Moderate Mental Disorders.
 - The 4 Core counties have higher gaps for ED visits but lower gaps for Admissions for Significant Mental Disorders and Substance Use Disorders.
 - The 2 Mohawk Valley counties have lower gaps across the board relative to their population Benchmarks than the 4 (much more urban) Core counties.
 - In Fulton County, where there is a gap, there is a somewhat higher reliance on Inpatient Admissions vs. ED visits for treatment of primarily chronic physical conditions.
 - The 2 So. Suburban counties have somewhat higher Admission gaps for Cardiovascular, Diabetes, and Significant Mental Disorders.
 - The 2 So. Suburban counties have much lower gaps in ED visits across all categories.
 - The 2 Hudson Valley counties have lower gaps for BOTH Admissions and ED visits for Cardiovascular, Diabetes, Respiratory, and Moderate Mental Disorders.
 - The 2 Hudson Valley counties have much higher gaps for Admissions of people with Significant Mental Disorders and Substance Use Disorders.

Project Intervention Moderate Mental Disorders (e.g. Depression, Anxiety, ADHD, PTSD, etc.) are included in Primarily Physical Care since most cases Notes: could be managed effectively in Primary Care with appropriate Behavioral Health consultation. Moderate Depression and Anxiety

Significant Mental Disorders (e.g. Psychosis, Schizophrenia, Major Depression/Bi-polar, etc.) and Substance Abuse Disorders

ED Gap/Admit Gap is a proxy measure of program focus and service availability. For example, lack of behavioral health dedicated

*Triage: Volume associated with Beneficiaries with ANY admission or ED visit rate per population vs. Benchmark (NYS other than NYC).

Major intervention focus is diversion to other lower intensity delivery site.

**Manage: Volume associated with average number of admissions or ED visits exceeding Benchmark.

Major intervention focus is addressing "Frequent Fliers".

AMC Observations Approximately half of the Admission Gap is associated with Behavioral Health Disorders (Southern 2 counties 70%), as is approximately 60% of the ED gap.

Observations AMC PPS: The 4 Core counties have higher gaps for BOTH Admissions and ED visits for Cardiovascular, Diabetes, Respiratory, and Moderate Mental Disorders.
(vs. Population Mix) The 4 Core counties have higher gaps for ED visits but lower gaps for Admissions for Significant Mental Disorders and Substance Use Disorders.

The 2 So. Suburban counties have somewhat higher Admission gaps for Cardiovascular, Diabetes, and Significant Mental Disorders.
The 2 So. Suburban counties have much lower gaps in ED visits across all categories.

The 2 Southern counties have lower gaps for BOTH Admissions and ED visits for Cardiovascular, Diabetes, Respiratory, and Moderate Mental Disorders.
The 2 Southern counties have much higher gaps for Admissions Significant Mental Disorders and Substance Use Disorders.

Project Intervention Notes: Moderate Mental Disorders (e.g. Depression, Anxiety, ADHD, PTSD, etc.) are included in Primary Care with appropriate Behavioral Health consultation. Moderate Depression and Anxiety in particular are common chronic co-morbidities that impair adherence to management of other chronic physical conditions.

Significant Mental Disorders (e.g. Psychosis, Schizophrenia, Major Depression/Bi-polar, etc.) and Substance Abuse Disorders typically require significant interventions managed by a Behavioral Health professional, including crisis intervention services.

ED Gap/Admit Gap is a proxy measure of program focus and service availability. For example, lack of behavioral health dedicated beds could lead to more ED crisis use. Also, lack of accessible ED could lead to more admissions. The higher the value, the more reliance on Outpatient ED use vs. Inpatient Admissions.

*Triage: Volume associated with Beneficiaries with ANY admission or ED visit rate per population vs. Benchmark (NYS other than NYC).

Major intervention focus is diversion to other lower intensity delivery site.

**Manage: Volume associated with average number of admissions or ED visits exceeding Benchmark.

Major intervention focus is addressing "Frequent Fliers".

ED Gap/Admit Gap			3.7		5.6				3.9		4.3		31.9		8.4		5.1

Major Observation Approximately half of the Admission Gap and ED gap is associated with Behavioral Health Disorders

Observations AMC PPS: The 5 counties have higher gaps for BOTH Admissions and ED visits for Cardiovascular, Diabetes, Respiratory, and Moderate Mental Disorders.
 (vs. Population Mix) The 5 counties have higher gaps for ED visits but lower gaps for Admissions for HIV, Significant Mental Disorders, and Substance Use Disorders.

Project Intervention Moderate Mental Disorders (e.g. Depression, Anxiety, ADHD, PTSD, etc.) are included in Primarily Physical Care since most cases could be managed effectively in Primary Care with appropriate Behavioral Health consultation. Moderate Depression and Anxiety in particular are common chronic co-morbidities that impair adherence to management of other chronic physical conditions.

Significant Mental Disorders (e.g. Psychosis, Schizophrenia, Major Depression/Bi-polar, etc.) and Substance Abuse Disorders typically require significant interventions managed by a Behavioral Health professional, including crisis intervention services.

ED Gap/Admit Gap is a proxy measure of program focus and service availability. For example, lack of behavioral health dedicated beds could lead to more ED crisis use. Also, lack of accessible ED could lead to more admissions. The higher the value, the more reliance on Outpatient ED use vs. Inpatient Admissions.

CAPITAL REGION, MOHAWK AND HUDSON VALLEY 10 COUNTY DSRIP COMMUNITY NEEDS ASSESSMENT

Frequently Asked Questions – 12/4/14

1. How do we target where to locate specific interventions for the DSRIP project, determine how many people will be affected (Scale), and set implementation goals (Speed)?

- A. Most of the information needed for this is in Appendix F-3 Intervention Groups and Major Driver Drill-Downs. In this Appendix:
1. Review the 3 Intervention Groups and Definitions (p. 2-3) - Hot Spots (Superutilizers), “Warm Spots” (Chronic Behavioral or Physical), and General (everyone else). Different types of project interventions and engagement will apply to each.
 2. *Where to focus interventions overall:* Look at the Characteristics and Encounter Rates table (p. 4) and Maps (p. 5-7) to determine the number of people falling into each intervention group in each county and an overview of where they are located.
 3. *Where to focus your health need intervention:* Use the Data Dictionary of the Major Driver Drill-Down Indicators (p. 8-9) to identify the demographic indicators and health conditions you want to follow. Then:
 - a. Use the DSRIP Intervention Groups - Scale and Focus Hotspots table (p. 10-12) to identify which intervention and age groups are disproportionately higher for the Medicaid & Uninsured population in your selected health condition(s).
 - i. These serve as priority targets to inform Scope and Speed.
 - b. Identify the county(s) where that health need is most prevalent for all Medicaid and Uninsured patients in the County Demographics and Health Indicators table (p. 13-18).
 - i. Note: Pink highlighted data are 20% higher than Region here & below.
 - c. Use the Neighborhood Demographics and Health Indicator tables (p. 19-66) to clarify where the health needs are highest.

2. How do we quickly find CNA material relevant to our DSRIP Project?

- A. Use Contents of the CNA and the keyword Search Function in the CNA & Appendices.
1. The Contents at the beginning of the CNA includes hotlinks to Major Report Sections, Tables, Figures, and Appendices throughout the report. Use this information along with the detailed drill-down data points in the Appendices.
 2. The PDF keyword Search function allows you to search the CNA and Appendices for relevant words and phrases (e.g. Asthma, Uninsured, Substance, Tobacco, etc.).
 - a. The data dictionary in Appendices F-3 provides a list of data points available in this Major Driver Appendix. Copy the name of any data point of interest into the Search box and hit enter to jump to the first occurrence of that indicator. Hit enter again to jump to the next, and repeat.

Appendix F-3 Intervention Groups and Major Driver Drill-Downs

Addressing Scale for the Medicaid and Uninsured Populations

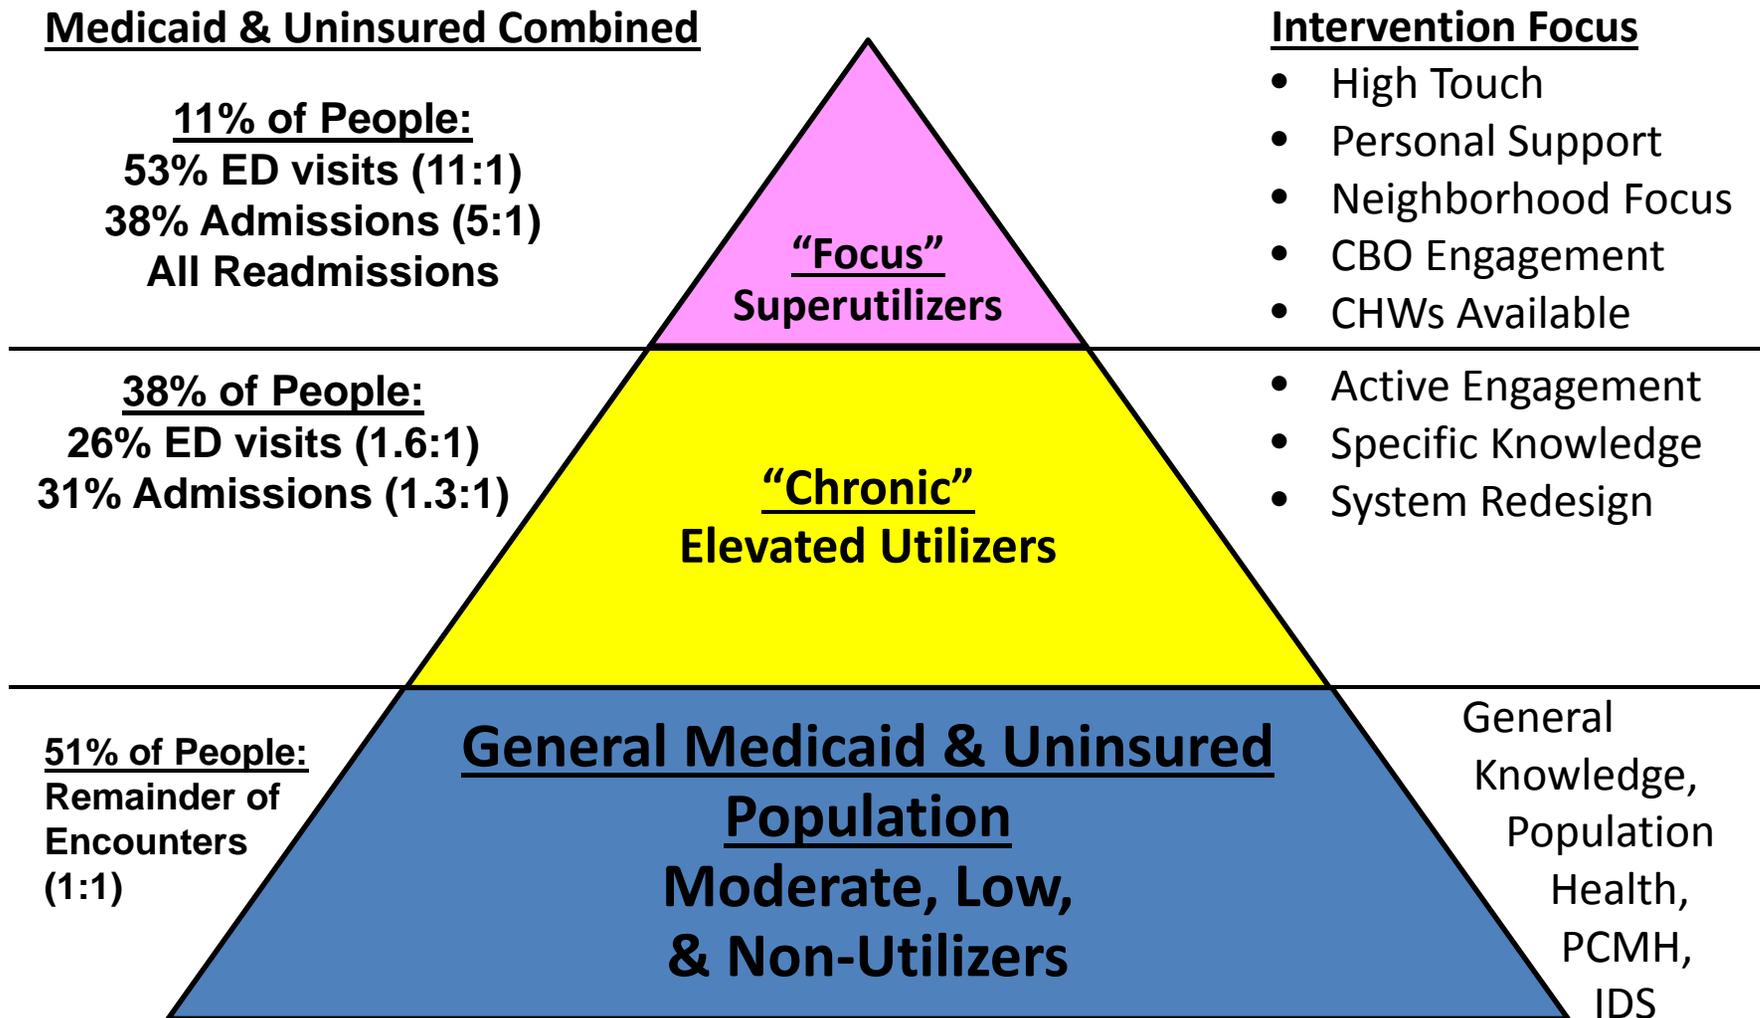

“Hotspotting” is the process of identifying where the greatest opportunity exists to improve utilization of services (e.g. the most avoidable encounters for fewest people). In the Intervention Pyramid that follows, this population is referred to as the “Focus” population. They are the individuals with the highest utilization ratio compared to the general population. Given the number of avoidable visits this group could avoid, more labor intensive interventions aligned with the needs of this population (e.g. high touch home visits) can be cost effective. Super-utilizers in the top (pink) section will benefit from personal high touch interventions beyond those of traditional health care delivery to address the SDS drivers of their ED and IP hospital use.

To improve the overall avoidable use of hospital ED and IP services, and expand scale of those engaged, we added the concept of “warmspotting.” It is similar to hotspotting, but the utilization rates aren’t as disproportional to the general population, so less intensive engagement is merited. These are people with elevated use of services identified as “Chronic” in our intervention priority pyramid. Specific interventions aligned with their needs (e.g. specific knowledge and improved engagement in self-care – Domain 3) can be cost effective at modest increased cost per person. Interventions to address the elevated Coordination, knowledge, and support needs of people with Chronic behavioral and physical conditions are in the middle (yellow) section of the pyramid.

System Transformation can move the baseline and “raise all boats” – for the above as well as the remainder of the population (e.g. the General Medicaid and Uninsured populations at the bottom of our pyramid). Specific interventions include Domain 2 system transformation and Domain 4 population health interventions can improve utilization for all. Interventions to address Access issues through overall system redesign are at the bottom (blue) section of the pyramid. They “raise all boats” and apply to all of the subpopulations, including the General population of moderate and low utilizers.

Using this framework, personal demographics, socio-demographic drivers in the neighborhood where the person lives, ED and Inpatient hospital service use, and drivers of this use are summarized below. Summaries are presented overall by county, summarized for counties in each PPS, and within each county by local neighborhood (combinations of zip codes). Presented are overall counts to inform scale, use rates, and relative risk to allow targeting within each of the three intervention groups.

