Objectives

Objectives Legend

C = Cognitive  P = Psychomotor  A = Affective
1 = Knowledge level
2 = Application level
3 = Problem-solving level

Cognitive Objectives
At the completion of this lesson, the EMT-Basic student will be able to:
3-1.1 Recognize hazards/potential hazards.(C-1)
3-1.2 Recall the need for BSI protection.
3-1.3 Describe common hazards found at the scene of a trauma and a medical patient.(C-1)
3-1.4 Determine if the scene is safe to enter.(C-2)
3-1.5 Define mechanisms of injury / nature of illness.(C-1)
3-1.6 Discuss the reason for identifying the total number of patients at the scene.(C-1)
3-1.7 Explain the reason for identifying the need for additional help or assistance.(C-1)

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-1.8 Explain the rationale for crew members to evaluate scene safety prior to entering.(A-2)
3-1.9 Serve as a model for others explaining how patient situations affect your evaluation of mechanism of injury or illness.(A-2)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-1.10 Observe various scenarios and identify potential hazards. (P-1)

Preparation
Motivation: Size-up is the first and most important aspect of patient assessment. It begins as the EMT-Basic approaches the scene. During this phase, the EMT-Basic surveys the scene to determine if there are any threats that may cause an injury to the EMT-Basic. In addition, this assessment allows the EMT-Basic to determine the nature of the call and obtain additional help.

Prerequisites: BLS
MATERIALS
AV Equipment: Utilize various audio-visual materials relating to scene size-up. The continuous design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

EMS Equipment: None

PERSONNEL
Primary Instructor: One EMT-Basic instructor, knowledgeable in scene management.

Assistant Instructor: The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable about scene size-up.

Recommended Minimum Time to Complete: 30 minutes
Presentation

Declarative (What)

I. Scene Size-up/Assessment
A. Body substance isolation review
   1. Eye protection if necessary
   2. Gloves if necessary
   3. Gown if necessary
   4. Mask if necessary
   5. Other items as appropriate
B. Scene safety
   1. Definition - an assessment to assure the well-being of the EMT-Basic.
   2. Personal protection - Is it safe to approach the patient?
      a. Crash/rescue scenes
      b. Toxic substances - low oxygen areas
      c. Crime scenes - potential for violence
      d. Unstable surfaces: slope, ice, water
   3. Protection of the patient - environmental considerations
   4. Protection of bystanders - if appropriate, help the bystander avoid becoming a patient.
   5. If the scene is unsafe, make it safe. Otherwise, do not enter.
C. Definition - an assessment of the scene and surroundings that will provide valuable information to the EMT-Basic.
D. Mechanism of injury/ nature of illness
   1. Medical
      a. Nature of illness - determine from the patient, family or bystanders why EMS was activated.
      b. Determine the total number of patients. If there are more patients than the responding unit can effectively handle, initiate a mass casualty plan.
         (1) Obtain additional help prior to contact with patients: law enforcement, fire, rescue, ALS, utilities. EMT-Basic is less likely to call for help if involved in patient care.
         (2) Begin triage.
   2. Trauma
      a. Mechanism of injury - determine from the patient, family or bystanders and inspection of the scene what is the mechanism of injury.
         (1) Ejection from vehicle
         (2) Death in the same passenger compartment
         (3) Falls > 20 feet
         (4) Roll-over of vehicle
         (5) High-speed vehicle collision
         (6) Vehicle-pedestrian collision
         (7) Motorcycle crash
(8) Bicycle collision

b. Determine the total number of patients.
   (1) If there are more patients than the responding unit can effectively handle, initiate a mass casualty plan.
      (a) Obtain additional help prior to contact with patients. EMT-Basic is less likely to call for help when involved in patient care.
      (b) Begin triage.
   (2) If the responding crew can manage the situation, consider spinal precautions and continue care.

**Suggested Application**

**Procedural (How)**
None identified for this lesson.

**Contextual (When, Where, Why)**
Size-up represents the very beginning of patient assessment. It requires the EMT-Basic to evaluate several aspects concerning the situation in a very short period of time. It is essential for assuring the safety of the crew and the patient. This information may be obtained as part of dispatch, but should always be reassessed upon arrival at the scene. For some situations, size-up is an on-going process. As additional information is obtained, modification is made to the size-up of the patient and the situation overall.

**STUDENT ACTIVITIES**

**Auditory (Hear)**
1. The student will hear simulations of various safe and unsafe scenes.

**Visual (See)**
1. The student will see simulations of various safe and unsafe scenes.
2. The student should see the flow chart from Appendix I.

**Kinesthetic (Do)**
1. The student will practice the actions to take at various safe and unsafe scenes.
2. The student should use the flow chart from Appendix I.

**INSTRUCTOR ACTIVITIES**
Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

**Evaluation**

Written: Develop evaluation instruments, e.g., examinations, verbal reviews, and handouts, to determine if the students have met the cognitive and affective objectives of this lesson.
Practical: Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

Remediation

Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor’s course guide.

Suggested Enrichment

What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor’s course guide and attach with lesson plan.
Objectives

Objectives Legend

C = Cognitive  P = Psychomotor  A = Affective
1 = Knowledge level
2 = Application level
3 = Problem solving level

COGNITIVE OBJECTIVES

At the completion of this lesson, the EMT-Basic student will be able to:

3-2.1 Summarize the reasons for forming a general impression of the patient.
3-2.2 Describe the steps of the initial assessment
3-2.3 Discuss methods of assessing altered mental status.(C-1)
3-2.4 Define each letter of AVPU.
3-2.5 Describe the patient characteristics for each letter of AVPU.
3-2.6 Differentiate between assessing the altered mental status in the adult, child and infant patient.(C-3)
3-2.7 Discuss methods of assessing the airway in the adult, child and infant patient.(C-1)
3-2.8 State reasons for management of the cervical spine once the patient has been determined to be a trauma patient.(C-1)
3-2.9 Describe methods used for assessing if a patient is breathing.(C-1)
3-2.10 State what care should be provided to the adult, child and infant patient with adequate breathing.(C-1)
3-2.11 State what care should be provided to the adult, child and infant patient without adequate breathing.(C-1)
3-2.12 Differentiate between a patient with adequate and inadequate breathing.
3-2.13 Distinguish between methods of assessing breathing in the adult, child and infant patient.(C-3)
3-2.14 Compare the methods of providing airway care to the adult, child and infant patient.(C-3)
3-2.15 Describe the methods used to obtain a pulse.(C-1)
3-2.16 Differentiate between obtaining a pulse in an adult, child and infant patient.(C-3)
3-2.17 Discuss the need for assessing the patient for external bleeding.(C-1)
3-2.18 Discuss the value of removing some of the patients clothing during assessment.
3-2.19 Describe normal and abnormal findings when assessing skin color.(C-1)
3-2.20 Describe normal and abnormal findings when assessing skin temperature.(C-1)
3-2.21 Describe normal and abnormal findings when assessing skin condition.
3-2.22 Describe normal and abnormal findings when assessing skin capillary refill in the infant and child. (C-1)
3-2.23 Explain the reason for prioritizing a patient for care and transport.(C-1)
AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-2.24 Explain the importance of forming a general impression of the patient.
3-2.25 Explain the value of performing an initial assessment. (A-2)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-2.26 Demonstrate the techniques for assessing mental status. (P-1,2)
3-2.27 Demonstrate the techniques for assessing the airway. (P-1,2)
3-2.28 Demonstrate the techniques for assessing if the patient is breathing.
3-2.29 Demonstrate the techniques for assessing if the patient has a pulse. (P-1,2)
3-2.30 Demonstrate the techniques for assessing the patient for external bleeding. (P-1,2)
3-2.31 Demonstrate the techniques for assessing the patient's skin color, temperature, condition and capillary refill (infants and children only).
3-2.32 Demonstrate the ability to prioritize patients. (P-1,2)

Preparation
Motivation: The EMT-Basic will encounter patients who require emergency medical care. It is important for the EMT-Basic to identify those patients who require rapid assessment critical interventions, and immediate transport.

Following the initial assessment, the EMT-B will use information obtained during this phase with the appropriate history and physical examination.

Prerequisites: BLS, Preparatory, and Airway.

MATERIALS
AV Equipment: Utilize various audio-visual materials relating to patient assessment. The continuous design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

EMS Equipment: Exam gloves, airway management equipment.

PERSONNEL
Primary Instructor: One EMT-Basic instructor knowledgeable in patient assessment.
Assistant Instructor: The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable about patient assessment.

