

Mosquito-borne Illness Annual Report 2023

NYSDOH STATEWIDE MOSQUITO-BORNE DISEASE ACTIVITY REPORT

December 21, 2023

The New York State Department of Health (NYSDOH) collects, compiles, and analyzes information on mosquito-borne disease activity in New York State (NYS) and produces this annual year-end report. Data in this report reflects testing performed by both NYSDOH's Wadsworth Center Laboratories (WC) and the New York City Department of Health and Mental Hygiene's (NYCDOHMH) Public Health Laboratory (PHL).

Year to Date Summary (01/01/2023 - 12/20/2023)

- West Nile Virus (WNV):
 - 335 WNV-positive mosquito pools¹ have been identified in NYS, outside of NYC².
 - 1146 WNV-positive mosquito pools have been reported from NYC counties.
 - 32 human cases of WNV infection have been reported, outside of NYC.
 - 32 human cases of WNV infection have been reported from NYC.
 - 5 equine cases of WNV infection have been reported.
 - 1 presumptive viremic donor³ has been reported, outside of NYC.
 - 1 presumptive viremic donor has been reported from NYC counties.
- Eastern Equine Encephalitis Virus (EEEV):
 - 19 EEEV-positive mosquito pools have been identified.
 - 0 human cases of EEEV infection have been reported.
 - 9 equine cases of EEEV infection have been reported.
 - o 0 caprine cases of EEEV infection have been reported.
 - 0 ratite cases of EEEV infection have been reported.
- Zika Virus (ZIKV):
 - Aedes albopictus has been identified in 4 counties outside of NYC. Aedes aegypti has not been identified anywhere in the state.
 - o 0 mosquito pools have been positive for Zika virus.
 - 0 human cases of ZIKV infection have been reported to NYSDOH. No cases of local mosquito-borne transmission⁴ (LMBT) have been identified.
- Chikungunya Virus (CHIKV), Dengue Virus (DENV), and Malaria⁵:
 - 11 human cases of CHIKV infection have been reported to NYSDOH. 0 cases of LMBT have been identified.
 - 65 human cases of DENV infection have been reported to NYSDOH. 0 cases of LMBT have been identified.
 - 95 human cases of malaria infection have been reported to NYSDOH. 0 cases of LMBT have been identified.

¹ Mosquito specimens collected by county surveillance staff are grouped into one or more "pools" of specimens according to their collection location, collection date, and species. A positive pool refers to a mosquito pool in which at least one specimen was positive for a given pathogen.

² Data pertaining to New York City municipalities in this report are derived from the NYC Department of Mental Health and Hygiene (NYCDOHMH) website (https://www.nyc.gov/site/doh/health/health-topics/west-nile-virus.page) and only reflect WNV+ mosquito pools. NYCDOHMH does not report the total number of pools collected. Consequently, some fields relating to NYC cannot be calculated and have been omitted from this report.

³ Presumptive viremic donors (PVDs) are people who had no symptoms at the time of donating blood (people with symptoms are deferred from donating) through a blood collection agency, but whose blood tested positive in preliminary tests when screened West Nile virus. Some PVDs develop symptoms after donation, at which point they would be included in the count of human cases by their state.

⁴ Local mosquito-borne transmission is defined by the absence of the following epidemiological risk factors: recent travel to a country or region with known active ZIKV transmission OR sexual contact with a recent traveler from these areas; recent blood transfusion; recent laboratory exposure to ZIKV; or mother-to-child transmission during pregnancy. NYCDOHMH directly reports human cases of ZIKV infection to CDC.

⁵ NYCDOHMH directly reports human cases of CHIKV, DENV and malaria infection to CDC.

2023 West Nile Virus Surveillance Summary

^{*}The number of WNV positive mosquitoes, mammal infections, or human cases depends, in part, on the amount of surveillance and testing performed in each county, and is not necessarily associated with the degree of WNV infection risk.

-- Map shows results reported through date range indicated.

Surveillance Summary (01/01/2023 - 12/21/2023)

NYSDOH, BCDC - December 21, 2023 Map Scale: 1:4,019,896

2023 Eastern Equine Encephalitis Virus Surveillance Summary

^{*}The number of EEEV positive mosquitoes, mammal infections, or human cases depends, in part, on the amount of surveillance and testing performed in each county, and is not necessarily associated with the degree of EEE infection risk.

-- Map shows results reported through date range indicated.

Surveillance Summary (01/01/2023 - 12/21/2023)

EEE positive mosquitoes, mammals, or birds reported

Mosquito surveillance being conducted AND no EEEV reported No mosquito surveillance being conducted AND no EEEV reported

Map Scale: 1:4,019,896

2023 Aedes aegypti/albopictus Surveillance Summary

^{*}The total number of Aedes aegypti or albopictus identified within a county depends on the amount of surveillance performed in each county, and is not necessarily associated with degree of Zika risk.

-- Map shows results reported through date range indicated.

Mosquito surveillance being conducted AND Aedes albopictus reported Surveillance Summary (01/01/2023 - 12/21/2023)

Mosquito surveillance being conducted AND no Aedes albopictus or Aedes aegypti reported

No mosquito
surveillance being
conducted

Map Scale: 1:4,019,896

2023 Mosquito-borne Illness Surveillance

Current week positives are highlighted with a yellow halo around the respective specimen symbols.

- -- Human cases represent local mosquito-borne transmission (LMBT). Travel associated cases are not included.
- -- NYC positive human cases are placed at the centroid of the patient's county of residence.
- -- Map shows results reported through date range indicated.

Surveillance Summary (01/01/2023 - 12/21/2023)

WNV Positive Mosquitoes EEE Positive Mosquitoes

WNV Positive Equine

EEE Positive Equine