Intervention Groups* & Priorities Supported by CNA

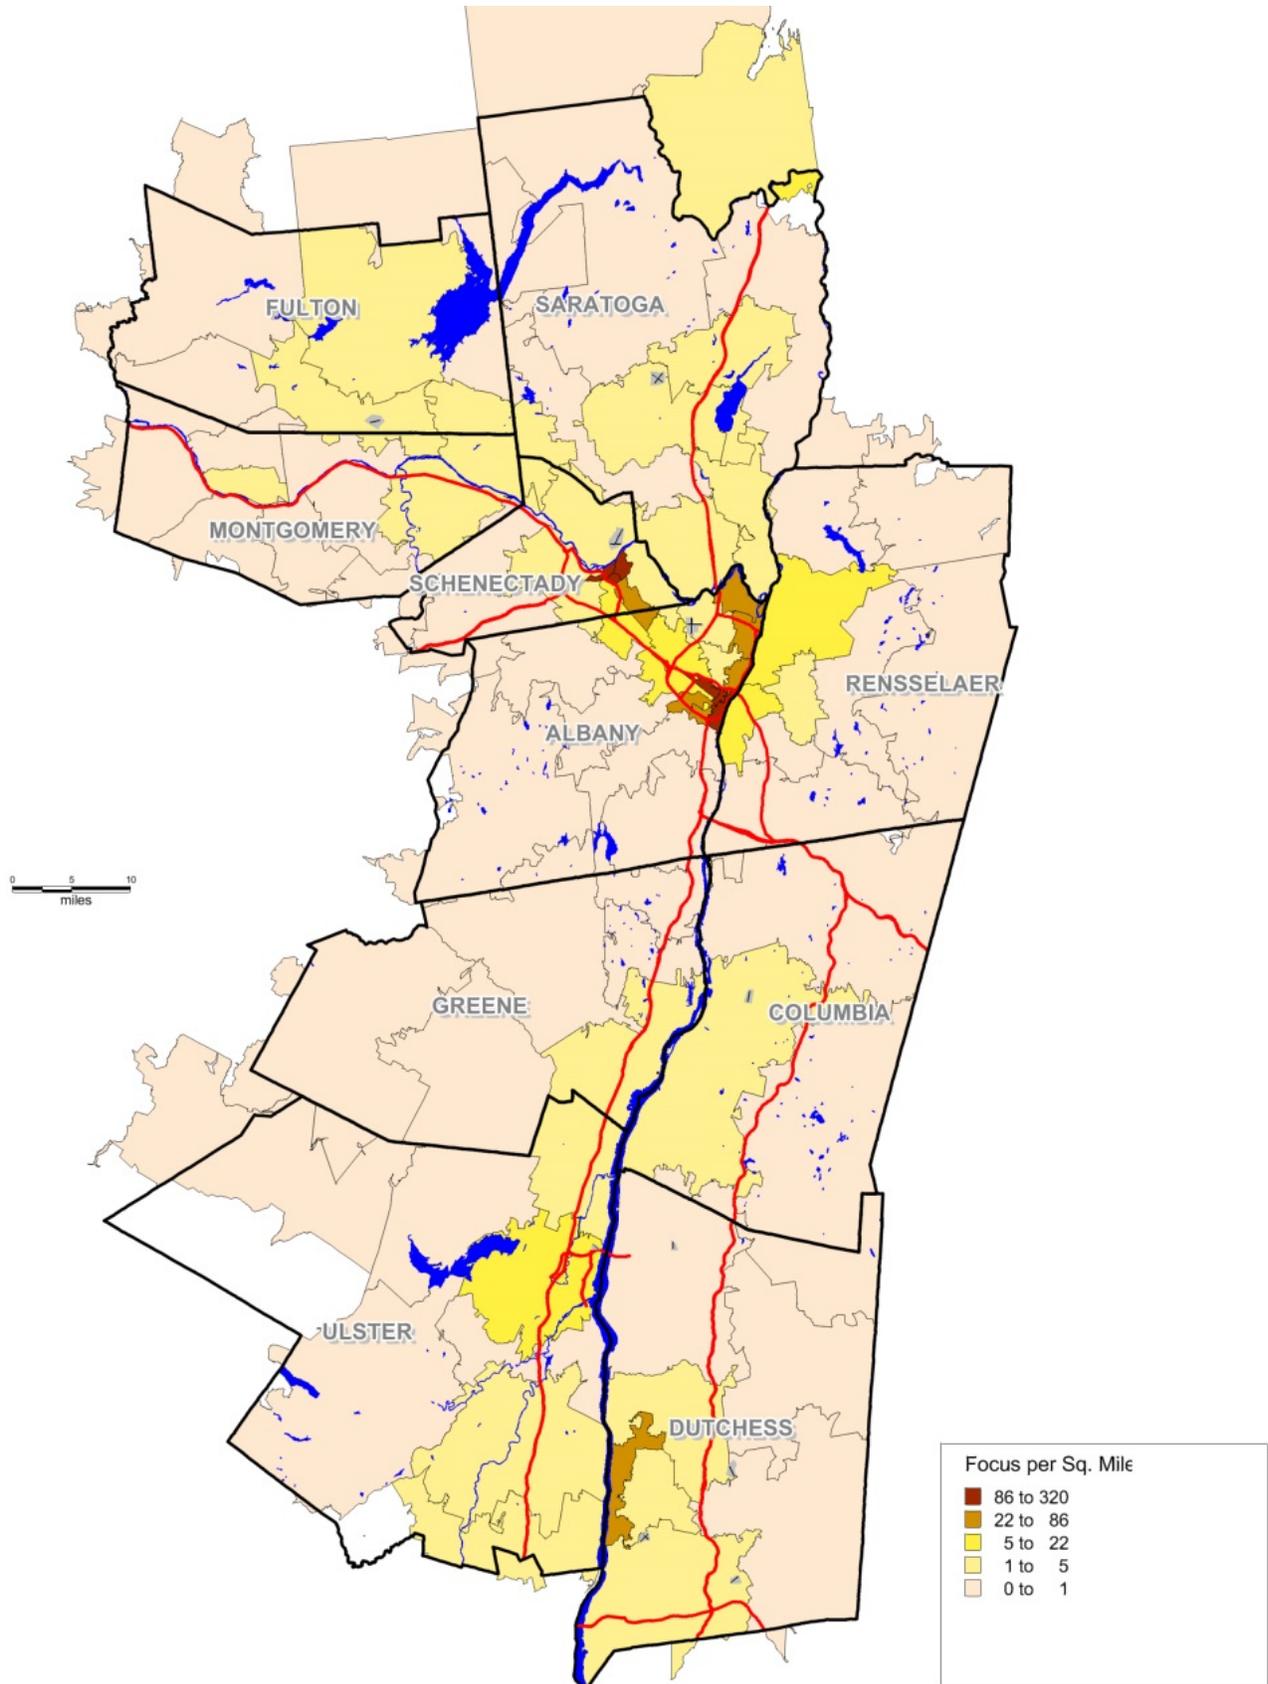

***Intervention Groups:** **Focus**=ED Superutilizers (2+/6 mo., Behavioral Health driven) or 30 day Readmission History, **Chronic**= 4+ of 10 Chronic Physical Conditions or Sig/Mod Behavioral Health Diagnosis, **General**=none of above (Relative Risk/ROI values justify (but set limits) on spending more to achieve greater return.)

*Intervention Groups: Focus=ED Superutilizers (Behavioral Health driven) or 30 day Readmission History, Target = 1.07+ vs. 11 Co. Region Rates
 Chronic= 4+ of 10 Chronic Physical Conditions or Behavioral Health Diagnosis,
 General=none of above (Relative Risk/ROI values justify (but set limits) on spending more to achieve greater return. 1=General Population)

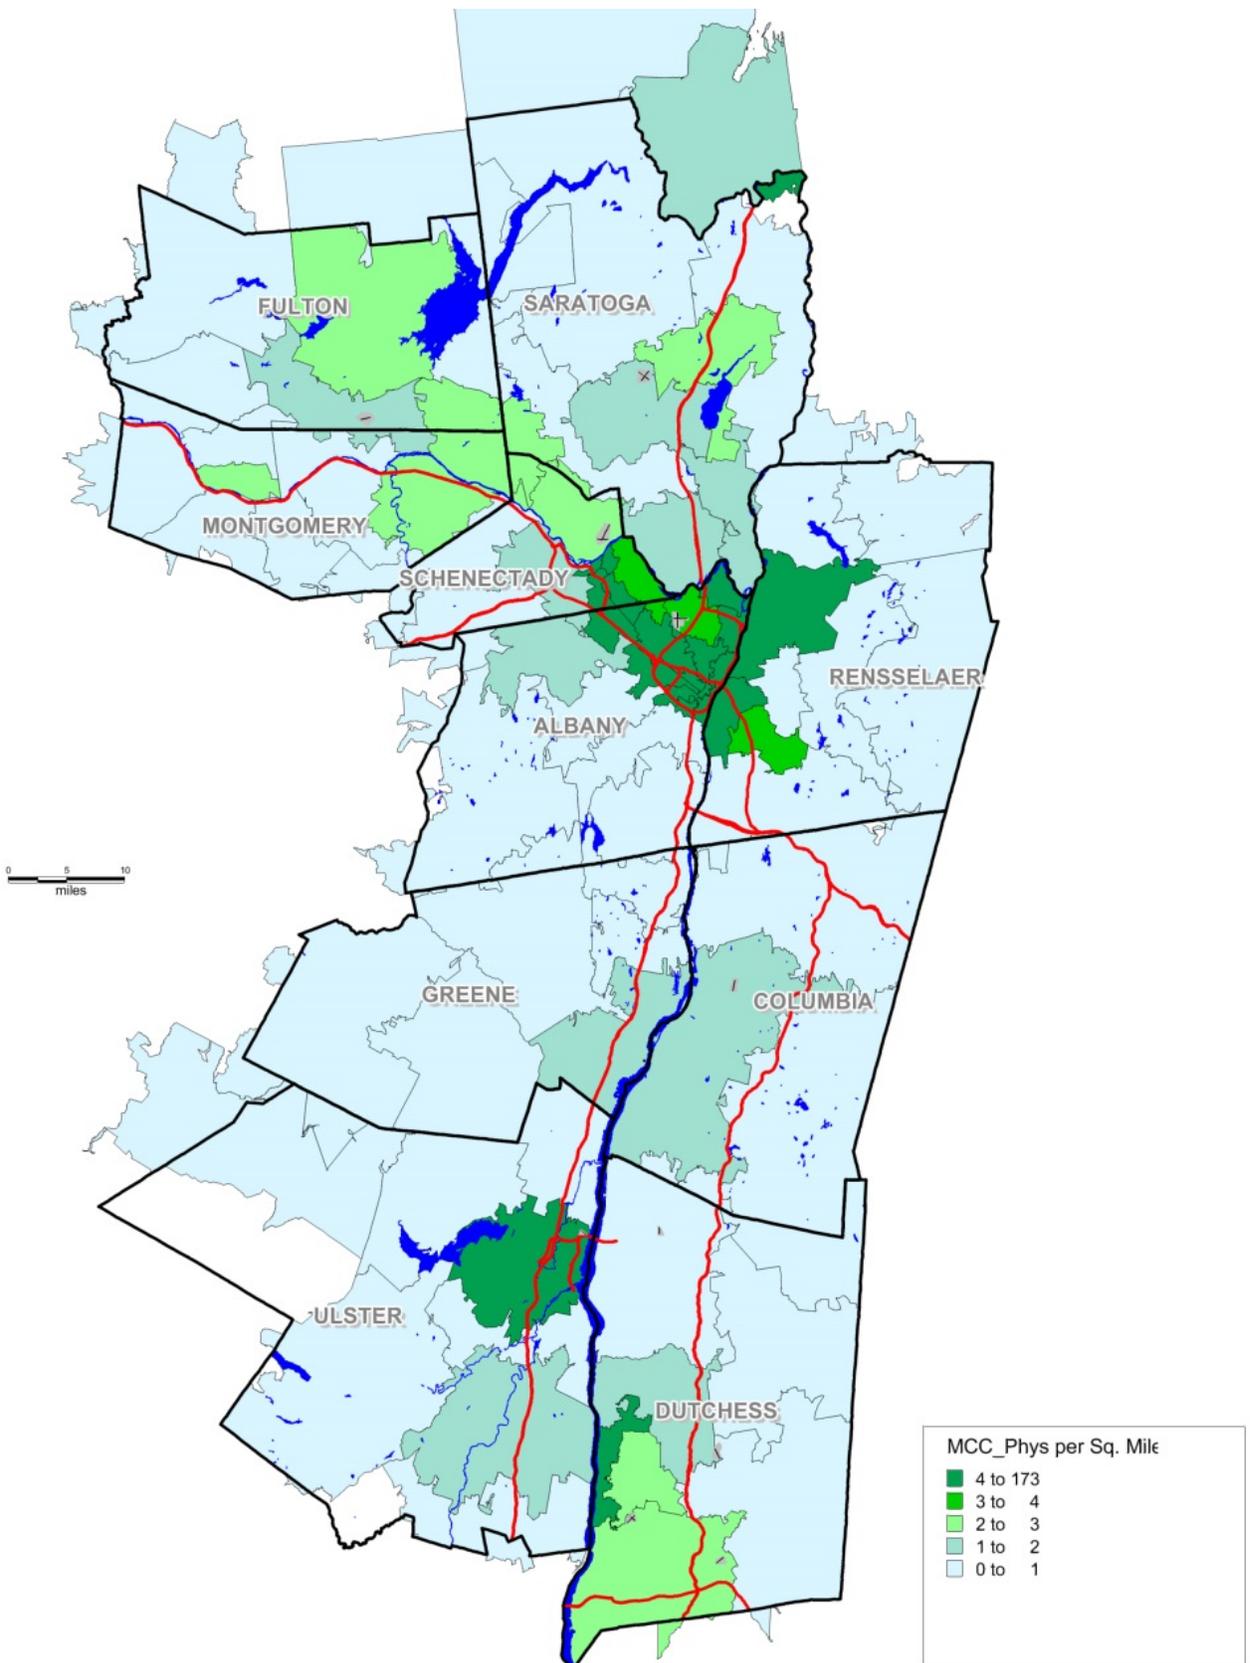

“1_Focus” Targets – ED Superutilizers (2+ ED/6 mo.) and/or 30 Day Readmits

“2_Chronic” Targets – Moderate or Significant Behavioral Health and/or Multiple Chronic Physical Conditions (4+ of 10)

