THE SPARCS DATA SYSTEM

OVERVIEW

BACKGROUND

The Statewide Planning and Research Cooperative System (SPARCS) was implemented by the New York State Department of Health in 1979, with the cooperation and initial financial support of the U.S. Department of Health and Human Services. SPARCS receives, processes, stores and analyzes inpatient data from all general hospitals in New York State. It serves as a comprehensive and integrated information network that supports and links the functions of health care resource planning, financing and surveillance of hospital services in New York State.

While meeting the informational needs of the Department of Health, SPARCS has also proven an effective management tool for the health care industry. Widespread support and advice from many organizations and individuals within the public and private sectors have been most beneficial in the development and refinement of SPARCS. The Department of Health continues to invite such active participation and assistance with the aim of improving the quality and usefulness of SPARCS.

The *1984 Annual Report Series* represents SPARCS' fifth full year of data collection efforts. The report series presents hospital stay data through a set of standard statistical tables determined to be of value to a wide spectrum of health information users. The tables are also available on a Health Systems Area, county and hospital specific basis, and may be requested through the use of the order form in the back of this report series.

DATA SOURCES

SPARCS was designed to make use of existing data sources to the greatest extent possible to minimize duplicative reporting requirements for New York hospitals. SPARCS collects data from two sources: the Discharge Data Abstract (DDA) and the Uniform Billing Form (UBF).

The data set defined for the DDA for SPARCS is based on the Uniform Hospital Discharge Data Set, developed by the National Committee on Vital and Health Statistics. For speed and efficiency, hospitals submit discharge data on computer tapes rather than on paper forms. Data elements collected by SPARCS are listed in Appendix A.

The Uniform Billing Form, used as the uniform claim form for all third-party payors in New York State, also serves as a reporting document for SPARCS. (See Appendix B for uniform bill data elements collected by SPARCS and a copy of the UBF-1-81 form). SPARCS data are generally extracted from the UBF after payment is made to the hospital to take advantage of the edits, corrections and computer tape transfers carried out by the various third-party payors.

DATA PROTECTION

Regulations governing the confidentiality of SPARCS data were adopted by the New York State Hospital Review and Planning Council with the advice of all sectors of the health care industry. The regulatory functions of SPARCS are administered by the Department of Health to ensure stringent control over the confidentiality of SPARCS data.

To protect patient privacy, patient names are omitted from the SPARCS data set for both the DDA and the UBF. As a result, SPARCS cannot track patients across time; the system tracks incidence of diseases or conditions requiring hospitalizations, rather than diseased individuals. For this reason, users of SPARCS data cannot ascertain the number of individuals *per se* treated for specific diseases, but only the number of patient incidents that have occurred.

The privacy regulations define the major purposes for which SPARCS data may be used: financial studies, rate setting, facility surveillance, health planning and resource allocation studies, epidemiology, research studies and hospital monitoring of its own data.

A Data Protection Review Board (DPRB) is responsible for approving all requests for deniable data. The SPARCS Privacy Regulation defines as deniable data certain data elements which by themselves or in combination with other elements might lead to the disclosure of a patient's identity. (See Appendix C for a description of the board's functions and current membership.)

The Department of Health also is advised by the Council on Hospital Information Policy (CHIP) on hospital data collection needs. This council focuses on the general data needs and data systems of New York's hospital industry. (See Appendix D for a description of the council's functions and membership.)

USES OF SPARCS DATA

The largest segment of SPARCS users consists of hospitals requesting their own data and management consultants acting on behalf of their client hospitals. The second most frequent user of SPARCS data is the New York State Department of Health.

All requests for SPARCS data must be submitted to the Department of Health's SPARCS Bureau. When such requests are approved for production, the SPARCS Bureau provides a cost estimate based on availability of existing reports and the cost of analysis, programming and computer time. The requestor must agree, prior to the processing of the request, to pay the actual costs for report production (not to exceed the estimate).

DATA COLLECTION PROCESS

DISCHARGE ABSTRACT COLLECTION NETWORK

The hospitals' medical record departments submit selected data which are transferred to a uniform, computer-readable format on magnetic tape in one of two ways: either directly to SPARCS or through a private information processing service.

All DDAs received by SPARCS are validated to identify critical and noncritical SPARCS errors. A critical data element is one that must have a valid value before a record is accepted by the system. The data collector is notified when a DDA needs correction. DDAs are carefully screened for duplicate submissions.

Each method of discharge data submission is producing timely and accurate information for incorporation into the SPARCS data base.

UNIFORM BILL COLLECTION NETWORK

When a UBF is completed for an inpatient discharge, the hospitals' billing departments distribute copies of the form to the appropriate third-party payor or payors. Uniform bill data collection for SPARCS is accomplished by a network of data collectors that process the required bill information on magnetic tape.

SPARCS data are gathered after Medicare, Medicaid and Blue Cross claims are processed, thereby enabling SPARCS to take advantage of the existing edits used by these payors. For all other types of claims, hospitals are required to submit a copy of the UBF to their regional SPARCS Data Collection Center at the time the claim is submitted.

The DDA and the UBF have a number of common elements that enable matching of records concerning patient stays. By linking these records, a merged file containing both financial and summary medical abstract information for all inpatient hospitalizations is created. The file may then be compared to or matched with data from the Institutional Cost Report (ICR).

CONSTRAINTS ON DATA APPLICATIONS

Data are included for all patients discharged in 1984 even if they were admitted in 1983 or earlier. Data for patients entering a hospital in 1984 but discharged in 1985 are not included. SPARCS arrives at a patient-day count for each discharge record by subtracting the date of admission from the date of discharge. If patients are admitted and discharged the same day, their length of stay is one day.

In contrast to the DDA data, which is submitted to SPARCS shortly after a patient's hospital discharge, the bulk of the UBF data is obtained only after payment has been made to the provider. Although this "post-payment" submission of billing data has many benefits, some problems do occur when there is a long delay between the hospitals' submission of bills and receipt of data by SPARCS. Questions concerning a patient's eligibility or the coordination of benefits may account for these delays.

It is important to note that, regardless of the length of a patient's hospital stay, the DDA is completed only once by the hospital. Hospital billing cycles, however, vary among hospitals. Many hospitals process bills monthly; therefore, the submission of a UBF does not always represent a discharge. When patient claims involve more than one payor, SPARCS must consolidate records for multiple payors. This is a complex process, fully successful only after all of a patient's component bills are received and properly validated.

These have proven difficult problems to solve due to the large number of records processed by SPARCS. However, major progress has been made on the processing and matching of 1984 billing data. A matched master file of 1984 DDA and UBF data will be available in the near future.

DESCRIPTION AND PRESENTATION OF SELECTED 1984 STATISTICS

1984 ANNUAL REPORT SERIES TABLE REVISIONS

The continued efforts of the SPARCS Bureau to refine and improve usefulness of hospital data has resulted in several changes to the *1984 Annual Report Series.*

One of the major changes involves the expansion of the currently available data by the addition of three new tables. Table 19 has been added and categorizes the number of discharges by total length of stay, major diagnostic category (MDC) and diagnosis related group (DRG). Table 20 contains the number of discharges, patient days and average length of stay data by expected primary source of reimbursement, MDC and DRG for stays requiring alternate level of care (ALC). Table 21 exhibits the number of discharges, patient days, discharges requiring alternate level of care and ALC days by disposition of patient, MDC and DRG.

In addition, there have been modifications to three existing tables. Table 1 includes one additional subsection displaying the number of discharges, patient days and average length of stay data by expected primary source of reimbursement for stays requiring alternate level of care. Table 7 has been modified to include DRGs as well as MDCs. Table 12 has been expanded to include patient days, average length of stay and DRGs. Tables 7 and 12 utilize the new DRG model described in Appendix G.