Recommended Minimum Time to Complete: One hour
Declarative (What)

I. General Impression of the Patient
   A. Definition
      1. The general impression is formed to determine priority of care and is based on the EMT-Basic's immediate assessment of the environment and the patient's chief complaint.
      2. Determine if ill, i.e., medical or injured (trauma). If injured, identify mechanism of injury.
      3. Age
      4. Sex
      5. Race (e.g. Native American, Asian, Black, Hispanic, White, other)

   B. Assess patient and determine if the patient has a life threatening condition.
      1. If a life threatening condition is found, treat immediately.
      2. Assess nature of illness or mechanism of injury.

II. Assess Patient's Mental Status. Maintain Spinal Immobilization if Needed.
   A. Begin by speaking to the patient. State name, tell the patient that you are an emergency medical technician, and explain that you are here to help.
   B. Levels of mental status
      1. Alert
      2. Responds to Verbal stimuli.
      3. Responds to Painful stimuli.
      4. Unresponsive - no gag or cough

III. Assess the Patient's Airway Status.
   A. Responsive patient - Is the patient talking or crying?
      1. If yes, assess for adequacy of breathing.
      2. If no, open airway.
   B. Unresponsive patient - Is the airway open?
      1. Open the airway. Positioning the patient is dependant upon their condition, age, and their size.
         a. For medical patients, perform the head-tilt chin-lift.
            (1) Clear
            (2) Not clear - Clear the airway.
         b. For trauma patients or those with unknown nature of illness, the cervical spine should be stabilized/immobilized and the jaw thrust maneuver performed.
            (1) Clear
            (2) Not clear - Clear the airway.

IV. Assess the Patient's Breathing.
   A. If breathing is adequate and the patient is responsive, oxygen may be indicated.
B. All responsive patients breathing >24 breaths per minute or <8 breaths per minute should receive high flow oxygen (defined as a 15 LPM nonrebreather mask).

C. If the patient is unresponsive and the breathing is adequate, open and maintain the airway and provide high concentration oxygen.

D. If the breathing is inadequate, open and maintain the airway, assist the patient's breathing and utilize ventilatory adjuncts. In all cases oxygen should be used.

E. If the patient is not breathing, open and maintain the airway and ventilate using ventilatory adjuncts. In all cases oxygen should be used.

V. Assess the Patient's Circulation.

A. Assess the patient's pulse.
   1. The circulation is assessed by feeling the carotid. If alert check the radial pulse.
      a. In a patient one year old or less, palpate a brachial pulse.
      b. If pulseless, palpate carotid pulse.
         (1) If pulseless, medical patient >12 years old, start CPR and apply automated external defibrillator (AED).
         (2) Medical patient < 12 years old, start CPR.
         (3) Trauma patient, start CPR.

B. Assess if major bleeding is present. If bleeding is present, control bleeding.

C. Assess the patient's perfusion by evaluating skin color and temperature.
   1. The patient's perfusion may be assessed by looking at the nail beds, lips and the skin inside the eyelids.
      a. Normal - pink
      b. Abnormal conditions
         (1) Pale
         (2) Cyanotic or blue-gray
         (3) Flushed or red
         (4) Jaundice or yellow
   2. Assess the patient's skin temperature by feeling the skin.
      a. Normal - warm
      b. Abnormal skin temperatures
         (1) Hot
         (2) Cool
         (3) Cold
         (4) Clammy - cool & moist
   3. Assess the patient's skin condition. This is an assessment of the amount of moisture on the skin.
      a. Normal - dry
      b. Abnormal - moist or wet
   4. Assess capillary refill in infant and child patients.
      a. Normal capillary refill is less than two seconds.
      b. Abnormal capillary refill is greater than two seconds.
VI. Identify Priority Patients.
   A. Consider:
      1. Poor general impression
      2. Unresponsive patients - no gag or cough
      3. Responsive, not following commands
      4. Difficulty breathing
      5. Shock
      6. Complicated childbirth
      7. Chest pain with BP <100 systolic
      8. Uncontrolled bleeding
      9. Severe pain
   B. Make a CUPS status determination
      1. Expedite transport of the patient based on determination. Consider ALS back up.

VII. Proceed to the appropriate focused history and physical examination.
   A. It is important for the EMT-Basic student to separate those patients who require rapid assessment and critical interventions, from those patients who can be managed using components of the focused assessment.

Suggested Application

Procedural (How)
1. Review airway patency, breathing and oxygen delivery.
2. Review methods of assessing mental status.
3. Demonstrate obtaining radial, carotid, and brachial pulses.
4. Show assessment and control of major external bleeding.
5. Demonstrate assessment of skin color, temperature.

Contextual (When, Where, Why)
Perform initial assessment on all patients after assuring scene and personal safety. If the scene is safe and the environment permits, perform the assessment prior to moving the patient. The initial assessment is a rapid means of assessing patient condition and priorities of care.

STUDENT ACTIVITIES

Auditory (Hear)
1. Students should hear recordings of various patient situations to listen for clues concerning the general impression.
2. Students should hear normal and abnormal airway noises.
3. Students should hear breathing.

Visual (See)
1. Students should see audio-visual aids or materials of various patients situations.
2. Students should see breathing while an initial assessment is being performed.
3. Students should see appropriate landmarks for assessing pulses.
4. Students should see examples of major bleeding.
5. Students should see normal skin color and condition.
6. Students should see how to control major bleeding.
7. Students should see the flow chart from Appendix I.

Kinesthetic (Do)
1. Students should practice establishing mental status on programmed patients (fellow students) with various altered mental statuses.
2. Students should practice airway opening techniques on manikins and each other.
3. Students should practice assessing breathing.
4. Students should practice assessing pulses.
5. Students should practice assessing for major bleeding.
6. Students should practice assessing skin color, temperature and condition.
7. Students should practice assessing capillary refill in infants and children.
8. Students should practice recording assessment findings.
9. Students should use the flow chart from Appendix I.

INSTRUCTOR ACTIVITIES
Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

Evaluation

Written: Develop evaluation instruments, e.g., examinations, verbal reviews, handouts, to determine if the students have met the cognitive and affective objectives of this lesson.

Practical: Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

Remediation

Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.

Suggested Enrichment

What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor's course guide and attach with lesson plan.

New York State Department of Health

MODULE 3
Patient Assessment
Lesson 3-3
Focused History and Physical Exam: Trauma
Objectives

Objectives Legend
C = Cognitive  P = Psychomotor  A = Affective
1 = Knowledge level  
2 = Application level  
3 = Problem-solving level

COGNITIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-3.1 Identify significant Mechanisms of Injury according to State Protocol.
3-3.2 Identify 3 considerations pertaining to significant mechanisms of injury as it relates to infants or children.
3-3.3 Discuss the reasons for reconsideration concerning the mechanism of injury.(C-1)
3-3.4 State the reasons for performing a rapid trauma assessment.(C-1)
3-3.5 Recite examples and explain why patients should receive a rapid trauma assessment.(C-1)
3-3.6 Describe the areas included in the rapid trauma assessment and discuss what should be evaluated.(C-1)
3-3.7 Differentiate when the rapid assessment may be altered in order to provide patient care.(C-3)
3-3.8 Discuss the reason for performing a focused history and physical exam.
3-3.9 Describe the assessment of patients with no significant mechanism of injury.

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-3.10 Recognize and respect the feelings that patients might experience during assessment.(A-1)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-3.11 Demonstrate the rapid trauma assessment that should be used to assess a patient based on mechanism of injury.(P-1,2)

Preparation

Motivation: With trauma patients, it is important for the EMT-Basic student to separate those patients who require rapid assessment and critical interventions, from those patients who can be managed using components of the focused assessment.

Prerequisite Skills: BLS, Preparatory, and Airway.
MATERIALS

AV Equipment: Utilize various audio-visual materials relating to the history and physical exam of trauma patients. The continuous design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

PERSONNEL

Primary Instructor: One EMT-Basic instructor, knowledgeable in patient assessment.

Assistant Instructor: The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable in assessing the history and physical exam of the trauma patient.

Recommended Minimum Time to Complete: Four hours
Presentation

Declarative (What)

I. Reconsider Mechanism of Injury
   A. Significant mechanism of injury
      1. Ejection from vehicle
      2. Death in same passenger compartment
      3. Falls > 20 feet
      4. Roll-over of vehicle
      5. High-speed vehicle collision
      6. Vehicle-pedestrian collision
      7. Motorcycle crash
      8. Unresponsive or altered mental status
      9. Penetrations of the head, chest, or abdomen
   B. Infant and child considerations
      1. Falls >10 feet
      2. Bicycle collision
      3. Vehicle in medium speed collision
   C. Consideration of Mechanism of Injury
      1. Mechanism of Injury often results in specific hidden injuries.
         a. Seat belts
            (1) If buckled, may have produced injuries.
            (2) If patient had seat belt on, it does not mean they do not have injuries.
            (3) Shoulder injury resulting from shoulder harness.
         b. Airbags
            (1) May not be effective without seat belt.
            (2) Patient can hit wheel after deflation.
            (3) Lift the deployed airbag and look at the steering wheel for deformation.
               (a) "Lift and look" under the bag after the patient has been removed.
               (b) Any visible deformation of the steering wheel should be regarded as an indicator of potentially serious internal injury, and appropriate action should be taken.
               (c) Damage to car body.