Multiple Chronic Physical Conditions (4+ of 10) within “2_Chronic” Target Group

Major Driver Drill-Down Indicators for County and Neighborhoods

Type	Field	Description
Heading	County_base	County
Heading	NEIGHCODE	Internal reference code for neighborhood
Heading	Neighborhood	Local neighborhoods defined by one or more zip codes used for planning
Claim Demographics	People	Unduplicated Medicaid and Uninsured Hospital Users from SPARCS claims (IP 2011-2013, OP 2012)
Claim Demographics	1_Child	Child = 0-17 years old, from latest age coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	2_Adult	Adult = 18-64 years old, from latest age coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	3_Senior	Senior = 65+ years old, from latest age coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	1_White	White (non-Hispanic) race, latest coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	2_Black	Black (non-Hispanic) race, latest coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	3_Hispanic	Hispanic Ethnicity of any race, latest coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	4_Asian/Pacific Islander	Asian or Pacific Islander (non-Hispanic), latest coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	5_Native American	Native American (non-Hispanic), latest coded in claims for unduplicated Medicaid & Uninsured
Claim Demographics	6_Other	Other race (non-Hispanic) reported, latest coded in claims for unduplicated Medicaid & Uninsured
SDS_Zip	EngLLrate	English Language Learner rate in Community
SDS_Zip	FBrate	Foreign Born rate in Community
SDS_Zip	Lang_Culture_Challenge_rate	EngLLrate times FBrate interaction
SDS_Zip	Poverty_rate	Poverty rate in Community
SDS_Zip	Pov_Avg_Decile	Poverty rate Decile average for Community
SDS_Zip	Unemploy_total_rate	Unemployment rate vs. total population
SDS_Zip	Unemploy_inLabor_rate	Unemployment rate vs. those
SDS_Zip	Uninsured_rate	Uninsured rate in Community
SDS_Zip	Edu8thless_rate	Less than 8th grade education rate in Community
SDS_Zip	Edu_SomeHS_rate	Some High School education rate in Community
SDS_Zip	Edu_HSgradGED	High School Graduate or GED rate in Community
SDS_Zip	Edu_SomeColl_rate	Some College rate in Community
SDS_Zip	Edu_AssocDeg_rate	Associates Degree rate in Community
SDS_Zip	Edu_4yrDegree_rate	4 year College Degree rate in Community
SDS_Zip	Edu_MoreThan4yr_rate	More than 4 years of College rate in Community
Target	1_Focus	Person is an ED Superutilizer and/or had a 30 day readmission
Target	2_Chronic	Person has Multiple Chronic Physical Conditions (4+ of 10) and/or Moderate or Significant BH
Target	3_General	Person has fewer than 4 MCC_Phys and no Moderate or Significant BH diagnosis
Service	NursingHome	Person transferred from or transferred to a Skilled Nursing Facility
Service	DUAL	Person is dually eligible for Medicare and Medicaid
Service	Un_McaidLo	Person is either Uninsured or a Low utilizer of Medicaid services
Service	ED>2Per6mo	Persons flagged as ED Superutilizers/frequent fliers
Service	IP>2PerYr	Persons flagged as IP admission Superutilizers/frequent fliers
Service	ED_Count	Number of ED visits in a year
Service	IP_Count	Number of IP admissions in a year
Service	R30_Count	Number of all-cause 30 day readmissions in a year
BH	BOTH_MI_SUD	Both Mental Illness and Substance Use Disorder Flag
BH	BH34	Behavior Health Category Severity Levels three and four
BH	BH_SIG	Significant Behavioral Health - MI/SUD together, or either at Severity 3 or 4
BH	Anxiety	Anxiety Flag (including PTSD)
BH	PTSD	Post Traumatic Stress Disorder Flag
BH	wo_PTSD	Anxiety Flag (not including PTSD)
BH	Depression	Depression Flag
BH	Dementia	Dementia Flag
BH	BH2	Severity 2 Behavioral Health, primarily Anxiety and Depression
BH	BH_claim	Any Behavioral Health Claim (i.e. Pdx)
BH	Subst_Alcohol	Person has diagnosis of Alcohol Substance use
BH	Subst_Opiod	Person has diagnosis of Opiod Substance use
BH	Subst_Other	Person has diagnosis of other Substance use
BH	SUD_IP	Substance Use Disorder Inpatient claim
BH	SUD_OP	Substance Use Disorder Outpatient claim
BH	SUD_BILL	Substance Use Disorder any claim
BH	OpiodOveruse	AHRQ composite measure of possible Opiod Overuse
BH	Tobacco	Tobacco Use Flag
Phys	AFIB	Atrial Fibrillation Flag
Phys	AMI	Acute Myocardial Infarction
Phys	HTN	Hypertension Flag
Phys	HTN_Malig	Malignant Hypertension Flag
Phys	Asthma	Asthma Flag
Phys	COPD	Chronic Obstructive Pulmonary Disease Flag

Major Driver Drill-Down Indicators for County and Neighborhoods

Type	Field	Description
Phys	ChronKidney	Chronic Kidney Disease Flag
Phys	ESRD	End Stage Renal Disease Flag
Phys	Diabetes	Diabetes Flag
Phys	Pneumonia	Pneumonia Flag
Phys	MCC_Phys#	Number Multiple Chronic Conditions
Phys	MCC_Phys	Multiple Chronic Condition Flag
Phys	Inf_Fluid_HF	Infection, Fluid Balance, Heart Failure - DOH avoidable use Composite
Phys	CANCER	Cancer Flag
Phys	UTI	Urinary Tract Infection Flag
Phys	CHF	Congestive Heart Failure Flag
Phys	CVA	Cerebrovascular Accident Flag
Phys	RA_OA	Rheumatoid or Osteoarthritis Flag
Phys	OBESITY	Obesity Flag
Phys	BMI35PLUS	Body Mass Index of Over 35 Flag
Phys	SMI/COPD/CHF	Significant Mental Illness plus COPD plus CHF
Phys	Diab_Depr	Diabetes and Depression Flag
Phys	Diab_Anx	Diabetes and Anxiety Flag
Phys	Diab_SMI	Diabetes and Significant Mental Illness Flag
Phys	HHC_5Chron	HHC candidates with diabetes, cardiac, hypertension, asthma or COPD

Hotspot Opportunities - Relative Risk Indicates Priority for Interventions that Target Drivers of Avoidable Use

Chronic Opportunities - System Improvement and Education

Opportunity for Coordination/Handoff Projects affecting General Population in addition to Hotspots above (IDS, PCMH, Care Transitions, Hospital/Home Health, Project 11)

Appendix F-4 Intervention Groups and Major Driver Drill-Downs

Addressing Scale for the Uninsured & Low Medicaid Utilizer (Project 11) Populations

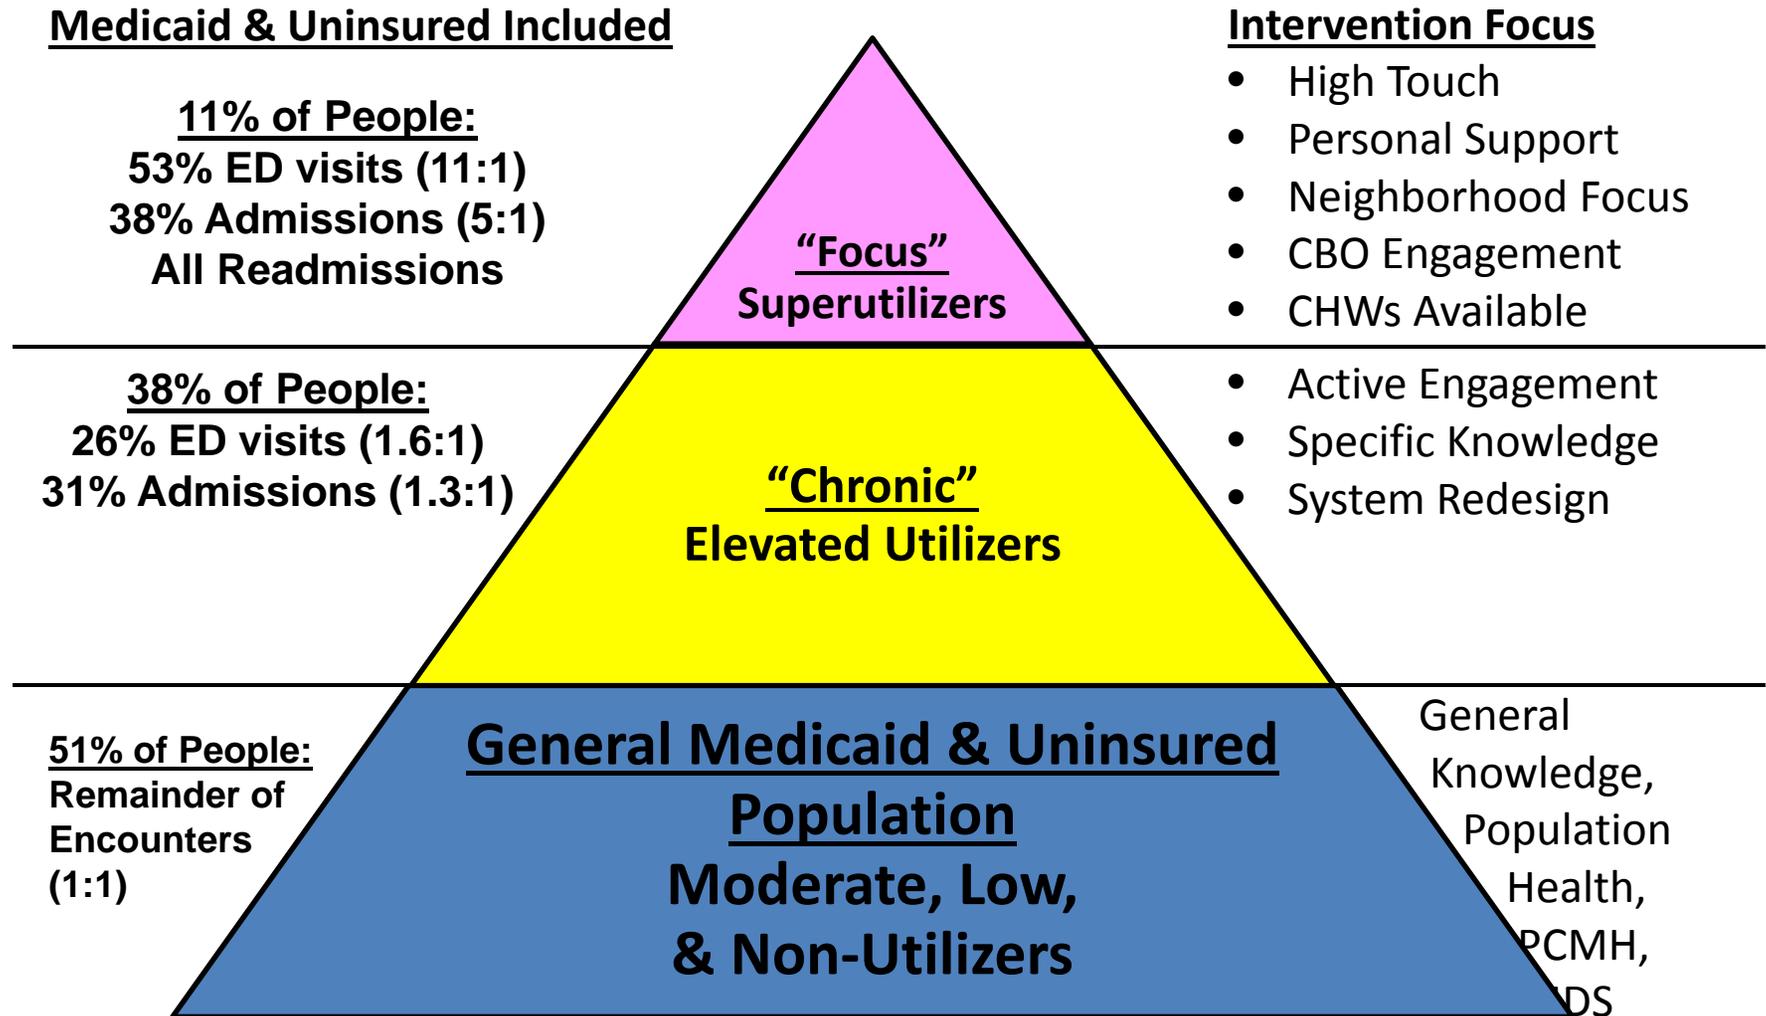

“Hotspotting” is the process of identifying where the greatest opportunity exists to improve utilization of services (e.g. the most avoidable encounters for fewest people). In the Intervention Pyramid that follows, this population is referred to as the “Focus” population. They are the individuals with the highest utilization ratio compared to the general population. Given the number of avoidable visits this group could avoid, more labor intensive interventions aligned with the needs of this population (e.g. high touch home visits) can be cost effective. Super-utilizers in the top (pink) section will benefit from personal high touch interventions beyond those of traditional health care delivery to address the SDS drivers of their ED and IP hospital use.

To improve the overall avoidable use of hospital ED and IP services, and expand scale of those engaged, we added the concept of “warmspotting.” It is similar to hotspotting, but the utilization rates aren’t as disproportional to the general population, so less intensive engagement is merited. These are people with elevated use of services identified as “Chronic” in our intervention priority pyramid. Specific interventions aligned with their needs (e.g. specific knowledge and improved engagement in self-care – Domain 3) can be cost effective at modest increased cost per person. Interventions to address the elevated Coordination, knowledge, and support needs of people with Chronic behavioral and physical conditions are in the middle (yellow) section of the pyramid.

System Transformation can move the baseline and “raise all boats” – for the above as well as the remainder of the population (e.g. the General Medicaid and Uninsured populations at the bottom of our pyramid). Specific interventions include Domain 2 system transformation and Domain 4 population health interventions can improve utilization for all. Interventions to address Access issues through overall system redesign are at the bottom (blue) section of the pyramid. They “raise all boats” and apply to all of the subpopulations, including the General population of moderate and low utilizers.

Using this framework, personal demographics, socio-demographic drivers in the neighborhood where the person lives, ED and Inpatient hospital service use, and drivers of this use are summarized below. Summaries are presented overall by county, summarized for counties in each PPS, and within each county by local neighborhood (combinations of zip codes). Presented are overall counts to inform scale, use rates, and relative risk to allow targeting within each of the three intervention groups.

Intervention Groups* & Priorities Supported by CNA

- **Intervention Groups:** **Focus**=ED Superutilizers (Behavioral Health driven) or 30 day Readmission History, **Chronic**= 4+ of 10 Chronic Physical Conditions or Sig/Mod Behavioral Health Diagnosis, **General**=none of above (Relative Risk/ROI values justify (but set limits) on spending more to achieve greater return. 1=General Population)

Major Driver Drill-Down Indicators for County and Neighborhoods

Type	Field	Description
Heading	County_base	County
Heading	NEIGHCODE	Internal reference code for neighborhood
Heading	Neighborhood	Local neighborhoods defined by one or more zip codes used for planning
Demographics	People	Total Medicaid and Uninsured
Demographics	1_Child	Child = 0-17 years old
Demographics	2_Adult	Adult = 18-64 years old
Demographics	3_Senior	Senior = 65+ years old
Demographics	1_White	White (non-Hispanic) race
Demographics	2_Black	Black (non-Hispanic) race
Demographics	3_Hispanic	Hispanic Ethnicity of any race
Demographics	4_Asian/Pacific Islander	Asian or Pacific Islander (non-Hispanic)
Demographics	5_Native American	Native American (non-Hispanic)
Demographics	6_Other	Other race (non-Hispanic) reported (Note: either self identified or Registrar too busy)
SDS_Zip	EngLLrate	English Language Learner rate in Community
SDS_Zip	FBrate	Foreign Born rate in Community
SDS_Zip	Lang_Culture_Challenge_rate	EngLLrate times FBrate interaction
SDS_Zip	Poverty_rate	Poverty rate in Community
SDS_Zip	Pov_Avg_Decile	Poverty rate Decile average for Community
SDS_Zip	Unemploy_total_rate	Unemployment rate vs. total population
SDS_Zip	Unemploy_inLabor_rate	Unemployment rate vs. those
SDS_Zip	Uninsured_rate	Uninsured rate in Community
SDS_Zip	Edu8thless_rate	Less than 8th grade education rate in Community
SDS_Zip	Edu_SomeHS_rate	Some High School education rate in Community
SDS_Zip	Edu_HSgradGED	High School Graduate or GED rate in Community
SDS_Zip	Edu_SomeColl_rate	Some College rate in Community
SDS_Zip	Edu_AssocDeg_rate	Associates Degree rate in Community
SDS_Zip	Edu_4yrDegree_rate	4 year College Degree rate in Community
SDS_Zip	Edu_MoreThan4yr_rate	More than 4 years of College rate in Community
Target	1_Focus	Person is an ED Superutilizer and/or had a 30 day readmission
Target	2_Chronic	Person has Multiple Chronic Physical Conditions (4+ of 10) and/or Moderate or Significant BH
Target	3_General	Person has fewer than 4 MCC_Phys and no Moderate or Significant BH diagnosis
Service	NursingHome	Person transferred from or transferred to a Skilled Nursing Facility
Service	DUAL	Person is dually eligible for Medicare and Medicaid
Service	Un_McaidLo	Person is either Uninsured or a Low utilizer of Medicaid services
Service	ED>2Per6mo	Persons flagged as ED Superutilizers/frequent fliers
Service	IP>2PerYr	Persons flagged as IP admission Superutilizers/frequent fliers
Service	ED_Count	Number of ED visits in a year
Service	IP_Count	Number of IP admissions in a year
Service	R30_Count	Number of all-cause 30 day readmissions in a year
BH	BOTH_MI_SUD	Both Mental Illness and Substance Use Disorder Flah
BH	BH34	Behavior Health Category Severity Levels three and four
BH	BH_SIG	Significant Behavioral Health - MI/SUD together, or either at Severity 3 or 4
BH	Anxiety	Anxiety Flag (including PTSD)
BH	PTSD	Post Traumatic Stress Disorder Flag
BH	wo_PTSD	Anxiety Flag (not including PTSD)
BH	Depression	Depression Flag
BH	Dementia	Dementia Flag
BH	BH2	Severity 2 Behavioral Health, primarily Anxiety and Depression
BH	BH_claim	Any Behavioral Health Claim (i.e. Pdx)
BH	Subst_Alcohol	Person has diagnosis of Alcohol Substance use
BH	Subst_Opiod	Person has diagnosis of Opiod Substance use
BH	Subst_Other	Person has diagnosis of other Substance use
BH	SUD_IP	Substance Use Disorder Inpatient claim
BH	SUD_OP	Substance Use Disorder Outpatient claim
BH	SUD_BILL	Substance Use Disorder any claim
BH	OpiodOveruse	AHRQ composite measure of possible Opiod Overuse