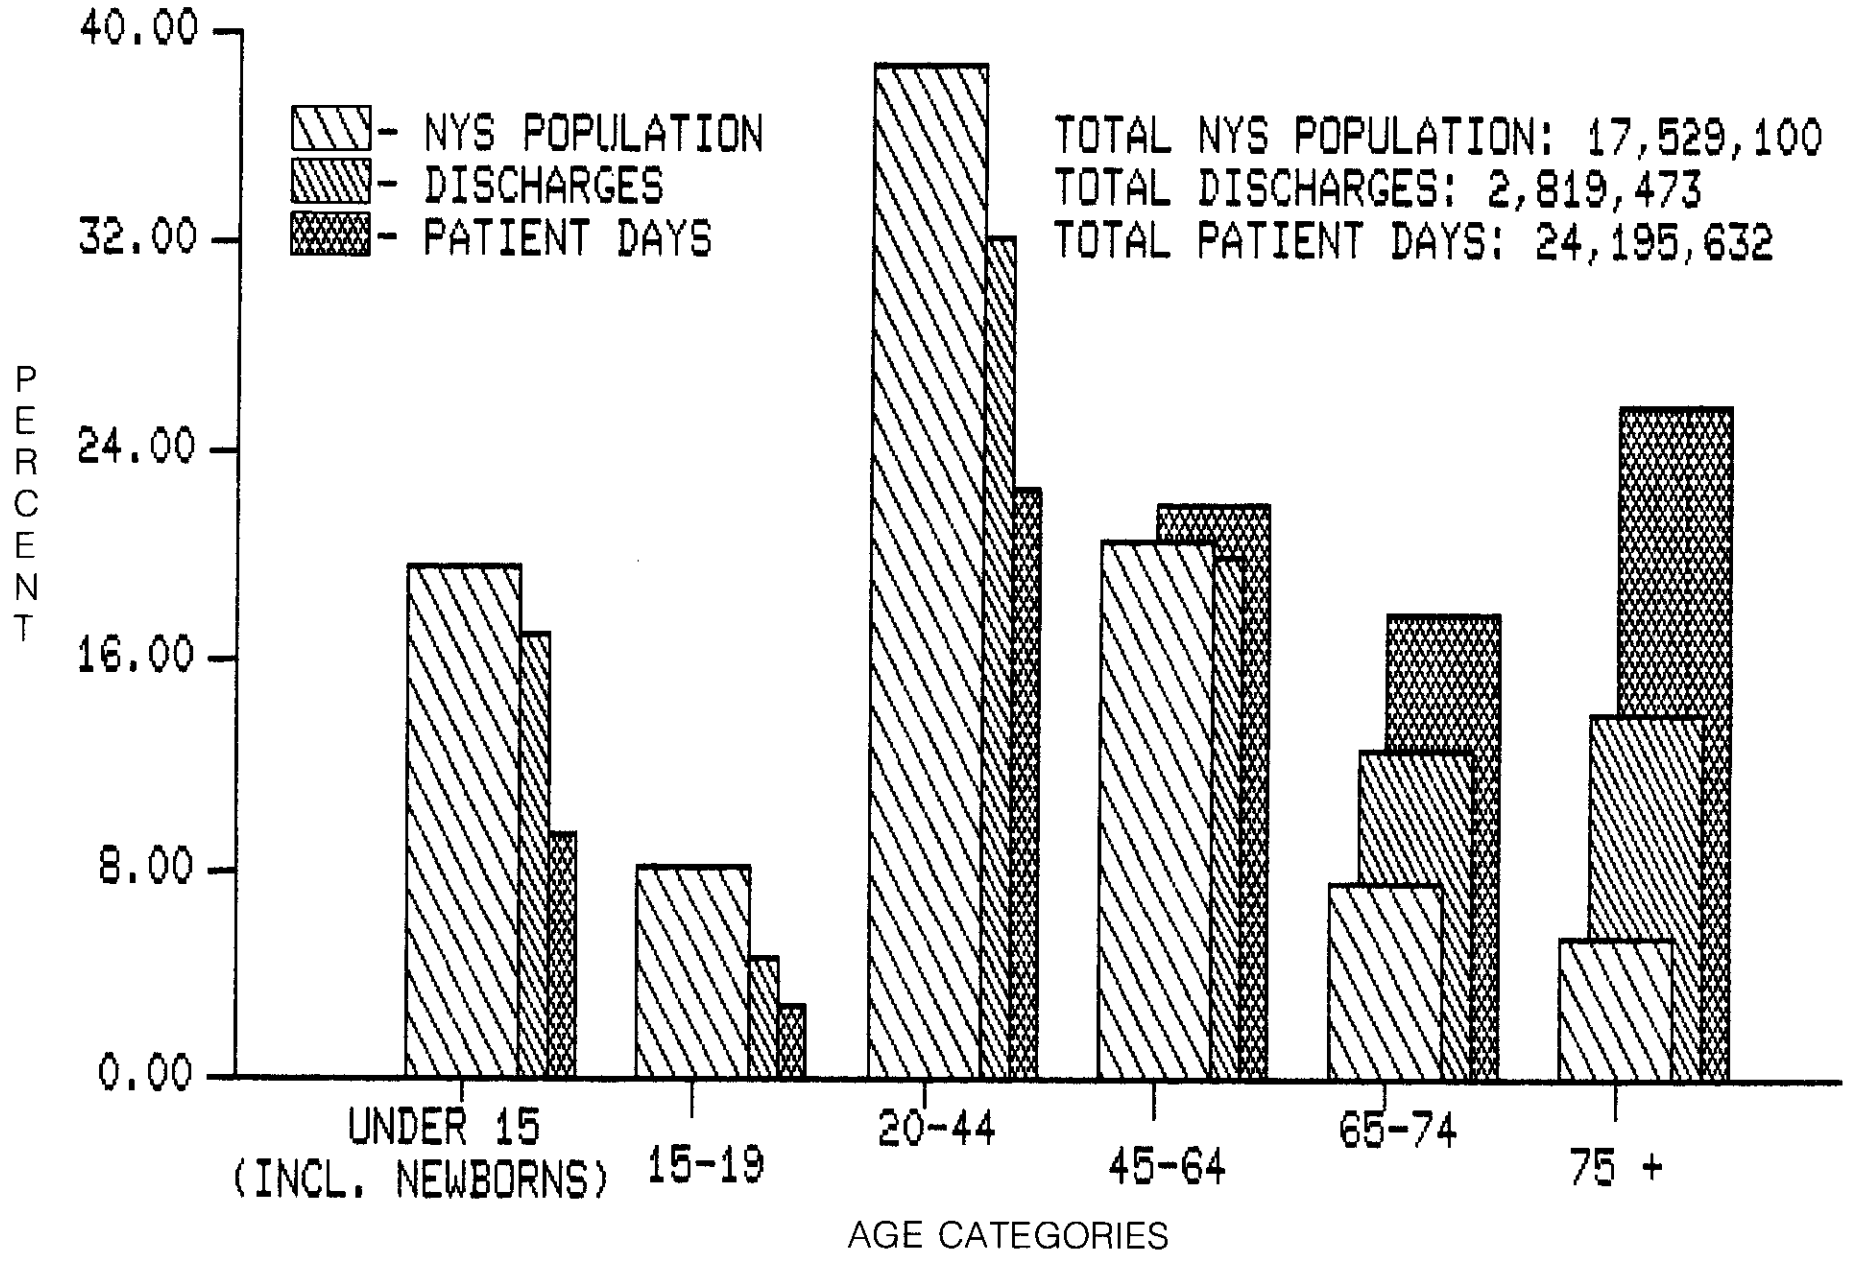
DATA COMPLETENESS

The data reported in the *1984 Annual Report Series* are complete except for the following:

- St. Mary's Hospital of Brooklyn is missing approximately 5,000 discharges from the last six months.
- Bronx Municipal Hospital Center is missing approximately 4,500 discharges from the last five months.
- Boulevard Hospital is missing approximately 4,000 discharges from the last six months which are irretrievable because the hospital closed during 1985.
- Kingsbrook Jewish Medical Center is missing approximately 800 discharges from December.
- Richmond Memorial Hospital and Health Center is missing approximately 600 discharges from February and March because of a submission problem that cannot be corrected.
- New York University Institute of Rehabilitative Medicine is missing all 12 months because of a problem with its identification number.

Because the SPARCS data file is a dynamic system, these discharges may have been received since the printing of the tables included in this report series.

FIGURE A
Percentage of New York State Population,
Discharges and Patient Days by Age Category
1984



AGE OF PATIENT

The age categories used in this *1984 Annual Report Series* are newborn[1], 0-5 (excluding newborns), 6-14, 15-19, 20-44, 45-64, 65-74, 75-84 and 85 years and older. For purposes of graphic display, the newborn, 0-5 and 6-14 age categories have been combined, as well as the 75-84 and the 85 and over categories.

Figure A illustrates the generally known fact that as people get older they are more likely to use hospital services, and that their average length of stay tends to increase as well. The 15-19 year old group, which comprised 8.2 percent of the state's population, accounted for only 4.5 percent of all discharges and 2.7 percent of all patient days in 1984.

This figure also shows that people 75 years of age and older made up 5.4 percent of the state's population, but accounted for 14 percent of all discharges and 25.7 percent of all patient days.

SEX OF PATIENT

In 1984,1,165,455 males and 1,654,018 females were discharged from general hospitals in New York State. Males represented 41.3 percent of discharges and females 58.7 percent. In the general population, males represented 47 percent and females 53 percent of the total state population of 17,529,100.

Figure B shows the average length of stay and ratio of discharges per 1,000 residents for the total state population and for males and females. The 1984 population data are based on estimates provided by the New York State Department of Health's Bureau of Biostatistics. While the state population statistics include only residents, SPARCS data include both resident and nonresident patients in New York State hospitals.