II. Perform rapid trauma assessment on patients with significant mechanism of injury to determine life threatening injuries. In the responsive patient, symptoms should be sought before and during the trauma assessment.
   A. The rapid trauma assessment is important in order to:
      1. Estimate the severity of injuries
      2. Make a CUPS status determination.
      3. Make transport decisions.
      4. Consider ALS intercept.
5. Consider platinum ten minutes and golden hour.

B. Rapid assessment should be interrupted to provide life saving interventions.
   1. Airway
   2. Breathing
   3. Circulation

C. Performing a Rapid Trauma Assessment:
   1. Continue spinal stabilization.
   2. Consider ALS request.
   3. Reconsider transport decision.
   4. Assess mental status.
   5. As you inspect and palpate, look and feel for the following examples of injuries or signs of injury:
      a. Deformities
      b. Contusions
      c. Abrasions
      d. Punctures/penetrations
      e. Burns
      f. Tenderness
      g. Lacerations
      h. Swelling
   6. Assess the head, inspect and palpate for injuries or signs of injury.
      a. Deformities
      b. Contusions
      c. Abrasions
      d. Punctures/penetrations
      e. Burns
      f. Tenderness
      g. Lacerations
      h. Swelling
      i. Crepitation
      j. Fluids / Blood from head.
   7. Assess the neck, inspect and palpate for injuries or signs of injury.
      a. Deformities
      b. Contusions
      c. Abrasions
      d. Punctures/penetrations
      e. Burns
      f. Tenderness
      g. Lacerations
      h. Swelling
      i. Jugular vein distension (JVD)
      j. Crepitation
   8. Apply cervical spinal immobilization collar (CSIC). May use information from the head injury lesson at this time.
9. Assess the chest, inspect and palpate for injuries or signs of injury:
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. Paradoxical motion
   j. Crepitation
   k. Breath sounds in the apices, mid-clavicular line, bilaterally
      and at the bases, mid-axillary line, bilaterally
      (1) Present
      (2) Absent
      (3) Equal

10. Assess the abdomen, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. Firm
   j. Soft
   k. Distended

11. Assess the pelvis, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. If no pain is noted, gently compress the pelvis to determine tenderness or motion.

12. Assess all four extremities, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
e. Burns  
f. Tenderness  
g. Lacerations  
h. Swelling  
i. Distal pulse  
j. Sensation  
k. Motor function  
l. Crepitation

13. Roll patient with spinal precautions and assess posterior body, inspect and palpate, examining for injuries or signs of injury.

15. Assess SAMPLE history.

III. For patients with no significant mechanism of injury, e.g., cut finger

A. Perform focused history and physical exam based on the components of the rapid assessment. Performing the focused history and physical examination permits:
   1. Assessment and treatment of injuries not identified in the initial assessment.
   2. Reconsideration of transport decisions.
B. Assess baseline vital signs.
C. Assess SAMPLE history.

**Suggested Application**  
**Procedural (How)**
The assessment is completed by visually inspecting, physically palpating and auscultating, and verbally communicating with the patient and family. The assessment is an input/output process, where the assessment findings are the input and the treatment is the output.
1. Review of scene size-up.
2. Review of the initial assessment.
3. Students should be shown audio-visual aids or materials of various trauma scenes to evaluate the mechanism of injury.
4. Demonstrate a rapid patient assessment.

**Contextual (When, Where, Why)**
The history and physical exam are performed following the initial assessment and correction of immediate threats to life. During this process, obtain additional information regarding the patient's condition.

This assessment may be performed at the same location as the initial assessment, unless the scene or patient's condition requires movement.

This assessment is the second hands-on approach to gain information to continue providing patient care, managing life threats, and making a transport decision.
STUDENT ACTIVITIES

Auditory (Hear)
1. Students should hear information input from a simulated patient or others regarding signs and symptoms for patients that are unresponsive.
2. Students should hear the presence of breath sounds on fellow students.

Visual (See)
1. Students should see audio-visual aids or materials of various injuries.
2. Students should see the inspection and palpation of programmed patients for various injuries and patterns of injury.
3. Students should see landmarks for auscultation of breath sounds.
4. Students should see landmarks for palpation and inspection.
5. Students should see the sizing and application of cervical spine immobilization devices.
6. Students should see how the pupils of the eye normally react to light.
7. Students should see the flow chart from Appendix I.

Kinesthetic (Do)
1. Students should practice performing the skills of inspection, palpation, and auscultation.
2. Students should practice recording assessment findings for a trauma patient.
3. Students should use the flow chart from Appendix I.
4. The student should practice doing the focused history and physical exam learned in this lesson.

INSTRUCTOR ACTIVITIES

Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

Evaluation

Written: Develop evaluation instruments, e.g., examination, verbal reviews, and handouts, to determine if the students have met the cognitive and affective objectives of this lesson.

Practical: Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

Remediation

Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.

MODULE 3
Patient Assessment

Lesson 3-4
Focused History and Physical Exam: Medical
Objectives

Objectives Legend
C = Cognitive P = Psychomotor A = Affective
1 = Knowledge level
2 = Application level
3 = Problem-solving level

COGNITIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-4.1 Describe the unique needs for assessing an individual with a specific chief complaint with no known prior history.(C-1)
3-4.2 Differentiate between the history and physical exam that are performed for responsive patients with no known prior history and responsive patients with a known prior history.(C-3)
3-4.3 Describe the needs for assessing an individual who is unresponsive.(C-1)
3-4.4 Differentiate between the assessment that is performed for a patient who is unresponsive or has an altered mental status and other medical patients requiring assessment.(C-3)

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-4.5 Attend to the feelings that these patients might be experiencing.(A-1)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-4.6 Demonstrate the patient assessment skills that should be used to assist a patient who is responsive with no known history.(P-1,2)
3-4.7 Demonstrate the patient assessment skills that should be used to assist a patient who is unresponsive or has an altered mental status.(P-1,2)

Preparation

Motivation: The emergency medical care for the patient by the EMT-Basic is based upon assessment findings. In the history and physical exam, the EMT-Basic will concentrate on the patient's complaint and history, allowing for rapid emergency medical care.

Prerequisite Skills: BLS, Preparatory and Airway.

MATERIALS
AV Equipment: Utilize various audio-visual materials relating to the history and physical exam of medical patients. The continuous
design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

PERSONNEL

Primary Instructor: One EMT-Basic instructor, knowledgeable in patient assessment.

Assistant Instructor: The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable in assessing the history and physical exam for medical patients.

Recommended Minimum Time to Complete: Two hours
Presentation

Declarative (What)

I. Assess History of Present Illness.
   A. Assess complaints and signs or symptoms.
      1. O-P-Q-R-S-T
         a. Onset
         b. Provocation
         c. Quality
         d. Radiation
         e. Severity
         f. Time
      2. Assess SAMPLE History.
      3. Perform rapid assessment.
         a. Assess the head if necessary.
         b. Assess the neck if necessary.
         c. Assess the chest if necessary.
         d. Assess the abdomen if necessary.
         e. Assess the pelvis if necessary.
         f. Assess the extremities if necessary.
         g. Assess the posterior body if necessary.
      4. Assess baseline vital signs.
      5. Provide emergency medical care based on signs and symptoms in consultation with medical direction.

II. Unresponsive Medical Patients
    A. Perform rapid assessment.
       1. Assess the head.
       2. Assess the neck.
       3. Assess the chest.
       4. Assess the abdomen.
       5. Assess the pelvis.
       6. Assess the extremities.
       7. Assess the posterior aspect of the body.
    B. Assess baseline vital signs.
    C. Position patient to protect airway.
    D. Obtain SAMPLE history from bystander, family, friends prior to leaving.

Suggested Application

Procedural (How)

1. Review methods of questioning to determine SAMPLE history.
2. Practice methods of questioning to determine history of present illness.
3. Review airway management.
4. Review size-up.
5. Review the initial assessment.
7. Review of general impression.

**Contextual (When, Where, Why)**
The history and physical exam will be performed on all patients, following the initial assessment. This assessment will focus on the patient's history, as well as the signs and symptoms of the present illness. This assessment will help the EMT-Basic student provide rapid intervention.

**STUDENT ACTIVITIES**

**Auditory (Hear)**
1. Students should hear input from the patient or others regarding signs and symptoms for patients that are unresponsive.
2. Students should hear the presence of breath sounds in fellow students.
3. Students should hear questions to assist in determining the SAMPLE History.
4. Students should hear questions to assist in determining the history of the present illness.