Major Driver Drill-Down Indicators for County and Neighborhoods

Type	Field	Description
BH	Tobacco	Tobacco Use Flag
Phys	AFIB	Atrial Fibrillation Flag
Phys	AMI	Acute Myocardial Infarction
Phys	HTN	Hypertension Flag
Phys	HTN_Malig	Malignant Hypertension Flag
Phys	Asthma	Asthma Flag
Phys	COPD	Chronic Obstructive Pulmonary Disease Flag
Phys	ChronKidney	Chronic Kidney Disease Flag
Phys	ESRD	End Stage Renal Disease Flag
Phys	Diabetes	Diabetes Flag
Phys	Pneumonia	Pneumonia Flag
Phys	MCC_Phys#	Number Multiple Chronic Conditions
Phys	MCC_Phys	Multiple Chronic Condition Flag
Phys	Inf_Fluid_HF	Infection, Fluid Balance, Heart Failure - DOH avoidable use Composite
Phys	CANCER	Cancer Flag
Phys	UTI	Urinary Tract Infection Flag
Phys	CHF	Congestive Heart Failure Flag
Phys	CVA	Cerebrovascular Accident Flag
Phys	RA_OA	Rheumatoid or Osteoarthritis Flag
Phys	OBESITY	Obesity Flag
Phys	BMI35PLUS	Body Mass Index of Over 35 Flag
Phys	SMI/COPD/CHF	Significant Mental Illness plus COPD plus CHF
Phys	Diab_Depr	Diabetes and Depression Flag
Phys	Diab_Anx	Diabetes and Anxiety Flag
Phys	Diab_SMI	Diabetes and Significant Mental Illness Flag
Phys	HHC_5Chron	HHC candidates with diabetes, cardiac, hypertension, asthma or COPD

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.a.i IDS	HealthData NY PQI Rate	The total Medicaid inpatient admission Gap based on the AHRQ PQI measures in the chartbooks is 1,183 for adults (PQI), primarily in Albany county (680=57%). Rates are over the benchmark of 129.4 in Columbia County	Preventable admissions would decrease with greater integration of services.	Outcome indicator used by DSRIP	Reduce avoidable admissions and save resources.
		HealthData NY PPV Rate, Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)	There are a total of 60,000 Preventable ED Visits in PPS. The preventable ED visit rate for the PPS is above the NYS State benchmark, and is high in Albany County (58) and Columbia County (55) vs. NYS rate 36 for Medicaid.	The emergency department is currently a major source of care for the uninsured and Medicaid beneficiaries.	Consumer survey of Medicaid enrollees showed 29% of the respondents used the ED as one of their usual places to get healthcare services, and 52.4% of those used the ED three or more times in the last year.	Focus on ED visits
		HealthData NY PPR Rate	PPR	The numbers of preventable admissions are below the NYS benchmark but still represent an opportunity.	The total Medicaid potentially preventable readmissions (PPR) are 643, with the majority at AMC (458=71%)	Reduce avoidable re-admissions and save resources.
		HealthData NY PDI Rate	PDI	The number of readmissions for children is very low and not worth pursuing.	The total Medicaid pediatric inpatient admission Gap based on the AHRQ PDI measures in the chartbooks is only 42 for children (PDI).	Focus primarily on adults.
		SPARCS Analysis	ED visits by type	Super Utilizers of the ED would impact the most utilization through the least number of people.	SPARCS analyses found 52.6% of the ED visits (23,552) are for 10.4% of the patients (4,022). They are most likely to be found in Albany (2,148).	Target high impact interventions on high need population.
		SPARCS Analysis	ED visits by type	Patients with mental health and substance abuse conditions account for the majority of inpatient admissions and ED visits.	Gap analysis by county and Chronic Disease show 69% of IP admissions and 59% of ED visits are behavioral health patients (MH and SUD)	Align physical and behavioral health to address the whole person.
		Dashboard C4 Primary care visit rate	Medicaid Primary care visit rate Alb (220), Sar (272), Col (292), Grn (292), Warren (409)	There is a need for greater access to primary care as an alternative to the ED.	Medicaid Primary care visit rate is lower in 4 out of 5 counties vs for NYS excl NYC (337). No 24/7 urgent care centers located in urban locations accessible to the target population via public transportation. Percent of Medicaid members with primary care visits is especially low in Albany (56%) and Greene (60%) Counties vs Upstate 64%.	Integrating care from the patient's perspective will direct them to the most appropriate care setting.
		HealthData NY PQI Rate	PQI (2011-2012) = 2,069 (composite)	The majority of preventable admissions are for beneficiaries with chronic conditions.	65% of PQI total admission of 1,184 are for chronic conditions. The total Medicaid inpatient admission Gap based on the AHRQ PQI measures in the chartbooks is 767 for adults (PQI), primarily in Albany county (452=35%). Rates are over the benchmark of 129.4 in Columbia County	Reducing hospital admission rates for those that are frequent users reduces the number of contact points for efficiency.

		SPARCS Analysis	Encounter volume by multiple chronic condition metric (4+ of 10)	Targeting those with many multiple chronic conditions would address 18.7% of the inpatient visits (1,423) through 7.6% of patients (2,930). 31.2% of those admissions would be readmissions.	SPARCS analyses found the number of admits in the region that have multiple chronic conditions is 1,388 in Albany, 956 in Saratoga, 216 in Greene, 299 in Columbia and 395 in Warren.	Target high impact interventions on high need population.
		CNA Qualitative Analysis	Surveys and listening sessions.	Consumers, providers and CBO's have confirmed that uncoordinated care is a major impediment to healthcare delivery.	Provider and CBO survey - 70% of providers said uncoordinated care is impediment to healthcare delivery for Medicaid & uninsured. Listening sessions and Focus group participants cited numerous instances of uncoordinated care.	Integrated care should be coordinated across all of its parts.

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	Health Home At-Risk Intervention					
		HealthData NY PPV Rate	The PPV visit rates are especially high in 2 of the five counties (Alb 58, Col 55)	The emergency department is currently a major source of care for the uninsured and Medicaid beneficiaries.	The preventable ED visit rate is above the NYS State benchmark. The PPV rates and number of visits are especially high in Columbia county vs. NYS rate 36 for Medicaid, 23.5 for all payor. There are a total of almost 60,000 Potentially Preventable ED Visits in PPS. Consumer survey of Medicaid enrollees showed that 29% of respondents used the emergency room as one of their usual places to get healthcare services, and 52.4% of those used the ED three or more times in the last year.	Make the services currently available to those in Health Homes also available to those at risk for a decline in health. Move focus to prevention in primary care vs. treatment in the ED.
		Dashboard C4 Primary care visit rate	Medicaid Primary care visit rate Alb (220), Sar (272), Col (292), Grn (292), Warren (409)	There is a need for greater access to primary care as an alternative to the ED.	Medicaid Primary care visit rate is lower in all five counties vs for NYS (excl NYC) (337) except in Warren County. No 24/7 urgent care centers located in urban locations accessible to the target population via public transportation. The provision of extended hours and/or 24/7 urgent care is one of the recommended solutions. Percent of Medicaid members with primary care visits is especially low in Albany (56%), Greene (61%) vs Upstate 64%.	Increase encounters for preventive primary care to avoid future ED care.
		SPARCS Analysis	ED visits by target level	Targeting Super Utilizers would address 52.6% of the ED visits (23,552) for only 10.4% of the patients (4,022).	SPARCS analyses found 52.6% of ED visits in the five county region are Super Utilizers, 14,442 in Albany, 4,018 in Saratoga, 1,903 in Columbia, 1,323 in Greene, 1,726 in Warren.	Target high impact interventions on high need population.
		SPARCS Analysis	ED visits by MH/SUD	Patients with mental health and substance abuse conditions account for the majority of ED visits.	ED Visit Gap analysis by county and Chronic Disease show 60% of ED visits are behavioral health patients.	Address comorbid physical and behavioral conditions to have greater impact
		NYSDOH DSRIP Medicaid Dashboards B-8	Growth in Medicaid enrollment over time.	This issue will likely grow without an intervention, since the ED visit rate is much higher than the rest of state and Medicaid beneficiaries are increasing markedly.	Medicaid Enrollment increased 11.4% from 3/2013 to 3/2014. Dashboard C-2 shows the ED visit rate for NYS (excl NYC) was 47.6 in March of 2014 and was 58.6 for the PPS.	Make patient centered and integrated care the new normal for those with elevated health risks due to chronic conditions.

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	Create a Medical Village					
		HealthData NY PPV Rate	The PPV visit rates are especially high in 2 of the five counties (Alb 58, Col 55)	The emergency department is currently a major source of care for the uninsured and Medicaid beneficiaries.	The preventable ED visit rate is above the NYS State benchmark. The PPV rates and number of visits are especially high in Columbia county vs. NYS rate 36 for Medicaid, 23.5 for all payor. There are a total of almost 60,000 Preventable ED Visits in PPS. Consumer survey of Medicaid enrollees showed that 29% of respondents used the emergency room as one of their usual places to get healthcare services, and 52.4% of those used the ED three or more times in the last year.	Make the Medical Village a lower cost alternative to the ED
		Dashboard C4 Primary care visit rate	Medicaid Primary care visit rate Alb (220), Sar (272), Col (292), Grn (292), Warren (409)	There is a need for greater access to primary care as an alternative to the ED.	Medicaid Primary care visit rate is lower in all six counties vs for NYS (337). No 24/7 urgent care centers located in urban locations accessible to the target population via public transportation. The provision of extended hours and/or 24/7 urgent care is one of the recommended solutions. Percent of Medicaid members with primary care visits is especially low in Albany (56%), Greene (61%) vs Upstate 64%.	Increase encounters for preventive primary care to avoid future ED care.
		SPARCS Analysis	ED visits by target level	Targeting Super Utilizers would address 52.6% of the ED visits (23,552) for only 10.4% of the patients (4,022).	SPARCS analyses found 52.6% of ED visits in the five county region are Super Utilizers, 14,442 in Albany, 4,018 in Saratoga, 1,903 in Columbia, 1,323 in Greene, 1,726 in Warren.	Target high impact interventions on high need population.
		SPARCS Analysis	ED visits by MH/SUD	Patients with mental health and substance abuse conditions account for the majority of ED visits.	ED Visit Gap analysis by county and Chronic Disease show 60% of ED visits are behavioral health patients.	Address comorbid physical and behavioral conditions to have greater impact
		NYSDOH DSRIP Medicaid Dashboards B-8	Growth in Medicaid enrollment over time.	This issue will likely grow without an intervention, since the ED visit rate is much higher than the rest of state and Medicaid beneficiaries are increasing markedly.	Medicaid Enrollment increased 11.4% from 3/2013 to 3/2014. Dashboard C-2 shows the ED visit rate for NYS (excl NYC) was 47.6 in March of 2014 and was 58.6 for the PPS.	Make patient centered and integrated care the new normal for those with elevated health risks due to chronic conditions.
		DOH Nursing home bed Need	Bed Need	Excess nursing home beds exist in the PPS	Based on target use rate of 36.7 beds per 1,000 population over the age of 65 there appears to be an excess of nursing home beds in Columbia County	Utilize existing infrastructure for new delivery models

		<p>Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)</p>	<p>Mental Health and Behavioral Health Provider Availability</p>	<p>The lack of sufficient behavioral health and mental health services was identified as a major problem for over half the providers surveyed.</p>	<p>Mental health and behavioral issues are a major problem for 62.7% of the respondents to the provider survey; 58% of providers cited the lack of qualified mental health professionals and 53% cited lack of community resources.</p>	<p>Maximize resources available to existing providers.</p>

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.b.iii ED Triage for at risk populations	HealthData NY PPV Rate	The PPV visit rates are especially high in two of the five counties (Alb 58, Col 55)	The emergency department is currently a major source of care for the uninsured and Medicaid beneficiaries.	The preventable ED visit rate is above the NYS State benchmark. The PPV rates and number of visits are especially high in Columbia county vs. NYS rate 36 for Medicaid, 23.5 for all payor. There are a total of 60,000 Preventable ED Visits in PPS. Consumer survey of Medicaid enrollees showed that 29% of respondents used the emergency room as one of their usual places to get healthcare services, and 52.4% of those used the ED three or more times in the last year.	Active diversion of people presenting in the ED who would be better served in a lower cost setting will conserve resources.
		Dashboard C4 Primary care visit rate	Medicaid Primary care visit rate Alb (220), Sar (272), Col (292), Grn (292), Warren (409)	There is a need for greater access to primary care as an alternative to the ED.	Medicaid Primary care visit rate is lower in all five counties vs for NYS (excl NYC) (337) except in Warren County. No 24/7 urgent care centers located in urban locations accessible to the target population via public transportation. The provision of extended hours and/or 24/7 urgent care is one of the recommended solutions. Percent of Medicaid members with primary care visits is especially low in Albany (56%), Greene (61%) vs Upstate 64%.	Providing convenient Urgent care during extended hours will reduce overuse of more expensive resources of the ED
		SPARCS Analysis	ED visits by target level	Targeting Super Utilizers would address 52.6% of the ED visits (23,552) for only 10.4% of the patients (4,022).	SPARCS analyses found 52.6% of ED visits in the five county region are Super Utilizers, 14,442 in Albany, 4,018 in Saratoga, 1,903 in Columbia, 1,323 in Greene, 1,726 in Warren.	Target high impact interventions on high need population.
		SPARCS Analysis	ED visits by MH/SUD	Patients with mental health and substance abuse conditions account for the majority of ED visits.	ED Visit Gap analysis by county and Chronic Disease show 60% of ED visits are behavioral health patients.	Address comorbid physical and behavioral conditions to have greater impact
		NYSDOH DSRIP Medicaid Dashboards B-8	Growth in Medicaid enrollment over time.	This issue will likely grow without an intervention, since the ED visit rate is much higher than the rest of state and Medicaid beneficiaries are increasing markedly.	Medicaid Enrollment increased 11.4% from 3/2013 to 3/2014. Dashboard C-2 shows the ED visit rate for NYS (excl NYC) was 47.6 in March of 2014 and was 58.6 for the PPS.	Make patient centered and integrated care the new normal for those with elevated health risks due to chronic conditions.
		2009 HCIDI Emergency Department Research	ED Utilization drivers	Patients frequently use the ED for convenience and cold treatment.	Almost half of primary care treatable ED visits in Albany, Schenectady and Rensselaer County hospitals was for colds. 60% of ED patients surveyed identified convenience as a factor for using the ED.	Treat more non-emergent patients in appropriate settings.