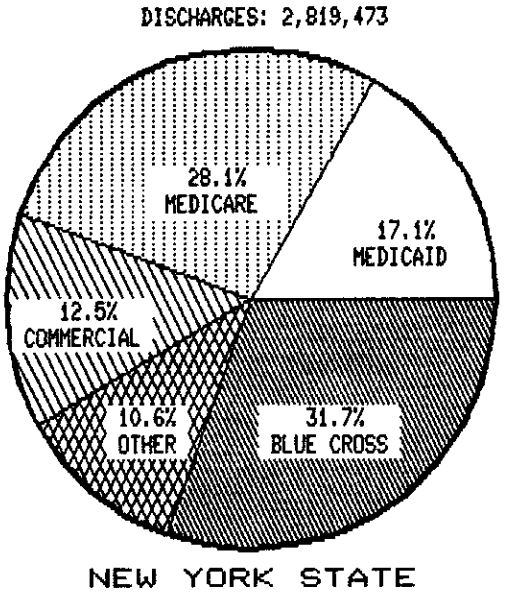
FIGURE B
New York State Average Length of Stay Data and Number of Discharges Per 1,000 Population For All Stays in New York State By Sex of Patient
1984

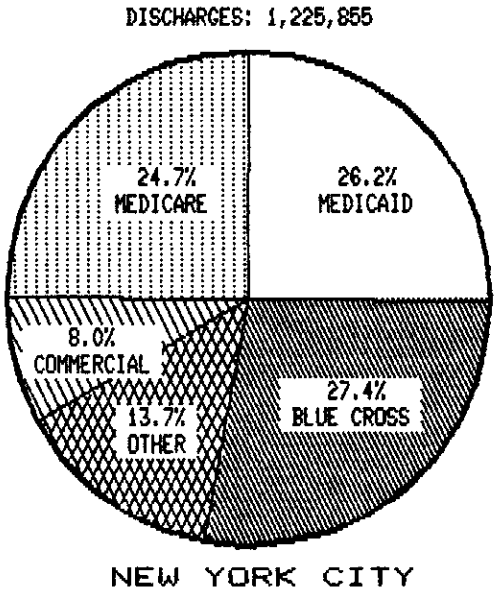
	Average Length of Stay	Discharges Per 1,000 Population
Both Sexes	8.6 days	160.8
Male	9.0 days	140.5
Female	8.3 days	179.2
Female excluding Abortions and Obstetrical Services	9.6 days	140.5

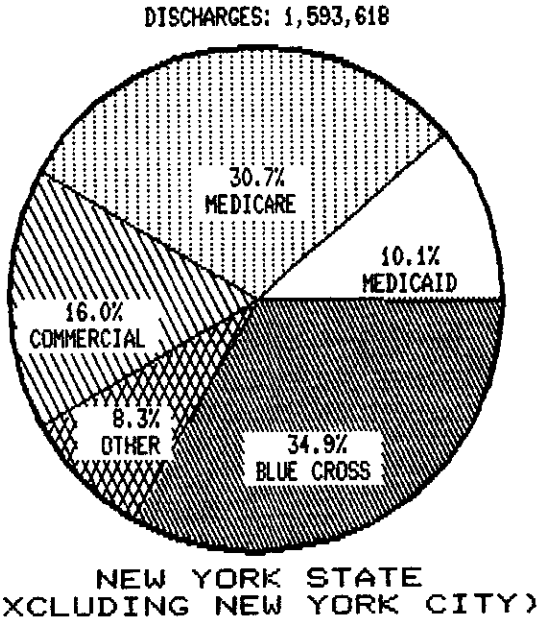
The average length of stay for all patients was 8.6 days. The average length of stay was 9 days for males and 8.3 days for females. If hospital discharges for principal diagnoses involving abortions and obstetrical services are discounted, the average length of stay for females was 9.6 days. Both females and males had the same probability of being hospitalized (140.5 discharges per 1,000); 53 percent of discharges were females and 47 percent of discharges were males.

[1]*The newborn (or nursery) category refers only to live-born infants whose principal* International Classification of Diseases, 9th Revision, Clinical Modification *(ICD-9-CM) diagnosis code is V30.0, V30.1, V31.0, V31.1, V32.0, V32.1, V33.0, V33.1, V34.0, V34.1, V35.0, V35.1, V36.0, V36.1, V37.0 or V37.1.*

FIGURE C
Percentage of Discharges by Expected Primary Source of Reimbursement 1984







EXPECTED PRIMARY SOURCE OF REIMBURSEMENT

The expected primary source of reimbursement used in the *Annual Report Series* was obtained from the DDA file. This data element is documented at the time of discharge, not the time of payment, and is the best information available to a hospital's medical records department when a patient leaves the facility. Given the complexity of reimbursement methodologies, especially when a patient appears to be eligible under more than one third-party payment plan, the expected primary payor cannot be considered a completely reliable component of this report series. There may be a bias toward underreporting of discharges for third-party payors where there are delays in the establishment of eligibility.

DISCHARGES

Statewide statistics indicate that government-sponsored health care programs and private health insurance played approximately equal roles as the primary payors for hospital stays in 1984. Government-sponsored programs were reported as the primary payors for 45.8 percent of all discharges. Private health insurance plans (Blue Cross, commerical insurance and Workers' Compensation) were reported as the primary payors for 45.3 percent of hospital discharges occurring in 1984.

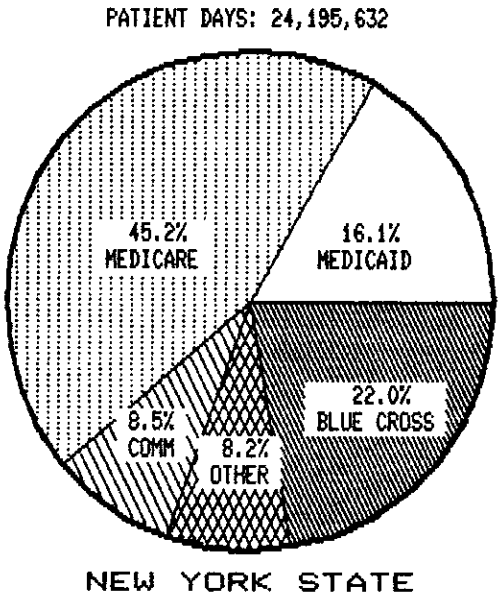
There are wide regional differences with regard to payor distribution. In New York City, government-sponsored programs were the primary payors for more than half the hospital stays (51.5 percent), while private insurance was the major payor for 36.2 percent of all cases. These proportions are reversed in the rest of the state, with government programs primarily paying for 41.3 percent of hospital discharges and private insurance reimbursing hospitals for 52.3 percent of discharges.

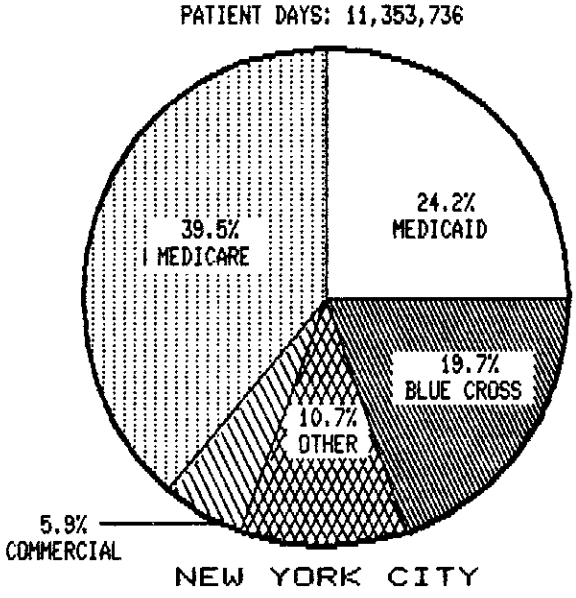
PATIENT DAYS

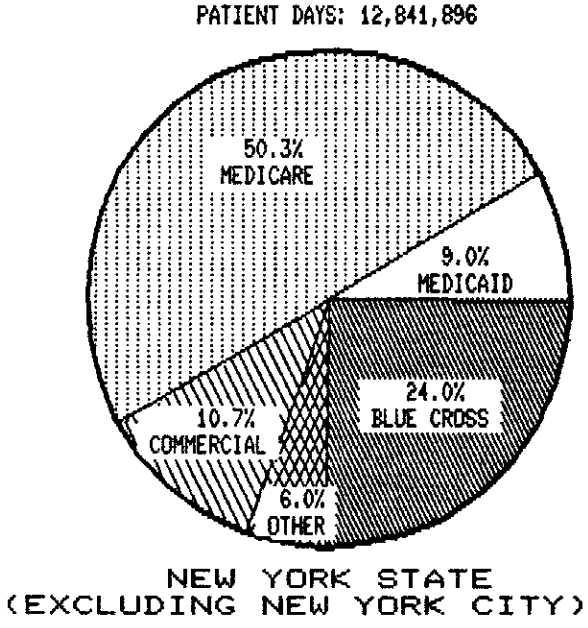
Government-sponsored programs were the primary payors for hospital stays representing more than half of all patient days in both New York City and the rest of the state. Care should be exercised in interpreting tabulations of patient days by expected primary source of reimbursement. For each discharge, a single payor is reported as the expected primary source of reimbursement. Since many cases have multiple payors, the expected primary payor may not pay the entire bill. For example, Figure D shows that discharges for which Medicare was the expected primary payor accounted for 45.2 percent of all patient days. That does not mean that Medicare paid for 45.2 percent of the patient days.

