| Oneida | 197 | 86 | 10 |

*The numbers displayed above were provided by NH facilities and capture COVID-19 confirmed and COVID-19 presumed deaths at NHs. Additionally, the table includes out of facility (hospital/other) deaths of NH residents reported by NHs as COVID-19 related, which have been verified with lab data or the facility where the fatality occurred as being COVID related. Retrospective data reporting dates back to March 1, 2020. Data is updated as fatality reports are confirmed and validated.

*Some nursing homes have reported certain fatalities for residents who died outside their facility, after those individuals were no longer under their care, where the facility suspected - but lacked confirmation - that the cause of death was COVID related. During data verification attempts by DOH, nursing homes have indicated that these reports are unreliable because they speculated from incomplete medical information, and could not confirm that information with the facility at which the patient died. There are 330 such reports that DOH continues to attempt to independently verify, including by examining lab data and records from the facilities where these patients died, and will update its reported data on a rolling basis as appropriate. There are 60 such reports that DOH believes are not COVID related based upon laboratory data, there are 281 cases in which no data exists to corroborate the initial unverified characterization by the nursing home.

*The numbers displayed above were provided by NH facilities and capture COVID-19 confirmed and COVID-19 presumed deaths at NHs. Additionally, the table includes out of facility (hospital/other) deaths of NH residents reported by NHs as COVID-19 related, which have been verified with lab data or the facility where the fatality occurred as being COVID related. Retrospective data reporting dates back to March 1, 2020. Data is updated as fatality reports are confirmed and validated.

*Some nursing homes have reported certain fatalities for residents who died outside their facility, after those individuals were no longer under their care, where the facility suspected - but lacked confirmation - that the cause of death was COVID related. During data verification attempts by DOH, nursing homes have indicated that these reports are unreliable because they speculated from incomplete medical information, and could not confirm that information with the facility at which the patient died. There are 330 such reports that DOH continues to attempt to independently verify, including by examining lab data and records from the facilities where these patients died, and will update its reported data on a rolling basis as appropriate. There are 60 such reports that DOH believes are not COVID related based upon laboratory data, there are 281 cases in which no data exists to corroborate the initial unverified characterization by the nursing home.

*The numbers displayed above were provided by NH facilities and capture COVID-19 confirmed and COVID-19 presumed deaths at NHs. Additionally, the table includes out of facility (hospital/other) deaths of NH residents reported by NHs as COVID-19 related, which have been verified with lab data or the facility where the fatality occurred as being COVID related. Retrospective data reporting dates back to March 1, 2020. Data is updated as fatality reports are confirmed and validated.

*Some nursing homes have reported certain fatalities for residents who died outside their facility, after those individuals were no longer under their care, where the facility suspected - but lacked confirmation - that the cause of death was COVID related. During data verification attempts by DOH, nursing homes have indicated that these reports are unreliable because they speculated from incomplete medical information, and could not confirm that information with the facility at which the patient died. There are 330 such reports that DOH continues to attempt to independently verify, including by examining lab data and records from the facilities where these patients died, and will update its reported data on a rolling basis as appropriate. There are 60 such reports that DOH believes are not COVID related based upon laboratory data, there are 281 cases in which no data exists to corroborate the initial unverified characterization by the nursing home.

*The numbers displayed above were provided by NH facilities and capture COVID-19 confirmed and COVID-19 presumed deaths at NHs. Additionally, the table includes out of facility (hospital/other) deaths of NH residents reported by NHs as COVID-19 related, which have been verified with lab data or the facility where the fatality occurred as being COVID related. Retrospective data reporting dates back to March 1, 2020. Data is updated as fatality reports are confirmed and validated.

*Some nursing homes have reported certain fatalities for residents who died outside their facility, after those individuals were no longer under their care, where the facility suspected - but lacked confirmation - that the cause of death was COVID related. During data verification attempts by DOH, nursing homes have indicated that these reports are unreliable because they speculated from incomplete medical information, and could not confirm that information with the facility at which the patient died. There are 330 such reports that DOH continues to attempt to independently verify, including by examining lab data and records from the facilities where these patients died, and will update its reported data on a rolling basis as appropriate. There are 60 such reports that DOH believes are not COVID related based upon laboratory data, there are 281 cases in which no data exists to corroborate the initial unverified characterization by the nursing home.