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.d.i Project 11	PPV	There are almost 60,000 PPV's to Medicaid recipients in AMC service area. NYS had a PPV rate of 36/100 Medicaid recipients. All 5 counties had rates higher than NYS, with Albany (58) and Columbia (55), in the 4th or 5th quintile.	ED is currently a major source of care for the Medicaid and Uninsured Population. Greater understanding and better access to more culturally sensitive primary care will reduce the number of ED visits.	With the major growth in Medicaid enrollment in past years, particularly with the implementation of the ACA, the uninsured person today may very likely become the Medicaid member tomorrow. Engaging these people in their own care now will make them better consumers tomorrow.	Engage with and teach people of all backgrounds and cultures how best to utilize health services.
		PQI	There were approximately 1,184 adult PQI hospitalizations per year in the Medicaid population residing in the AMC PPS area. NYS had an overall PQI composite rate of 184.8 per 10,000 Medicaid recipients. Of the 5 counties in the service area, 1 had rates higher than NYS, and fell into the 4th or 5th quintiles of NYS counties: Albany (189.9)	PQIs are considered ambulatory sensitive conditions. Greater understanding and better access to more culturally sensitive primary care will reduce the number of ED visits.	Engaging with and understanding this population's sociodemographic drivers of unnecessary hospital use will build trust and define the best levers for improving health.	Engage with and teach people of all backgrounds and cultures how best to utilize health services.
		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)	Participants described access challenges	Access to health services for the uninsured is more limited, with some providers not serving these patients and some serving a disproportionate share.	Our CNA survey found 9% of provider patients as uninsured - higher than the general population - and 17% not accepting new uninsured patients.	Better understand access barriers to devise ways to overcome them.
		NYSDOH DSRIP Medicaid Dashboards B-8	Trends in Medicaid enrollment	The Affordable Care Act is rapidly increasing the number of Medicaid insured. The newly insured and the uninsured will require primary care services and support to not use the ED as their usual source of care.	Medicaid Enrollment increased 11.4% from 3/2013 to 3/2014.	Make patient centered and integrated care the new normal for those with elevated health risks due to chronic conditions.
		US Census Bureau Small Area Health Insurance Estimates (2011) and 2011 Population Estimates	Demographics	The largest number of uninsured are in the densely populated counties with more Black and Hispanic residents.	As of 2011 SAHIE census estimates, there were 57,000 uninsured individuals (9.2%) in the five county AMC PPS. The largest number of uninsured are located in Albany County (25,196) followed by Saratoga County (15,575). The Kaiser Family Foundation reports that the NY uninsured rate for Blacks (13%) and Hispanics (15%) is roughly double that for Whites (7%).	Understanding the people served will help build trust and engagement
		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)	Participants described access challenges	Many low income consumers don't know where to get health insurance or lose coverage when moving - which is more common with this population.	CNA consumer survey of Medicaid enrollees showed 6% reporting as being uninsured; half of them reported not knowing where to get health insurance. Focus groups reported problems with losing insurance when moving.	Understanding the people served will help build trust and engagement

		<p>Pew Research and ACS, US Census Bureau, American Community Survey 5 Year Estimates 2008-2012 (DP-2), Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)</p>	<p>Socio demographic data</p>	<p>Illegal immigrants, limited english speakers, homeless, the unemployed and disabled all have significant barriers to coverage and care, but still have health problems that require care.</p>	<p>Number of illegal immigrants was estimated at 2.8% of the population for the five county area. The highest numbers are in Albany and Saratoga. The number of people who speak English less than very well in the 5 county area is 18,424 or 2.8% of the population. There are an estimated 4,627 homeless or 0.65% of the populations in the five counties. CNA survey found 29% unemployed, with 14% disabled and not employed.</p>	<p>Understanding the people served will help build trust and engagement</p>
--	--	--	-------------------------------	--	---	---

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	3.a.i PC&BH Integrations					
		SPARCS Analysis	Encounter frequencies tied to member characteristics	Behavioral health drives higher admission, readmission and ED rates.	Medicaid and Uninsured patients with Behavioral Health needs have much higher use rates than those without: Admissions more than 4-4.5 times, Readmissions 6-8 times, and ED visits 1.4-1.9 times.	Addressing overlapping physical and behavioral health needs will reduce interaction effects.
		SPARCS Analysis	Summarize chronic behavioral conditions	A large number and percent of Medicaid beneficiaries have mental health and substance use disorders.	A high percentage of Medicaid enrollees in the PPS have MH (40% or 15,555) and/or SUD (13% or 5,124) with most SUD having both (4,333).	Parity in treatment is necessary.
		SPARCS Analysis	Encounter frequencies tied to member characteristics	Patients with mental health and substance abuse conditions account for the majority of inpatient admissions and ED visits.	SPARCS analysis showed that 42.7% of Medicaid beneficiaries with moderate to severe BH conditions (MH and SUD) that used IP or ED services used 61.6% of the ED visits, 54.4% of the IP Admits and 67.9% of the readmits.	Address comorbid physical and behavioral conditions to have greater impact
		EBRFSS, SPARCS	Prevention and population health indicators	Poor mental health days, self-inflicted hospitalizations, and Suicide Mortality indicate that there are mental health needs in the region that are greater than the upstate average.	About 13% or 72,900 in the Albany Med PPS had at least 14+ poor mental health days in the past month (2012-13). Albany, Saratoga, and Greene had higher than state rates. The service area averaged over 520 self-inflicted hospitalizations per year. Hospitalization rate of 7.4/10,000 was higher than NYS rate of 5.6. The service area averages over 77 suicide deaths per year. Mortality rate of 11.0/100,000 is higher than NYS rate of 8.2.	A major goal is to reverse these disparities and trends.
		PH Prevention Indicators	Prevention and population health indicators	2 of 5 counties have worse rates than Upstate for initiation of alcohol and other drug dependence treatment	Initiation of alcohol and other drug dependence treatment: 2 of the 5 counties had initiation rates lower than Upstate NY (78.3%): Saratoga (72.5%) and Albany (75.1%).	A major goal is to reverse these disparities and trends.
		NPI Data, Dashboard C4 Primary care visit rate	Provider types	There is a need for greater access to primary care, even more so for MH and SUD providers who are scarce outside of urban Albany.	Medicaid Primary care visit rate is lower in 4 of the five counties vs for NYS excl NYC (337). The AMC PPS area has fewer mental health providers per 100,000 population than the State average, with the lowest percentages in Saratoga and Greene Counties. There is a lack of social workers in all counties except Greene.	An effective Workforce must be available.

		<p>Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8), DSRIP Dashborad B9</p>	<p>Qualitative input</p>	<p>The provider survey validates services must increase and coordinate for patients with mental health and behavioral issues, yet the number of practices with PCMH or Health Home certification are low.</p>	<p>Mental health and behavioral issues are a major problem for 62.7% of the respondents to the provider survey; 58% of providers cited the lack of qualified mental health professionals and 53% cited lack of community resources. To reduce admits, readmits and ED providers cited co-location of primary care and behavioral care (51.7% for admit, 55.4% for re-admit, 62.7% for ED visits). Only 13.4% of physicians are PCMH Level 3 certified in the region and 1,280 patients are enrolled in health homes for the five county region.</p>	<p>Consumers and Providers alike expect integration of physical and behavioral services. Care must be designed to meet these expectations to meet metrics.</p>

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	Behavioral Health Crisis Stabilization					
		SPARCS Analysis	Encounter frequencies tied to member characteristics	Behavioral health drives higher admission, readmission and ED rates.	Medicaid and Uninsured patients with Behavioral Health needs have much higher use rates than those without: Admissions more than 4-4.5 times, Readmissions 6-8 times, and ED visits 1.4-1.9 times.	Addressing overlapping physical and behavioral health needs will reduce interaction effects.
		SPARCS Analysis	Summarize chronic behavioral conditions	A large number and percent of Medicaid beneficiaries have mental health and substance use disorders.	A high percentage of Medicaid enrollees in the PPS have MH (40% or 15,555) and/or SUD (13% or 5,124) with most SUD having both (4,333).	Parity in treatment is necessary.
		SPARCS Analysis	Encounter frequencies tied to member characteristics	Patients with mental health and substance abuse conditions account for the majority of inpatient admissions and ED visits.	SPARCS analysis showed that 42.7% of Medicaid beneficiaries with moderate to severe BH conditions (MH and SUD) that used IP or ED services used 61.6% of the ED visits, 54.4% of the IP Admits and 67.9% of the readmits.	Address comorbid physical and behavioral conditions to have greater impact
		EBRFSS, SPARCS	Prevention and population health indicators	Poor mental health days, self-inflicted hospitalizations, and Suicide Mortality indicate that there are mental health needs in the region that are greater than the upstate average.	About 13% or 72,900 in the Albany Med PPS had at least 14+ poor mental health days in the past month (2012-13). Albany, Saratoga, and Greene had higher than state rates. The service area averaged over 520 self-inflicted hospitalizations per year. Hospitalization rate of 7.4/10,000 was higher than NYS rate of 5.6. The service area averages over 77 suicide deaths per year. Mortality rate of 11.0/100,000 is higher than NYS rate of 8.2.	A major goal is to reverse these disparities and trends.
		PH Prevention Indicators	Prevention and population health indicators	2 of 5 counties have worse rates than Upstate for initiation of alcohol and other drug dependence treatment	Initiation of alcohol and other drug dependence treatment: 2 of the 5 counties had initiation rates lower than Upstate NY (78.3%): Saratoga (72.5%) and Albany (75.1%).	A major goal is to reverse these disparities and trends.
		NPI Data, Dashboard C4 Primary care visit rate	Provider types	There is a need for greater access to primary care, even more so for MH and SUD providers who are scarce outside of urban Albany.	Medicaid Primary care visit rate is lower in 4 of the five counties vs for NYS excl NYC (337). The AMC PPS area has fewer mental health providers per 100,000 population than the State average, with the lowest percentages in Saratoga and Greene Counties. There is a lack of social workers in all counties except Greene.	An effective Workforce must be available.

		<p>Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8), DSRIP Dashborad B9</p>	<p>Qualitative input</p>	<p>The provider survey validates services must increase and coordinate for patients with mental health and behavioral issues, yet the number of practices with PCMH or Health Home certification are low.</p>	<p>Mental health and behavioral issues are a major problem for 62.7% of the respondents to the provider survey; 58% of providers cited the lack of qualified mental health professionals and 53% cited lack of community resources. --	--	---	--------------------------	---	---	--

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	3.b.i EBM- Cardio.	Circulatory PQIs	The 5 County service area experienced an average of 206 Medicaid Circulatory Composite PQIs per year, roughly 75% were Adult Heart Failure PQIs (n=155) and 25% Adult Hypertension PQIs (n=51). The NYS Circulatory Composite PQI rate was 42.2 per 10,000 Medicaid recipients. Greene (43.4) county fell into the 4 th or 5 th quintile for NYS counties. Two of the 5 counties had Medicaid Adult Heart Failure PQI rates that fell into the 4 th or 5 th quintile: Greene (31.6); and Columbia (28.7). Two of the 5 AMC service area counties also into the 4 th or 5 th quintile for Adult Hypertension PQI rates: Albany (9.9); and Greene (8.4) counties.	Circulatory PQIs are useful in identifying cardiovascular hospitalizations that could have been better managed in outpatient setting.	A significant gap provides opportunity for improvement	Reductions in PQIs will conserve resources
		Hospitalizations and Mortality	County Public Health Indicators	Coronary heart disease(CHD) and Congestive heart failure (CHF) are widely used health indicators for looking at the cardiovascular health of the population.	The AMC service area averaged over 2,000 CHD hospitalizations and 1,100 CHD deaths per year. The CHD crude hospitalization rate for the area was 28.8/10,000. Warren had the highest adjusted hospitalization rate of 28.1 (lower than the NYS rate of 39.0). The service area had a crude CHD mortality rate of 156.1/100,000. Columbia's adjusted rate of 162.7/100,000 was in the 4th quartile of NYS counties. There were almost 1,800 CHF hospitalizations and 150 deaths per year in the service area. Warren had the highest adjusted CHF hospitalization rate (22.4/10,000). The crude CHF mortality rate(20.8/100,000) was higher than NYS (13.8) with Albany (20.0) having adjusted CHF mortality rates in the 4th quartile.	Reduce variability in cardiovascular outcomes across the region
		EBRFSS; BMI School Survey	Major risk factor	Obesity has been highly associated with many chronic diseases including cardiovascular disease. NYS has been seeing increasing obesity rates in its adult and childhood populations.	EBRFSS data - an estimated 148,000 adults are obese in the AMC service area. The % of obese adults increased in 4 of the 5 counties from 2008-09 to 2013-14. All counties had obesity rates higher than NYS (24.9%). Warren (30.5%) and Greene (30.0%) fell into the 3 rd quartile. School Survey -4 of the 5 counties had school student obesity rates higher than NYS (17.6%). Greene County (20.4%) had the highest obesity rate for school students, followed by Warren (19.7%) and Columbia (19.1%) counties.	Need to reverse this trend in children

		<p>5 County SPARCS Analysis</p>	<p>Hotspot targeting for Speed and Scale</p>	<p>Using a Hotspot targeting procedure, we identified a prioritized list of initial zipcodes targets for implementation.</p>	<p>Hotspotting can segment high utilizers, such as the 10,943 (28%) of the 5 county population with Hypertension generate 39% of the ED visits, 44% of the Admissions, and 65% of the readmissions for Hypertensives. It can also focus on local geographies such as Neighborhoods to leverage efficiency and effectiveness of efforts. See detailed analysis in Appendix F.</p>	<p>More efficient and more effective interventions will meet DSRIP goals faster.</p>
--	--	---	--	--	--	--