Table 1 shows that statewide, government programs were the expected primary source of reimbursement for hospital stays involving three-fifths (61.8 percent) of all patient days, while private insurance was the expected primary source of reimbursement for hospital stays involving approximately one-third (31.2 percent) of 1984 patient days. In New York City, government programs were the expected primary payment source for hospital stays involving almost two-thirds (64.2 percent) of patient days in general care hospitals, while private insurance was the expected primary payment source for hospital stays involving 26.2 percent of patient days. In the rest of the state, government programs were the expected payment source for hospital stays involving 59.7 percent of patient days, while private insurance was the expected primary payment source for hospital stays involving 35.7 percent. Figures C and D show the proportions of discharges and patient days associated with the four largest expected payor categories: Medicare, Medicaid, Blue Cross and commercial. A detailed listing of expected primary source of reimbursement appears in Table 1.

FIGURE D
Percentage of Patient Days by Expected Primary Source of Reimbursement 1984







SERVICE CATEGORIES

The service categories used in the *Annual Report Series* are based on categories developed by the New York State Department of Health and used by the former New York State Health Planning Commission. The categories are defined in terms of the *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD-9-CM) diagnosis codes. The SPARCS service categories are tabulated only by principal diagnosis, as reported on the DDA.

NURSERY - The patient's age is equal to zero with an ICD-9-CM code: V30.0, V30.1, V31.0, V31.1, V32.0, V32.1, V33.0, V33.1, V34.0, V34.1, V35.0, V35.1, V36.0, V36.1, V37.0 or V37.1. These codes refer only to live-born infants. The definitions of the nursery service category and the newborn age category are the same.

OBSTETRICAL - All ages, ICD-9-CM codes 630 through 634.9 and 640 through 676.9.

PSYCHIATRIC - All ages, ICD-9-CM codes 290 through 319.

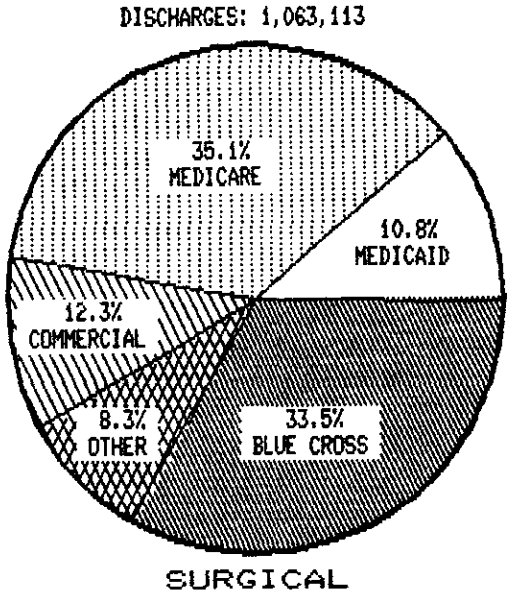
PEDIATRIC - All patients, age 14 years and younger, whose primary diagnosis is neither included in the newborn, obstetrical or psychiatric categories defined above nor classified by ICD-9-CM codes 614 through 629.9 (gynecological) or 635 through 639.9 (abortion).

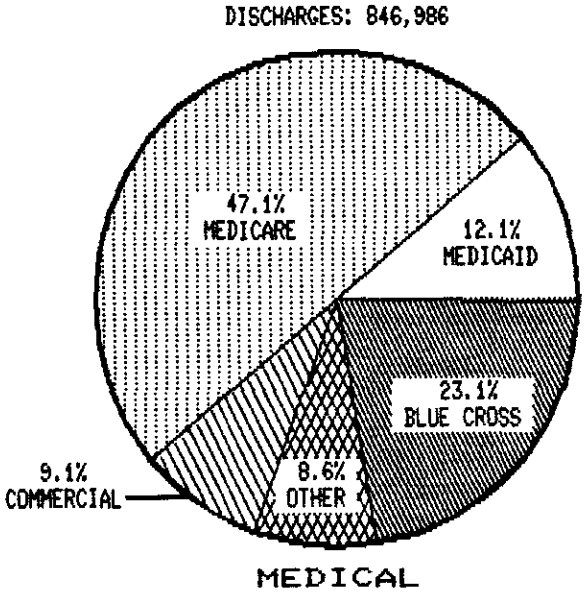
MEDICAL - All patients, age 15 years or older, with no reported procedure code or all reported procedure codes greater than 86.99. This category also includes gynecological patients (ICD-9-CM codes 614 through 629.9) of all ages with no reported procedure code or all reported procedure codes greater than 86.99. Excluded are newborn, obstetrical, psychiatric and pediatric patients as defined above.

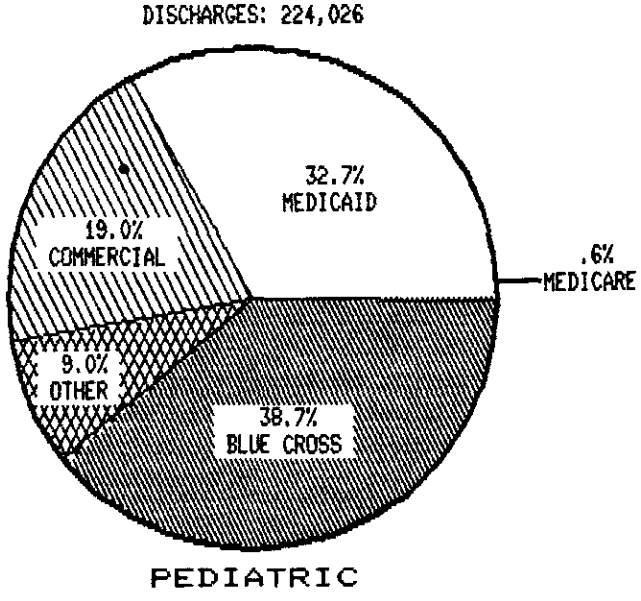
SURGICAL - Patients age 15 years or older with at least one procedure code in the range 01 through 86.99. This category also includes gynecological patients (ICD-9-CM codes 614 through 629.9) of all ages with at least one such procedure code, and all patients whose principal diagnosis is listed as 635 - 639.9 (abortion). Excluded are newborns, obstetrical, psychiatric, pediatric and medical patients as defined above.

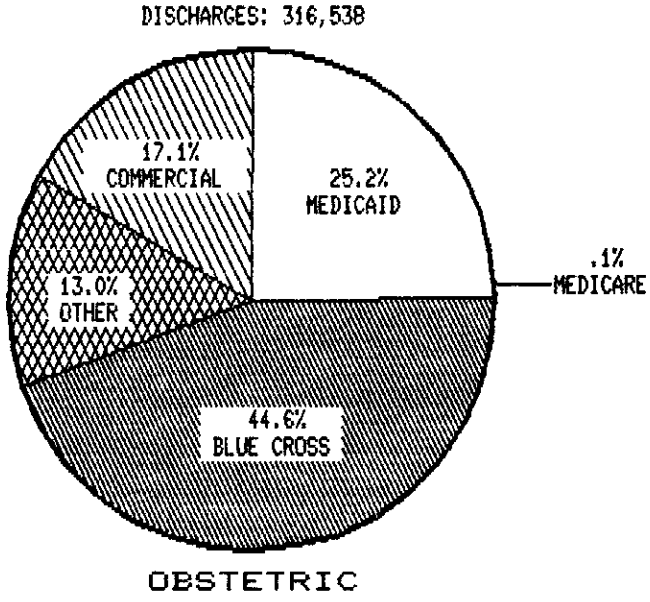
FIGURE E
Percentage of Discharges by Expected Primary Source of Reimbursement and Service Category 1984

These charts display the major expected primary source of reimbursement categories as functions of the six service categories used in this publication.









Private payors (Blue Cross and commercial insurance) were the expected primary payors for more than half of the reported discharges in the pediatric, obstetric and nursery service categories. Medicare and Medicaid combined were the expected primary payors for over half of the reported discharges in the medical and psychiatric service categories. SPARCS data indicate that in New York State there is a significant relationship between the type of service rendered and the expected primary source of reimbursement.