**Visual (See)**
1. Students should see the entire assessment completed for each patient category.
2. Students should see audio-visual aids or materials of various illnesses.
3. Students should see the inspection and palpation of programmed patients for various illnesses.
4. Students should see landmarks for auscultation of breath sounds.
5. Students should see landmarks for palpation and inspection.
6. Students should see the flow chart from Appendix I.

**Kinesthetic (Do)**
1. Students should practice performing the skills of inspection, palpation, and auscultation.
2. Students should practice questioning programmed patients on SAMPLE histories.
3. Students should practice questioning programmed patients on the history of present illness.
4. Students should practice all components of the assessment including: Size-up, initial assessment and the focused history and physical exam.
5. Students should practice recording assessment findings on a medical patient.
6. Students should use the flow chart from Appendix I.

**INSTRUCTOR ACTIVITIES**
Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).
Evaluation
Written: Develop evaluation instruments, e.g., examinations, verbal reviews, and handouts, to determine if the students have met the cognitive and affective objectives of this lesson.

Practical: Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

Remediation
Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.

Suggested Enrichment
What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor's course guide and attach with lesson plan.
MODULE 3
Patient Assessment
Lesson 3-5
Detailed Physical Exam
Objectives

Objectives Legend
C = Cognitive  P = Psychomotor  A = Affective
1 = Knowledge level
2 = Application level
3 = Problem-solving level

COGNITIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-5.1 Discuss the components of the detailed physical exam.(C-1)
3-5.2 State the areas of the body that are evaluated during the detailed physical exam.(C-1)
3-5.3 Explain what additional care should be provided while performing the detailed physical exam.(C-1)
3-5.4 Distinguish between the detailed physical exam that is performed on a trauma patient and that of the medical patient.(C-3)

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-5.5 Explain the rationale for the feelings that these patients might be experiencing.(A-3)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-5.6 Demonstrate the skills involved in performing the detailed physical exam.(P-1,2)

Preparation

Motivation: The entire basis for the EMT-Basic's emergency medical care is the assessment findings. In the detailed physical exam, the EMT-Basic will continue to assess the patient, allowing for continued care.

Prerequisites: BLS, Preparatory and Airway.

MATERIALS
AV Equipment: Utilize various audio-visual materials relating to the detailed physical exam. The continuous design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

PERSONNEL
Primary Instructor: One EMT-Basic instructor with knowledge in patient assessment.

Assistant Instructor: The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable in assessing a detailed physical exam.

Recommended Minimum Time to Complete: One hour
Presentation

Declarative (What)

I. Detailed Physical Exam
   A. Patient and injury specific, e.g., cut finger would not require the detailed physical exam.
   B. Perform a detailed physical examination on the patient to gather additional information.
      1. As you inspect and palpate, look and/or feel for the following examples of injuries or signs of injury:
         a. Deformities
         b. Contusions
         c. Abrasions
         d. Punctures/penetrations
         e. Burns
         f. Tenderness
         g. Lacerations
         h. Swelling
      2. Assess the head, inspect and palpate for injuries or signs of injury.
         a. Deformities
         b. Contusions
         c. Abrasions
         d. Punctures/penetrations
         e. Burns
         f. Tenderness
         g. Lacerations
         h. Swelling
      3. Assess the face, inspect and palpate for injuries or signs of injury.
         a. Deformities
         b. Contusions
         c. Abrasions
         d. Punctures/penetrations
         e. Burns
         f. Tenderness
         g. Lacerations
         h. Swelling
      4. Assess the ears, inspect and palpate for injuries or signs of injury.
         a. Deformities
         b. Contusions
         c. Abrasions
         d. Punctures / penetrations
         e. Burns
         f. Tenderness
         g. Lacerations
         h. Swelling
         i. Drainage
5. Assess the eyes, inspect for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. Discoloration
   j. Unequal pupils
   k. Foreign bodies
   l. Blood in anterior chamber

6. Assess the nose, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. Drainage
   j. Bleeding

7. Assess the mouth, inspect for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. Teeth
   j. Obstructions
   k. Swollen or lacerated tongue
   l. Odors
   m. Discoloration

8. Assess the neck, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
9. Assess the chest, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. Crepitance
   j. Paradoxical motion
   k. Breath sounds in the apices, mid-clavicular line, bilaterally and at the bases, mid-axillary line, bilaterally.
      (1) Present
      (2) Absent
      (3) Equal

10. Assess the abdomen, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. Firm
   j. Soft
   k. Distended

11. Assess the pelvis, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
   c. Abrasions
   d. Punctures/penetrations
   e. Burns
   f. Tenderness
   g. Lacerations
   h. Swelling
   i. If the patient does not complain of pain or is unresponsive, gently flex and compress the pelvis to determine stability.

12. Assess all four extremities, inspect and palpate for injuries or signs of injury.
   a. Deformities
b. Contusions
c. Abrasions
d. Punctures/penetrations
e. Burns
f. Tenderness
g. Lacerations
h. Swelling
i. Distal pulses
j. Sensation
k. Motor function
l. Crepitation

13. Roll with spinal precautions and assess posterior aspect of body, inspect and palpate for injuries or signs of injury.
   a. Deformities
   b. Contusions
c. Abrasions
d. Punctures/penetrations
e. Burns
f. Tenderness
g. Lacerations
h. Swelling

II. Assess Baseline Vital Signs.

Suggested Application

Procedural (How)
The physical assessment is completed by visual inspection and palpation. The assessment is an input/output process, where the assessment findings are the input and the treatment is the output.

Contextual (When, Where, Why)
The detailed physical exam is performed following the focused history and physical exam. It will be performed after all critical interventions have been completed. It is situation and time dependent. Depending upon the severity of the patient's injury or illness, this assessment may not be completed. During this process, additional information regarding the patient's condition is obtained.

Typically this assessment will be performed while en route to the receiving facility.

STUDENT ACTIVITIES
Auditory (Hear)
1. Students should hear information (clues) from the responsive or altered mental status patient regarding symptoms.
Visual (See)
1. Students should see audio-visual aids or materials of various injuries.
2. Students should see the inspection and palpation of programmed patients for various injuries and illnesses.
3. Students should see landmarks for auscultation of breath sounds.
4. Students should see landmarks for palpation and inspection.
5. Students should see the flow chart from Appendix I.

Kinesthetic (Do)
1. Students should practice performing the skills of inspection, palpation, and auscultation of the detailed physical exam.
2. Students should use the flow chart from Appendix I.

INSTRUCTOR ACTIVITIES
Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

Evaluation
Written: Develop evaluation instruments, e.g., examinations, verbal reviews, and handouts, to determine if the students have met the cognitive and affective objectives of this lesson.

Practical: Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

Remediation
Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.

Suggested Enrichment
What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor's course guide and attach with lesson plan.
Objectives

Objectives Legend
C = Cognitive P = Psychomotor A = Affective
1 = Knowledge level
2 = Application level
3 = Problem-solving level

COGNITIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-6.1 Discuss the reasons for repeating the initial assessment as part of the on-going assessment.(C-1)
3-6.2 Describe the components of the on-going assessment.(C-1)
3-6.3 Describe trending of assessment components.(C-1)

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-6.4 Explain the value of performing an on-going assessment.(A-2)
3-6.5 Recognize and respect the feelings that patients might experience during assessment.(A-1)
3-6.6 Explain the value of trending assessment components to other health professionals who assume care of the patient.(A-2)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-6.7 Demonstrate the skills involved in performing the on-going assessment.(P-1,2)

Preparation

Motivation: In order to assure appropriate care, the EMT-Basic must re-evaluate the patient frequently. The length of time spent with the patient or the condition of the patient will assist in establishing how often and how on-going assessments will be conducted.

It is of utmost importance to be accurate with the documentation of all findings and interventions. Be sure to accurately record all times associated with the care provided.

Prerequisites: BLS, Preparatory and Airway.
### MATERIALS

**AV Equipment:** Utilize various audio-visual materials relating to patient assessment. The continuous design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

**EMS Equipment:** Exam gloves, stethoscope (dual and single head)(1:6), blood pressure cuffs (adult, child and infant)(1:6), penlights (1:6).

### PERSONNEL

**Primary Instructor:** One EMT-Basic instructor with knowledge in patient assessment.

**Assistant Instructor:** The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable in the aspects of the on-going assessment.

**Recommended Minimum Time to Complete:** One hour
Presentation

Declarative (What)
I. Repeat initial assessment. For a stable patient, repeat and record every 15 minutes. For an unstable patient, repeat and record at a minimum every 5 minutes.
   A. Reassess mental status.
   B. Maintain open airway.
   C. Monitor breathing for rate and quality.
   D. Reassess pulse for rate and quality.
   E. Monitor skin color and temperature.
   F. Re-establish patient priorities.