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	3.d.iii Evidence based strategies for Asthma Management	PQI (Asthma and COPD)	There are 326 Asthma PQIs and 37 PDIs calculated.	A similar analysis of chronic respiratory disease encounters yielded an opportunity gap of 723 IP admissions and 2,846 ED visits vs. a Non-NYC benchmark.	Asthma and COPD are typically considered together (as they are in the AHRQ measure), since they frequently coexist, particularly in the senior population.	Reduce asthma exacerbations to reduce overall avoidable hospital ED and IP use
		SPARCS analysis of Multiple Chronic Conditions	Encounter profile for chronic diseases	Asthma frequently is one of several comorbid conditions, placing the patient at a synergistic increased risk of ED or Inpatient use. Tobacco use is also highly correlated in this population, serving as an asthma trigger.	While 14% of the Medicaid and Uninsured population in the 5 counties has asthma, they represent 30% of the ED visits, 21% of the Admissions, and 32% of the Readmissions.	Reducing asthma exacerbations will have an multiplier effect for those with other chronic diseases.
		NYS Prevention Agenda Population Health Indicators to Improve Health Status and Reduce Health Disparities	Prevention targets	Prevention Agenda indicators for the total population showed 2 of the counties in the the highest quartiles for most asthma related metrics.	Asthma has pervasively high rates for prevalence, encounters, and environmental challenges (e.g. housing, pollution) in the region. The rural counties of Saratoga, Columbia, Greene had the lowest asthma rates.	Target asthma efforts where they will have the most impact.
		NYS Office of the State Controller (OSC)	State health payments	For the Medicaid population, The Office of the State Controller highlighted that 2 of the 5 PPS counties had prevalence rates in the top quartile.	Both of these local counties were not in the top tier in the last survey, but saw prevalence increase.	Cost savings
		NQDA Measure (NQF endorsed measure #1800)	Domain 3 metric	4 of 5 PPS counties fell into the third and fourth quartiles in AMR asthma controller medication ratio, indicating a target for improvement.	Columbia and Warren County fell into the fourth quartile for AMR asthma controller medication, with Albany, and Greene in the 3rd.	Reverse trends
		NIH National Heart Lung Blood Institute Guidelines for the Diagnosis and Management of Asthma, NYSDOH Survey of School Nurses, US EPA	Evidence-based tool use rates	Effective use of Asthma Action Plans (part of the national evidence-based clinical guideline for Asthma care) is at very low levels locally, particularly in school age children.	While only about 1/3 of schools statewide were surveyed, some local schools had only 10% AAP use rates. EPA Award Winning programs typically achieve 70% use rates.	Improve AAP tool use to reduce asthma exacerbations
		CAHPS Patient Satisfaction Sections of the QARR/HEDIS Quality Reports - NYSDOH	Patient reported measure	Health Plans serving the most Medicaid Members in the PPS had strong clinical service support satisfaction compared to the rest of state, but fell short on care coordination.	Medicaid Members reported that at least one local Medicaid Managed Care Plan fell short of the NYS benchmark for 1. Satisfaction with Collaborative Decision Making (for BOTH Adults and Children and Adolescents) and 2. Satisfaction with Care Coordination for children with chronic conditions (e.g. asthma) (4 measures total).	Goal to improve asthma coordination

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
	4.b.i. Tobacco Cessation	EBRFSS	Population health measure	Smoking Prevalence in the AMC PPS is mostly higher than Upstate and maintaining or increasing over the past 5 years.	The 2013-14 EBRFSS data on adult smoking prevalence indicate that 3 of the 5 counties have rates of smoking similar to or increasing from 2008-09 (Albany and Warren counties decreased). All of the 5 counties had higher smoking prevalence than Upstate (17.3%).	Reverse this trend
		BRFSS	Risk combinations	Smoking prevalence increases as SES and education decreases.	Seventeen percent of adult NYS residents were current smokers in 2013. Their rate for the population with incomes <\$15,000/year is 26.8%; \$15,000-\$24,999 is 22.0%; \$50,000+ is 11.6%. Smoking for the population without a HS education (27.6%) is dramatically higher than for college graduates (7.7%).	Address both risk factors together to obtain greater return on effort
		CDC	Risk combinations	Populations with mental illness or substance abuse disorders have higher smoking prevalence than the general population.	The CDC's 2013 national data on smoking prevalence in adults reported 36% of the population with mental illness vs. 21.0% for the population without Mental Illness. The Capital District Tobacco Free Coalition reported 32.5% of NY residents with mental illness are current smokers.	Address both risk factors together to obtain greater return on effort
		SPARCS Analysis	Major hospital ED and IP drivers	Smokers are 2.3 times more likely to be Superutilizers and chronic elevated utilizers of the hospital ED and IP, similar to rates for those with significant mental or substance use disorders	Consciously treating related behavioral factors can provide more insights how to engage the member	Address both risk factors together to obtain greater return on effort

E. Summary Chart of Projects to be Implemented - AMC PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
	4.b.ii. Increase access to chronic disease prevention - Cancer screening, etc.	SPARCS Analysis	Comparing hospital ED and IP encounter rates for identified drivers	Members with cancer or other chronic diseases like CVA have higher than average hospital encounter use (much higher in the Senior population).	Prevention and early detection strategies can avoid major future health care expenditures, particularly if efforts are targeted.	Target screening to high risk populations
		EBRFSS; % of females 13-17 Years with 3+ doses of HPV (2012) NYSDOH Immunization Registry	Population health	People with HPV may have an increased risk of cancer of the cervix, vulva, penis or anus.	Three of the 5 counties had colorectal screening rates below the NYS rate of 69.3%. Columbia (59.3%) fell into the 4th quartile while Warren (67.0%) and Greene (67.8%) fell into the 3rd risk quartile. There are over 13,700 females 13-17 years in the Service Area not fully immunized for HPV. All counties were better than the NYS rate of 26.4%. However, Columbia County (27.9%) fell into the 3rd risk quartile.	Target screening to high risk populations
		Colorectal Cancer Incidence and Mortality. NYSDOH Community Health Indicator Reports (2009-11)	Population health	A correlation between smoking and colorectal cancer has been found. Reducing smoking rates is expected to lower colorectal cancer rates over time.	The Service area crude colorectal cancer incidence (53.6/100,000) and mortality rates (17.7) were higher than the NYS rate of 48.1 and 16.9. Three counties in the service area had incidence rates higher than NYS, with Columbia County being the highest (53.1). The area crude Colorectal mortality rate (17.7) was higher than the NYS rate (16.9), with Columbia County (18.7) in the 4th quartile.	Target screening to high risk populations
		Female Breast Cancer Incidence and Mortality. NYSDOH Community Health Indicator Reports (2009-11)	Population health	The incidence of breast cancer has been found to be significantly higher for active smokers.	The Service area crude incidence rate of 166.6/100,000 was higher than the NYS rate of 144.9. Two counties had adjusted rates higher than NYS, with Albany in the 4th quartile, Saratoga and Warren in the 3rd quartile. The service area also had a crude mortality rate (30.8/100,000) higher than the NYS rate of 26.6. Four of the 5 counties adjusted mortality rates fell into the 4th risk quartile: Greene (26.2); Warren (24.5); Saratoga (24.4); and Albany (23.5).	Target screening to high risk populations

		<p>Cervical Cancer Screening, Women 24-64 years, Breast Cancer Screening, Women 50-74 years., & Colorectal Cancer Screening, Adults 50-75 Years (Clinical Improvement Indicators for Medicaid Pop.)</p>	<p>Population health</p>	<p>All 5 counties had screening rates below (poorer) than NYS. 4 of the 5 counties had rates that fell into the 4th risk quartile: Columbia (49.8%); Greene (53.2%); Albany (54.7%) and Saratoga (58.0%). All 5 counties had screening rates below (poorer) than NYS. No counties fell into the 4th Quartile. All 5 counties had colorectal screening rates below (poorer) than NYS. Columbia (38.2%) and Greene (38.3%) fell into the 4th risk quartile.</p>	<p>Screening is an important tool to identify the incidence of cancer when it can be most successfully treated.</p>	<p>Target screening to high risk populations</p>
--	--	---	--------------------------	---	---	--

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.a.i IDS	HealthData NY PQI Rate	The total Medicaid inpatient admission Gap based on the AHRQ PQI measures in the chartbooks is 2,029 for adults (PQI), primarily in Albany county (680=34%). Rates are over the benchmark of 129 in Rensselaer (141) and Fulton Co. (145).	Preventable admissions would decrease with greater integration of services.		Reduce avoidable admissions and save resources.
		HealthData NY PPV Rate, Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)	There are a total of 61,650 Preventable ED Visits in PPS. The preventable ED visit rate for the PPS is above the NYS State benchmark, and is especially high in Rensselaer, Schenectady and Albany County vs. NYS rate 36 for Medicaid.	The emergency department is currently a major source of care for the uninsured and Medicaid beneficiaries.	The emergency room was used as the usual source of care for 29% of Medicaid enrollees surveyed, and 52.4% of those used the ED 3+ times in the last year.	Focus on ED visits
		HealthData NY PPR Rate	PPR	The numbers of preventable admissions are below the NYS benchmark but still represent an opportunity.	The total Medicaid potentially preventable readmissions (PPR) are 909, with the majority at Ellis (314=43%) and St. Peter's (266=37%).	Reduce avoidable re-admissions and save resources.
		HealthData NY PDI Rate	PDI	The number of readmissions for children is very low and not worth pursuing	The total Medicaid pediatric inpatient admission Gap based on the AHRQ PDI measures in the chartbooks is only 19 for children (PDI). 3/4 of the Gap is in Fulton County. Focus should be on adults	Focus primarily on adults.
		SPARCS Analysis		Super Utilizers of the ED would impact the most utilization through the least number of people.	SPARCS analyses found 47% of the ED visits (34,370) are for 7% of the patients (3,491). They are most likely to be found in Albany (10,795), Rensselaer (5,991), Schenectady (5,820), Montgomery (1,723) and Fulton County (1,994).	Target high impact interventions on high need population.
		SPARCS Analysis		Patients with mental health and substance abuse conditions account for the majority of inpatient admissions and ED visits.	Gap analysis by county and Chronic Disease show 69% of IP admissions and 59% of ED visits are behavioral health patients (MH and SUD)	Align physical and behavioral health to address the whole person.
		Dashboard C4 Primary care visit rate	Medicaid Primary care visit rate Alb (220), Ren (232), Sch (275), Sar (272), Ful (298), Mont(292)	There is a need for greater access to primary care as an alternative to the ED.	Medicaid Primary care visit rate is lower in all six counties vs for NYS (337). No 24/7 urgent care centers located in urban locations accessible to the target population via public transportation. Percent of Medicaid members with primary care visits is especially low in Albany (56%), Rensselaer (58%), Schenectady (61%) vs Upstate 64%.	Integrating care from the patient's perspective will direct them to the most appropriate care setting.

		HealthData NY PQI Rate	PQI (2011-2012) = 2,069 (composite)	The majority of preventable admissions are for beneficiaries with chronic conditions	62% of PQI total admission of 2,069 are for chronic conditions. The total Medicaid inpatient admission Gap based on the AHRQ PQI measures in the chartbooks is 1,365 for adults (PQI), primarily in Albany county (452=35%). Rates are over the benchmark of 129.4 in Rensselaer (140.9)and Fulton Co. (145.4).	Reducing hospital admission rates for those that are frequent users reduces the number of contact points for efficiency.
				Targeting those with many multiple chronic conditions would address 12.2% of the inpatient visits (4,471) through 6.5% of patients (3,721). 24% of those admissions would be readmissions.	SPARCS analyses found the number of admits in the region that have multiple chronic conditions is 1,083 in Albany, 716 in Rensselaer, 741 in Schenectady, 336 in Saratoga, 196 in Montgomery and 238 in Fulton counties.	Target high impact interventions on high need population.
				The vast majority of physician offices have not created work processes that use the medical home framework to integrated services.	Only 7.5% of the physicians and 3% of the Nures Practitioners/Physician Assistant's are PCMH Level 3 certified.	Integrated care should be coordinated across all of its parts.
				Consumers, providers and CBO's have confirmed that uncoordinated care is a major impediment to healthcare delivery.	Provider and CBO survey - 70% of providers said uncoordinated care is impediment to healthcare delivery for Medicaid & uninsured. Listening sessions and Focus group participants cited numerous instances of uncoordinated care.	Addressing lack of care coordination in areas of transition.
				15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers	The choice of these neighborhoods was on a combination of the numbers and density (#/per sq. mile) based on SPARCS analysis of super-utilizers (ED use 2x or more in 6 months and/or had a 30 day all cause Readmission 2011-2013 and Chronic (defined as those with Multiple Chronic Physical Condition or Moderate or Significant Behavioral Health diagnoses) as well as neighborhoods lacking primary care and mental health providers.	Target interventions in high need areas for quickest impact.

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.b.iii ED Triage for at risk populations	HealthData NY PPV Rate	The PPV visit rates are especially high in five of the six counties (Alb 58, Sch 59, Ren 68, Ful 54, Mont 48)	The emergency department is currently a major source of care for the uninsured and Medicaid beneficiaries.	The preventable ED visit rate is above the NYS State benchmark. The PPV rates and number of visits are especially high in Rensselaer, Schenectady and Albany County vs. NYS rate 36 for Medicaid, 23.5 for all payor. There are a total of 61,650 Preventable ED Visits in PPS. consumer survey of Medicaid enrollees showed that 29% of respondents used the emergency room as one of their usual places to get healthcare services, and 52.4% of those used the ED three or more times in the last year.	Reduce avoidable admissions and save resources.
		Dashboard C4 Primary care visit rate	Medicaid Primary care visit rate Alb (220), Ren (232), Sch (275), Sar (272), Ful (298), Mont(292)	There is a need for greater access to primary care as an alternative to the ED.	Medicaid Primary care visit rate is lower in all six counties vs for NYS (337). No 24/7 urgent care centers located in urban locations accessible to the target population via public transportation. The provision of extended hours and/or 24/7 urgent care is one of the recommended solutions. Percent of Medicaid members with primary care visits is especially low in Albany (56%), Rensselaer (58%), Schenectady (61%) vs Upstate 64%.	Active diversion of people presenting in the ED who would be better served in a lower cost setting will conserve resources.
				Targeting Super Utilizers would address 47% of the ED visits (34,370) through just 7% of the patients (3,491).	SPARCS analyses found half of ED visits in the region are Super Utilizers, 10,795 in Albany, 5,991 in Rensselaer, 5,820 in Schenectady, 1,723 in Montgomery and 1,994 in Fulton County	Providing convenient Urgent care during extended hours will reduce overuse of more expensive resources of the ED
				Patients with mental health and substance abuse conditions account for the majority of ED visits.	ED Visit Gap analysis by county and Chronic Disease show 60% of ED visits are behavioral health patients	Target high impact interventions on high need population.

				<p>This issue will likely grow without an intervention, since the ED visit rate is much higher than the rest of state and Medicaid beneficiaries are increasing markedly.</p>	<p>NYSDOH DSRIP Medicaid Dashboards B-8, Medicaid Enrollment increased 11.4% from 3/2013 to 3/2014. Dashboard C-2 shows the ED visit rate for NYS (excl NYC) was 47.6 in March of 2014 and was 64.0 for the PPS.</p>	<p>Make patient centered and integrated care the new normal for those with elevated health risks due to chronic conditions.</p>
				<p>15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers.</p>	<p>The top neighborhoods for Super-Utilizers are Hamilton Hill, Troy/Lansingburgh, West End (includes West Hill), Arbor Hill/Center Square, Goose Hill/Union, Stockade and Rt 20/New Scotland. None of these neighborhoods have PCMH providers or urgent care centers.</p>	<p>Target interventions in high need areas for quickest impact.</p>

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.b.iv Care Transitions					
		NYS Vital Records; Population-US Census Bureau Population Estimates; NYSDOH Leading Causes of Death		Leading causes of death and premature death include a large number of chronic diseases including diseases of the heart disease, cancer, chronic lower respiratory disease, stroke and diabetes	All Counties had age adjusted mortality rates higher than NYS, with Fulton and Montgomery having rates in the 4th quartile.	Address the needs of this fragile population.
		HealthData NY PPR Rate		The numbers of preventable admissions are below the NYS benchmark but still represent an opportunity for reduction. The majority of readmissions are for chronic conditions	The total Medicaid potentially preventable readmissions (PPR) are 909, with the majority at Ellis (314=43%) and St. Peter's (266=37%).	Reduce avoidable admissions and save resources.
		HealthData NY PPR Rate		The New York State PPR benchmark is currently 6.7 for the Medicaid population in 2013 with a goal of 5.1 by 2018	PR rates at Ellis (6.1) and St. Peter's (5.5) are higher than the 2018 goal.	Reduce avoidable admissions and save resources.
		SPARCS Analysis		Behavioral health drives higher admission, readmission and ED rates.	Medicaid and Uninsured patients with Behavioral Health needs have much higher use rates: Admissions more than 4-4.5 times, Readmissions 6-8 times, and ED visits 1.4-1.9 times.	Address comorbid physical and behavioral conditions to have greater impact
		SPARCS Analysis		Targeting those with many multiple chronic conditions would address 12.2% of the inpatient visits (4,471) through 6.5% of patients (3,721). 24% of those admissions would be readmissions.	SPARCS analyses found the number of readmits in the region that have multiple chronic conditions and/or are Super Utilizers is 1,243 in Albany, 649 in Rensselaer, 739 in Schenectady, 337 in Saratoga, 323 in Montgomery and 244 in Fulton counties.	Target high impact interventions on high need population.
		SPARCS Analysis		Targeting Super Utilizers would address 47% of the ED visits and 65% of the admits of which 24% are readmissions, through just 7% of the patients	Targeting Super Utilizers would address 47% of the ED visits (34,370) and 65% of the admits (4,486), of which 1,380 (24%) are readmissions, through just 7% of the patients (3,491).	Providing necessary care transition assistance will reduce overuse of more expensive resources of the ED
		DSRIP Managed Care Provider Network Data and NCQA PCMH Recognition list		The percent of physician's certified as PCMH is a very small percentage of the total primary care physicians and of the nurse practitioners/physician assistants and is not well distributed in relation to the need.	There are 2,464 Primary care providers (1,140 physicians and 1,324 NP/PA) and only 7.5% of the physicians and 3% of the NP/PA's are PCMH Level 3 certified. Albany, Schenectady, Rensselaer have the lowest percent of providers PCMH certified.	Number of PCMH certified providers will increase.
		SPARCS Analysis		Patients with mental health and substance abuse conditions account for the majority of inpatient admissions and ED visits.	Gap analysis by county and Chronic Disease show 69% of IP admissions and 59% of ED visits are behavioral health patients(MH and SUD) Rensselaer, Montgomery, Albany, Fulton and Saratoga had higher than state rates of poor mental health 14 or more days in the past month.	Align physical and behavioral health to address the whole person within care transitions.