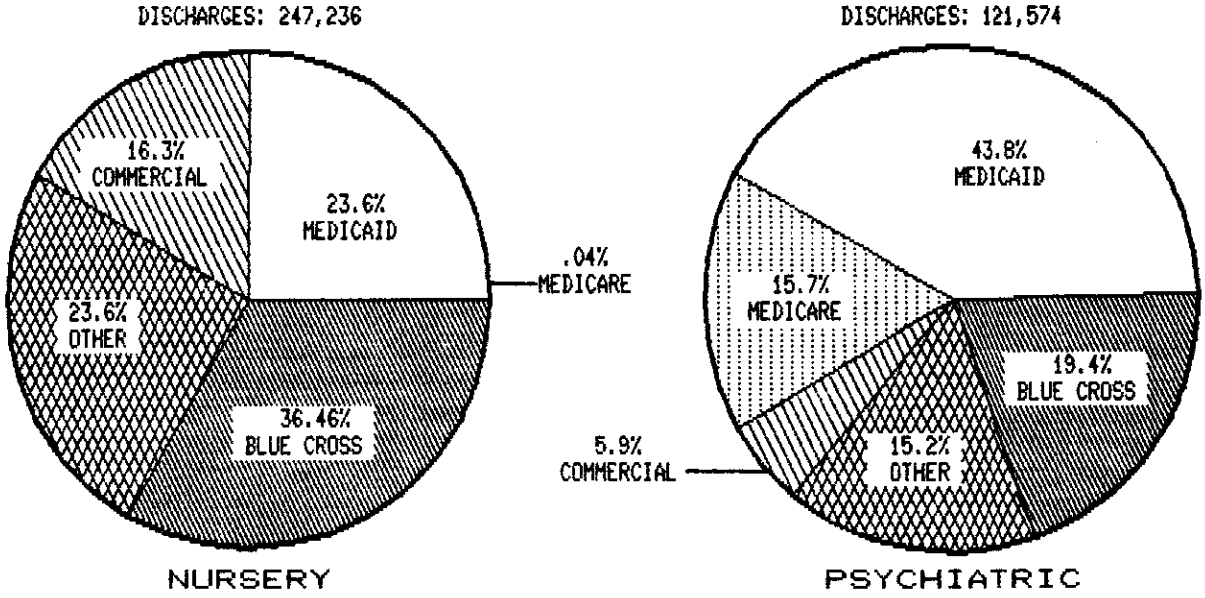


FIGURE F
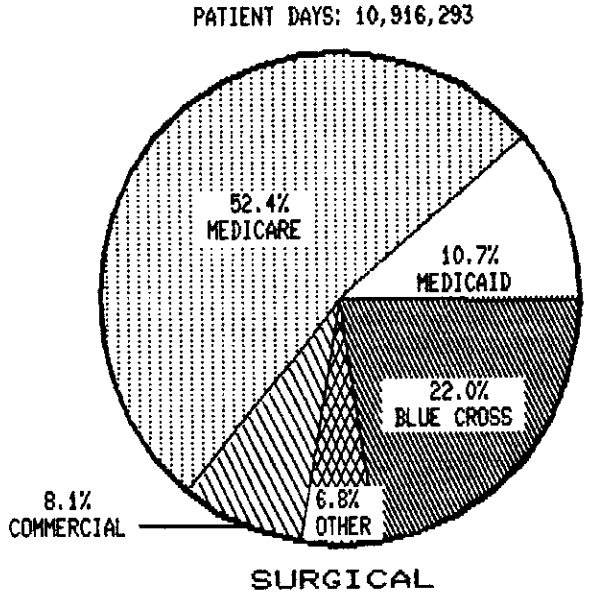
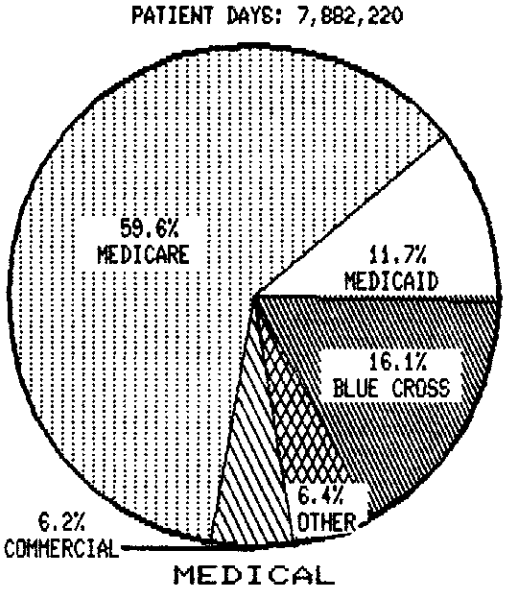
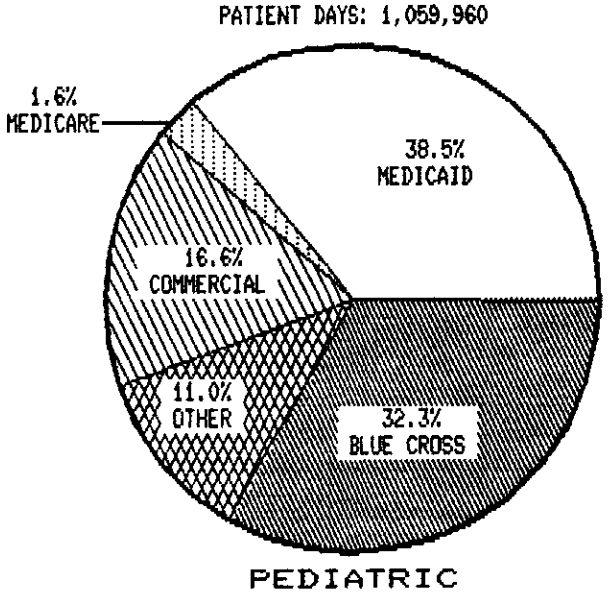
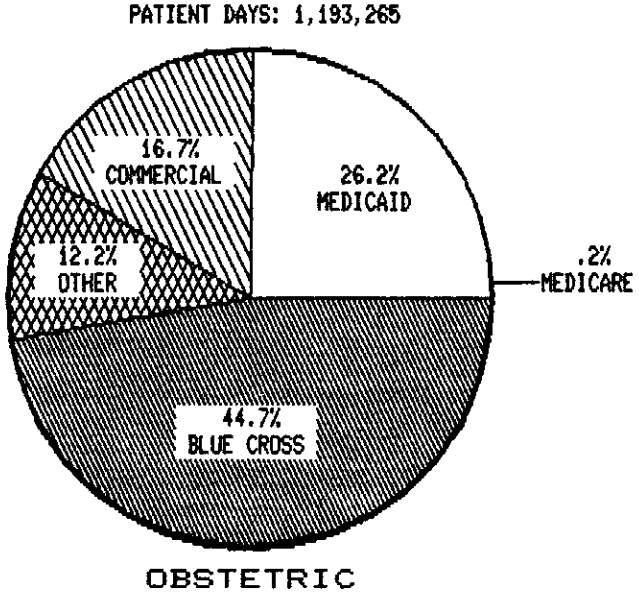
Percentage of Patient Days by Expected Primary Source of Reimbursement and Service Category 1984

These charts display the major expected primary source of reimbursement categories as functions of the six service categories used in this publication.

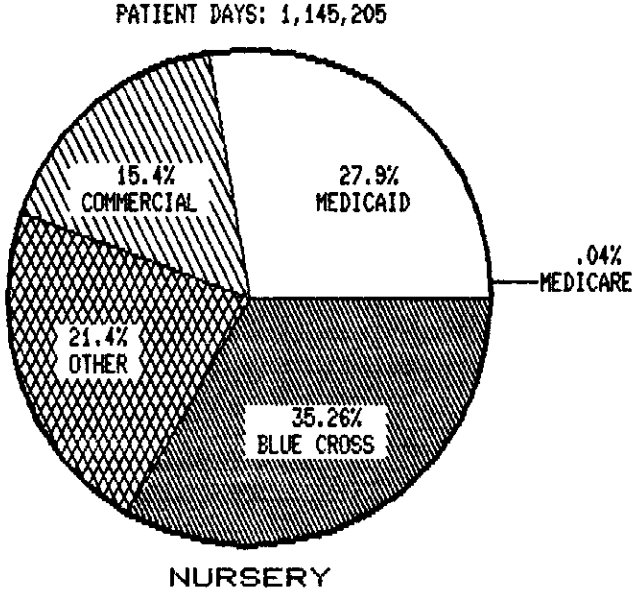


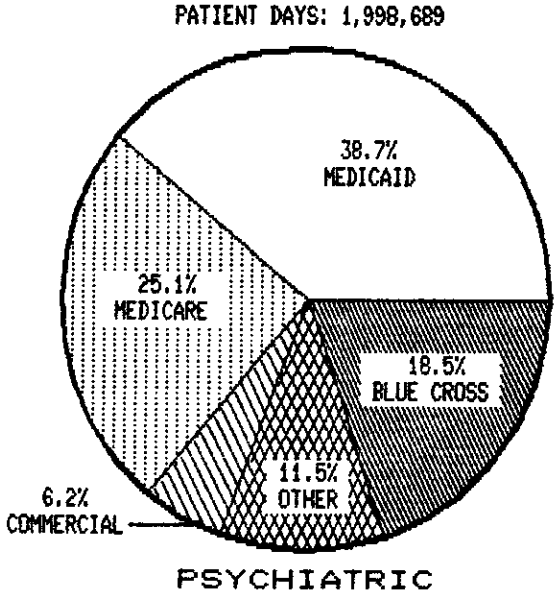






As in the similar distribution of discharges (Figure E), Blue Cross and commercial insurance were the expected primary sources of reimbursement for hospital stays involving more than half of the patient days in the obstetric and nursery service categories. These same two payor groups were the expected primary payors for hospital stays involving slightly less than half of the patient days in the pediatric service category. Medicare alone was the expected primary source of reimbursement for hospital stays involving the majority of the patient days in the medical and surgical service categories. Medicare and Medicaid combined were the expected primary sources of reimbursement for hospital stays involving the majority of the patient days in the psychiatric service category.





