VBP Quality Measurement General Task Force

December 19, 2017

December 19, 2017

Agenda

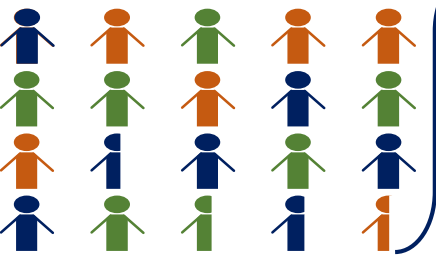

Section	Time	Presenter
Introduction	10:00 5 minutes	Dr. Doug Fish
Project Level Set	10:05 10 minutes	Dr. Lindsay Cogan
Quality Measurement Testing Overview	10:15 30 minutes	Isaac Lutz
Questions and Group Discussion	10:45 40 minutes	Group
Wrap-Up	11:25 5 minutes	Dr. Doug Fish

Level Set

- VBP Pilot Participants are already required to report most VBP Category 1 measures for the first VBP pilot year
- Pilot Participants were also required to report two Category 2 measures for their VBP arrangement for year 2
- Instead of reporting two Category 2 measures, participants will be asked to report **Controlling High Blood Pressure** (which is a Category 1 measure) for their arrangement
 - In turn, Pilot Participants will be asked to report only one Category 2 Measure of their choice
 - Category 2 measure work will be done outside of the testing project
- Testing participants can work with third parties (e.g., QEs or data aggregators) to help collect clinical data and calculate measures
- Results of the testing may be shared with external organizations, like NCQA and CMS, to drive measure alignment and development

Level Set: Background

- VBP is leveraging the APC Scorecard method to require health plans to modify the Patient Level Detail (PLD) files submitted for HEDIS/QARR to include provider attribution fields to calculate measure results at the VBP Contractor level across all arrangements.

Quality Measure	MCO HEDIS/QARR Measure Result	Measure Breakout by Member via PLD	Measure Score by VBP Pilot Arrangement	Measure Score by VBP Contractor and Arrangement		
Cervical Cancer Screening (CCS)	 MCO #1 765/1199		HARP 218/322	 66/98  90/123  62/101		
			 MCO #2 832/1171		TCGP 218/322	 283/387  244/320  223/276
					IPC 218/322	 210/350  243/410  176/305

Legend:

-  Included in Numerator
-  Denominator Only
-  VBP Contractor #1
-  VBP Contractor #2
-  VBP Contractor #3

Level Set: Problems and Challenges

- **What is the problem that needs to be solved?**

- Several Category 1 Quality Measures for VBP are not reportable by Managed Care Organizations (MCOs) at the VBP Contractor Level

- **Controlling High Blood Pressure (HEDIS: CBP)**
- Diabetes Foot Exam
- Screening for Clinical Depression and Follow-up
- Tobacco Use: Screening and Cessation Intervention
- Influenza Immunization
- BMI Screening and Follow-up Plan

- **Challenges:**

- MCOs do not report all Category 1 VBP Measures for HEDIS/QARR and may not have the capacity to report new VBP measures without additional support
- Controlling High Blood Pressure (CBP) is a hybrid only measure and relies on medical record review (MRR) to calculate the measure results based on a sample from the eligible population

VBP Pilot Quality Measure Testing

- Goals:**
- VBP pilot participants will design, implement, and test their ability to collect clinical data and generate clinical quality measures for the non-reportable VBP Category 1 Controlling High Blood Pressure (CBP)
- Objectives:**
- Create valid measure results for non-reportable VBP quality measures at the VBP contractor level
 - Create baseline scores for non-reportable VBP quality measures to benchmark future quality measure improvements
 - Enable more frequent measure reporting between VBP Contractors and MCOs
 - Improve the quality of the data for those data elements needed to generate quality measures
- Impact:**
- Prepares VBP participants to work together on improving data quality through the calculation of quality measurement at the VBP contractor level

Eligible Population Parameters

Denominator Criteria: HEDIS Specification and Value Sets		Discussion points
Ages	18-85 years of December 31	<ul style="list-style-type: none"> • Proposed Recommendation: <i>Testing participants will use the HEDIS specification to determine the eligible population to help calculate the denominator</i> • Are there other recommendations for determining the initial population other than using the HEDIS specification? • If so, how can participants share the relevant data needed to identify the initial population to calculate the denominator? • Does the Dx of HTN need additional confirmation, as is required for HEDIS?
Continuous Enrollment	Measure year (MY) with no more than one gap in continuous enrollment of up to 45 days	
Event/diagnosis	One outpatient visit during first six months of MY _____ with _____ Diagnosis (Dx) of Hypertension (HTN)	
Exclusions	<ul style="list-style-type: none"> • Members in hospice care • Members with end-stage renal disease (ESRD) or kidney transplant • Members who are pregnant • Members who had nonacute inpatient admission during measure year 	