II. Reassess and record vital signs.

III. Repeat focused assessment regarding patient complaint or injuries.

IV. Check interventions.
   A. Assure adequacy of oxygen delivery/artificial ventilation.
   B. Assure management of bleeding.
   C. Assure adequacy of other interventions.

Suggested Application

Procedural (How)
1. Review methods for determining mental status.
2. Review of the airway module for airway patency.
3. Review of the airway module for breathing.
4. Review of the airway module for oxygen delivery/artificial ventilation.
5. Review of obtaining radial, carotid, and brachial pulses.
6. Review assessment of skin color, temperature and capillary refill for infant and child patients.
7. Review patient priorities.
8. Review baseline vital signs.
9. Review SAMPLE history.
10. Review the focused history and physical examination.
11. Discuss intervention checks.

Contextual (When, Where, Why)
The on-going assessment should be performed on all patients after assuring completion of critical interventions. Ideally, it is completed following the detailed physical exam. However, the patient condition may preclude performance of the detailed physical exam. In these cases, the on-going assessment is extremely valuable. The on-going assessment is a means of determining changes in the patient’s condition.
STUDENT ACTIVITIES

Auditory (Hear)
None identified for this lesson.

Visual (See)
1. The students should see the flow chart from Appendix I.

Kinesthetic (Do)
1. The students should practice establishing mental status on programmed patients with various mental statuses.
2. The students should practice airway opening techniques on manikins and each other.
3. The students should practice on each other to determine breathing.
4. The students should practice determining pulses.
5. The students should practice determining skin color, temperature and condition.
6. The students should practice examining interventions to assure that they continue to be effective.
7. The students should practice completing an on-going assessment.
8. The students should practice recording assessment findings.
9. The students should use the flow chart from Appendix I.

INSTRUCTOR ACTIVITIES

Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

Evaluation

Written: Develop evaluation instruments, e.g., examinations, verbal reviews, and handouts, to determine if the students have met the cognitive and affective objectives of this lesson.

Practical: Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

Remediation

Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.
Suggested Enrichment

What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor's course guide and attach with lesson plan.
Objectives

Objectives Legend
C = Cognitive  P = Psychomotor  A = Affective
1 = Knowledge level
2 = Application level
3 = Problem-solving level

COGNITIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-7.1 List the proper methods of initiating and terminating a radio call.(C-1)
3-7.2 State the proper sequence for delivery of patient information.(C-1)
3-7.3 Explain the importance of effective communication of patient information in the verbal report.(C-1)
3-7.4 Identify the essential components of the verbal report.(C-1)
3-7.5 Describe the attributes for increasing effectiveness and efficiency of verbal communications.(C-1)
3-7.6 State legal aspects to consider in verbal communication.(C-1)
3-7.7 Discuss the communication skills that should be used to interact with the patient.(C-1)
3-7.8 Discuss the communication skills that should be used to interact with the family, bystanders, individuals from other agencies while providing patient care and the difference between skills used to interact with the patient and those used to interact with others.(C-1)
3-7.9 List the correct radio procedures in the following phases of a typical call:
   ● To the scene.
   ● At the scene.
   ● To the facility.
   ● At the facility.
   ● To the station.
   ● At the station.

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-7.10 Explain the rationale for providing efficient and effective radio communications and patient reports.(A-3)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-7.11 Perform a simulated, organized, concise radio transmission.(P-2)
3-7.12 Perform an organized, concise patient report that would be given to the staff at a receiving facility.(P-2)
3-7.13 Perform a brief, organized report that would be given to an ALS provider arriving at an incident scene at which the EMT-Basic was already providing care.(P-2)
Preparation

Motivation: The best prehospital patient care may come to an end at the door of the Emergency Department (ED) if a patient's condition is not described well enough for the ED staff to prepare. Communication is an essential component of prehospital care. Both verbal and written communications will be used during every response. Patient care not only includes assessment and treatment, but the ability to effectively and efficiently communicate findings to other health care providers.

Prerequisites: BLS, Preparatory and Airway.

MATERIALS

AV Equipment: Utilize various audio-visual materials relating to communications. The continuous design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

EMS Equipment: None

PERSONNEL

Primary Instructor: One EMT-Basic instructor knowledgeable in this area.

Assistant Instructor: The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable in communications.

Recommended Minimum Time to Complete: One hour
Presentation

Declarative (What)

I. Communication
   A. Communication system
      1. System components
         a. Base station - a radio which is located at a stationary site such as a hospital, mountain top, or public safety agency.
         b. Mobile two-way radios (transmitter/receivers)
            (1) Implies a vehicular mounted device.
            (2) Mobile transmitters usually transmit at lower power than base stations (typically 20 - 50 watts).
            (3) Typical transmission range is 10 - 15 miles over average terrain.
         c. Portable radios (transmitter/receivers)
            (1) Implies a hand held device.
            (2) Typically have power output of 1 - 5 watts, limiting their range.
         d. Repeater/base station - receives a transmission from a low-power portable or mobile radio on one frequency and retransmits at a higher power on another frequency.
         e. Digital radio equipment
         f. Cellular telephones
      2. Radio communications
         b. Response to the scene
            (1) The dispatcher needs to be notified that the call was received.
            (2) Dispatch needs to know that the unit is en route.
            (3) Other agencies should be notified as appropriate, e.g., local hospital.
         c. Arrival at the scene - the dispatcher must be notified.
      3. Communication with medical direction
         a. In some systems, medical direction is at the receiving facility. In others, medical direction is at a separate site.
         b. In either case, EMT-Basics may need to contact medical direction for consultation and to get orders for administration of medications. Radio transmissions need to be organized, concise and pertinent.
         c. Since the physician will determine whether to order medications and procedures based on the information given by the EMT-Basic, this information must be accurate.
         d. After receiving an order for a medication or procedure (or denial of such a request), repeat the order back word for word.
e. Orders that are unclear or appear to be inappropriate should be questioned.

f. Communication with receiving facilities

g. EMT-Basics provide information that allows hospitals to prepare for a patient's arrival by having the right room, equipment and personnel prepared.

h. Patient reporting concepts

   (1) When speaking on the radio, keep these principles in mind:

   (a) Radio is on and volume is properly adjusted.

   (b) Listen to the frequency and ensure it is clear before beginning a transmission.

   (c) Press the "press to talk" (PTT) button on the radio and wait for one second before speaking.

   (d) Speak with lips about 2 to 3 inches from the microphone.

   (e) Address the unit being called, then give the name of the unit (and number if appropriate) where the transmission is originating from.

   (f) The unit being called will signal that the transmission should start by saying "go ahead" or some other term standard for that area. A response of "stand by" means wait until further notice.

   (g) Speak clearly and slowly, in a monotone voice.

   (h) Keep transmissions brief. If, on occasion, a transmission takes longer than 30 seconds, stop at that point and pause for a few seconds so that emergency traffic can use the frequency if necessary.

   (i) Use clear text.

   (j) Avoid codes.

   (k) Avoid meaningless phrases like "Be advised."

   (l) Courtesy is assumed, so there is no need to say "please," "thank you" and "you're welcome."

   (m) When transmitting a number that might be confused (e.g., a number in the teens), give the number, then give the individual digits.

   (n) The airwaves are public and scanners are popular. EMS transmissions may be overheard by more than just the EMS community. Do not give a patient's name over the air.

   (o) For the same reason, be careful to remain objective and impartial in describing patients.
An EMT-Basic may be sued for slander if he injures someone's reputation in this way.

(p) An EMT-Basic rarely acts alone: Use "we" instead of "I."

(q) Do not use profanity on the air. The FCC takes a dim view of such language and may impose substantial fines.

(r) Avoid words that are difficult to hear like "yes" and "no." Use "affirmative" and "negative."

(s) Use the standard format for transmission of information.

(t) When the transmission is finished, indicate this by saying "over." Get confirmation that the message was received.

(u) Avoid codes, especially those that are not standardized.

(v) Avoid offering a diagnosis of the patient's problem.

(w) Use EMS frequencies only for EMS communication.

(x) Reduce background noise as much as possible by closing the window.

(2) Notify the dispatcher when the unit leaves the scene.

(3) When communicating with medical direction or the receiving facility, a verbal report should be given. The essential elements of such a report, in the order they should be given, are:

(a) Identify unit and level of provider (who and what)

(b) Estimated time of arrival

(c) Patient's age and sex

(d) Chief complaint

(e) Brief, pertinent history of the present illness

(f) Major past illnesses

(g) Mental status

(h) Baseline vital signs

(i) Pertinent findings of the physical exam

(j) Emergency medical care given

(k) Response to emergency medical care

(4) After giving this information, the EMT-Basic will continue to assess the patient. Additional vital signs may be taken and new information may become available, particularly on long transports. In some systems, this information should be relayed to the hospital (see local protocol). Information that must be transmitted includes deterioration in the patient's
condition.