DIAGNOSIS RELATED GROUPS (DRGS)

DRGs are a classification system used to categorize patient abstracts into meaningful groupings. In previous *Annual Report Series* (1980-1982), the original DRG model of 383 DRGs arrayed within 83 major diagnostic categories (MDCs) was reported. The 1983 and 1984 report series use the "new" or "federal" DRG model which consists of 470 DRGs arrayed within 24 MDCs (including a residual category).

The new DRG model was developed to make use directly of the diagnoses and procedures as coded according to the IDC-9-CM. The previous DRG model required the conversion of ICD-9-CM coding into an earlier coding system before the assignment of DRGs. The development of the new model led to a different emphasis based on the direct correlation that was identified between organ systems and the consumption of hospital resources.

The new DRG model begins the classification process by categorizing all principal diagnoses into 23 mutually exclusive and exhaustive MDCs based on certain predetermined criteria. The criteria used to assign an abstract to a DRG include principal diagnosis, secondary diagnoses, operating room procedures, presence of a substantial comorbidity and/or complication, age and discharge status. An additional category labelled "MDC 24" has been developed in order to classify cases in DRG 468 (operating procedures unrelated to diagnosis), DRG 469 (valid diagnosis unacceptable as principal diagnosis) and DRG 470 (discharge with invalid data).

Figure G illustrates the method of assigning an abstract to one of the eight DRGs within MDC 16: Diseases and Disorders of the Blood and Blood-Forming Organs and Immunity.

Figure H compares the rate of hospitalization for males and females within the 24 MDCs. The most common MDC among females was "pregnancy, childbirth and the puerperium."

Of the conditions not related to obstetrical services, "diseases of the circulatory system" were the most frequently occurring conditions requiring hospitalization for both males and females. In 1984, there were 155,810 males and 149,344 females discharged with diagnoses included in this MDC.