Numerator Compliance Parameters

VBP Contractor Attribution	Identify Attributed Population in EHR/HIE	Numerator Compliance
<ul style="list-style-type: none"> Members attributed to the VBP Contractor will need to be filtered from the total eligible population Participants should leverage their existing attribution method established for VBP As new attribution issues arise, participants will collaborate to implement mutually amenable solutions for accurate measurement at the VBP contractor level 	<ul style="list-style-type: none"> Measure Testing participants will need to identify attributed members in their EHRs or through the HIE (or other electronic clinical data repositories) Participants will also need to develop solutions to find clinical data for patients with no EHR or HIE clinical data Missing data could potentially be used in gap in care reporting 	<ul style="list-style-type: none"> Electronic clinical data should be used to identify numerator compliance for the entire population MRR or samples should not be used to find numerator compliance Participants will address poor data quality that impacts overall measure performance

Testing Objectives

- **Objective 1:** *Create measure results for non-reportable VBP quality measures at the VBP contractor level*
 - Testing participants will calculate quality measures results (i.e. numerators/denominators) for CBP to assess the performance of VBP Contractors by VBP arrangement.
 - Measure validity will need to be defined and further refined by the State and testing participants.
- **How does this objective accomplish the overall vision and goals for quality measurement?**
 - While there are other required Category 1 measures in VBP that are non-reportable, CBP is a high priority measure used across other programs, like DSRIP, HEDIS/QARR, and the Merit-based Incentive Payment Systems (MIPS)
 - Testing and calculating measure results for CBP will facilitate mutually beneficial solutions that can be leveraged for other quality measures or other programs
 - As VBP moves from pilots to full-scale adoption, measure testing will better prepare participants for the responsibility of reporting quality measures by VBP arrangements and contractors

Testing Objectives

- **Objective 2:** *Create baseline scores for non-reportable VBP quality measures to benchmark future quality measure improvements*
 - Measure testing will establish benchmarks by which to gauge future measure results for VBP Contractors and arrangements
 - Benchmarks could also include quantifying/qualifying the data elements needed for quality measurement and setting improvement goals or methods to improving the quality of data elements
- **How does this objective accomplish the overall vision and goals for quality measurement?**
 - Baselining measure scores and data elements needed for measurement will allow stakeholders to better quantify the current state of data quality and its utility for quality measurement
 - Allows stakeholders to target specific areas or resources needed to improve overall quality
 - Gives stakeholders access to relevant data points needed to enter into VBP arrangements where quality measurement performance is tied more directly to payment

Testing Objective

- **Objective 3:** *Enable more frequent measure reporting between VBP Contractors and MCOs for Category 1 Measures*
 - Testing participants should report quality measure results to help VBP stakeholders assess and monitor VBP Contractor performance on feasible but frequent basis (other than annually)
 - Measure results and data should be shared in standardized, re-usable formats that can be shared for gaps in care reports or for multiple other kinds of use cases
- **How does this objective accomplish the overall vision and goals for quality measurement?**
 - The interoperable exchange of clinical data should provide stakeholders more timely access to actionable data needed to address gaps in care or improve performance even for outcome-based measures like CBP
 - More frequent measure reporting may also help stakeholders address data quality issues when reported measure results don't match expected outcomes or match internal monitoring systems or reports

Testing Objectives

- **Objective 4:** *Improve the quality of the data for those data elements needed to generate quality measures*
 - Testing participants should assess the current state of data quality and improve data quality where there are deficiencies
 - Measure testing should address various domains of quality, including:
 - Structured data
 - Data completeness of each data element
 - Use of, and fidelity to, structured fields and codes
 - Data reusability for other quality measures or use cases where clinical data is aggregated
- **How does this objective accomplish the overall vision and goals for quality measurement?**
 - Data quality is inherent to an organization's ability to accurately collect, aggregate, and calculate quality measures
 - The measure testing will enable stakeholders who contribute data or calculate measures to work together on a focused use case for improving data quality

Milestones Roadmap

Phase	Participant Activities	Deliverables
Measure Testing Planning and Design	<ul style="list-style-type: none"> • Develop individual testing scopes and charters • Assess current capabilities and data sources for CBP • Design processes, data sharing agreements, and other technical solutions needed to exchange clinical data • Finalize measure specifications and data sets 	<ul style="list-style-type: none"> • Individual Testing Project Plans • Testing Current State: Snapshot
Measure Testing Implementation	<ul style="list-style-type: none"> • Execute solutions and processes • Share interim findings, challenges, best practices • Report on other testing activities 	<ul style="list-style-type: none"> • Monthly Milestone Reporting
Measure Testing Evaluation	<ul style="list-style-type: none"> • Internal evaluations between participants • External evaluations by third party • Recommendations for scaling solutions statewide 	<ul style="list-style-type: none"> • Evaluation Report • VBP Measure Results for CBP