		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)		Consumer survey results confirm high inpatient use and readmission rates	Preliminary results of an on-line consumer survey of Medicaid enrollees showed that 34% of the respondents had been an inpatient in the last year with 26.5% of them more than once.	Providing necessary care transition assistance will reduce overuse of more expensive resources of inpatient care
		SPARCS Analysis		15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers.	The top neighborhoods for Chronic users are Hamilton Hill, Troy/Lansingburgh, West End (including West Hill), South End/Riverfront, Arbor Hill/Center Square, and Gloversville/Mayfield. Of these neighborhoods only Gloversville has PCMH providers.	Target interventions in high need areas for quickest impact.

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.b.viii Hosp Home Care Collab					
		NYS Medicaid Count of Dual Eligibles by County, Service Date: March 2013		Dual eligibles are a relatively small proportion of Medicaid enrollees but are responsible for almost half of the inpatient admissions.	Dual eligible beneficiaries form 17.8% of the total number of beneficiaries but account for 49.8% of the preventable Medicaid inpatient admits.	Intervene in the cycle of dual eligible beneficiaries utilizing a disproportionate amount of IP admissions with the use of better home care collaboration.
		HealthData NY PPR Rate	The total Medicaid potentially preventable readmissions (PPR) is 909, with the majority at Ellis (314=43%) and St. Peter's (266=37%).	The numbers of preventable admissions are below the NYS benchmark but still represent an opportunity for reduction. The majority of readmissions are for chronic conditions.		Reduce avoidable admissions and save resources.
		HealthData NY PPR Rate	PPR (2011-2012) = 909 readmissions	Those discharged home have higher than Benchmark IP readmissions that highlight the need for targeted hospital HHC innovations. The favorable readmission rates for patients in formal BH treatment suggests that a BH component in the Hospital/HHC innovations should be included.	Within a subset of people with diabetes, cardiac, hypertension, asthma or COPD, far fewer patients are discharged to SNFs locally (10.5%) than the Non-NYC benchmark (16.1%). Most of these patients either go home without post acute services (PAC) (59.9% vs. 56.5%), to behavioral or substance facilities (8.6% vs. 6.8%), or HHC (14.6% vs. 13.9%). Readmission rates for HHC and Home woPAC are higher than the benchmark (26.3% vs. 25.7% (HHC) and 20.1% vs. 19.3% (Home woPAC)), while those discharged to a BH treatment facility are lower (23.4% vs. 26.4%).	Reduce readmissions for these conditions by identifying and addressing risk factors during hospitalizations and attempting to intervene with home care solutions.
		SPARCS Analysis		Behavioral health drives higher use rates and admissions.	Medicaid and Uninsured patients with Significant or Moderate Behavioral Health diagnoses represent over 40% of discharges overall (30% with Significant BH diagnoses). This is concentrated in 100% at SPARC, 63% at Seton, 59% at Samaritan, 58% at Ellis, and 44% at St. Mary's. Medicaid and Uninsured patients with Behavioral Health needs have much higher use rates: Admissions more than 4-4.5 times, Readmissions 6-8 times, and ED visits 1.4-1.9 times.	Align physical and behavioral health to address the whole person within hospital and home care transitions.
		SPARCS Analysis		Targeting those with many multiple chronic conditions would address 12.2% of the inpatient visits (4,471) through 6.5% of patients (3,721). A quarter of the admissions result in readmissions.	The number of readmits in the region that have multiple chronic conditions and/or are Super Utilizers is 1,243 in Albany, 649 in Rensselaer, 739 in Schenectady, 337 in Saratoga, 323 in Montgomery and 244 in Fulton counties.	Reduce readmissions for these conditions by identifying and addressing risk factors during hospitalizations and attempting to intervene with home care solutions.

		<p>Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)</p>		<p>Providers believe monitoring chronic care patients and care coordination would reduce readmissions.</p>	<p>The provider survey recommended the following to reduce re-admissions: Monitoring of chronic care patients (65.2%), Temporary assisted living for mental health or substance abuse patient (62.0%), Care coordinators (60.5%), Co-location of primary and behavioral care (55.4%), Temporary residence with social support services (50.6%).</p>	<p>Reduce avoidable admissions and save resources.</p>
		<p>HealthData NY PPR Rate, NYS Medicaid Count of Dual Eligibles by County, Service Date: March 2013</p>		<p>The geographic focus where the highest number of re-admissions and highest concentrations of chronic care dual eligible beneficiaries is in the urban cities of Albany, Schenectady, and Troy.</p>	<p>The top neighborhoods for Chronic, Multiple Chronic users and 30 day Re-admissions are Hamilton Hill, Troy/Lansingburgh, West End (including West Hill), South End/Riverfront, Arbor Hill/Center Square, Upper State Street, Stockade and Gloversville/Mayfield. Of these neighborhoods only Gloversville has PCMH providers.</p>	<p>Reduce avoidable admissions and save resources by addressing highest need areas for quickest impact.</p>

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
2	2.d.i Project 11	PPV	There are over 115,000 PPV's to Medicaid recipients in AMC service area. NYS had a PPV rate of 36/100 Medicaid recipients. All 7 counties had rates higher than NYS, with Schenectady (59), Albany (58) and Columbia (55), in the 4th or 5th quintile.	ED is currently a major source of care for the Medicaid and Uninsured Population. Greater understanding and better access to more culturally sensitive primary care will reduce the number of ED visits.		Engage with and teach people of all backgrounds and cultures how best to utilize health services.
		PQI	There were approximately 1,900 adult PQI hospitalizations per year in the Medicaid population residing in the AMC PPS area. NYS had an overall PQI composite rate of 184.8 per 10,000 Medicaid recipients. Of the 7 counties in the service area, 2 had rates higher than NYS, and fell into the 4th or 5th quintiles of NYS counties: Albany (189.9); and Ulster (189.7).	PQIs are considered ambulatory sensitive conditions. Greater understanding and better access to more culturally sensitive primary care will reduce the number of ED visits.		Engage with and teach people of all backgrounds and cultures how best to utilize health services.
		SPARCS		Readmission for Low Utilizers (LU) being higher than the already high Uninsured/Medicaid rates suggesting the need for improved post-discharge community supports for LU patients.	There are 15,127 people in the six County, PPS area that are either uninsured (UI) or Medicaid members that are low utilizers of services (LU). LU inpatient utilization is higher (2.71 vs. 2.07) than UI/Medicaid members, largely driven by higher readmission rates (1.27 vs. 2.07). These patterns are consistent across 4 of the 6 counties. Listening sessions found uninsured participants relate that if they got sick, they did not seek care since they could not afford to either stay home or pay for care.	Better understand access barriers to devise ways to overcome them.
		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)		Access to health services for the uninsured is more limited, with some providers not serving these patients and some serving a disproportionate share.	Our CNA survey found 9% of provider patients as uninsured - higher than the general population - and 17% not accepting new uninsured patients.	Make patient centered and integrated care the new normal for those with elevated health risks due to chronic conditions.
		NYSDOH DSRIP Medicaid Dashboards B-8		The Affordable Care Act is rapidly increasing the number of Medicaid insured. The newly insured and the uninsured will require primary care services and support to not use the ED as their usual source of care.	Medicaid Enrollment increased 11.4% from 3/2013 to 3/2014.	Understanding the people served will help build trust and engagement
		US Census Bureau Small Area Health Insurance Estimates (2011) and 2011 Population Estimates		The largest number of uninsured are in the densely populated counties with more Black and Hispanic residents.	As of 2013 (5 year ACS) there were 71,905 uninsured individuals (3.9%) in the six county Ellis PPS. The largest number of uninsured are located in Albany County (8,283) followed by Saratoga County (4,930) and Schenectady (4,070). The Kaiser Family Foundation reports that the NY uninsured rate for Blacks (13%) and Hispanics (15%) is roughly double that for Whites (7%).	Understanding the people served will help build trust and engagement

		American Community Survey, US Census		The rural population has a higher uninsured rate generally, particularly for children, which will require a different strategy than in urban areas.	Fulton and Montgomery counties have fewer total people that are covered by Medicaid or are uninsured, however, higher portions of their populations are in Medicaid (30% vs. 20.4% in the 6 counties) or uninsured (10.1-10.6% vs. the 6 county average of 7.7%). Higher portions of the Medicaid population are children in these counties.	Understanding the people served will help build trust and engagement
		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)		Many low income consumers don't know where to get health insurance or lose coverage when moving - which is more common with this population.	CNA consumer survey of Medicaid enrollees showed 6% reporting as being uninsured; half of them reported not knowing where to get health insurance. Focus groups reported problems with losing insurance when moving.	Better understand access barriers to devise ways to overcome them.
		Pew Research and ACS, US Census Bureau, American Community Survey 5 Year Estimates 2008-2012 (DP-2), Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)		Illegal immigrants, limited english speakers, homeless, the unemployed and disabled all have significant barriers to coverage and care, but still have health problems that require care.	Number of illegal immigrants was estimated at 23,151 or 3.8% of the population for the six county area. The highest numbers are in Albany followed by Schenectady, Saratoga and Rensselaer. The number of people who speak English less than very well in the 6 county area is 27,078 or 3% of the population. Montgomery has the highest percent (5,4%). There are an estimated 6,283 homeless or 1% of the populations in the four county area (no data was available for Montgomery and Fulton Counties). CNA survey found 29% unemployed, with 14% disabled and not employed.	Better understand access barriers to devise ways to overcome them.
			15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers.	The top neighborhoods for the Uninsured and low Medicaid users are Hamilton Hill, West End (including West Hill), Arbor Hill/Center Square, Troy/Lansingburgh, South End/Riverfront, Goose Hill/Union, Stockade, Rt 20/New Scotland and Upper State Street. Of these neighborhoods only Arbor Hill, Troy/Lansingburgh and Upper State Street have a FQHC. None have PCMH providers.		Understanding the people served will help build trust and engagement

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	3.a.i PC&BH Integrations					
		SPARCS Analysis		Behavioral health drives higher admission, readmission and ED rates.	Medicaid and Uninsured patients with Behavioral Health needs have much higher use rates than those without: Admissions more than 4-4.5 times, Readmissions 6-8 times, and ED visits 1.4-1.9 times.	Addressing overlapping physical and behavioral health needs will reduce interaction effects.
		Medicaid_Chronic_Conditions__Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012		A large number and percent of Medicaid beneficiaries have mental health and substance use disorders.	A high percentage of Medicaid enrollees in the PPS have MH (40.4% or 79,790) and SUD (10.3% or 20,452).	Parity in treatment is necessary.
		SPARCS Analysis		Patients with mental health and substance abuse conditions account for the majority of inpatient admissions and ED visits.	SPARCS analysis showed that 42.7% of Medicaid beneficiaries with moderate to severe BH conditions (MH and SUD) that used IP or ED services used 61.6% of the ED visits, 54.4% of the IP Admits and 67.9% of the readmits.	Address comorbid physical and behavioral conditions to have greater impact
		EBRFSS, SPARCS		Poor mental health days, self-inflicted hospitalizations, and Suicide Mortality indicate that there are mental health needs in the region that are greater than the upstate average.	About 13.6% or 102,000 in the Ellis PPS had at least 14+ poor mental health days in the past month (2012-13). Rensselaer, Montgomery, Albany, Fulton and Saratoga had higher than state rates. The service area averaged over 800 self-inflicted hospitalizations per year. Hospitalization rate of 8.5/10,000 was higher than NYS rate of 5.6. The service area averages over 100 suicide deaths per year. Mortality rate of 11.0/100,000 is higher than NYS rate of 8.2.	A major goal is to reverse these disparities and trends.
		NPI Data, Dashboard C4 Primary care visit rate		There is a need for greater access to primary care, even more so for MH and SUD providers who are scarce outside of urban Albany.	Medicaid Primary care visit rate is lower in all six counties (Alb (220), Ren (232), Sch (275), Sar (272), Ful (298), Mont(292)) vs for NYS (337). The Ellis PSS area has fewer mental health providers per 100,000 population than the State average, with the lowest percentages in Rensselaer, Saratoga and Fulton Counties. There is a lack of social workers in all counties except Montgomery.	A major goal is to reverse these disparities and trends.

		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8), DSRIP Dashborad B9		The provider survey validates services must increase and coordinate for patients with mental health and behavioral issues, yet the number of practices with PCMH or Health Home certification are low.	Mental health and behavioral issues are a major problem for 62.7% of the respondents to the provider survey; 58% of providers cited the lack of qualified mental health professionals and 53% cited lack of community resources. To reduce admits, readmits and ED providers cited co-location of primary care and behavioral care (51.7% for admit, 55.4% for re-admit, 62.7% for ED visits). Only 7.5% of physicians are PCMH Level 3 certified in the region and 2,620 patients are enrolled in health homes for the six county region.	An effective Workforce must be available.
		PH Prevention Indicators		The lack of providers may cause 4 of 6 counties to have worse rates than Upstate for initiation of alcohol and other drug dependence treatment.	Initiation of alcohol and other drug dependence treatment: 4 of the 6 counties had initiation rates lower than Upstate NY (78.3%): Fulton (70.9%); Schenectady (71.4%); Saratoga (72.5%) and Albany (75.1%).	Consumers and Providers alike expect integration of physical and behavioral services. Care must be designed to meet these expectations to meet metrics.
				15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers.	The neighborhoods with the greatest number and concentration of those with significant behavioral health needs includes: Hamilton Hill, West End (including West Hill), Troy/Lansingburgh, Arbor Hill/Center Square, South End/Riverfront, Stockade, and Goose Hill/Union. Of these Hamilton Hill has a severe lack of mental health providers. Other neighborhoods lacking sufficient mental health providers include: Troy/Lansingburgh and Arbor Hill.	Address these utilizers by targetin interventions in high area of needs.