FIGURE G
DRG Classification System

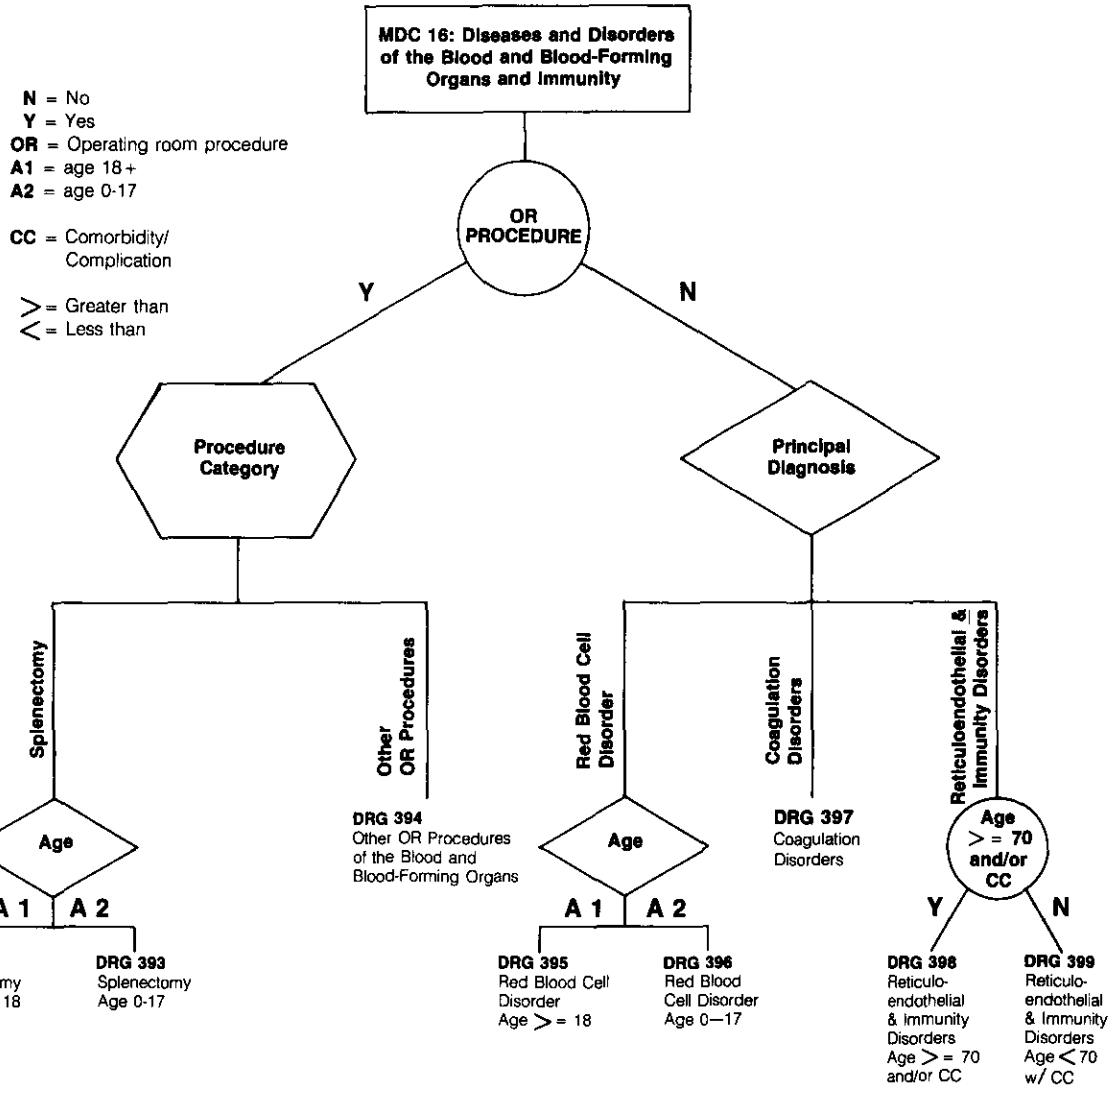


FIGURE H
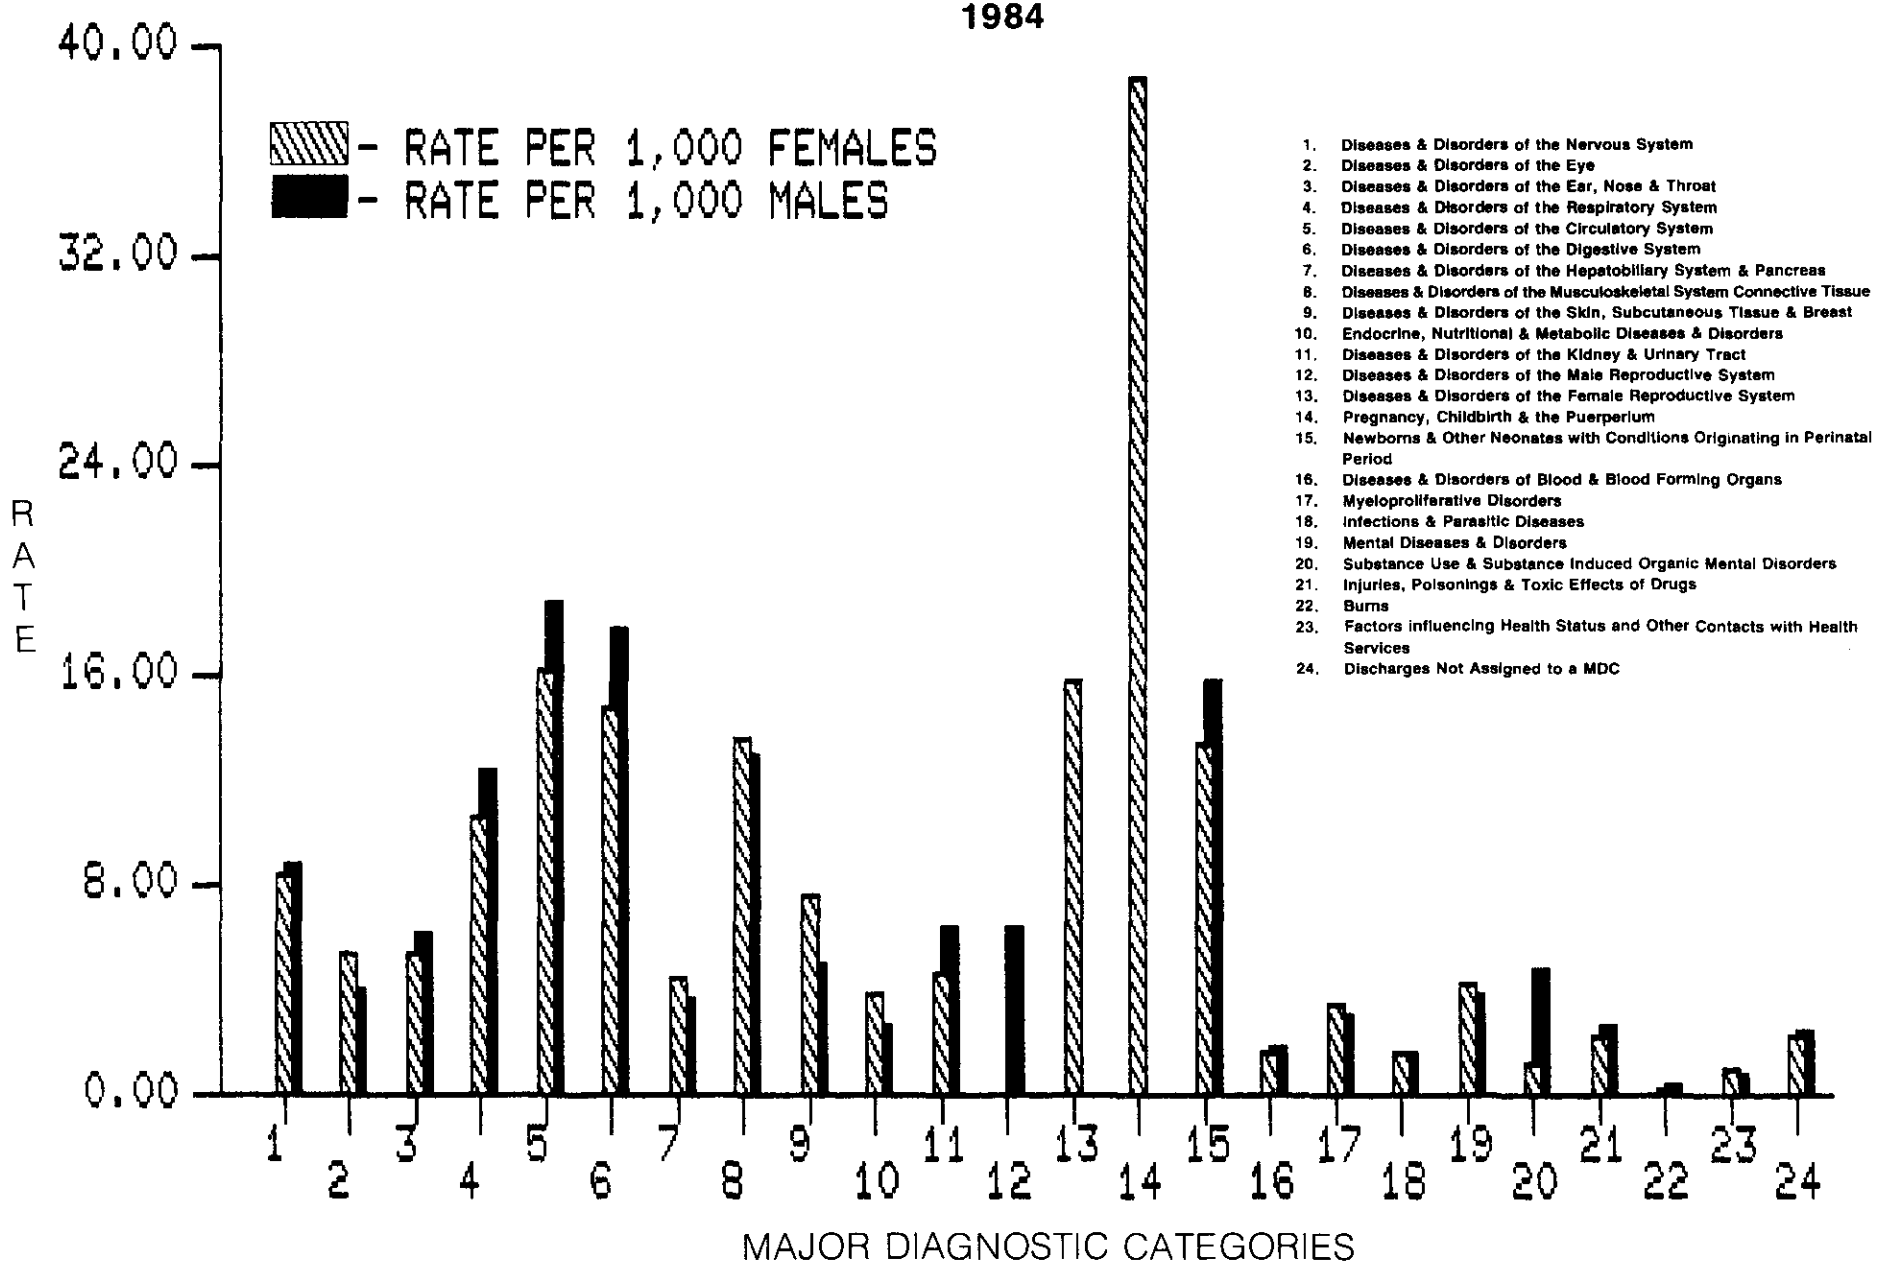
Hospital Discharges per 1,000 Population by Major Diagnostic Category and Sex 1984



RESIDENT HOSPITALIZATION RATES

The patient's county of origin is based on the county code submitted to the SPARCS Bureau on the DDA. Tables 14, 15, 16 and 18 are derived from these county codes.

Table 14 lists each county, its rate of hospitalization per 1,000 residents and the hospitals most frequently used by patients in each county. The 1984 county population data used in this report series are estimates provided by the New York State Department of Health's Bureau of Biostatistics.

The state average discharge rate per 1,000 population for New York State residents is 155.9 while the patient day rate is 1,339.8 patient days per 1,000 residents.

Figures I and J illustrate the relative hospitalization and patient day rates by county. Figure K illustrates the average length of stay data by county of patient origin. Residents of Tioga County were the least likely to be hospitalized in 1984, with a rate of 98.8 discharges per 1,000 residents; the rate for Montgomery County was the highest in the state with 217.8 discharges per 1,000 residents. Tioga County experienced the state's lowest patient day rate in 1984, with 701.3 patient days per 1,000 residents, while Montgomery County's rate of 1,899.2 patient days per 1,000 residents was the state's highest.

New York State residents treated in out-of-state hospitals are not reported to SPARCS. An assumption can be made that hospitalization rates for counties where patients routinely travel to out-of-state facilities for health care would be higher if data from out-of-state hospitals were available. Out-of-state residents treated in New York hospitals are not included in Tables 14, 15 and 18.

Figure L illustrates the relative hospitalization and patient day rates by health service area (HSA) for 1983 and 1984. While residents in HSA 1 (Western New York) represented the largest discharge rate with 179 discharges per 1,000 residents in 1984, residents in HSA 7 (New York City) had the largest patient day rate with 1,518 patient days per 1,000 population. Those who resided in HSA 8 (Nassau-Suffolk) were the least likely to be hospitalized with a rate of 140.1 discharges per 1,000 residents hospitalized. These same residents were also representative of the smallest patient day rate in 1984 with 1,138.8 patient days per 1,000 residents. In 1983, residents in HSA 1 also represented the highest discharge rate and residents in HSA 7 represented the highest patient day rate.

Figures M and N compare the resident inpatient hospitalization rates and the resident patient day rates respectively for New York State, New York City and New York State excluding New York City.

Data collected by SPARCS should not, in itself, be used to draw conclusions about the overall health of residents. The availability of health care outside hospitals, the average length of stay for patients hospitalized in a county or HSA and socioeconomic characteristics should be taken into account when comparing the hospitalization rates of different areas of the state.

New York State	23,485,173	1,339.8
New York City	10,791,487	1,518.0
New York State excluding New York City	12,693,686	1,218.2

ALTERNATE LEVEL OF CARE (ALC)

Table 1 contains data indicating the number of discharges with ALC days, the type of care required and the expected primary source of reimbursement for these discharges. In this table, the discharges are defined as those with one or more days of alternate level of care. Patient days include both acute and ALC days.

Surgical discharges with ALC days had the highest average length of stay (69 days) while obstetrics had the lowest (13.5 days). The type of alternate level of care most frequently required was a skilled nursing facility.

Tables 20 and 21 are new tables that display the expected primary source of reimbursement, disposition of patient, ALC days and DRGs for these discharges.

1980/1981/1982/1983/1984 COMPARATIVE STATISTICS

COMPARISON OF DISCHARGES AND PATIENT DAYS BY AGE, EXPECTED PRIMARY SOURCE OF REIMBURSEMENT AND SERVICE CATEGORY

Statewide comparative statistics for 1982, 1983 and 1984 confirm the discharge and patient day stability of the inpatient hospital population. Figures P, Q and R display the comparisons.

COMPARISON OF NEW YORK STATE HOSPITALIZATION RATES PER 1,000 POPULATION 1980/1981/1982/1983/1984

The 1980, 1981, 1982, 1983 and 1984 resident hospitalization rates per 1,000 population are similar for New York State, New York City and New York State excluding New York City. Figure O compares these rates for 1980, 1981, 1982, 1983 and 1984.