(5) Arrival at the hospital
(a) The dispatcher must be notified.
(b) In some systems, the hospital should also be notified.

(6) Leaving the hospital for the station - the dispatcher should be notified.

(7) Arrival at the station - the dispatcher should be notified.

4. System maintenance
   a. Communication equipment needs to be checked periodically by a qualified technician, e.g., to ensure that a radio is not drifting from its assigned frequency.
   b. As technology changes, new equipment becomes available that may have a role in EMS systems, e.g., cellular phones.
   c. Since EMT-Basics may need to be able to consult on-line medical direction, an EMS system must provide a back-up in case the usual procedures do not work.

B. Verbal communication
   1. After arrival at the hospital, give a verbal report to the staff.
      a. Introduce the patient by name (if known).
      b. Summarize the information given over the radio:
         (1) Chief complaint
         (2) History that was not given previously
         (3) Additional treatment given en route
         (4) Additional vital signs taken en route
      c. Give additional information that was collected but not transmitted.

C. Written communication - this is covered in the lesson on documentation.

D. Interpersonal communication
   1. Make and keep eye contact with the patient.
   2. When practical, position yourself at a level lower than the patient.
   3. Be honest with the patient.
   4. Use language the patient can understand.
   5. Be aware of your own body language.
   6. Speak clearly, slowly and distinctly.
   7. Use the patient's proper name, either first or last, depending on the circumstances. Ask the patient what he wishes to be called.
   8. If a patient has difficulty hearing, speak clearly with lips visible.
   9. Allow the patient enough time to answer a question before asking the next one.
   10. Act and speak in a calm, confident manner.

E. Communication with hearing impaired, non-English speaking populations, use of interpreters, etc.

F. Communication with elderly
   1. Potential for visual deficit
2. Potential for auditory deficit

Suggested Application

Procedural (How)
1. Show how to initiate and terminate a radio call.
2. Demonstrate use of the radio in the different phases of a typical call.
   - To the scene.
   - At the scene.
   - To the facility.
   - At the facility.
   - To the station.
   - At the station.
3. Demonstrate the proper sequence of patient information.
4. Demonstrate how to communicate with a patient.
5. Demonstrate how to communicate with a patient’s family.
6. Demonstrate how to communicate with bystanders.
7. Demonstrate how to communicate with individuals from other agencies while providing patient care.
8. Demonstrate a brief, organized report that would be given to an ALS provider arriving at an incident scene at which the EMT-Basic was already providing care.
9. Demonstrate a simulated, organized, concise radio transmission.

Contextual (When, Where, Why)
Communications occur from the pre-dispatch phase, throughout the call, and well after the completion of the transport. Various individuals will be involved in the verbal communication process and vital information will be discussed. The EMT-Basic must have excellent verbal and written communication skills to assure accurate information is delivered to the appropriate individuals. The continuum of patient care is based upon effective and efficient communication skills.

STUDENT ACTIVITIES
Auditory (Hear)
1. The student should hear both sides of a radio transmission during the phases of a typical call:
   - To the scene.
   - At the scene.
   - To the facility.
   - At the facility.
   - To the station.
   - At the station.
2. The student should hear initiation and termination of a radio call.
3. The student should hear patient information delivered in the proper sequence.
4. The student should hear communication with a simulated patient.
5. The student should hear communication with the family of a simulated patient.
6. The student should hear communication with simulated bystanders.
7. The student should hear communication with individuals from other agencies at a call.
8. The student should hear a brief, organized report that would be given to an ALS provider arriving at an incident scene at which the EMT-Basic was already providing care.

**Visual (See)**
1. The student should see examples of portable, mobile and base station radio equipment.
2. The student should see the communication skills used to interact with the family.
3. The student should see the communication skills used to interact with bystanders.
4. The student should see the communication skills used to interact with individuals from other agencies while providing patient care.
5. The student should see the components of the minimum data set.

**Kinesthetic (Do)**
1. The student should practice radio use procedures in the following phases of a typical call:
   - To the scene.
   - At the scene.
   - To the facility.
   - At the facility.
   - To the station.
   - At the station.
2. The student should practice the proper methods of initiating and terminating a radio call.
3. The student should practice the proper sequence of delivery of patient information.
4. The student should practice the communication skills used to interact with the patient.
5. The student should practice the communication skills used to interact with the family.
6. The student should practice the communication skills used to interact with bystanders.
7. The student should practice the communication skills used to interact with individuals from other agencies while providing patient care.
8. The student should practice performing an organized, concise patient report that would be given to the medical staff at a receiving facility.
9. The student should practice performing a brief, organized report that would be given to an ALS provider arriving at an incident scene at which the EMT-Basic was already providing care.
10. The student should practice performing a simulated, organized, concise radio transmission.

**INSTRUCTOR ACTIVITIES**
Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

**Evaluation**

**Written:**
Develop evaluation instruments, e.g., examinations, verbal reviews, and handouts, to determine if the students have met the cognitive and affective objectives of this lesson.

**Practical:**
Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

**Remediation**
Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.

**Suggested Enrichment**

What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor's course guide and attach with lesson plan.
Objectives

Objectives Legend
C = Cognitive  P = Psychomotor  A = Affective
1 = Knowledge level
2 = Application level
3 = Problem-solving level

COGNITIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-8.1 Explain the components of the written report and list the information that should be included in the written report.(C-1)
3-8.2 Identify the various sections of the written report.(C-1)
3-8.3 Describe what information is required in each section of the prehospital care report and how it should be entered.(C-1)
3-8.4 Define the special considerations concerning patient refusal.(C-1)
3-8.5 Describe the legal implications associated with the written report.(C-1)
3-8.6 Discuss all state and/or local record and reporting requirements.(C-1)

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-8.7 Explain the rationale for patient care documentation.(A-3)
3-8.8 Explain the rationale for the EMS system gathering data.(A-3)
3-8.9 Explain the rationale for using medical terminology correctly.(A-3)
3-8.10 Explain the rationale for using an accurate and synchronous clock so that information can be used in trending.(A-3)

PSYCHOMOTOR OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
3-8.11 Complete a prehospital care report.(P-2)

Preparation

Motivation: A competent prehospital report documents the nature and extent of emergency medical care. Well prepared reports are an important medical/legal document. "If it isn't written down, it wasn't done," and "If it wasn't done, don't write it down."

Health care providers use the information from the report to trend changes in patient condition. In particular, the trending of mental status and vital signs is extremely important to physicians and nurses who assume care. The information on the report can also be used in quality
assessment of emergency medical care.

**Prerequisites:**

BLS

**MATERIALS**

**AV Equipment:** Utilize various audio-visual materials relating to documentation. The continuous design and development of new audio-visual materials relating to EMS requires careful review to determine which best meet the needs of the program. Materials should be edited to assure the objectives of the curriculum are met.

**EMS Equipment:** Copies of a prehospital care report and a vital sign trended report.

**PERSONNEL**

**Primary Instructor:** One EMT-Basic instructor knowledgeable in this area.

**Assistant Instructor:** None required.

**Recommended Minimum Time to Complete:** One hour and 30 minutes
Declarative (What)

I. Documentation

A. Minimum data set

1. Patient information gathered at time of EMT-B’s initial contact with patient on arrival at scene, following all interventions and on arrival at facility.
   a. Chief complaint
   b. Level of consciousness (AVPU) - mental status
   c. Systolic blood pressure for patients greater than 3 years old
   d. Skin perfusion (capillary refill) for patients less than 6 years old
   e. Skin color and temperature
   f. Pulse rate
   g. Respiratory rate and effort

2. Administrative information
   a. Time incident reported
   b. Time unit notified
   c. Time of arrival at patient
   d. Time unit left scene
   e. Time of arrival at destination
   f. Time of transfer of care

3. Accurate and synchronous clocks

B. Prehospital care report

1. Functions
   a. Continuity of care - a form that is not read immediately in the emergency department may very well be referred to later for important information.
   b. Legal document
      (1) A good report has documented what emergency medical care was provided and the status of the patient on arrival at the scene and any changes upon arrival at the receiving facility.
      (2) The person who completed the form ordinarily must go to court with the form.
      (3) Information should include objective and subjective information and be clear.
   c. Educational - used to demonstrate proper documentation and how to handle unusual or uncommon cases.
   d. Administrative
      (1) Billing
      (2) Service statistics
   e. Research
   f. Evaluation and continuous quality improvement

2. Use
a. Types
(1) Traditional written form with check boxes and a section for narrative.
(2) Computerized version where information is filled in by means of an electronic clipboard or a similar device.

b. Sections
(1) Run data - date, times, service, unit, names of crew
(2) Patient data - patient name, address, date of birth, insurance information, sex, age, nature of call, mechanism of injury, location of patient, treatment administered prior to arrival of EMT-Basic, signs and symptoms, care administered, baseline vital signs, SAMPLE history and changes in condition.
(3) Check boxes
   (a) Be sure to fill in the box completely.
   (b) Avoid stray marks.
(4) Narrative section (if applicable)
   (a) Describe, don't conclude.
   (b) Include pertinent negatives.
   (c) Record important observations about the scene, e.g., suicide note, weapon, etc.
   (d) Avoid radio codes.
   (e) Use abbreviations only if they are standard.
   (f) When information of a sensitive nature is documented, note the source of that information, e.g., communicable diseases.
   (g) State reporting requirements
   (h) Be sure to spell words correctly, especially medical words. If you do not know how to spell it, find out or use another word.
   (i) For every reassessment, record time and findings.
(5) Other state or local requirements

c. Confidentiality - the form itself and the information on the form are considered confidential. Be familiar with state laws.

d. Distribution - local and state protocol and procedures will determine where the different copies of the form should be distributed.