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	3.a.iv Amb Detox					
		DSRIP Medicaid_Chronic_Conditions__Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012		Seven percent of Beneficiaries have drug related conditions in the Ellis PPS. They account for a disproportionate share of IP and ED visits.	Although beneficiaries with drug related conditions account for 14,000 of the beneficiaries (Opioid related conditions consist of 3,952); they account for 16% of inpatient admits and 16.5% of ED visits (excl. alcohol related) for chronic conditions.	Decrease inappropriate use of ED/IP for drug related conditions through use of ambulatory detox treatment programs.
		PH Indicators - drug related hospitalizations	Drug related hospitalization rate of 17.6	Drug related hospitalizations and newborn drug related discharges are disproportionately high throughout the PPS.	Four of the 6 counties were at high risk of Drug-related hospitalizations compared to the rest of NYS counties. The service area's newborn drug-related discharges rate of 117.5/10,000 is higher than NYS (83.8). Five of the 6 counties were at very high (1) or high risk (4) compared to all the NYS counties. Schenectady at 207.7 was at very high risk.	A major goal is to reverse this trend.
		DSRIP Managed Care Provider Network Data, ACS 2013; PH Prevention Indicators		The there is a significant lack of MH and SUD providers, especially outside of urban Albany, resulting in poor rates of initiation of alcohol and other drug dependence treatment.	The Ellis PSS has fewer mental health providers per 100,000 residents than upstate NY, with the lowest percentages in Rensselaer, Saratoga and Fulton Counties. There is a lack of social workers in all counties except Montgomery. There are almost no providers reporting themselves as SUD providers. Four of the 6 counties had initiation of alcohol and other drug dependence treatment rates lower than Upstate NY (78.3%): Fulton (70.9%); Schenectady (71.4%); Saratoga (72.5%) and Albany (75.1%).	Increase access to behavioral health services where appropriate.
		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8)		There are insufficient alternatives to hospitals for high or intoxicated individuals.	Key informant interviews with local ED staff indicated that this population has no place to dry out, and described that the police frequently drop off this population at the ED since there is no other place to go if they have not committed a crime.	Address this gap through development of community based addiction treatment programs.
		DSRIP Medicaid_Chronic_Conditions__Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012		Opioid SUD Medicaid members are concentrated in urban areas.	Albany, Schenectady and Rensselaer have a high number of members with opioid abuse. The highest concentrations of Opioid SUD members and ED visits are in the Tri-City urban areas and in Latham and Colonie.	Address highest SUD need geographical areas to gain quickest impact for initiatives.

				<p>15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers.</p>	<p>The neighborhoods with the greatest number and concentration of those with significant behavioral health needs includes: Hamilton Hill, West End (including West Hill), Troy/Lansingburgh, Arbor Hill/Center Square, South End/Riverfront, Stockade, and Goose Hill/Union. Of these Hamilton Hill has a severe lack of mental health providers. Other neighborhoods lacking sufficient mental health providers include: Troy/Lansingburgh and Arbor Hill.</p>	<p>Address highest SUD need geographical areas to gain quickest impact for initiatives.</p>

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	3.d.ii Asthma home based self management	PQI (Asthma and COPD)	There are 564 Asthma PQIs and 75 PDIs calculated.	A similar analysis of chronic disease encounters yielded a gap of 521 IP admissions and 4,877 ED visits vs. a NonNYC benchmark.	Asthma and COPD are typically considered together (as they are in the AHRQ measure), since the frequently coexist, particularly in the senior population.	Reduce asthma exacerbations to reduce overall avoidable hospital ED and IP use
		SPARCS analysis of Multiple Chronic Conditions		Asthma frequently is one of several comorbid conditions, placing the patient at a synergistic increased risk of ED or Inpatient use. Tobacco use is also highly correlated in this population, serving as an asthma trigger.	While 14% of the Medicaid and Uninsured population in the 7 counties has asthma, they represent 31% of the ED visits, 21% of the Admissions, and 31% of the Readmissions.	Reducing asthma exacerbations will have a multiplier effect for those with other chronic diseases.
		NYS Prevention Agenda Population Health Indicators to Improve Health Status and Reduce Health Disparities		Prevention Agenda indicators for the total population showed the 5 or 6 of the 6 counties in the the highest quartiles for most asthma related metrics.	Asthma has pervasively high rates for prevalence, encounters, and environmental challenges (e.g. housing) in the region. Results of Listening sessions throughout the region highlighted the poor condition of housing stock.	Target asthma efforts where they will have the most impact.
		NYS Office of the State Controller (OSC)		For the Medicaid population, The Office of the State Controller highlighted that 5 of the 6 PPS counties had prevalence rates in the top quartile, with Schenectady the highest in NYS.	3 of these local counties were not in the top tier in the last survey, but saw prevalence increase.	Cost savings
		NCQA Measure (NQF endorsed measure #1800)		5 PPS counties fell into the third and fourth quartiles in AMR asthma controller medication ratio, indicating a target for improvement.		Reverse trends
		NIH National Heart Lung Blood Institute Guidelines for the Diagnosis and Management of Asthma, NYSDOH Survey of School Nurses, US EPA		Effective use of Asthma Action Plans (part of the national evidence-based clinical guideline for Asthma care) is at very low levels locally, particularly in school age children.		Improve AAP tool use to reduce asthma exacerbations
		CAHPS Patient Satisfaction Sections of the QARR/HEDIS Quality Reports - NYSDOH		Health Plans serving the most Medicaid Members in the PPS had strong clinical service support satisfaction compared to the rest of state, but fell short on care coordination.	Medicaid Members reported that at least one local Medicaid Managed Care Plan fell short of the NYS benchmark for 1. Satisfaction with Collaborative Decision Making (for BOTH Adults and Children and Adolescents) and 2. Satisfaction with Care Coordination for children with chronic conditions (e.g. asthma) (4 measures total).	Goal to improve asthma coordination

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
3	3.g.i Palliative Care					
		NYS Vital Records; Population-US Census Bureau Population Estimates; NYSDOH Leading Causes of Death		Leading causes of death and premature death include a large number of chronic diseases including diseases of the heart disease, cancer, chronic lower respiratory disease, stroke and diabetes	All Counties had age adjusted mortality rates higher than NYS, with Fulton and Montgomery having rates in the 4th quartile.	Address the palliative care needs of this fragile population.
		NYS Medicaid Count of Dual Eligibles by County, Service Date: March 2013		Dual eligibles are a relatively small proportion of Medicaid enrollees but are responsible for almost half of the inpatient admissions	Dual eligible beneficiaries form 17.8% of the total number of beneficiaries but account for 49.8% of the preventable inpatient admits	Address the needs of this fragile population.
		HealthData NY PQI Rate	PQI (2011-2012) = 2,069 (composite)	The majority of preventable admissions are for beneficiaries with chronic conditions	62% of PQI total admission of 2,069 are for chronic conditions. The total Medicaid inpatient admission Gap based on the AHRQ PQI measures in the chartbooks is 1,365 for adults (PQI), primarily in Albany county (452=35%). Rates are over the benchmark of 129.4 in Rensselaer (140.9) and Fulton Co. (145.4).	Address palliative care need of those with chronic conditions.
		SPARCS Analysis		Targeting those with many multiple chronic conditions would address 12.2% of the inpatient visits (4,471) through 6.5% of patients (3,721). 24% of those admissions would be readmissions.	SPARCS analyses found the number of admits in the region that have multiple chronic conditions is 1,083 in Albany, 716 in Rensselaer, 741 in Schenectady, 336 in Saratoga, 196 in Montgomery and 238 in Fulton counties.	Address palliative care need of those with chronic conditions.
		SPARCS Analysis		24% of the admissions of those with multiple conditions are for readmissions. These are the patients to target in able to reduce the readmission rate.	SPARCS analyses found the number of readmits in the region that have multiple chronic conditions and/or are Super Utilizers is 1,243 in Albany, 649 in Rensselaer, 739 in Schenectady, 337 in Saratoga, 323 in Montgomery and 244 in Fulton counties.	Address palliative care need of those with chronic conditions.
		Medicaid_Chronic_Conditions_Inpatient_Admissions_and_Emergency_Room_Visits_by_County_Beginning_2012 Duals		Top chronic care conditions leading to inpatient admissions include Hypertensions, Asthma, Diabetes, COPD and CHF.	Mental health and substance abuse account for the highest percent of admissions (69%). Other top conditons include Hypertension (8%), Asthma (4.8%), Diabetes (4.4%), COPD (3.4%), CHF (2.2%).	Address palliative care need of those with chronic conditions to reduce inpatient admissions.
		SPARCS Analysis		The chronic care population that are candidates for palliative care were responsible for a high percentage of the total admissions.	16,213 enrollees (8% of the total) in the last year were individuals who have a primary or secondary diagnosis of CHF, COPD, Diabetes, and Chronic Kidney disease. Those individuals had 29,530 ED visits or 8% of the total visits and 15,836 inpatient admissions or 15.6% of the total admissions.	Address palliative care need of those with chronic conditions to reduce inpatient admissions.

		DSRIP Managed Care Provider Network Data and NCQA PCMH Recognition list	7.5% of Primary Care MDs and 3% of NP/PA are PCMH certified	The percent of physician's certified as PCMH is a small percentage of the total primary care physicians and is not well distributed in relation to the need.	There are 2,464 Primary care providers (1,140 physicians and 1,324 NP/PA) and only 7.5% of the physicians and 3% of the NP/PA's are PCMH Level 3 certified. Albany, Schenectady, Rensselaer have the lowest percent of providers PCMH certified.	Increase access to palliative care within the primary care setting.
		SPARCS Analysis		Targeting those with many multiple chronic conditions would address 12.2% of the inpatient visits (4,471) through 6.5% of patients (3,721). 24% of those admissions would be readmissions. These are the patients to target in able to reduce the readmission rate.	SPARCS analyses found the number of readmits in the region that have multiple chronic conditions and/or are Super Utilizers is 1,243 in Albany, 649 in Rensselaer, 739 in Schenectady, 337 in Saratoga, 323 in Montgomery and 244 in Fulton counties.	Address palliative care need of those with chronic conditions.
		DSRIP Dashborad B9		The number of patients in health homes is low compared to the number with multiple chronic conditions	The number enrolled in health homes is 2,620 for the six county region with Schenectady County having the most (1,173) followed by Albany (557) and Rensselear (512)	Increase access to palliative care within the primary care setting.
				15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers.	The top neighborhoods for those with Mulitple Chronic conditions (4+ out of 10 chronic conditions) are Troy/Lansingburgh, Hamilton Hill, West End (including West Hill), Gloversville/Mayfield, South End/Riverfront and Upper State Street	Address palliative care need of those with chronic conditions in aareas of highest need for quickest impact.

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
4	4.a.ii MH&SUD Infrastructure					
		Medicaid_Chronic_Conditions_Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012		A large number and percent of Medicaid beneficiaries have mental health and substance use disorders.	A high percentage of Medicaid enrollees in the PPS have MH (40.4% or 79,790) and SUD (10.3% or 20,452).	Parity in treatment is necessary.
		SPARCS Analysis		Behavioral health drives higher admission, readmission and ED rates.	Medicaid and Uninsured patients with Behavioral Health needs have much higher use rates: Admissions more than 4-4.5 times, Readmissions 6-8 times, and ED visits 1.4-1.9 times.	Parity in treatment is necessary.
		Primary data collection, consumer, provider and CBO surveys, focus groups (8) and listening sessions (8), DSRIP Dashborad B9		The provider survey validates services must increase and coordinate for patients with mental health and behavioral issues, yet the number of practices with PCMH or Health Home certification are low.	Mental health and behavioral issues are a major problem for 62.7% of the respondents to the provider survey; 58% of providers cited the lack of qualified mental health professionals and 53% cited lack of community resources. To reduce admits, readmits and ED providers cited co-location of primary care and behavioral care (51.7% for admit, 55.4% for re-admit, 62.7% for ED visits). Only 7.5% of physicians are PCMH Level 3 certified in the region and 2,620 patients are enrolled in health homes for the six county region.	Parity in treatment is necessary.
		DSRIP Managed Care Provider Network Data, ACS 2013		The there is a significant lack of MH and SUD providers and social workers, especially outside of urban Albany.	The Ellis PSS area has fewer mental health providers per 100,000 population (121) with the lowest percentages in Rensselaer (75) , Saratoga (85) and Fulton Counties (55). Albany Co has a sufficient number of mental health professionals. There is a lack of social workers (129/100,000) in all counties except Montgomery. All Counties have a low number of counselors at only 13 per 100,000	A major goal is to reverse these trends.
		PH Prevention Indicators		The lack of providers may cause 4 of 6 counties to have worse rates than Upstate for initiation of alcohol and other drug dependence treatment.	Initiation of alcohol and other drug dependence treatment: 4 of the 6 counties had initiation rates lower than Upstate NY (78.3%): Fulton (70.9%); Schenectady (71.4%); Saratoga (72.5%) and Albany (75.1%).	A major goal is to reverse these trends.
		DSRIP Medicaid_Chronic_Conditions_Inpatient_Admissions_and_Emergency_Room_Visits_by_County__Beginning_2012, PQI Suite		Geographically, the high need areas are Tri-City urban areas and in Montgomery and Fulton County		Targeting highest need areas of behavioral health incidence will lead to quickest impact.

				<p>15 top need neighborhoods were identified in the six county area by the number and density of super-utilizers and chronic care people and the lack of primary care providers, especially PCMH certified providers.</p>	<p>The neighborhoods with the greatest number and concentration of those with significant and moderate behavioral health needs includes: Hamilton Hill, West End (including West Hill), Troy/Lansingburgh, Arbor Hill/Center Square, South End/Riverfront, Stockade, and Goose Hill/Union. Of these Hamilton Hill has a severe lack of mental health providers. Other neighborhoods lacking sufficient mental health providers include: Troy/Lansingburgh and Arbor Hill.</p>	<p>Targeting highest need areas of behavioral health incidence will lead to quickest impact.</p>

E. Summary Chart of Projects to be Implemented - Ellis PPS

Domain	Project	DSRIP Measure	DSRIP Measure Preliminary Baseline Finding	Other Population Findings	Rationale for Choice	Plan Goal
	4.b.i. Tobacco Cessation	EBRFSS		Smoking Prevalence in the Ellis PPS is mostly higher than Upstate and maintainint or increasing over the past 5 years.	The 2013-14 EBRFSS data on adult smoking prevalence indicate that 5 of the 6 counties have rates of smoking similar to or increasing from 2008-09 (Albany county decreased). Four of the 6 counties had higher smoking prevalence than Upstate (17.3%). Fulton (29.0%), and Rensselaer (23.8%) had rates in the 4 th quartile of NYS counties, while Montgomery (23.4%) county fell in the 3 rd quartile.	Reverse this trend
		BRFSS		Smoking prevalence increases as SES and education decreases.	Seventeen percent of adult NYS residents were current smokers in 2013. Ther rate for the population with incomes <\$15,000/year is 26.8%; \$15,000-\$24,999 is 22.0%; \$50,000+ is 11.6%. Smoking for the population without a HS education (27.6%) is dramatically higher than for college graduates (7.7%).	Address both risk factors together to obtain greater return on effort
		CDC		Populations with mental illness or substance abuse disorders have higher smoking prevalence than the general population.	The CDC's 2013 national data on smoking prevalence in adults reported 36% of the population with mental illness vs. 21.0% for the population without Mental Illness. The Capital District Tobacco Free Coalition reported 32.5% of NY residents with mental illness are current smokers.	Address both risk factors together to obtain greater return on effort
		SPARCS Analysis	Major hospital ED and IP drivers	Smokers are 2.3 times more likely to be Superutilizers and chronic elevated utilizers of the hospital ED and IP, similar to rates for those with significant mental or substance use disorders	Consciously treating related behavioral factors can provide more insights how to engage the member	Address both risk factors together to obtain greater return on effort