There were 2,644,613 New York State resident discharges reported to SPARCS in 1980, 2,682,409 in 1981, 2,720,372 in 1982, 2,751,586 in 1983 and 2,699,600 in 1984. While Figure O shows a trend from 1980 to 1982 of slightly increasing hospitalization rates, it is probable that these increases are a reflection of improved SPARCS reporting. However, our analyses of 1982, 1983 and 1984 data indicate that SPARCS is nearing the goal of complete reporting from all hospitals. Therefore, comparison of the rates for future years with the 1983 and 1984 rates should allow determination of the existence of trends for the hospitalization rates of New York State residents.

FIGURE O
New York State Resident Hospitalization
Rates Per 1,000 Population for 1980, 1981, 1982, 1983 and 1984

	1980	1981	1982	1983	1984
New York State	150.6	153.3	155.8	157.0	155.9
New York City	152.2	157.7	161.6	163.0	160.9
New York State excluding New York City	149.6	150.3	152.0	152.8	152.6

APPENDIX C

DATA PROTECTION REVIEW BOARD (DPRB)

The Data Protection Review Board (DPRB) was established by regulation to review all requests for deniable data.

For the release of deniable data to be approved, the request must be technically feasible and a majority of the DPRB must be satisfied that the purpose of the request is legitimate, the applicant is qualified, the applicant needs the data to conduct the proposed study and adequate safeguards exist to protect patient privacy.

The board makes recommendations to the Commissioner of Health on the release of information. While the commissioner may reverse the decision of the board, the board retains the authority to overturn the commissioner's decision by a two-thirds vote of the entire board. This system of checks and balances protects the rights of individuals while providing access to needed information.

COUNCIL ON HOSPITAL INFORMATION POLICY

The Council on Hospital Information Policy (CHIP) was established by regulation to provide advice and assistance to the Department of Health on matters relating to the collection and dissemination of hospital data. CHIP advises the Commissioner of Health on the data needs of New York's hospital industry.

The scope of CHIP's authority includes review of policy regarding:

- the establishment of new hospital data collection systems, including the formulation of regulations governing these systems and the development of efficient data collection methodologies;
- the maintenance and/or modification of SPARCS;
- the preparation of reports that address the common information requirements of data users.

Glossary

C.C. = complications and/or comorbidity
GT = greater than
GE = greater than or equal to
LT = less than
w/o = without
O.R. = operating room
M = medical - no operative procedure involved
P = procedure - operative procedure involved

1984 ANNUAL REPORT SERIES STATISTICAL TABLES

The statistical tables in this section are available by health service area, county and hospital. For your convenience, an order form is included at the end of this report series.

TABLE 1
Summary of Hospital Stay Data

Number of Discharges, Patient Days and Average Length of Stay Data by Age, Sex, Service Category, Expected Primary Source of Reimbursement, Admission Status, Disposition of Patient, Month of Discharge, Day of Admission and Service Categories, Type of Alternate Level of Care Required and Expected Primary Source of Reimbursement for Discharges Requiring Alternate Level of Care

1A New York State
1B New York City
1C New York State excluding New York City
1D Western New York
1E Finger Lakes
1F Central New York
1G NY-Penn
1H Northeastern New York
1I Hudson Valley
1J Nassau-Suffolk

TABLE 2
Hospital Statistical Profiles

2A Number of Discharges by Service Category, HSA, County and Hospital
2B Number of Patient Days by Service Category, HSA, County and Hospital
2C Average Length of Stay Data by Service Category, HSA, County and Hospital

TABLE 3

3A Number of Discharges by Service Category, Sex and Age
3B Number of Patient Days by Service Category, Sex and Age
3C Average Length of Stay Data by Service Category, Sex and Age

TABLE 4

4A Number of Discharges by Service Category and Expected Primary Source of Reimbursement
4B Number of Patient Days by Service Category and Expected Primary Source of Reimbursement
4C Average Length of Stay Data by Service Category and Expected Primary Source of Reimbursement

TABLE 5
Number of Discharges, Patient Days and
Average Length of Stay Data by
Expected Primary Source of Reimbursement, Sex and Age

5A Expected Primary Source of Reimbursement - Private
5B Expected Primary Source of Reimbursement - Government
5C Expected Primary Source of Reimbursement - Other

TABLE 6
Number of Discharges, Patient Days and
Average Length of Stay Data by
Expected Primary Source of Reimbursement, County and Hospital

6A Expected Primary Source of Reimbursement - Private
6B Expected Primary Source of Reimbursement - Government
6C Expected Primary Source of Reimbursement - Other

TABLE 7
Number of Discharges and Average Length of
Stay Data by Age, Sex, Diagnosis Related
Group and Major Diagnostic Category

7A Age Groupings - 0 to 5; 6 to 14
7B Age Groupings - 15 to 19; 20 to 44; 45 to 64
7C Age Groupings - 65 to 74; 75 to 84; 85+

TABLE 8
Number of Discharges by Admission Status,
Patient Disposition and Service Category

TABLE 9
Number of Discharges by Patient Disposition, Sex and Age

TABLE 10

10A Number of Discharges and Average Length of Stay Data by Service Category and Month
10B Number of Discharges and Average Length of Stay Data by Service Category and Day of Admission

TABLE 11
Number of Discharges by the Fifty Most
Common Principal Diagnoses and Surgical
Procedure Categories

TABLE 12
Number of Discharges, Patient Days and Average Length of Stay Data
by Expected Primary Source of Reimbursement,
Diagnosis Related Groups and Major Diagnostic Category

12A Expected Primary Source of Reimbursement - Private
12B Expected Primary Source of Reimbursement - Government
12C Expected Primary Source of Reimbursement - Other

TABLE 13
Number of Discharges by Expected Primary Source
of Reimbursement and Surgical Procedure Category

13A Expected Primary Source of Reimbursement - Private
13B Expected Primary Source of Reimbursement - Government
13C Expected Primary Source of Reimbursement - Other

TABLE 14
Patient Origin Profiles

14A Number of Discharges by Service Category, Patient County of Origin and Hospital
14B Number of Patient Days by Service Category, Patient County of Origin and Hospital

TABLE 15
Patient Origin Profiles
Number of Discharges by Service Category,
Hospital and Patient County of Origin

TABLE 16
Patient Migration Patterns

16A Number of Discharges by Health Service Area and County of Patient Origin and Health Service Area and County of Hospitalization (Newborns Excluded)
16B Number of Patient Days by Health Service Area and County of Patient Origin and Health Service Area and County of Hospitalization (Newborns Excluded)

TABLE 17
Number of Discharges and Average Length of Stay Data
by Age, Sex, County of Hospital and Hospital

17A Age Groupings - newborn; 0 to 5
17B Age Groupings - 6 to 14; 15 to 19; 20 to 44
17C Age Groupings - 45 to 64; 65 to 74; 75 to 84
17D Age Grouping - 85+

TABLE 18
Patient Origin Profiles
Number of Discharges and Average Length of Stay Data
by Age, Sex and Patient County of Origin

18A Age Groupings - newborn; 0 to 5
18B Age Groupings - 6 to 14; 15 to 19; 20 to 44
18C Age Groupings - 45 to 64; 65 to 74; 75 to 84
18D Age Grouping - 85+

TABLE 19
Number of Discharges by Total Length of Stay,
Diagnosis Related Group and Major Diagnostic Category

19A Total Length of Stay - 1; 2; 3; 4; 5; 6; 7; 8 days
19B Total Length of Stay - 9; 10; 11; 12; 13; 14; 15-19; 20-24; 25+ days

TABLE 20
Number of Discharges, Patient Days and Average Length of Stay Data
By Expected Primary Source of Reimbursement,
Diagnosis Related Group and Major Diagnostic Category
for Discharges Requiring Alternate Level of Care

TABLE 21
Number of Discharges, Patient Days, Discharges Requiring
Alternate Level of Care and Alternate Level of Care Days
by Disposition of Patient, Diagnosis Related Group
and Major Diagnostic Category

21A Total, Another Acute Care Hospital and Skilled Nursing Facility
21B Intermediate Care or Health Related Facility, Psychiatric Chronic Care Facility and Home
21C Home Health Services, Other Institution, Left Against Medical Advice and Died

SPARCS STANDARD TABLE PRICES FOR 1984

The following statistical tables are available by health service area, county and hospital from the SPARCS Bureau:

TABLE 1 — Fee: $4.00 per report

Summary of hospital stay data showing number of discharges, patient days and average length of stay data by age, sex, service category, expected primary source of reimbursement, admission status, disposition of patient, month of discharge, day of admission and service categories, type of alternate level of care required and expected primary source of reimbursement for discharges requiring alternate level of care (three pages per report)

TABLE 2 — Available in the two-volume *Annual Report Series* only. Fee: $25.00.

Hospital statistical profiles displaying discharges, patient days and average length of stay data by service category for each health service area, county and hospital

TABLE 3 — Fee: $5.00 per report

Number of discharges, patient days and average length of stay data by service category, sex and age (three pages per report)

TABLE 4 — Fee: $5.00 per report

Number of discharges, patient days and average length of stay data by service category and expected primary source of reimbursement (three pages per report)

TABLE 5 — Fee: $5.00 per report