3. Falsification issues
a. When an error of omission or commission occurs, the EMT-Basic should not try to cover it up. Instead, document what did or did not happen and what steps were taken (if any) to correct the situation.

b. Falsification of information on the prehospital care report may lead not only to suspension or revocation of the EMT-
Basic's certification/license, but also to poor patient care because other health care providers have a false impression of which assessment findings were discovered or what treatment was given.

c. Specific areas of difficulty
   (1) Vital signs - document only the vital signs that were actually taken.
   (2) Treatment - if a treatment like oxygen was overlooked, do not chart that the patient was given oxygen.

C. Documentation of patient refusal
1. Competent adult patients have the right to refuse treatment.
2. Before the EMT-Basic leaves the scene, however, he should:
   a. Try again to persuade the patient to go to a hospital.
   b. Ensure the patient is able to make a rational, informed decision, e.g., not under the influence of alcohol or other drugs, or illness/injury effects.
   c. Inform the patient why he should go and what may happen to him if he does not.
   d. Consult medical direction as directed by local protocol.
   e. If the patient still refuses, document any assessment findings and emergency medical care given, then have the patient sign a refusal form.
   f. Have a family member, police officer or bystander sign the form as a witness. If the patient refuses to sign the refusal form, have a family member, police officer or bystander sign the form verifying that the patient refused to sign.
   g. Complete the prehospital care report.
      (1) Complete patient assessment.
      (2) Care EMT-Basic wished to provide for the patient.
      (3) Statement that the EMT-Basic explained to the patient the possible consequences of failure to accept care, including potential death.
      (4) Offer alternative methods of gaining care.
      (5) State willingness to return.

D. Special situations/reports/incident reporting
1. Correction of errors
   a. Errors discovered while the report form is being written
      (1) Draw a single horizontal line through the error, initial it and write the correct information beside it.
      (2) Do not try to obliterate the error - this may be interpreted as an attempt to cover up a mistake.
   b. Errors discovered after the report form is submitted
      (1) Preferably in a different color ink, draw a single line through the error, initial and date it and add a note with the correct information.
(2) If information was omitted, add a note with the correct information, the date and the EMT-Basic's initials.

2. Multiple casualty incidents (MCI)
   a. When there is not enough time to complete the form before the next call, the EMT-Basic will need to fill out the report later.
   b. The local MCI plan should have some means of recording important medical information temporarily, e.g., triage tag, that can be used later to complete the form.
   c. The standard for completing the form in an MCI is not the same as for a typical call. The local plan should have guidelines.

3. Special situation reports
   a. Used to document events that should be reported to local authorities, or to amplify and supplement primary report.
   b. Should be submitted in timely manner.
   c. Should be accurate and objective.
   d. The EMT-Basic should keep a copy for his own records.
   e. The report, and copies, if appropriate, should be submitted to the authority described by local protocol.
   f. Exposure
   g. Injury

4. Continuous quality improvement
5. Information gathered from the prehospital care report can be used to analyze various aspects of the EMS system.
6. This information can then be used to improve different components of the system and prevent problems from occurring.

Suggested Application

Procedural (How)
1. Show the students the prehospital care report used locally.
2. Show the students the refusal form used locally, if there is one.
3. Show the students good examples of completed prehospital care reports.
4. If there is a quality improvement system in place locally, show the students a report generated by the system.
5. Show the students how trending information is used to aid in the future care of the patient.

Contextual (When, Where, Why)
To establish the continuum of care, the EMT-Basic must document not only what the patient complained of, but also what he denied. A prehospital care report must be filled out for every patient encounter. On non-emergency runs, this process may be started at the scene.
Documentation is an on-going process and the report provides information that can be used in many constructive ways.

**STUDENT ACTIVITIES**

**Auditory (Hear)**

None identified for this lesson.

**Visual (See)**

1. The student should see the prehospital care report used locally.
2. The student should see the components of the prehospital care report.
3. The student should see good examples of completed prehospital care reports.

**Kinesthetic (Do)**

1. The student should practice completing the prehospital care report, given different scenarios.

**INSTRUCTOR ACTIVITIES**

Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

**Evaluation**

**Written:** Develop evaluation instruments, e.g., examinations, verbal reviews, and handouts, to determine if the students have met the cognitive and affective objectives of this lesson.

**Practical:** Evaluate the actions of the EMT-Basic students during role play, practice or other skill stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

**Remediation**

Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.

**Suggested Enrichment**

What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor's course guide and attach with lesson plan.
MODULE 3
Patient Assessment

Lesson 3-9
Practical Lab: Patient Assessment
Objectives

Objectives Legend

C = Cognitive  
P = Psychomotor  
A = Affective

1 = Knowledge level
2 = Application level
3 = Problem-solving level

**COGNITIVE OBJECTIVES**
At the completion of this lesson, the EMT-Basic student will be able to:

- Demonstrate the cognitive objectives of Lesson 3-1: Scene Size-up.
- Demonstrate the cognitive objectives of Lesson 3-2: Initial Assessment.
- Demonstrate the cognitive objectives of Lesson 3-3: Focused History and Physical Exam: Trauma.
- Demonstrate the cognitive objectives of Lesson 3-4: Focused History and Physical Exam: Medical.
- Demonstrate the cognitive objectives of Lesson 3-5: Detailed Physical Exam.
- Demonstrate the cognitive objectives of Lesson 3-6: On-going Assessment.
- Demonstrate the cognitive objectives of Lesson 3-7: Communications.
- Demonstrate the cognitive objectives of Lesson 3-8: Documentation.

**AFFECTIVE OBJECTIVES**
At the completion of this lesson, the EMT-Basic student will be able to:

- Demonstrate the affective objectives of Lesson 3-1: Scene Size-up.
- Demonstrate the affective objectives of Lesson 3-2: Initial Assessment.
- Demonstrate the affective objectives of Lesson 3-3: Focused History and Physical Exam: Trauma.
- Demonstrate the affective objectives of Lesson 3-4: Focused History and Physical Exam: Medical.
- Demonstrate the affective objectives of Lesson 3-5: Detailed Physical Exam.
- Demonstrate the affective objectives of Lesson 3-6: On-going Assessment.
- Demonstrate the affective objectives of Lesson 3-7: Communications.
PSYCHOMOTOR OBJECTIVES

At the completion of this lesson, the EMT-Basic student will be able to:

- Demonstrate the psychomotor objectives of Lesson 3-1: Scene Size-up.
- Demonstrate the psychomotor objectives of Lesson 3-2: Initial Assessment.
- Demonstrate the psychomotor objectives of Lesson 3-3: Focused History and Physical Exam: Trauma
- Demonstrate the psychomotor objectives of Lesson 3-4: Focused History and Physical Exam: Medical
- Demonstrate the psychomotor objectives of Lesson 3-5: Detailed Physical Exam.
- Demonstrate the psychomotor objectives of Lesson 3-6: On-going Assessment.
- Demonstrate the psychomotor objectives of Lesson 3-7: Communications.
- Demonstrate the psychomotor objectives of Lesson 3-8: Documentation.

Preparation

Motivation: The practical lesson is designed to allow the students additional time to perfect skills. It is of utmost importance that the students demonstrate proficiency of the skill, cognitive knowledge of the steps to perform a skill, and a healthy attitude towards performing that skill on a patient.

This is an opportunity for the instructor and assistant instructors to praise progress and re-direct the students toward appropriate psychomotor skills. The material from all preceding lessons and basic life support should be incorporated into these practical skill sessions.

Prerequisites: BLS, Preparatory and Airway.

MATERIALS

AV Equipment: Typically not required.

EMS Equipment: Equipment from the lists in Lessons 3-1 through 3-8.

PERSONNEL

Primary Instructor: One EMT-Basic instructor knowledgeable in patient
Assistant Instructor: The instructor-to-student ratio should be 1:6 for psychomotor skill practice. Individuals used as assistant instructors should be knowledgeable in patient assessment.

Recommended Minimum Time to Complete: Eight hours

Presentation

Procedural (How)
Instructor should demonstrate the procedural activities from Lesson 3-1: Scene Size-up.
Instructor should demonstrate the procedural activities from Lesson 3-2: Initial Assessment.

Instructor should demonstrate the procedural activities from Lesson 3-3: Focused History and Physical Exam: Trauma.

Instructor should demonstrate the procedural activities from Lesson 3-4: Focused History and Physical Exam: Medical.

Instructor should demonstrate the procedural activities from Lesson 3-5: Detailed Physical Exam.

Instructor should demonstrate the procedural activities from Lesson 3-6: On-going Assessment.

Instructor should demonstrate the procedural activities from Lesson 3-7: Communications.

Instructor should demonstrate the procedural activities from Lesson 3-8: Documentation.

Contextual (When, Where, Why)
Instructor should review contextual information from Lesson 3-1: Scene Size-up.

Instructor should review contextual information from Lesson 3-2: Initial Assessment.

Instructor should review contextual information from Lesson 3-3: Focused History and Physical Exam: Trauma

Instructor should review contextual information from Lesson 3-4: Focused History and Physical Exam: Medical
Instructor should review contextual information from Lesson 3-5: Detailed Physical Exam.

Instructor should review contextual information from Lesson 3-6: On-going Assessment.

Instructor should review contextual information from Lesson 3-7: Communications.

Instructor should review contextual information from Lesson 3-8: Documentation.

**STUDENT ACTIVITIES**

**Auditory (Hear)**

The students should hear the auditory information from Lesson 3-1: Scene Size-up.

The students should hear the auditory information from Lesson 3-2: Initial Assessment.

The students should hear the auditory information from Lesson 3-3: Focused History and Physical Exam: Trauma.

The students should hear the auditory information from Lesson 3-4: Focused History and Physical Exam: Medical.

The students should hear the auditory information from Lesson 3-5: Detailed Physical Exam.

The students should hear the auditory information from Lesson 3-7: Communications.

**Visual (See)**

The students should see the visual material from Lesson 3-1: Scene Size-up.

The students should see the visual material from Lesson 3-2: Initial Assessment.

The students should see the visual material from Lesson 3-3: Focused History and Physical Exam: Trauma.

The students should see the visual material from Lesson 3-4: Focused History and Physical Exam: Medical.

The students should see the visual material from Lesson 3-5: Detailed Physical Exam.

The students should see the visual material from Lesson 3-7: Communications.

The students should see the visual material from Lesson 3-8: Documentation.

**Kinesthetic (Do)**

The students should practice the kinesthetic activities from Lesson 3-1: Scene Size-up.
The students should practice the kinesthetic activities from Lesson 3-2: Initial Assessment.

The students should practice the kinesthetic activities from Lesson 3-3: Focused History and Physical Exam: Trauma.

The students should practice the kinesthetic activities from Lesson 3-4: Focused History and Physical Exam: Medical.

The students should practice the kinesthetic activities from Lesson 3-5: Detailed Physical Exam.

The students should practice the kinesthetic activities from Lesson 3-6: On-going Assessment.

The students should practice the kinesthetic activities from Lesson 3-7: Communications.

The students should practice the kinesthetic activities from Lesson 3-8: Documentation.

**INSTRUCTOR ACTIVITIES**

Supervise student practice.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

**Evaluation**

Practical: Evaluate the actions of the EMT-Basic students during role play, practice or other skills stations to determine their compliance with the cognitive and affective objectives and their mastery of the psychomotor objectives of this lesson.

**Remediation**

Identify students or groups of students who are having difficulty with this subject content. Complete remediation sheet from the instructor's course guide.

**Suggested Enrichment**

What is unique in the local area concerning this topic? Complete enrichment sheets from the instructor's course guide and attach with lesson plan.
Objectives

Objectives Legend
C = Cognitive  P = Psychomotor  A = Affective
1 = Knowledge level
2 = Application level
3 = Problem-solving level

COGNITIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
• Demonstrate knowledge of the cognitive objectives of Lesson 3-1: Scene Size-up.
• Demonstrate knowledge of the cognitive objectives of Lesson 3-2: Initial Assessment.
• Demonstrate knowledge of the cognitive objectives of Lesson 3-3: Focused History and Physical Exam: Trauma.
• Demonstrate knowledge of the cognitive objectives of Lesson 3-4: Focused History and Physical Exam: Medical.
• Demonstrate knowledge of the cognitive objectives of Lesson 3-5: The Detailed Physical Exam.
• Demonstrate knowledge of the cognitive objectives of Lesson 3-6: On-going Assessment.
• Demonstrate knowledge of the cognitive objectives of Lesson 3-7: Communications.
• Demonstrate knowledge of the cognitive objectives of Lesson 3-8: Documentation.

AFFECTIVE OBJECTIVES
At the completion of this lesson, the EMT-Basic student will be able to:
• Demonstrate knowledge of the affective objectives of Lesson 3-1: Scene Size-up.
• Demonstrate knowledge of the affective objectives of Lesson 3-2: Initial Assessment.
• Demonstrate knowledge of the affective objectives of Lesson 3-3: Focused History and Physical Exam: Trauma.
• Demonstrate knowledge of the affective objectives of Lesson 3-4: Focused History and Physical Exam: Medical.
History and Physical Exam: Medical.

- Demonstrate knowledge of the affective objectives of Lesson 3-5: The Detailed Physical Exam.
- Demonstrate knowledge of the affective objectives of Lesson 3-6: On-going Assessment.
- Demonstrate knowledge of the affective objectives of Lesson 3-7: Communications.
- Demonstrate knowledge of the affective objectives of Lesson 3-8: Documentation.

**PSYCHOMOTOR OBJECTIVES**

At the completion of this lesson, the EMT-Basic student will be able to:
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-1: Scene Size-up.
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-2: Initial Assessment.
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-3: Focused History and Physical Exam: Trauma.
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-4: Focused History and Physical Exam: Medical.
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-5: The Detailed Physical Exam.
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-6: On-going Assessment.
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-7: Communications.
- Demonstrate knowledge of the psychomotor objectives of Lesson 3-8: Documentation.

**Preparation**

**Motivation:**
Evaluation of the student’s attainment of the cognitive and affective knowledge and psychomotor skills is an essential component of the EMT-Basic educational process. The modules are presented in a "building block" format. Once
the students have demonstrated their knowledge and proficiency, the next lesson should be built upon that knowledge. This evaluation will help to identify students or groups of students having difficulty with a particular area. This is an opportunity for the instructor to evaluate his performance, and make appropriate modifications to the delivery of material.

Prerequisites: Completion of Lessons 3-1 through 3-9.

**MATERIALS**

AV Equipment: Typically none required.

EMS Equipment: Equipment required to evaluate the students' proficiency in the psychomotor skills of this module.

**PERSONNEL**

Primary Instructor: One proctor for the written evaluation.

Assistant Instructor: One practical skills examiner for each 6 students.

Recommended Minimum Time to Complete: One hour

**Presentation**

Declarative (What)

I. Purpose of the evaluation

I. Items to be evaluated

II. Feedback from evaluation

**Evaluation**

Procedural (How)

1. Written evaluation based on the cognitive and affective objectives of Lessons 3-1 through 3-8.

2. Practical evaluation stations based on the psychomotor objectives of Lessons 3-1 through 3-8.

Contextual (When, Where and Why)

The final lesson in this module is designed to bring closure to the module and to assure that students are prepared to move to the next module. This modular evaluation is given to determine the effectiveness of the presentation of
materials and how well students have retained the material. This is an opportunity for the students to make necessary adjustments in study habits or for the instructor to adjust the manner in which material is presented.

INSTRUCTOR ACTIVITIES
Supervise student evaluation.
Reinforce student progress in cognitive, affective, and psychomotor domains.
Redirect students having difficulty with content (complete remediation forms).

Remediation
Identify students or groups of students that are having difficulty with this subject content. Complete remediation sheet from the instructor’s course guide. If students continue to have difficulty demonstrating knowledge of the cognitive and affective objectives, or demonstrating proficiency in psychomotor skills, the students should be counseled, remediated and re-evaluated. If no progress is noted, or this continues to be a problem, the student or students should be dismissed from the program.
